Here is Ann's response, I checked and it does look the same. Note that the polygon is much larger than the Upper Green River project area.

It looks just like the map in the 2011 IGBST annual report, p. 52, with an arrow added by the article's author. Report attached.

Mark,
Do you know the origin of the map used in this newspaper?
Chris

There was also an article about grizz, wolves killing cattle in Upper Green with a map that I did not recognize. Was this from one of our publications? It used a 60% fixed kernel isopleth on conflict locations, (assuming livestock?) according to the legend so I'm pretty sure this was not done by the News and Guide. Based on the fact is says project area maybe from a USFS document?
