Chris,

Attached is the PDF of our food synthesis report. The USGS FSP and co-author comments were very helpful and have really tightened up the report.

We put protections on the PDF so it cannot be modified or copied; it can be printed, however.

The USGS elevated this report to "Influential" status, which means it went through OMB. As a result, our summary of responses to the 2 FSP reviewers will be posted online. USGS considers this a final report and not a draft final report so the disclaimer on the first page is important.

Unless I hear differently, I will send this copy to all co-authors but not to anyone else until IGBC decides when to release the report.

Thanks for all the resources you and USFWS provided to help us deliver this product on time, would not have been possible without!

Let me know if you have any questions. I think it's time for a drink!

Cheers,

Frank
