Hey Rebecca,

This is a tough one; the statement is almost certainly true but I'm a little hesitant about citing it based on what we currently have. The analyses should really be completed first and be carefully reviewed by a geneticist before I would be willing to make that statement publicly.

Sorry, I have gotten a little more careful about these issues because of the criticisms we received on the Food Synthesis report for having to cite 'in prep' rather than peer-reviewed work.

Chris just contacted me about the contract for this genetics work and I hope we can get this figured out this week.

hi Frank & Mark,

do you think I could say something to the effect of... "preliminary analyses suggest effective

population size in the GYA grizzly bear population is higher than previously thought."
If I could say that, is there anything I could cite to support it other than an email or meeting notes?
thank you in advance!
rebecca
