Maps 1A & 1B

Have the basemap for Mark once we verify 1B.

Alternatively they could map the points with the monitoring line and send us a georeferenced jpg.

In addition: in map 3 there is actually another 'demographic monitoring area' for the NCDE that could be delineated. It is basically all of Zone 1 (to include those little connector areas). If that was highlighted then the two ecosystems would be represented pretty similarly...with three boundary lines each, 1) recovery zone, 2) demographic monitoring area, 3) DPS or proposed delisting line (I'm leaning on that as the title now as the DPS may give people the impression that we want bears to be everywhere within that DPS line. I can easily explain with a line titled 'proposed delisting line' that the area within this is what will be proposed by the USFWS to be delisted populations.

Let me know if I'm making this worse...I know now (I think) how I want map 3 to look but I may not be explaining it very well!
