#### SUPPLEMENTARY INFORMATION:

##### Background

Restoring an endangered or threatened animal or plant to the point where it is again a secure, self-sustaining member of its ecosystem is a primary goal of the our endangered species program. Recovery plans guide the recovery efforts for listed species native to the United States. Recovery plans describe actions considered necessary for conservation of the species, establish criteria for recovery levels for downlisting or delisting them, and estimate time and cost for implementing the recovery measures needed.

Under the provisions of the Endangered Species Act of 1973 (Act) as amended (16 U.S.C. 1531 *et seq.*), we approved the revised Grizzly Bear Recovery Plan on September 10, 1993.

The grizzly bear was listed under the Act as a threatened species in the 48 conterminous States on July 28, 1995 (40 FR 31734). Threats to grizzly bear populations come primarily from habitat modification caused by human activities and from direct bear/human conflicts resulting from recreational and resource use activities, highway and railroad corridors, illegal mortality, etc. The grizzly bear population in each of the ecosystems included in the Plan can be delisted independently once recovery criteria stated in the Plan are met.

The Plan provides that prior to delisting of the grizzly bear population in each ecosystem a conservation strategy will be developed and implemented that outlines all habitat and regulatory mechanisms that will be in force after recovery of that population.

The Yellowstone Ecosystem Draft Conservation Strategy is now available for review and comment.
