Seth -- I'll be in the air most of the day Mar 7, flying to Portland to stop by their project leaders' meeting before heading on to Spokane the next day for the North American. I don't see any way I can find time to call that day.

But I could call from the airport Wed afternoon, Mar 8, at around 3:30p Mountain, if that would work on your end. Just let me know.

If all else fails, I could probably fine a time to call from Spokane on Thurs, if you're still meeting that day. -- GDF

Hi all: I just found out that we have only until this coming Tuesday to finish our agenda. I've started working on it but quickly found out I need a lot more info.

First, I need to know availability of the following people who would call in. Some of the topics look like we'll need a call-in but the caller isn't specified. In some cases I'm suggesting times (in ( )) to help with agenda flow and/or in consideration of Seth's availability. In **bold** is the person I'm "assigning" to track this info down:

Ted, Seth: Gary Fraser (9:00 Tuesday), Benjamin/Joy (8:30 Tuesday)

Susan J: Laverna (budget), Ben Jessup, Nathan, Shawn (T vs E), Shawn (listing work plan), Julie? (monarch update)

Denise: Don (funding fidelity), Justin? (wind energy discussion)

Adam: Dawn (Emphasis Area Discussion)

Susan M: Stacey Stanford and Kathy Konishi (S.7 on 10(a)(1)(A) permits)

Other holes that need to be filled:

"Being Safe". Who should lead?

"Coordination with OLE and SOL" Who should lead, and approximate duration?

"Fishnet". Debra lead? Approximate duration? Description of this topic?

"New FWS policies" (lead, duration? Any call-ins?)

"DTS routing review" (Chuck). Duration?

"Monarch updates" Lead? Duration?

"M-37041 (IT under MBTA)" Lead? Duration?

"Wind energy" Lead?

Date:	Tuesday, April 18, 2017 8:40:39 AM

Ben,

Can we get more information on the HQ review of infrastructure, energy and border wall projects from the Department? I would like to see the written request and discuss when we expect to see more information from the Department, what Gary has said about this, and any discussions with the ARDS.

Christy

R2 Project Leader discussion w/ Gary Frazer
Changed: Note - modified call in number (again).
Thank you Gary! I think a general update on transition, your growing relationship with the new team, priorities, dos and don'ts, budgets, hiring freeze, etc. New administration stuff is what I would imagine. If you are hearing any rumblings on Border Wall, Mexican wolf, LPC, and Mexican government cooperation / relations those might be a few R2 issues of particular interest (all stuff I'm learning more about in the new gig).
Your insights are always super interesting. We will let you know if I hear anything else in particular.

When Wed Mar 8 2017 5:30pm – 6:30pm Eastern Time

---

Thank you for the opportunity to support and participate in the Service's commemoration of the 75th anniversary of the Battle of Midway! We look forward to seeing all of you next week.

Robert: I will pick you up at the airport on Sunday afternoon (UAL #231 arriving at 3:24 pm).

Steve: I will pick you up at the airport on Sunday evening (UAL #240 arriving at 8:19 pm).

I live close to the airport and picking you up is not a problem for me.

I will be waiting in the cellphone lot, when you are curbside, please call my cellphone and I will swing by and pick you up. Your hotels are about 15 minutes away in downtown San Diego, close to the airport.

760-535-7065 (work cellphone)
(b) (6) (personal cellphone)
(b) (6) (home)

I will pick you up at the US Grant Hotel (Steve and Polly) and Westin San Diego (Robert) on Monday morning at 7:30 am and drop you off at the USS Midway Museum.

After the commemoration, we have scheduled either a tour of the coastal Refuges (Sweetwater Marsh Unit-San Diego Bay NWR and Tijuana Slough NWR) or a tour of the Sweetwater Marsh Unit and the border fence. We can decide on Monday on the tour.

Polly: either option gets you back to the airport by 6:15 pm (in time for your 7:30 pm return flight).

Hope this helps! Have a safe trip!

Andy

Refuge Tour: Steve Guertin, Rob Miller, Polly Wheeler, and Alice Garrett (Option 1)	
Tour: June 5, 2017 (Monday afternoon)	
Noon	Battle of Midway Commemoration ends
12:45 PM	Depart USS Midway with Steve, Rob, Polly, and Alice

Greg,
Just a follow up note- looks like I'm tied up next week during your visit. We have former First Lady Laura Bush in town and I'm part of the background entourage for the event which is fine with me!
I would like to get caught up with you, at your convenience, to answer any questions you might have on the issues we discussed prior- my personal cell is (b) (6) (Fairbanks, Alaska). I'm always available and perhaps we can get together some evening when you return.
Best wishes on your trip to south Texas- I do hope you get some one on one time with project leader Tim Cooper- he is top notch and comes with a high level of integrity.
Thanks for all you do and best wishes.
Rob

I graduated in 1986 so a bit more decrepit that you. You have some tough issues with the areas that you oversee. Fever tick and walls, both tricky. I would like to discuss those more with you. I will be down in Texas on Nov 8-10. Not sure of where I will be traveling then but primarily to visit the hurricane refuges. If you can make it up briefly that would be great. Maybe we could talk one evening later this week after 7 pm EST. I suspect you are busy on Tuesday and Wednesday eves.

Thanks Rob. I am sorry I will miss you. I have extended my time through Friday, Veterans Day, although I feel bad about asking people to work on a holiday.

Please call me anytime that you have questions, ideas, or suggestions. Best wishes with your event with Mrs. Bush.

Thanks for everything,
Greg

4pm - 5pm Interview: Shawn Regan | National Review Magazine

Video call:
(b)(5)

Where: (b) (6)
Calendar: (b)(6)Ryan Zinke @ios.doi.gov
Created by: Caroline Boulton
Who: Heather Swift, (b)(6)Ryan Zinke @ios.doi.gov
Description:
Topic: It will be a policy-focused profile piece, describing a bit of Zinke's background as a freshman congressman-turned-Interior Secretary but mostly looking at the issues facing the department today. I'd like to discuss Sec. Zinke's priorities and positions on major western land issues like energy development, the national park maintenance backlog, and the recent conflicts over grazing rights. I know he's mentioned many of those as priorities, including building front-line trust with local communities. Just trying to get some quotes to go along with the piece. It will largely be meant to introduce him to a national audience who may not know much about him, exploring his positions on the major issues and describing the challenges the department faces today.

(b)(6)Ryan Zinke @ios.doi.gov

6pm - 8:30pm Shakespeare and the Law Panel: The Rules of War

Subject:	OMB FY 2018 Passback Expected Friday - ACTION NEEDED
Date:	Tuesday, February 21, 2017 11:25:42 AM

This is a heads up that OMB plans to provide the FY 2018 passback to the Department on Friday, Feb. 24, with appeals due back to OMB on Monday, Feb. 27, close of business. The Office of Budget will provide guidance to the Bureau Budget Officers for determining appeals. To prepare, Bureaus and Offices should consider Presidential priorities (border wall; oil, gas and coal production; multiple use of public lands; infrastructure; jobs), and anticipate deep cuts (10% or more). Bureaus and Offices should be prepared to propose efficiencies and cost-saving strategies (co-locations, shared services etc.) and identify programs that can be shut down completely.

Meetings will be scheduled for late Friday, Feb. 24, and for Saturday, Feb. 25, for Bureaus and Offices to discuss proposed appeals with Departmental senior leadership. Acting Assistant Secretaries, Acting Bureau Directors and Bureau Budget Officers, along with senior political leaders for program Assistant Secretary offices should plan to be available.

Thank you for your attention to this important matter. Please let us know if you have any questions. Olivia

Subject: Close Hold -- OMB FY 2018 Passback Expected Friday
Date: Tuesday, February 21, 2017 12:00:14 PM

We are already scheduled for a pre-brief tomorrow at 10. Please bring appropriate tables, scenarios, etc. (We are also hearing from AS-FWP channels about funding levels with a -10% reduction, though from the 2016 level). We have already invested considerable effort and thinking into developing these budget scenarios at these levels if required so that Jim as acting Director has a lot of background already.

Note expected timeline for meetings with DOI either Friday afternoon or sometime Saturday.

Jim and I just talked -- we will confirm tomorrow but we're probably not going to have lots of time/opportunity to respond so may be just reaching out to individual ADs. That is one of the reasons we sat down with the ADs as a group earlier in January.

See you tomorrow at 10.

Steve

If you can bring copies of

the comp table
scenario tables
the AD worksheets

Thanks

This is a heads up that OMB plans to provide the FY 2018 passback to the Department on Friday, Feb. 24, with appeals due back to OMB on Monday, Feb. 27, close of business. The Office of Budget will provide guidance to the Bureau Budget Officers for determining appeals. To prepare, Bureaus and Offices should consider Presidential priorities (border wall; oil, gas and coal production; multiple use of public lands; infrastructure; jobs), and anticipate deep cuts (10% or more). Bureaus and Offices should be prepared to propose efficiencies and cost-saving strategies (co-locations, shared services etc.) and identify programs that can be shut down completely.

Meetings will be scheduled for late Friday, Feb. 24, and for Saturday, Feb. 25, for Bureaus and Offices to discuss proposed appeals with Departmental senior leadership. Acting Assistant Secretaries, Acting Bureau Directors and Bureau Budget Officers, along with senior political leaders for program Assistant Secretary offices should plan to be available.

Thank you for your attention to this important matter. Please let us know if you have any questions. Olivia

Chris,
Kim just sent this email to us. It sounds fairly daunting with a short turn around. I'll start gathering information and start preparing a scenario and possible strategies if our fire program is cut 10% or more. I will be sure to identify the cut we've takend this FY because of the risk based.

Thx

Chris - Do you want me to kick a note out, and/or organize calls, to the coordinators asking them to describe, in one page or less, what the world as they see it would look like at a -10% while considering some of the suggestions in the note from the Department? I don't think the recent workforce plans addressed a reduction of that nature.

This is a heads up that OMB plans to provide the FY 2018 passback to the Department on Friday, Feb. 24, with appeals due back to OMB on Monday, Feb. 27, close of business. The Office of Budget will provide guidance to the Bureau Budget Officers for determining appeals. To prepare, Bureaus and Offices should consider Presidential priorities (border wall; oil, gas and coal production; multiple use of public lands; infrastructure; jobs), and anticipate deep cuts (10% or more). Bureaus and Offices should be prepared to propose efficiencies and cost-saving strategies (co-locations, shared services etc.) and identify programs that can be shut down completely.

Meetings will be scheduled for late Friday, Feb. 24, and for Saturday, Feb. 25, for Bureaus and Offices to discuss proposed appeals with Departmental senior leadership. Acting Assistant Secretaries, Acting Bureau Directors and Bureau Budget Officers, along with senior political leaders for program Assistant Secretary offices should plan to be available.

Thank you for your attention to this important matter. Please let us know if you have any questions. Olivia

Just wanted to clarify something on this - I spoke with Charisa earlier today but have had an ongoing discussion with SOL-excuse me if I am repeating myself Charisa...

We still do not know what will be proposed for new wall, fence etc. Regardless of what is proposed it is highly likely that DHS will invoke their waiver authority since this is the only way that work could proceed right away. If they do use the waiver there will be no NEPA, ESA, NHPA, refuge permits etc. required for work to begin. I know that the Secretary's office has been inquiring about things that may impede construction - I have gotten this question on several occasions and told them a waiver is very likely and we would not be in our usual role in environmental review.

I am around all week - let me know if you have any questions on this.

I just spoke with SOL; their concern was that we had referenced "a BO" as an example of something that could cause an impediment. We had perhaps used that example to represent the broader concept of identifying any critical issues that would require a conversation; we understand that under a waiver, we would not be issuing BOs.

Fish and Wildlife and Parks

Fish and Wildlife and Parks

Current Operations

- Secretarial event on deferred maintenance/backlog, August 25
- NPS
  - Revocation of Director's Order #100, *Resource Stewardship for the 21st Century,* week of August 14
  - Revocation of NPS Policy Memo 11-03, *Disposable Plastic Water Bottle Recycling and Reduction,* week of August 14
  - Eclipse viewing on the MIB roof with a NPS ranger, August 21 (1:17pm begins/2:42 maximum/4:01 ends)
- FWS
  - Wildlife Hunting and Heritage Council teleconference, August 30
  - Release of 2016 National Survey of Fishing, Hunting and Wildlife-Associated Recreation, late August

Fish and Wildlife and Parks

30-60 Day Objectives and Policy Outlook

- FWS
  - *Federal Register* notice stating import permits can be issued for African elephant trophy animals taken in Zimbabwe on or after January 21, 2016, through 2017, August.
  - Authorization of imports of wild and wild-managed lions from South Africa taken in 2017-2019, August.
  - 6-month extension of Final Determination on the Proposed Endangered Status for Texas Hornshell, August
  - National Wildlife Refuge Week, October 8-14, 2017.
- NPS
  - Release of Great Smoky Mountains National Park fire report, late August/early September
  - Golden Gate National Recreation Area Dog Walking Rule, under review by ASFWP
  - Glen Canyon National Recreation Area Off-Road Vehicle Proposed Rule, FR publication, August
  - U.S. Semiquincentennial (250th) Anniversary Commission establishment, September

Fish and Wildlife and Parks

Major Events and Travel

- Deputy Secretary David Bernhardt
  - Visit to Yellowstone National Park, August 17
- Acting Assistant Secretary Todd Willens
  - Visit to San Antonio Missions National Historical Park, Lyndon B. Johnson National Historical Park, August 15
  - Speak at American Wildlife Conservation Partners, San Antonio, Texas, August 16
- Deputy Assistant Secretary Aurelia Skipwith
  - Attend and speak at Wild Horses and Burro event, Salt Lake City, Utah, August 22-25
- FWS Principal Deputy Director Greg Sheehan
  - Attend FWS leadership meeting in MIB/NoVa, August 15-16
  - Visit to Cape Romaine National Wildlife Refuge, South Carolina, with Representative Turner and Chairman Bishop, August 20-22
- Acting NPS Director Mike Reynolds
  - Attend solar eclipse events at Homestead National Monument of America, Nebraska, August 21
- Eclipse events at NPS and FWS sites across the United States, August 21

SLIDE 1

Secretarial event on deferred maintenance/backlog, August 25

- Great Smoky Mountains National Park, Tennessee; and Blue Ridge Parkway, North Carolina.
- Park visit with hike.
- Morning and afternoon press events.

NATIONAL PARK SERVICE

Revocation of Director's Order #100, *Resource Stewardship for the 21st Century,* week of August 14

- During the week of August 14, the acting NPS director will revoke National Park Service (NPS) Director's Order # 100, *Resource Stewardship for the 21st Century*, which was signed December 20, 2016.
- The stated goal of Order #100 was to guide the NPS in taking the necessary actions to support resource stewardship to fulfill its mission in the 21st century.
- Secretary Zinke is leading a new, comprehensive initiative to identify Departmental priorities and to reorganize the Department for the next hundred years. The Department is working with all of the bureaus and offices, including the NPS, on this initiative. NPS Director's Order #100 is, therefore, already obsolete.
- Revoking this policy statement will eliminate confusion among the public and NPS employees about current NPS policy.

Revocation of NPS Policy Memo 11-03, *Disposable Plastic Water Bottle Recycling and Reduction,* week of August 14

- During the week of August 14, the acting NPS director will revoke NPS Director's Policy Memorandum 11-03 (*Disposable Plastic Water Bottle Recycling and Reduction*), which was signed on December 14, 2011.
- The Policy Memorandum stated that the use of disposable plastic water bottles had a greater environmental impact than the use of tap water and refillable bottles. It went on to say, however:

  > The issues surrounding plastic bottles are complex. Banning the sale of water bottles in national parks has great symbolism but runs counter to our healthy food initiative as it eliminates the healthiest choice for bottled drinks, leaving sugary drinks as a primary alternative. A ban could pose challenges for diabetics and others with health issues who come to a park expecting bottled water to be readily available. For parks without access to running water, filling stations for reusable bottles are impractical. A ban could affect visitor safety; proper hydration is key to planning a safe two-hour hike or a multi-day backcountry excursion. Even reasonably priced reusable water bottles may be out of reach for some visitors, especially those with large families.

- Secretary Zinke acknowledges the potential negative effects of banning the sale of plastic water bottles in the parks and believes the issue warrants further review. Revoking this policy memorandum will ensure that all facets of the issue are fully explored.
- This revocation is effective immediately and will be implemented throughout all parks.

Eclipse viewing on the MIB roof with a NPS ranger, August 21 (1:17pm begins/2:42 maximum/4:01 ends)

- The NPS will host an eclipse event at the Main Interior Building on Monday, August 21. NPS rangers will lead the viewing session on the roof (two sections) of the building. The eclipse begins in Washington, DC, at 1:17 pm, maximum eclipse (85 percent) at 2:42 pm, and ends at 4:01 pm.
- The NPS will provide eclipse viewing glasses for all participants.
- Accommodations are being arranged if attendance exceeds the capacity of the roof.

FISH AND WILDLIFE SERVICE

Wildlife Hunting and Heritage Conservation Council teleconference, August 30

- The Wildlife and Hunting Heritage Conservation Council is an official advisory group established under the Federal Advisory Committee Act. It advises the Secretary of the Interior and the Secretary of Agriculture on wildlife and habitat conservation, and recreational hunting issues.
- The Council is also responsible to help implement the Recreational Hunting and Wildlife Conservation Plan - A Ten Year Plan for Implementation (Executive Order 13443), which was developed in 2008.
- The Council works to assist the federal government in promoting hunting opportunities and the management of game species and their habitats.
- The Council consists of 18 members, appointed by the Secretary of the Interior and the Secretary of Agriculture, plus seven ex officio members, who represent the Association of Fish and Wildlife Agencies and six federal agencies: U.S. Fish and Wildlife Service; Bureau of Land Management; National Park Service; U.S. Forest Service; Natural Resources Conservation Service; and Farm Service Agency.
- On August 30, the Council will hold a teleconference to discuss how best to implement Secretarial Order 3347, to increase outdoor recreation opportunities and asking federal bureaus and agencies to identify areas where recreational hunting can be expanded.

Release of 2016 National Survey of Fishing, Hunting and Wildlife-Associated Recreation, late August

- In August, FWS will release preliminary results of the 2016 National Survey of Fishing, Hunting and Wildlife-Associated Recreation.
- The survey, conducted every five years since 1955 in partnership with state wildlife agencies and the Census Bureau, surveyed more than 7,000 households nationwide. Participants were given detailed interviews about their participation and expenditures in

2016 related to hunting, angling, wildlife watching and other wildlife-associated recreational pursuits.

- Release of the preliminary report is eagerly awaited by the conservation community and the outdoor recreation industry, because of the detailed snapshot it provides of public engagement with wildlife and the outdoors.
- A final, more detailed national report will be issued in January 2018. Significant media and congressional interest is also expected. Outreach is planned.

SLIDE TWO

FISH AND WILDLIFE SERVICE

***Federal Register* notice stating import permits can be issued for African elephant trophy animals taken in Zimbabwe on or after January 21, 2016, through 2017, August.**

- At the end of August, FWS plans to publish in the *Federal Register* a change to the permitting status for imports of African elephant trophies from Zimbabwe.
- In 2014 and 2015, FWS was unable to determine that the hunting programs and subsequent imports of African elephant trophies from Zimbabwe met criteria under ESA regulations, so FWS could not authorize the issuance of import permits.
- After receiving information from Zimbabwe on a number of substantial improvements to their management program and elephant conservation efforts, FWS has determined that taking of African elephant trophy animals in Zimbabwe on or after January 21, 2016 (the date that Zimbabwe's new management plan was officially adopted) through 2017 would enhance the survival of African elephants, and import permits can be issued for these trophies.
- Planned outreach includes a news release, comprehensive FAQs and social media.

Authorization of imports of wild and wild-managed lions from South Africa taken in 2017-2019, August.

- In August, FWS will announce that after reviewing updated information, it will again authorize imports of wild and wild-managed lions from South Africa taken during 2017-2019.
- In 2016, FWS listed the lion in eastern and southern Africa as threatened under the ESA.
- FWS contacted each of the countries within this region that have conducted trophy lion hunts in the past few years to obtain information on the country's lion population, management of lions, and how sport hunting has contributed to survival of the species.
- FWS then authorized the import of wild and wild managed lion sport-hunted trophies in 2016.
- Outreach in the form of a blog is planned.

6-month extension of Final Determination on the Proposed Endangered Status for Texas Hornshell, August

- The FWS will publish a six-month extension on the final determination to list the Texas hornshell as an endangered species. The Texas hornshell is a freshwater mussel in New Mexico, Texas, and Mexico that was proposed as an endangered species on August 10, 2016.
- In May 2017, the comment period was reopened in May 2017 in order to hold public hearings. They were held in Laredo, Texas, and Carlsbad, New Mexico, on June 13 and 15, 2017.
- The FWS has coordinated repeatedly with Customs and Border Protections and the International Boundary and Water Commission regarding effects on upcoming projects,

including a potential border wall. Customs and Border Protection has indicated that direct impacts to the hornshell from the types of wall construction as have done in the past would be unlikely because the hornshells occur in the river where construction is not possible.

- Candidate Conservation Agreements and Candidate Conservation Agreements with Assurances have been developed, and we anticipate that a number of affected landowners will sign up

National Wildlife Refuge Week, October 8-14, 2017.

- In early September, FWS will announce National Wildlife Refuge Week, which will take place October 8-14 2017.
- Refuge Week is an annual celebration of the nation's wildlife conservation heritage and the national wildlife refuges that protect it.
- The timing provides notice for print and online media to announce the annual celebration and regional events for the public to plan ahead, as well as for the regions and refuges to begin preparing additional promotional information.
- Outreach, including a press release, is planned.

NATIONAL PARK SERVICE

Release of Great Smoky Mountains National Park fire report, late August/early September

- The Chimney Tops 2 Fire was the largest fire in the history of the Great Smoky Mountains National Park.
- The National Park Service established an independent fire review team that has completed a Significant Wildland Fire Review report, which is one part of the effort to understand the full story of the fire both inside the park and beyond park boundaries. This report will support the broader effort among federal, state and local to understand the fire through the ongoing *Sevier County Fires After Action Review (AAR).*
- The fire review team focused on the portion of the Chimney Tops 2 fire that burned within the boundaries of Great Smoky Mountains National Park. The fire review is not an investigation, but it is intended to help us understand what happened and how we can prevent it from happening again. The review report does not cover the response to Sevier County fires, but it will be part of the broader effort to understand the full scope of what happened on November 23. A separate process will be used for reviewing the larger response effort by all agencies in the Sevier County area. A date has not been scheduled for that work, but discussions are underway.
- Briefings for the Acting Assistant Secretary for Fish and Wildlife and Parks, the Deputy Secretary and the Secretary are being scheduled prior to the release of the final report.

Golden Gate National Recreation Area Dog Walking Rule, under review by ASFWP

- Following the release of the Final Environmental Impact Statement on the Dog Management Plan at the Golden Gate National Recreation Area in December 2016, the NPS learned that a former employee used a personal email account to communicate with outside parties, and did not forward those communications to a government e-mail account.
- In January 2017, the NPS commissioned an independent review panel of three government officials from non-NPS federal agencies (OEPC, the Office of Surface Mining Reclamation and Enforcement, and the Bureau of Land Management) with expertise in environmental planning, rulemaking and National Environmental Policy Act procedures to review this use of personal email. They were asked to evaluate and report on how these emails may have impacted the planning, rulemaking process, and environmental impact study, and make recommendations on how best to proceed given the significant body of work to date – including thousands of comments and more than a decade of analysis. Both CEQ and OIG declined to participate in the review.
- The review panel was given access to all records and information associated with the planning, rulemaking and environmental review conducted on the Dog Management Plan. The NPS has received the report from the team and briefed Acting Assistant Secretary Willens. Following more than ten years of public engagement, including more than 4,100 comments, and investment in a process intended to balance the needs of all park users, the findings of this independent review team will help the NPS determine the best path forward to meet the needs of all park visitors at Golden Gate NRA.

Glen Canyon National Recreation Area Off-Road Vehicle Proposed Rule, FR publication, August

- The National Park Service has prepared a proposed rule governing off-road vehicle use at Glen Canyon National Recreation Area. The NPS is required to publish a special regulation pursuant to the terms of a court-approved 2008 Settlement Agreement. The rule would require a special use permit to operate a motor vehicle off-road in selected locations and designate routes and areas where motor vehicles may be used off-road. The rule would establish management prescriptions for off-road vehicle (ORV) use, including speed limits and quiet hours. The rule would allow the Superintendent to implement other closures or restrictions to maintain visitor safety, protect resources, and meet management objectives. The rule would allow certain types of ORVs on some paved and unpaved roads.
- The rule would comply with the terms of a 2008 Settlement Agreement between the NPS and Friends of the Earth, the National Parks Conservation Association, and Wildlands CPR, which required the NPS to develop an environmental impact statement and a special regulation for ORV use at the Recreation Area. This rule would conclude a 7-year planning process by implementing the preferred alternative in the January 2017 ORV Management Plan/Final Environmental Impact Statement.

- The rule may be somewhat controversial. ORV user groups are likely to oppose any closures of existing routes and areas. Utah counties strongly favor vehicle access and local users have vocalized opposition to any limitations on ORV use. During alternatives development, public meetings were well attended by ORV enthusiasts. Environmental organizations oppose continued ORV use.
- The proposed rule has been reviewed and surnamed by ASFWP and is currently with the Office of the Executive Secretariat for final DOI review and approval.

U.S. Semiquincentennial (250th) Anniversary Commission establishment, September

- Public Law 114-196 established the United States Semiquincentennial Commission to "plan, encourage, develop, and coordinate the commemoration of the history of the United States leading up to the 250th anniversary of the founding of the United States." The Secretary of the Interior serves as an ex officio member to the Commission.
- This law directs the Secretary of the Interior to undertake a study of actions that could be taken to further preserve and develop historic sites and battlefields to ensure that appropriate observances and exhibits may be held during the 250th commemoration. The Secretary is to submit a report containing the results of the study to the Commission. The law also instructs the Commission to use the Secretary's study to develop a report with recommendations to the President and Congress within two years of its formation.
- The Secretary is directed to competitively seek a nonprofit partner who will provide financial and administrative support and serve as the secretariat to the Commission. The National Park Service is assisting with this effort.
- Brian Pavlik is the point of contact for the Commission until the Secretary appoints his representative.

The Long Report – October 18, 2017

In addition to participating in scheduled meetings and handling immediate requests for advice from FWS, I expect to work on the following:

Within two weeks:

- Provide ongoing legal support on FWS's ITDS ACE implementation.
  - Attended COAC meeting Oct 6
  - Working on update for Rick (with Sheila)
- [redacted]
- Reviewed Indian Arts & Crafts Act language on "investigation" and compare to other statutes LE provisions
  - Met with Dominic Malone on the draft amendment (Sept 15)
  - ~~Worked through Dominic's revisions & suggestions~~
  - ~~Walked through reward account/fund language with General Law (Tony Irish)~~
  - Submitted final language to Dominic – awaiting to hear if any further action items
- MOUs
  - Caribbean Wildlife Enforcement Network (CaribWEN) MOU (with Russ)
    - Reviewed updated version circulated Oct 3
  - CBP's National Targeting Center for FWS-OLE
    - Reviewed draft from CBP & provided comments to FWS-OLE
    - Waiting for edits/comments from FWS-OLE – pinged Phil for his edits/comments
- RTPs
  - Crow Tribe: assigned May 31 ~~– talked to Kim about edits (Sept. 7 & 11) – working on final edits – reviewed with Ben & Kim (Sept 28)~~
    - Submitted updated draft to DIA Oct 12
  - Navajo: assigned June 6 talked to Kim about edits (Sept 7 & 11) – working on final edits – reviewed with Ben & Kim (Sept 28)
    - Generally researched abrogation
    - Submitted updated draft Oct 3
  - Three Affiliated Tribes Nation: assigned Oct 2 – working on 1st draft
- [redacted]
- [redacted]
- Litigation support to ENRD appellate for *Obendorfer v. United States* (9th Cir.) – Defendant's reply received – awaiting moot court date
  - 9th Circuit put on calendar for oral arguments in February 2018

- Reviewing Chief's Directives – (on hold b/c no SAC-INV)
  - retirement credentials – 1st edits done & returned to OLE (July 28) – no update
  - vehicle pursuits – returned comments & edits to OLE (Aug 7) – no update
- Met with Elinor on forfeiture sales issue (July 12)
  - Editing response paper; found new documentation (SOL documents and CAFRA legislative history) to support arguments
  - ~~Meeting~~ Discussed with Elinor ~~again to discuss her white paper (TBD)~~ Oct 16
  - Agreed with Elinor to table
- Briefing paper on *Ziglar v. Abbasi* with Roland – assigned July 26
  - *Abbasi* to be discussed at next LE Practice Group meeting (date TBD)
- Responded to GAO Questions (Aug 8)
  - Responded to final follow-up (Sept. 12)
- NAFTA negotiations with Joan – assigned Aug 1
  - Continue to provide feedback on wildlife trafficking & other environmental language
  - ~~Round 4 in DC (week of Oct 9)~~
- Civil penalties & back fees issue – working on briefing for OLE (assigned Aug 10) & talked to Kim (Sept 7)
  - Initial research complete – working on first draft
- Received inquiry from CA Dept. Fish & Wildlife attorneys on ivory law/rules in relation to new CA state law on ivory
  - ~~Worked through questions (w/Russ) and developed draft talking points~~
  - ~~Had call Sept 29~~
  - Developing draft white paper on ESA § 6(f) in relation to preemption
  - Received follow-up questions
- ~~Will attend inaugural call for SOL NEPA working group (Oct 11)~~ Done

Within 4-6 weeks:

- Continue drafting Part 14 regulations. Working with Sheila on developing a first draft
- Finalizing response to comments on proposed Part 12 regulations. Revamping work on Part 12 regs with Nada

Ongoing/Future:

- Continue discussions on proposed CBP/Canada cargo pre-clearance program. – No new update from CBP

I am unaware of any projects that I won't complete.

Privileged and Confidential: Attorney-Client Communication and Attorney Work Product

(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP(b)(5) DPP(b)(5) DPP	Reviewing BJC comments
(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP	Comments sent 9/29
Fur Bearer ESA sec 7/CITES litigation, review of the Administrative Record	Mid-Nov; certify deadline 12/15

Over 4-weeks:

Item	Due Date
Nationwide Pesticide consultation; ~~possible response to DowAg's letter;~~ compliance with settlement agreement deadlines; assist w/ FOIA response.	Ongoing
Review draft EA for resident Canada geese Agricultural Depredation Order	Comments to FWS 6/20
Recovery Plan implementation litigation risk analysis	ASAP

Litigation items awaiting result

Item	Date
Tamarisk Beetle Case (CBD v. Vilsak); Assisting Nancy Brown-Kobil, FWS providing APHIS recovery tasks	Order issued 8/1, no FWS violation, responding to motion to order injunction
Hymas litigation; Assisting Sherry Kaswell	hearing 9/14

SL/Telework:

AL: 12/26-29

NCTC:

November 3, Friday, HCP Course, SOL session

Workload Report – October 18, 2017

Joan Goldfarb

Assignments for This Week

1) Regulations
   - When Helen has ~~D~~developed updated legal review checklist for listing determinations, review
   - ~~Talk to Sarah about making sure that the Species Assessment Forms provide the Service's analysis on the legal standards~~
   - Finish consolidated advice on Required Determinations and E.O. 13771, and communicate with PPM, Exec., FWS, and RO attorneys; address government-to-government issue
     - Respond to government-to-government relations email
   - Respond to Dana J. question about cumulative threats
   - Clear out any DTS items
   - Complete review of eastern puma delisting rule, especially taxonomy aspect
   - Preliminary review of where-listed corrections
   - Research case law on APA Section 705 (potentially for grizzly)
   - Research case law on "amending" or "revising" a final rule
   - Review BOEM comments on NOAA false killer whale CH asap

2) Litigation
   - Bi-State Sage-Grouse—Review draft SJ brief; respond to DOJ questions
   - WGL Wolf—Keep apprised of fees negotiations
   - Bonecave harvestman—Work with Frank Lupo and FWS on developing responses to plaintiffs' and intervenors' briefs
   - For dusky gopher frog attorney at DOJ, work with FWS to identify any examples of instances where the agency thought about what "habitat" means, and concluded that it is more broad than just places where the species currently lives or could live
   - Critical Habitat/Adverse Mod Case
     - Keep apprised of Deputy Solicitor efforts to get NOAA concurrence on draft settlement letter and send letter to DOJ, as well as DOJ efforts to negotiate with plaintiffs; ~~After policy team weighs in, incorporate any revisions to draft settlement letter and finalize upon SOL and ASFWP approval;~~ review FWS settlement memo as needed
   - Grizzly—Continue to work with Tyson and FWS on next steps in light of WGL wolf and CY decisions; provide assistance on no-appeal recommendation as needed
   - Continue to work with SOL and FWS on negotiating fees in WGL wolf case
   - Read eagle decision
   - Continue to work with Veronica on 3 Sierra amphibians challenge to "new" approach to reg-flex analysis for CH determination
   - Gunnison Sage-Grouse—Get direction on settlement request letter; if policy team concur with settlement, finalize letter; synthesize conversations and documents from FWS and NOAA/OGC regarding affirmative and responsive arguments on SPR Policy, coordinate with FWS and NOAA, and to provide outline to DOJ
   - Rio Grande Cutthroat Trout—Talk to Dana J. about record question.

- Keep any settlement memos and agreements moving through the office

3) Legislation—

4) FOIA and Administrative Record Issues
   - Check on parameters of referral process to evaluate whether an agreement with NMFS privilege review for SPR Policy documents would exceed those parameters; review draft of agreement with NMFS

5) Listing Program and Policy Work
   - ~~Review FWS summary of approach to evaluating taxonomic information~~
   - ~~Provide any final advice as the terminology draft gets distributed more widely within FWS/SOL; participate in next team call~~
   - Nail down DOJ position on SPR Policy vacatur
   - Participate in any follow-up on Kristen Floom's question about req'd determinations
   - Talk to Sarah Quamme about SOL review protocol and best package tracking document
   - Complete review of Helen's summary of the WGL wolf decision and send her comments
   - Review Maggie's draft Commerce Clause memo
   - Work with FWS on understanding SAT approach to evaluating rangewide status of species

6) Regular Tracking Activities
   - Compile listing and critical habitat deadline information for weekly report
   - Work with Parks on improved case tracking; get input from Ben and Peg
   - Participate in next ESA Litigation and Attorneys ~~e~~Calls (10/19 and 11/9~~/14~~)

7) Administrative Tasks
   - Prepare for performance review
   - Work with Helen to figure out which cases/matters would be good candidates for her to work on and which would be good for both of us to work on
   - Work with Ben and Helen on better process for the three of us to keep up with litigation deadlines

Assignments for Next 4 Weeks

1) Review Branch Practice Area Chart and Provide Comments

2) Regulations
   - Review December batch of 12-month findings

~~2)~~3) Listing Program and Policy Work
   - Complete review and surname of response to petition to remove blanket 4(d) rule
   - Classification handbook – review relevant case law to assist in advising FWS
   - Hear back from Helen about FWS approach to DPS issues we discussed; have conversation with FWS/Q →

- (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
- Check in with FWS/Kelly about putting a list of state contacts on their website, to address concerns expressed over the new petition regs.
- Participate in monthly SAT/SSA Calls
- (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
- (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
- Work with FWS to Identify Actual Deadlines for Next 6 Months
- (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP

~~3)~~4) Litigation
- Review Patagonia silk moth NOI and brief Ben on its contents
- ~~Review northern long-eared bat reply brief (due 9/8)~~

~~4)~~5) FOIA and Administrative Record Issues
- Deliberative process privilege scope (review draft standard of practice from FWS)
- Read New FOIA/DPP Amendments
- Work with DOJ and Tyson Santos on improved attorneys' fees reporting

Pending Assignments for Beyond Next 4 Weeks

1) Listing Program and Policy Work
   - (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
   - Complete Review of Revised FWS Petition Guidance
   - Participate in FIT and SAT meetings
   - (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP
2) Sage-Grouse
   - Continue discussions of state role in SSA
3) Develop concept paper on incorporating conflict management or ADR into the process for developing and implementing the work plan
   - Set up meeting with FWS to brainstorm
4) (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
5) Tracking Activities, Back-Up Review
6) Coordinate with FWS Regarding Tracking of EAJA Fees
7) Take FWS webinar on Species Status Assessment process
8) Continue developing Section 4 Reference Library for Google Docs

Speights Weekly Activity Report for Week of October 18, 2017

Main Activities this week:

1. [redacted]

2. Golden conure deadline litigation: Draft Agreement shared with Plaintiff. Awaiting comments and then will share final draft with Service/Ben/Peg/Rick. Review motion for two-week extension of answer.

3. USARK Litigation: Service will agree to pay 150K if plaintiff moves to dismiss with prejudice the remaining claim on merits of rule. Review/edit draft settlement agreement.

4. [redacted]

5. [redacted]

~~3.~~6. [redacted]

~~4.~~7. Assist Joan in counseling Service regarding FR notices for not warranted petition findings. Research related case law to inform guidance.

8. Continue to add ESA decisions to law digest.

9. Work on updated checklist for solicitor review of ESA listing and critical habitat packages.

~~5.~~10. Conduct mandatory DOI Learn training.

~~6. Review draft answer and serve as point of contact for S7 litigation assigned to SE SOL while lead attorney is away for 2 weeks. Black Warrior Riverkeeper, Inc. v. USACE (N.D. Ala.)(Black Creek Mine).~~

Anticipated Priority Work Items for the Next 4 Weeks and Longer Term

1. Counsel the Service related to the litigation for failure to make a 12-month finding on the golden conure.

~~1.~~ Counsel Service in response to complaint for negative 90-day finding on petition to list *homo sapiens* as endangered or threatened species under ESA. ~~Trying to confirm whether US Attorney's office was properly served. If not, will move to dismiss.~~

2. Work on updated checklist for solicitor review of ESA listing and critical habitat packages.
3. (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
4. Provide final legal review of direct final rule outlining technical corrections for listed domestic species.
5. USARK litigation briefing of merits and resolution of fees related to claims challenging Service's interpretation of transport provision.
6. Provide legal summaries of decisions issued involving ESA Section 4 challenges. Seek to update and maintain list of Section 4 decisions by topic.
7. Research issues related to Service's responsibility to translate and consider data submitted in another language via APA notice and comment procedures.

- Hawaii Longline Permit litigation - Received court order requesting supplemental briefing on whether any deference is owed to FWS's agency practice of issuing special purpose permits to cover incidental take of migratory birds under the MBTA. The Court also asks whether any deference is owed to the suspended M-Opinion explaining how the MBTA prohibits incidental take of migratory birds and its summary of past agency practice.
    - Reviewing supplemental brief and advising DoJ and the Department on the contents of the brief. Elevated review to SOL management for review of arguments relating to withdrawn M-Opinion on whether MBTA applies to incidental take.
    - Requested 14-day filing extension to provide time for proper briefing of management. DoJ motion granted by court.
    - Tracked down all FWS special purpose permits issued that authorize incidental take.
    - SOL management provided review.
    - Supplemental brief filed on May 22nd.
    - Supplemental briefing complete. Awaiting court decision.
    - Provided DoJ with an update on the status of SOL review of the temporarily-suspended M-Opinion.

- Pygmy-owl/SPR Litigation – District court issued opinion vacating and remanding the Services' SPR Policy and pygmy-owl no warranted finding, which relied on the Policy.

- Draft Motion for Reconsideration filed on April 26th. Requested that court clarify the scope of vacatur order.
- Plaintiffs filed response late on May 15th. Reviewed response and provided comments to DoJ.
- Our reply filed on May 22nd. Requested update of weekly litigation report if necessary.
- Awaiting court's ruling on our motion for reconsideration.

- EWAC v. Zinke – Status report delivered to the court on August 27th. This case challenging the basis for FWS's incidental take permit regulation under the Eagle Act was voluntarily stayed by Plaintiff shortly after it was filed two years ago. Parties agreed to continue the stay.

- Barred Owl Permit litigation – 9th Circuit oral argument. Assisted DoJ in prepping for argument and moot court on September 28th. Oral argument occurred on October 5th. DoJ reported that it went very well. Awaiting opinion.

- ANILCA – Assuming lead role for issues related to this statute in the Branch. Coordinating with Jason Waanders in the National Parks Branch. Alaska Regional Office is putting together background reading material for me to get up to speed. Reviewing materials. Ongoing.

- Tribal ESA Training in Phoenix (October) – Will present on issues related to FOIA and sharing of information during consultations between Indian tribes and the federal government in the context of the ESA and also the Eagle Act and MBTA. Updated presentation from previous training. Developed presentation on MBTA/Eagle Act/ Lacey Act to fill in for another presenter who can't make the training. Delivered both presentations on Thursday and worked with tribal representatives on addressing their information confidentiality concerns.

- NEPA Working Group (SOL) – Attended inaugural session reviewing new Executive and Secretarial Orders on streamlining of NEPA for infrastructure projects. Will develop future topic on issues that come up for NEPA analysis of incidental take permits under ESA and the Eagle Act.

Next Three Months:

- Wind projects – Continuing to advise R1 and HQ on issues relating to review of several wind-energy projects in the region, including reviewing EA for the Horse Butte and other wind project. FWS webinar with the wind industry and other stakeholders to discuss updating the fatality prediction model with new data.
- CFPO Litigation – Draft appeal recommendation after court rules on motion for reconsideration.
- (b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP(b)(5) DPP
- *Public Citizen v. Trump* – DPW F&W Branch lead for reviewing plaintiffs' summary judgement motion in this case challenging the so-called Two-for-One Executive Order. Developed and submitted response to DoJ request for examples of categories of statutes that DPW's client agencies implement. Briefing complete. May need to provide DOJ future updates regarding any development of rulemakings affected by the challenged Executive Order.
- Reviewing ANILCA materials provided by the Alaska Regional Office. Gaining sufficient knowledge to represent the Branch of Fish and Wildlife on any ANILCA-related issues.
- Tribal Consultation on Grizzly Bear DPS delisting – Advising Denver Regional Office on engaging in adequate tribal consultation that complies with Departmental policy and applicable case law.

All,

The article below provide the mo t current tate of play on FY 2018 appropriation action

Spending caps deal unlikely before Thanksgiving

By Sarah Ferris

11/08/2017 04:16 PM EDT

Congressional leaders have little hope of striking a deal on spending caps before Thanksgiving, almost certainly setting up another stopgap extension in December, according to top appropriators and aides.

Leaders in both chambers have spent weeks haggling over how much to spend on military and domestic programs in fiscal 2018. But with the GOP's tax overhaul plans taking center stage, a deal on the overarching funding levels isn't expected to be unveiled until late November at the earliest, putting the federal government on track for a stopgap spending bill that could last weeks, if not months.

Rep. Tom Cole (R-Okla.) said Wednesday that GOP leaders told him not to expect topline spending levels until after Congress' weeklong break this month, dashing hopes of passing a comprehensive appropriations bill before government funding runs out on Dec. 8.

A multi-week continuing resolution is "likely," as House Speaker Paul Ryan aims now for a deal no later than New Year's to fund the government for the remainder of the fiscal year, Cole said.

But a senior Republican aide privy to the process said even that time frame is unlikely, instead predicting a February omnibus as the best-case scenario.

"No way 2-3 weeks is realistic," the aide said by email, adding that it would take at least a month, "more likely two," to hammer out final spending details between the House and Senate.

That process includes several weeks of subcommittee negotiations, drafting and scoring the actual bill, and allotting floor time in both chambers. Final leadership-level negotiations — on highly controversial items like a "DREAMers" deal, border wall funding and Obamacare subsidies — could drag out the process even longer, the GOP aide warned.

The topline spending levels are long overdue for House and Senate appropriators, who have been forced to hit pause on negotiating their individual spending bills as they await a leadership-level deal.

"Sometimes it's lost on some people that the appropriators just can't waive a magic wand and create a product. This does take time," Steve Womack (R-Ark.) — a contender to be the House Budget Committee's next chairman — said Wednesday afternoon, adding that "we're at" the point when spending leaders need to have topline numbers to stand a chance at negotiating a funding package by the Dec. 8 deadline.

Most subcommittee leaders say they haven't been able to start internal negotiations at all without knowing their total spending level. And the Senate Appropriations Committee has yet to introduce or mark up four of its 12 annual funding bills.

As chairman of the Homeland Security subcommittee, Sen. John Boozman (R-Ark.) is in charge of one of those lagging measures. Without caps, he said, his panel can't begin formal discussions with House lawmakers.

"People, even though we haven't marked up, have been talking," Boozman said. "But it's a challenge."

Rep. Mike Simpson (R-Idaho), who confirmed the delayed timeline, said he's increasingly anxious as days dwindle in the countdown to government shutdown.

"We could get this done by Dec. 8 if we have a number," Simpson said Tuesday night. "But apparently we're not going to get a number until after Thanksgiving."

This year's talks are particularly divisive because Congress must also repeal sequester-era funding caps to boost spending.

FYI. According to the article below we're looking ahead to another CR after December 8 and the prognosis for a Senate Interior mark up is not clear.

APPROPRIATIONS

Another CR likely as Hill focuses on tax overhaul

George Cahlink, E&E News reporter
Published: Tuesday, November 14, 2017

With tax overhaul efforts dominating Capitol Hill, lawmakers say it's likely Congress will need to pass stopgap spending legislation to avoid a government shutdown next month.

House and Senate appropriators say they do not have enough time to negotiate a final bicameral deal before current funding expires Dec. 8. Those lawmakers suggest the most l kely scenario is that Congress would pass another short-term funding measure, known as a continuing resolution (CR).

A stopgap would mean the Energy, Interior and Commerce departments and other agencies, among them U.S. EPA, would continue to be funded at fiscal 2017 spending levels until a final accord is hammered out.

A CR would also avoid a government shutdown, a scenario neither Democrats nor Republicans favor. Several appropriators said they believe a CR running through the end of December would get bipartisan backing.

However, lawmakers did not rule out the stopgap spilling into 2018, if House and Senate leaders cannot soon agree on overall spending levels. They said they are aiming to have all 12 of the annual spending bills in the final omnibus package.

Debate on tax reform is delaying negotiations on a year-end spending accord. Wikipedia (money); Ed Uthman/Flickr (Capitol)

"I think right now we are focusing on taxes, and then probably after that we'll focus on the approps," said Sen. Richard Shelby (R-Ala.), a senior appropriator, who said he prefers a short-term CR through the end of the year rather than pushing off the work into 2018.

Sen. Dick Durbin (D-Ill.), another senior appropriator, agreed that spending talks are being crowded out. "With the Trump tax plan front and center and taking up all of our attention and time for the next several weeks, we are going to be bumping up against the Dec. 8 deadline," he said.

Asked about the fiscal 2018 Interior-EPA bill, Sen. Lisa Murkowski (R-Alaska), head of the Senate Appropriations subcommittee with jurisdiction over the agencies, said she's ready to mark it up but concedes it faces long odds. Her bill is one of only four yet to surface in the Senate.

Murkowski agreed the focus on taxes has taken time away from spending work. "It kind of feels l ke [taxes are the priority]. I don't like to say that out loud because we worked so hard to make sure as a subcommittee we had done our work, and we really have. Now, we need to be able to finish up that last step, which is going to markup," she said last week.

Fiscal 2018 spending bills

Bill	House	Senate
Agriculture	$20 billion	$20.5 billion
Commerce, Justice, Science	$54 billion	$53.4 billion
Defense	$658.1 billion	NA*
Energy and Water	$37.6 billion	$38.4 billion
Financial Services	$20.2 billion	NA*
Homeland Security	$44.3 billion	NA*
Interior and Environment	$31.4 billion	NA*
Labor, HHS and Education	$156 billion	$164.1 billion
Legislative Branch	$3.6 billion	$3.2 billion
Military Construction and Veterans Affairs	$88.8 billion	$88.9 billion
State and Foreign Operations	$47.4 billion	$51.2 billion
Transportation, HUD	$56.5 billion	$60.1 billion

* The bill has yet to be released.
Source: Senate and House appropriations committees

If the Senate Interior-EPA bill is not marked up — the most likely scenario — the subcommittee will likely do what it has done in years past and release a summary of its bill ahead of talks with the House, which passed its version over the summer.

Negotiations ongoing

Already, aides in both chambers have been meeting for weeks to lay the groundwork for a spending deal, but they say leaders need to give them final discretionary caps for the year.

Rep. Tom Cole (R-Okla.), a senior appropriator, said last week Republican leaders have told him that those numbers won't come until after the Thanksgiving break. "I don't see how [Dec. 8] is possible. The thinking likely is the end of the year is the best we can do," he added.

As it stands now, the House is pushing for increases in defense spending at the expense of domestic accounts. The Senate has called for more modest military increases with largely flat funding for domestic programs.

Any deal would also likely have to take into account existing caps under sequestration. Lawmakers will almost certainly have to raise them to account for discretionary spending that will likely top $1 trillion.

Sen. Roy Blunt (R-Mo.), a senior appropriator who also serves in Senate GOP leadership, said he hopes for spending directions "sooner rather than later" to allow more spending across the government.

"I think we all believe there'll be more money available on both the defense side and the non-defense side," Blunt told reporters last week. "I can assure you that the appropriations staff is looking at several different ways to spend different amounts of money depending on how that higher agreement comes down."

Storm aid

Other questions remain before a final spending deal can advance.

Lawmakers increasingly expect the final spending package to include billions of dollars in new aid for Texas, Florida, California and Puerto Rico in the wake of storms and wildfires.

A proposal from the White House could come this week. Puerto Rico Gov. Ricardo Rosselló and Resident Commissioner Jenniffer González-Colón said they were requesting a $94 billion package for the island.

Puerto Rico Gov. Ricardo Rosselló and Resident Commissioner Jenniffer González Colón yesterday requested billions of dollars in new aid for the island. @RepJenniffer/Twitter

"What we are asking for is equal treatment," the governor said during a Washington news conference. Other states have also requested tens of billions of dollars from Congress.

House conservatives have said they will insist any additional storm aid, on top of the two emergency spending packages that passed this fall, be offset by spending cuts elsewhere, and they appear to have the attention of White House's budget chief, Mick Mulvaney.

The administration recently requested billions of dollars more be added to any fiscal 2018 spending deal for the Defense Department as well as funding for building a wall along the U.S.-Mexico border.

Democrats, for their part, say they also want to address the children of illegal immigrants, known as dreamers, who potentially face a spring deadline for deportation.

Senate Majority Whip John Cornyn (R-Texas) — who has led efforts to secure more emergency aid for the Lone Star State and has questioned the need for offsets — said he worries a push for too much additional spending or extraneous provisions could sink the omnibus.

"My worry is if we load that up too much, we will wind up with a [long-term] continuing resolution that would be a disaster in more ways than one," he said.

Reporter Nick Sobczyk contributed.

All,

This email requests your assistance to review two Department FY 2019 Budget documents by 5pm on Thursday, January 18th.

The release of the President's FY 2019 budget will occur on Monday, February 5, 2018. We are in the final stages of preparing the 2019 Budget in Brief (BIB).

The BIB is a summary of Interior's 2019 budget request. The attached Overview and Legislative Proposals chapters showcase Administration and Department priorities and shape the message for how these priorities will be communicated to Congress and the public. Your input on potential "fatal flaws" in these chapters is important.

Send any suggested edits in Microsoft Word track changes or hard copy to Jason Freihage (jason_freihage@ios.doi.gov) and copy Denise Flanagan (Denise_Flanagan@ios.doi.gov) and Adrianne Moss (Adrianne_Moss@ios.doi.gov) by 5pm on Thursday, January 18th.

Please email or call me at my desk 202-208-5309 or my cell 202-316-1383 if you have questions. Thanks so much for your help! Denise

2019 Legislative Proposals

The 2019 President's budget includes legislative proposals affecting revenues, and available budget authority that require action by the Congress. These proposals provide an important contribution to the Administration's policy goals, including achieving a fair return to the American taxpayer from the sale of Federal resources.

Public Lands Infrastructure Initiative – The Administration proposes legislation for a new Public Lands Infrastructure Fund to help pay for repairs and improvements in national parks, national wildlife refuges, and Bureau of Indian Education schools, which have over $12 billion in deferred maintenance. The Fund would be derived from 50 percent of incremental energy leasing receipts over 2018 Budget projections not otherwise allocated for other purposes. As the Department works to expand energy development on Federal lands and waters, this initiative has the potential to generate up to $18 billion over ten years for national parks, national wildlife refuges, and BIE schools. The 2019 budget baseline assumes $6.8 billion is available for the Fund over ten years.

Bureau of Reclamation Title Transfer – The Administration proposes legislation to better facilitate title transfer of BOR facilities to non-Federal entities when the transfers are beneficial to all parties. This proposal would allow local water managers to make their own decisions to improve water management at the local level, while allowing BOR to focus management efforts on projects with a greater Federal nexus.

Redirect Southern Nevada Public Land Management Act Account Balances – The budget proposes to cancel $230 million in unobligated balances from the Southern Nevada Public Land Management Act program over a three year period. The SNPLMA was enacted in 1998 authorizing the Bureau of Land Management to sell specified public lands around Las Vegas, Nevada, and retain the proceeds for capital improvements and various conservation, restoration, and recreational purposes in the State. The budget proposes to redirect a portion of the program balances to the Treasury where they are available for broader taxpayer use. The SNPLMA program is not proposed for elimination and viable conservation efforts will continue to be supported with remaining available funds.

Reauthorize the Federal Land Transaction Facilitation Act – The budget assumes permanent reauthorization of FLTFA's land sale authority, allowing Interior to dispose of lands with low conservation value and use the proceeds to acquire lands with high conservation values, consistent with the original FLTFA mandate. Also consistent with the prior authorization, 80 percent of the receipts would be spent in the same state in which the funds were generated. The FLTFA authority provides Interior with the flexibility to manage its land portfolio to improve

access to public lands or to acquire inholdings within existing Interior areas, in a constrained budget environment. This proposal is estimated to result in savings of $36.0 million over ten years.

Recreation Fee Program – The budget proposes to permanently reauthorize the Federal Lands Recreation Enhancement Act, which expires in September 2018. As a precaution, the budget also proposes appropriations language to provide a two-year extension of FLREA through September 2021. The revenues collected by Interior from these recreation fees—approximately $316 million in FY 2017—are an important source of funding for land management operations, maintenance and improvements to recreation facilities on public lands.

Termination of EPAct Geothermal Payments to Counties – The budget proposes to restore the disposition of Federal geothermal leasing revenues to the historical formula of 50 percent to the states and 50 percent to the U.S. Treasury by repealing Section 224(b) of the Energy Policy Act of 2005. That section changed the distribution to direct 50 percent to states, 25 percent to counties, and 25 percent to the Federal government. The 25 percent share for county payments is inconsistent with longstanding revenue-sharing practices and reduces the return to Federal taxpayers from geothermal leases on Federal lands. The proposal is estimated to result in savings of $40.0 million over ten years.

Land and Water Conservation Fund – The LWCF receipts authorization expires at the end of fiscal year 2018 and the Administration will review options for reauthorization.

Wildland Fire Suppression Disaster Cap Adjustment – The budget responsibly funds 100 percent of the rolling 10-year average cost for wildfire suppression in the Departments of Agriculture and the Interior within discretionary budget caps, and proposes a separate annual cap adjustment for wildfire suppression operations. Similar to how unanticipated funding needs for other natural disasters are addressed, the budget proposes a separate Fund that will include an annual cap adjustment appropriation for wildfire suppression to ensure adequate resources are available to fight wildland fires, protect communities, and safeguard human life during the most severe wildland fire seasons. The cap proposal is described separately in the President's Budget Appendix and will be managed by the Office of Management and Budget on behalf of both Departments.

"Across the Department we are striking the right balance to protect our greatest treasures and also generate the revenue and energy our country needs"

Secretary Ryan Zinke, December 28, 2017

The 2019 budget for the Department of the Interior features targeted investments to further the Administration's objectives to prioritize American interests by leading in American Energy Dominance, restoring public access to public lands, and strengthening the economy through infrastructure investment, regulatory relief, and fiscal responsibility.

The Department of the Interior conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper. The Department's 2019 budget reflects the Administration's commitment to strike the right balance of development and conservation of America's resources to advance important national objectives.

The Department of the Interior strives to fulfill a vision to:

- *Promote energy and minerals dominance* to create jobs for Americans, insulate our Nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so our people can be healthier, more fully enjoy the wonderful features of their Federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our Nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian Tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

The Department's 2019 budget request supports the Administration's broader economic goals to manage Federal spending with restraint. Interior's fiscal 2019 budget request is $11.3 billion in current authority, $2.2 billion or 16 percent below the 2018 Continuing Resolution level. The budget also proposes to transfer $111 million from the Department of Defense for commitments to the Republic of Palau, increasing Interior's total 2019 budget to $11.4 billion in current authority.

A major component of the 2019 budget is the Public Lands Infrastructure legislative proposal which would provide up to $18.0 billion over 10 years to address Interior's deferred maintenance backlog in the national parks, national wildlife refuges, and BIE schools. The investment in the Department's infrastructure would be funded by energy leasing revenues. The proposal complements the

President's national infrastructure investment proposal and recognizes the strategic importance of a long-term investment in America's treasures.

----------INSERT TEXT BOX----------

SECRETARY RYAN ZINKE'S TOP TEN PRIORITIES:

- Create a conservation stewardship legacy second only to Teddy Roosevelt
- Sustainably develop our energy and natural resources
- Restore trust and be a good neighbor
- Ensuring sovereignty means something
- Increase revenues to support DOI and national interests
- Protect our people and the border
- Strike a regulatory balance
- Modernize our infrastructure
- Reorganize DOI for the next 100 years
- Achieve our goals and lead our team forward

----------END TEXT BOX----------

GENERATING REVENUE AND UTILIZING NATURAL RESOURCES

GROWING AMERICA'S ECONOMY

The Department of the Interior touches American lives in more ways than any other Federal agency – managing one-fifth of the land in the United States and delivering water and power in the West. Across Interior's diverse mission, this budget emphasizes the Department's crucial role in promoting economic growth for America. The Department is responsible for the oversight and management of America's public lands, national parks, mineral resources, grazing lands, and more. As the stewards of this public trust, the Department manages America's public lands for multiple uses, ensuring these lands are available for recreation, job growth and creation, and responsible energy development. It is this balanced stewardship of resources that drives job opportunities and economic growth.

America's lands hold tremendous job-creating assets. In 2017, Interior's energy, mineral, grazing, and forestry activities resulted in $9.6 billion in revenue to the American people, including direct revenue payments to states, Tribes, and local communities. Interior supported $254 billion in economic benefit. In addition, direct grants and payments to states, Tribes, and local communities provided an estimated $10 billion in economic benefit. Interior also supports the economy by eliminating unnecessary and burdensome Federal regulatory requirements. For example, in 2017, Interior initiated 21 deregulatory actions, saving the taxpayer $3.8 billion over time.

The Department creates jobs across America through our national parks and outdoor recreation opportunities at Interior's spectacular and unique public lands and cultural sites. Visitors to our parks spend more than $18.4 billion in local gateway communities, supporting approximately 318,000 jobs and contributing $34.9 billion into the national economy, according to the *2016 National Park Service Visitor Spending Effects Report*.

Interior also plays an important role in the Administration's key economic objective to strengthen

America's infrastructure. Interior manages thousands of real property assets with responsibility for reviewing and approving permits for access to Interior lands, and ensuring necessary environmental compliance including upfront and formal consultations to avoid conflicts over protected species.

Interior is one of 13 Federal agencies designated to implement Title 41 of the Fixing America's Surface Transportation Act—commonly referred to as FAST-41—designed to improve the timeliness, predictability, and transparency of the Federal environmental review and authorization process for specific infrastructure projects.

The Department is a member of the Federal Permitting Improvement Steering Council, which includes senior leadership of Federal agencies responsible for conducting reviews and permitting for covered projects. FAST-41 is designed to improve consultation and coordination among government agencies; increase transparency and timeliness of Federal authorizations and environmental reviews; and increase accountability through consultation and reporting on projects. There are currently 26 FAST-41 infrastructure projects, of which the Department is the lead agency for eight, and a coordinating or cooperating agency for 14 projects. Dovetailing with the FAST-41 effort, in 2017, Secretarial Order 3355 was issued to enhance and modernize the Federal environmental review process and restore the purpose of the National Environmental Protection Act requirements to support the adoption of sound decisions based on an informed understanding of environmental consequences, rather than the generation of vast amounts of expensive and time consuming paperwork.

The 2019 budget maintains support for Interior programs that play a critical role in encouraging national infrastructure development. The 2019 budget includes $98.8 million for Fish and Wildlife Service up-front planning and consultation activities to avoid species conflicts. This request enables FWS to meet legal consultation requirements and avoid logjams that could delay infrastructure projects and associated economic benefits. The budget also includes $48.3 million for the Bureau of Land Management's cadastral program, which maps and surveys lands and resources and is needed to permit rights of way and other infrastructure project requirements in a timely fashion. An example of the projects this work supports is the recently approved Boardman to Hemingway Transmission Line Project which will provide additional electrical capacity between the Pacific Northwest and the Intermountain West regions. The project will improve the Nation's energy infrastructure, strengthen energy reliability, create nearly 500 jobs, and boost local economies.

ADVANCING ENERGY DOMINANCE

Interior plays a significant role in the Administration's objective to achieve America's energy dominance. Interior supports the Administration's efforts to unlock America's domestic energy resources to advance both the Nation's economic and national security position by reducing dependence on other nations for energy. The Department of the Interior is working to improve access to public lands, remove unnecessary and burdensome roadblocks, and smartly balance conservation while facilitating exploration and development of America's energy opportunities.

----------INSERT TEXT BOX----------

UNLEASHING AMERICA'S ENERGY POTENTIAL

In response to Executive Order 13783, Interior released the report *"Review of the Department of the Interior Actions that Potentially Burden Domestic Energy,"* identifying agency actions that potentially burden the development or use of domestically produced energy resources. This review guided real action to foster multiple-use, which includes energy development under reasonable regulations. Among the actions identified in the review that are underway or accomplished:

- Launch development of a new 5-year offshore energy development program.
- Repeal the 2016 moratorium on new Federal coal leases.
- Rescind the Hydraulic Fracturing on Federal and Indian Lands Rule.
- Review the Waste Prevention, Production Subject to Royalties, and Resource Conservation Rule.
- Address unnecessarily lengthy NEPA reviews that delay projects.
- Re-examine compensatory mitigation policies unnecessarily burdening permitting and authorization timelines.
- Address systematic delays in the onshore leasing program and permitting process.
- Develop recommendations to improve the application of the Endangered Species Act to avoid abuses that unnecessarily increase costs and delay projects.

At the same time, Secretary Zinke signed Secretarial Order 3358 establishing an Executive Committee for Expedited Permitting at Interior. The ECEP includes the Deputy Secretary and Assistant Secretarial leadership from across the Department, with the charge to improve Interior's energy permitting in service to the American public and Indian Country. The Committee will evaluate and recommend energy-permitting policies to better meet the Nation's energy needs, facilitate identification of energy rights-of-way corridors on Federal lands for expedited review of energy infrastructure projects, improve interagency communication regarding energy permitting, and identify best practices and reforms.

----------END TEXT BOX----------

Interior is the steward and manager of America's natural resources including oil, gas, coal, and hydropower and supports installation of renewable energy sources. American energy resources create jobs and generate significant revenue for the U.S. Treasury, states and local economies. With policies that foster growth and local input, the Department provides opportunities for new jobs and revenue for Federal, state, local, and tribal governments. Interior disbursements from energy and minerals production on Federal and American Indian lands and offshore areas totaled $7.11 billion in fiscal year 2017, an increase of nearly $1 billion over the previous year. Of this, states received $1.44 billion, tribal governments and individual mineral rights owners received nearly $676 million, and $950 million went into the Land and Water Conservation Fund to support outdoor recreation opportunities and conservation.

Onshore, the Department oversees more than 480 million acres of lands, and 700 million acres of subsurface minerals, mostly through BLM and Office of Surface Mining Reclamation and Enforcement. Offshore, the Department oversees oil, gas, and wind development for 1.7 billion acres of the Outer Continental Shelf through the Bureau of Ocean Energy Management and the Bureau of Safety and Environmental Enforcement.

This budget proposes $792.0 million in current and permanent funding for energy related programs across the Department, an increase of $42.9 million from 2018. Interior's 2019 budget continues to support an "all-of-the-above" energy development strategy, increasing funding for onshore and offshore oil and gas, expanding coal activities, and sustaining the current pace of renewable energy development.

A large portion of Interior's energy development activities occur on the Outer Continental Shelf. The 2019 request includes support from offsetting collections, and supports a total offshore energy development and safety program of $379.2 million, an increase of $32.5 million compared to 2018.

The budget includes a total of $179.3 million for offshore oil, gas and renewable energy development activities in BOEM, an increase of $10.9 million from 2018. This funding reflects the importance of offshore production to America's economic and energy security. It includes a $9.4 million increase for BOEM to prepare a leasing program for FY 2019-2024. In January 2018, Secretary Zinke announced the Draft Proposed National Outer Continental Shelf Oil and Gas Leasing Program for 2019-2024.

The request for BOEM also includes $20.7 million for Renewable Energy activities. In 2017, the Department announced completion of the Nation's seventh competitive lease sale for renewable wind energy in Federal waters. A Wind Energy Area of 122,405 acres offshore Kitty Hawk, North Carolina, received the high bid of $9,066,650. Although the energy production from the sale will depend on the size of the project developed, the lease area is estimated to generate potentially enough energy to power more than 500,000 homes.

Integral to a strong offshore energy program are the continued efforts of BSEE, whose staff in the Gulf of Mexico and Alaska are dedicated to maintaining a strong offshore safety culture. The 2019 budget includes $199.9 million for BSEE's programs to evaluate emerging offshore technologies, improve safety, conduct training, and maintain up-to-date policies, standards and guidelines. BSEE also manages an oil spill response and preparedness program as well as compliance programs governing offshore oil, gas and mineral operations. The 2019 request is a $21.7 million increase from the 2018 CR level, reflective of a one-time rescission of prior year balances in FY 2017.

Onshore, the budget includes $173.8 million in current and mandatory funding for the BLM oil and gas management program which in 2017, generated $348.9 million in combined onshore oil and gas lease sales. A recent U.S. Geological Survey and BLM assessment of undiscovered, technically recoverable onshore oil and gas resources in Alaska indicates higher than previously estimated oil and gas resource potential largely due to new insights on two geological formations in the National Petroleum Reserve – Alaska area. The assessment estimates a mean of 8.7 billion barrels of oil and 25 trillion cubic feet of gas of potential resources in the area, a significant increase from a 2010 assessment, which estimated a mean of 1.5 billion barrels of oil. In 2017, USGS, BLM, and BOEM conducted these assessments in compliance with Secretarial Order 3352 and as part of a program directed at estimating the undiscovered, technically recoverable oil and gas resources of priority petroleum basins in the United States. The next USGS assessments to be announced are for the Alaska 1002 Area and the area west of the NPR-A.

The 2019 budget includes $137.2 million in appropriated funds for oil and gas management and oversight, including leasing, permitting, and inspections. Increases are requested to expand areas

available for leasing, expedite permitting, and improve various aspects of the program management. The funding will also help to facilitate infrastructure needs to move oil and gas to refineries and end-users with resources to expedite the processing of BLM rights-of-way.

The budget includes $19.0 million for the BLM coal management program which will continue to focus on reducing processing times, simplify the lease application process, and improve the timeliness to complete lease sale fair market value determinations. In 2017, the Administration ended a Federal coal leasing moratorium, recognizing the Federal coal leasing program supplies roughly 40 percent of the coal produced in the United States. In 2017, the BLM approved a $22 million coal lease on the Green Hollow tract in Utah, estimated to contain more than 55 million tons of recoverable, high-energy producing coal. Also in 2017, the Administration rescinded the Stream Protection Rule, which impacts surface coal mining operations.

The budget includes $16.0 million for BLM to support onshore Renewable Energy development. The BLM Renewable Energy Management program processes leasing and development applications for geothermal energy, rights-of way and leasing applications for wind and solar energy, and rights-of-way applications for transmission lines connecting to renewable energy-related projects. The BLM conducts full environmental reviews under the NEPA on all renewable energy projects proposed on BLM-administered public lands. The request aligns with anticipated BLM workload addressing near-term demand.

An important component of Interior's natural resource programs is the collection and disbursement of receipts from development. The 2019 budget includes $137.5 million for the Office of Natural Resources Revenue. In 2017, Secretary Zinke held the first meeting of the reestablished Royalty Policy Committee, which includes 20 members representing local, tribal, and state government, and other stakeholders. They will advise the Secretary on the fair market value and revenue collection from Federal and Indian mineral and energy leases, including renewable energy sources.

INCREASING NATURAL RESOURCE DEVELOPMENT

Interior manages a wealth of additional natural resource assets that require balanced stewardship and management. The BLM manages close to 65 million acres of forest and woodlands across 12 western states and Alaska in accordance with the multiple-use, sustained yield mandate of the Federal Land Policy and Management Act of 1976. The Bureau of Indian Affairs has a trust responsibility concerning the management of Indian forest lands by 313 Tribes across 18.3 million acres. The BIA works closely with the Tribes regarding land management decisions to help ensure resource sustainability, forest health, and continued economic development.

Interior is working together with other Federal partners to achieve a better balance of forest health and productivity in the Nation's timber-rich areas. Many of the Nation's forests and woodlands are increasingly overgrown and unhealthy, increasing the risk of catastrophic wildfire. Sharp declines in timber-related employment have devastated many rural communities. Increasing timber harvests can spur job growth and local economies in timber-rich and historically timber-dependent communities, including tribal communities; reduce fire risk; and help create healthier forests and woodlands for wildlife and to support a viable timber industry well into the future.

Maintaining healthy and productive forests requires active management. The 2019 budget includes $9.5 million for BLM's Public Domain Forestry program and $90.0 million for the Oregon and California grant lands. Both programs support jobs and local economies through timber and timber product sales. The programs also maintain and improve the productivity and resilience of forest and woodland ecosystems through sales and forest development projects such as density management and reforestation. In 2019, BLM will continue to implement efficiencies and prioritize Allowable Sale Quantity timber sale outputs in western Oregon.

----------INSERT TEXT BOX----------

HELPING TO PROTECT WORKING LANDSCAPES

In December 2017, the BLM initiated an environmental analyses of fuel breaks, fuels reduction and habitat restoration projects on sagebrush steppe rangelands in Idaho, Nevada, Oregon, Washington, Utah and California to ensure healthy, productive working landscapes and wildlife habitats. Region-wide analysis of impacts and cumulative effects will help the BLM streamline authorization of projects aimed at reducing the threat of wildfires and restoring degraded habitats.

Large-scale wildfires have become significantly more frequent throughout the western U.S. in recent years, particularly in sagebrush-steppe ecosystems. Wildfires have begun to exceed 100,000 acres on a regular basis, and areas are re-burning more often. Large and frequent fires often result in conversion of sagebrush to annual grasses like invasive cheatgrass, and native habitats cannot recover naturally.

Strategically sited fuel breaks can slow the progress of wildfires, allowing better firefighter safety and increased protection of human life and property, livestock forage and important ecological resources such as sage-grouse habitat. Treating invasive plants like cheatgrass and encroaching species like juniper further reduces the threat of catastrophic wildfire.

BLM has identified fire, invasive annual grasses and conifer encroachment as the most significant threats to sagebrush-steppe in the Great Basin. Focusing on these threats will also help the BLM protect working landscapes that contribute to healthy local economies.

----------END TEXT BOX----------

The BLM actively manages rangeland and grazing activities on public lands in the West which remain a vital part of local Western economies. The 2019 budget includes $82.1 million for the Rangeland Management program. The Rangeland Management Program focuses on efforts to maintain or improve public land health through monitoring and land health evaluations; administration of grazing use through permit renewals (largely 10-year permits); development of grazing systems and range improvements; grazing permit compliance inspections; management of permittee, allotment and resource data; and, management of invasive species and noxious weeds. The BLM manages approximately 17,950 livestock grazing permits and leases on the public lands.

The USGS is the Nation's leading source of expertise in earth and natural sciences and works closely with other Interior bureaus and state, local, tribal, and other Federal partners to help resource managers make informed decisions. The USGS focuses on core earth science and data used by land and resource managers not only within Interior and other Federal agencies, but also partners across the

world. The 2019 budget includes $859.6 million for USGS programs, to focus on core science activities including land and water resources, energy and minerals, mapping, ecosystems, invasive species, natural hazards, and maintains funding for the Landsat 9 ground system.

An example of the importance of the USGS work is its Mineral Resource program, which conducts assessments to identify critical minerals and estimate potential supplies. President Trump and Secretary Zinke signed Orders prioritizing the need to reduce America's dependence on foreign sources for critical mineral supplies, citing a recent USGS report examining 23 minerals the U.S. relies upon for manufacturing everything from batteries and computer chips to equipment used by our military. Secretary Zinke's Order directs Interior bureaus to identify a list of critical minerals, identify domestic sources, and streamline permitting to encourage domestic production of these critical minerals. The 2019 budget for the USGS includes a $10.0 million increase to support this Administration priority. With the additional funding, the USGS will accelerate the first nationwide geological and topographical survey of the United States in modern history to locate domestic critical mineral sources.

----------INSERT TEXT BOX----------

BREAKING AMERICA'S DEPENDENCE ON FOREIGN MINERALS

In response to the President's Executive Order on a *Federal Strategy to Ensure Secure and Reliable Supplies of Critical Minerals*, the Secretary directed the USGS to identify new sources of critical minerals by providing access to the most advanced geological and topographical surveys, and BLM and USGS to provide a list of minerals defined as "critical minerals," which will be coordinated with the Department of Defense. Ensuring the Nation has access to advanced topographic, geologic, and geophysical data will increase private-sector domestic exploration, production, and development of critical minerals to reduce dependence on foreign imports and improve the balance of trade, support job creation, preserve the Nation's innovation leadership, improve national security and enhance the technological superiority of the United States Armed Forces, a significant consumer of critical minerals.

"Right now the United States is almost completely reliant on foreign adversaries and competitors for many of the minerals that are deemed critical for our national and economic security. As both a former military commander and geologist, I know the risk this presents to our Nation," said Secretary Ryan Zinke. "The problem is we can't fix the problem if we don't know where the minerals are within our own borders. Other nations are far ahead of us with mapping of their mineral resources, leading to private sector investment overseas rather than right here at home. Creating a complete topographical and geographic survey of the United States is exactly the kind of task the USGS was created to do."

----------END TEXT BOX----------

CONSERVING OUR LAND AND WATER AND EXPANDING OUTDOOR ACCESS

Interior is the steward of America's public lands and cultural resources for the benefit of current and future generations. Among Secretary Zinke's top priorities for the Department are to create a conservation stewardship legacy second only to Teddy Roosevelt and to restore trust and be a good

neighbor to the states and local communities where Interior manages lands and resources. An important part of achieving these priorities has been the Secretary's efforts to increase public access to Interior's lands for sportsmen and other types of recreation, and strengthen Federal-state conservation efforts.

----------INSERT TEXT BOX----------

MAKING OUR PUBLIC LANDS MORE ACCESSIBLE FOR AMERICANS

As part of "National Hunting and Fishing Month," Secretary Zinke hosted a first-of-its-kind meeting with veteran service organizations to share experiences and ideas to make public lands more accessible to veterans with and without disabilities. The Hunting and Fishing Access for Veterans roundtable discussion hosted by Secretary Zinke included members of his leadership team. More than 20 veteran advocates participated, including many who specialize in hunting and fishing therapy for returning warriors.

Secretary Zinke told the group that, "Hunting and fishing present such an incredible healing opportunity for our veterans who return home with physical and emotional wounds. Unfortunately, many of our public lands are either inaccessible to individuals with various physical disabilities, or we just don't offer programs to encourage veterans to access and use them. I want these warriors to be able to return home from their service and enjoy the very lands they fought to protect. I want to make sure hunting and fishing on public lands is easily accessible and available. Hearing ideas from leaders in the veteran community about how to achieve this goal has given my team some much-needed insight as we move forward."

----------END TEXT BOX----------

Taking care of the resources we have rather than acquiring new Federal lands continues to be a top priority in the 2019 budget. The budget does not propose funding for new Federal land acquisition projects in 2019 and continues to focus resources on conservation stewardship and increased access for the public use and enjoyment of Interior's existing lands. The budget for land acquisition programs across the Department is $8.1 million, which includes the proposed cancellation of $25.0 million in prior year balances.

The 2019 budget includes $4.3 billion for operating programs in the three primary land management bureaus – NPS, FWS, and BLM. This funding supports the day to day management of the natural resources and public amenities of America's national parks, national wildlife refuges, and national conservation lands. This includes funding to support visitor services and safety, law enforcement, and maintenance of facilities. Operating funds also support the primary stewardship activities needed to carry out each of the bureau's unique resource stewardship missions. Early eradication and control of invasive species is an example of a core stewardship activity shared across the Department. The 2019 budget includes a total of $100.8 million for invasive species activities to address significant issues such as the spread of invasive mussels and Asian Carp.

Since taking office last year, Secretary Zinke has issued three Secretarial Orders to expand access to public lands and increase hunting, fishing, and recreation opportunities nationwide. Under Secretary Zinke's leadership, the Department opened public access to the Sabinoso Wilderness, which contains

some of the most pristine sportsmen opportunities in the country, expanded hunting and fishing access on 10 national wildlife refuges, successfully defended a mineral withdrawal near the Grand Canyon, and advocated for a mineral withdrawal north of Yellowstone.

Focusing on the future of America's national parks, national wildlife refuges, and BLM public lands, in 2017, Secretary Zinke established the Recreation Advisory Committee. The Committee will develop recommendations on policies and programs to expand and improve visitor infrastructure through public-private partnerships; implement sustainable operations embracing fair, efficient and convenient fee collection and strategic use of the collected fees; improve interpretation using technology; and create better tools and/or opportunities for Americans to discover their lands and waters. This Committee will consider new ideas to better leverage partnerships and technologies to ensure the magnificence of America's treasures into the future. Secretary Zinke also created the Hunting and Shooting Sports Conservation Council in order to more effectively gather advice and recommendations from experts on existing and proposed policies and authorities with regard to wildlife and habitat conservation.

The Land and Water Conservation Fund matching grants provided to states, and through states to local governments, support the acquisition and development of public outdoor recreation areas and facilities all across the Nation. The 2019 budget reflects a shift in funding for NPS State Assistance grants from discretionary to mandatory funding. In prior years, annual discretionary appropriations derived from the LWCF provided the main source of funding for this program. Starting in 2009, discretionary LWCF appropriations for the State Assistance program were supplemented by revenues from certain oil and gas leases in the Gulf of Mexico, as authorized by Section 105 of the Gulf of Mexico Energy Security Act. Under existing law, this permanent funding for NPS State Assistance grants is expected to reach $89 million in 2019.

Ensuring the availability of water is central to the Department's resource stewardship mission and is vitally important to communities across the West. The 2019 budget includes $1.0 billion for Bureau of Reclamation water resource programs to ensure millions of customers continue to receive the water and power essential for daily life, healthy local economies, and land management. Reclamation is the largest supplier and manager of water in the 17 western states and the Nation's second largest producer of hydroelectric power. Reclamation manages water for agricultural, municipal and industrial uses, and provides flood risk reduction and recreation for millions of people.

The 2019 budget continues support for Reclamation's efforts to address America's water reliability and availability. Together with the USGS, Reclamation partners with states and local communities to assess future water supply and demand in key basins. This effort is part of Reclamation's suite of WaterSMART programs. The 2019 budget includes funding to continue the WaterSMART water conservation grants and Title XVI water recycling reuse grants that support local innovation efforts to stretch water supplies.

The 2019 budget includes funding to support innovation by incentivizing research through Reclamation's Water and Power Technology Prize Competitions. Reclamation is using prize competitions to harness the innovative capacity of the American public and private sectors to solve research and development problems related to Reclamation's mission and stakeholder interests. Reclamation prize competitions target difficult scientific and technological problems related to infrastructure, water availability, and environmental compliance that affect water delivery and hydropower generation. The budget also includes $4.5 million for Reclamation to pro-actively stop the spread of invasive

mussels in the West, including preventing the spread of zebra and quagga mussels into the Columbia River Basin.

Secretary Zinke has set another important priority for our land and water management programs -- to restore trust and be a good neighbor to the communities surrounding Interior's lands. Being a good neighbor means honoring Interior's commitments to localities and working closely with and listening to state and local partners in land management decisions. An example of this commitment is the establishment and implementation of the recommendations of a Sage-Grouse Review Team to complement state efforts to improve Greater Sage-Grouse conservation and economic development on public lands. The team of representatives from 11 states with sage-grouse habitat as well as officials across Interior and the U.S. Forest Service issued recommendations to strengthen communication and collaboration between states and the Federal government to conserve and protect sage-grouse and their habitat, while also ensuring conservation efforts do not impede local economic opportunities.

The 2019 budget maintains an important commitment to neighboring communities, by including $396.9 million in the discretionary request for Payments in Lieu of Taxes program. PILT payments offset the loss in property tax revenue for communities with significant Federal lands in their jurisdiction. The 2019 funding level for PILT is consistent with the 2018 President's Request and ensures continuation of this important program supporting rural America.

FULFILLING OUR TRUST AND INSULAR RESPONSIBILITIES

The Department of the Interior upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationship between the Federal government and federally recognized Tribes, American Indians and Alaskan Natives. The U.S. also has important relationships with Native Hawaiians, and the affiliated insular areas including the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Interior administers and oversees Federal assistance to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

Interior's programs maintain strong and important relationships with Native and insular communities, helping to promote efficient and effective governance and support nation-building and self-determination. These programs deliver community services, restore tribal homelands, fulfill commitments related to water and other resource rights, execute fiduciary trust responsibilities, support the stewardship of energy and other natural resources, create economic opportunity, and expand access to education.

The Department provides services directly, or through contracts, grants or compacts, to 567 federally recognized Tribes with a service population of nearly two million American Indians and Alaska Natives. The Department and its bureaus and offices play an important leadership role in carrying out the Federal trust responsibility to Tribes and individual Indians. The 2019 budget addresses Federal responsibilities and tribal needs related to education, social services, infrastructure, and stewardship of land, water, and other natural resources. The budget prioritizes support for programs that serve the broadest service population and proposes reductions in initiatives that are more narrowly focused. Throughout Interior's bureaus and offices, the 2019 budget supports the Administration's commitment to help empower tribal and insular communities to improve quality of life, create educational and economic opportunities, promote efficient and effective governance, preserve and foster

cultural heritage, and steward natural resources.

The President's budget maintains the Administration's strong support for the principle of tribal self-determination, and efforts to strengthen tribal communities across Indian Country. The budget calls for full funding for Contract Support Costs and Tribal Grant Support Costs that Tribes incur from managing Federal Indian programs.

The budget includes $350.1 million for BIA Public Safety and Justice programs. The programs provide law enforcement, corrections, and courts services to Indian communities. The programs safeguard life and property, enforce laws, maintain justice and order, and ensure that detained American Indian offenders are held in safe, secure, and humane environments. The BIA also provides technical assistance to Tribes to amend tribal legal codes to reflect provisions in the Tribal Law and Order Act of 2010 and the Violence Against Women Act as reauthorized.

BIA also undertakes initiatives to promote the development of resilient tribal communities. The 2019 budget includes $2.5 million to address the opioid crisis, which has been particularly devastating in Indian Country. This initiative would expand BIA capacity to address the increase in drug-related activities through interdiction programs to reduce drug use, distribution, and drug related crime. The initiative will support BIA participation in intra- and inter-agency initiatives that support opioid and substance abuse prevention efforts. The BIA liaisons will align, leverage, and coordinate Federal efforts and resources to assist American Indian and Alaska Native communities in achieving their goals to reduce the supply of drugs, provide opioid addition prevention assistance, and otherwise combat the opioid crisis which the Trump Administration has identified as one of epic proportions and a priority to address.

The 2019 budget request includes $739.7 million to continue support for core Indian education programs, including formula funding and operation and maintenance funding for elementary and secondary schools, and support for post-secondary programs. The request prioritizes programs that support the Bureau of Indian Education's responsibilities to directly support educational services to Indian children at BIE schools.

The 2019 budget includes $172.4 million across the Department to honor Indian Water Settlement commitments. This includes $127.4 million in Reclamation and $45.0 million in BIA. The budget continues to meet Federal responsibilities outlined in enacted land and water rights claim settlements with Indian Tribes to ensure they have access to land and water to meet domestic, economic, and cultural needs. These settlements support infrastructure projects needed to improve the health and well-being of tribal members and their communities. The 2019 funding level proposed for BIA provides sufficient funding to meet imminent settlement dates, however, specific settlement funding levels for 2019 will depend on the outcome of Congressional action on the 2018 Appropriations.

The 2019 budget includes $3.0 million to implement a phased closure of the independent agency, the Office of Navajo Hopi Indian Relocation. As part of this phased closure, the Office of Special Trustee would assume responsibility for development of a detailed transition plan and the transfer of land management activities currently conducted by ONHIR to Interior in 2019. Interior will work with ONHIR to ensure a smooth transition of activities.

The 2019 budget for the Office of Insular Affairs focuses resources to support the most critical needs of insular communities—improving quality of life, creating economic opportunity, and promoting

efficient and effective governance. The proposed 2019 OIA budget is $718.8 million, with $84.1 million in current appropriations. The budget also includes $111.0 million in discretionary Department of Defense appropriations as a transfer to the Department of the Interior to support enactment of the 2010 Compact Review Agreement with Palau. The Compact is an important element of the Pacific national security strategy.

----------START TEXT BOX----------

COMPACT WITH PALAU

The United States and Palau governments signed the Palau Compact Review Agreement in 2010, which proposed continued U.S. financial assistance totaling $229 million through 2024. Until recently, funding for the pact has not been authorized by Congress. Beginning with 2010, subsequent Interior discretionary appropriations have included annual economic assistance to Palau of approximately $13.1 million a year for a total of $118.3 million in discretionary funding by the end of 2017. In 2017, Congress enacted the 2018 National Defense Authorization Act, which officially authorized the strategic agreement signed between the United States and Palau governments in 2010.

"Authorizing full funding for the agreement is an important element of the Pacific national security strategy to maintain stability in the Western Pacific Region and we look forward to continuing our work with Congress to get this job done. President Trump's strong support for the agreement, the Department's budget request, and Congress' support for it all point to the strategic importance of our U.S. Territories and the Freely Associated States." - Secretary Zinke, 12/13/2017

The 2019 President's Budget requests $111.0 million in the Department of Defense, to be transferred to the Department of the Interior, to fully fund the U.S. Government's remaining commitment to Palau. These funds are provided to assist the Government of Palau in its efforts to advance the well-being of its people and in recognition of the special relationship that exists between the United States and Palau, and its importance in the Nation's Pacific national security strategy.

----------END TEXT BOX----------

PROTECTING OUR PEOPLE AND THE BORDER

Inherent in Interior's management of public lands is the requirement to protect employees and visitors to those public lands. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices. The Department's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, national wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities; and address emergency needs.

----------START TEXT BOX----------

RESPONDING TO HURRICANE EMERGENCIES

In response to the devastation caused by Hurricanes Harvey, Irma and Maria during 2017, Interior deployed 560 employees on 31 Federal Emergency Management Agency mission assignments in the immediate response. When the flooding started during the Hurricane events, teams from the USGS risked their safety to deploy storm-tide sensors, helping partners at the Federal, state, and local levels track the storm and get a head start on their response. Hundreds of Interior law enforcement officers deployed to evacuate, prepare and respond to emergency needs in the hurricane zones.

Many Interior employees who were hurricane victims themselves helped to serve not only the immediate needs of Interior's mission, but even more importantly they also supported their communities. For example, on the island of Vieques, off the coast of Puerto Rico, FWS employees coordinated an airdrop of food and water for 4,600 residents, and the National Park Service served as points of distribution for FEMA supplies.

----------END TEXT BOX----------

A key component of Interior's land stewardship and public safety goals is management of wildland fire. The 2019 budget provides $388.1 million for wildfire suppression–the full 10-year average of suppression expenditures. This level of funding is projected to be sufficient to meet fire suppression needs in an average fire season without the risk of needing emergency transfers from other departmental accounts.

The budget responsibly funds 100 percent of the rolling 10-year average cost for wildfire suppression in the Departments of Agriculture and the Interior within discretionary budget caps, and proposes a separate annual cap adjustment for wildfire suppression operations. Similar to how unanticipated funding needs for other natural disasters are addressed, the budget proposes a separate fund that will include an annual cap adjustment appropriation for wildfire suppression to ensure adequate resources are available to fight wildland fires, protect communities, and safeguard human life during the most severe wildland fire seasons.

Devastating fires in California and Montana, and high-profile fires in Yosemite and Glacier National Parks have caught national headlines, however, millions of acres of other forest and grassland burned in 2017. As a result, Secretary Zinke directed Department of the Interior bureaus, park superintendents, and land managers at all levels to adopt more aggressive practices to prevent and combat the spread of catastrophic wildfires through robust fuels reduction and pre-suppression techniques.

There are over 12.5 million acres under Interior jurisdiction within 50 miles of the United States-Mexico border. More than 40 percent of the border, or 820 linear miles, is managed by Interior's land management agencies and the U.S. Forest Service. Interior is engaged with the Department of Homeland Security to increase security on the Southwest border, including 54 border miles on tribal lands, primarily made up of lands located on and managed by the Tohono O'odham Nation in Arizona. Currently, 305 miles, or 38 percent, of Interior border lands have a vehicle or pedestrian fence or wall. Interior's responsibilities include conservation of over 200 threatened and endangered species in the border region and over 500 species of migratory birds. Interior's investments are focused primarily on law enforcement and security; environmental coordination and land management on national wildlife refuges, national parks and BLM lands; protection of trust resources; and water resource management by Reclamation on the Lower Colorado. The budget includes $1.8 million to

expand the Department's Southwest Border Radio Demonstration Project. The project was developed in cooperation with BLM, NPS, FWS, and the U.S. Forest Service in the Southwest border region to address Inspector General-identified material deficiencies in the land mobile radio program and infrastructure.

Interior plays an important role in preparation for and addressing the aftermath of natural hazard events. The USGS provides scientific information to emergency responders, policy makers, and the public to reduce the risk of losses from a wide range of natural hazards, including earthquakes, floods, hurricanes, landslides, magnetic storms, tsunamis, volcanic eruptions, and wildfires. The 2019 budget includes $116.6 million for the USGS Natural Hazards programs to maintain important nation-wide monitoring networks that provide vital scientific information to emergency managers.

MODERNIZING OUR ORGANIZATION AND INFRASTRUCTURE FOR THE NEXT 100 YEARS

INFRASTRUCTURE MANAGEMENT

Interior manages an infrastructure asset portfolio with a replacement value exceeding $300 billion, ranging from elementary and secondary schools serving Indian children in the West, to highways and bridges serving the daily commuting needs of the Washington, D.C., metropolitan area. Most well-known, are Interior's iconic and unique national treasures that have priceless historical significance.

Many of these assets are deteriorating, with older assets becoming more expensive to repair and maintain in good condition. The FY 2019 budget launches Interior's new Public Lands Infrastructure Fund to help pay for repairs and improvement in national parks, national wildlife refuges, and BIE schools. The Department is taking action to increase revenue from energy leasing and development over 2018 budget projections and will keep for Department infrastructure needs 50 percent of additional revenue that is not otherwise allocated for other purposes. This would generate an estimated $6.8 billion over 10 years. As Interior works to expand energy development on Federal lands and waters, this initiative has the potential to generate up to $18 billion over ten years for national parks, national wildlife refuges, and BIE schools. This investment would significantly improve the Nation's most visible and visited public facilities that support a multi-billion dollar outdoor recreation economy. The other 50 percent of increased revenues would go to the Treasury supporting deficit reduction.

Interior owns approximately 43,000 buildings, 100,000 miles of road, and 80,000 structures–including dams, laboratories, employee housing, and irrigation and power infrastructure. Taking care of this significant asset portfolio is a persistent challenge. Interior's deferred maintenance backlog has grown to over $16 billion in 2017, of which over $11 billion belongs to the NPS. The 2019 budget for NPS includes $256.5 million in current funding for construction and deferred maintenance projects, an increase of $1.0 million from 2018. Construction and maintenance funding across the Department totals over $1.3 billion in 2018, excluding Reclamation.

Reclamation is responsible for roughly 40 percent of the value of Interior's structure portfolio, which includes dams, power plants, water pipelines and canals in the 17 western states. Maintenance of this significant infrastructure is funded through a combination of Federal appropriations, direct revenue, customer payments, and payments from other Federal agencies. The 2019 budget for Reclamation is over $1.0 billion, and includes $88.1 million for the Dam Safety Program, of which $66.5

million is requested to correct identified safety issues.

Transportation assets—such as roads and bridges—account for about half of the deferred maintenance backlog. The Congress provides for some transportation maintenance and repair through the Federal Lands Transportation Program funded by the Department of Transportation Highway Trust Fund. This will provide more than $300 million for Interior projects in 2019. The Department also funds transportation maintenance and repair through bureau operating and construction appropriations.

----------START TEXT BOX----------

ARLINGTON MEMORIAL BRIDGE REPAIRS ARE UNDERWAY

In December 2017, NPS announced a $227 million project to rehabilitate Arlington Memorial Bridge, a historic and critical transportation link in the Nation's capital. The project will save American taxpayers $35 million and 1.5 years of estimated construction time. The NPS, with the District of Columbia as co-signer, received a $90 million FASTLANE grant from the U.S. Department of Transportation. In order to complete the project in a single phase, the NPS will invest $107 million of its annual transportation and construction funds. A "design-build" contract – meaning the contractor will both design the work and conduct the repairs – will save money and accelerate the project's completion time.

----------END TEXT BOX----------

The budget includes $264.6 million for construction and maintenance funding within Indian Affairs. Within this total are targeted increases for resource management infrastructure, roads, and other construction and deferred maintenance programs. Projects address needs at dams and irrigation systems to improve delivery of water to aid economic development, as well as protect lives, resources, and property. The BIA has maintenance responsibility for approximately 27,900 miles of bureau-owned roads and 970 bridges. Other construction programs maintain regional and agency facilities at 127 locations where Indian programs are administered. In 2019, funding for education related construction is focused on facilities improvement and repair, and employee housing repair.

MANAGEMENT AND REFORMS

During the peak summer seasons, the Department of the Interior has nearly 70,000 employees in 2,400 locations across the United States, Puerto Rico, U.S. Territories, and Freely Associated States. Interior's varied mission, wide geographic presence, direct public service programs, and trust and stewardship responsibilities, make it a personnel intensive and field oriented agency. Interior's diverse staff works to protect and manage the Nation's natural resources and cultural heritage, provide scientific and other information about those resources, and provide services to American Indians, Alaskan Natives, and insular communities.

Secretary Zinke set some top management objectives to better achieve his goals and lead Interior's team forward – and implementation is underway. From day one, Secretary Zinke made improving the work experience a priority while at the Department. At the end of his first year, according to the *Partnership for Public Service's Best Places to Work* report, the numbers show progress toward that goal. In 2017, Interior moved from 11th place in the rankings to 9th place among all the large Federal agencies. Key to achieving improvement is the clear direction from Departmental leadership

there is zero tolerance for any type of workplace harassment. Recently released results from an anonymous Work Environment Survey at Interior show 35 percent of employees reported they were harassed or discriminated against in the preceding 12 months. In response, Interior is instilling a culture change through transparency and a zero-tolerance policy, swift personnel actions, clear management accountability and reporting procedures for harassing conduct, training, and action plans from all bureau and office heads across the Department.

Interior is also taking bold steps to better position itself for the next 100 years. In response to President Trump's Executive Order on a *Comprehensive Plan for Reorganizing the Executive Branch*, Secretary Zinke laid out a vision for a reorganized Department of the Interior which aligns regional boundaries within Interior to provide better coordination across the Department to improve mission delivery and focuses resources in the field. The 2019 budget includes a total of $17.5 million to start this effort. The budget also proposes additional shifts to better align functions within the Department and respond to Congressional direction related to the Office of the Special Trustee.

--------START TEXT BOX-------

DEPARTMENT WIDE REORGANIZATION PLAN

The Department of the Interior intends to establish scientifically based common regional boundaries for Interior's bureaus in FY 2018, and to further develop this approach in FY 2019. The goal is to improve overall operations, internal communication, customer service, and stakeholder engagement. Aligning geographic jurisdictions across Interior will enhance coordination of resource decisions and policies affecting ecosystems, and will simplify how citizens engage with the Department.

Organizing bureaus along common geographic lines, based on ecosystems, will allow for more integrated and better coordinated decision making across our bureaus. The Department will migrate to common regional boundaries, based primarily upon watershed features. For administrative simplicity, we plan to use county lines that most closely align to the watersheds.

Currently, Interior's bureaus have more than 40 distinct regions, each with their own geographic boundaries. This complicates coordination and hampers Interior's ability to get things done expeditiously. Having 13 common regions would help streamline the bureaucracy and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision.

The new regional boundaries currently under discussion, and subject to modification, are expected to have minimal budgetary impact and only change the maps included in the detailed budget justification material. The BIA has initiated discussions with Indian Country and will continue with tribal consultations regarding any proposed adjustments to the regional field organizations serving the Bureau of Indian Affairs and Bureau of Indian Education. The regions would operate virtually and gradually shift toward consolidated and collocated office space as leases expire. In 2019, the budget includes funding to support the establishment of joint offices in Alaska and California, and shift some FWS, BLM and Reclamation headquarters staff to the West.

--------END TEXT BOX-------

[Insert Map with New Common Boundaries]

The 2019 budget assumes efficiencies and reduces lower priority programs $2.3 billion below 2018 and supports 59,759 full time equivalents. This represents a reduction of roughly 4,500 full time equivalent staff from 2018, or 7 percent of our employees. To accomplish this, the Department will rely on a combination of attrition and separation incentives. Presently, 16 percent of our employees are eligible to retire. Actual attrition rates and acceptance of separation incentives will determine the need for further action to reduce staffing.

The Department annually spends nearly $3 billion to procure goods and services, over $1 billion on information technology and over $300 million to administer acquisition and human resources services. Interior will work to achieve cost savings of $50 million through more aggressive use of shared services and use of multi-agency procurement vehicles, such as shared contracting with other bureaus and Federal agencies. These savings will take effort to achieve, however, identifying administrative efficiencies provides the best opportunity to meet broader fiscal objectives and maintain programmatic funding. While all bureaus and offices will contribute to overall savings, specific targeted administrative savings apply to the following bureaus below.

Administrative Savings (dollars in millions)	**2019 Request**
BLM	-5.6
BIA	-8.3
FWS	-5.6
NPS	-22.2
USGS	-8.3
Total, Administrative Savings	**-50.0**

Reducing Interior's physical footprint and seeking ways to consolidate space and resources continues to be an important management priority. Efforts build on several multi-year actions to reduce Interior's nationwide facilities footprint and improve the efficiency and effectiveness of its information technology infrastructure and financial reporting capabilities.

Ensuring Interior's cybersecurity strength continues to be a top priority. The 2019 budget maintains $9.9 million in the appropriated working capital fund to continue the Department's remediation of its cybersecurity systems and processes. The request continues support for activities launched in 2015 and supports Department of Homeland Security Continuous Diagnostics and Mitigation investments to identify, isolate, and quantify cyber threats. In 2019, Interior will sustain activities that identify and manage hardware and software assets and security configuration settings; protect trusted internet connections at gateways; and introduce measures to prevent malware and phishing attacks through e-mail.

Maintaining the integrity of Interior's financial and business systems is another top priority. A

multi-year Department-wide effort successfully implemented the Financial and Business Management System, a modern, integrated, and secure system supporting better management, accountability, and transparency in budget execution, financial management, acquisition and financial assistance, fleet and facilities management, and property management. The system continues to deliver promised improvements in functionality, consistency in reporting, standardized internal controls and processes, and improved data availability.

The 2019 budget includes $46.8 million for the Financial and Business Management System. The request will maintain the system, avoid technical obsolescence, and implement high priority improvements to support the Department's operations. The FBMS tool continues to improve data quality and consistency across the Department, enables informed management decisions, and decreases manual processes.

The Department of the Interior's 2019 budget request maintains core functions important to the American people and supports a transformation the Department needs to accomplish for more effective management over the next 100 years. It reflects tough choices to prioritize and focus limited resources where investments have the most impact, but continues to deliver access and services that are critical to Americans. Achieving success in all of Interior's important responsibilities for the American people is the Department's primary focus. Interior is committed to take necessary actions to better accomplish our mission.

All,

This email requests your assistance to review two Department FY 2019 Budget documents by 5pm on Thursday, January 18th.

The release of the President's FY 2019 budget will occur on Monday, February 5, 2018. We are in the final stages of preparing the 2019 Budget in Brief (BIB).

The BIB is a summary of Interior's 2019 budget request. The attached Overview and Legislative Proposals chapters showcase Administration and Department priorities and shape the message for how these priorities will be communicated to Congress and the public. Your input on potential "fatal flaws" in these chapters is important.

Send any suggested edits in Microsoft Word track changes or hard copy to Jason Freihage (jason_freihage@ios.doi.gov) and copy Denise Flanagan (Denise_Flanagan@ios.doi.gov) and Adrianne Moss (Adrianne_Moss@ios.doi.gov) by 5pm on Thursday, January 18th.

Please email or call me at my desk 202-208-5309 or my cell 202-316-1383 if you have questions. Thanks so much for your help! Denise

2019 Legislative Proposals

The 2019 President's budget includes legislative proposals affecting revenues, and available budget authority that require action by the Congress. These proposals provide an important contribution to the Administration's policy goals, including achieving a fair return to the American taxpayer from the sale of Federal resources.

Public Lands Infrastructure Initiative – The Administration proposes legislation for a new Public Lands Infrastructure Fund to help pay for repairs and improvements in national parks, national wildlife refuges, and Bureau of Indian Education schools, which have over $12 billion in deferred maintenance. The Fund would be derived from 50 percent of incremental energy leasing receipts over 2018 Budget projections not otherwise allocated for other purposes. As the Department works to expand energy development on Federal lands and waters, this initiative has the potential to generate up to $18 billion over ten years for national parks, national wildlife refuges, and BIE schools. The 2019 budget baseline assumes $6.8 billion is available for the Fund over ten years.

Bureau of Reclamation Title Transfer – The Administration proposes legislation to better facilitate title transfer of BOR facilities to non-Federal entities when the transfers are beneficial to all parties. This proposal would allow local water managers to make their own decisions to improve water management at the local level, while allowing BOR to focus management efforts on projects with a greater Federal nexus.

Redirect Southern Nevada Public Land Management Act Account Balances – The budget proposes to cancel $230 million in unobligated balances from the Southern Nevada Public Land Management Act program over a three year period. The SNPLMA was enacted in 1998 authorizing the Bureau of Land Management to sell specified public lands around Las Vegas, Nevada, and retain the proceeds for capital improvements and various conservation, restoration, and recreational purposes in the State. The budget proposes to redirect a portion of the program balances to the Treasury where they are available for broader taxpayer use. The SNPLMA program is not proposed for elimination and viable conservation efforts will continue to be supported with remaining available funds.

Reauthorize the Federal Land Transaction Facilitation Act – The budget assumes permanent reauthorization of FLTFA's land sale authority, allowing Interior to dispose of lands with low conservation value and use the proceeds to acquire lands with high conservation values, consistent with the original FLTFA mandate. Also consistent with the prior authorization, 80 percent of the receipts would be spent in the same state in which the funds were generated. The FLTFA authority provides Interior with the flexibility to manage its land portfolio to improve

access to public lands or to acquire inholdings within existing Interior areas, in a constrained budget environment. This proposal is estimated to result in savings of $36.0 million over ten years.

Recreation Fee Program – The budget proposes to permanently reauthorize the Federal Lands Recreation Enhancement Act, which expires in September 2018. As a precaution, the budget also proposes appropriations language to provide a two-year extension of FLREA through September 2021. The revenues collected by Interior from these recreation fees—approximately $316 million in FY 2017—are an important source of funding for land management operations, maintenance and improvements to recreation facilities on public lands.

Termination of EPAct Geothermal Payments to Counties – The budget proposes to restore the disposition of Federal geothermal leasing revenues to the historical formula of 50 percent to the states and 50 percent to the U.S. Treasury by repealing Section 224(b) of the Energy Policy Act of 2005. That section changed the distribution to direct 50 percent to states, 25 percent to counties, and 25 percent to the Federal government. The 25 percent share for county payments is inconsistent with longstanding revenue-sharing practices and reduces the return to Federal taxpayers from geothermal leases on Federal lands. The proposal is estimated to result in savings of $40.0 million over ten years.

Land and Water Conservation Fund – The LWCF receipts authorization expires at the end of fiscal year 2018 and the Administration will review options for reauthorization.

Wildland Fire Suppression Disaster Cap Adjustment – The budget responsibly funds 100 percent of the rolling 10-year average cost for wildfire suppression in the Departments of Agriculture and the Interior within discretionary budget caps, and proposes a separate annual cap adjustment for wildfire suppression operations. Similar to how unanticipated funding needs for other natural disasters are addressed, the budget proposes a separate Fund that will include an annual cap adjustment appropriation for wildfire suppression to ensure adequate resources are available to fight wildland fires, protect communities, and safeguard human life during the most severe wildland fire seasons. The cap proposal is described separately in the President's Budget Appendix and will be managed by the Office of Management and Budget on behalf of both Departments.

"Across the Department we are striking the right balance to protect our greatest treasures and also generate the revenue and energy our country needs"

Secretary Ryan Zinke, December 28, 2017

The 2019 budget for the Department of the Interior features targeted investments to further the Administration's objectives to prioritize American interests by leading in American Energy Dominance, restoring public access to public lands, and strengthening the economy through infrastructure investment, regulatory relief, and fiscal responsibility.

The Department of the Interior conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper. The Department's 2019 budget reflects the Administration's commitment to strike the right balance of development and conservation of America's resources to advance important national objectives.

The Department of the Interior strives to fulfill a vision to:

- *Promote energy and minerals dominance* to create jobs for Americans, insulate our Nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so our people can be healthier, more fully enjoy the wonderful features of their Federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our Nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian Tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

The Department's 2019 budget request supports the Administration's broader economic goals to manage Federal spending with restraint. Interior's fiscal 2019 budget request is $11.3 billion in current authority, $2.2 billion or 16 percent below the 2018 Continuing Resolution level. The budget also proposes to transfer $111 million from the Department of Defense for commitments to the Republic of Palau, increasing Interior's total 2019 budget to $11.4 billion in current authority.

A major component of the 2019 budget is the Public Lands Infrastructure legislative proposal which would provide up to $18.0 billion over 10 years to address Interior's deferred maintenance backlog in the national parks, national wildlife refuges, and BIE schools. The investment in the Department's infrastructure would be funded by energy leasing revenues. The proposal complements the

President's national infrastructure investment proposal and recognizes the strategic importance of a long-term investment in America's treasures.

----------INSERT TEXT BOX----------

SECRETARY RYAN ZINKE'S TOP TEN PRIORITIES:

- Create a conservation stewardship legacy second only to Teddy Roosevelt
- Sustainably develop our energy and natural resources
- Restore trust and be a good neighbor
- Ensuring sovereignty means something
- Increase revenues to support DOI and national interests
- Protect our people and the border
- Strike a regulatory balance
- Modernize our infrastructure
- Reorganize DOI for the next 100 years
- Achieve our goals and lead our team forward

----------END TEXT BOX----------

GENERATING REVENUE AND UTILIZING NATURAL RESOURCES

GROWING AMERICA'S ECONOMY

The Department of the Interior touches American lives in more ways than any other Federal agency – managing one-fifth of the land in the United States and delivering water and power in the West. Across Interior's diverse mission, this budget emphasizes the Department's crucial role in promoting economic growth for America. The Department is responsible for the oversight and management of America's public lands, national parks, mineral resources, grazing lands, and more. As the stewards of this public trust, the Department manages America's public lands for multiple uses, ensuring these lands are available for recreation, job growth and creation, and responsible energy development. It is this balanced stewardship of resources that drives job opportunities and economic growth.

America's lands hold tremendous job-creating assets. In 2017, Interior's energy, mineral, grazing, and forestry activities resulted in $9.6 billion in revenue to the American people, including direct revenue payments to states, Tribes, and local communities. Interior supported $254 billion in economic benefit. In addition, direct grants and payments to states, Tribes, and local communities provided an estimated $10 billion in economic benefit. Interior also supports the economy by eliminating unnecessary and burdensome Federal regulatory requirements. For example, in 2017, Interior initiated 21 deregulatory actions, saving the taxpayer $3.8 billion over time.

The Department creates jobs across America through our national parks and outdoor recreation opportunities at Interior's spectacular and unique public lands and cultural sites. Visitors to our parks spend more than $18.4 billion in local gateway communities, supporting approximately 318,000 jobs and contributing $34.9 billion into the national economy, according to the *2016 National Park Service Visitor Spending Effects Report*.

Interior also plays an important role in the Administration's key economic objective to strengthen

America's infrastructure. Interior manages thousands of real property assets with responsibility for reviewing and approving permits for access to Interior lands, and ensuring necessary environmental compliance including upfront and formal consultations to avoid conflicts over protected species.

Interior is one of 13 Federal agencies designated to implement Title 41 of the Fixing America's Surface Transportation Act—commonly referred to as FAST-41—designed to improve the timeliness, predictability, and transparency of the Federal environmental review and authorization process for specific infrastructure projects.

The Department is a member of the Federal Permitting Improvement Steering Council, which includes senior leadership of Federal agencies responsible for conducting reviews and permitting for covered projects. FAST-41 is designed to improve consultation and coordination among government agencies; increase transparency and timeliness of Federal authorizations and environmental reviews; and increase accountability through consultation and reporting on projects. There are currently 26 FAST-41 infrastructure projects, of which the Department is the lead agency for eight, and a coordinating or cooperating agency for 14 projects. Dovetailing with the FAST-41 effort, in 2017, Secretarial Order 3355 was issued to enhance and modernize the Federal environmental review process and restore the purpose of the National Environmental Protection Act requirements to support the adoption of sound decisions based on an informed understanding of environmental consequences, rather than the generation of vast amounts of expensive and time consuming paperwork.

The 2019 budget maintains support for Interior programs that play a critical role in encouraging national infrastructure development. The 2019 budget includes $98.8 million for Fish and Wildlife Service up-front planning and consultation activities to avoid species conflicts. This request enables FWS to meet legal consultation requirements and avoid logjams that could delay infrastructure projects and associated economic benefits. The budget also includes $48.3 million for the Bureau of Land Management's cadastral program, which maps and surveys lands and resources and is needed to permit rights of way and other infrastructure project requirements in a timely fashion. An example of the projects this work supports is the recently approved Boardman to Hemingway Transmission Line Project which will provide additional electrical capacity between the Pacific Northwest and the Intermountain West regions. The project will improve the Nation's energy infrastructure, strengthen energy reliability, create nearly 500 jobs, and boost local economies.

ADVANCING ENERGY DOMINANCE

Interior plays a significant role in the Administration's objective to achieve America's energy dominance. Interior supports the Administration's efforts to unlock America's domestic energy resources to advance both the Nation's economic and national security position by reducing dependence on other nations for energy. The Department of the Interior is working to improve access to public lands, remove unnecessary and burdensome roadblocks, and smartly balance conservation while facilitating exploration and development of America's energy opportunities.

----------INSERT TEXT BOX----------

UNLEASHING AMERICA'S ENERGY POTENTIAL

In response to Executive Order 13783, Interior released the report *"Review of the Department of the Interior Actions that Potentially Burden Domestic Energy,"* identifying agency actions that potentially burden the development or use of domestically produced energy resources. This review guided real action to foster multiple-use, which includes energy development under reasonable regulations. Among the actions identified in the review that are underway or accomplished:

- Launch development of a new 5-year offshore energy development program.
- Repeal the 2016 moratorium on new Federal coal leases.
- Rescind the Hydraulic Fracturing on Federal and Indian Lands Rule.
- Review the Waste Prevention, Production Subject to Royalties, and Resource Conservation Rule.
- Address unnecessarily lengthy NEPA reviews that delay projects.
- Re-examine compensatory mitigation policies unnecessarily burdening permitting and authorization timelines.
- Address systematic delays in the onshore leasing program and permitting process.
- Develop recommendations to improve the application of the Endangered Species Act to avoid abuses that unnecessarily increase costs and delay projects.

At the same time, Secretary Zinke signed Secretarial Order 3358 establishing an Executive Committee for Expedited Permitting at Interior. The ECEP includes the Deputy Secretary and Assistant Secretarial leadership from across the Department, with the charge to improve Interior's energy permitting in service to the American public and Indian Country. The Committee will evaluate and recommend energy-permitting policies to better meet the Nation's energy needs, facilitate identification of energy rights-of-way corridors on Federal lands for expedited review of energy infrastructure projects, improve interagency communication regarding energy permitting, and identify best practices and reforms.

----------END TEXT BOX----------

Interior is the steward and manager of America's natural resources including oil, gas, coal, and hydropower and supports installation of renewable energy sources. American energy resources create jobs and generate significant revenue for the U.S. Treasury, states and local economies. With policies that foster growth and local input, the Department provides opportunities for new jobs and revenue for Federal, state, local, and tribal governments. Interior disbursements from energy and minerals production on Federal and American Indian lands and offshore areas totaled $7.11 billion in fiscal year 2017, an increase of nearly $1 billion over the previous year. Of this, states received $1.44 billion, tribal governments and individual mineral rights owners received nearly $676 million, and $950 million went into the Land and Water Conservation Fund to support outdoor recreation opportunities and conservation.

Onshore, the Department oversees more than 480 million acres of lands, and 700 million acres of subsurface minerals, mostly through BLM and Office of Surface Mining Reclamation and Enforcement. Offshore, the Department oversees oil, gas, and wind development for 1.7 billion acres of the Outer Continental Shelf through the Bureau of Ocean Energy Management and the Bureau of Safety and Environmental Enforcement.

This budget proposes $792.0 million in current and permanent funding for energy related programs across the Department, an increase of $42.9 million from 2018. Interior's 2019 budget continues to support an "all-of-the-above" energy development strategy, increasing funding for onshore and offshore oil and gas, expanding coal activities, and sustaining the current pace of renewable energy development.

A large portion of Interior's energy development activities occur on the Outer Continental Shelf. The 2019 request includes support from offsetting collections, and supports a total offshore energy development and safety program of $379.2 million, an increase of $32.5 million compared to 2018.

The budget includes a total of $179.3 million for offshore oil, gas and renewable energy development activities in BOEM, an increase of $10.9 million from 2018. This funding reflects the importance of offshore production to America's economic and energy security. It includes a $9.4 million increase for BOEM to prepare a leasing program for FY 2019-2024. In January 2018, Secretary Zinke announced the Draft Proposed National Outer Continental Shelf Oil and Gas Leasing Program for 2019-2024.

The request for BOEM also includes $20.7 million for Renewable Energy activities. In 2017, the Department announced completion of the Nation's seventh competitive lease sale for renewable wind energy in Federal waters. A Wind Energy Area of 122,405 acres offshore Kitty Hawk, North Carolina, received the high bid of $9,066,650. Although the energy production from the sale will depend on the size of the project developed, the lease area is estimated to generate potentially enough energy to power more than 500,000 homes.

Integral to a strong offshore energy program are the continued efforts of BSEE, whose staff in the Gulf of Mexico and Alaska are dedicated to maintaining a strong offshore safety culture. The 2019 budget includes $199.9 million for BSEE's programs to evaluate emerging offshore technologies, improve safety, conduct training, and maintain up-to-date policies, standards and guidelines. BSEE also manages an oil spill response and preparedness program as well as compliance programs governing offshore oil, gas and mineral operations. The 2019 request is a $21.7 million increase from the 2018 CR level, reflective of a one-time rescission of prior year balances in FY 2017.

Onshore, the budget includes $173.8 million in current and mandatory funding for the BLM oil and gas management program which in 2017, generated $348.9 million in combined onshore oil and gas lease sales. A recent U.S. Geological Survey and BLM assessment of undiscovered, technically recoverable onshore oil and gas resources in Alaska indicates higher than previously estimated oil and gas resource potential largely due to new insights on two geological formations in the National Petroleum Reserve – Alaska area. The assessment estimates a mean of 8.7 billion barrels of oil and 25 trillion cubic feet of gas of potential resources in the area, a significant increase from a 2010 assessment, which estimated a mean of 1.5 billion barrels of oil. In 2017, USGS, BLM, and BOEM conducted these assessments in compliance with Secretarial Order 3352 and as part of a program directed at estimating the undiscovered, technically recoverable oil and gas resources of priority petroleum basins in the United States. The next USGS assessments to be announced are for the Alaska 1002 Area and the area west of the NPR-A.

The 2019 budget includes $137.2 million in appropriated funds for oil and gas management and oversight, including leasing, permitting, and inspections. Increases are requested to expand areas

available for leasing, expedite permitting, and improve various aspects of the program management. The funding will also help to facilitate infrastructure needs to move oil and gas to refineries and end-users with resources to expedite the processing of BLM rights-of-way.

The budget includes $19.0 million for the BLM coal management program which will continue to focus on reducing processing times, simplify the lease application process, and improve the timeliness to complete lease sale fair market value determinations. In 2017, the Administration ended a Federal coal leasing moratorium, recognizing the Federal coal leasing program supplies roughly 40 percent of the coal produced in the United States. In 2017, the BLM approved a $22 million coal lease on the Green Hollow tract in Utah, estimated to contain more than 55 million tons of recoverable, high-energy producing coal. Also in 2017, the Administration rescinded the Stream Protection Rule, which impacts surface coal mining operations.

The budget includes $16.0 million for BLM to support onshore Renewable Energy development. The BLM Renewable Energy Management program processes leasing and development applications for geothermal energy, rights-of way and leasing applications for wind and solar energy, and rights-of-way applications for transmission lines connecting to renewable energy-related projects. The BLM conducts full environmental reviews under the NEPA on all renewable energy projects proposed on BLM-administered public lands. The request aligns with anticipated BLM workload addressing near-term demand.

An important component of Interior's natural resource programs is the collection and disbursement of receipts from development. The 2019 budget includes $137.5 million for the Office of Natural Resources Revenue. In 2017, Secretary Zinke held the first meeting of the reestablished Royalty Policy Committee, which includes 20 members representing local, tribal, and state government, and other stakeholders. They will advise the Secretary on the fair market value and revenue collection from Federal and Indian mineral and energy leases, including renewable energy sources.

INCREASING NATURAL RESOURCE DEVELOPMENT

Interior manages a wealth of additional natural resource assets that require balanced stewardship and management. The BLM manages close to 65 million acres of forest and woodlands across 12 western states and Alaska in accordance with the multiple-use, sustained yield mandate of the Federal Land Policy and Management Act of 1976. The Bureau of Indian Affairs has a trust responsibility concerning the management of Indian forest lands by 313 Tribes across 18.3 million acres. The BIA works closely with the Tribes regarding land management decisions to help ensure resource sustainability, forest health, and continued economic development.

Interior is working together with other Federal partners to achieve a better balance of forest health and productivity in the Nation's timber-rich areas. Many of the Nation's forests and woodlands are increasingly overgrown and unhealthy, increasing the risk of catastrophic wildfire. Sharp declines in timber-related employment have devastated many rural communities. Increasing timber harvests can spur job growth and local economies in timber-rich and historically timber-dependent communities, including tribal communities; reduce fire risk; and help create healthier forests and woodlands for wildlife and to support a viable timber industry well into the future.

Maintaining healthy and productive forests requires active management. The 2019 budget includes $9.5 million for BLM's Public Domain Forestry program and $90.0 million for the Oregon and California grant lands. Both programs support jobs and local economies through timber and timber product sales. The programs also maintain and improve the productivity and resilience of forest and woodland ecosystems through sales and forest development projects such as density management and reforestation. In 2019, BLM will continue to implement efficiencies and prioritize Allowable Sale Quantity timber sale outputs in western Oregon.

----------INSERT TEXT BOX----------

HELPING TO PROTECT WORKING LANDSCAPES

In December 2017, the BLM initiated an environmental analyses of fuel breaks, fuels reduction and habitat restoration projects on sagebrush steppe rangelands in Idaho, Nevada, Oregon, Washington, Utah and California to ensure healthy, productive working landscapes and wildlife habitats. Region-wide analysis of impacts and cumulative effects will help the BLM streamline authorization of projects aimed at reducing the threat of wildfires and restoring degraded habitats.

Large-scale wildfires have become significantly more frequent throughout the western U.S. in recent years, particularly in sagebrush-steppe ecosystems. Wildfires have begun to exceed 100,000 acres on a regular basis, and areas are re-burning more often. Large and frequent fires often result in conversion of sagebrush to annual grasses like invasive cheatgrass, and native habitats cannot recover naturally.

Strategically sited fuel breaks can slow the progress of wildfires, allowing better firefighter safety and increased protection of human life and property, livestock forage and important ecological resources such as sage-grouse habitat. Treating invasive plants like cheatgrass and encroaching species like juniper further reduces the threat of catastrophic wildfire.

BLM has identified fire, invasive annual grasses and conifer encroachment as the most significant threats to sagebrush-steppe in the Great Basin. Focusing on these threats will also help the BLM protect working landscapes that contribute to healthy local economies.

----------END TEXT BOX----------

The BLM actively manages rangeland and grazing activities on public lands in the West which remain a vital part of local Western economies. The 2019 budget includes $82.1 million for the Rangeland Management program. The Rangeland Management Program focuses on efforts to maintain or improve public land health through monitoring and land health evaluations; administration of grazing use through permit renewals (largely 10-year permits); development of grazing systems and range improvements; grazing permit compliance inspections; management of permittee, allotment and resource data; and, management of invasive species and noxious weeds. The BLM manages approximately 17,950 livestock grazing permits and leases on the public lands.

The USGS is the Nation's leading source of expertise in earth and natural sciences and works closely with other Interior bureaus and state, local, tribal, and other Federal partners to help resource managers make informed decisions. The USGS focuses on core earth science and data used by land and resource managers not only within Interior and other Federal agencies, but also partners across the

world. The 2019 budget includes $859.6 million for USGS programs, to focus on core science activities including land and water resources, energy and minerals, mapping, ecosystems, invasive species, natural hazards, and maintains funding for the Landsat 9 ground system.

An example of the importance of the USGS work is its Mineral Resource program, which conducts assessments to identify critical minerals and estimate potential supplies. President Trump and Secretary Zinke signed Orders prioritizing the need to reduce America's dependence on foreign sources for critical mineral supplies, citing a recent USGS report examining 23 minerals the U.S. relies upon for manufacturing everything from batteries and computer chips to equipment used by our military. Secretary Zinke's Order directs Interior bureaus to identify a list of critical minerals, identify domestic sources, and streamline permitting to encourage domestic production of these critical minerals. The 2019 budget for the USGS includes a $10.0 million increase to support this Administration priority. With the additional funding, the USGS will accelerate the first nationwide geological and topographical survey of the United States in modern history to locate domestic critical mineral sources.

----------INSERT TEXT BOX----------

BREAKING AMERICA'S DEPENDENCE ON FOREIGN MINERALS

In response to the President's Executive Order on a *Federal Strategy to Ensure Secure and Reliable Supplies of Critical Minerals*, the Secretary directed the USGS to identify new sources of critical minerals by providing access to the most advanced geological and topographical surveys, and BLM and USGS to provide a list of minerals defined as "critical minerals," which will be coordinated with the Department of Defense. Ensuring the Nation has access to advanced topographic, geologic, and geophysical data will increase private-sector domestic exploration, production, and development of critical minerals to reduce dependence on foreign imports and improve the balance of trade, support job creation, preserve the Nation's innovation leadership, improve national security and enhance the technological superiority of the United States Armed Forces, a significant consumer of critical minerals.

"Right now the United States is almost completely reliant on foreign adversaries and competitors for many of the minerals that are deemed critical for our national and economic security. As both a former military commander and geologist, I know the risk this presents to our Nation," said Secretary Ryan Zinke. "The problem is we can't fix the problem if we don't know where the minerals are within our own borders. Other nations are far ahead of us with mapping of their mineral resources, leading to private sector investment overseas rather than right here at home. Creating a complete topographical and geographic survey of the United States is exactly the kind of task the USGS was created to do."

----------END TEXT BOX----------

CONSERVING OUR LAND AND WATER AND EXPANDING OUTDOOR ACCESS

Interior is the steward of America's public lands and cultural resources for the benefit of current and future generations. Among Secretary Zinke's top priorities for the Department are to create a conservation stewardship legacy second only to Teddy Roosevelt and to restore trust and be a good

neighbor to the states and local communities where Interior manages lands and resources. An important part of achieving these priorities has been the Secretary's efforts to increase public access to Interior's lands for sportsmen and other types of recreation, and strengthen Federal-state conservation efforts.

----------INSERT TEXT BOX----------

MAKING OUR PUBLIC LANDS MORE ACCESSIBLE FOR AMERICANS

As part of "National Hunting and Fishing Month," Secretary Zinke hosted a first-of-its-kind meeting with veteran service organizations to share experiences and ideas to make public lands more accessible to veterans with and without disabilities. The Hunting and Fishing Access for Veterans roundtable discussion hosted by Secretary Zinke included members of his leadership team. More than 20 veteran advocates participated, including many who specialize in hunting and fishing therapy for returning warriors.

Secretary Zinke told the group that, "Hunting and fishing present such an incredible healing opportunity for our veterans who return home with physical and emotional wounds. Unfortunately, many of our public lands are either inaccessible to individuals with various physical disabilities, or we just don't offer programs to encourage veterans to access and use them. I want these warriors to be able to return home from their service and enjoy the very lands they fought to protect. I want to make sure hunting and fishing on public lands is easily accessible and available. Hearing ideas from leaders in the veteran community about how to achieve this goal has given my team some much-needed insight as we move forward."

----------END TEXT BOX----------

Taking care of the resources we have rather than acquiring new Federal lands continues to be a top priority in the 2019 budget. The budget does not propose funding for new Federal land acquisition projects in 2019 and continues to focus resources on conservation stewardship and increased access for the public use and enjoyment of Interior's existing lands. The budget for land acquisition programs across the Department is $8.1 million, which includes the proposed cancellation of $25.0 million in prior year balances.

The 2019 budget includes $4.3 billion for operating programs in the three primary land management bureaus – NPS, FWS, and BLM. This funding supports the day to day management of the natural resources and public amenities of America's national parks, national wildlife refuges, and national conservation lands. This includes funding to support visitor services and safety, law enforcement, and maintenance of facilities. Operating funds also support the primary stewardship activities needed to carry out each of the bureau's unique resource stewardship missions. Early eradication and control of invasive species is an example of a core stewardship activity shared across the Department. The 2019 budget includes a total of $100.8 million for invasive species activities to address significant issues such as the spread of invasive mussels and Asian Carp.

Since taking office last year, Secretary Zinke has issued three Secretarial Orders to expand access to public lands and increase hunting, fishing, and recreation opportunities nationwide. Under Secretary Zinke's leadership, the Department opened public access to the Sabinoso Wilderness, which contains

some of the most pristine sportsmen opportunities in the country, expanded hunting and fishing access on 10 national wildlife refuges, successfully defended a mineral withdrawal near the Grand Canyon, and advocated for a mineral withdrawal north of Yellowstone.

Focusing on the future of America's national parks, national wildlife refuges, and BLM public lands, in 2017, Secretary Zinke established the Recreation Advisory Committee. The Committee will develop recommendations on policies and programs to expand and improve visitor infrastructure through public-private partnerships; implement sustainable operations embracing fair, efficient and convenient fee collection and strategic use of the collected fees; improve interpretation using technology; and create better tools and/or opportunities for Americans to discover their lands and waters. This Committee will consider new ideas to better leverage partnerships and technologies to ensure the magnificence of America's treasures into the future. Secretary Zinke also created the Hunting and Shooting Sports Conservation Council in order to more effectively gather advice and recommendations from experts on existing and proposed policies and authorities with regard to wildlife and habitat conservation.

The Land and Water Conservation Fund matching grants provided to states, and through states to local governments, support the acquisition and development of public outdoor recreation areas and facilities all across the Nation. The 2019 budget reflects a shift in funding for NPS State Assistance grants from discretionary to mandatory funding. In prior years, annual discretionary appropriations derived from the LWCF provided the main source of funding for this program. Starting in 2009, discretionary LWCF appropriations for the State Assistance program were supplemented by revenues from certain oil and gas leases in the Gulf of Mexico, as authorized by Section 105 of the Gulf of Mexico Energy Security Act. Under existing law, this permanent funding for NPS State Assistance grants is expected to reach $89 million in 2019.

Ensuring the availability of water is central to the Department's resource stewardship mission and is vitally important to communities across the West. The 2019 budget includes $1.0 billion for Bureau of Reclamation water resource programs to ensure millions of customers continue to receive the water and power essential for daily life, healthy local economies, and land management. Reclamation is the largest supplier and manager of water in the 17 western states and the Nation's second largest producer of hydroelectric power. Reclamation manages water for agricultural, municipal and industrial uses, and provides flood risk reduction and recreation for millions of people.

The 2019 budget continues support for Reclamation's efforts to address America's water reliability and availability. Together with the USGS, Reclamation partners with states and local communities to assess future water supply and demand in key basins. This effort is part of Reclamation's suite of WaterSMART programs. The 2019 budget includes funding to continue the WaterSMART water conservation grants and Title XVI water recycling reuse grants that support local innovation efforts to stretch water supplies.

The 2019 budget includes funding to support innovation by incentivizing research through Reclamation's Water and Power Technology Prize Competitions. Reclamation is using prize competitions to harness the innovative capacity of the American public and private sectors to solve research and development problems related to Reclamation's mission and stakeholder interests. Reclamation prize competitions target difficult scientific and technological problems related to infrastructure, water availability, and environmental compliance that affect water delivery and hydropower generation. The budget also includes $4.5 million for Reclamation to pro-actively stop the spread of invasive

mussels in the West, including preventing the spread of zebra and quagga mussels into the Columbia River Basin.

Secretary Zinke has set another important priority for our land and water management programs -- to restore trust and be a good neighbor to the communities surrounding Interior's lands. Being a good neighbor means honoring Interior's commitments to localities and working closely with and listening to state and local partners in land management decisions. An example of this commitment is the establishment and implementation of the recommendations of a Sage-Grouse Review Team to complement state efforts to improve Greater Sage-Grouse conservation and economic development on public lands. The team of representatives from 11 states with sage-grouse habitat as well as officials across Interior and the U.S. Forest Service issued recommendations to strengthen communication and collaboration between states and the Federal government to conserve and protect sage-grouse and their habitat, while also ensuring conservation efforts do not impede local economic opportunities.

The 2019 budget maintains an important commitment to neighboring communities, by including $396.9 million in the discretionary request for Payments in Lieu of Taxes program. PILT payments offset the loss in property tax revenue for communities with significant Federal lands in their jurisdiction. The 2019 funding level for PILT is consistent with the 2018 President's Request and ensures continuation of this important program supporting rural America.

FULFILLING OUR TRUST AND INSULAR RESPONSIBILITIES

The Department of the Interior upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationship between the Federal government and federally recognized Tribes, American Indians and Alaskan Natives. The U.S. also has important relationships with Native Hawaiians, and the affiliated insular areas including the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Interior administers and oversees Federal assistance to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

Interior's programs maintain strong and important relationships with Native and insular communities, helping to promote efficient and effective governance and support nation-building and self-determination. These programs deliver community services, restore tribal homelands, fulfill commitments related to water and other resource rights, execute fiduciary trust responsibilities, support the stewardship of energy and other natural resources, create economic opportunity, and expand access to education.

The Department provides services directly, or through contracts, grants or compacts, to 567 federally recognized Tribes with a service population of nearly two million American Indians and Alaska Natives. The Department and its bureaus and offices play an important leadership role in carrying out the Federal trust responsibility to Tribes and individual Indians. The 2019 budget addresses Federal responsibilities and tribal needs related to education, social services, infrastructure, and stewardship of land, water, and other natural resources. The budget prioritizes support for programs that serve the broadest service population and proposes reductions in initiatives that are more narrowly focused. Throughout Interior's bureaus and offices, the 2019 budget supports the Administration's commitment to help empower tribal and insular communities to improve quality of life, create educational and economic opportunities, promote efficient and effective governance, preserve and foster

cultural heritage, and steward natural resources.

The President's budget maintains the Administration's strong support for the principle of tribal self-determination, and efforts to strengthen tribal communities across Indian Country. The budget calls for full funding for Contract Support Costs and Tribal Grant Support Costs that Tribes incur from managing Federal Indian programs.

The budget includes $350.1 million for BIA Public Safety and Justice programs. The programs provide law enforcement, corrections, and courts services to Indian communities. The programs safeguard life and property, enforce laws, maintain justice and order, and ensure that detained American Indian offenders are held in safe, secure, and humane environments. The BIA also provides technical assistance to Tribes to amend tribal legal codes to reflect provisions in the Tribal Law and Order Act of 2010 and the Violence Against Women Act as reauthorized.

BIA also undertakes initiatives to promote the development of resilient tribal communities. The 2019 budget includes $2.5 million to address the opioid crisis, which has been particularly devastating in Indian Country. This initiative would expand BIA capacity to address the increase in drug-related activities through interdiction programs to reduce drug use, distribution, and drug related crime. The initiative will support BIA participation in intra- and inter-agency initiatives that support opioid and substance abuse prevention efforts. The BIA liaisons will align, leverage, and coordinate Federal efforts and resources to assist American Indian and Alaska Native communities in achieving their goals to reduce the supply of drugs, provide opioid addition prevention assistance, and otherwise combat the opioid crisis which the Trump Administration has identified as one of epic proportions and a priority to address.

The 2019 budget request includes $739.7 million to continue support for core Indian education programs, including formula funding and operation and maintenance funding for elementary and secondary schools, and support for post-secondary programs. The request prioritizes programs that support the Bureau of Indian Education's responsibilities to directly support educational services to Indian children at BIE schools.

The 2019 budget includes $172.4 million across the Department to honor Indian Water Settlement commitments. This includes $127.4 million in Reclamation and $45.0 million in BIA. The budget continues to meet Federal responsibilities outlined in enacted land and water rights claim settlements with Indian Tribes to ensure they have access to land and water to meet domestic, economic, and cultural needs. These settlements support infrastructure projects needed to improve the health and well-being of tribal members and their communities. The 2019 funding level proposed for BIA provides sufficient funding to meet imminent settlement dates, however, specific settlement funding levels for 2019 will depend on the outcome of Congressional action on the 2018 Appropriations.

The 2019 budget includes $3.0 million to implement a phased closure of the independent agency, the Office of Navajo Hopi Indian Relocation. As part of this phased closure, the Office of Special Trustee would assume responsibility for development of a detailed transition plan and the transfer of land management activities currently conducted by ONHIR to Interior in 2019. Interior will work with ONHIR to ensure a smooth transition of activities.

The 2019 budget for the Office of Insular Affairs focuses resources to support the most critical needs of insular communities—improving quality of life, creating economic opportunity, and promoting

efficient and effective governance. The proposed 2019 OIA budget is $718.8 million, with $84.1 million in current appropriations. The budget also includes $111.0 million in discretionary Department of Defense appropriations as a transfer to the Department of the Interior to support enactment of the 2010 Compact Review Agreement with Palau. The Compact is an important element of the Pacific national security strategy.

----------START TEXT BOX----------

COMPACT WITH PALAU

The United States and Palau governments signed the Palau Compact Review Agreement in 2010, which proposed continued U.S. financial assistance totaling $229 million through 2024. Until recently, funding for the pact has not been authorized by Congress. Beginning with 2010, subsequent Interior discretionary appropriations have included annual economic assistance to Palau of approximately $13.1 million a year for a total of $118.3 million in discretionary funding by the end of 2017. In 2017, Congress enacted the 2018 National Defense Authorization Act, which officially authorized the strategic agreement signed between the United States and Palau governments in 2010.

"Authorizing full funding for the agreement is an important element of the Pacific national security strategy to maintain stability in the Western Pacific Region and we look forward to continuing our work with Congress to get this job done. President Trump's strong support for the agreement, the Department's budget request, and Congress' support for it all point to the strategic importance of our U.S. Territories and the Freely Associated States." - Secretary Zinke, 12/13/2017

The 2019 President's Budget requests $111.0 million in the Department of Defense, to be transferred to the Department of the Interior, to fully fund the U.S. Government's remaining commitment to Palau. These funds are provided to assist the Government of Palau in its efforts to advance the well-being of its people and in recognition of the special relationship that exists between the United States and Palau, and its importance in the Nation's Pacific national security strategy.

----------END TEXT BOX----------

PROTECTING OUR PEOPLE AND THE BORDER

Inherent in Interior's management of public lands is the requirement to protect employees and visitors to those public lands. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices. The Department's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, national wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities; and address emergency needs.

----------START TEXT BOX----------

RESPONDING TO HURRICANE EMERGENCIES

In response to the devastation caused by Hurricanes Harvey, Irma and Maria during 2017, Interior deployed 560 employees on 31 Federal Emergency Management Agency mission assignments in the immediate response. When the flooding started during the Hurricane events, teams from the USGS risked their safety to deploy storm-tide sensors, helping partners at the Federal, state, and local levels track the storm and get a head start on their response. Hundreds of Interior law enforcement officers deployed to evacuate, prepare and respond to emergency needs in the hurricane zones.

Many Interior employees who were hurricane victims themselves helped to serve not only the immediate needs of Interior's mission, but even more importantly they also supported their communities. For example, on the island of Vieques, off the coast of Puerto Rico, FWS employees coordinated an airdrop of food and water for 4,600 residents, and the National Park Service served as points of distribution for FEMA supplies.

----------END TEXT BOX----------

A key component of Interior's land stewardship and public safety goals is management of wildland fire. The 2019 budget provides $388.1 million for wildfire suppression–the full 10-year average of suppression expenditures. This level of funding is projected to be sufficient to meet fire suppression needs in an average fire season without the risk of needing emergency transfers from other departmental accounts.

The budget responsibly funds 100 percent of the rolling 10-year average cost for wildfire suppression in the Departments of Agriculture and the Interior within discretionary budget caps, and proposes a separate annual cap adjustment for wildfire suppression operations. Similar to how unanticipated funding needs for other natural disasters are addressed, the budget proposes a separate fund that will include an annual cap adjustment appropriation for wildfire suppression to ensure adequate resources are available to fight wildland fires, protect communities, and safeguard human life during the most severe wildland fire seasons.

Devastating fires in California and Montana, and high-profile fires in Yosemite and Glacier National Parks have caught national headlines, however, millions of acres of other forest and grassland burned in 2017. As a result, Secretary Zinke directed Department of the Interior bureaus, park superintendents, and land managers at all levels to adopt more aggressive practices to prevent and combat the spread of catastrophic wildfires through robust fuels reduction and pre-suppression techniques.

There are over 12.5 million acres under Interior jurisdiction within 50 miles of the United States-Mexico border. More than 40 percent of the border, or 820 linear miles, is managed by Interior's land management agencies and the U.S. Forest Service. Interior is engaged with the Department of Homeland Security to increase security on the Southwest border, including 54 border miles on tribal lands, primarily made up of lands located on and managed by the Tohono O'odham Nation in Arizona. Currently, 305 miles, or 38 percent, of Interior border lands have a vehicle or pedestrian fence or wall. Interior's responsibilities include conservation of over 200 threatened and endangered species in the border region and over 500 species of migratory birds. Interior's investments are focused primarily on law enforcement and security; environmental coordination and land management on national wildlife refuges, national parks and BLM lands; protection of trust resources; and water resource management by Reclamation on the Lower Colorado. The budget includes $1.8 million to

expand the Department's Southwest Border Radio Demonstration Project. The project was developed in cooperation with BLM, NPS, FWS, and the U.S. Forest Service in the Southwest border region to address Inspector General-identified material deficiencies in the land mobile radio program and infrastructure.

Interior plays an important role in preparation for and addressing the aftermath of natural hazard events. The USGS provides scientific information to emergency responders, policy makers, and the public to reduce the risk of losses from a wide range of natural hazards, including earthquakes, floods, hurricanes, landslides, magnetic storms, tsunamis, volcanic eruptions, and wildfires. The 2019 budget includes $116.6 million for the USGS Natural Hazards programs to maintain important nation-wide monitoring networks that provide vital scientific information to emergency managers.

MODERNIZING OUR ORGANIZATION AND INFRASTRUCTURE FOR THE NEXT 100 YEARS

INFRASTRUCTURE MANAGEMENT

Interior manages an infrastructure asset portfolio with a replacement value exceeding $300 billion, ranging from elementary and secondary schools serving Indian children in the West, to highways and bridges serving the daily commuting needs of the Washington, D.C., metropolitan area. Most well-known, are Interior's iconic and unique national treasures that have priceless historical significance.

Many of these assets are deteriorating, with older assets becoming more expensive to repair and maintain in good condition. The FY 2019 budget launches Interior's new Public Lands Infrastructure Fund to help pay for repairs and improvement in national parks, national wildlife refuges, and BIE schools. The Department is taking action to increase revenue from energy leasing and development over 2018 budget projections and will keep for Department infrastructure needs 50 percent of additional revenue that is not otherwise allocated for other purposes. This would generate an estimated $6.8 billion over 10 years. As Interior works to expand energy development on Federal lands and waters, this initiative has the potential to generate up to $18 billion over ten years for national parks, national wildlife refuges, and BIE schools. This investment would significantly improve the Nation's most visible and visited public facilities that support a multi-billion dollar outdoor recreation economy. The other 50 percent of increased revenues would go to the Treasury supporting deficit reduction.

Interior owns approximately 43,000 buildings, 100,000 miles of road, and 80,000 structures–including dams, laboratories, employee housing, and irrigation and power infrastructure. Taking care of this significant asset portfolio is a persistent challenge. Interior's deferred maintenance backlog has grown to over $16 billion in 2017, of which over $11 billion belongs to the NPS. The 2019 budget for NPS includes $256.5 million in current funding for construction and deferred maintenance projects, an increase of $1.0 million from 2018. Construction and maintenance funding across the Department totals over $1.3 billion in 2018, excluding Reclamation.

Reclamation is responsible for roughly 40 percent of the value of Interior's structure portfolio, which includes dams, power plants, water pipelines and canals in the 17 western states. Maintenance of this significant infrastructure is funded through a combination of Federal appropriations, direct revenue, customer payments, and payments from other Federal agencies. The 2019 budget for Reclamation is over $1.0 billion, and includes $88.1 million for the Dam Safety Program, of which $66.5

million is requested to correct identified safety issues.

Transportation assets—such as roads and bridges—account for about half of the deferred maintenance backlog. The Congress provides for some transportation maintenance and repair through the Federal Lands Transportation Program funded by the Department of Transportation Highway Trust Fund. This will provide more than $300 million for Interior projects in 2019. The Department also funds transportation maintenance and repair through bureau operating and construction appropriations.

----------START TEXT BOX----------

ARLINGTON MEMORIAL BRIDGE REPAIRS ARE UNDERWAY

In December 2017, NPS announced a $227 million project to rehabilitate Arlington Memorial Bridge, a historic and critical transportation link in the Nation's capital. The project will save American taxpayers $35 million and 1.5 years of estimated construction time. The NPS, with the District of Columbia as co-signer, received a $90 million FASTLANE grant from the U.S. Department of Transportation. In order to complete the project in a single phase, the NPS will invest $107 million of its annual transportation and construction funds. A "design-build" contract – meaning the contractor will both design the work and conduct the repairs – will save money and accelerate the project's completion time.

----------END TEXT BOX----------

The budget includes $264.6 million for construction and maintenance funding within Indian Affairs. Within this total are targeted increases for resource management infrastructure, roads, and other construction and deferred maintenance programs. Projects address needs at dams and irrigation systems to improve delivery of water to aid economic development, as well as protect lives, resources, and property. The BIA has maintenance responsibility for approximately 27,900 miles of bureau-owned roads and 970 bridges. Other construction programs maintain regional and agency facilities at 127 locations where Indian programs are administered. In 2019, funding for education related construction is focused on facilities improvement and repair, and employee housing repair.

MANAGEMENT AND REFORMS

During the peak summer seasons, the Department of the Interior has nearly 70,000 employees in 2,400 locations across the United States, Puerto Rico, U.S. Territories, and Freely Associated States. Interior's varied mission, wide geographic presence, direct public service programs, and trust and stewardship responsibilities, make it a personnel intensive and field oriented agency. Interior's diverse staff works to protect and manage the Nation's natural resources and cultural heritage, provide scientific and other information about those resources, and provide services to American Indians, Alaskan Natives, and insular communities.

Secretary Zinke set some top management objectives to better achieve his goals and lead Interior's team forward – and implementation is underway. From day one, Secretary Zinke made improving the work experience a priority while at the Department. At the end of his first year, according to the *Partnership for Public Service's Best Places to Work* report, the numbers show progress toward that goal. In 2017, Interior moved from 11th place in the rankings to 9th place among all the large Federal agencies. Key to achieving improvement is the clear direction from Departmental leadership

there is zero tolerance for any type of workplace harassment. Recently released results from an anonymous Work Environment Survey at Interior show 35 percent of employees reported they were harassed or discriminated against in the preceding 12 months. In response, Interior is instilling a culture change through transparency and a zero-tolerance policy, swift personnel actions, clear management accountability and reporting procedures for harassing conduct, training, and action plans from all bureau and office heads across the Department.

Interior is also taking bold steps to better position itself for the next 100 years. In response to President Trump's Executive Order on a *Comprehensive Plan for Reorganizing the Executive Branch*, Secretary Zinke laid out a vision for a reorganized Department of the Interior which aligns regional boundaries within Interior to provide better coordination across the Department to improve mission delivery and focuses resources in the field. The 2019 budget includes a total of $17.5 million to start this effort. The budget also proposes additional shifts to better align functions within the Department and respond to Congressional direction related to the Office of the Special Trustee.

--------START TEXT BOX-------

DEPARTMENT WIDE REORGANIZATION PLAN

The Department of the Interior intends to establish scientifically based common regional boundaries for Interior's bureaus in FY 2018, and to further develop this approach in FY 2019. The goal is to improve overall operations, internal communication, customer service, and stakeholder engagement. Aligning geographic jurisdictions across Interior will enhance coordination of resource decisions and policies affecting ecosystems, and will simplify how citizens engage with the Department.

Organizing bureaus along common geographic lines, based on ecosystems, will allow for more integrated and better coordinated decision making across our bureaus. The Department will migrate to common regional boundaries, based primarily upon watershed features. For administrative simplicity, we plan to use county lines that most closely align to the watersheds.

Currently, Interior's bureaus have more than 40 distinct regions, each with their own geographic boundaries. This complicates coordination and hampers Interior's ability to get things done expeditiously. Having 13 common regions would help streamline the bureaucracy and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision.

The new regional boundaries currently under discussion, and subject to modification, are expected to have minimal budgetary impact and only change the maps included in the detailed budget justification material. The BIA has initiated discussions with Indian Country and will continue with tribal consultations regarding any proposed adjustments to the regional field organizations serving the Bureau of Indian Affairs and Bureau of Indian Education. The regions would operate virtually and gradually shift toward consolidated and collocated office space as leases expire. In 2019, the budget includes funding to support the establishment of joint offices in Alaska and California, and shift some FWS, BLM and Reclamation headquarters staff to the West.

--------END TEXT BOX-------

[Insert Map with New Common Boundaries]

The 2019 budget assumes efficiencies and reduces lower priority programs $2.3 billion below 2018 and supports 59,759 full time equivalents. This represents a reduction of roughly 4,500 full time equivalent staff from 2018, or 7 percent of our employees. To accomplish this, the Department will rely on a combination of attrition and separation incentives. Presently, 16 percent of our employees are eligible to retire. Actual attrition rates and acceptance of separation incentives will determine the need for further action to reduce staffing.

The Department annually spends nearly $3 billion to procure goods and services, over $1 billion on information technology and over $300 million to administer acquisition and human resources services. Interior will work to achieve cost savings of $50 million through more aggressive use of shared services and use of multi-agency procurement vehicles, such as shared contracting with other bureaus and Federal agencies. These savings will take effort to achieve, however, identifying administrative efficiencies provides the best opportunity to meet broader fiscal objectives and maintain programmatic funding. While all bureaus and offices will contribute to overall savings, specific targeted administrative savings apply to the following bureaus below.

Administrative Savings (dollars in millions)	**2019 Request**
BLM	-5.6
BIA	-8.3
FWS	-5.6
NPS	-22.2
USGS	-8.3
Total, Administrative Savings	**-50.0**

Reducing Interior's physical footprint and seeking ways to consolidate space and resources continues to be an important management priority. Efforts build on several multi-year actions to reduce Interior's nationwide facilities footprint and improve the efficiency and effectiveness of its information technology infrastructure and financial reporting capabilities.

Ensuring Interior's cybersecurity strength continues to be a top priority. The 2019 budget maintains $9.9 million in the appropriated working capital fund to continue the Department's remediation of its cybersecurity systems and processes. The request continues support for activities launched in 2015 and supports Department of Homeland Security Continuous Diagnostics and Mitigation investments to identify, isolate, and quantify cyber threats. In 2019, Interior will sustain activities that identify and manage hardware and software assets and security configuration settings; protect trusted internet connections at gateways; and introduce measures to prevent malware and phishing attacks through e-mail.

Maintaining the integrity of Interior's financial and business systems is another top priority. A

multi-year Department-wide effort successfully implemented the Financial and Business Management System, a modern, integrated, and secure system supporting better management, accountability, and transparency in budget execution, financial management, acquisition and financial assistance, fleet and facilities management, and property management. The system continues to deliver promised improvements in functionality, consistency in reporting, standardized internal controls and processes, and improved data availability.

The 2019 budget includes $46.8 million for the Financial and Business Management System. The request will maintain the system, avoid technical obsolescence, and implement high priority improvements to support the Department's operations. The FBMS tool continues to improve data quality and consistency across the Department, enables informed management decisions, and decreases manual processes.

The Department of the Interior's 2019 budget request maintains core functions important to the American people and supports a transformation the Department needs to accomplish for more effective management over the next 100 years. It reflects tough choices to prioritize and focus limited resources where investments have the most impact, but continues to deliver access and services that are critical to Americans. Achieving success in all of Interior's important responsibilities for the American people is the Department's primary focus. Interior is committed to take necessary actions to better accomplish our mission.

WEEKLY REPORT
DEPARTMENT OF THE INTERIOR/Assistant Secretary for Fish and Wildlife and Parks
January 24, 2018

Week Ahead Schedule of Meetings, Hearings, and Travel

From January 24-26, Principal Deputy Assistant Secretary Jason Larrabee will be in Sacramento, California, for various meetings.

Deputy Assistant Secretary Aurelia Skipwith will be in the office.

Week Ahead Announcements and Actions

On January 24, Director of Gulf of Mexico Restoration, Mary Josie Blanchard, and representatives of U.S. Fish and Wildlife Service and the Office of Environmental Policy and Compliance will meet with representatives of the Port Fourchon, including the Executive Director, staff, and four Port Commissioners and the Port's engineering consultant.

On January 26, Mary Josie Blanchard will meet with the Director, Gulf of Mexico Program of The Nature Conservancy.

30-60 Day Look Ahead

WEEKLY REPORT
DEPARTMENT OF THE INTERIOR U.S. Fish and Wildlife Service
January 24, 2018

Week Ahead Schedule of Meetings, Hearings and Travel

On January 24, Greg Sheehan will travel to Albuquerque, New Mexico, for an All Employee Meeting with FWS, South Region Staff on DOI Priorities. On January 25, Mr. Sheehan will travel to Denver, Colorado, for the Sage Grouse Task Force Meeting.

Week Ahead Announcement and Actions

On January 27, the Sierra Club is organizing a "Save Santa Ana National Wildlife Refuge" event from 11 a.m. to 1:30 p.m. The independently organized rally will take place in a field east of the refuge. Representative Filemon Vela (D-TX) is expected to attend, and representatives from the 19 cities/counties that passed resolutions opposing the proposed border wall have been invited. The event coincides with a FWS-organized 75th anniversary event at the Santa Ana NWR. The FWS event is being coordinated to have guest speakers, guided walks, interpretive exhibits and displays, games and activities, and refreshments. FWS will have increased law enforcement as well as External Affairs support onsite to help as needed.

FWS and partners will conduct the annual Mexican wolf population survey and capture, weather conditions permitting through February 2. The Mexican Wolf Recovery Program is a multi-agency cooperative effort among FWS, Arizona Game and Fish Department, U.S. Forest Service, USDA-Animal and Plant Health Inspection Service, Wildlife Services and the White Mountain Apache Tribe, as well as in consultation with the New Mexico Department of Game and Fish. Survey flights will occur on the Fort Apache Indian Reservation, Apache and Gila National Forests in eastern Arizona and western New Mexico, and possibly on some areas immediately outside the forests. The count is not open to the public. A limited number of reporters may be invited to observe the count.

The biennial meeting of the signatories to the Agreement on the Conservation of Polar Bears, which includes Canada, Greenland, Norway, Russia, and the United States (Ranges States) will be meeting February 2-4 in Fairbanks, Alaska. The parties plan to exchange information on polar bear management and research and will evaluate the progress on implementation of the Circumpolar Action Plan. FWS is organizing and will be participating in the meeting. Alaska congressional offices have been notified. No news release is planned, but FWS may pitch stories to a couple of local reporters and offer interviews with some of the meeting participants. The meeting is not open to the public, so no media will be there during proceedings. No controversy is expected.

On or around January 26, FWS plans to send to the *Federal Register* a notice announcing the availability of comprehensively revised boundaries for the first batch of Coastal Barrier Resources System (CBRS) units included in the Hurricane Sandy Remapping Project. CBRS was created by the Coastal Barrier Resources Act in 1982 to conserve relatively undeveloped, highly vulnerable coastal barriers along the Atlantic and Gulf of Mexico coasts. The proposed revisions will affect 112 existing and 36 proposed new units in Delaware, Massachusetts, New Hampshire, and New Jersey. The notice will announce a 120-day public comment period and also advise of

upcoming public meetings to be held via webcast. Landowners, state and local officials (and their representatives in Congress) will likely support the removal of areas from the CBRS and similarly oppose the addition of new areas into the CBR. Properties in a CBRA unit are ineligible for federally subsidized flood insurance. Taxpayer groups, recreational interest groups and conservation groups will likely support the additions to the CBRS. Outreach will include a news release and FAQs, as well as stakeholder and congressional outreach.

In January, FWS and Forest Service representatives are scheduled to meet with a private rancher and staff from Representative Pearce's (R-NM) office. The rancher's cattle graze Forest Service-managed lands that are inhabited by the ESA-listed New Mexico meadow jumping mouse. Discussions will include development of a framework to address long-term land management practices that will benefit the mouse while meeting the needs of the rancher.

In late January, FWS, NOAA, and New York State Department of Environmental Conservation (the Hudson River Natural Resource Trustees) plan to release an injury determination report that concludes PCBs released by General Electric have caused repeated and prolonged exceedances of state and federal water quality standards and contaminated surface water resources of the Hudson River for decades. The report is the latest demonstration of the Trustees' measurement of natural resource injuries from General Electric's release of PCBs to the Hudson River from its manufacturing facilities in Hudson Falls and Fort Edward, New York. The Trustees are planning coordinated outreach through a joint news release and congressional notifications.

In late January, FWS, NOAA and New York State Department of Environmental Conservation (the Hudson River Natural Resource Trustees) plan to release a data report regarding polychlorinated biphenyl (PCB) concentrations in eggs of the gray catbird. In 2015, the Trustees collected catbird eggs from along the Hudson River to determine PCB exposure. The study indicates that seven of the 29 eggs collected from the Hudson River exceed an avian effects threshold for PCBs quantified in scientific literature, suggesting the potential for embryo-mortality, an injury to these birds. The Catbird Egg Data Report is part of the Trustees' ongoing natural resource damage assessment (NRDA) to determine appropriate actions needed to injured restore natural resources and natural resource services of the Hudson River. The Trustees are planning coordinated outreach through posting on the web.

In January or February, FWS plans to send to the *Federal Register* a notice of issuance for letters of authorizations issued in 2015, 2016, and 2017 under regulations authorizing the non-lethal, incidental, unintentional take of marine mammals in the Chukchi and Beaufort seas. This is an administrative action and is noncontroversial. No news release will be issued for this notice of issuance.

30-60-Day Look Ahead

FWS has completed a Draft Recovery Plan for the Southern California Distinct Population Segment of the mountain yellow-legged frog. The recovery plan is expected to be announced for public comment and review in February and is designed to help southern populations of this species in three recovery units through a set of recovery strategies with associated objectives and measurable criteria. The recovery units include San Bernardino Mountains, San Gabriel Mountains and San Jacinto Mountains. The draft plan includes input from partners including the

San Diego and Los Angeles Zoos, California Department of Fish and Wildlife, U.S. Geological Survey and the U.S. Forest Service. This is not controversial. Planned outreach includes congressional and stakeholder notifications and a press release to media.

In January and February, several border projects involving FWS are anticipated to begin. Customs and Border Protection (CBP) will need access to water from a FWS-owned well on Buenos Aires NWR in Arizona for a road repair project. The Border Patrol & Air and Marine Program Management Office (BPAM PMO) plans a road construction project for a 66-mile portion of the Presumido Canyon Road through the Baboquivari Mountains in Arizona. CBP will update existing communications and surveillance towers on and adjacent to the Buenos Aires NWR.

On February 5-8, the Management Board of the Arctic Council's Conservation of Arctic Flora and Fauna (CAFF) Working Group will be meeting in Fairbanks, Alaska. FWS coordinates U.S. engagement in the CAFF Working Group. Participants will include representatives from all Arctic Council countries (Canada, Denmark, Finland, Iceland, Norway, Sweden, Russia and the United States); Arctic indigenous communities, including several representing Alaska native communities; and observer countries and organizations. Experts from FWS and across the U.S. government will join the U.S. delegation. A number of priority activities for the FWS, and the broader U.S. government, will be discussed at this meeting, including Arctic migratory birds, invasive species, wetlands, and monitoring, among others. The meeting is not open to the public. FWS may send a media alert about the meeting to a few reporters to invite them to attend a reception, which will be held prior to the meeting. Reporters would learn more about CAFF, the topics that the CAFF board will discuss at the upcoming meeting, and have the opportunity to interview participants.

On February 8, Jan Butts' farm (approximately 730 acres) in Kankakee County, Illinois, will be sold at auction. In his will, the former farm owner, Mr. Butts, directed that a large portion of his estate be provided to the "U.S. Fish and Wildlife Service Grand Kankakee Marsh National Wildlife Refuge." Grand Kankakee Marsh National Wildlife Refuge does not exist. It is called Kankakee National Wildlife Refuge and Conservation Area. Staffs from FWS, together with attorneys from the Interior Solicitor's Office and the U.S. Attorney's Office in Illinois have been working with lawyers representing the Jan Butts Estate and the State Circuit Court to secure a path forward for the acceptance of what will likely be a donation valued at several million dollars.

FWS and the Marine National Monuments office have completed a public scoping process to evaluate ways to protect seabirds from predation by invasive house mice at Midway Atoll National Wildlife Refuge and Battle of Midway National Memorial, located in Papahānaumokuākea Marine National Monument. Midway is the largest Laysan albatross colony in the world and more than 3 million birds from 29 species nest on Midway's three islands. All of them are potentially vulnerable to mouse predation. The mice have been documented eating seabirds while they are nesting, resulting in injury and death. Due to their extreme dedication to raising their young, the birds won't leave the nest if attacked. FWS is preparing a draft environmental assessment that will evaluate alternatives to protect seabirds from mouse predation. The draft Environmental Assessment (EA) should be ready for public comment in

mid-February. Outreach is planned to include local public notifications through the web and social media, when the draft EA is published, and notifications to members of Congress in Hawaii, with targeted stakeholder outreach.

In February, FWS plans to send to the *Federal Register* a notice seeking public review and comment on a draft Environmental Assessment (EA) describing the potential effects of issuing a proposed Incidental Take Permit (ITP) for construction and development activities in Thurston County, Washington. UPC, LLC developed a draft Habitat Conservation Plan (HCP) and applied for a 15-year ITP. The project development site is 127 acres, and the conservation site is 64 acres. Species covered in the HCP include the threatened Olympia subspecies of the Mazama pocket gopher and the threatened Oregon spotted frog. This is not controversial. This HCP is a single-site developer and independent from the HCP that FWS briefed ASFWP on November 17. This applicant would like to move forward with development in advance of the completion of the Thurston County HCP.

In February, FWS will award nearly $19 million in grants to coastal states to conserve and restore coastal wetlands and their fish and wildlife habitat. Each year, the Service supports coastal wetland conservation through the National Coastal Wetlands Conservation Grant Program and the Sport Fish Restoration and Boating Trust Fund. The grant funds are derived from excise taxes on fishing tackle and motorboat and small engine fuels. The grants will support 22 projects in 13 coastal states to protect, restore or enhance more than 30,000 acres of coastal wetlands and adjacent upland habitats, including 287 miles of shoreline. Over $21 million in additional matching funds will be provided by partner contributions from state and local governments, private landowners and conservation groups. Conservation of this habitat will help recover coastal-dependent federal trust species, enhance flood protection and water quality, provide economic benefits to coastal communities and increase recreational opportunities for hunters and anglers. The grant recipients (states) have not yet been informed that they will be receiving funds. Planned outreach includes congressional and stakeholder notifications and a news release.

In December, BNSF Railway submitted a final draft grizzly bear Habitat Conservation Plan to the FWS. The plan minimizes the effects of railway operations on grizzly bears and mitigates for unavoidable strikes by investing in bear conservation efforts in the project area. FWS is reviewing the plan. FWS is preparing for the other steps of environmental review including National Environmental Policy Act compliance, Incidental Take Permit issuance criteria, and intra-Service section 7 consultation. Since 1967, at least 55 grizzly bears have been struck and killed on railroad tracks in the 160-mile project area, which traverses the Continental Divide and is south of Glacier National Park. Beginning in the 1990s, BNSF instituted a series of voluntary measures directed at reducing or eliminating the causes of bear strikes. The incidence of grizzly bear strikes in the project area has markedly declined to less than one per year on average since 2009.

Endangered Species Act Listing/Delisting Actions

Pending approval by the Department, FWS plans to send to the *Federal Register* the final delisting determination for Eureka Valley evening-primrose and downlisting, to threatened from endangered, of the Eureka dune grass. These are two plant species that occur in Death Valley

National Park, California. The primary partner and stakeholder is the National Park Service who supports the actions. Some environmental groups opposed delisting the two species. However, in response to new information, we are no longer delisting Eureka dunegrass and are instead reclassifying it to a threatened species which may reduce the level of concern among the interested parties. Planned outreach will include a news release and notifications to stakeholders and members of Congress.

Pending approval by the Department, FWS plans to send to the *Federal Register* a proposed listing determination and proposed critical habitat designation for the Island marble butterfly, found in Washington. The proposed critical habitat designation includes approximately 812 acres. This action is not expected to be opposed and media coverage is expected to be neutral. Interested stakeholders include Xerces (the petitioner), federal partners including National Park Service and Bureau of Land Management, and state partners including Washington Department of Fish and Wildlife and Washington Department of Natural Resources, San Juan County Land Bank, the San Juan Preservation Trust, and local landowners. A news release to all interested parties and the media is planned.

On or around February 2, FWS plans to send to the *Federal Register* a final listing determination for the Texas hornshell, a mussel that occurs in New Mexico, Texas, and Mexico. The states of New Mexico and Texas have not overtly opposed listing the hornshell, and FWS has worked with oil and gas companies extensively on a Candidate Conservation Agreement for the Black and Delaware rivers, the only portion of the range of Texas hornshell where oil and gas production is occurring. FWS anticipates significant participation in these agreements which will provide regulatory certainty for these companies. Stakeholders include the Center for Biological Diversity, the States of Texas and New Mexico, the Bureau of Land Management, the Independent Petroleum Association of America, and local landowners. Planned outreach will include notifications to stakeholders and relevant members of Congress and a news release to local media. FWS is required by settlement agreement to publish the final determination in the *Federal Register* by February 10; therefore, FWS plans to submit it by February 2.

On or around February 19, FWS plans to send to the *Federal Register* a notice of availability of a draft post-delisting monitoring plan for the black-capped vireo. While this action is not expected to be controversial, stakeholders who oppose the delisting of the species may use this notice to express their concerns about the delisting. Stakeholders include the petitioners, Pacific Legal Foundation, Jim Chilton, New Mexico Cattle Growers' Association, New Mexico Farm & Livestock Bureau, New Mexico Federal Lands Council, and Texas Farm Bureau, and the Office of Travis Co. Judge and Big Bend National Park. Planned outreach will include notifications to local stakeholders, a news release to local media and social media posts.

On or around February 28, FWS plans to send to the *Federal Register* a proposed rule to downlist to threatened from endangered the Kuenzler hedgehog cactus. When first listed, only one population of 200 plants was known. The discovery of additional populations, together with efforts to conserve the plant and its habitat, indicate the cactus is no longer at risk of extinction. Today, there are 3,300 individual cacti in 11 known populations within its southern New Mexico range. Additionally, the permitting of captive propagation and sale of the plant has relieved much of the threat from collection of the species in the wild. This downlisting is not expected to be

controversial. Planned outreach includes a news release, phone calls to stakeholders and web postings.

On or around February 28, FWS plans to send to the *Federal Register* a proposal to downlist the Hawaiian goose (nene) from endangered to threatened. FWS will also propose to establish special regulations for the conservation of the species under section 4(d) of the ESA to allow for flexibility in managing lands. Landowners of resort, golf course, agricultural, residential and recreational properties are likely to support the reclassification and associated 4(d) rule while conservation groups may be opposed. Interested stakeholders include the State of Hawaii, federal agencies, conservation and bird groups, various private landowners, and the public. Outreach includes a news release, social media, emails and phone calls to Congressional offices and stakeholders.

On or around February 28, FWS plans to send to the *Federal Register* a final determination on a proposed rule to reclassify the Tobusch fishhook cactus from endangered to threatened. This plant species has shown significant recovery due in part to collaborative conservation efforts with partners. Supporters of this action include the Texas Parks and Wildlife Department, the Texas Department of Transportation, the Lady Bird Johnson Wildflower Center, The Nature Conservancy. FWS has gained positive coverage on downlisting proposals, and anticipates more interest when this final determination is announced. Outreach planned includes a news release and social media postings.

On or around March 6, FWS plans to send to the *Federal Register* a proposal to delist the Colorado butterfly plant due to recovery. This species is located in Colorado, Nebraska and Wyoming. This action is not expected to be opposed. Outreach plans include a news release, and an if-asked Q&A. Key stakeholders include private landowners, F.E. Warren Air Force Base, the City of Fort Collins, Colorado, and the Bureau of Land Management.

On or around March 8, FWS plans to send to the *Federal Register* a final determination to withdraw our proposed rule to list the San Fernando Valley spineflower, a plant found in California. This action is not expected to be strongly opposed; however, the Santa Clarita Organization for Planning and the Environment, a local environmental organization, has filed litigation regarding a development project in the range of the species and will likely oppose the withdrawal of the proposed rule. Other interested stakeholders include Newhall Land Company, City of Calabasas, Santa Monica Mountains Conservancy, WildEarth Guardians, California Department of Fish and Wildlife, and local landowners. Media coverage is expected to be neutral. Planned outreach includes a news release to all interested parties and the media. FWS is required by settlement agreement to submit the determination to the *Federal Register* by March 15; therefore, FWS plans to submit it by March 8.

On or around March 9, FWS plans to send to the *Federal Register* an amendment to the current listing of the southern Selkirk Mountains population of woodland caribou (endangered) to include the entire Southern Mountain Caribou population as a distinct population segment (DPS). The revised DPS (17 subpopulations; 15 extant, 2 extirpated) includes the currently listed southern Selkirk Mountains population of woodland caribou, which is a transboundary population between British Columbia, Canada and northern Idaho and northeastern Washington.

The critical habitat designation will remain unchanged. Non-governmental organizations including the International Fund for Wildlife, Kettle Range Conservation Group, Selkirk Conservation Alliance, Kootenai Environmental Alliance, Center for Biological Diversity, Idaho Conservation League, and the State of Idaho may be opposed to the DPS listing. The Pacific Legal Foundation (representing Bonner County) is likely to challenge the determination. FWS received a notice of intent to sue from the Pacific Legal Foundation on behalf of Bonner County in June 2017 because FWS has not met the statutory deadline for finalizing this rule (a proposed rule was published in 2014). Planned outreach includes a news release, social media, emails and phone calls to Congressional offices and stakeholders.

On or around March 9, FWS plans to send to the *Federal Register* a minor map correction in the final rule designating critical habitat for two butterflies, the Poweshiek skipperling and Dakota skipper. One map incorrectly labeled Poweshiek skipperling critical habitat as Dakota skipper critical habitat in Minnesota. FWS does not expect any opposition to this. No outreach is needed for this simple correction notice.

On or around March 16, FWS plans to send to the *Federal Register* a rule removing the textual descriptions of the critical habitat boundaries from certain wildlife entries that have maps sufficient to stand as the official delineation of the critical habitat designation. This rule does not increase, decrease, or in any other way change the critical habitat designations from which we are removing the textual descriptions of boundaries. This action will save taxpayer resources. FWS is taking this action in accordance with the May 1, 2012, revision of the regulations related to publishing textual descriptions of critical habitat boundaries. No outreach is planned.

Migratory Bird Management Actions

In January, FWS plans to publish in the *Federal Register* the proposed 2018-19 hunting regulations for certain migratory game birds. FWS annually prescribes frameworks, or outer limits, for dates and times when hunting may occur and the number of birds that may be taken and possessed in hunting seasons. These frameworks are necessary to allow state selections of seasons and limits and to allow recreational harvest at levels compatible with population and habitat conditions. Planned outreach includes congressional and stakeholder notifications.

In January, FWS plans to publish a final rule removing regulations setting forth the provisions for two depredation orders for double-crested cormorants. FWS had used these standing orders to allow for lethal control of cormorants where they impact aquaculture and public resources; however, on May 25, 2016, the District Court for the District of Columbia ordered that both the Aquaculture Depredation Order and the Public Resources Depredation Order be vacated until FWS performs a new and legally adequate environmental assessment (EA) or environmental impact statement for national cormorant management orders in compliance with the requirements of the National Environmental Policy Act (NEPA). This final rule administratively implements the court's decision. While the depredation orders no longer exist, on November 15, 2017, FWS provided some measure of relief to aquaculture facilities. It issued a final EA under NEPA, which allows aquaculture facility managers and property owners across 37 central and eastern states and the District of Columbia to apply for individual permits for lethal take of

cormorants where they are impacting resources. This latest action is not controversial. If-asked talking points will be planned for outreach.

In January, FWS will publish a final rule in the *Federal Register* on special methods of hunting migratory game birds by tribal members on ceded lands in Wisconsin, Michigan, and Minnesota for the 2017-18 season. This rule prescribes special migratory bird hunting regulations for certain tribes on Indian reservations, off-reservation trust lands and ceded lands. This rule responds to tribal requests for FWS recognition of their authority to regulate hunting under established guidelines. This rule allows the establishment of season bag limits and, thus, harvest at levels compatible with populations and habitat conditions. This new final rule replaces the August 31, 2017, interim final rule. Outreach will include talking points, emails and phone calls to tribes, states, Congressional offices and stakeholders.

In January, FWS will publish a proposed rule in the *Federal Register* for migratory bird subsistence harvest regulations in Alaska for the 2018 season. These regulations allow for the continuation of customary and traditional subsistence uses of migratory birds in Alaska and prescribe regional information on when and where the harvesting of birds may occur. These regulations were developed under a co-management process involving FWS, the Alaska Department of Fish and Game and Alaska Native representatives. The rulemaking is necessary because the regulations governing the subsistence harvest of migratory birds in Alaska are subject to annual review. This rulemaking proposes region-specific regulations that go into effect on April 2, 2018. Planned outreach includes congressional and stakeholder notifications and a news release.

In January, FWS will release a draft environmental assessment in response to a request by Ocotillo Express LLC for a five-year programmatic take permit for golden eagles at its Ocotillo Wind Energy Facility in Imperial County, California. Golden eagles are protected under the Bald and Golden Eagle Protection Act. Ocotillo is requesting a permit to cover unintentional of eagles from their ongoing activities. With their permit application, Ocotillo has submitted an eagle conservation plan that proposes proactive conservation measures to minimize impacts to golden eagles in the region to offset unavoidable harm. Outreach is planned in the form of a news release. This is not controversial.

WEEKLY REPORT
DEPARTMENT OF THE INTERIOR/National Park Service
January 24, 2018

Week Ahead Schedule of Meetings, Hearings, and Travel

There are no scheduled events for the NPS executive management team for the week ahead.

Week Ahead Announcements and Actions

The week of January 22, a surnaming package will be presented to DOI for approval and conveyance to the Hill for a 90 day Congressional review as required. The Sitka Tribe of Alaska, under section Title IV of the Indian Self-Determination and Education Assistance Act, submitted a request to compact the interpretation and resource management programs at Sitka National Historical Park. Formal negotiations on the compact and accompanying annual funding have been on-going since July 2017. The tribe's proposal has completed the final stages of refinement in scope and in budget. A tentative agreement was reached between both parties on January 18, 2018 for the second half of fiscal year 2018. The scope of the tentative agreement is limited to portions of the interpretation program only for 2018. Timing review is necessary to execute the agreement and allow for hiring of employees for the upcoming visitor season (before the first cruise ships begin arriving in May).

From January 8 through March 31, 2018, Cuyahoga Valley National Park in Ohio is implementing the third year of its four-year White-Tailed Deer Management Plan. Management activities will be conducted in partnership with United States Department of Agriculture sharpshooters on weekday evenings from dusk till midnight. Park closures will be in effect during the time and in the areas where management activities are taking place. The park has notified immediate neighbors and municipalities and a hotline has been established for the public.

In mid-January, Chesapeake and Ohio Canal National Historical Park plans to announce a Finding of No Significant Impact for a new submerged Potomac River water supply intake, which will be operated by the Washington Suburban Sanitary Commission (WSSC). The project also involves constructing a boat ramp, a parking area, permanent water filtration plant facilities in the park, and a permanent access road. In exchange for a perpetual easement for the existing and proposed intake facilities, a land exchange between the NPS and WSSC will occur prior to construction. WSSC does not plan to begin construction for two years.

On January 22, the 30-day no action period required under the National Environmental Policy Act for the Fire Island National Seashore Wilderness Breach Management Plan and Final Environmental Impact Statement (FEIS) will end. The NPS will then submit a Record of Decision for the Northeast Regional Director’s signature and review/concurrence of the Office of the Deputy Secretary. The Final Breach Plan/EIS identifies "No Human Intervention Unless Established Criteria are Exceeded" (Alternative 3 in the plan), as the NPS preferred alternative for managing the breach that formed within the Otis Pike Fire Island High Dune Wilderness during Hurricane Sandy in 2012. The Final Breach Plan/EIS evaluates the impacts of all alternatives considered in the plan, and responds to public and agency comments received on the Draft Breach Plan/EIS during the 45-day comment period which began in October 2016. The

FEIS for the plan was filed with the Environmental Protection Agency on December 15, 2017, with a Notice of Availability published in the Federal Register on December 22.

In late January, the NPS will close escrow on the acquisition of 223 acres of unimproved land at Hawai'i Volcanoes National Park. The land is being purchased from The Nature Conservancy (TNC) for $350,000 using Land & Water Conservation Fund appropriations. TNC acquired this last remnant of the 117,000 acre Kahuku Ranch in 2013. The NPS completed the purchase of the main body of the Kahuku Ranch from TNC in 2010.

In late January, the NPS anticipates concluding a $20,600 purchase of a water line easement at Muir Woods National Monument using Land & Water Conservation Fund appropriations. The acquisition was necessitated by a major upgrade to the potable water system serving the park.

In late January, Point Reyes National Seashore will release an Environmental Assessment (EA) prepared by Salmon Protection and Watershed Network-SPAWN for a project to enhance riparian and floodplain habitat at two sites in the park. The proposed actions will benefit federally listed coho salmon and steelhead, and are part of a decades-long restoration program involving watershed stakeholders and landowners within the Lagunitas Creek watershed. The proposed actions are not controversial and have strong local and regional support.

On January 26, the draft air tour management agreement for Glen Canyon / Rainbow Bridge will close after a 45-day public review. The agreement and FAQs are available through the park's PEPC page. The park has sent letters to congressional offices and the air tour operators and has issued a press release. The NPS, the Federal Aviation Administration, and seven commercial air tour operators intend to sign the agreement, once complete, to manage air tours over Glen Canyon National Recreation Area and Rainbow Bridge National Monument to ensure protection of resources and visitor use and enjoyment without compromising aviation safety.

On January 26, Rep. Jared Huffman (D-CA-2) will host a meeting between Point Reyes National Seashore staff and park ranchers to discuss the ongoing General Management Plan Amendment process. The amendment discussion will focus on allowing existing ranch families to continue beef and dairy operations with 20-year lease/permits, and managing tule elk in the Drakes Beach area at a level compatible with authorized ranching. Visitor experience improvements, management strategies to protect park resources, and visitor carrying capacities in the planning area will also be addressed. Rep. Huffman is fully engaged on this issue, and has coordinated similar meetings over the past four years.

On January 26, the Federal Energy Regulatory Commission (FERC) will be issuing an Environmental Assessment (EA) for the Columbia Gas Eastern Panhandle Expansion Project. The proposed project being analyzed includes building an 8-inch gas transmission pipeline that would, in part, cross under Chesapeake and Ohio Canal National Historical Park and the Potomac River near Hancock, Maryland. To streamline the review process, the NPS is participating in the EA as a Cooperating Agency. The park has received a draft for internal review. The pipeline has attracted much public attention, and the superintendent has received over 550 emails requesting the park deny any right-of-way permit requests for a gas line

crossing. No decision will be made until the EA process is complete. The 90-day Federal Authorization Deadline is April 26.

On January 26, National Capital Regional staff will meet with Maryland State Senator Thomas Middleton and a small group of community members at Charles County, Maryland, historic site La Grange. The meeting, requested by Senator Middleton, is a first step to help the NPS learn more about LaGrange, its future needs/opportunities, any existing or potential community support organizations, and possible ways the NPS may be able to provide technical assistance. La Grange is on the National Register of Historic Places. This is not a public meeting and the media is not expected to cover the site visit.

On January 29, the NPS will be issue a prospectus asking groups to submit proposals to provide marina services at James Creek Marina in Washington, D.C. for the next 10 years. These services include wet slip rentals, fuel service, marine sanitation, parking lot operations, and retail and vending sales. Contract offers must be received by April 13, 2018.

On January 29, a team from Wolf Trap National Park for the Performing Arts, the regional office, and the DOI Solicitor's Office will meet with Wolf Trap Foundation for the Performing Arts (Foundation) about renewing and extending the park's partnership agreements. The current cooperative agreement with the Foundation, signed in 1998, expires October 1, 2018. The goal is to have new agreements in place by late summer 2018.

New date (Embargoed until public announcement) On or after January 29, Golden Gate National Recreation Area will publicly release the signed Record of Decision (ROD) for the Alcatraz Ferry Embarkation Plan/Environmental Impact Statement (EIS). The selected alternative will rehabilitate historic structures for visitor use and ferry operations at Pier 31½ in San Francisco, supporting a commercial services concession that will begin in 2019.

New date (Embargoed until public announcement) On or after January 29, National Park Service, Pacific West Region will announce the business opportunity to provide ferry passenger service to Alcatraz and other associated visitor services within Golden Gate National recreation Area. A one-day site visit will be offered to interested parties.

On January 29, Big Bend National Park plans to release its Exotic Animal Management Plan and Environmental Assessment (EA), which is designed to guide management decisions for exotic aoudad (Barbary sheep) and feral hogs. The EA analyzes a no action and a proposed action alternative. Feral hogs are currently limited to the northern portion of the park, but are expected to enter from existing populations outside the park both upstream and downstream along the Rio Grande. Aoudad are presently located in drier, sparsely vegetated mountains park wide. The no action alternative would allow continued and increasing impacts from these exotic species on natural and cultural resources within the park. The proposed alternative includes programmatic and site-specific analyses for implementing aerial (helicopter) shooting of aoudad; and aerial shooting, ground-based shooting, and live-trapping of feral hogs, to be coordinated by the State of Texas. The EA examines impacts to: federally-listed species, vegetation, wildlife, wilderness values, archeological resources and historic structures. Previous agency, tribal and public scoping included scoping newsletters, press releases, and public meetings. The park is working

with the regional office to develop a communications plan to effectively discuss the EA with the public and park stakeholders.

On or about January 30, Mesa Verde National Park will forward the Livestock Removal Plan/Environmental Assessment (EA) for Intermountain Regional Office approval. The EA calls for the removal of approximately 80 horses and 20 cattle that are presently inside the park. The park does not have the legal authority to allow livestock use within the park. When the park was established in 1906, there was no boundary fencing to exclude livestock from entering the park and by 1908 large numbers of livestock had entered the park, particularly during the summer grazing season. As a result, the Secretary of the Interior issued the first regulations in 1908 specifically for Mesa Verde to prohibit livestock use within the park. Previous fence designs along the park's boundary and topography make fence maintenance a challenge and livestock continue to migrate in and out of the park from adjacent land through gaps in the boundary fence. Until the mid to late 1990s, the park actively maintained the boundary fences and removed most trespass livestock in the park. Livestock is now primarily in the southwest canyons of the park. Once the plan is approved by the NPS, it will release it for a 30-day public comment period in advance of a final determination (Finding of no Significant Impact). There has been significant public and moderate media interest. The park is working with and consulting animal advocacy groups on how to humanely remove livestock from the park and identify potential homes for captured, unclaimed livestock. Initial public scoping began in 2015, and resulted in more than 9,000 comments, most of which were form letters.

In late January, Glacier National Park will issue a press release updating the public about the following two topics: (1) the park will announce that the Going-to-the-Sun Road Corridor Management Plan will be released as an Environmental Assessment in the fall, and (2) the park will announce a likely two-week construction related closure along the Going-to-the-Sun Road in mid-September due to routine pavement preservation.

In late January, following DOI approval, the NPS expects to release the final plan/Environmental Impact Statement (EIS) to address the presence of wolves at Isle Royale National Park. The publication of the U.S. Environmental Protection Agency NOA of this final plan/EIS in the Federal Register will initiate a 30-day wait period before the Regional Director of the Midwest Region will sign the Record of Decision. The NPS preferred alternative would introduce between 20-30 wolves to the island over a 3-year time period. A decision is needed because the potential absence of wolves raises concerns about possible effects to the current Isle Royale ecosystem, including effects to both the moose population and forest/vegetation communities. Over the past five years, the wolf population has declined steeply and at this time, natural recovery of the population is unlikely.

In late January, Arches National Park anticipates submitting a Finding of No Significant Impact (FONSI) following the release of the Salt Wash Rehabilitation Project Environmental Assessment (EA) in mid-October 2017. The park is currently preparing the FONSI for Regional Director review. The proposed action will provide for a safer and better visitor experience and improve natural processes by reducing the flooding, sediment deposition, and closure of the Wolfe Ranch/Delicate Arch Viewpoint road, and improve the conveyance of water and sediment in three washes. The FONSI will assess impacts to hydrologic and geomorphologic processes,

vegetation, visitor experience, and wilderness character and will determine if there will be significant impacts to these resources from the proposed action. During the public comment period, the park received nine public comment letters calling on the NPS to consider additional alternatives and suggested mitigation measures to manage impacts to wetlands, native vegetation and wildlife. The comments are addressed in the Errata Sheets attached to the FONSI, and resulted in minor changes to the EA. Additionally, the park consulted affiliated Tribes, the public, potential interested parties, and the State Historic Preservation Office during the planning process. Regional office anticipates signing before the end of February.

In January or February, pending DOI approval, the NPS anticipates publishing an NOA in the Federal Register for the Draft Management Plan and Draft EIS for Saline Valley Warm Springs (plan/DEIS) in Death Valley National Park. The NOA will initiate a 60-day public comment period on the document during which public meetings will be held in the vicinity of the park. The plan/DEIS analyzes five alternatives for the management of the Saline Valley Warm Springs area, and is intended to provide a framework for natural and cultural resource management, administration and operations, and managing visitor access.

On February 1, Joshua Tree National Park will be expanding its current online campground reservation system to include Jumbo Rocks and Cottonwood campgrounds. Currently the park offers approximately 200 sites for reservation, and the inclusion of Jumbo Rocks and Cottonwood campgrounds will double the number of reservable sites. Park management is moving towards expanding the number of reservable sites following an extensive public comment period and a series of public meetings on how better to serve the camping community at the park. Sites can be reserved at Recreation.gov; first come, first serve campers will still have access to four other campgrounds.

On February 1, Joshua Tree National Park will implement a pilot transportation program with a fleet of shuttle buses operating throughout the northern portion of the park during the peak season. The shuttle, supported through fee dollars, will be a free option for visitors, and will travel the 30 miles between Twentynine Palms, California and the village of Joshua Tree, providing access to all of the major campgrounds and hiking trails. After a two-year test period, the park will reevaluate the system to determine if it should be further expanded or made permanent.

On February 1 and 2, Rep. Mike Quigley (D-IL-5), Rep. Carol Shea-Porter (D-NH-1), Rep. Gerry Connolly (D-VA-11), Rep. Debbie Wasserman Schultz (D-FL-23), Caucus Executive Director Maria Laverdiere, and Rep. Matthew Cartwright's (D-PA-17) Deputy Chief of Staff, with accompanying staffers and participants, are planning to visit coastal areas of Everglades National Park and sites in Northeastern and Central Florida Bay. Topics during the visit will include water resource management, Hurricane Irma effects, and Everglades Restoration and Ecosystem Sustainability programs. Local and national media have been invited to join.

During the week of February 5, Grand Canyon National Park expects to begin a 30-day public scoping period for a plan to address improvements at Desert View settlement on the South Rim of the canyon, and support development of an Inter-Tribal Cultural Heritage Site. The park partnered with Grand Canyon's Inter-tribal Advisory Council (ItAC) for the project, which

includes representatives from the park's 11 associated tribes, and Grand Canyon Association, the park's non-profit partner. Potential changes in the Desert View settlement include adaptive reuse of facilities to support cultural heritage interpretation and cultural demonstrations, tribally-directed exhibits, way finding, and infrastructure improvements. Implementation could begin in 2019, coinciding with the park's centennial year. The NPS will hold public meetings at the South Rim on February 20, in Flagstaff, Arizona, on February 21, as well as a webinar.

During the week of February 5, Lassen Volcanic National Park anticipates opening a 30-day public comment period for its draft Environmental Assessment (EA) regarding the Bumpass Hell Trail Visitor Use Improvements project. The two-year project will improve the primary trail to the park's largest hydrothermal area, which is one of the most popular trails in the park. The preferred alternative proposes to re-establish a previous trail into the thermal basin, rehabilitate the trail tread, and replace boardwalk areas with a more sustainable design.

In early February, the final rule to allow bicycle use on a portion of the East Shore Trail at Rocky Mountain National Park is expected to be published in the *Federal Register*. The East Shore Trail is an existing hiking and equestrian trail that runs north/south along the east shore of Shadow Mountain Lake near the town of Grand Lake, Colorado. A Finding of No Significant Impact (FONSI) was signed in February, 2015, that approved bicycle use on a two-mile segment of the trail. Rerouting trails along the East Shore to safely accommodate bike use triggered the rulemaking process per the NPS Bicycle Rule policy. The proposed rule was published in the *Federal Register* in December 2015. Substantive comments received during the proposed rule public comment period were addressed.

In early February, a proposed rule managing Off-Road Vehicle (ORV) use at Glen Canyon National Recreation Area is anticipated to be published. The rule would authorize ORV use, designate routes and areas, and establish criteria for operations of ORVs. This rule is required by the terms of a 2008 court-approved settlement agreement between the NPS and environmental groups. If this rule is not issued, the plaintiffs could re-litigate their claims and a court could require the NPS to stop all ORV use at the recreation area.

From February 5 - 9, the NPS will be conducting site visits throughout the State of Mississippi as part of the initiation of a Special Resource Study (SRS) looking at significant civil rights sites in Mississippi. The team will be visiting five different sites scattered across the state that were identified in the legislation requiring the SRS and meet with local stakeholders and property owners. The study will evaluate the potential for inclusion of each site in the national park system based on whether it meets congressionally established criteria for significance, suitability, feasibility, and need for NPS management. Representatives from the Mississippi Department of Archives and History will be participating in the site visits. The planning will include the start of preparations for formal public scoping and community engagement meetings, expected to be held in the spring of 2018.

On February 7, Pictured Rocks National Lakeshore will host a Quarter Launch & Coin Exchange at Mather Elementary School in Munising, Michigan, commemorating the release of the park’s quarter, the 41st coin to be released in the United States Mint America the Beautiful Quarter Program. As a prelude to the event, the United States Mint will host a coin forum the evening

before, February 6, at Munising Township Office in Wetmore, Michigan. The WASO Office of Communications is in contact with the United States Mint who will draft a press release for coordination by the WASO Solicitor's Office.

On or about February 9, the City of San Francisco will certify a California state-level environmental compliance document for the Alcatraz Ferry Embarkation Plan. This will be subsequent to Golden Gate National Recreation Area completion of the Record of Decision for the Alcatraz Ferry Embarkation Plan/Environmental Impact Statement. The selected alternative will rehabilitate historic structures for visitor use and ferry operations at Pier 31½ in San Francisco, supporting a commercial services concession that will begin in 2019.

By February 12, the NPS will submit to the DOI regional environmental officer their comments on a proposal by the Federal Highway Administration for an EA and Section 4(f) Evaluation for review through the Environmental Review Tracking System (ERTS) for the Cairo Bridge Replacement Project. The project proposes to construct a new bridge in the existing location on WV 31 over the North Fork Hughes River in Cairo, West Virginia. The North Fork Hughes River is listed on the Nationwide Rivers Inventory, so there is potential for NPS interest in the project. The document has been forwarded to the NER Rivers Program for review and comment. Comments are due to the NER External Review Program Coordinator by February 5, 2018.

On or about February 15, the NPS State, Tribal, Local, Plans & Grants Division anticipates announcing 60 African American Civil Rights Grant awards, totaling almost $13 million. Grants will be used to fund planning, education, research, pre-development, and physical preservation projects focusing on the struggle for African American equality in the 20th Century. Eligible applicants include States, Federally recognized Tribes, local governments, and nonprofits. The grants are anticipated to receive press coverage and legislative attention upon announcement; the NPS will coordinate with DOI on the outreach.

From February 17 to 18, Frederick Douglass National Historic Site will celebrate the bicentennial of Frederick Douglass' birth. There will be community lectures, dramatic historical performances, kid activities, and musical performances. Douglass descendants and award-winning historian David Blight, are among the guest speakers. A news release announcing the event will be distributed February 7. All events are open press. An invitation has been extended to the Secretary.

On February 19, President and Mrs. Jimmy Carter will speak at the Plains High School in Plains, Georgia, a part of Jimmy Carter National Historic Site, during the annual Presidents Day celebration. The Congressional delegation, state and local officials will be invited to attend.

30 to 60 Day Look Ahead

In February, Phase 2 will begin on the waterline project to upgrade and replace the aging system in and around the National Mall and Memorial Parks. This phase is expected to take approximately one year. Work area will include West Potomac Park, the Washington Monument (WAMO) grounds, Lincoln Memorial, Ash Woods Road, the area between Constitution Gardens and the Vietnam Veterans Memorial, and the recreation fields near the Martin Luther King, Jr.

Memorial. A majority of the work will be horizontal drilling, with pits every 500 feet to pull the line; however, there will be open trenching around WAMO.

In February, Death Valley National Park and the Ridgecrest Bureau of Land Management (BLM) office anticipate opening a public comment period on the Keystone Mine Plan of Operations Amendment and accompanying Environmental Assessment. The mine is on BLM land near the park's western border, and the mining plan includes the use of water rights from within the park.

In February, Olympic National Park anticipates initiating a two-week public scoping period for the Olympic Hot Springs Road Environmental Assessment. A news release will be issued. No public meetings are planned.

In February, the Deputy Director, Operations, will be issuing a Policy Memorandum that includes updated guidance on the NPS uniform program. These changes are based on the results from the Online Uniform Wear Survey conducted in 2015, and from organizational changes within NPS that moved the uniform program to a different directorate. This guidance will be included when the Director's Order is updated in the future.

The week of February 5, Grand Canyon National Park expects to begin a 30-day public scoping period for a plan to address improvements at Desert View, and support development of an Inter-Tribal Cultural Heritage Site. The park partnered with Grand Canyon's Inter-tribal Advisory Council (ItAC) for the project, which includes representatives from the park's 11 associated tribes, and Grand Canyon Association, the park's non-profit partner. Potential changes in the Desert View area include adaptive reuse of facilities to support cultural heritage interpretation and cultural demonstrations, tribally-directed exhibits, and restroom, way finding and infrastructure improvements. Implementation could begin in 2019, coinciding with the park's centennial year. The NPS will hold public meetings as well as a webinar.

From February 9- 26, Yosemite National Park expects high visitation for Horsetail Fall in the late afternoons. The popular annual event occurs when the sun reflects off of a waterfall on El Capitan and the water looks like fire. The park will pilot a free shuttle bus to bring visitors to the viewing area.

On or after February 19, Death Valley National Park anticipates releasing the final Bonnie Clare Road Reconstruction Environmental Assessment and FONSI. Reconstruction work is scheduled to start in August 2018 and be completed by May 2019. This will allow the reopening of the northeast entrance to the park and restore public access to Scotty's Castle.

In mid to late February, Yosemite National Park will be releasing an Environmental Assessment (EA) about the Bridalveil Fall Rehabilitation Project. The project is slated to improve visitor services at the popular location by improving trails and viewing platforms, improving accessibility, constructing new restrooms, and addressing deferred maintenance issues. The project is in partnership with Yosemite Conservancy, the park's philanthropic partner, and construction is anticipated to start in the fall.

On February 20, Glen Canyon National Recreation area managers will meet with the Navajo Nation Department of Justice to discuss updating the 1970 Quadrilateral Agreement, the 1994 Memorandum of Understanding, and 2003 Bridge Agreement - all of which expire in 2020. The Quadrilateral Agreement was signed by the Bureau of Indian Affairs, Bureau of Reclamation, NPS, Secretary of the Interior, and Navajo Nation in 1970. The agreement provides a mechanism to plan development for commercial and recreational facilities along the shared park/Navajo Nation boundary. The 1994 MOU is signed by the NPS, BIA, and Navajo Nation to address the Development Concept Plan for Antelope Point and is tiered from the 1970 Quadrilateral Agreement. The 2003 Bridge Agreement is between the Navajo Nation and the NPS and details the administration of the Antelope Point area. This agreement also tiers off the 1970 Quadrilateral Agreement and 1994 MOU.

February 21 is the application deadline for Save America's Treasures Grants. The notice of availability of grants was posted on Grants.gov on December 20, 2017. These grants fund the preservation and conservation of nationally significant properties and collections. $5 million is available for grants to State, Tribes, local governments, nonprofits and Federal agencies excluding the National Park Service. There is significant interest in the program with calls and emails received daily.

The deadline to submit proposals for the 250th non-profit has been extended until February 28. A press release regarding this extension was sent by the team on December 21, 2017.

In late February, Golden Gate National Recreation Area is expected to release a Request for Qualifications for a competitive business opportunity to establish a waterfront community center at the Fort Baker Historic Boat Shop and Marina as an affordable recreational and gathering place.

In late February, Glen Canyon National Recreation Area plans to release a Request for Proposals for a new interim, three-year temporary concessions contract for the Hite location in the park, to avoid interruption of visitor services. The interim contract is needed to address increased land-based recreational use and will help inform and allow time to develop a typical 10-year concessions contract.

In February or March, Cape Hatteras National Seashore plans to issue a Request for Proposals (RFP) to lease Oregon Inlet Marina. The marina is operated under a concession contract, which has been extended on an annual basis since 2000. A lease has been determined to be the appropriate method for managing the property in order to provide for facility maintenance and continued public use of this locally-important and internationally-known charter fishing marina. The RFP is expected to garner attention from multiple interested parties, including the current operator, the local media, and elected officials.

In February or March, (pending Departmental approval) Olympic National Park anticipates issuing a news release announcing that a Notice of Availability NOA is to be published in the Federal Register for its Mountain Goat Management Plan/Final EIS.

On or about March 1, the FY 2017 annual report on the 20-percent Historic Tax Credit (HTC) is planned to be issued. The HTC was retained as part of the tax reform legislation signed by the President into law on December 22, 2017. The eight-page annual report summarizes information about the program to include total number of projects reviewed broken down by state, rehabilitation cost, new use, etc., and also includes photos and short descriptions of some representative projects.

(Embargoed until public announcement) On or before March 15, Channel Islands National Park will initiate the process to transfer human remains that have been undergoing Native American Graves Protection and Repatriation Act (NAGPRA) review to the Santa Ynez Band of Chumash Mission Indians (a federally recognized tribe) under 43 C.F.R. §10.7 (Disposition of unclaimed human remains, funerary objects, sacred objects, or objects of cultural patrimony). The park is required to submit a list of the items to the Manager, National NAGPRA Program, and publish a notice of proposed transfer in a newspaper of general circulation.

In March, the nonprofit Peaceful Valley Donkey Rescue will begin rounding up and removing feral burros from Death Valley National Park and Mojave National Preserve. The organization anticipates removing up to 2,500 burros over the next 5 years to test burros for disease and domesticate the animals for adoption. Burros that cannot be tamed will be kept in sanctuaries by the organization. Compliance for burro removal was conducted as part of both parks' 2002 General Management Plans. This is anticipated to generate public interest and has already triggered a FOIA request.

In March, the State, Tribal, and Local Plans and Grants Division anticipates announcement of a grant funding opportunity on grants.gov for the Historically Black Colleges and Universities grants which fund the preservation of National Register listed properties on HBCU campuses. $4 million in FY2017 funding is available to eligible HBCU applicants. There is already interest in the program with weekly inquiries.

Through March, the NPS will conduct annual deer management actions at Catoctin Mountain Park, Antietam National Battlefield, Monocacy National Battlefield, and Rock Creek Park. This will be Catoctin's ninth season of deer management operations, Rock Creek Park's fifth season, and the second season for Antietam and Monocacy National Battlefields. Park staff members are conducted deer population density surveys in October and November 2017 to determine the number of animals to remove, as determined through their deer management plans. Sharpshooters from the U.S. Department of Agriculture's Animal and Plant Health Inspection Service will remove deer from closed park areas during the daytime in some parks and from park roads after dusk in all parks. Venison will be donated to local food banks

On March 20-21, Manhattan Project National Historical Park will conduct an internal workshop with its Department of Energy partners in Lakewood, Colorado, to develop a Visitor Access Plan. Many of the facilities listed in the park's enabling legislation are currently inaccessible to the public. This plan will analyze the feasibility of visitor access to these facilities over the next 15 years.

In March, Mojave National Preserve expects to begin the public comment period on a Management Plan for Developed Water Sources and Environmental Assessment (PDWS/EA). The plan will provide a comprehensive strategy and water management techniques to ensure the preservation of wildlife, historic, wilderness, and recreation values in the management of developed and undeveloped water resources in the park (wildlife guzzlers and developed springs). The process is being closely watched by local hunting and conservation groups concerned about how the park will manage wildlife guzzlers, which are viewed by some as necessary for maintaining a healthy bighorn sheep population.

In March or April, Yosemite Hospitality, Inc. (YH), the park's primary concessioner, will open a Starbucks licensed store in the Yosemite Valley Lodge food court area, called “Basecamp Cafe.” The new operation is a component of YH’s larger renovation of food service options at the Yosemite Valley Lodge.

By March 30, the NPS will provide any comments to the Delaware River Basin Commission (DRBC) which recently proposed regulations addressing natural gas development, which includes a ban on high-volume hydraulic fracturing in the Basin. The NPS has filed comments on the various iterations of proposed regulations over the last eight years; a multi-disciplinary team is preparing a comment memo to be filed to the federal representative, the U.S. Army Corps of Engineers. The memo will be routed for NPS and ASFWP leadership review prior to submission.

By April 1, the Tennessee Valley Authority (TVA) is seeking approval for a right-of-way permit from Natchez Trace Parkway to begin construction of an aerial 161-kV transmission line across the Parkway at milepost 159.1 as part of a 43-mile upgrade of electrical service. The NPS and the State Historical Preservation Office determined the transmission line will adversely affect the cultural landscape and scenic vista of the Parkway, under section 106 of the National Historic Preservation Act. TVA proposed to transfer funds to the NPS to cover the cost to underground non-TVA transmission lines crossing the Parkway to mitigate the adverse effect. The Parkway is drafting two general agreements to manage the funds, which will undergo complete DOI legal review of mitigation framework and agreements.

Early this year, the U.S. Army Corps of Engineers (Corps) is expected to begin conducting an Environmental Assessment (EA) for the Morehead City Port channel project, located next to Cape Lookout National Seashore in Carteret County, North Carolina. Recently, the county and Rep. Walter Jones Jr. (R-NC-3) formally requested that the Corps prepare a full Environmental Impact Statement (EIS) or a mitigated Finding of No Significant Impact (FONSI) before moving ahead with the project. They expressed concerns that the Corps' alternatives will have negative impacts to nearby eastern Bogue Banks that were not evaluated, and that the draft EA would not comply with the National Environmental Policy Act. The county believes that the Corps should include the installation of a terminal groin (rock jetty) on the western tip of Shackleford Banks, an island within park boundaries that is designated as proposed wilderness.

This summer, the U.S. Army Corps of Engineers (Corps) estimates the release of the Final Supplemental Environmental Impact Statement (EIS) for the Alaska Stand Alone Pipeline, with a prior review by cooperating agencies expected to begin in February. The proposed action remains outside of Denali National Park and Preserve (DENA), and a right-of-way application

has not been submitted to the NPS. The applicant considers the route through DENA to be infeasible because of the procedural requirements of Title XI in the Alaska National Interest Lands Conservation Act. However, proposed legislative changes to preclude the procedural requirements of Title XI are pending in Congress. The applicant could change their proposed route because of changes in legislation or with the Final Supplemental EIS. The Corps could direct the applicant to the route through DENA as the Least Environmentally Damaging Practicable Alternative (LEDPA) because of fewer impacts to wetlands. If the route would encumber DENA lands, the applicant would submit a right-of-way application to the NPS.

Heads-up/reminders

On January 16 the National Park Service initiated a criminal investigation on at Yellowstone National Park to investigate a trespass and tampering incident at the Stephens Creek facility. Bison being held at the facility for possible quarantine are no longer in the pens. This act will delay the ongoing quarantine discussions between the Interagency Bison Management Plan partners and delay bison going to tribal lands.

The week of January 16, the NPS released the Tule Springs Fossil Beds National Monument Environmental Assessment (EA) and Finding of No Significant Impact (FONSI), on a proposed exchange of easements between the National Park Service and the City of North Las Vegas at Tule Springs Fossil Beds National Monument. The land exchange is proposed to provide access and utilities to a part of a planned community that is surrounded by NPS-managed land. It also includes a trailhead and trail, to encourage visitors to access the monument in a manner that will protect park resources.

From February 11 to 15, the 20th Annual Hike the Hill event will be held at the Washington Plaza Hotel, Washington, D.C. This event, sponsored by the Partnership for the National Trails System and American Hiking Society, draws partners and federal employees from national trails and trail related organizations for work sessions, networking and meetings on Capitol Hill. With the 50th anniversary of the National Trails and Wild & Scenic Rivers Systems this year, several events will include partners and staff from river organizations as well. A schedule with a full list of activities for this event can be found at: http://pnts.org/new/our-work/hike-the-hill/.

Columbia Gas Corporation currently operates two 18-inch underground natural gas pipelines that traverse 6,328 ft. of Petersburg National Battlefield in a 50 ft. wide maintained corridor. The presence of the gas line through the park has been authorized through a Special Use Permit (SUP) which expired on November 1, 2017. To ensure compliance with DO-53, the park is seeking to set up a long term Right of Way (10 year.) permit. Since this could not be completed by the expiration date of the SUP due to communication issues with Columbia Gas and compliance needs, the park is working on a temporary 6 month -1 year permit so the proper compliance can be completed.

Rock Creek Park is working with the Washington Metropolitan Area Transit Authority (WMATA) to improve safety and security near a historic trestle at the southern end of Glover Archbold Park in Washington, DC. The WMATA-owned trestle is at risk of imminent collapse. NPS crews have installed updated signage and temporary chain-link fencing north and south of the trestle.

The NPS has prepared a transportation plan and draft environmental impact statement for Acadia National Park to determine ways to improve safety, reduce congestion and crowding, avoid impacts to park resources, and provide visitors with a high-quality experience through a variety of mechanisms such as visitor management strategies, enhancements to alternative transportation services, restrictions on vehicle size, and expanded access to parking. A Federal Register Notice of Availability of the draft transportation plan and environmental impact statement is currently awaiting the Regional Director's approval. Once signed, the Notice of Availability will be submitted for WASO and DOI clearance to publish in the Federal Register. A briefing on the plan and draft EIS is pending with the AS-FWP hallway.

Acadia National Park is requesting a no-cost transfer of the Bass Harbor Head Light Station (2.5-acres) from the U.S. Coast Guard, which is proposing to excess the property and retain a right of way to operate the automated aid to navigation. The NPS is pursuing options to reuse the light station through a public-private partnership that would generate revenue to support its maintenance and preservation, and increase opportunities for visitor access and education. The property contains five buildings (2,700 square feet) and is located entirely within the legislated boundary of the park. The light station was constructed in 1858 and listed in the National Register of Historic Places in 1988.

STRATEGIC PLAN FOR FISCAL YEARS 2018 – 2022

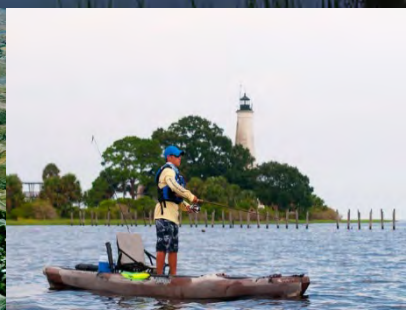

Table of Contents

LETTER FROM THE SECRETARY 1

MISSION AND ORGANIZATION 3

Mission 3

Vision 3

History 3

STRATEGIC PLAN FRAMEWORK 13

DESCRIPTION OF MISSION AREAS 14

MISSION AREA 1: Conserving Our Land and Water 15

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities 15

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity 19

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands 20

GOAL #4: Inform land use planning processes especially for public use and access 22

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources 24

GOAL #1 Ensure energy and economic security for America 24

GOAL #2: Ensure access to mineral resources 26

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate 26

GOAL #4: Focus timber programs on “healthy forests” lifecycle 28

GOAL #5: Manage grazing resources 29

MISSION AREA 3 Expanding Outdoor Recreation and Access 30

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters 30

GOAL #2: Enhance public satisfaction at DOI sites 31

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities 32

GOAL #1: Support tribal self-determination, self-governance, and sovereignty 32

GOAL #2: Fulfill fiduciary trust 33

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states 34

MISSION AREA 5 Protecting Our People and the Border 37

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks 37

GOAL 2: Support securing our southern continental US border 38

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience 39

GOAL #4: Provide science to safeguard communities from natural hazards 40

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years 42

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery 42
GOAL #2: Reduce administrative and regulatory burden 43
GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog 45
APPENDIX A – ACRONYMS 48

LETTER FROM THE SECRETARY

The Department of the Interior's Strategic Plan for Fiscal Year 2018-2022 is our bold vision for the future under President Donald J. Trump. As the chief stewards of our public lands, it is our job to ensure that these lands continue to be used "for the benefit and enjoyment of the people," as the words engraved into the Roosevelt Arch at Yellowstone National Park so proudly proclaim.

We will restore the American conservation ethic that built our nation. Among the American traditions that made our country great was a philosophy of multiple-use on our public lands. I am an admirer of President Theodore Roosevelt – he had it right. As President Roosevelt once remarked, "It is not what we have that will make us a great nation; it is the way in which we use it."

Our public lands are our greatest treasures, and all Americans should be able to experience these treasures. One of my top priorities as Secretary of the Interior is public access to public land. Recognizing that hunting and fishing is an integral part of the American heritage, we must do more to ensure that all Americans can enjoy these sports – not just the wealthy elite. Americans should also be proud of their public lands, which is why investing in American infrastructure and addressing the maintenance backlog at our National Parks is critically important.

While "benefit and enjoyment" includes recreation, it also includes traditional uses like grazing and timber harvesting. Our mandate is multiple-use of public lands, and multiple-use also includes the development of natural resources as we seek to leverage American energy for American strength. Americans should have the right to make a living off the land, and one of our most critical responsibilities at Interior is upholding this right.

If we are going to preserve our heritage, we must bolster our standing in the world. It is in the economic and national security interest of the United States to pursue a policy of American energy dominance. An America-First energy policy is one which maximizes the use of American resources while freeing us from dependence on foreign oil.

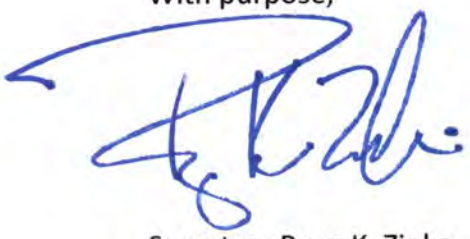
American energy dominance requires aggressive regulatory reform. With our strategic plan, the Interior Department has a unique opportunity to cut the burdensome, unnecessary regulations that have suppressed job creation and wealth generation. Regulatory reform also includes reduced permitting times. The Trump Administration will not deregulate or streamline at the expense of environmental standards or worker safety, but we will strike a balance and strive toward regulatory certainty going forward when creating a bureaucratic framework.

Along with our conservation stewardship responsibilities, we must also be the greatest champion of our tribal nations. Native Americans and Alaska Natives are proud people with a rich history. Sovereignty has to have meaning, and the days of empty promises to our tribal communities are over. Our priorities in Indian Country will be self-determination, government-to-government interaction, and empowerment.

To accomplish our goals, a reorganization of the Department is necessary. We will chart a path forward for the next 100 years at Interior, as Teddy Roosevelt did over a century ago. As a former Navy SEAL, I have long believed that a healthy front line makes for a healthy operation – it is in this spirit that the reorganization plan will focus on our front lines and how we can better engage those on the ground.

Our strategic plan will restore trust in local communities. The federal government has a long way to go when it comes to being a good neighbor, but I am confident we can get there. With a renewed focus on conservation and a bold approach to energy, the Department of the Interior can lead the way in making America great again. This is our desired outcome.

With purpose,



Secretary Ryan K. Zinke
United States Department of the Interior

MISSION AND ORGANIZATION

Mission

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

Vision

The Department of the Interior strives to fulfill a vision to:

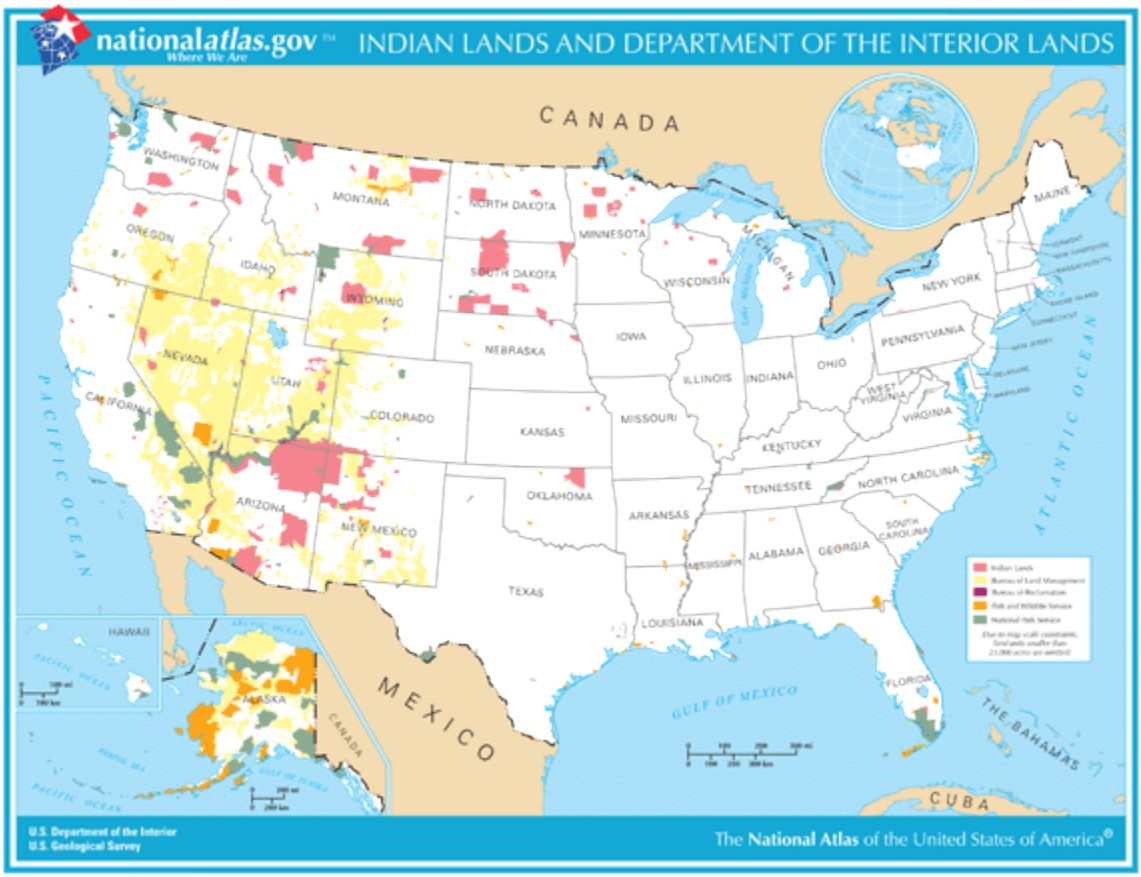
- *Promote energy dominance and critical minerals development* to create jobs for Americans, insulate our nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so that our people can be healthier, more fully enjoy the wonderful features of their federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

History

The Department of the Interior (DOI) was established in 1849. The DOI was charged with managing a wide variety of programs, which included overseeing Indian Affairs, exploring the western wilderness, directing the District of Columbia jail, constructing the National Capital's water system, managing hospitals and universities, improving historic western emigrant routes, marking boundaries, issuing patents, conducting the census, and researching the geological resources of the United States. As the country matured during the last half of the 19th Century, so did the DOI and its mission began to evolve as some of these functions moved to other agencies at the same time the DOI acquired new responsibilities.

With information from Robert Utley and Barry Mackintosh, *The Department of Everything Else: Highlights of Interior History*, 1988, pp. 1-2.

Surface Lands Managed by the Department of the Interior



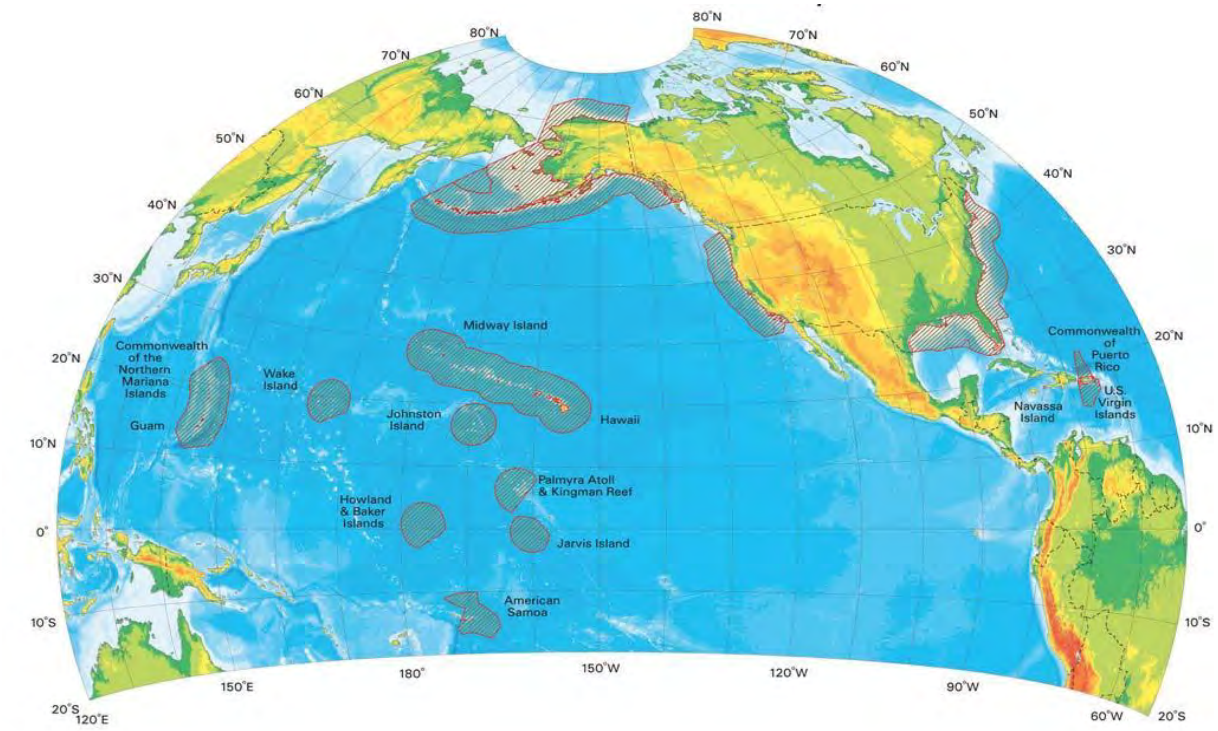
USGS Map, Oct 2014 (except for US Territories that are identified on next graphic)

Following Theodore Roosevelt's conservation summit and the awakening of the conservation movement at the beginning of the 20th Century, there was an increasing urgency and expanding congressional mandate to protect and more effectively manage the nation's natural resources. In 1905, management of the federal forests changed from the Department of the Interior to the United States Forest Service within the Department of Agriculture. Its Chief, Gifford Pinchot, introduced better forestry methods. Pinchot sought to turn public land policy from one that disposed of resources to private parties, to one that maintained federal ownership and management of public land. Pinchot argued that scientific management of forests and natural resources was profitable. He generally opposed preservation for the sake of preservation. During the 1960's and 1970's the DOI's authorizing statutes shifted to put more emphasis on the preservation, management, and use of public lands and natural and cultural resources.

Today, the DOI manages the Nation's public lands and minerals, including providing access to more than 480 million acres of public lands, 700 million acres of subsurface minerals, and 1.7 billion acres of the Outer Continental Shelf. The DOI is the steward of 20 percent of the Nation's lands, including national parks, national wildlife refuges, and other public lands; manages resources that supply 30 percent of the Nation's energy; supplies and manages water in the 17 Western States and supplies 15 percent of the Nation's hydropower energy; and upholds Federal trust responsibilities to 573 federally recognized Indian tribes and Alaska Native villages. The DOI is responsible for migratory bird and wildlife conservation, historic preservation, endangered species conservation, surface-mined lands protection and restoration, mapping, geological, hydrological, and biological science

for the Nation, and financial and technical assistance for the insular areas (many of which are depicted in the following graphic).

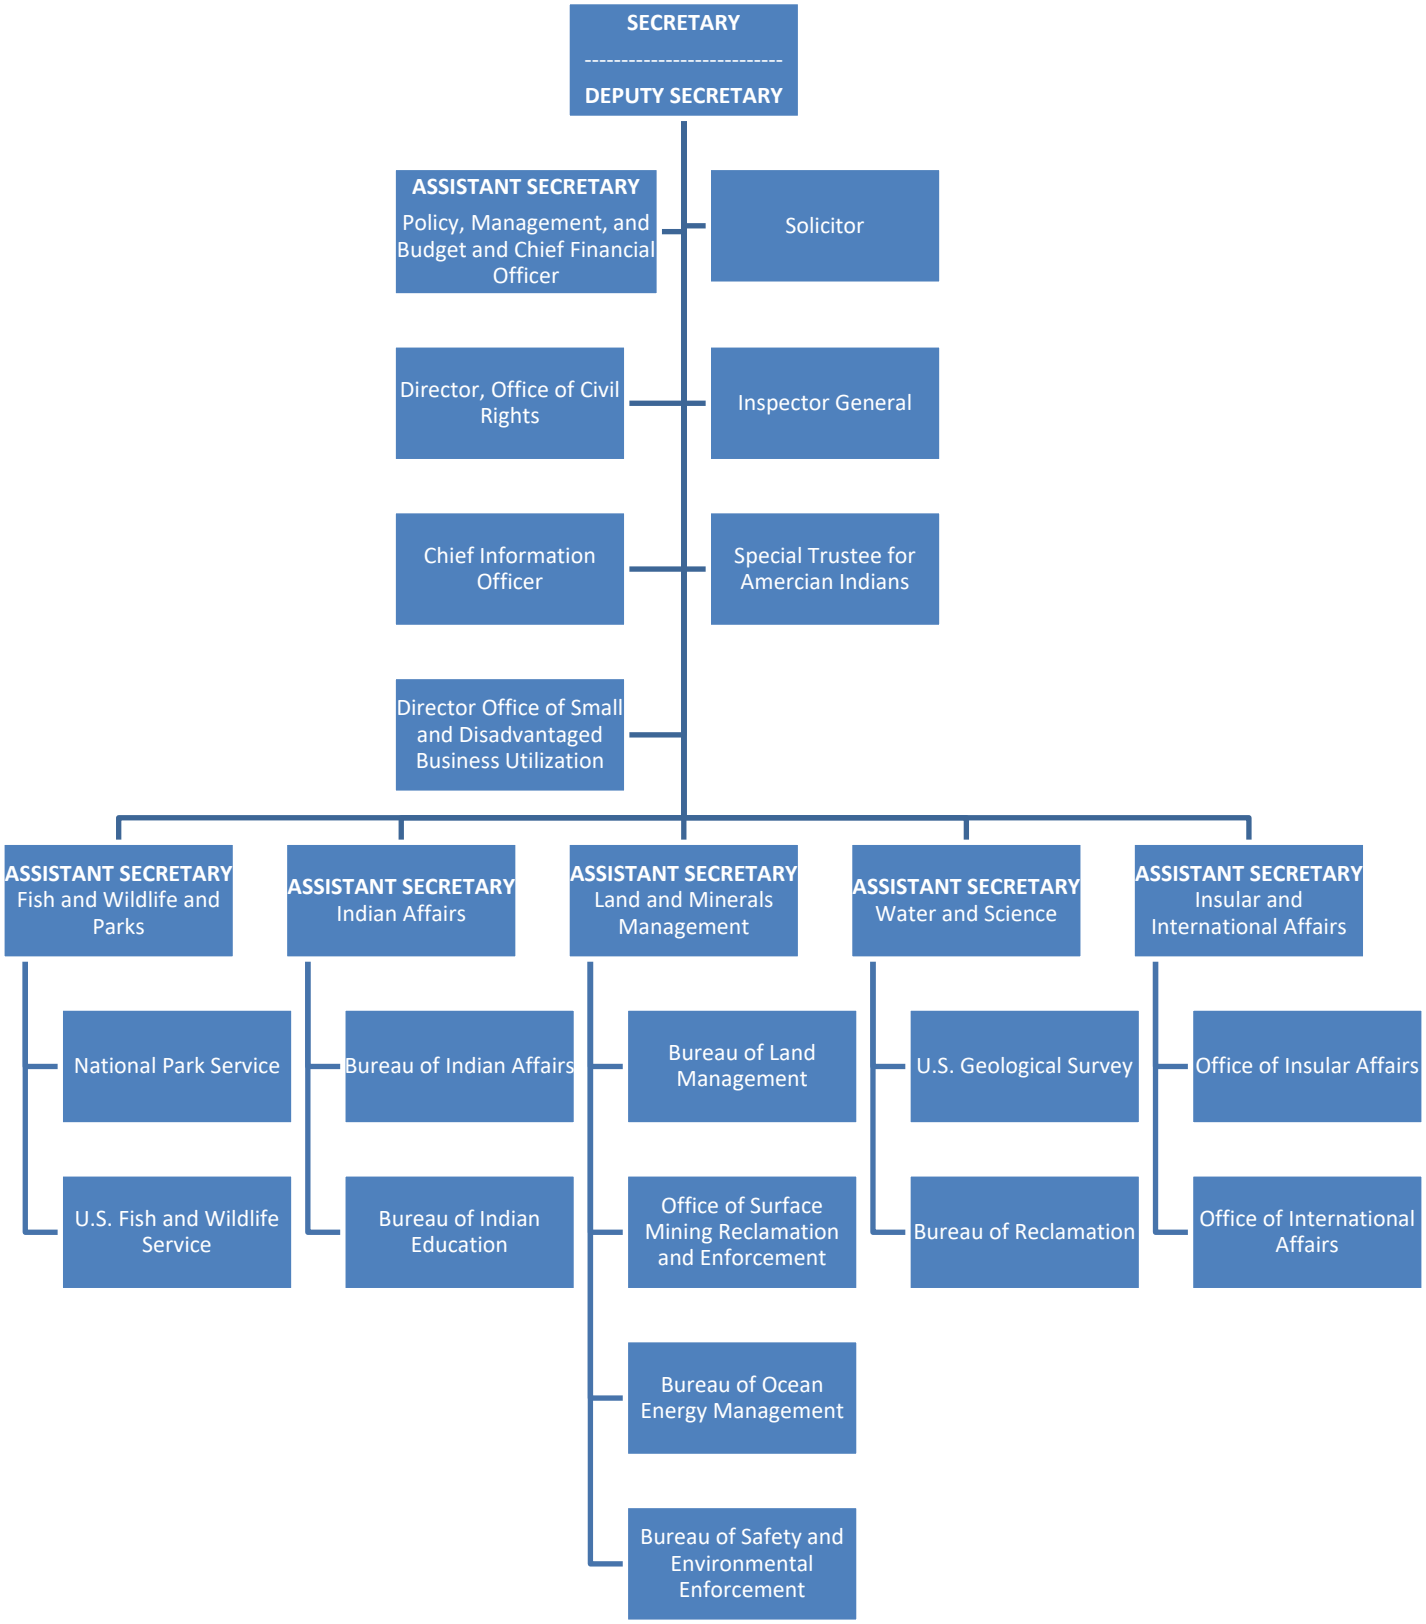
United States Continental Shelf Boundary Areas



National Geophysical Data Center, Sep 2001

The DOI's programs encompassed in this Strategic Plan cover a broad spectrum of activities that are performed by 10 bureaus and multiple offices and are captured in the following presentation of each entity's unique mission and set of responsibilities. The Strategic Plan's six mission areas capture the vitality, inventiveness, and potential of the bureaus and offices and the DOI's 70,000 dedicated and skilled employees. Along with our hardworking and skilled employees, over 350,000 much appreciated volunteers annually contribute their time in support of bureau and office missions, bringing unique local knowledge to park operations, assisting in recovery from natural disasters, and participating in environmental education, among other activities. We cannot effectively address all our responsibilities alone, so it is critical to strengthen partnerships with our sister federal agencies with related missions. In the federal family, we share forest, minerals, rangeland, and wildland fire management responsibilities with the US Department of Agriculture's Forest Service. We share water resource management and hydroelectric power generation responsibilities with the US Army Corps of Engineers, and we share fishery and endangered species management responsibilities with the Department of Commerce's National Marine Fisheries Service. In some ways, our relationships with state, tribal, and local government are even more important. We operate within the bounds of state water law, and respect state authority over resident wildlife. We deal with tribal governments on a government to government basis, respecting each other's authority and jurisdiction. We share land use planning responsibilities with local government, so we must make our own land management plans in a way that is mindful of the goals and plans of those local government neighbors.

US Department of the Interior Organization Chart



Bureau and Office Summaries

Bureau of Land Management (BLM)

- Manages public lands for the benefit of all Americans under the dual framework of multiple use and sustained yield on nearly 250 million surface acres, as well as 700 million acres of subsurface mineral estate. Priorities include:
  - Making full use of the Nation's domestic energy and mineral sources, including conventional and renewable energy sources;
  - Serving American families by providing outdoor recreation opportunities that are key to the Nation's heritage and its economy; and
  - Managing working landscapes to support sustainable livestock grazing operations; and timber and biomass production.
  - Developing and maintaining strong partnerships with State, local, and private stakeholders in shared conservation stewardship.

Office of Surface Mining Reclamation and Enforcement (OSMRE)

- Protects the environment during coal mining through Federal programs, grants to states and Tribes, and oversight activities.
- Ensures the land is reclaimed afterwards.
- Mitigates the effects of past mining by pursuing reclamation of abandoned coal mine lands.

Bureau of Ocean Energy Management (BOEM)

- Manages access to renewable and conventional energy resources of the Outer Continental Shelf (OCS);
- Administers nearly 3,000 active fluid mineral leases on over 16 million OCS acres;
- Oversees 4 percent of the natural gas and 18 percent of the oil produced domestically; and
- Oversees lease and grant issuance for off shore renewable energy projects.
- Manages leasing for marine mineral resources such as sand to facilitate beach replenishment and coastal nourishment projects.

U.S. Geological Survey (USGS)

- Produces information to increase understanding of natural hazards such as earthquakes, volcanoes, and landslides.
- Conducts research and delivers assessments on oil, gas, and alternative energy potential, production, consumption, and environmental effects.
- Conducts reliable scientific research in land resources, mineral assessments, and water resources to inform effective decision making and planning.
- Provides science information that supports natural resource decisions.
- Produces topographic, geologic, hydrographic, and biogeographic data and maps.

Bureau of Safety and Environmental Enforcement (BSEE)

- Fosters secure and reliable energy production from the 1.7 billion acre U.S. Outer Continental Shelf (OCS) for America's energy future.
- Conducts inspections, permitting, incident and equipment failure analysis, oil spill preparedness and enforcement programs aimed at promoting a culture of safety and reducing risk to those who work offshore.
- Supports the technical expertise to engage opportunities and to meet challenges to tap the full potential of OCS energy resources.

Bureau of Reclamation (BOR)

- Manages, develops, and protects water and related resources in an environmentally and economically sound manner in the interest of the American public.
- Largest wholesale supplier of water in the Nation
- Manages 492 dams and 338 reservoirs.
- Delivers water to 1 in every 5 western farmers and more than 31 million people.
- America's second largest producer of hydroelectric power.

Fish and Wildlife Service (FWS)

- Manages the lands and waters of the 855 million-acre National Wildlife Refuge System, primarily for the benefit of fish and wildlife.
- Manages 73 fish hatcheries and other related facilities for endangered species recovery and to restore native fisheries.
- Protects and conserves:
  - Migratory birds;
  - Threatened and endangered species; and
  - Certain marine mammals.
- Hosts about 48 million visitors annually at more than 560 refuges located in all 50 states and 38 wetland management districts.

Indian Affairs (IA)

- Fulfills Indian trust responsibilities.
- Promotes self-determination on behalf of 573 federally recognized Indian Tribes.
- Funds self-governance compacts and self-determination contracts to support all Federal programs including education, law enforcement, and social service programs that are delivered by Tribal Nations.
- Supports 183 elementary and secondary schools and dormitories, providing educational services to approximately 48,000 students in 23 states.
- Supports 32 community colleges, universities, post-secondary schools, and technical colleges.

Note: IA includes the Bureau of Indian Affairs (BIA) and the Bureau of Indian Education (BIE)

National Park Service (NPS)

- Maintains and manages a system of 417 natural, cultural, and recreational sites for the benefit and enjoyment of the American people.
- Manages and protects over 27,000 historic and prehistoric structures, nearly 44 million acres of designated wilderness, and a wide range of museum collections and cultural and natural landscapes.
- Provides outdoor recreation to nearly 324 million visitors at national park units.
- Provides technical assistance and support to state, tribal and local natural and cultural resource sites and programs, and fulfills responsibilities under the National Historic Preservation Act of 1966.

Insular and International Affairs

- Coordinates federal policy for the territories of American Samoa, Guam, the U.S. Virgin Islands and the Commonwealth of the Northern Mariana Islands.
- Oversees the Department's involvement with oceans policy
- Manages the Department's involvement in international affairs
- Responsible for administering and overseeing U.S. federal assistance to the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau under the Compacts of Free Association, as well as providing technical and financial assistance to all the Insular Areas.

Note: Includes Office of Insular Affairs and Office of International Affairs

Departmental Offices

- Immediate Office of the Secretary, Deputy Secretary, and Assistant Secretaries
- Office of the Solicitor
- Policy, Management and Budget provides leadership and support for the following:
  - Budget, Finance, Performance and Acquisition;
  - Public Safety, Resource Protection, and Emergency Services;
  - Natural Resources Revenue Management;
  - Human Capital and Diversity;
  - Technology, Information and Business Services;
  - Policy and Environmental Management
- Office of Inspector General
- Office of the Special Trustee for American Indians

CROSS-CUTTING PRINCIPLES

As the Department of the Interior (DOI) advances through FY 2018-2022, the following principles guide our leadership, management, and workforce.

Effective and Accountable Leadership - The DOI is committed to being an outstanding steward of approximately 500 million acres of public lands, 700 million onshore subsurface acres, and 1.7 billion acres of the Outer Continental Shelf (OCS) including magnificent vistas, valuable energy and mineral resources, unique ecosystems, range, and treasured natural, cultural, and heritage assets. The management and oversight of these resources require a dedicated cadre of employees, the contributions of volunteers, and the input of stakeholders to inform decision-making. The challenges of managing for a diverse constituency while meeting national goals for energy development and sustaining high levels of recreation and access require technical expertise, the best available science, and an understanding of the balance of development and conservation.

A critical role for DOI's senior executives is providing the necessary leadership to guide the efforts of DOI's offices, bureaus, and field locations in effectively achieving Presidential and Secretarial goals especially through:

- Ensuring cost effective operations and quality customer-centric service to the public;
- Facilitating cooperation and collaboration across organizations within the DOI and its federal and nonfederal partners;
- Ensuring a workplace environment that is safe, fair, and conducive to employee productivity; resolving conflicts as needed; and
- Holding individuals at all levels accountable for their actions.

Empowering the Field - Accomplishing the multi-faceted missions of the DOI involves the skills of 10 bureaus and spans 2,400 locations across the U.S. These locations are often remote and present managers with unique challenges. Managers and experts in the field organization must be allowed to exercise informed judgement and discretion, and must have a skilled workforce to address the issues and manage their operations. The DOI's agency reform plan, developed in response to the President's Executive Order "Comprehensive Plan for Reorganizing the Executive Branch," provides a strategy for better enabling our managers and workforce in the field through regional realignment and executive empowerment, increased colocation, and shifting workforce resources closer to the DOI's field locations.

Engaging the Nation in Cooperative Stewardship - In managing such a broad range of resources for the benefit of the public, the DOI works closely with other federal agencies, state, tribal, territorial, and local governments, and the public. The DOI's reform plan calls for increased coordination across agency lines and levels of government to achieve common goals and resolve differences without expensive and time-consuming litigation. DOI is working to increase its collaborations and partnerships across all levels of government.

Improving Infrastructure - The DOI manages an infrastructure asset portfolio with a replacement value exceeding $300 billion. Most well-known are the DOI's iconic and unique national treasures, which have priceless historical significance. More broadly, the DOI owns approximately 43,000 buildings, 100,000 miles of roads, and 80,000 structures; including dams, laboratories, employee housing, Indian schools, visitor facilities, historic structures and hydropower infrastructure. The related deferred maintenance backlog has grown to over $15 billion in 2016, of which over $11 billion belongs to the National Park Service. DOI is committed to determining how to best address

this backlog and maintain its facilities for the safety and productivity of its workforce, and the continued high quality experience and enjoyment by the American public.

Striking a Regulatory Balance – In accordance with the Executive Order on Enforcing the Regulatory Reform Agenda, the DOI will identify regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The DOI will continue to protect human health and the environment in a responsible, cost-effective manner but in a way that avoids imposing an undue process or economic burden on the public.

Generating Revenue, Jobs, and Economic Activity - The DOI grants access to public lands and offshore areas for all forms of energy development—representing roughly a quarter of the Nation's domestic supplies of oil and natural gas—while ensuring safety, environmental protection and revenue generation for the American public. It is important to the Nation's future that these natural resources are managed wisely and – as appropriate -- made accessible for public use to help generate revenues, enhance national security, create jobs, and grow the U.S. economy.

Restoring Trust - It is critical that the DOI can be trusted to operate in the best interest of the American public. Key to maintaining public trust and confidence in the integrity of government is the adherence to high ethical standards and ensuring that government business is conducted with impartiality, transparency, accountability, and integrity. While many of our employees have important law enforcement responsibilities as part of their jobs, more generally we want the public to primarily view our employees as helpful and friendly technical experts, not as law enforcement. When we do need to perform our law enforcement responsibilities, our preference is to achieve compliance through education and demonstrating a sincere desire to create win-win situations with the public we serve. The DOI embodies this principle, follows the law and holds people accountable. Decisions are based on sound science and the best interest of the public.

The DOI is committed to effective and efficient financial operations and accountability characterized by high quality and timely reporting, robust internal controls, clean audits, and effective follow-up on audit and internal control findings. The DOI utilizes the enterprise Financial and Business Management System for the integration of business functions including budget execution, finance, acquisition, improved internal controls, a secure information technology environment, and a community of business innovation, efficiency, and transparency.

Respect for Tribal Sovereignty – As a steward of tribal trust assets, the DOI plays a critical role for the United States in fulfilling the trust responsibility to Indian tribes. The DOI is committed to effectively meeting that responsibility by assisting tribes and Indian individual land owners to create greater economic opportunities, build safer and healthier communities, and effectively consulting with tribal governments.

OVERVIEW OF THE FY 2018-2022 STRATEGIC PLAN

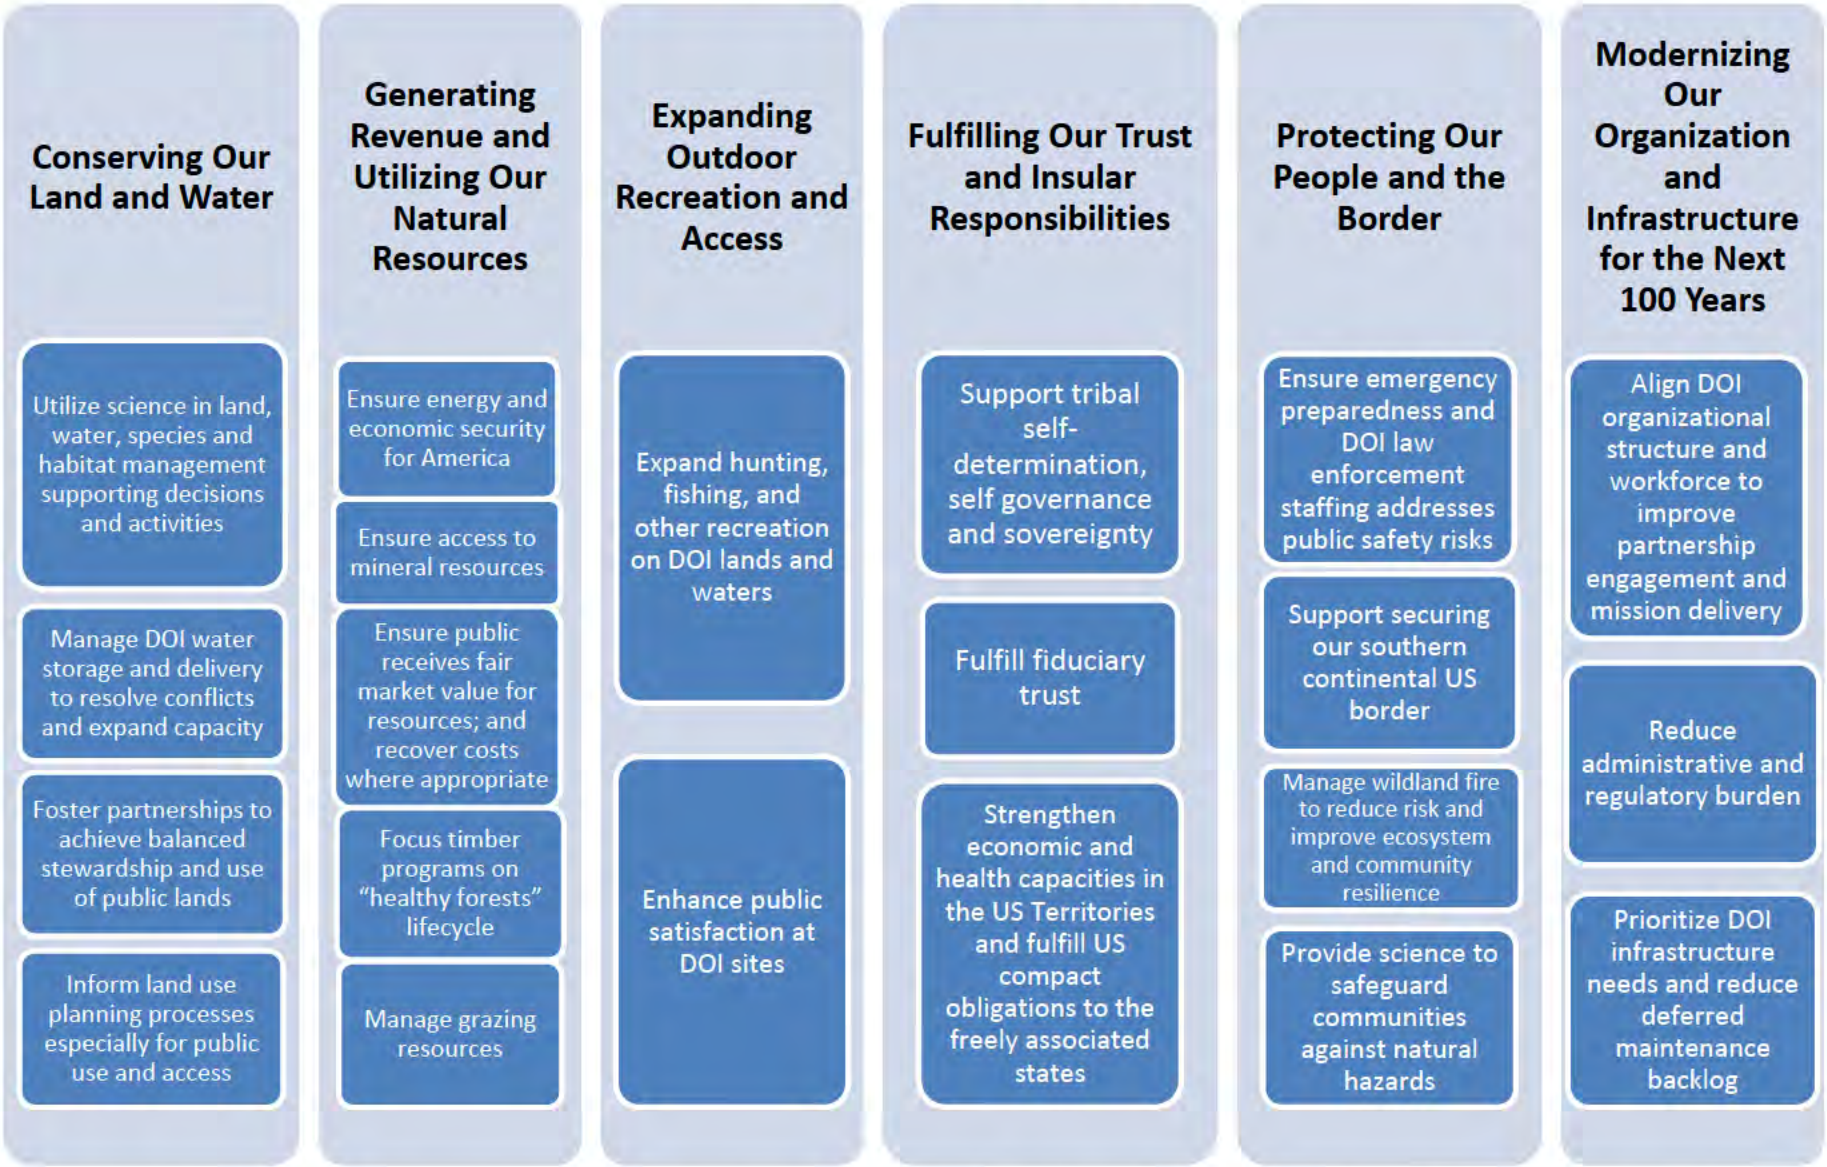
The DOI's FY 2018-2022 Strategic Plan provides the framework for the programs and activities that are performed by 10 bureaus and multiple offices, and take place at approximately 2,400 locations throughout the Nation.

The Strategic Plan facilitates the integration of programs, the allocation and alignment of resources, and collaboration and coordination with stakeholders to achieve key goals. A set of six mission areas, 21 goals, 34 strategies, and approximately 120 performance measures will guide the DOI's activities for the next five years. These mission areas reflect the Secretary of the Interior's priorities, while the goals and strategies describe the means by which those priorities will be achieved.

The mission areas, goals, and strategies that constitute the Strategic Plan are displayed in the Strategic Plan Framework, followed by a description of the mission areas, goals, strategic objectives, and performance measures. An FY 2022 goal is provided for each performance measure that reflects a desirable annual level of achievement that DOI aspires to assuming the availability of a reasonable level of resources. The anticipated level of performance for these measures on an annual basis in consideration of actual resource levels will be reported in the DOI's Annual Performance Plan and Report that is released with the FY 2019 President's budget and available at www.doi.gov/bpp.

There is some continuity of performance measures from the FY 2014-2018 Strategic Plan because the core of our statutory mission remains the same regardless of shifts in policy emphasis resulting from a change in Administrations. Trends in performance related to funding and programmatic plans are available in the DOI's FY 2019 Annual Performance Plan and Report available at www.doi.gov/bpp.

STRATEGIC PLAN FRAMEWORK



Crosscutting principles: Senior executives provide leadership in achieving Presidential and Secretarial goals and are expected to: ensure cost-effective operations and quality service to the public; facilitate organizational cooperation and conflict resolution; ensure workplace environment conducive to employee productivity and safety; and hold individuals accountable for their actions.

DESCRIPTION OF MISSION AREAS

(With Supporting Goals, Strategies, and Performance Measures)

MISSION AREA 1: Conserving Our Land and Water

The DOI ensures that America's natural endowment – the lands and waters of the United States – is conserved for the benefit, use, and enjoyment of current and future generations. The DOI's bureaus use the best available science, modern natural resource management techniques, technology and engineering, efficient decision-making processes, robust partnerships, and improved land use planning to ensure balanced stewardship and use of the public lands and its resources, including wildlife and fish species.

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities

The DOI will ensure that it delivers data, tools, techniques, and analyses that advance understanding of natural resources, the forces that shape them, and the interactions of plants, animals, and people that live within them. Research, monitoring, and remote sensing are necessary to understand and detect changes that affect land resources and processes that are essential to the Nation's economic growth, well-being, and ecological health. These efforts support the DOI in its role as the largest manager of the Nation's land and water resources.

The DOI's land and water management bureaus are stewards of the lands and waters managed by the DOI. These bureaus will utilize the best available scientific data, tools, techniques, and analyses provided by our researchers, our nonfederal government partners, or others to maintain and restore lands and waters and ensure that habitats support healthy fish and wildlife populations.

STRATEGY #1: Apply science to land, water, and species management

The USGS seeks to understand the Nation's environmental, natural resource, and economic challenges with scientific monitoring and research to support the development of management strategies that address the impacts of land use on the availability and sustainability of land and water resources. The USGS helps management agencies by providing them the measures designed to prevent or control invasive species and wildlife disease outbreaks; and apply decision science to actions.

The USGS conducts monitoring, assessments, and research in order to understand and predict changes in the quality and quantity of water resources in response to land-use and management scenarios. Through advanced understanding and integrated modeling of processes that determine water availability, the USGS informs the balanced management of water resources for multiple purposes, including energy production, human and crop consumption, the sustainability of fish and other aquatic communities valued by society, and public enjoyment. The USGS works with land and water resources managers in applying its data and research results to help them make informed decisions for effectively managing the resources with which they are entrusted.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted land and water management research actions	100%
USGS	Millions of people living in targeted watersheds covered by completed water quality models	306.7
USGS	Percent completion of planned water quality sampling and studies for the Nation's groundwater, streams and rivers	100%
USGS	Percent completion of the USGS National Water Census baseline	100%
USGS	Percent completion of U.S. aquifer groundwater availability baseline studies	43%
USGS	Percent completion of targeted species management research actions	100%
USGS	Percent completion of targeted biological threats research actions	100%
USGS	Percent completion of collaborative research projects on factors affecting fish and wildlife habitat	100%

STRATEGY #2: Provide stewardship of land, surface water, streams and shorelines

The Bureau of Land Management, the Fish and Wildlife Service, the National Park Service, and the Bureau of Reclamation manage, maintain and restore uplands, wetlands, lakes, streams and some marine areas through efforts that include controlling invasive plants and animals, restoring land or waters to a condition that is self-sustaining, and ensuring that habitats support healthy fish and wildlife populations. The DOI's Natural Resource Damage Assessment and Restoration program works with the bureaus to assess the impacts of oil spills and hazardous waste sites and coordinates restoration efforts. The Office of Surface Mining Reclamation and Enforcement works with states and tribes to ensure that coal mining is conducted in a manner that protects citizens and the environment during mining, restores the land to beneficial use following mining, and mitigates the effects of historic mining by pursuing reclamation of abandoned mine lands. The DOI aims to balance the conservation of special places with resource development while also providing visitors with opportunities for outdoor recreation.

Bureaus administer their resource management and conservation programs on more than 400 million acres of upland, wetland, and aquatic lands within their jurisdiction. Many of these lands have special status as national parks, seashores, monuments, wildlife refuges, wilderness areas, national conservation lands or wild and scenic rivers. Land managers utilize earth and natural science, social science, partnerships with other DOI bureau, federal, state, local and tribal entities, and other tools and resources (including its front-line managers) in managing these lands and waters.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of DOI acres that have achieved desired conditions	88.9%
BLM, FWS	Percent of DOI riparian (stream/shoreline) miles that have achieved desired conditions	89.2%
BLM, BOR, FWS, NPS	Percent of acres infested with invasive plant species that are under control	0.2%
FWS, NPS	Percent of invasive animal species populations that are under control	8.7%
OSMRE	Percent completion of abandoned mine lands restored by eliminating health, safety, and environmental concerns	57%
OSMRE	Percent of active coal mining sites that are free of off-site impacts	88%
OSMRE	Percent of coal mine acreage reclaimed to beneficial post-mining land use	44%

STRATEGY #3: Provide stewardship of wildlife, bird, fish, and plant species

The Fish and Wildlife Service (FWS) is tasked with the conservation and protection of certain populations of fish, wildlife, plants, and their habitats. The FWS works first to prevent species from becoming listed as threatened or endangered by using the best available science to make land management decisions that might affect species viability. The FWS conducts, consults or coordinates many species management activities in partnership with others including NPS, BLM, Reclamation, and other federal, state, local and tribal agencies and private organizations. The strategy to sustain species focuses on identifying and implementing corrective actions that will lead to species recovery.

Congress passed the Endangered Species Act (ESA) in 1973, to protect and recover imperiled species from becoming extinct and to conserve the habitats upon which they depend. The FWS and the Commerce Department's National Marine Fisheries Service (NMFS) administer the ESA. The FWS has primary responsibility for terrestrial and freshwater organisms, while the responsibilities of NMFS are mainly marine wildlife such as whales and anadromous fish such as salmon.

FWS works with many partners using a range of conservation tools to recover listed species (threatened and endangered) to ensure that they are able to survive on their own in the wild. These tools can include acquiring and restoring habitat, removing invasive species, conducting surveys, monitoring individual populations, and breeding species in captivity to release them into their historic range.

The DOI uses a number of datasets and metrics to track its progress on species listings, downlistings, delistings, critical habitat, scientific findings, and Species Status Assessments (SSA). The SSA is the scientific foundation supporting listing, delisting, and downlisting decisions and recovery plans and includes biological and threats information and analyses that help FWS and its partners better understand the species status. Recovery criteria, describing the conditions of the species when the protections of the act are no longer necessary, address both the biological status in terms of the 3 R's (resiliency, representation and redundancy) and the mitigation of threats necessary to achieve that status. The DOI is working to include more information on critical habitat,

estimated costs of recovery and economic impact of its threatened and endangered species listings and recovery action plans, to provide a more complete perspective to states and the public of the actions being planned for attempting to save each species.

In its Policy Regarding the Role of State Agencies in ESA Activities, FWS coordinates, collaborates, and uses the expertise of state agencies in developing the scientific foundation upon which FWS bases its determinations for listing actions. By September 30, 2018, all FWS decisions on whether to list a species under the ESA will be informed by input from state fish and wildlife agencies, subject to the affected states' willingness to participate (some state fish and wildlife agencies have declined participation due to lack of authority for some species under ESA review). This input should include (but is not limited to) a solicitation of state data and state personnel involvement in the development of SSAs.

Per Section 4(c)(1) of the ESA, FWS is required to review the status of each listed species at least once every 5 years and determine whether it should be: (1) removed from the List (delisted), (2) reclassified from endangered to threatened (downlisted), or (3) reclassified from threatened to endangered (uplisted). By September 30, 2019, for 100% of all species with 5-year reviews recommending downlisting or delisting FWS will have proposed downlisting or delisting rules acted on by the Director, or a new status review initiated if new information indicates the need for an updated assessment prior to initiating rulemaking, within 2 years of the 5-year review recommendation.

The DOI's responsibility to protect fish, wildlife, and native plants transcends jurisdictional boundaries, and includes efforts that affect almost 1,500 species with special status under the Endangered Species Act and more than 1,000 migratory birds that receive Federal protection under the Migratory Bird Treaty Act. The DOI works to combat domestic and international wildlife trafficking by improving enforcement of domestic laws, strengthening international cooperation and global enforcement, promoting legal trade and hunting, and helping to reduce demand for illegal wildlife products. Under Executive Order 13771 of January 30, 2017, i.e. Reducing Regulation and Controlling Regulatory Costs, the DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to private constituents, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient. This activity is described further in the second goal under the sixth Mission Area on reducing administrative and regulatory burden.

Agency Priority Performance Goals:

- ***By September 30, 2018, 100% of proposed species listings will be based on best available information that includes state input and/or data provided through participation in Species Status Assessments (SSA).***
- ***By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species.***

Bureaus	Key Performance Indicators	2022 Goal
FWS	Percent of Threatened or Endangered species listed for 2.5 years or more with a final recovery plan	75%
FWS	Percent of five-year Threatened or Endangered species five-year status review recommendations to downlist or delist acted on within five years *(prior to next status review)*	60%
FWS	Percent of listed species with current five-year reviews *(completed in the last five years)*	90%
FWS	Percent of rules and findings completed based on Threatened or Endangered Species Status Assessments	100%
FWS	Percent of threatened and endangered species listings with proposed critical habitat	100%
FWS	Percent of migratory bird species that are at healthy and sustainable levels	72%
FWS	Percent of fish species of management concern that are managed to self-sustaining levels	23%

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity

The Western U.S. is one of the fastest growing regions of the country, and urbanization has created significant demands for water use and service. The DOI strives to keep its water storage facilities in good condition to ensure safe and reliable water supply. Stretching existing water supplies for multiple uses are among the many significant challenges facing Reclamation. The Bureau of Reclamation is the nation's largest wholesale water supplier and manages water in 17 western states. Reclamation's projects and programs are an important driver of economic growth bringing water to more than 31 million people and providing one of five western farmers (140,000) with irrigation water for 10 million acres of farmland that produce 60 percent of the nation's vegetables and 25 percent of its fruits and nuts. Reclamation's facilities also provide substantial flood control, hydropower, recreation, and fish and wildlife benefits.

The DOI is the lead agency in defining and protecting water rights for Indian tribes and individual Indian land owners. The Bureau of Indian Affairs (BIA) is responsible for maintaining 137 dams on tribal lands. The BIA also provides irrigation water to over 780,000 acres through 17 congressionally authorized irrigation projects.

STRATEGY #1 Manage water resources and delivery

Changes in water supplies, water demands, and the increased duration and frequency of droughts have the potential to affect Reclamation's ability to fulfill its mission. Many rural communities face significant challenges in financing the cost of replacing or upgrading aging and obsolete facilities and systems. Water conservation programs increase the available water supply and contribute to DOI's broader objective of achieving a more sustainable, secure water supply. Protecting and extending the life of aging infrastructure are significant challenges facing Reclamation, and maintenance, rehabilitation, and replacement will become more costly over time. Reclamation

prioritizes infrastructure assets based on detailed design criteria: engineering need, consequence of failure, financial considerations, efficiency opportunities, scheduling, and others.

The Bureau of Indian Affairs (BIA) water management functions are implemented through three complementary programs. The Water Rights Negotiation/Litigation Program defines and protects Indian water rights and settles claims through negotiations if possible, or alternatively, through litigation. The Water Management Program assists tribes in managing, conserving, and utilizing trust water resources. The BIA Irrigation, Power and Safety of Dams program operates and manages irrigation, power, and dam infrastructure. The program sets high standards for maintenance, collaboration with stakeholders, and effective water and power distribution. The BIA manages facilities to ensure they do not present an unacceptable risk to downstream lives and property; and are managed in an economically, technically, environmentally, and culturally sound manner.

Agency Priority Performance Goal: By September 30, 2019, the Bureau of Reclamation will facilitate water conservation capacity of 53,800 acre-feet to help reduce the impact of drought.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]	74%
BOR	Amount of acre feet of water conservation capacity enabled to help address drought	1,392,000
BIA	Percent of projects completed in support of water management, planning, and pre-development.	77%

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands

The DOI will assess, utilize and enhance the most promising of partnership practices and explore the potential for furthering these types of opportunities to work jointly with other individuals and organizations for the benefit of the nation's public lands, waters, and historic and cultural sites and the fish and wildlife species.

STRATEGY #1: Build and maintain partnership programs

Public and private partnerships provide opportunities for greater engagement of people and organizations in caring for and managing the natural, historical, cultural and physical resources across the DOI's 500 million acres. This can be especially beneficial for our national park units, National Wildlife Refuges, wildlife management areas, and national conservation public lands. Support can come from other federal or state agencies, tribal nations, volunteers, non-profit organizations, educational institutions, corporations or foundations through sponsorship or philanthropy. DOI bureaus should endeavor to partner with non-traditional stakeholders to increase our relevance to the American public, rather than just relying on traditional constituencies.

The National Park Service already has the authority from Congress to accept monetary and in-kind gifts, including those collected through the National Park Foundation. Similarly, the Fish and Wildlife Service has authority to accept gifts from some entities, including some non-profits organizations and the federally chartered non-profit National Fish and Wildlife Foundation. The Bureau of Land Management has Congressional authority to accept monetary and other types of donations, along with Congressional authorization to create a Bureau of Land Management Foundation. The BLM works with local, state, federal, and private partners on nearly all of the activities undertaken on public lands, from identifying important fish and wildlife habitat with the state game and fish agencies, working with local rangeland fire protection associations, to providing hunting and fishing opportunities for sports men groups. As permitted under current law, the DOI hopes to develop further philanthropic and sponsorship opportunities, and promote other partnering best practices.

The DOI utilizes migratory bird joint ventures as collaborative, regional partnerships of government agencies, non-profit organizations, corporations, tribes, and individuals that conserve habitat for the benefit of priority bird species, other wildlife, and people. Joint ventures bring these diverse partners together under the guidance of national and international bird conservation plans to design and implement landscape-scale conservation efforts in support of the North American Waterfowl Management Plan and the other bird management plans. These joint ventures use state-of-the-art science to ensure that diverse habitat is available to sustain migratory bird populations for the benefit of those species, other wildlife, and the public. These partnerships have a three-decade record of success, they use non-regulatory solutions and economically sound business approaches, promote working lands conservation, sporting, and outdoor traditions, and support resilient urban and rural communities.

The Department of the Interior and the U.S. Department of Agriculture working near each other in the field continue to pool resources, conduct joint projects and share services under Service First agreements. Service First authority promotes collaborating across bureau and agency boundaries to develop joint solutions to common problems and integrate responses to federal land management issues and opportunities. Bureaus of the Department of the Interior and the U.S. Department of Agriculture cooperate in jointly managing some areas. For example, the National Trail, and Wild and Scenic River Systems span every state of our nation and exceed the length of the interstate highway system. Federal land management agencies, as well as state and local jurisdictions and partners enhance recreational access, conserve the Nation's heritage, and leverage the federal investment to manage these nationally recognized resources cooperatively.

Building new partnerships for infrastructure improvement is a priority at the DOI. There are also numerous volunteer opportunities, where individuals or associations provide service in caring for natural resources and cultural and historic assets on our public lands (see www.volunteer.gov). The DOI will also empower managers in the field to directly engage in further collaboration within the units they manage, identify best practices for collaboration and partnering, provide training and technical support, and encourage field managers to find or create and execute partnerships on a local basis.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Number of estimated work hours in a national park unit, National Wildlife Refuge, or Bureau of Land Management site that are performed or sponsored by a private citizen, National Service participant or non-federal entity	9,870,000
BOR, FWS, CUPCA	Number of non-DOI acres restored, including through partnerships	593,876
FWS	Number of non-DOI acres managed or protected to maintain desired condition, including acres restored through partnerships	602,654
FWS, CUPCA	Number of non-DOI riparian (stream/shoreline) miles restored, including through partnerships	255

GOAL #4: Inform land use planning processes especially for public use and access

The DOI will review and improve its land planning processes to enable expanded access and use of the public lands while restoring a balance between conservation and utilization of the lands, energy and mineral resources, waters, fish and wildlife, and other natural and cultural resources. The DOI will employ the latest available science, land-imaging and other technology tools and datasets to inform land use planning to maximize the societal value of land planning. The DOI land use planning will take into account the land use plans of affected local and state governments.

STRATEGY #1: Assess land use planning processes for public access and use of DOI lands

DOI land use and management plans ensure that the public lands are managed in accordance with the intent of Congress as stated in several authorities including, but not limited to: the Federal Land Policy and Management Act (FLPMA), the National Environmental Policy Act (NEPA), the Endangered Species Act, the National Wildlife Refuge System Administration and Improvement Acts, the Organic Act of 1916 (National Park Service), the Alaska Native Claims Settlement Act, and the Alaska National Interest Lands Conservation Act (ANILCA).

Land use planning efforts vary across bureaus based on enabling legislation. The National Park Service creates management plans to execute its mission. The National Wildlife Refuge system creates Comprehensive Conservation Plans for each refuge as part of their mission. The BLM's mission states that its duty is to sustain the health, diversity, and productivity of America's public lands for the multiple use and enjoyment of present and future generations.

A common thread through all three bureaus' mission is the need to accommodate and benefit the use and enjoyment of these public lands for both present and future generations. Some lands are made available for multiple use and sustained yield, other lands for conservation and preservation values.

The DOI is undertaking the challenge to review and improve its planning processes in ways that can best meet the sometimes-conflicting uses for public lands. The DOI will strive to enhance public participation and input to the planning processes, engage our state, local, and tribal government partners, provide open and understandable decision-making, expedite the decision-making process

so that implementation is not delayed, and ensure that public access and use is appropriately built into every land use plan.

STRATEGY #2: Inform land use planning with mapping and land imaging

The USGS is the lead civilian mapping agency for the Nation and supports the conduct of detailed surveys and the resulting distribution of high-quality and highly-accurate topographic, geologic, hydrographic, and biogeographic maps and data. Remote sensing satellites and aircraft monitor the Earth providing information that is broad, precise, impartial, and easily available. For more than 45 years, Landsat satellites have collected data over the planet's land surface to support global research studies. These data constitute the longest continuous record of the Earth's land surface as seen from space.

High-resolution information results in geologic maps and geospatial products that enable precise planning of civil engineering and transportation infrastructure, versatile urban planning, improved flood projection, timely and accurate emergency response, effective hazard identification and mitigation, and detailed environmental analyses. This information is also used by DOI bureau land managers in exercising their responsibilities to help plan for public land use and access.

In the next decade, the USGS will continue to improve spatial and temporal resolution through research and development of products such as full four-dimensional geologic maps, showing how the complex geologic structure of the Earth has changed through time. Mapping accuracy through cutting-edge technology allows for precise planning for energy development, transportation and pipeline infrastructure projects, urban planning, flood prediction, emergency response, and hazard mitigation.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent of land-area coverage available to the public over the internet through the National Geologic Mapping Database	55.5%
USGS	Percent of foundational topographic information services updated quarterly to support on-demand mapping	100%
USGS	Percent completion of research efforts related to land resource management	100%
USGS	Number of terabytes of remotely-sensed data managed	20,140
USGS	Percent increase of scientific research enhanced with Advanced Research Computation	100%

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources

The DOI provides access to and manages energy and other resources including oil, gas, coal, timber, grazing, and non-energy minerals on public lands and oil and gas on the Outer Continental Shelf (OCS). The DOI is committed to achieve and maintain American energy dominance through responsible productivity of the public lands for the multiple use and economic benefit of present and future generations.

GOAL #1 Ensure energy and economic security for America

The DOI is the steward and manager of much of America's natural resources which include oil, gas, coal, minerals, and renewable energy sources, such as solar, wind, geothermal, and hydropower. There are vast amounts of untapped domestic energy reserves on public lands. DOI is also reinitiating the National OCS Oil and Gas Leasing Program development process, which is a key component of the America First Energy Plan and the Executive Order on Implementing an America-First Offshore Energy Strategy, to bring jobs and prosperity to millions of Americans. Our nation will use the revenues from energy production to rebuild our roads, schools, bridges and public infrastructure. The Department's "all-of-the-above" strategy facilitates development of all energy resources and makes our nation stronger by decreasing dependency on other nations, creating jobs, and helping drive economic growth.

STRATEGY #1: Promote safe and robust oil, gas, coal, and renewable energy resource development

Oil, gas, coal and renewable energy form the cornerstones of our nation's energy base, and the DOI will continue to expand production of both offshore and onshore conventional and renewable U.S. energy resources while ensuring safety and reliability through efficient permitting, appropriate standards, assessment and oversight. As demand for energy resources grows, agencies within the DOI, such as BIA, BLM, BOEM, BSEE, OSMRE, and USGS conduct work that is increasingly critical to understand the exploration, development, quality, supply, and use of our energy resources. This work enables the DOI to advance new sources of efficient energy generation, facilitate the construction of new or upgraded infrastructure including transmission networks, develop resources responsibly, and ensure that the American public receives a fair return on that development.

Agency Priority Performance Goals:

- ***By September 30, 2019, the Bureau of Land Management will eliminate its backlog of fluid mineral Applications for Permits to Drill (APD's) that have been pending for 3 years or more.***
- ***By September 30, 2019, the Bureau of Land Management will process 80% of parcels created for leasing public lands for oil, gas, or other mineral extraction within 180 days.***

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of pending fluid minerals Applications for Permits to Drill (APDs) which are processed	75%
BLM	Percent of high priority fluid mineral cases that have completed inspection during the year	100%

BLM	Percent of coal lease applications processed	15%
BLM	Number of acres of public lands made available for oil and natural gas leasing	25,000,000
BLM, BOEM	Number of megawatts of approved capacity authorized (that year) on public land and the OCS for renewable energy development while ensuring compliant environmental review	2,020
BOEM	Percentage of Exploration and Development Plan reviews completed within statutory timelines	100%
BOEM	Percent of offshore lease sale processes completed, pursuant to the Secretary's approved National OCS Oil and Gas Leasing Program	100%
USGS	Percent completion of targeted energy resource assessments and research	100%
BSEE	Amount of operational offshore oil spilled (in barrels) per million barrels produced	3.1
BSEE	Percent of high risk production facilities and operations inspected	95%
BSEE	Number of recordable injuries per 200,000 offshore man hours worked	.390
BSEE	Percentage of high risk well operation (e.g., drilling) inspections completed	95%

STRATEGY #2: Provide hydropower

The DOI facilitates the development and use of renewable energy that employs hydropower energy to strengthen US energy security, economic vitality, and quality of life. The Bureau of Reclamation (BOR) is the second largest producer of hydroelectric power in the U.S., operating and maintaining 53 hydroelectric power facilities, comprising over 14,700 megawatts of capacity. On average, Reclamation generates 40 million megawatt-hours of electricity each year – the equivalent demand of over 3.5 million U.S. homes, returning over one billion dollars in federal revenue through power sales. Sustainable, low cost hydropower generated by Reclamation projects has provided significant value to the nation, spurring the development of the western U.S. – through the provision of firm electric power to rural communities as well as ancillary service to support western interconnect grid reliability. Reclamation works to promote domestic energy production by enabling new energy generation from hydropower, a renewable source, and facilitating the construction of new or upgraded transmission networks, helping to create new industries and supply chains, driving economic growth and job creation, and helping provide more energy from domestic sources.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Amount of hydropower capability, in megawatts (MW), installed from 2018 through 2022	50
BOR	Percent of hydropower facilities in good condition as measured by the Facility Reliability Rating	73%

BOR	Percent of time that Bureau of Reclamation hydroelectric generating units are available to the interconnected Western electrical system during daily peak demand periods	80%

GOAL #2: Ensure access to mineral resources

The DOI recognizes that public lands are an important source of the Nation's non-energy mineral resources, some of which are critical and strategic. The DOI is committed to ensuring appropriate access to public lands, for orderly and efficient development of these resources under principles of multiple use management.

STRATEGY #1: Manage non-energy mineral development

DOI promotes energy security, environmental protection, and economic development through responsible, science-informed management of mineral resources. The BLM conducts environmental analysis of complex issues necessary to authorize use on BLM public lands and meet the increasing demand for non-energy solid leasable minerals, especially potash and phosphate. BOEM's Marine Minerals Program provides sand and gravel resources to protect and improve coastal infrastructure and the environment locally, regionally and nationally. Additionally, the in-depth science provided by the USGS Mineral Resources Program (http://minerals.usgs.gov) facilitates resource discovery and provides essential information and analyses for strategic, evidence-based economic and geopolitical decisions.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of non-energy mineral exploration and development requests processed	30%
BOEM	Number of sand and gravel requests processed for coastal restoration projects	8
USGS	Percent completion of targeted non-fuel mineral resource assessments and research	100%
USGS	Percent completion of targeted Critical Mineral Early Warning System (CMEWS) analyses and evaluations	100%

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate

Rents, royalties, and bonuses are collected from issuing leases on public lands, and offshore on the OCS, and for the amount of the resource extracted. These resources include oil, gas, coal, forage for grazing, and access to renewable energy resources such as solar, wind, and geothermal. It is important that these financial transactions include appropriate accountability and fair return to the American public. The associated regulations and practices for these fees and collections must also be rational and transparent to ensure businesses that extract and process these resources can function efficiently and profitably in order to support the economic growth and security of the nation.

STRATEGY #1: Ensure accurate and timely accounting and collection of energy revenues

The Department collects, disburses and verifies natural resource revenue generated from issuing leases on public lands, and offshore on the OCS. This revenue is then shared with states and localities according to specific statutory obligations, allocated to various Federal programs, or deposited in the General Fund of the Treasury, thus serving to reduce the deficit. The DOI is committed to managing these transactions accurately, responsibly, and in a timely manner. The Royalty Policy Committee has been reinstated by the Secretary to elicit robust advice and recommendations regarding policies related to royalties from these resources and their benefit to the American public.

The BSEE helps ensure the accuracy of metering from higher risk hydrocarbon sites that experience high volumes of throughput and/or have a past history of noncompliance to help ensure the appropriate financial benefit is obtained for the American people. Additionally, data driven procedures enable the BOEM and the BLM to ensure bid adequacy through a two phased review system for onshore and offshore leasing, and also allow for timely collection and disbursement of mineral and renewable energy revenues by the Office of Natural Resources Revenue (ONRR). ONRR's distributions benefit the Land and Water Conservation Fund, the Historic Preservation Fund, and the Reclamation Fund, helping to ensure America's natural resources and rich history are available to be enjoyed by current and future generations. Distributions to states are used to fund capital projects such as schools, roads, and public buildings. Revenues collected from leases on Indian lands directly benefit members of the Indian community.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
ONRR	Percent of federal and Indian oil and gas revenues disbursed on a timely basis per statute ($ Billions)	98%
BSEE	Percent of oil royalty meters, identified as high-risk using a risk based methodology, where meter provings will be observed	10%

STRATEGY #2: Ensure effective collection and application of recreation fees

The nation's public lands offer many excellent locations for public recreation in the outdoors at national parks and monuments, National Wildlife Refuges, BLM public lands and other locations, in historic sites and buildings and at national treasures such as the Statue of Liberty. Facilities (roads, visitor centers, bathrooms, historic buildings, museums, etc.) that enable visitors to enjoy their public lands and sites are expensive to maintain. All of the major land management bureaus have large backlogs of deferred maintenance at these facilities. The DOI will continuously review its fee structure to determine how best to accommodate visitors enjoyment while collecting fees that help to offset some of the maintenance costs required to keep visitor-facing infrastructure in good shape for visitors. All such reviews of fees and changes will remain consistent with Congressional direction that has been provided through a series of laws including the Federal Lands Recreation Enhancement Act.

The National Park Service established fee structure guidelines in 2006 to standardize rates across the country. The resulting tier system assigns each park unit to a tier and associated entrance fee schedule based on the type of site and the amenities provided for the public. During 2017, the National Park Service initiated a comprehensive review to evaluate and consider bringing entrance fees at all park units into compliance with their assigned tier through a process of public engagement by January 1, 2018. Even with proposed increases, entrance fees remain affordable at $15-$30 per vehicle, which is normally good for several days. The America the Beautiful Pass Annual Pass remains at the price of $80 for one year for unlimited entrance fees for almost all national parks, Fish and Wildlife and BLM sites where fees are required. Congress raised the one-time cost of the America the Beautiful Lifetime Senior Pass for those age 62 or older from the previous fee of $10 to $80 effective in August 2017.

Reviews of other amenity fees (such as for campgrounds and special use permits) will also strive to set fair and equitable fees for activities that visitors enjoy after they enter the park, refuge, or recreation area. The bureaus will seek public comment during any process to review and modify fee amounts to ensure that the public has an opportunity to raise questions and provide comments regarding any fee changes. The bureaus will also identify ways to modernize and enhance fee collection mechanisms that speed access to facilities and/or reduce the cost to the federal government for fee collection.

GOAL #4: Focus timber programs on "healthy forests" lifecycle

The BLM manages forests or woodlands for the benefit of the American public. The BLM maintains a permanent source of timber supply, which supports the production of lumber, plywood, and paper, while also protecting watersheds, regulating stream flow, contributing to the economic stability of local communities and industries, and providing recreational opportunities. Responsible management that reduces fire fuels improves the health and resilience of our forests and helps to prevent forest fires.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to national sources of timber supply. Many tribes now actively participate in management of their forest assets through self-governance and self-determination programs.

STRATEGY #1: Manage sales of timber and forest product resources

Forest management programs within the DOI generate economic benefits through timber harvests on public and Indian trust lands, and restoring forest health. The benefits of healthy forests include typical forest products such as timber and biomass but also include opportunities for recreation and maintenance of watershed health.

The BLM has two focus areas for forest management, the Oregon and California grant lands and the public domain lands. For Oregon and California lands, generating revenue for counties is the primary driver of forest management treatments, while for public domain lands, fire management is the primary driver for forest management. The BLM is currently reviewing its management plans to determine prospects for offering additional timber for sale in the future.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to the national sources of timber supply. Many tribes now actively participate in management of their forest assets through the self-governance and self-determination programs.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of allowable sale quantity (ASQ) timber offered for sale consistent with applicable resource management plans (O&C--Oregon and California--only)	100%
BLM	Volume (mmbf) of wood products offered consistent with applicable management plans	285
BIA	Percent of Annual Allowable Cut prepared and offered for sale or free use	48%

GOAL #5: Manage grazing resources

The BLM manages livestock grazing on over half of its public lands; approximately 18,000 permits and leases are held by ranchers that graze their livestock on over 21,000 grazing allotments throughout BLM managed lands. The BLM's overall objective is to ensure the long-term health and productivity of these lands. BLM uses a variety of methods to accomplish this objective – periodic rest or deferment of grazing in pastures in specific allotments during critical growth periods; vegetation treatments; and projects such as water developments and fences. The terms and conditions for grazing on BLM-managed lands such as stipulations on forage use and season of use are set forth in the permits and leases issued by the Bureau to public land ranchers.

STRATEGY #1: Provide for sustainable forage and grazing

Livestock grazing contributes to food production and adds to local economic stability, and it can be used in certain areas to maintain and improve land health by reducing hazardous fuels and minimizing the likelihood and impact of catastrophic wildfires. The BLM partners with local communities and state and local governments to develop rangeland improvement projects, stewardship contracting, and good neighbor authority in its rangeland management. In recent years, the number of grazing permits and leases processed has decreased due to dramatic increases in litigation and drought. The BLM continues to look for opportunities to streamline the grazing permit process and provide livestock operators greater flexibility in grazing their livestock on public lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of grazing permits and leases processed as planned consistent with applicable resource management plans	16%
BIA	Percent of tribal range units assessed during the reporting year for level of utilization	15%

MISSION AREA 3 Expanding Outdoor Recreation and Access

Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the DOI's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Americans have the opportunity to hunt and fish on public lands managed by the DOI as part of its multiple-use policy that also includes hiking, camping, climbing, boating, wildlife viewing, and other outdoor pursuits.

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters

Hunting, fishing and other outdoor activities contributed $156 billion in economic activity across the United States according to the FWS National Survey of Fishing, Hunting and Wildlife-Associated Recreation. More than 101 million Americans, or 40 percent of the United States' population 16 and older, pursue wildlife-related recreation, which supports 480,000 American jobs.

Following two initial Secretarial Orders issued on his first day, Secretary Zinke issued Secretarial Order 3356 in September, 2017, to further expand public access to lands and waters administered by the DOI, for hunting, fishing, recreational shooting, and other forms of outdoor recreation. In addition, this Order gave greater priority to recruiting and retaining sportsmen and women conservationists, with an emphasis on engaging youth, veterans, minorities, and underserved communities that traditionally have low participation in outdoor recreation activities.

STRATEGY #1: Promote hunting, fishing, and other recreation on DOI lands and waters

There are 372 National Wildlife Refuges and wetland management districts open to hunting and 308 refuges and wetland management districts open to fishing. As practiced on refuges, hunting and fishing do not pose a threat to wildlife populations, and in some instances, are actually necessary for sound wildlife management. For example, deer populations will often grow too large for the refuge habitat to support. If some of the deer are not harvested, they destroy habitat for themselves and other animals and die from starvation or disease. The harvesting of wildlife on refuges is carefully regulated to ensure an appropriate balance between population levels and wildlife habitat. The FWS National Fish Hatcheries continue to be a valuable tool in managing fisheries providing recreation opportunities to America's 36 million anglers who spend $46 billion annually in pursuit of their favored pastime.

There are 76 areas managed by the National Park Service that permit hunting. A total of 51,097,000 acres managed by the NPS are open to hunting at various times during the year, representing approximately 60% of the total acreage of the NPS system. The Bureau of Land Management estimates that over 95 percent of the nearly 250 million acres of BLM-managed public lands are open to hunting.

The recreation areas developed as a result of Bureau of Reclamation water projects are among the Nation's most popular for water-based outdoor recreation. There are 289 Reclamation project areas that have developed recreation facilities and opportunities available for public use. Reclamation has approximately 6.5 million acres of land and water, most of which is available for public outdoor recreation. The 187 developed recreation areas managed by Reclamation or a non-Federal recreation partner draw over 24 million visits annually. The 187 developed recreation areas provide 549 campgrounds, 454 boat launch ramps, and more than 5,500 miles of shoreline.

Bureaus	Key Performance Indicators	2022 Goal
FWS	Number of National Wildlife Refuge acres newly opened to hunting and fishing	250,000
BLM	Number of legal public access transactions completed that facilitate open access to recreation opportunities	20
BLM	Number of newly installed campsites, restrooms, and other facilities that promote public access to BLM-managed public lands	30
BLM, BOR, FWS	Number of individuals participating in outdoor recreation activities at special events	5,420,000

GOAL #2: Enhance public satisfaction at DOI sites

Visitor satisfaction with the quality of experiences on public lands remains very high. Collectively, satisfaction is above 90 percent for the bureaus providing recreation services, e.g., interpretive programs, visitor centers, camping, fishing, hiking, horseback riding, boating, off-highway vehicle driving, wildlife viewing, photography, and climbing. Satisfaction with recreation services provided through facilitated programs remains very high – also above 90 percent.

STRATEGY #1: Enhance the enjoyment and appreciation of our natural and cultural heritage

Survey results show that a sizeable percentage of visitors are satisfied with their experiences at parks, refuges and other public lands. Competition from other forms of entertainment pose challenges to the DOI in its quest to ensure that all Americans understand, appreciate and enjoy the special places protected by the national parks, wildlife refuges and BLM lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of visitors satisfied with the quality of the experience	95%
BLM, NPS	Percent of visitors satisfied with facilitated programs	94%

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities

The DOI upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationships between the Federal government and federally recognized Tribes, and by providing services to individual American Indians, and Alaskan Natives. The U.S. also has important relationships with the affiliated insular areas including the Territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. The DOI administers and oversees Federal Assistance to the three Freely Associated States: The Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

GOAL #1: Support tribal self-determination, self-governance, and sovereignty

The DOI is strengthening the nation-to-nation relationship between the Federal Government and tribal nations because self-determination, sovereignty, self-government, and self-reliance are the tools that will enable tribal nations to shape their own destiny. Tribes have also assumed an expanded role in the operation of Indian programs through Public Law 93-638 contracting. Tribes contract with the Federal Government to operate programs serving their tribal members and other eligible persons.

STRATEGY #1: Support self-governance and self-determination

Self-Governance: Under a self-governance compact, a tribe takes over most or all operations affecting that tribe. The Indian Affairs' Office of Self-Governance (OSG) implements the Tribal Self Governance Act of 1994 by developing and implementing regulations, policies, and guidance in support of self-governance initiatives. Indian Affairs advocates for the transfer of Federal programmatic authorities and resources to tribal governments and supports tribal sovereignty and an expanded role in the operation of Indian programs. The program work includes negotiating annual funding agreements with eligible tribes and consortia, and resolving issues identified in financial and program audits of self-governance operations.

Self-Determination: Under a self-determination contract, a tribe contracts with BIA to take over operation of a program formerly delivered by BIA employees. The funds BIA previously used to run the program transfer to the tribe. Self-determination typically is a program-by-program decision. The Indian Self-Determination Program within BIA works to further American Indian tribes' exercise of self-determination and conducts oversight of self-determination contracts and grants.

Bureaus	Key Performance Indicators	2022 Goal
AS-IA	Percent of Self-Governance Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	99%
BIA	Percent of Self-Determination Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	91%
AS-IA	Percent of P.L. 93-638 contracts with clean audits	90%

GOAL #2: Fulfill fiduciary trust

The DOI has ongoing responsibilities to ensure that trust and restricted Federal Indian-owned lands are managed effectively and to accurately account for revenues and disbursements in a timely and efficient manner. The Office of the Special Trustee for American Indians and the Bureau of Indian Affairs oversee fiduciary trust activities. The DOI assists American Indian and Alaska Native communities in developing capabilities needed to strengthen their communities and maintain economic self-sufficiency. Efforts such as reducing fractionation of Indian lands and developing conservation and resource management plans help tribes maximize economic benefits of their lands. Securing unsubsidized employment reduces dependency on Federal subsidized programs such as childcare assistance, food stamps, and welfare.

Trust assets are crucial to the financial well-being of individual Indian beneficiaries and key components in the economies of tribes. As such, these assets must be managed with great care, paying attention that all financial transactions are completed accurately and as quickly as possible. Since passage of the American Indian Trust Fund Management Reform of 1994, the trust accounts managed by OST are balanced to the penny on a daily basis. OST has also incorporated industry-standard practices, such as a lockbox facility, to shorten the time between the payment of a lease and deposit of those funds into a trust account. For Fiscal Years (FY) 2013 through 2017, OST has received a "clean" audit opinion for Individual Indian Monies (IIM) accounts, attesting to its professionalism in managing these assets. Despite this proven record of success, OST retains a commitment to continual reform, looking for more ways to improve its service to individual Indians and tribes.

The Bureau of Indian Education (BIE) helps provide quality education opportunities starting in early childhood in accordance with tribally identified strategies and needs that contribute to the social well-being of the community and sustain Indian cultures. Tribes directly operate 150 of the 183 BIE funded schools through self-determination contracts and Tribally Controlled Schools Act grants.

STRATEGY #1: Ensure accurate and timely management of fiduciary trust assets

In its effort to promote the fulfillment of fiduciary trust processes, the DOI assists Indian tribes in developing capacity and infrastructure needed to attain economic self-sufficiency on reservations to enhance their quality of life. One critical path is economic development and job creation. The BIA coordinates development of comprehensive tribal programs with the Departments of Labor and Health and Human Services. The DOI offers programs and financial services that encourage start-ups and help position Indian businesses and individuals to compete in today's economy.

Bureaus	Key Performance Indicators	2022 Goal
BIA	Total average gain in earnings of participants that obtain unsubsidized employment through Job Placement Training programs for tribes submitting P.L. 102-477 related reports	$10.82
BIA	Percent of active, supervised Individual Indian Monies (IIM) case records reviewed in accordance with regulations	98%

BIA	Increase in the percentage of submitted land-into-trust applications with determinations (Fee to Trust)	40%
OST	Percent of financial information initially processed accurately in trust beneficiaries' accounts.	99%
OST	Percent of oil and gas revenue transmitted by ONRR recorded in the Trust Funds Accounting System within 24 hours of receipt.	99%
OST	Percent of timeliness of financial account information provided to trust beneficiaries.	100%

STRATEGY #2: Strengthen Indian Education

Improving performance in BIE schools is a challenge the DOI is addressing through initiatives aimed at increasing student achievement. Students at BIE-funded schools receive a culturally relevant, high-quality education that prepares them with the knowledge, skills, and behaviors needed to flourish in the opportunities of tomorrow, become healthy and successful individuals, and lead their communities and sovereign nations to a thriving future that preserves their unique cultural identities.

Bureaus	Key Performance Indicators	2022 Goal
BIE	Percent of students attending BIE-funded schools completing high school with a regular diploma within four years of their 9th grade entry date	69%

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states

The DOI supports the U.S. Territories and Freely Associated States (FAS) through the Office of Insular Affairs (OIA) under the Assistant Secretary for Insular and International Affairs. The U.S.-affiliated insular areas are: the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Residents of these U.S. territories are U.S. citizens or nationals. The DOI also administers and oversees Federal assistance provided to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. The Assistant Secretary Insular and International Affairs and the Office of Insular Affairs carry out these responsibilities on behalf of the Secretary.

STRATEGY #1: Bolster Healthcare Capacity

The Territories and FAS experience significant healthcare challenges. The DOI along with other partners, such as the Department of Health and Human Services (HHS), will work with insular area partners to improve the quality of healthcare across the insular areas. The DOI will make investments to implement corrective action plans which address chronic operational and facility shortcomings at territorial hospitals, which serve their U.S. citizens and nationals, with a focus on those identified by the HHS/Centers for Medicare/Medicaid (CMS) and local elected officials. Additional investments will be made to combat non-communicable and communicable diseases impacting the Pacific and Caribbean islands such as obesity, diabetes, and tuberculosis.

Offices	Key Performance Indicators	2022 Goal
OIA	Percent of Community Water Systems (CWS) that receive health based violations notices from the US Environmental Protection Agency	9%
OIA	Number of new and relapse tuberculosis cases occurring during the calendar year on the islands (per 1,000 people in the population)	1
OIA	Percent of patients with newly diagnosed tuberculosis disease for whom 12 months or less of treatment is indicated, who complete treatment within 12 months	95%
OIA	Infant mortality rate per 1,000 live births (number of deaths to infants from birth through 1 year of age per number of live births)	6

STRATEGY #2: Strengthen Island Economies

Strong local economies provide employment and a viable tax base for citizens in the Insular Areas. The DOI will assist the insular areas to strengthen their economies through strategic investments in infrastructure, public services and technical assistance which will attract and retain private sector investment. The DOI will promote policies and improve Federal coordination on issues impacting insular economies.

Capital investments will be made in basic utilities, hospitals, schools, ports, tourist areas, telecommunications and roads as they create the backbone for increased economic activity. Pursuing renewable energy strategies lessens dependence on oil imports and provides more reliable and affordable energy.

Stable economies and fiscally prudent insular governments foster a more hospitable climate for investment in the islands. Technical assistance will be provided to equip the insular areas with the statistical and management information necessary for informed leadership decision making, expert consultants to effectively improve insular government financial policies and procedures, and strong financial management systems along with technical planning abilities.

The DOI will help create economic opportunity by forging partnerships that bolster tourism and attract industry by promoting the unique island cultures, natural resources, and by preparing the next generation of business leaders. Key indicators of OIA's effectiveness include the following:

Average per capita Gross Domestic Product (GDP): In the four U.S. Territories (Guam, US Virgin Islands, American Samoa, and Commonwealth of the Northern Mariana Islands (CNMI)) for which it is measured, GDP remains a fraction of that for other U.S. citizens in the states. OIA provides technical assistance to the insular areas to assist with economic development planning and execution and supports local planning and education activities related to tourism, agriculture, and aquaculture. In addition, OIA funds infrastructure projects related to economic development, such as fiber optic connectivity, port improvements and renovations to tourist districts.

Cost of electricity: Without indigenous fossil fuels, insular areas face great challenges in achieving reliable, affordable, and secure energy, which can have severe economic effects on the island communities. These areas depend almost entirely on imported petroleum products for energy. The residential cost per kilowatt hour for power in the territories directly impacts the quality of life in

the insular areas and remains over three times higher than the national average. To try to address high electricity costs, the Office of Insular Affairs (OIA) contracts with the Department of Energy's National Renewable Energy Laboratory (NREL) to engage territories and provide energy efficiency and renewable energy assessments, help develop strategic energy plans, and provide technical assistance in reviewing and implementing alternative energy projects. The OIA, through its Empowering Insular Communities grant program, continues to provide funding for the highest priority projects identified in the energy plans including photovoltaic, wind and geothermal development projects, as well as assuring traditional energy plants continue operating.

Offices	Key Performance Indicators	2022 Goal
OIA	Difference in the mean GDP per capita in the 4 US territories compared to the mean GDP per capita in the US	60%
OIA	Difference in the residential cost per kilowatt hour for power from the national average	2X

STRATEGY #3: Fulfill US Compact Obligations

In coordination with the State Department, the DOI will implement compact obligations with three U.S.-affiliated Freely Associated States (FAS): the Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI) and the Republic of Palau (Palau). The DOI will make direct grants to the FSM and RMI under their amended Compacts to provide assistance in six sectors: education, health care, infrastructure, public sector capacity building, private sector development, and environment. The DOI will also continue to support U.S. compact obligations to Palau.

Offices	Key Performance Indicators	2022 Goal
OIA	Ratio of FAS private sector jobs versus total FAS employment	55%
OIA	Ratio of FAS public sector jobs versus total FAS Employment	45%
OIA	Percent of FAS employment attributable to OIA Grants and Programs	30%
OIA	Percent of FAS employee compensation attributable to OIA grants and programs	25%
OIA	Average FAS private sector wage rate as a percentage of average FAS central government wage rate	45%

MISSION AREA 5 Protecting Our People and the Border

Inherent in DOI's management responsibilities of the public lands is the requirement to protect employees and visitors. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices covering four disciplines – law enforcement, emergency management, wildland fire, and natural hazards science. The DOI's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities. Wildland fires potentially endanger lives and property. The Office of Wildland Fire (OWF) coordinates among the DOI's land management bureaus and the US Forest Service to safely, efficiently, and effectively prevent, respond to, and manage the impacts of wildfires. The USGS also protects lives by monitoring and warning of natural hazards such as earthquakes, volcanoes, landslides, and environmental health hazards.

The DOI has land on both the Canadian and Mexican borders, and a presence in the Pacific that exposes Americans to risks from Asia. The Administration is presently emphasizing securing our southern border with Mexico to better protect our country. The DOI has a considerable amount of land that borders Mexico. As such, the DOI's law enforcement officers work in partnership with the US Customs and Border Patrol, Immigration and Customs Enforcement, Drug Enforcement Agency, and tribal, state and local governments to address the flow of illegal immigration, gun and drug trafficking, and to mitigate the impacts associated with these activities, which affect DOI lands and our community partners. In addition, OWF shares wildfire management responsibilities with Mexico along the southern border.

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks

The DOI places a high priority on safety, security, and preparedness, and will uphold its responsibilities for protecting lives, resources, and property through a wide variety of program areas, including law enforcement, health and safety, security, and emergency management. The DOI's preference is to achieve public and visitor compliance with applicable laws and regulations by using techniques that are not confrontational and are designed to elicit voluntary as opposed to coerced compliance.

STRATEGY #1: Ensure public safety on our lands

The Office of Law Enforcement and Security (OLES) provides program direction and oversight on law enforcement policy, border security, drug enforcement, training at the national academy, internal affairs, victims assistance, program compliance, and inspections as well as emergency deployment of DOI law enforcement resources. The Office coordinates with other Federal, state and local agencies (including the Department of Homeland Security, Federal Bureau of Investigation (FBI), and Central Intelligence Agency) on law enforcement and security issues, including infrastructure on the Outer Continental Shelf, the Trans-Alaska pipeline, and gas transmission lines.

To help ensure effective protection of people on DOI lands, each bureau will determine the effective level and distribution of law enforcement staffing for each of its programs on a unit-by-unit basis. The effective level and distribution of staffing needs is dependent on the differing

conditions, levels of risk, and populations served in each unit, captured through a staffing model developed and monitored by each bureau. The DOI's bureaus will engage in developing these staffing models, to determine on a program basis the effective levels of law enforcement staffing that are needed across its units, evaluate the actual level of law enforcement staffing that presently exists, and develop recommendations for better ensuring the effective level of staffing for protecting the people in each unit.

The DOI will strengthen law enforcement in Indian Country by putting more officers on the streets, bolstering tribal courts, and helping fight violent crime and drug abuse. Tribal justice systems are an essential part of tribal governments, which interface with BIA and tribal law enforcement activities. Congress and the Federal courts have repeatedly recognized tribal justice systems as the appropriate forums for adjudicating disputes and minor criminal activity within Indian Country. It is important that the BIA and tribal law enforcement activities complement the operations of the tribal courts to ensure that justice in the tribal forums is administered effectively.

Bureaus	Key Performance Indicators	2022 Goal
OLES	Percent of DOI law enforcement agencies with a current law enforcement staffing plan	100%
BIA	Percent of criminal offenses solved by arrest (Part 1 Offense Clearance Rate)	44%

Strategy 2: Prepare DOI to respond to and recover from emergencies and incidents

The Office of Emergency Management (OEM) promotes all-hazard preparedness and response; ensures continuity of the DOI to perform essential functions during catastrophic events; and assists communities during imminent threats. Collectively, the DOI supports the five National Planning Frameworks (Protection, Prevention, Mitigation, Response, and Recovery) and their related five Federal Interagency Operational Plans, the National Incident Management System, and the National Oil and Hazardous Substances Pollution Contingency Plan while continuing the DOI's mission to protect natural and cultural resources. The DOI's All-Hazards Baseline Operational Plan provides the baseline guidance for how the Department prepares for and responds to emergencies, regardless of type or cause. The OEM leads coordination and information sharing for emergency management regarding communications, public health, environmental health, wildlife health, integrated pest management, invasive species, and occupational safety and health across the DOI's bureaus and offices.

Offices	Key Performance Indicator	2022 Goal
PEM	Average Interior Readiness (I-READ) Index score for emergency preparedness across DOI Bureaus/Offices	91.0%

GOAL 2: Support securing our southern continental US border

The DOI manages 41% of the southwest border of the continental United States. The DOI's managers in the field are daily faced with tough decisions on how to best utilize their law

enforcement assets. An integrated government approach is essential to effectively securing the border and supporting the construction of a physical barrier where needed. Through partnering, federal, state, tribal, and local law enforcement agencies working in proximity to each other have been able to address critical issues like illegal immigration and marijuana smuggling.

STRATEGY #1: Support securing our southern continental US border

The DOI's goal is to increase collaboration among the agencies operating along the border to better understand each other's mission, share resources, and coordinate efforts. This is accomplished by routine interagency coordination, participating in local Border Management Task Force (BMTF) meetings, interagency training, an annual interagency border forum, and law enforcement specific operations.

The US Border Patrol is the main federal agency responsible for patrolling DOI lands adjacent to the US/Mexican Border. The DOI's goal is to work with US Border Patrol to decrease illegal immigration on DOI managed public lands through collaborative efforts with partnering agencies.

Bureaus	Key Performance Indicators	2022 Goal
PMB/OLES	Number of apprehensions on DOI-managed lands	Reduced Annually

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience

The DOI, working with the Department of Agriculture, will improve the way that both agencies manage wildland fire by ensuring that fire management assets are used in the most efficient way possible. The DOI will work with state, local, tribal, and other partners to ensure a coordinated approach to wildland fire management that enables protection responsibilities to be exchanged and resources shared to improve operational efficiency and reduce management duplication. The DOI will continue to integrate science and technology into informing and supporting the firefighters with the appropriate training tools, resources and program support to enable them to work safely and effectively.

The DOI is developing new wildland fire management performance measures to better articulate and determine the efficacy of Department and Administration resources in achieving desired resource conditions that reduce the intensity, severity or negative effects of wildfire. As part of this effort, the Department has established a working group among the four DOI wildland fire bureaus, as well as the U.S. Forest Service, which will explore the feasibility of concepts and principles in wildfire risk mitigation, and examine the value of the strategic placement of fuels treatments as informed by a risk assessment and mitigation plan. This group will develop recommendations for a) establishing outcome-based targets, and b) annually evaluating the performance of the program in meeting the desired objectives of the National Cohesive Wildland Fire Management Strategy. When

completed, the DOI will incorporate the new performance measures into its strategic plan implementation.

STRATEGY #1: Integrate fire ecology, risk management, and collaboration to mitigate wildfire impacts

The Department's Office of Wildland Fire coordinates programs and funding across four bureaus (BLM, FWS, NPS, and BIA) that manage wildland fire programs to implement the National Cohesive Wildland Fire Management Strategy, a science-based collaborative approach to mitigating wildfire risk. The DOI, in partnership with the Department of Agriculture's Forest Service, is committed to the inclusive principles of providing safe and effective response to wildfires, promoting fire-adapted communities, and creating fire-resilient landscapes. The DOI strives to achieve a science-based and technically effective wildland fire management program that is integrated with natural resources programs.

Successful management in fire-adapted communities and landscapes depends on implementation of a broad-based, intergovernmental, collaborative, and national cohesive strategy to address the mounting challenges of escalating fire behavior, increased risk to responders, greater natural and cultural resource losses, and increased threats and losses to communities. The DOI is a lead agency in this collaborative approach with the Forest Service and other Federal, state, tribal, and local governments and stakeholders.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
OWF	Percent of DOI-managed landscape acres that are in desired condition as a result of fire management	36%
OWF	Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan	94%
OWF	Percent of wildfires on DOI-managed landscapes where the initial strategies fully succeeded during the initial response phase	97%

GOAL #4: Provide science to safeguard communities from natural hazards

The USGS helps protect public safety, public health, and property by effectively delivering natural hazards and environmental health science. The Nation's emergency managers and public officials use USGS science to inform citizens of the potential risks these hazards pose to natural systems and the built environment, improve preparation and response activities, and protect the health of the public, which reduce the loss of life and property.

STRATEGY #1: Monitor and assess natural hazards risk and response planning

Responsibilities in natural hazards include the issuing of warnings and advisories for earthquakes, volcanic eruptions, landslides, and coastal erosion; informing warnings issued by other agencies for floods, tsunamis, and wildfires; providing timely information to emergency managers and response officials, the media, and the public to inform and educate communities during and between crises.

The USGS supports these activities by implementing 24x7 operations for seismic, volcanic, and geomagnetic monitoring efforts; maintaining an extensive national network of streamgages measuring rainfall, streamflow, stream height or lake levels; and developing the next generation of tools for rapid evaluation of hazards.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted natural hazards assessments of very high and high-threat regions of the Nation (Index)	4%
USGS	Percent completion of targeted landslide hazard research	8%
USGS	Percent completion of coastal and marine hazards and subsidence research (Index)	87%
USGS	Percent progress towards optimal monitoring capability for natural hazards situational awareness (Index)	52%
USGS	Percent of the National Streamflow Network (NSN) streamgages that are fully operational	88%

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years

The DOI is looking to better ensure effective operations and service delivery through coordinated organizational alignments in the field across bureaus and with other federal and nonfederal partners, and through putting a relatively larger fraction of our employees into the field to serve the public. Expediting environmental analysis and compliance, reducing the cost of space, collocating offices for more convenient public service and improved interagency coordination, and common regional boundaries are all being explored to help improve the DOI's infrastructure and related effectiveness.

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery

The DOI is reevaluating its organizational model to determine how to best achieve its mission of serving the American public, honoring our tribal and fiduciary trust responsibilities, and managing and protecting our land, water and natural resources for the next 100 years.

STRATEGY #1: Ensure effective alignment of DOI organizational structure in the field and with partners

The DOI intends to establish unified regional boundaries for its bureaus in 2018 and to further develop this approach in 2019. The goal is to improve overall operations, internal communications, customer service, and stakeholder engagement. Aligning geographic areas across the DOI will enhance coordination of resource decisions and policies and will simplify how citizens engage with the DOI.

Organizing bureaus with common geographic areas will allow for more integrated and better coordinated decision making across bureaus. Currently, the DOI's bureaus have more than 40 distinct regions, each with its own geographic boundaries. This complicates coordination and hampers the DOI's ability to get things done expeditiously. Having unified regions will help streamline operations and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision. The new regional boundaries currently under discussion – and subject to modification – are expected to have minimal budgetary impact.

To improve customer service and reduce operational costs, sharing functions at field locations has already begun. For a number of years, the Department of the Interior and Department of Agriculture's US Forest Service (USFS) have pooled resources, conducted joint projects, and shared services under Service First agreements where field locations are in close proximity to each other. Service First authority promotes partnering across agency boundaries to develop joint solutions to common problems and to address federal land management issues in an integrated way.

STRATEGY #2: Improve strategic hiring, placement and retention efforts to ensure mission-critical service delivery through data driven processes and increased employee engagement efforts

The DOI is committed to managing America's vast natural and cultural resources with a 70,000-strong and 350 occupation-plus workforce that exemplifies high performance, customer service and

accountability. Historically, it has been difficult to attract certain DOI employees or recruits in certain occupations to positions in headquarters, or even to regional offices, because many of our employees enjoy living in relatively rural areas and because the cost of living is so much higher in large cities. Moving a larger fraction of our staff of some bureaus to relatively more rural and considerably less expensive areas in the West might therefore both reduce payroll cost because fewer employees would receive locality pay, and improve employee retention.

To facilitate strategic human capital planning, the Department has put in place hiring controls to emphasize new hiring for field-related positions rather than administrative and support positions in the Washington, D.C., and Denver, Colorado metropolitan areas.

The DOI will leverage automation to improve employee performance and training opportunities, and examine additional data to determine if operational efficiencies can be gained while minimizing redundancies under the current organizational design.

Data to be analyzed include:

- Federal Employee Viewpoint Survey (*e.g.*, employee engagement)
- Geographic Representation of Bureau Mission Critical Occupations
- Geographic Representation of Administrative and Support Services
- Customer Service data
- Benchmarking cost allocations for administrative and support functions
- DOI Human Capital Framework Evaluations
- Accountability drivers on performance, labor management, EEO, etc.
- Bureau plans in response to the Department-wide Workplace Environment Survey

Offices	Key Performance Indicator	2022 Goal
PHR	Employee engagement index for DOI in the Federal Employee Viewpoint Survey	75%
PHR	DOI's ranking among large agencies in the Partnership for Public Services' Best Places to Work report	1

GOAL #2: Reduce administrative and regulatory burden

Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, directed agencies to "manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations." The DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to the public, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient.

STRATEGY #1: Evaluate and improve the net benefits of regulatory reform initiatives and policies, and identify regulations for repeal, replacement, or modification

On February 24, 2017, President Trump signed Executive Order 13777 entitled, "Enforcing the Regulatory Reform Agenda" to alleviate unnecessary regulatory burdens placed on the American people. The Executive Order established a Regulatory Reform Officer (RRO) for each agency and a Regulatory Reform Task Force. The efforts of the RRO and the task force will help identify

regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The costs of the regulatory and deregulatory actions are measured as the opportunity costs or cost savings to society, as defined in OMB Circular A-4 (i.e. the values reported are the cumulative net savings from deregulatory actions and costs of newly required regulatory actions over multiple years starting in FY 2017). In 2017, the DOI achieved cumulative net savings of $1.15B (net present value) from its deregulatory actions. Goals for subsequent years will be established as the DOI completes its review of target regulations.

Office	Key Performance Indicator	2022 Goal
DOI	Total incremental cost of all EO 13771 regulatory actions and EO 13771 deregulatory actions (including costs or cost savings carried over from previous fiscal years)	TBD
DOI	Number of EO 13771 regulatory actions issued.	TBD
DOI	Number of EO 13771 deregulatory actions issued.	TBD

STRATEGY #2: Improve transparency and timeliness of the infrastructure permitting process

As outlined in the President's Executive Order "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure," and the corresponding Secretarial Order 3355, a significant opportunity exists for agencies to streamline and collaborate on National Environmental Protection Act (NEPA) compliance efforts. The DOI believes this can best be achieved through a unified regional structure adopted across the DOI which focuses on the intersecting issues within the same geographical boundaries.

The DOI is also establishing an Executive Committee for Expedited Permitting (ECEP) to expedite the responsible leasing and permitting of energy and mineral production. More specifically, this involves, but is not limited to, the processing of Applications for Permit to Drill (APD), Expressions of Interest (EOI), coal leasing actions, Right-of-Way (ROW) applications, and harmonization of appurtenant environmental reviews.

Office	Key Performance Indicator	2022 Goal
DOI	*Cross-Agency Priority Goal metric on improving infrastructure permitting to be added*	
BLM	Average amount of time (in days) to process and administratively complete Applications for Permit to Drill	90 days
BLM	Average amount of time (in months) to issue a decision on major right-of-way applications	48 months
BLM	Average amount of time (in days) to process and administratively complete a grazing permit	390 days
FWS	Percent of formal Endangered Species Act Section 7 consultations addressed in a timely manner	100%

GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog

Real property assets are integral to the success of Interior's mission. DOI's real property inventory includes approximately 43,000 buildings and 80,000 structures across six major land-holding bureaus, with a replacement value of approximately $300 billion. DOI manages the full life-cycle requirements of nearly every type of constructed asset found, including visitor centers, dams, schools, health clinics, power generating facilities, housing, hotels, fire stations, campgrounds, roads, water and wastewater treatment plants, offices, and more. Many of these assets have historic or cultural significance that not only support the DOI's mission, but are important to our Nation's heritage.

STRATEGY #1: Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery

The DOI's goal is to balance mission delivery demands with adequate investments in operations and maintenance to sustain the portfolio in an appropriate condition befitting of our role as America's stewards. Appropriately maintained assets enable the DOI to accomplish habitat and resource management, provide outdoor recreation activities, deliver water, fulfill trust and treaty responsibilities, and provide critical economic inputs and job creation for local communities. Adequately constructed and maintained Federal real property supports healthy habitats and populations, availability of safe and reliable public use opportunities, and robust local economies.

A significant factor impacting a sustainable portfolio of constructed assets is DOI's aging infrastructure. Many assets already exceed original design life, and this trend of aging infrastructure continues to threaten mission delivery. Prioritizing repairs on a portfolio scale will ensure the assets condition is maintained at an acceptable level. Effective management of deferred maintenance is a Departmental priority to ensure completion of needed repairs and prevent further deterioration and unsafe conditions. The DOI prioritizes addressing deferred maintenance/repair needs for mission critical activities. Furthermore, proactive maintenance, replacement of components and colocation of programs and staff in owned facilities will help to reduce future costs.

The DOI conserves the Nation's cultural and heritage sites that reflect a rich and diverse history. The DOI safeguards our heritage for the generations that follow, to better understand our country and learn from our past. Many challenges exist in protecting and maintaining historic and archeological sites, especially with the impacts of weather on fragile sites and structures. Sites are exposed to changing weather conditions that cause damage and deterioration of the structures and sites and some locations are vandalized or accidentally damaged by visitors to federal lands.

The Road Construction Program maintains and operates the 29,000 miles of BIA-owned roads and bridges. These roads and bridges serve as the primary access points to tribal communities, without which critical resources and services would not reach tribal members.

The DOI will continue to improve and provide safe, functional, energy efficient, and universally accessible BIA facilities. The DOI is allocating funds to improve its Bureau of Indian Education (BIE) funded schools, and improve the learning environment of BIE students.

Agency Priority Performance Goal: By September 30, 2019, the Department of the Interior will improve the condition of its priority real property assets such that 82% are in the desired state of acceptable condition.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
PAM	Percent of priority assets in acceptable condition (i.e. meet investment objective)	84%
PAM	Amount of priority deferred maintenance (repair) needs/activities addressed (i.e. completed for that year)	$1.2 billion
NPS	Value of NPS deferred maintenance work orders closed ($000)	TBD
BIA, BLM, FWS, NPS	Percent of historic structures on DOI inventory in good condition	57%
BIA, BLM, BOR, FWS, NPS	Percent of museum collections on DOI inventory in good condition	59%
BIA, BLM, FWS, NPS	Percent of archaeological sites on DOI inventory in good condition	67%
BOR	Maintain a completion rate of 95% for Safety of Dam recommendations	95%
BIA	Percent of miles of BIA road in acceptable condition based on the Service Level Index	14%
BIA	Percent of BIA bridges in acceptable condition based on the Service Level Index	69%
BIE	Percent of students in BIE school facilities that are in acceptable condition as measured by the Facilities Condition Index	67%

STRATEGY #2: Provide dependable and efficient information technology

Information Management and Technology (IMT) provides modern and secure technology solutions to advance the DOI's ability to deliver programs and services to the public and our customers. To do so, the DOI must protect its critical information assets from cyber exploitation and attack to ensure that employees and the public can rely on the confidentiality, integrity, and availability of the DOI's data and information systems. The DOI is implementing advanced technologies that will increase visibility into its IMT environment, improve protections around our high-value information assets, and empower its workforce to better detect, respond, and recover from cyber-attacks and breaches. With a more secure computing environment in place, its employees can more easily obtain the tools and data they need to perform the mission securely efficiently and effectively, anywhere and anytime.

The DOI will continue to deploy and mature Continuous Diagnostics and Mitigation (CDM) capabilities that help to fortify its networks and systems. These capabilities provide the DOI with tools necessary to better identify cybersecurity risks on an ongoing basis, prioritize these risks based upon potential impacts, and enable cybersecurity personnel to mitigate the most significant

problems first. Achieving the performance objectives will enable the DOI to meet the requirements of Presidential Executive Order 13800, "Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure." The DOI has adopted the National Institute of Standards and Technology (NIST) Cybersecurity Framework and will work towards implementing and maturing the set of activities known to be effective in managing cybersecurity risks and that are necessary to achieve key cybersecurity outcomes that support the following functions: Identify, Protect, Detect, Respond and Recover.

The DOI is working collaboratively with its user community to understand operational needs better in the field, resulting in expanding network capabilities to improve connectivity in remote areas so employees can be as productive as possible. To improve collaboration, the DOI will enhance its Geospatial Platform capabilities, which is an internet-based tool for sharing trusted geospatial data with the public, government agencies, and partners to meet their mission needs. The DOI will also seek to deliver improved services at a lower cost by consolidating and standardizing IT services and systems, including consolidating and optimizing its data center and network operations and standardizing security, customer support, and administrative functions.

Offices	Key Performance Indicator	2022 Goal
PIO	Percent of unclassified network hardware and software assets appropriately authorized and managed	95%
PIO	Percent completion of DOI's Federal Information Technology Acquisition Reform Act (FITARA) Implementation Plan	100%

All,
Attached is the new DOI GPRA strategic plan. This, along with the Secretary's Top 10 list, ought to be reflected in the 2018 SES performance standards for your direct reports. With FY 18 already half over, I'd urge you to get FY18 performance plans in place for your SESers ASAP, if you haven't done so already, so they can understand your goals for them and have as much time as possible to accomplish those goals.
Thanks,
Scott

STRATEGIC PLAN FOR FISCAL YEARS 2018 – 2022

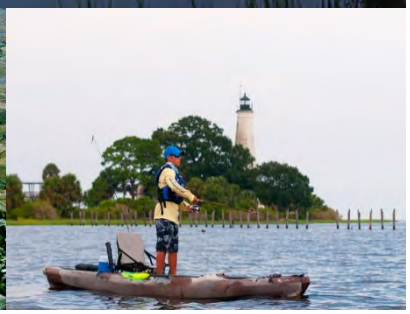

Table of Contents

LETTER FROM THE SECRETARY 1

MISSION AND ORGANIZATION 3

Mission 3

Vision 3

History 3

STRATEGIC PLAN FRAMEWORK 13

DESCRIPTION OF MISSION AREAS 14

MISSION AREA 1: Conserving Our Land and Water 15

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities 15

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity 19

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands 20

GOAL #4: Inform land use planning processes especially for public use and access 22

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources 24

GOAL #1 Ensure energy and economic security for America 24

GOAL #2: Ensure access to mineral resources 26

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate 26

GOAL #4: Focus timber programs on “healthy forests” lifecycle 28

GOAL #5: Manage grazing resources 29

MISSION AREA 3 Expanding Outdoor Recreation and Access 30

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters 30

GOAL #2: Enhance public satisfaction at DOI sites 31

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities 32

GOAL #1: Support tribal self-determination, self-governance, and sovereignty 32

GOAL #2: Fulfill fiduciary trust 33

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states 34

MISSION AREA 5 Protecting Our People and the Border 37

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks 37

GOAL 2: Support securing our southern continental US border 38

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience 39

GOAL #4: Provide science to safeguard communities from natural hazards 40

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years 42

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery 42
GOAL #2: Reduce administrative and regulatory burden 43
GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog 45
APPENDIX A – ACRONYMS 48

LETTER FROM THE SECRETARY

The Department of the Interior's Strategic Plan for Fiscal Year 2018-2022 is our bold vision for the future under President Donald J. Trump. As the chief stewards of our public lands, it is our job to ensure that these lands continue to be used "for the benefit and enjoyment of the people," as the words engraved into the Roosevelt Arch at Yellowstone National Park so proudly proclaim.

We will restore the American conservation ethic that built our nation. Among the American traditions that made our country great was a philosophy of multiple-use on our public lands. I am an admirer of President Theodore Roosevelt – he had it right. As President Roosevelt once remarked, "It is not what we have that will make us a great nation; it is the way in which we use it."

Our public lands are our greatest treasures, and all Americans should be able to experience these treasures. One of my top priorities as Secretary of the Interior is public access to public land. Recognizing that hunting and fishing is an integral part of the American heritage, we must do more to ensure that all Americans can enjoy these sports – not just the wealthy elite. Americans should also be proud of their public lands, which is why investing in American infrastructure and addressing the maintenance backlog at our National Parks is critically important.

While "benefit and enjoyment" includes recreation, it also includes traditional uses like grazing and timber harvesting. Our mandate is multiple-use of public lands, and multiple-use also includes the development of natural resources as we seek to leverage American energy for American strength. Americans should have the right to make a living off the land, and one of our most critical responsibilities at Interior is upholding this right.

If we are going to preserve our heritage, we must bolster our standing in the world. It is in the economic and national security interest of the United States to pursue a policy of American energy dominance. An America-First energy policy is one which maximizes the use of American resources while freeing us from dependence on foreign oil.

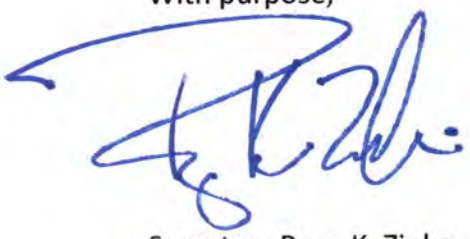
American energy dominance requires aggressive regulatory reform. With our strategic plan, the Interior Department has a unique opportunity to cut the burdensome, unnecessary regulations that have suppressed job creation and wealth generation. Regulatory reform also includes reduced permitting times. The Trump Administration will not deregulate or streamline at the expense of environmental standards or worker safety, but we will strike a balance and strive toward regulatory certainty going forward when creating a bureaucratic framework.

Along with our conservation stewardship responsibilities, we must also be the greatest champion of our tribal nations. Native Americans and Alaska Natives are proud people with a rich history. Sovereignty has to have meaning, and the days of empty promises to our tribal communities are over. Our priorities in Indian Country will be self-determination, government-to-government interaction, and empowerment.

To accomplish our goals, a reorganization of the Department is necessary. We will chart a path forward for the next 100 years at Interior, as Teddy Roosevelt did over a century ago. As a former Navy SEAL, I have long believed that a healthy front line makes for a healthy operation – it is in this spirit that the reorganization plan will focus on our front lines and how we can better engage those on the ground.

Our strategic plan will restore trust in local communities. The federal government has a long way to go when it comes to being a good neighbor, but I am confident we can get there. With a renewed focus on conservation and a bold approach to energy, the Department of the Interior can lead the way in making America great again. This is our desired outcome.

With purpose,



Secretary Ryan K. Zinke
United States Department of the Interior

MISSION AND ORGANIZATION

Mission

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

Vision

The Department of the Interior strives to fulfill a vision to:

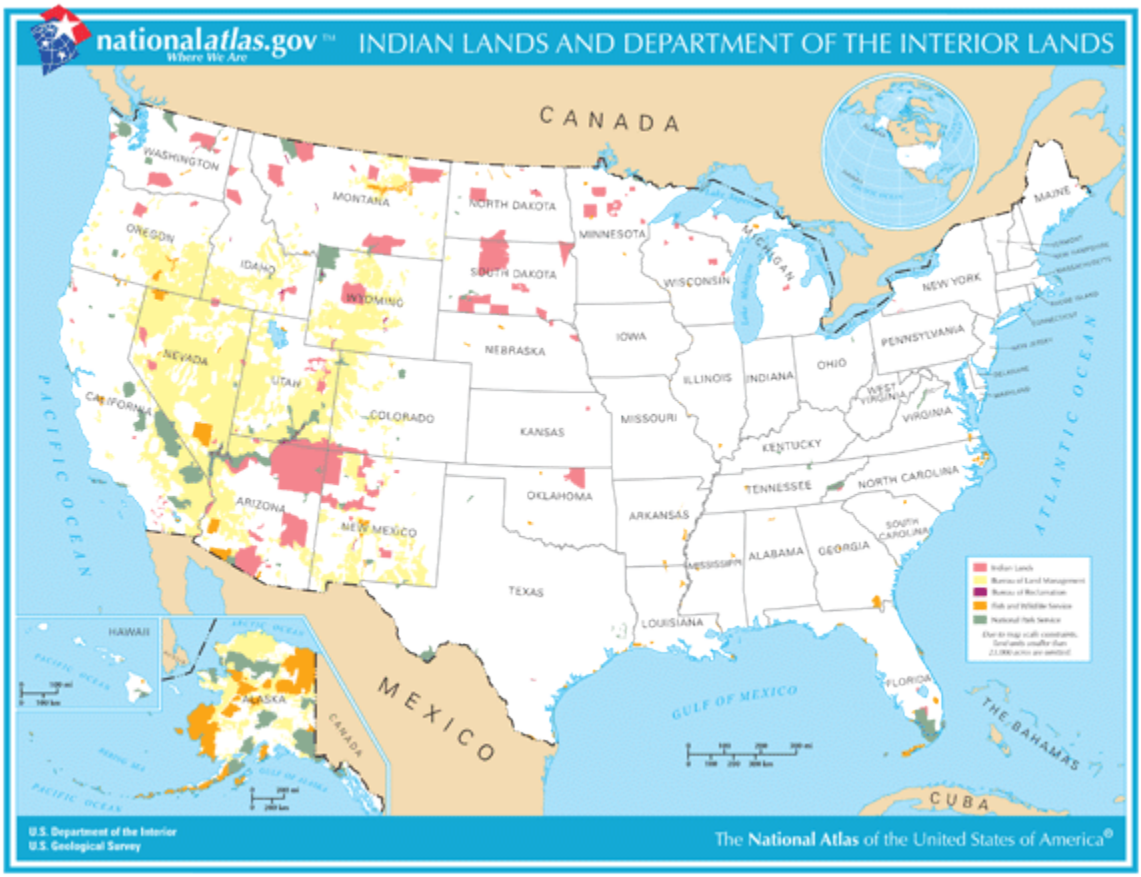
- *Promote energy dominance and critical minerals development* to create jobs for Americans, insulate our nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so that our people can be healthier, more fully enjoy the wonderful features of their federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

History

The Department of the Interior (DOI) was established in 1849. The DOI was charged with managing a wide variety of programs, which included overseeing Indian Affairs, exploring the western wilderness, directing the District of Columbia jail, constructing the National Capital's water system, managing hospitals and universities, improving historic western emigrant routes, marking boundaries, issuing patents, conducting the census, and researching the geological resources of the United States. As the country matured during the last half of the 19th Century, so did the DOI and its mission began to evolve as some of these functions moved to other agencies at the same time the DOI acquired new responsibilities.

With information from Robert Utley and Barry Mackintosh, *The Department of Everything Else: Highlights of Interior History*, 1988, pp. 1-2.

Surface Lands Managed by the Department of the Interior



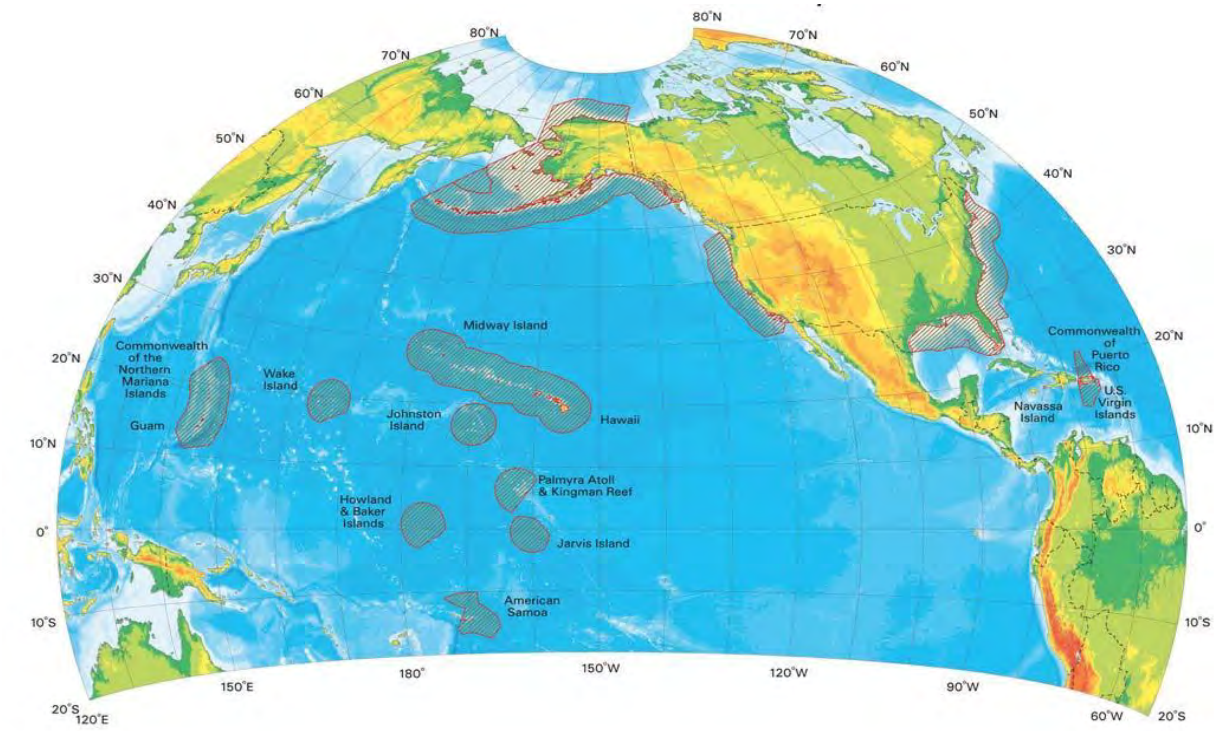
USGS Map, Oct 2014 (except for US Territories that are identified on next graphic)

Following Theodore Roosevelt's conservation summit and the awakening of the conservation movement at the beginning of the 20th Century, there was an increasing urgency and expanding congressional mandate to protect and more effectively manage the nation's natural resources. In 1905, management of the federal forests changed from the Department of the Interior to the United States Forest Service within the Department of Agriculture. Its Chief, Gifford Pinchot, introduced better forestry methods. Pinchot sought to turn public land policy from one that disposed of resources to private parties, to one that maintained federal ownership and management of public land. Pinchot argued that scientific management of forests and natural resources was profitable. He generally opposed preservation for the sake of preservation. During the 1960's and 1970's the DOI's authorizing statutes shifted to put more emphasis on the preservation, management, and use of public lands and natural and cultural resources.

Today, the DOI manages the Nation's public lands and minerals, including providing access to more than 480 million acres of public lands, 700 million acres of subsurface minerals, and 1.7 billion acres of the Outer Continental Shelf. The DOI is the steward of 20 percent of the Nation's lands, including national parks, national wildlife refuges, and other public lands; manages resources that supply 30 percent of the Nation's energy; supplies and manages water in the 17 Western States and supplies 15 percent of the Nation's hydropower energy; and upholds Federal trust responsibilities to 573 federally recognized Indian tribes and Alaska Native villages. The DOI is responsible for migratory bird and wildlife conservation, historic preservation, endangered species conservation, surface-mined lands protection and restoration, mapping, geological, hydrological, and biological science

for the Nation, and financial and technical assistance for the insular areas (many of which are depicted in the following graphic).

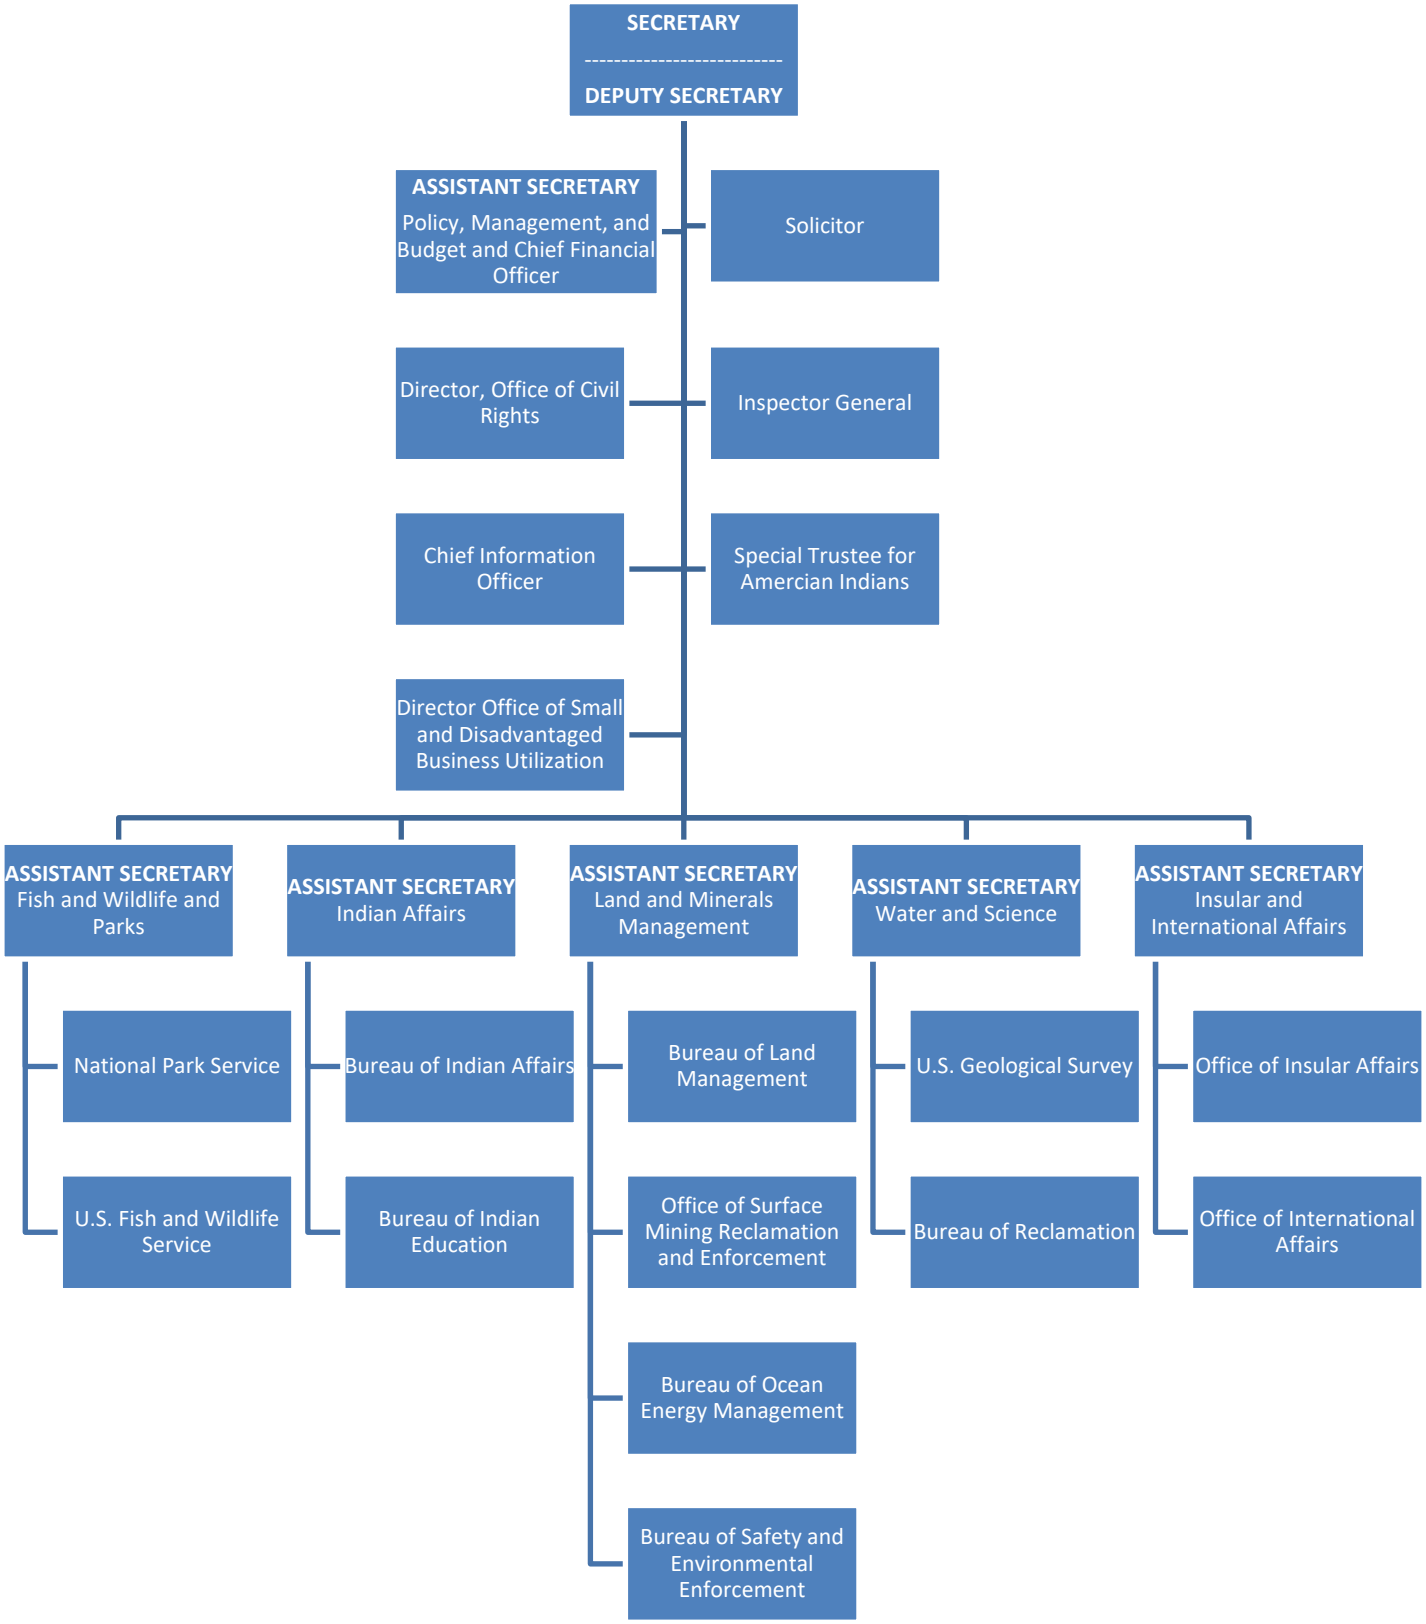
United States Continental Shelf Boundary Areas



National Geophysical Data Center, Sep 2001

The DOI's programs encompassed in this Strategic Plan cover a broad spectrum of activities that are performed by 10 bureaus and multiple offices and are captured in the following presentation of each entity's unique mission and set of responsibilities. The Strategic Plan's six mission areas capture the vitality, inventiveness, and potential of the bureaus and offices and the DOI's 70,000 dedicated and skilled employees. Along with our hardworking and skilled employees, over 350,000 much appreciated volunteers annually contribute their time in support of bureau and office missions, bringing unique local knowledge to park operations, assisting in recovery from natural disasters, and participating in environmental education, among other activities. We cannot effectively address all our responsibilities alone, so it is critical to strengthen partnerships with our sister federal agencies with related missions. In the federal family, we share forest, minerals, rangeland, and wildland fire management responsibilities with the US Department of Agriculture's Forest Service. We share water resource management and hydroelectric power generation responsibilities with the US Army Corps of Engineers, and we share fishery and endangered species management responsibilities with the Department of Commerce's National Marine Fisheries Service. In some ways, our relationships with state, tribal, and local government are even more important. We operate within the bounds of state water law, and respect state authority over resident wildlife. We deal with tribal governments on a government to government basis, respecting each other's authority and jurisdiction. We share land use planning responsibilities with local government, so we must make our own land management plans in a way that is mindful of the goals and plans of those local government neighbors.

US Department of the Interior Organization Chart



Bureau and Office Summaries

Bureau of Land Management (BLM)

- Manages public lands for the benefit of all Americans under the dual framework of multiple use and sustained yield on nearly 250 million surface acres, as well as 700 million acres of subsurface mineral estate. Priorities include:
  - Making full use of the Nation's domestic energy and mineral sources, including conventional and renewable energy sources;
  - Serving American families by providing outdoor recreation opportunities that are key to the Nation's heritage and its economy; and
  - Managing working landscapes to support sustainable livestock grazing operations; and timber and biomass production.
  - Developing and maintaining strong partnerships with State, local, and private stakeholders in shared conservation stewardship.

Office of Surface Mining Reclamation and Enforcement (OSMRE)

- Protects the environment during coal mining through Federal programs, grants to states and Tribes, and oversight activities.
- Ensures the land is reclaimed afterwards.
- Mitigates the effects of past mining by pursuing reclamation of abandoned coal mine lands.

Bureau of Ocean Energy Management (BOEM)

- Manages access to renewable and conventional energy resources of the Outer Continental Shelf (OCS);
- Administers nearly 3,000 active fluid mineral leases on over 16 million OCS acres;
- Oversees 4 percent of the natural gas and 18 percent of the oil produced domestically; and
- Oversees lease and grant issuance for off shore renewable energy projects.
- Manages leasing for marine mineral resources such as sand to facilitate beach replenishment and coastal nourishment projects.

U.S. Geological Survey (USGS)

- Produces information to increase understanding of natural hazards such as earthquakes, volcanoes, and landslides.
- Conducts research and delivers assessments on oil, gas, and alternative energy potential, production, consumption, and environmental effects.
- Conducts reliable scientific research in land resources, mineral assessments, and water resources to inform effective decision making and planning.
- Provides science information that supports natural resource decisions.
- Produces topographic, geologic, hydrographic, and biogeographic data and maps.

Bureau of Safety and Environmental Enforcement (BSEE)

- Fosters secure and reliable energy production from the 1.7 billion acre U.S. Outer Continental Shelf (OCS) for America's energy future.
- Conducts inspections, permitting, incident and equipment failure analysis, oil spill preparedness and enforcement programs aimed at promoting a culture of safety and reducing risk to those who work offshore.
- Supports the technical expertise to engage opportunities and to meet challenges to tap the full potential of OCS energy resources.

Bureau of Reclamation (BOR)

- Manages, develops, and protects water and related resources in an environmentally and economically sound manner in the interest of the American public.
- Largest wholesale supplier of water in the Nation
- Manages 492 dams and 338 reservoirs.
- Delivers water to 1 in every 5 western farmers and more than 31 million people.
- America's second largest producer of hydroelectric power.

Fish and Wildlife Service (FWS)

- Manages the lands and waters of the 855 million-acre National Wildlife Refuge System, primarily for the benefit of fish and wildlife.
- Manages 73 fish hatcheries and other related facilities for endangered species recovery and to restore native fisheries.
- Protects and conserves:
  - Migratory birds;
  - Threatened and endangered species; and
  - Certain marine mammals.
- Hosts about 48 million visitors annually at more than 560 refuges located in all 50 states and 38 wetland management districts.

Indian Affairs (IA)

- Fulfills Indian trust responsibilities.
- Promotes self-determination on behalf of 573 federally recognized Indian Tribes.
- Funds self-governance compacts and self-determination contracts to support all Federal programs including education, law enforcement, and social service programs that are delivered by Tribal Nations.
- Supports 183 elementary and secondary schools and dormitories, providing educational services to approximately 48,000 students in 23 states.
- Supports 32 community colleges, universities, post-secondary schools, and technical colleges.

Note: IA includes the Bureau of Indian Affairs (BIA) and the Bureau of Indian Education (BIE)

National Park Service (NPS)

- Maintains and manages a system of 417 natural, cultural, and recreational sites for the benefit and enjoyment of the American people.
- Manages and protects over 27,000 historic and prehistoric structures, nearly 44 million acres of designated wilderness, and a wide range of museum collections and cultural and natural landscapes.
- Provides outdoor recreation to nearly 324 million visitors at national park units.
- Provides technical assistance and support to state, tribal and local natural and cultural resource sites and programs, and fulfills responsibilities under the National Historic Preservation Act of 1966.

Insular and International Affairs

- Coordinates federal policy for the territories of American Samoa, Guam, the U.S. Virgin Islands and the Commonwealth of the Northern Mariana Islands.
- Oversees the Department's involvement with oceans policy
- Manages the Department's involvement in international affairs
- Responsible for administering and overseeing U.S. federal assistance to the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau under the Compacts of Free Association, as well as providing technical and financial assistance to all the Insular Areas.

Note: Includes Office of Insular Affairs and Office of International Affairs

Departmental Offices

- Immediate Office of the Secretary, Deputy Secretary, and Assistant Secretaries
- Office of the Solicitor
- Policy, Management and Budget provides leadership and support for the following:
  - Budget, Finance, Performance and Acquisition;
  - Public Safety, Resource Protection, and Emergency Services;
  - Natural Resources Revenue Management;
  - Human Capital and Diversity;
  - Technology, Information and Business Services;
  - Policy and Environmental Management
- Office of Inspector General
- Office of the Special Trustee for American Indians

CROSS-CUTTING PRINCIPLES

As the Department of the Interior (DOI) advances through FY 2018-2022, the following principles guide our leadership, management, and workforce.

Effective and Accountable Leadership - The DOI is committed to being an outstanding steward of approximately 500 million acres of public lands, 700 million onshore subsurface acres, and 1.7 billion acres of the Outer Continental Shelf (OCS) including magnificent vistas, valuable energy and mineral resources, unique ecosystems, range, and treasured natural, cultural, and heritage assets. The management and oversight of these resources require a dedicated cadre of employees, the contributions of volunteers, and the input of stakeholders to inform decision-making. The challenges of managing for a diverse constituency while meeting national goals for energy development and sustaining high levels of recreation and access require technical expertise, the best available science, and an understanding of the balance of development and conservation.

A critical role for DOI's senior executives is providing the necessary leadership to guide the efforts of DOI's offices, bureaus, and field locations in effectively achieving Presidential and Secretarial goals especially through:

- Ensuring cost effective operations and quality customer-centric service to the public;
- Facilitating cooperation and collaboration across organizations within the DOI and its federal and nonfederal partners;
- Ensuring a workplace environment that is safe, fair, and conducive to employee productivity; resolving conflicts as needed; and
- Holding individuals at all levels accountable for their actions.

Empowering the Field - Accomplishing the multi-faceted missions of the DOI involves the skills of 10 bureaus and spans 2,400 locations across the U.S. These locations are often remote and present managers with unique challenges. Managers and experts in the field organization must be allowed to exercise informed judgement and discretion, and must have a skilled workforce to address the issues and manage their operations. The DOI's agency reform plan, developed in response to the President's Executive Order "Comprehensive Plan for Reorganizing the Executive Branch," provides a strategy for better enabling our managers and workforce in the field through regional realignment and executive empowerment, increased colocation, and shifting workforce resources closer to the DOI's field locations.

Engaging the Nation in Cooperative Stewardship - In managing such a broad range of resources for the benefit of the public, the DOI works closely with other federal agencies, state, tribal, territorial, and local governments, and the public. The DOI's reform plan calls for increased coordination across agency lines and levels of government to achieve common goals and resolve differences without expensive and time-consuming litigation. DOI is working to increase its collaborations and partnerships across all levels of government.

Improving Infrastructure - The DOI manages an infrastructure asset portfolio with a replacement value exceeding $300 billion. Most well-known are the DOI's iconic and unique national treasures, which have priceless historical significance. More broadly, the DOI owns approximately 43,000 buildings, 100,000 miles of roads, and 80,000 structures; including dams, laboratories, employee housing, Indian schools, visitor facilities, historic structures and hydropower infrastructure. The related deferred maintenance backlog has grown to over $15 billion in 2016, of which over $11 billion belongs to the National Park Service. DOI is committed to determining how to best address

this backlog and maintain its facilities for the safety and productivity of its workforce, and the continued high quality experience and enjoyment by the American public.

Striking a Regulatory Balance – In accordance with the Executive Order on Enforcing the Regulatory Reform Agenda, the DOI will identify regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The DOI will continue to protect human health and the environment in a responsible, cost-effective manner but in a way that avoids imposing an undue process or economic burden on the public.

Generating Revenue, Jobs, and Economic Activity - The DOI grants access to public lands and offshore areas for all forms of energy development—representing roughly a quarter of the Nation's domestic supplies of oil and natural gas—while ensuring safety, environmental protection and revenue generation for the American public. It is important to the Nation's future that these natural resources are managed wisely and – as appropriate -- made accessible for public use to help generate revenues, enhance national security, create jobs, and grow the U.S. economy.

Restoring Trust - It is critical that the DOI can be trusted to operate in the best interest of the American public. Key to maintaining public trust and confidence in the integrity of government is the adherence to high ethical standards and ensuring that government business is conducted with impartiality, transparency, accountability, and integrity. While many of our employees have important law enforcement responsibilities as part of their jobs, more generally we want the public to primarily view our employees as helpful and friendly technical experts, not as law enforcement. When we do need to perform our law enforcement responsibilities, our preference is to achieve compliance through education and demonstrating a sincere desire to create win-win situations with the public we serve. The DOI embodies this principle, follows the law and holds people accountable. Decisions are based on sound science and the best interest of the public.

The DOI is committed to effective and efficient financial operations and accountability characterized by high quality and timely reporting, robust internal controls, clean audits, and effective follow-up on audit and internal control findings. The DOI utilizes the enterprise Financial and Business Management System for the integration of business functions including budget execution, finance, acquisition, improved internal controls, a secure information technology environment, and a community of business innovation, efficiency, and transparency.

Respect for Tribal Sovereignty – As a steward of tribal trust assets, the DOI plays a critical role for the United States in fulfilling the trust responsibility to Indian tribes. The DOI is committed to effectively meeting that responsibility by assisting tribes and Indian individual land owners to create greater economic opportunities, build safer and healthier communities, and effectively consulting with tribal governments.

OVERVIEW OF THE FY 2018-2022 STRATEGIC PLAN

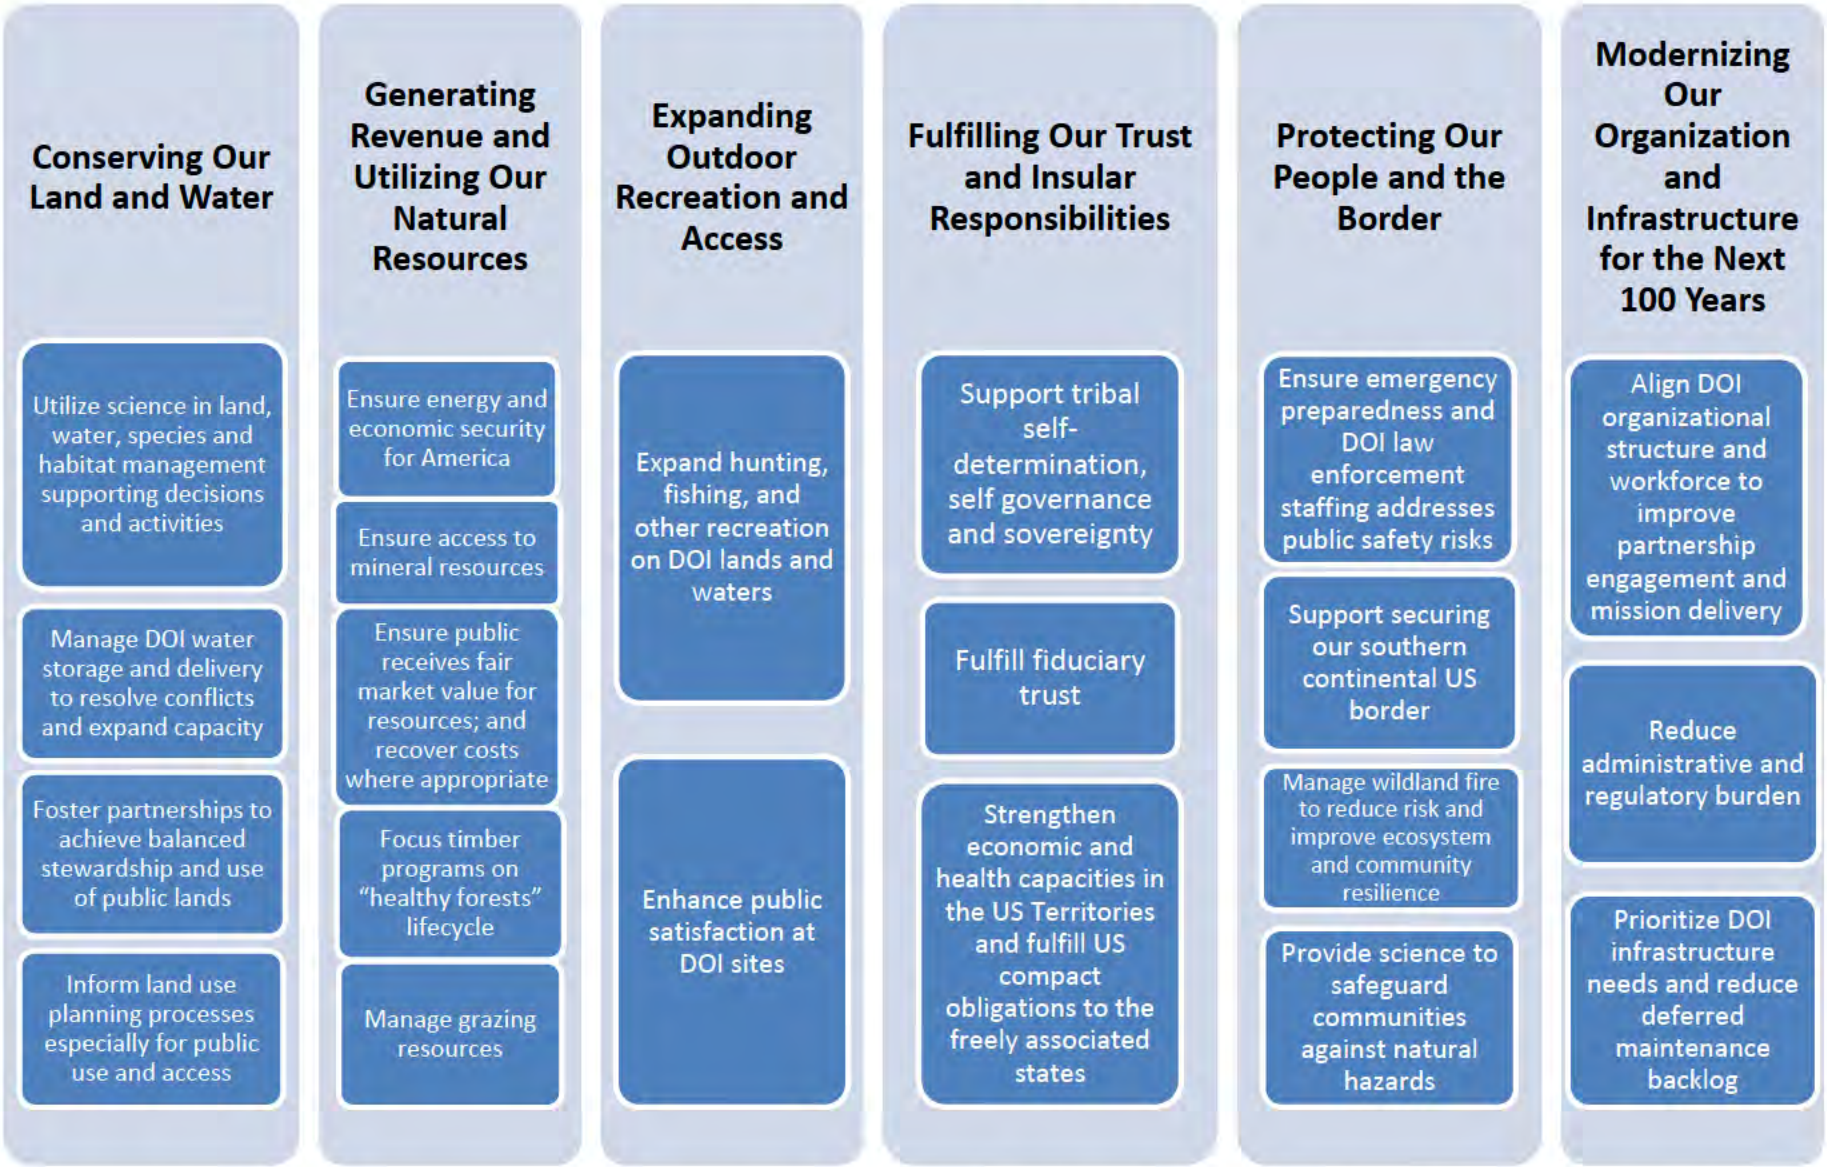
The DOI's FY 2018-2022 Strategic Plan provides the framework for the programs and activities that are performed by 10 bureaus and multiple offices, and take place at approximately 2,400 locations throughout the Nation.

The Strategic Plan facilitates the integration of programs, the allocation and alignment of resources, and collaboration and coordination with stakeholders to achieve key goals. A set of six mission areas, 21 goals, 34 strategies, and approximately 120 performance measures will guide the DOI's activities for the next five years. These mission areas reflect the Secretary of the Interior's priorities, while the goals and strategies describe the means by which those priorities will be achieved.

The mission areas, goals, and strategies that constitute the Strategic Plan are displayed in the Strategic Plan Framework, followed by a description of the mission areas, goals, strategic objectives, and performance measures. An FY 2022 goal is provided for each performance measure that reflects a desirable annual level of achievement that DOI aspires to assuming the availability of a reasonable level of resources. The anticipated level of performance for these measures on an annual basis in consideration of actual resource levels will be reported in the DOI's Annual Performance Plan and Report that is released with the FY 2019 President's budget and available at www.doi.gov/bpp.

There is some continuity of performance measures from the FY 2014-2018 Strategic Plan because the core of our statutory mission remains the same regardless of shifts in policy emphasis resulting from a change in Administrations. Trends in performance related to funding and programmatic plans are available in the DOI's FY 2019 Annual Performance Plan and Report available at www.doi.gov/bpp.

STRATEGIC PLAN FRAMEWORK



Crosscutting principles: Senior executives provide leadership in achieving Presidential and Secretarial goals and are expected to: ensure cost-effective operations and quality service to the public; facilitate organizational cooperation and conflict resolution; ensure workplace environment conducive to employee productivity and safety; and hold individuals accountable for their actions.

DESCRIPTION OF MISSION AREAS

(With Supporting Goals, Strategies, and Performance Measures)

MISSION AREA 1: Conserving Our Land and Water

The DOI ensures that America's natural endowment – the lands and waters of the United States – is conserved for the benefit, use, and enjoyment of current and future generations. The DOI's bureaus use the best available science, modern natural resource management techniques, technology and engineering, efficient decision-making processes, robust partnerships, and improved land use planning to ensure balanced stewardship and use of the public lands and its resources, including wildlife and fish species.

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities

The DOI will ensure that it delivers data, tools, techniques, and analyses that advance understanding of natural resources, the forces that shape them, and the interactions of plants, animals, and people that live within them. Research, monitoring, and remote sensing are necessary to understand and detect changes that affect land resources and processes that are essential to the Nation's economic growth, well-being, and ecological health. These efforts support the DOI in its role as the largest manager of the Nation's land and water resources.

The DOI's land and water management bureaus are stewards of the lands and waters managed by the DOI. These bureaus will utilize the best available scientific data, tools, techniques, and analyses provided by our researchers, our nonfederal government partners, or others to maintain and restore lands and waters and ensure that habitats support healthy fish and wildlife populations.

STRATEGY #1: Apply science to land, water, and species management

The USGS seeks to understand the Nation's environmental, natural resource, and economic challenges with scientific monitoring and research to support the development of management strategies that address the impacts of land use on the availability and sustainability of land and water resources. The USGS helps management agencies by providing them the measures designed to prevent or control invasive species and wildlife disease outbreaks; and apply decision science to actions.

The USGS conducts monitoring, assessments, and research in order to understand and predict changes in the quality and quantity of water resources in response to land-use and management scenarios. Through advanced understanding and integrated modeling of processes that determine water availability, the USGS informs the balanced management of water resources for multiple purposes, including energy production, human and crop consumption, the sustainability of fish and other aquatic communities valued by society, and public enjoyment. The USGS works with land and water resources managers in applying its data and research results to help them make informed decisions for effectively managing the resources with which they are entrusted.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted land and water management research actions	100%
USGS	Millions of people living in targeted watersheds covered by completed water quality models	306.7
USGS	Percent completion of planned water quality sampling and studies for the Nation's groundwater, streams and rivers	100%
USGS	Percent completion of the USGS National Water Census baseline	100%
USGS	Percent completion of U.S. aquifer groundwater availability baseline studies	43%
USGS	Percent completion of targeted species management research actions	100%
USGS	Percent completion of targeted biological threats research actions	100%
USGS	Percent completion of collaborative research projects on factors affecting fish and wildlife habitat	100%

STRATEGY #2: Provide stewardship of land, surface water, streams and shorelines

The Bureau of Land Management, the Fish and Wildlife Service, the National Park Service, and the Bureau of Reclamation manage, maintain and restore uplands, wetlands, lakes, streams and some marine areas through efforts that include controlling invasive plants and animals, restoring land or waters to a condition that is self-sustaining, and ensuring that habitats support healthy fish and wildlife populations. The DOI's Natural Resource Damage Assessment and Restoration program works with the bureaus to assess the impacts of oil spills and hazardous waste sites and coordinates restoration efforts. The Office of Surface Mining Reclamation and Enforcement works with states and tribes to ensure that coal mining is conducted in a manner that protects citizens and the environment during mining, restores the land to beneficial use following mining, and mitigates the effects of historic mining by pursuing reclamation of abandoned mine lands. The DOI aims to balance the conservation of special places with resource development while also providing visitors with opportunities for outdoor recreation.

Bureaus administer their resource management and conservation programs on more than 400 million acres of upland, wetland, and aquatic lands within their jurisdiction. Many of these lands have special status as national parks, seashores, monuments, wildlife refuges, wilderness areas, national conservation lands or wild and scenic rivers. Land managers utilize earth and natural science, social science, partnerships with other DOI bureau, federal, state, local and tribal entities, and other tools and resources (including its front-line managers) in managing these lands and waters.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of DOI acres that have achieved desired conditions	88.9%
BLM, FWS	Percent of DOI riparian (stream/shoreline) miles that have achieved desired conditions	89.2%
BLM, BOR, FWS, NPS	Percent of acres infested with invasive plant species that are under control	0.2%
FWS, NPS	Percent of invasive animal species populations that are under control	8.7%
OSMRE	Percent completion of abandoned mine lands restored by eliminating health, safety, and environmental concerns	57%
OSMRE	Percent of active coal mining sites that are free of off-site impacts	88%
OSMRE	Percent of coal mine acreage reclaimed to beneficial post-mining land use	44%

STRATEGY #3: Provide stewardship of wildlife, bird, fish, and plant species

The Fish and Wildlife Service (FWS) is tasked with the conservation and protection of certain populations of fish, wildlife, plants, and their habitats. The FWS works first to prevent species from becoming listed as threatened or endangered by using the best available science to make land management decisions that might affect species viability. The FWS conducts, consults or coordinates many species management activities in partnership with others including NPS, BLM, Reclamation, and other federal, state, local and tribal agencies and private organizations. The strategy to sustain species focuses on identifying and implementing corrective actions that will lead to species recovery.

Congress passed the Endangered Species Act (ESA) in 1973, to protect and recover imperiled species from becoming extinct and to conserve the habitats upon which they depend. The FWS and the Commerce Department's National Marine Fisheries Service (NMFS) administer the ESA. The FWS has primary responsibility for terrestrial and freshwater organisms, while the responsibilities of NMFS are mainly marine wildlife such as whales and anadromous fish such as salmon.

FWS works with many partners using a range of conservation tools to recover listed species (threatened and endangered) to ensure that they are able to survive on their own in the wild. These tools can include acquiring and restoring habitat, removing invasive species, conducting surveys, monitoring individual populations, and breeding species in captivity to release them into their historic range.

The DOI uses a number of datasets and metrics to track its progress on species listings, downlistings, delistings, critical habitat, scientific findings, and Species Status Assessments (SSA). The SSA is the scientific foundation supporting listing, delisting, and downlisting decisions and recovery plans and includes biological and threats information and analyses that help FWS and its partners better understand the species status. Recovery criteria, describing the conditions of the species when the protections of the act are no longer necessary, address both the biological status in terms of the 3 R's (resiliency, representation and redundancy) and the mitigation of threats necessary to achieve that status. The DOI is working to include more information on critical habitat,

estimated costs of recovery and economic impact of its threatened and endangered species listings and recovery action plans, to provide a more complete perspective to states and the public of the actions being planned for attempting to save each species.

In its Policy Regarding the Role of State Agencies in ESA Activities, FWS coordinates, collaborates, and uses the expertise of state agencies in developing the scientific foundation upon which FWS bases its determinations for listing actions. By September 30, 2018, all FWS decisions on whether to list a species under the ESA will be informed by input from state fish and wildlife agencies, subject to the affected states' willingness to participate (some state fish and wildlife agencies have declined participation due to lack of authority for some species under ESA review). This input should include (but is not limited to) a solicitation of state data and state personnel involvement in the development of SSAs.

Per Section 4(c)(1) of the ESA, FWS is required to review the status of each listed species at least once every 5 years and determine whether it should be: (1) removed from the List (delisted), (2) reclassified from endangered to threatened (downlisted), or (3) reclassified from threatened to endangered (uplisted). By September 30, 2019, for 100% of all species with 5-year reviews recommending downlisting or delisting FWS will have proposed downlisting or delisting rules acted on by the Director, or a new status review initiated if new information indicates the need for an updated assessment prior to initiating rulemaking, within 2 years of the 5-year review recommendation.

The DOI's responsibility to protect fish, wildlife, and native plants transcends jurisdictional boundaries, and includes efforts that affect almost 1,500 species with special status under the Endangered Species Act and more than 1,000 migratory birds that receive Federal protection under the Migratory Bird Treaty Act. The DOI works to combat domestic and international wildlife trafficking by improving enforcement of domestic laws, strengthening international cooperation and global enforcement, promoting legal trade and hunting, and helping to reduce demand for illegal wildlife products. Under Executive Order 13771 of January 30, 2017, i.e. Reducing Regulation and Controlling Regulatory Costs, the DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to private constituents, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient. This activity is described further in the second goal under the sixth Mission Area on reducing administrative and regulatory burden.

Agency Priority Performance Goals:

- ***By September 30, 2018, 100% of proposed species listings will be based on best available information that includes state input and/or data provided through participation in Species Status Assessments (SSA).***
- ***By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species.***

Bureaus	Key Performance Indicators	2022 Goal
FWS	Percent of Threatened or Endangered species listed for 2.5 years or more with a final recovery plan	75%
FWS	Percent of five-year Threatened or Endangered species five-year status review recommendations to downlist or delist acted on within five years *(prior to next status review)*	60%
FWS	Percent of listed species with current five-year reviews *(completed in the last five years)*	90%
FWS	Percent of rules and findings completed based on Threatened or Endangered Species Status Assessments	100%
FWS	Percent of threatened and endangered species listings with proposed critical habitat	100%
FWS	Percent of migratory bird species that are at healthy and sustainable levels	72%
FWS	Percent of fish species of management concern that are managed to self-sustaining levels	23%

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity

The Western U.S. is one of the fastest growing regions of the country, and urbanization has created significant demands for water use and service. The DOI strives to keep its water storage facilities in good condition to ensure safe and reliable water supply. Stretching existing water supplies for multiple uses are among the many significant challenges facing Reclamation. The Bureau of Reclamation is the nation's largest wholesale water supplier and manages water in 17 western states. Reclamation's projects and programs are an important driver of economic growth bringing water to more than 31 million people and providing one of five western farmers (140,000) with irrigation water for 10 million acres of farmland that produce 60 percent of the nation's vegetables and 25 percent of its fruits and nuts. Reclamation's facilities also provide substantial flood control, hydropower, recreation, and fish and wildlife benefits.

The DOI is the lead agency in defining and protecting water rights for Indian tribes and individual Indian land owners. The Bureau of Indian Affairs (BIA) is responsible for maintaining 137 dams on tribal lands. The BIA also provides irrigation water to over 780,000 acres through 17 congressionally authorized irrigation projects.

STRATEGY #1 Manage water resources and delivery

Changes in water supplies, water demands, and the increased duration and frequency of droughts have the potential to affect Reclamation's ability to fulfill its mission. Many rural communities face significant challenges in financing the cost of replacing or upgrading aging and obsolete facilities and systems. Water conservation programs increase the available water supply and contribute to DOI's broader objective of achieving a more sustainable, secure water supply. Protecting and extending the life of aging infrastructure are significant challenges facing Reclamation, and maintenance, rehabilitation, and replacement will become more costly over time. Reclamation

prioritizes infrastructure assets based on detailed design criteria: engineering need, consequence of failure, financial considerations, efficiency opportunities, scheduling, and others.

The Bureau of Indian Affairs (BIA) water management functions are implemented through three complementary programs. The Water Rights Negotiation/Litigation Program defines and protects Indian water rights and settles claims through negotiations if possible, or alternatively, through litigation. The Water Management Program assists tribes in managing, conserving, and utilizing trust water resources. The BIA Irrigation, Power and Safety of Dams program operates and manages irrigation, power, and dam infrastructure. The program sets high standards for maintenance, collaboration with stakeholders, and effective water and power distribution. The BIA manages facilities to ensure they do not present an unacceptable risk to downstream lives and property; and are managed in an economically, technically, environmentally, and culturally sound manner.

Agency Priority Performance Goal: By September 30, 2019, the Bureau of Reclamation will facilitate water conservation capacity of 53,800 acre-feet to help reduce the impact of drought.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]	74%
BOR	Amount of acre feet of water conservation capacity enabled to help address drought	1,392,000
BIA	Percent of projects completed in support of water management, planning, and pre-development.	77%

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands

The DOI will assess, utilize and enhance the most promising of partnership practices and explore the potential for furthering these types of opportunities to work jointly with other individuals and organizations for the benefit of the nation's public lands, waters, and historic and cultural sites and the fish and wildlife species.

STRATEGY #1: Build and maintain partnership programs

Public and private partnerships provide opportunities for greater engagement of people and organizations in caring for and managing the natural, historical, cultural and physical resources across the DOI's 500 million acres. This can be especially beneficial for our national park units, National Wildlife Refuges, wildlife management areas, and national conservation public lands. Support can come from other federal or state agencies, tribal nations, volunteers, non-profit organizations, educational institutions, corporations or foundations through sponsorship or philanthropy. DOI bureaus should endeavor to partner with non-traditional stakeholders to increase our relevance to the American public, rather than just relying on traditional constituencies.

The National Park Service already has the authority from Congress to accept monetary and in-kind gifts, including those collected through the National Park Foundation. Similarly, the Fish and Wildlife Service has authority to accept gifts from some entities, including some non-profits organizations and the federally chartered non-profit National Fish and Wildlife Foundation. The Bureau of Land Management has Congressional authority to accept monetary and other types of donations, along with Congressional authorization to create a Bureau of Land Management Foundation. The BLM works with local, state, federal, and private partners on nearly all of the activities undertaken on public lands, from identifying important fish and wildlife habitat with the state game and fish agencies, working with local rangeland fire protection associations, to providing hunting and fishing opportunities for sports men groups. As permitted under current law, the DOI hopes to develop further philanthropic and sponsorship opportunities, and promote other partnering best practices.

The DOI utilizes migratory bird joint ventures as collaborative, regional partnerships of government agencies, non-profit organizations, corporations, tribes, and individuals that conserve habitat for the benefit of priority bird species, other wildlife, and people. Joint ventures bring these diverse partners together under the guidance of national and international bird conservation plans to design and implement landscape-scale conservation efforts in support of the North American Waterfowl Management Plan and the other bird management plans. These joint ventures use state-of-the-art science to ensure that diverse habitat is available to sustain migratory bird populations for the benefit of those species, other wildlife, and the public. These partnerships have a three-decade record of success, they use non-regulatory solutions and economically sound business approaches, promote working lands conservation, sporting, and outdoor traditions, and support resilient urban and rural communities.

The Department of the Interior and the U.S. Department of Agriculture working near each other in the field continue to pool resources, conduct joint projects and share services under Service First agreements. Service First authority promotes collaborating across bureau and agency boundaries to develop joint solutions to common problems and integrate responses to federal land management issues and opportunities. Bureaus of the Department of the Interior and the U.S. Department of Agriculture cooperate in jointly managing some areas. For example, the National Trail, and Wild and Scenic River Systems span every state of our nation and exceed the length of the interstate highway system. Federal land management agencies, as well as state and local jurisdictions and partners enhance recreational access, conserve the Nation's heritage, and leverage the federal investment to manage these nationally recognized resources cooperatively.

Building new partnerships for infrastructure improvement is a priority at the DOI. There are also numerous volunteer opportunities, where individuals or associations provide service in caring for natural resources and cultural and historic assets on our public lands (see www.volunteer.gov). The DOI will also empower managers in the field to directly engage in further collaboration within the units they manage, identify best practices for collaboration and partnering, provide training and technical support, and encourage field managers to find or create and execute partnerships on a local basis.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Number of estimated work hours in a national park unit, National Wildlife Refuge, or Bureau of Land Management site that are performed or sponsored by a private citizen, National Service participant or non-federal entity	9,870,000
BOR, FWS, CUPCA	Number of non-DOI acres restored, including through partnerships	593,876
FWS	Number of non-DOI acres managed or protected to maintain desired condition, including acres restored through partnerships	602,654
FWS, CUPCA	Number of non-DOI riparian (stream/shoreline) miles restored, including through partnerships	255

GOAL #4: Inform land use planning processes especially for public use and access

The DOI will review and improve its land planning processes to enable expanded access and use of the public lands while restoring a balance between conservation and utilization of the lands, energy and mineral resources, waters, fish and wildlife, and other natural and cultural resources. The DOI will employ the latest available science, land-imaging and other technology tools and datasets to inform land use planning to maximize the societal value of land planning. The DOI land use planning will take into account the land use plans of affected local and state governments.

STRATEGY #1: Assess land use planning processes for public access and use of DOI lands

DOI land use and management plans ensure that the public lands are managed in accordance with the intent of Congress as stated in several authorities including, but not limited to: the Federal Land Policy and Management Act (FLPMA), the National Environmental Policy Act (NEPA), the Endangered Species Act, the National Wildlife Refuge System Administration and Improvement Acts, the Organic Act of 1916 (National Park Service), the Alaska Native Claims Settlement Act, and the Alaska National Interest Lands Conservation Act (ANILCA).

Land use planning efforts vary across bureaus based on enabling legislation. The National Park Service creates management plans to execute its mission. The National Wildlife Refuge system creates Comprehensive Conservation Plans for each refuge as part of their mission. The BLM's mission states that its duty is to sustain the health, diversity, and productivity of America's public lands for the multiple use and enjoyment of present and future generations.

A common thread through all three bureaus' mission is the need to accommodate and benefit the use and enjoyment of these public lands for both present and future generations. Some lands are made available for multiple use and sustained yield, other lands for conservation and preservation values.

The DOI is undertaking the challenge to review and improve its planning processes in ways that can best meet the sometimes-conflicting uses for public lands. The DOI will strive to enhance public participation and input to the planning processes, engage our state, local, and tribal government partners, provide open and understandable decision-making, expedite the decision-making process

so that implementation is not delayed, and ensure that public access and use is appropriately built into every land use plan.

STRATEGY #2: Inform land use planning with mapping and land imaging

The USGS is the lead civilian mapping agency for the Nation and supports the conduct of detailed surveys and the resulting distribution of high-quality and highly-accurate topographic, geologic, hydrographic, and biogeographic maps and data. Remote sensing satellites and aircraft monitor the Earth providing information that is broad, precise, impartial, and easily available. For more than 45 years, Landsat satellites have collected data over the planet's land surface to support global research studies. These data constitute the longest continuous record of the Earth's land surface as seen from space.

High-resolution information results in geologic maps and geospatial products that enable precise planning of civil engineering and transportation infrastructure, versatile urban planning, improved flood projection, timely and accurate emergency response, effective hazard identification and mitigation, and detailed environmental analyses. This information is also used by DOI bureau land managers in exercising their responsibilities to help plan for public land use and access.

In the next decade, the USGS will continue to improve spatial and temporal resolution through research and development of products such as full four-dimensional geologic maps, showing how the complex geologic structure of the Earth has changed through time. Mapping accuracy through cutting-edge technology allows for precise planning for energy development, transportation and pipeline infrastructure projects, urban planning, flood prediction, emergency response, and hazard mitigation.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent of land-area coverage available to the public over the internet through the National Geologic Mapping Database	55.5%
USGS	Percent of foundational topographic information services updated quarterly to support on-demand mapping	100%
USGS	Percent completion of research efforts related to land resource management	100%
USGS	Number of terabytes of remotely-sensed data managed	20,140
USGS	Percent increase of scientific research enhanced with Advanced Research Computation	100%

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources

The DOI provides access to and manages energy and other resources including oil, gas, coal, timber, grazing, and non-energy minerals on public lands and oil and gas on the Outer Continental Shelf (OCS). The DOI is committed to achieve and maintain American energy dominance through responsible productivity of the public lands for the multiple use and economic benefit of present and future generations.

GOAL #1 Ensure energy and economic security for America

The DOI is the steward and manager of much of America's natural resources which include oil, gas, coal, minerals, and renewable energy sources, such as solar, wind, geothermal, and hydropower. There are vast amounts of untapped domestic energy reserves on public lands. DOI is also reinitiating the National OCS Oil and Gas Leasing Program development process, which is a key component of the America First Energy Plan and the Executive Order on Implementing an America-First Offshore Energy Strategy, to bring jobs and prosperity to millions of Americans. Our nation will use the revenues from energy production to rebuild our roads, schools, bridges and public infrastructure. The Department's "all-of-the-above" strategy facilitates development of all energy resources and makes our nation stronger by decreasing dependency on other nations, creating jobs, and helping drive economic growth.

STRATEGY #1: Promote safe and robust oil, gas, coal, and renewable energy resource development

Oil, gas, coal and renewable energy form the cornerstones of our nation's energy base, and the DOI will continue to expand production of both offshore and onshore conventional and renewable U.S. energy resources while ensuring safety and reliability through efficient permitting, appropriate standards, assessment and oversight. As demand for energy resources grows, agencies within the DOI, such as BIA, BLM, BOEM, BSEE, OSMRE, and USGS conduct work that is increasingly critical to understand the exploration, development, quality, supply, and use of our energy resources. This work enables the DOI to advance new sources of efficient energy generation, facilitate the construction of new or upgraded infrastructure including transmission networks, develop resources responsibly, and ensure that the American public receives a fair return on that development.

Agency Priority Performance Goals:

- ***By September 30, 2019, the Bureau of Land Management will eliminate its backlog of fluid mineral Applications for Permits to Drill (APD's) that have been pending for 3 years or more.***
- ***By September 30, 2019, the Bureau of Land Management will process 80% of parcels created for leasing public lands for oil, gas, or other mineral extraction within 180 days.***

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of pending fluid minerals Applications for Permits to Drill (APDs) which are processed	75%
BLM	Percent of high priority fluid mineral cases that have completed inspection during the year	100%

BLM	Percent of coal lease applications processed	15%
BLM	Number of acres of public lands made available for oil and natural gas leasing	25,000,000
BLM, BOEM	Number of megawatts of approved capacity authorized (that year) on public land and the OCS for renewable energy development while ensuring compliant environmental review	2,020
BOEM	Percentage of Exploration and Development Plan reviews completed within statutory timelines	100%
BOEM	Percent of offshore lease sale processes completed, pursuant to the Secretary's approved National OCS Oil and Gas Leasing Program	100%
USGS	Percent completion of targeted energy resource assessments and research	100%
BSEE	Amount of operational offshore oil spilled (in barrels) per million barrels produced	3.1
BSEE	Percent of high risk production facilities and operations inspected	95%
BSEE	Number of recordable injuries per 200,000 offshore man hours worked	.390
BSEE	Percentage of high risk well operation (e.g., drilling) inspections completed	95%

STRATEGY #2: Provide hydropower

The DOI facilitates the development and use of renewable energy that employs hydropower energy to strengthen US energy security, economic vitality, and quality of life. The Bureau of Reclamation (BOR) is the second largest producer of hydroelectric power in the U.S., operating and maintaining 53 hydroelectric power facilities, comprising over 14,700 megawatts of capacity. On average, Reclamation generates 40 million megawatt-hours of electricity each year – the equivalent demand of over 3.5 million U.S. homes, returning over one billion dollars in federal revenue through power sales. Sustainable, low cost hydropower generated by Reclamation projects has provided significant value to the nation, spurring the development of the western U.S. – through the provision of firm electric power to rural communities as well as ancillary service to support western interconnect grid reliability. Reclamation works to promote domestic energy production by enabling new energy generation from hydropower, a renewable source, and facilitating the construction of new or upgraded transmission networks, helping to create new industries and supply chains, driving economic growth and job creation, and helping provide more energy from domestic sources.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Amount of hydropower capability, in megawatts (MW), installed from 2018 through 2022	50
BOR	Percent of hydropower facilities in good condition as measured by the Facility Reliability Rating	73%

BOR	Percent of time that Bureau of Reclamation hydroelectric generating units are available to the interconnected Western electrical system during daily peak demand periods	80%

GOAL #2: Ensure access to mineral resources

The DOI recognizes that public lands are an important source of the Nation's non-energy mineral resources, some of which are critical and strategic. The DOI is committed to ensuring appropriate access to public lands, for orderly and efficient development of these resources under principles of multiple use management.

STRATEGY #1: Manage non-energy mineral development

DOI promotes energy security, environmental protection, and economic development through responsible, science-informed management of mineral resources. The BLM conducts environmental analysis of complex issues necessary to authorize use on BLM public lands and meet the increasing demand for non-energy solid leasable minerals, especially potash and phosphate. BOEM's Marine Minerals Program provides sand and gravel resources to protect and improve coastal infrastructure and the environment locally, regionally and nationally. Additionally, the in-depth science provided by the USGS Mineral Resources Program (http://minerals.usgs.gov) facilitates resource discovery and provides essential information and analyses for strategic, evidence-based economic and geopolitical decisions.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of non-energy mineral exploration and development requests processed	30%
BOEM	Number of sand and gravel requests processed for coastal restoration projects	8
USGS	Percent completion of targeted non-fuel mineral resource assessments and research	100%
USGS	Percent completion of targeted Critical Mineral Early Warning System (CMEWS) analyses and evaluations	100%

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate

Rents, royalties, and bonuses are collected from issuing leases on public lands, and offshore on the OCS, and for the amount of the resource extracted. These resources include oil, gas, coal, forage for grazing, and access to renewable energy resources such as solar, wind, and geothermal. It is important that these financial transactions include appropriate accountability and fair return to the American public. The associated regulations and practices for these fees and collections must also be rational and transparent to ensure businesses that extract and process these resources can function efficiently and profitably in order to support the economic growth and security of the nation.

STRATEGY #1: Ensure accurate and timely accounting and collection of energy revenues

The Department collects, disburses and verifies natural resource revenue generated from issuing leases on public lands, and offshore on the OCS. This revenue is then shared with states and localities according to specific statutory obligations, allocated to various Federal programs, or deposited in the General Fund of the Treasury, thus serving to reduce the deficit. The DOI is committed to managing these transactions accurately, responsibly, and in a timely manner. The Royalty Policy Committee has been reinstated by the Secretary to elicit robust advice and recommendations regarding policies related to royalties from these resources and their benefit to the American public.

The BSEE helps ensure the accuracy of metering from higher risk hydrocarbon sites that experience high volumes of throughput and/or have a past history of noncompliance to help ensure the appropriate financial benefit is obtained for the American people. Additionally, data driven procedures enable the BOEM and the BLM to ensure bid adequacy through a two phased review system for onshore and offshore leasing, and also allow for timely collection and disbursement of mineral and renewable energy revenues by the Office of Natural Resources Revenue (ONRR). ONRR's distributions benefit the Land and Water Conservation Fund, the Historic Preservation Fund, and the Reclamation Fund, helping to ensure America's natural resources and rich history are available to be enjoyed by current and future generations. Distributions to states are used to fund capital projects such as schools, roads, and public buildings. Revenues collected from leases on Indian lands directly benefit members of the Indian community.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
ONRR	Percent of federal and Indian oil and gas revenues disbursed on a timely basis per statute ($ Billions)	98%
BSEE	Percent of oil royalty meters, identified as high-risk using a risk based methodology, where meter provings will be observed	10%

STRATEGY #2: Ensure effective collection and application of recreation fees

The nation's public lands offer many excellent locations for public recreation in the outdoors at national parks and monuments, National Wildlife Refuges, BLM public lands and other locations, in historic sites and buildings and at national treasures such as the Statue of Liberty. Facilities (roads, visitor centers, bathrooms, historic buildings, museums, etc.) that enable visitors to enjoy their public lands and sites are expensive to maintain. All of the major land management bureaus have large backlogs of deferred maintenance at these facilities. The DOI will continuously review its fee structure to determine how best to accommodate visitors enjoyment while collecting fees that help to offset some of the maintenance costs required to keep visitor-facing infrastructure in good shape for visitors. All such reviews of fees and changes will remain consistent with Congressional direction that has been provided through a series of laws including the Federal Lands Recreation Enhancement Act.

The National Park Service established fee structure guidelines in 2006 to standardize rates across the country. The resulting tier system assigns each park unit to a tier and associated entrance fee schedule based on the type of site and the amenities provided for the public. During 2017, the National Park Service initiated a comprehensive review to evaluate and consider bringing entrance fees at all park units into compliance with their assigned tier through a process of public engagement by January 1, 2018. Even with proposed increases, entrance fees remain affordable at $15-$30 per vehicle, which is normally good for several days. The America the Beautiful Pass Annual Pass remains at the price of $80 for one year for unlimited entrance fees for almost all national parks, Fish and Wildlife and BLM sites where fees are required. Congress raised the one-time cost of the America the Beautiful Lifetime Senior Pass for those age 62 or older from the previous fee of $10 to $80 effective in August 2017.

Reviews of other amenity fees (such as for campgrounds and special use permits) will also strive to set fair and equitable fees for activities that visitors enjoy after they enter the park, refuge, or recreation area. The bureaus will seek public comment during any process to review and modify fee amounts to ensure that the public has an opportunity to raise questions and provide comments regarding any fee changes. The bureaus will also identify ways to modernize and enhance fee collection mechanisms that speed access to facilities and/or reduce the cost to the federal government for fee collection.

GOAL #4: Focus timber programs on "healthy forests" lifecycle

The BLM manages forests or woodlands for the benefit of the American public. The BLM maintains a permanent source of timber supply, which supports the production of lumber, plywood, and paper, while also protecting watersheds, regulating stream flow, contributing to the economic stability of local communities and industries, and providing recreational opportunities. Responsible management that reduces fire fuels improves the health and resilience of our forests and helps to prevent forest fires.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to national sources of timber supply. Many tribes now actively participate in management of their forest assets through self-governance and self-determination programs.

STRATEGY #1: Manage sales of timber and forest product resources

Forest management programs within the DOI generate economic benefits through timber harvests on public and Indian trust lands, and restoring forest health. The benefits of healthy forests include typical forest products such as timber and biomass but also include opportunities for recreation and maintenance of watershed health.

The BLM has two focus areas for forest management, the Oregon and California grant lands and the public domain lands. For Oregon and California lands, generating revenue for counties is the primary driver of forest management treatments, while for public domain lands, fire management is the primary driver for forest management. The BLM is currently reviewing its management plans to determine prospects for offering additional timber for sale in the future.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to the national sources of timber supply. Many tribes now actively participate in management of their forest assets through the self-governance and self-determination programs.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of allowable sale quantity (ASQ) timber offered for sale consistent with applicable resource management plans (O&C--Oregon and California--only)	100%
BLM	Volume (mmbf) of wood products offered consistent with applicable management plans	285
BIA	Percent of Annual Allowable Cut prepared and offered for sale or free use	48%

GOAL #5: Manage grazing resources

The BLM manages livestock grazing on over half of its public lands; approximately 18,000 permits and leases are held by ranchers that graze their livestock on over 21,000 grazing allotments throughout BLM managed lands. The BLM's overall objective is to ensure the long-term health and productivity of these lands. BLM uses a variety of methods to accomplish this objective – periodic rest or deferment of grazing in pastures in specific allotments during critical growth periods; vegetation treatments; and projects such as water developments and fences. The terms and conditions for grazing on BLM-managed lands such as stipulations on forage use and season of use are set forth in the permits and leases issued by the Bureau to public land ranchers.

STRATEGY #1: Provide for sustainable forage and grazing

Livestock grazing contributes to food production and adds to local economic stability, and it can be used in certain areas to maintain and improve land health by reducing hazardous fuels and minimizing the likelihood and impact of catastrophic wildfires. The BLM partners with local communities and state and local governments to develop rangeland improvement projects, stewardship contracting, and good neighbor authority in its rangeland management. In recent years, the number of grazing permits and leases processed has decreased due to dramatic increases in litigation and drought. The BLM continues to look for opportunities to streamline the grazing permit process and provide livestock operators greater flexibility in grazing their livestock on public lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of grazing permits and leases processed as planned consistent with applicable resource management plans	16%
BIA	Percent of tribal range units assessed during the reporting year for level of utilization	15%

MISSION AREA 3 Expanding Outdoor Recreation and Access

Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the DOI's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Americans have the opportunity to hunt and fish on public lands managed by the DOI as part of its multiple-use policy that also includes hiking, camping, climbing, boating, wildlife viewing, and other outdoor pursuits.

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters

Hunting, fishing and other outdoor activities contributed $156 billion in economic activity across the United States according to the FWS National Survey of Fishing, Hunting and Wildlife-Associated Recreation. More than 101 million Americans, or 40 percent of the United States' population 16 and older, pursue wildlife-related recreation, which supports 480,000 American jobs.

Following two initial Secretarial Orders issued on his first day, Secretary Zinke issued Secretarial Order 3356 in September, 2017, to further expand public access to lands and waters administered by the DOI, for hunting, fishing, recreational shooting, and other forms of outdoor recreation. In addition, this Order gave greater priority to recruiting and retaining sportsmen and women conservationists, with an emphasis on engaging youth, veterans, minorities, and underserved communities that traditionally have low participation in outdoor recreation activities.

STRATEGY #1: Promote hunting, fishing, and other recreation on DOI lands and waters

There are 372 National Wildlife Refuges and wetland management districts open to hunting and 308 refuges and wetland management districts open to fishing. As practiced on refuges, hunting and fishing do not pose a threat to wildlife populations, and in some instances, are actually necessary for sound wildlife management. For example, deer populations will often grow too large for the refuge habitat to support. If some of the deer are not harvested, they destroy habitat for themselves and other animals and die from starvation or disease. The harvesting of wildlife on refuges is carefully regulated to ensure an appropriate balance between population levels and wildlife habitat. The FWS National Fish Hatcheries continue to be a valuable tool in managing fisheries providing recreation opportunities to America's 36 million anglers who spend $46 billion annually in pursuit of their favored pastime.

There are 76 areas managed by the National Park Service that permit hunting. A total of 51,097,000 acres managed by the NPS are open to hunting at various times during the year, representing approximately 60% of the total acreage of the NPS system. The Bureau of Land Management estimates that over 95 percent of the nearly 250 million acres of BLM-managed public lands are open to hunting.

The recreation areas developed as a result of Bureau of Reclamation water projects are among the Nation's most popular for water-based outdoor recreation. There are 289 Reclamation project areas that have developed recreation facilities and opportunities available for public use. Reclamation has approximately 6.5 million acres of land and water, most of which is available for public outdoor recreation. The 187 developed recreation areas managed by Reclamation or a non-Federal recreation partner draw over 24 million visits annually. The 187 developed recreation areas provide 549 campgrounds, 454 boat launch ramps, and more than 5,500 miles of shoreline.

Bureaus	Key Performance Indicators	2022 Goal
FWS	Number of National Wildlife Refuge acres newly opened to hunting and fishing	250,000
BLM	Number of legal public access transactions completed that facilitate open access to recreation opportunities	20
BLM	Number of newly installed campsites, restrooms, and other facilities that promote public access to BLM-managed public lands	30
BLM, BOR, FWS	Number of individuals participating in outdoor recreation activities at special events	5,420,000

GOAL #2: Enhance public satisfaction at DOI sites

Visitor satisfaction with the quality of experiences on public lands remains very high. Collectively, satisfaction is above 90 percent for the bureaus providing recreation services, e.g., interpretive programs, visitor centers, camping, fishing, hiking, horseback riding, boating, off-highway vehicle driving, wildlife viewing, photography, and climbing. Satisfaction with recreation services provided through facilitated programs remains very high – also above 90 percent.

STRATEGY #1: Enhance the enjoyment and appreciation of our natural and cultural heritage

Survey results show that a sizeable percentage of visitors are satisfied with their experiences at parks, refuges and other public lands. Competition from other forms of entertainment pose challenges to the DOI in its quest to ensure that all Americans understand, appreciate and enjoy the special places protected by the national parks, wildlife refuges and BLM lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of visitors satisfied with the quality of the experience	95%
BLM, NPS	Percent of visitors satisfied with facilitated programs	94%

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities

The DOI upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationships between the Federal government and federally recognized Tribes, and by providing services to individual American Indians, and Alaskan Natives. The U.S. also has important relationships with the affiliated insular areas including the Territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. The DOI administers and oversees Federal Assistance to the three Freely Associated States: The Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

GOAL #1: Support tribal self-determination, self-governance, and sovereignty

The DOI is strengthening the nation-to-nation relationship between the Federal Government and tribal nations because self-determination, sovereignty, self-government, and self-reliance are the tools that will enable tribal nations to shape their own destiny. Tribes have also assumed an expanded role in the operation of Indian programs through Public Law 93-638 contracting. Tribes contract with the Federal Government to operate programs serving their tribal members and other eligible persons.

STRATEGY #1: Support self-governance and self-determination

Self-Governance: Under a self-governance compact, a tribe takes over most or all operations affecting that tribe. The Indian Affairs' Office of Self-Governance (OSG) implements the Tribal Self Governance Act of 1994 by developing and implementing regulations, policies, and guidance in support of self-governance initiatives. Indian Affairs advocates for the transfer of Federal programmatic authorities and resources to tribal governments and supports tribal sovereignty and an expanded role in the operation of Indian programs. The program work includes negotiating annual funding agreements with eligible tribes and consortia, and resolving issues identified in financial and program audits of self-governance operations.

Self-Determination: Under a self-determination contract, a tribe contracts with BIA to take over operation of a program formerly delivered by BIA employees. The funds BIA previously used to run the program transfer to the tribe. Self-determination typically is a program-by-program decision. The Indian Self-Determination Program within BIA works to further American Indian tribes' exercise of self-determination and conducts oversight of self-determination contracts and grants.

Bureaus	Key Performance Indicators	2022 Goal
AS-IA	Percent of Self-Governance Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	99%
BIA	Percent of Self-Determination Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	91%
AS-IA	Percent of P.L. 93-638 contracts with clean audits	90%

GOAL #2: Fulfill fiduciary trust

The DOI has ongoing responsibilities to ensure that trust and restricted Federal Indian-owned lands are managed effectively and to accurately account for revenues and disbursements in a timely and efficient manner. The Office of the Special Trustee for American Indians and the Bureau of Indian Affairs oversee fiduciary trust activities. The DOI assists American Indian and Alaska Native communities in developing capabilities needed to strengthen their communities and maintain economic self-sufficiency. Efforts such as reducing fractionation of Indian lands and developing conservation and resource management plans help tribes maximize economic benefits of their lands. Securing unsubsidized employment reduces dependency on Federal subsidized programs such as childcare assistance, food stamps, and welfare.

Trust assets are crucial to the financial well-being of individual Indian beneficiaries and key components in the economies of tribes. As such, these assets must be managed with great care, paying attention that all financial transactions are completed accurately and as quickly as possible. Since passage of the American Indian Trust Fund Management Reform of 1994, the trust accounts managed by OST are balanced to the penny on a daily basis. OST has also incorporated industry-standard practices, such as a lockbox facility, to shorten the time between the payment of a lease and deposit of those funds into a trust account. For Fiscal Years (FY) 2013 through 2017, OST has received a "clean" audit opinion for Individual Indian Monies (IIM) accounts, attesting to its professionalism in managing these assets. Despite this proven record of success, OST retains a commitment to continual reform, looking for more ways to improve its service to individual Indians and tribes.

The Bureau of Indian Education (BIE) helps provide quality education opportunities starting in early childhood in accordance with tribally identified strategies and needs that contribute to the social well-being of the community and sustain Indian cultures. Tribes directly operate 150 of the 183 BIE funded schools through self-determination contracts and Tribally Controlled Schools Act grants.

STRATEGY #1: Ensure accurate and timely management of fiduciary trust assets

In its effort to promote the fulfillment of fiduciary trust processes, the DOI assists Indian tribes in developing capacity and infrastructure needed to attain economic self-sufficiency on reservations to enhance their quality of life. One critical path is economic development and job creation. The BIA coordinates development of comprehensive tribal programs with the Departments of Labor and Health and Human Services. The DOI offers programs and financial services that encourage start-ups and help position Indian businesses and individuals to compete in today's economy.

Bureaus	Key Performance Indicators	2022 Goal
BIA	Total average gain in earnings of participants that obtain unsubsidized employment through Job Placement Training programs for tribes submitting P.L. 102-477 related reports	$10.82
BIA	Percent of active, supervised Individual Indian Monies (IIM) case records reviewed in accordance with regulations	98%

BIA	Increase in the percentage of submitted land-into-trust applications with determinations (Fee to Trust)	40%
OST	Percent of financial information initially processed accurately in trust beneficiaries' accounts.	99%
OST	Percent of oil and gas revenue transmitted by ONRR recorded in the Trust Funds Accounting System within 24 hours of receipt.	99%
OST	Percent of timeliness of financial account information provided to trust beneficiaries.	100%

STRATEGY #2: Strengthen Indian Education

Improving performance in BIE schools is a challenge the DOI is addressing through initiatives aimed at increasing student achievement. Students at BIE-funded schools receive a culturally relevant, high-quality education that prepares them with the knowledge, skills, and behaviors needed to flourish in the opportunities of tomorrow, become healthy and successful individuals, and lead their communities and sovereign nations to a thriving future that preserves their unique cultural identities.

Bureaus	Key Performance Indicators	2022 Goal
BIE	Percent of students attending BIE-funded schools completing high school with a regular diploma within four years of their 9th grade entry date	69%

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states

The DOI supports the U.S. Territories and Freely Associated States (FAS) through the Office of Insular Affairs (OIA) under the Assistant Secretary for Insular and International Affairs. The U.S.-affiliated insular areas are: the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Residents of these U.S. territories are U.S. citizens or nationals. The DOI also administers and oversees Federal assistance provided to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. The Assistant Secretary Insular and International Affairs and the Office of Insular Affairs carry out these responsibilities on behalf of the Secretary.

STRATEGY #1: Bolster Healthcare Capacity

The Territories and FAS experience significant healthcare challenges. The DOI along with other partners, such as the Department of Health and Human Services (HHS), will work with insular area partners to improve the quality of healthcare across the insular areas. The DOI will make investments to implement corrective action plans which address chronic operational and facility shortcomings at territorial hospitals, which serve their U.S. citizens and nationals, with a focus on those identified by the HHS/Centers for Medicare/Medicaid (CMS) and local elected officials. Additional investments will be made to combat non-communicable and communicable diseases impacting the Pacific and Caribbean islands such as obesity, diabetes, and tuberculosis.

Offices	Key Performance Indicators	2022 Goal
OIA	Percent of Community Water Systems (CWS) that receive health based violations notices from the US Environmental Protection Agency	9%
OIA	Number of new and relapse tuberculosis cases occurring during the calendar year on the islands (per 1,000 people in the population)	1
OIA	Percent of patients with newly diagnosed tuberculosis disease for whom 12 months or less of treatment is indicated, who complete treatment within 12 months	95%
OIA	Infant mortality rate per 1,000 live births (number of deaths to infants from birth through 1 year of age per number of live births)	6

STRATEGY #2: Strengthen Island Economies

Strong local economies provide employment and a viable tax base for citizens in the Insular Areas. The DOI will assist the insular areas to strengthen their economies through strategic investments in infrastructure, public services and technical assistance which will attract and retain private sector investment. The DOI will promote policies and improve Federal coordination on issues impacting insular economies.

Capital investments will be made in basic utilities, hospitals, schools, ports, tourist areas, telecommunications and roads as they create the backbone for increased economic activity. Pursuing renewable energy strategies lessens dependence on oil imports and provides more reliable and affordable energy.

Stable economies and fiscally prudent insular governments foster a more hospitable climate for investment in the islands. Technical assistance will be provided to equip the insular areas with the statistical and management information necessary for informed leadership decision making, expert consultants to effectively improve insular government financial policies and procedures, and strong financial management systems along with technical planning abilities.

The DOI will help create economic opportunity by forging partnerships that bolster tourism and attract industry by promoting the unique island cultures, natural resources, and by preparing the next generation of business leaders. Key indicators of OIA's effectiveness include the following:

Average per capita Gross Domestic Product (GDP): In the four U.S. Territories (Guam, US Virgin Islands, American Samoa, and Commonwealth of the Northern Mariana Islands (CNMI)) for which it is measured, GDP remains a fraction of that for other U.S. citizens in the states. OIA provides technical assistance to the insular areas to assist with economic development planning and execution and supports local planning and education activities related to tourism, agriculture, and aquaculture. In addition, OIA funds infrastructure projects related to economic development, such as fiber optic connectivity, port improvements and renovations to tourist districts.

Cost of electricity: Without indigenous fossil fuels, insular areas face great challenges in achieving reliable, affordable, and secure energy, which can have severe economic effects on the island communities. These areas depend almost entirely on imported petroleum products for energy. The residential cost per kilowatt hour for power in the territories directly impacts the quality of life in

the insular areas and remains over three times higher than the national average. To try to address high electricity costs, the Office of Insular Affairs (OIA) contracts with the Department of Energy's National Renewable Energy Laboratory (NREL) to engage territories and provide energy efficiency and renewable energy assessments, help develop strategic energy plans, and provide technical assistance in reviewing and implementing alternative energy projects. The OIA, through its Empowering Insular Communities grant program, continues to provide funding for the highest priority projects identified in the energy plans including photovoltaic, wind and geothermal development projects, as well as assuring traditional energy plants continue operating.

Offices	Key Performance Indicators	2022 Goal
OIA	Difference in the mean GDP per capita in the 4 US territories compared to the mean GDP per capita in the US	60%
OIA	Difference in the residential cost per kilowatt hour for power from the national average	2X

STRATEGY #3: Fulfill US Compact Obligations

In coordination with the State Department, the DOI will implement compact obligations with three U.S.-affiliated Freely Associated States (FAS): the Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI) and the Republic of Palau (Palau). The DOI will make direct grants to the FSM and RMI under their amended Compacts to provide assistance in six sectors: education, health care, infrastructure, public sector capacity building, private sector development, and environment. The DOI will also continue to support U.S. compact obligations to Palau.

Offices	Key Performance Indicators	2022 Goal
OIA	Ratio of FAS private sector jobs versus total FAS employment	55%
OIA	Ratio of FAS public sector jobs versus total FAS Employment	45%
OIA	Percent of FAS employment attributable to OIA Grants and Programs	30%
OIA	Percent of FAS employee compensation attributable to OIA grants and programs	25%
OIA	Average FAS private sector wage rate as a percentage of average FAS central government wage rate	45%

MISSION AREA 5 Protecting Our People and the Border

Inherent in DOI's management responsibilities of the public lands is the requirement to protect employees and visitors. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices covering four disciplines – law enforcement, emergency management, wildland fire, and natural hazards science. The DOI's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities. Wildland fires potentially endanger lives and property. The Office of Wildland Fire (OWF) coordinates among the DOI's land management bureaus and the US Forest Service to safely, efficiently, and effectively prevent, respond to, and manage the impacts of wildfires. The USGS also protects lives by monitoring and warning of natural hazards such as earthquakes, volcanoes, landslides, and environmental health hazards.

The DOI has land on both the Canadian and Mexican borders, and a presence in the Pacific that exposes Americans to risks from Asia. The Administration is presently emphasizing securing our southern border with Mexico to better protect our country. The DOI has a considerable amount of land that borders Mexico. As such, the DOI's law enforcement officers work in partnership with the US Customs and Border Patrol, Immigration and Customs Enforcement, Drug Enforcement Agency, and tribal, state and local governments to address the flow of illegal immigration, gun and drug trafficking, and to mitigate the impacts associated with these activities, which affect DOI lands and our community partners. In addition, OWF shares wildfire management responsibilities with Mexico along the southern border.

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks

The DOI places a high priority on safety, security, and preparedness, and will uphold its responsibilities for protecting lives, resources, and property through a wide variety of program areas, including law enforcement, health and safety, security, and emergency management. The DOI's preference is to achieve public and visitor compliance with applicable laws and regulations by using techniques that are not confrontational and are designed to elicit voluntary as opposed to coerced compliance.

STRATEGY #1: Ensure public safety on our lands

The Office of Law Enforcement and Security (OLES) provides program direction and oversight on law enforcement policy, border security, drug enforcement, training at the national academy, internal affairs, victims assistance, program compliance, and inspections as well as emergency deployment of DOI law enforcement resources. The Office coordinates with other Federal, state and local agencies (including the Department of Homeland Security, Federal Bureau of Investigation (FBI), and Central Intelligence Agency) on law enforcement and security issues, including infrastructure on the Outer Continental Shelf, the Trans-Alaska pipeline, and gas transmission lines.

To help ensure effective protection of people on DOI lands, each bureau will determine the effective level and distribution of law enforcement staffing for each of its programs on a unit-by-unit basis. The effective level and distribution of staffing needs is dependent on the differing

conditions, levels of risk, and populations served in each unit, captured through a staffing model developed and monitored by each bureau. The DOI's bureaus will engage in developing these staffing models, to determine on a program basis the effective levels of law enforcement staffing that are needed across its units, evaluate the actual level of law enforcement staffing that presently exists, and develop recommendations for better ensuring the effective level of staffing for protecting the people in each unit.

The DOI will strengthen law enforcement in Indian Country by putting more officers on the streets, bolstering tribal courts, and helping fight violent crime and drug abuse. Tribal justice systems are an essential part of tribal governments, which interface with BIA and tribal law enforcement activities. Congress and the Federal courts have repeatedly recognized tribal justice systems as the appropriate forums for adjudicating disputes and minor criminal activity within Indian Country. It is important that the BIA and tribal law enforcement activities complement the operations of the tribal courts to ensure that justice in the tribal forums is administered effectively.

Bureaus	Key Performance Indicators	2022 Goal
OLES	Percent of DOI law enforcement agencies with a current law enforcement staffing plan	100%
BIA	Percent of criminal offenses solved by arrest (Part 1 Offense Clearance Rate)	44%

Strategy 2: Prepare DOI to respond to and recover from emergencies and incidents

The Office of Emergency Management (OEM) promotes all-hazard preparedness and response; ensures continuity of the DOI to perform essential functions during catastrophic events; and assists communities during imminent threats. Collectively, the DOI supports the five National Planning Frameworks (Protection, Prevention, Mitigation, Response, and Recovery) and their related five Federal Interagency Operational Plans, the National Incident Management System, and the National Oil and Hazardous Substances Pollution Contingency Plan while continuing the DOI's mission to protect natural and cultural resources. The DOI's All-Hazards Baseline Operational Plan provides the baseline guidance for how the Department prepares for and responds to emergencies, regardless of type or cause. The OEM leads coordination and information sharing for emergency management regarding communications, public health, environmental health, wildlife health, integrated pest management, invasive species, and occupational safety and health across the DOI's bureaus and offices.

Offices	Key Performance Indicator	2022 Goal
PEM	Average Interior Readiness (I-READ) Index score for emergency preparedness across DOI Bureaus/Offices	91.0%

GOAL 2: Support securing our southern continental US border

The DOI manages 41% of the southwest border of the continental United States. The DOI's managers in the field are daily faced with tough decisions on how to best utilize their law

enforcement assets. An integrated government approach is essential to effectively securing the border and supporting the construction of a physical barrier where needed. Through partnering, federal, state, tribal, and local law enforcement agencies working in proximity to each other have been able to address critical issues like illegal immigration and marijuana smuggling.

STRATEGY #1: Support securing our southern continental US border

The DOI's goal is to increase collaboration among the agencies operating along the border to better understand each other's mission, share resources, and coordinate efforts. This is accomplished by routine interagency coordination, participating in local Border Management Task Force (BMTF) meetings, interagency training, an annual interagency border forum, and law enforcement specific operations.

The US Border Patrol is the main federal agency responsible for patrolling DOI lands adjacent to the US/Mexican Border. The DOI's goal is to work with US Border Patrol to decrease illegal immigration on DOI managed public lands through collaborative efforts with partnering agencies.

Bureaus	Key Performance Indicators	2022 Goal
PMB/OLES	Number of apprehensions on DOI-managed lands	Reduced Annually

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience

The DOI, working with the Department of Agriculture, will improve the way that both agencies manage wildland fire by ensuring that fire management assets are used in the most efficient way possible. The DOI will work with state, local, tribal, and other partners to ensure a coordinated approach to wildland fire management that enables protection responsibilities to be exchanged and resources shared to improve operational efficiency and reduce management duplication. The DOI will continue to integrate science and technology into informing and supporting the firefighters with the appropriate training tools, resources and program support to enable them to work safely and effectively.

The DOI is developing new wildland fire management performance measures to better articulate and determine the efficacy of Department and Administration resources in achieving desired resource conditions that reduce the intensity, severity or negative effects of wildfire. As part of this effort, the Department has established a working group among the four DOI wildland fire bureaus, as well as the U.S. Forest Service, which will explore the feasibility of concepts and principles in wildfire risk mitigation, and examine the value of the strategic placement of fuels treatments as informed by a risk assessment and mitigation plan. This group will develop recommendations for a) establishing outcome-based targets, and b) annually evaluating the performance of the program in meeting the desired objectives of the National Cohesive Wildland Fire Management Strategy. When

completed, the DOI will incorporate the new performance measures into its strategic plan implementation.

STRATEGY #1: Integrate fire ecology, risk management, and collaboration to mitigate wildfire impacts

The Department's Office of Wildland Fire coordinates programs and funding across four bureaus (BLM, FWS, NPS, and BIA) that manage wildland fire programs to implement the National Cohesive Wildland Fire Management Strategy, a science-based collaborative approach to mitigating wildfire risk. The DOI, in partnership with the Department of Agriculture's Forest Service, is committed to the inclusive principles of providing safe and effective response to wildfires, promoting fire-adapted communities, and creating fire-resilient landscapes. The DOI strives to achieve a science-based and technically effective wildland fire management program that is integrated with natural resources programs.

Successful management in fire-adapted communities and landscapes depends on implementation of a broad-based, intergovernmental, collaborative, and national cohesive strategy to address the mounting challenges of escalating fire behavior, increased risk to responders, greater natural and cultural resource losses, and increased threats and losses to communities. The DOI is a lead agency in this collaborative approach with the Forest Service and other Federal, state, tribal, and local governments and stakeholders.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
OWF	Percent of DOI-managed landscape acres that are in desired condition as a result of fire management	36%
OWF	Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan	94%
OWF	Percent of wildfires on DOI-managed landscapes where the initial strategies fully succeeded during the initial response phase	97%

GOAL #4: Provide science to safeguard communities from natural hazards

The USGS helps protect public safety, public health, and property by effectively delivering natural hazards and environmental health science. The Nation's emergency managers and public officials use USGS science to inform citizens of the potential risks these hazards pose to natural systems and the built environment, improve preparation and response activities, and protect the health of the public, which reduce the loss of life and property.

STRATEGY #1: Monitor and assess natural hazards risk and response planning

Responsibilities in natural hazards include the issuing of warnings and advisories for earthquakes, volcanic eruptions, landslides, and coastal erosion; informing warnings issued by other agencies for floods, tsunamis, and wildfires; providing timely information to emergency managers and response officials, the media, and the public to inform and educate communities during and between crises.

The USGS supports these activities by implementing 24x7 operations for seismic, volcanic, and geomagnetic monitoring efforts; maintaining an extensive national network of streamgages measuring rainfall, streamflow, stream height or lake levels; and developing the next generation of tools for rapid evaluation of hazards.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted natural hazards assessments of very high and high-threat regions of the Nation (Index)	4%
USGS	Percent completion of targeted landslide hazard research	8%
USGS	Percent completion of coastal and marine hazards and subsidence research (Index)	87%
USGS	Percent progress towards optimal monitoring capability for natural hazards situational awareness (Index)	52%
USGS	Percent of the National Streamflow Network (NSN) streamgages that are fully operational	88%

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years

The DOI is looking to better ensure effective operations and service delivery through coordinated organizational alignments in the field across bureaus and with other federal and nonfederal partners, and through putting a relatively larger fraction of our employees into the field to serve the public. Expediting environmental analysis and compliance, reducing the cost of space, collocating offices for more convenient public service and improved interagency coordination, and common regional boundaries are all being explored to help improve the DOI's infrastructure and related effectiveness.

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery

The DOI is reevaluating its organizational model to determine how to best achieve its mission of serving the American public, honoring our tribal and fiduciary trust responsibilities, and managing and protecting our land, water and natural resources for the next 100 years.

STRATEGY #1: Ensure effective alignment of DOI organizational structure in the field and with partners

The DOI intends to establish unified regional boundaries for its bureaus in 2018 and to further develop this approach in 2019. The goal is to improve overall operations, internal communications, customer service, and stakeholder engagement. Aligning geographic areas across the DOI will enhance coordination of resource decisions and policies and will simplify how citizens engage with the DOI.

Organizing bureaus with common geographic areas will allow for more integrated and better coordinated decision making across bureaus. Currently, the DOI's bureaus have more than 40 distinct regions, each with its own geographic boundaries. This complicates coordination and hampers the DOI's ability to get things done expeditiously. Having unified regions will help streamline operations and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision. The new regional boundaries currently under discussion – and subject to modification – are expected to have minimal budgetary impact.

To improve customer service and reduce operational costs, sharing functions at field locations has already begun. For a number of years, the Department of the Interior and Department of Agriculture's US Forest Service (USFS) have pooled resources, conducted joint projects, and shared services under Service First agreements where field locations are in close proximity to each other. Service First authority promotes partnering across agency boundaries to develop joint solutions to common problems and to address federal land management issues in an integrated way.

STRATEGY #2: Improve strategic hiring, placement and retention efforts to ensure mission-critical service delivery through data driven processes and increased employee engagement efforts

The DOI is committed to managing America's vast natural and cultural resources with a 70,000-strong and 350 occupation-plus workforce that exemplifies high performance, customer service and

accountability. Historically, it has been difficult to attract certain DOI employees or recruits in certain occupations to positions in headquarters, or even to regional offices, because many of our employees enjoy living in relatively rural areas and because the cost of living is so much higher in large cities. Moving a larger fraction of our staff of some bureaus to relatively more rural and considerably less expensive areas in the West might therefore both reduce payroll cost because fewer employees would receive locality pay, and improve employee retention.

To facilitate strategic human capital planning, the Department has put in place hiring controls to emphasize new hiring for field-related positions rather than administrative and support positions in the Washington, D.C., and Denver, Colorado metropolitan areas.

The DOI will leverage automation to improve employee performance and training opportunities, and examine additional data to determine if operational efficiencies can be gained while minimizing redundancies under the current organizational design.

Data to be analyzed include:

- Federal Employee Viewpoint Survey (*e.g.*, employee engagement)
- Geographic Representation of Bureau Mission Critical Occupations
- Geographic Representation of Administrative and Support Services
- Customer Service data
- Benchmarking cost allocations for administrative and support functions
- DOI Human Capital Framework Evaluations
- Accountability drivers on performance, labor management, EEO, etc.
- Bureau plans in response to the Department-wide Workplace Environment Survey

Offices	Key Performance Indicator	2022 Goal
PHR	Employee engagement index for DOI in the Federal Employee Viewpoint Survey	75%
PHR	DOI's ranking among large agencies in the Partnership for Public Services' Best Places to Work report	1

GOAL #2: Reduce administrative and regulatory burden

Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, directed agencies to "manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations." The DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to the public, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient.

STRATEGY #1: Evaluate and improve the net benefits of regulatory reform initiatives and policies, and identify regulations for repeal, replacement, or modification

On February 24, 2017, President Trump signed Executive Order 13777 entitled, "Enforcing the Regulatory Reform Agenda" to alleviate unnecessary regulatory burdens placed on the American people. The Executive Order established a Regulatory Reform Officer (RRO) for each agency and a Regulatory Reform Task Force. The efforts of the RRO and the task force will help identify

regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The costs of the regulatory and deregulatory actions are measured as the opportunity costs or cost savings to society, as defined in OMB Circular A-4 (i.e. the values reported are the cumulative net savings from deregulatory actions and costs of newly required regulatory actions over multiple years starting in FY 2017). In 2017, the DOI achieved cumulative net savings of $1.15B (net present value) from its deregulatory actions. Goals for subsequent years will be established as the DOI completes its review of target regulations.

Office	Key Performance Indicator	2022 Goal
DOI	Total incremental cost of all EO 13771 regulatory actions and EO 13771 deregulatory actions (including costs or cost savings carried over from previous fiscal years)	TBD
DOI	Number of EO 13771 regulatory actions issued.	TBD
DOI	Number of EO 13771 deregulatory actions issued.	TBD

STRATEGY #2: Improve transparency and timeliness of the infrastructure permitting process

As outlined in the President's Executive Order "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure," and the corresponding Secretarial Order 3355, a significant opportunity exists for agencies to streamline and collaborate on National Environmental Protection Act (NEPA) compliance efforts. The DOI believes this can best be achieved through a unified regional structure adopted across the DOI which focuses on the intersecting issues within the same geographical boundaries.

The DOI is also establishing an Executive Committee for Expedited Permitting (ECEP) to expedite the responsible leasing and permitting of energy and mineral production. More specifically, this involves, but is not limited to, the processing of Applications for Permit to Drill (APD), Expressions of Interest (EOI), coal leasing actions, Right-of-Way (ROW) applications, and harmonization of appurtenant environmental reviews.

Office	Key Performance Indicator	2022 Goal
DOI	*Cross-Agency Priority Goal metric on improving infrastructure permitting to be added*	
BLM	Average amount of time (in days) to process and administratively complete Applications for Permit to Drill	90 days
BLM	Average amount of time (in months) to issue a decision on major right-of-way applications	48 months
BLM	Average amount of time (in days) to process and administratively complete a grazing permit	390 days
FWS	Percent of formal Endangered Species Act Section 7 consultations addressed in a timely manner	100%

GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog

Real property assets are integral to the success of Interior's mission. DOI's real property inventory includes approximately 43,000 buildings and 80,000 structures across six major land-holding bureaus, with a replacement value of approximately $300 billion. DOI manages the full life-cycle requirements of nearly every type of constructed asset found, including visitor centers, dams, schools, health clinics, power generating facilities, housing, hotels, fire stations, campgrounds, roads, water and wastewater treatment plants, offices, and more. Many of these assets have historic or cultural significance that not only support the DOI's mission, but are important to our Nation's heritage.

STRATEGY #1: Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery

The DOI's goal is to balance mission delivery demands with adequate investments in operations and maintenance to sustain the portfolio in an appropriate condition befitting of our role as America's stewards. Appropriately maintained assets enable the DOI to accomplish habitat and resource management, provide outdoor recreation activities, deliver water, fulfill trust and treaty responsibilities, and provide critical economic inputs and job creation for local communities. Adequately constructed and maintained Federal real property supports healthy habitats and populations, availability of safe and reliable public use opportunities, and robust local economies.

A significant factor impacting a sustainable portfolio of constructed assets is DOI's aging infrastructure. Many assets already exceed original design life, and this trend of aging infrastructure continues to threaten mission delivery. Prioritizing repairs on a portfolio scale will ensure the assets condition is maintained at an acceptable level. Effective management of deferred maintenance is a Departmental priority to ensure completion of needed repairs and prevent further deterioration and unsafe conditions. The DOI prioritizes addressing deferred maintenance/repair needs for mission critical activities. Furthermore, proactive maintenance, replacement of components and colocation of programs and staff in owned facilities will help to reduce future costs.

The DOI conserves the Nation's cultural and heritage sites that reflect a rich and diverse history. The DOI safeguards our heritage for the generations that follow, to better understand our country and learn from our past. Many challenges exist in protecting and maintaining historic and archeological sites, especially with the impacts of weather on fragile sites and structures. Sites are exposed to changing weather conditions that cause damage and deterioration of the structures and sites and some locations are vandalized or accidentally damaged by visitors to federal lands.

The Road Construction Program maintains and operates the 29,000 miles of BIA-owned roads and bridges. These roads and bridges serve as the primary access points to tribal communities, without which critical resources and services would not reach tribal members.

The DOI will continue to improve and provide safe, functional, energy efficient, and universally accessible BIA facilities. The DOI is allocating funds to improve its Bureau of Indian Education (BIE) funded schools, and improve the learning environment of BIE students.

Agency Priority Performance Goal: By September 30, 2019, the Department of the Interior will improve the condition of its priority real property assets such that 82% are in the desired state of acceptable condition.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
PAM	Percent of priority assets in acceptable condition (i.e. meet investment objective)	84%
PAM	Amount of priority deferred maintenance (repair) needs/activities addressed (i.e. completed for that year)	$1.2 billion
NPS	Value of NPS deferred maintenance work orders closed ($000)	TBD
BIA, BLM, FWS, NPS	Percent of historic structures on DOI inventory in good condition	57%
BIA, BLM, BOR, FWS, NPS	Percent of museum collections on DOI inventory in good condition	59%
BIA, BLM, FWS, NPS	Percent of archaeological sites on DOI inventory in good condition	67%
BOR	Maintain a completion rate of 95% for Safety of Dam recommendations	95%
BIA	Percent of miles of BIA road in acceptable condition based on the Service Level Index	14%
BIA	Percent of BIA bridges in acceptable condition based on the Service Level Index	69%
BIE	Percent of students in BIE school facilities that are in acceptable condition as measured by the Facilities Condition Index	67%

STRATEGY #2: Provide dependable and efficient information technology

Information Management and Technology (IMT) provides modern and secure technology solutions to advance the DOI's ability to deliver programs and services to the public and our customers. To do so, the DOI must protect its critical information assets from cyber exploitation and attack to ensure that employees and the public can rely on the confidentiality, integrity, and availability of the DOI's data and information systems. The DOI is implementing advanced technologies that will increase visibility into its IMT environment, improve protections around our high-value information assets, and empower its workforce to better detect, respond, and recover from cyber-attacks and breaches. With a more secure computing environment in place, its employees can more easily obtain the tools and data they need to perform the mission securely efficiently and effectively, anywhere and anytime.

The DOI will continue to deploy and mature Continuous Diagnostics and Mitigation (CDM) capabilities that help to fortify its networks and systems. These capabilities provide the DOI with tools necessary to better identify cybersecurity risks on an ongoing basis, prioritize these risks based upon potential impacts, and enable cybersecurity personnel to mitigate the most significant

problems first. Achieving the performance objectives will enable the DOI to meet the requirements of Presidential Executive Order 13800, "Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure." The DOI has adopted the National Institute of Standards and Technology (NIST) Cybersecurity Framework and will work towards implementing and maturing the set of activities known to be effective in managing cybersecurity risks and that are necessary to achieve key cybersecurity outcomes that support the following functions: Identify, Protect, Detect, Respond and Recover.

The DOI is working collaboratively with its user community to understand operational needs better in the field, resulting in expanding network capabilities to improve connectivity in remote areas so employees can be as productive as possible. To improve collaboration, the DOI will enhance its Geospatial Platform capabilities, which is an internet-based tool for sharing trusted geospatial data with the public, government agencies, and partners to meet their mission needs. The DOI will also seek to deliver improved services at a lower cost by consolidating and standardizing IT services and systems, including consolidating and optimizing its data center and network operations and standardizing security, customer support, and administrative functions.

Offices	Key Performance Indicator	2022 Goal
PIO	Percent of unclassified network hardware and software assets appropriately authorized and managed	95%
PIO	Percent completion of DOI's Federal Information Technology Acquisition Reform Act (FITARA) Implementation Plan	100%

All,
Attached is the new DOI GPRA strategic plan. This, along with the Secretary's Top 10 list, ought to be reflected in the 2018 SES performance standards for your direct reports. With FY 18 already half over, I'd urge you to get FY18 performance plans in place for your SESers ASAP, if you haven't done so already, so they can understand your goals for them and have as much time as possible to accomplish those goals.
Thanks,
Scott

STRATEGIC PLAN FOR FISCAL YEARS 2018 – 2022

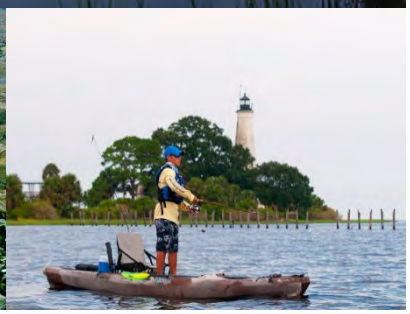

Table of Contents

LETTER FROM THE SECRETARY 1

MISSION AND ORGANIZATION 3

Mission 3

Vision 3

History 3

STRATEGIC PLAN FRAMEWORK 13

DESCRIPTION OF MISSION AREAS 14

MISSION AREA 1: Conserving Our Land and Water 15

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities 15

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity 19

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands 20

GOAL #4: Inform land use planning processes especially for public use and access 22

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources 24

GOAL #1 Ensure energy and economic security for America 24

GOAL #2: Ensure access to mineral resources 26

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate 26

GOAL #4: Focus timber programs on “healthy forests” lifecycle 28

GOAL #5: Manage grazing resources 29

MISSION AREA 3 Expanding Outdoor Recreation and Access 30

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters 30

GOAL #2: Enhance public satisfaction at DOI sites 31

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities 32

GOAL #1: Support tribal self-determination, self-governance, and sovereignty 32

GOAL #2: Fulfill fiduciary trust 33

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states 34

MISSION AREA 5 Protecting Our People and the Border 37

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks 37

GOAL 2: Support securing our southern continental US border 38

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience 39

GOAL #4: Provide science to safeguard communities from natural hazards 40

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years 42

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery 42
GOAL #2: Reduce administrative and regulatory burden 43
GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog 45
APPENDIX A – ACRONYMS 48

LETTER FROM THE SECRETARY

The Department of the Interior's Strategic Plan for Fiscal Year 2018-2022 is our bold vision for the future under President Donald J. Trump. As the chief stewards of our public lands, it is our job to ensure that these lands continue to be used "for the benefit and enjoyment of the people," as the words engraved into the Roosevelt Arch at Yellowstone National Park so proudly proclaim.

We will restore the American conservation ethic that built our nation. Among the American traditions that made our country great was a philosophy of multiple-use on our public lands. I am an admirer of President Theodore Roosevelt – he had it right. As President Roosevelt once remarked, "It is not what we have that will make us a great nation; it is the way in which we use it."

Our public lands are our greatest treasures, and all Americans should be able to experience these treasures. One of my top priorities as Secretary of the Interior is public access to public land. Recognizing that hunting and fishing is an integral part of the American heritage, we must do more to ensure that all Americans can enjoy these sports – not just the wealthy elite. Americans should also be proud of their public lands, which is why investing in American infrastructure and addressing the maintenance backlog at our National Parks is critically important.

While "benefit and enjoyment" includes recreation, it also includes traditional uses like grazing and timber harvesting. Our mandate is multiple-use of public lands, and multiple-use also includes the development of natural resources as we seek to leverage American energy for American strength. Americans should have the right to make a living off the land, and one of our most critical responsibilities at Interior is upholding this right.

If we are going to preserve our heritage, we must bolster our standing in the world. It is in the economic and national security interest of the United States to pursue a policy of American energy dominance. An America-First energy policy is one which maximizes the use of American resources while freeing us from dependence on foreign oil.

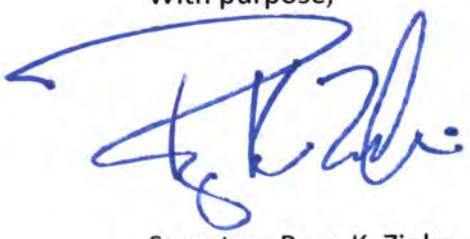
American energy dominance requires aggressive regulatory reform. With our strategic plan, the Interior Department has a unique opportunity to cut the burdensome, unnecessary regulations that have suppressed job creation and wealth generation. Regulatory reform also includes reduced permitting times. The Trump Administration will not deregulate or streamline at the expense of environmental standards or worker safety, but we will strike a balance and strive toward regulatory certainty going forward when creating a bureaucratic framework.

Along with our conservation stewardship responsibilities, we must also be the greatest champion of our tribal nations. Native Americans and Alaska Natives are proud people with a rich history. Sovereignty has to have meaning, and the days of empty promises to our tribal communities are over. Our priorities in Indian Country will be self-determination, government-to-government interaction, and empowerment.

To accomplish our goals, a reorganization of the Department is necessary. We will chart a path forward for the next 100 years at Interior, as Teddy Roosevelt did over a century ago. As a former Navy SEAL, I have long believed that a healthy front line makes for a healthy operation – it is in this spirit that the reorganization plan will focus on our front lines and how we can better engage those on the ground.

Our strategic plan will restore trust in local communities. The federal government has a long way to go when it comes to being a good neighbor, but I am confident we can get there. With a renewed focus on conservation and a bold approach to energy, the Department of the Interior can lead the way in making America great again. This is our desired outcome.

With purpose,



Secretary Ryan K. Zinke
United States Department of the Interior

MISSION AND ORGANIZATION

Mission

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

Vision

The Department of the Interior strives to fulfill a vision to:

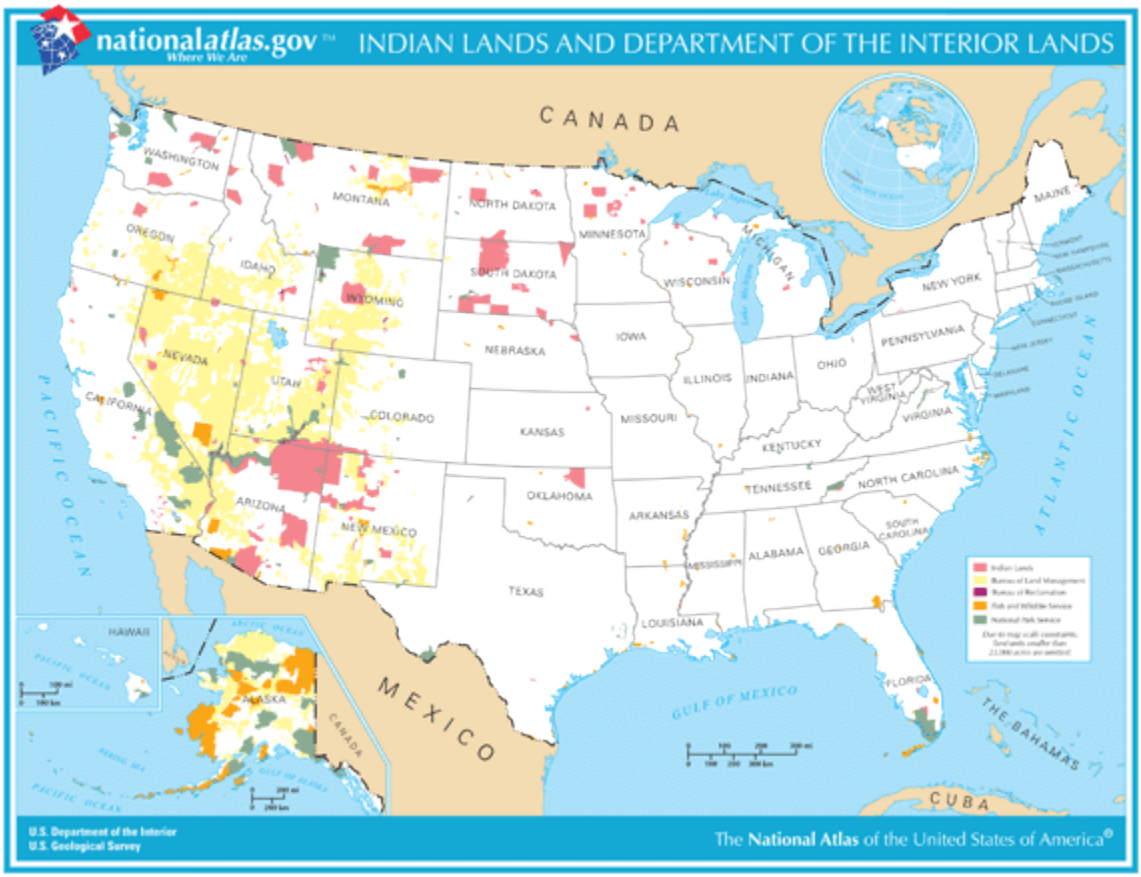
- *Promote energy dominance and critical minerals development* to create jobs for Americans, insulate our nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so that our people can be healthier, more fully enjoy the wonderful features of their federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

History

The Department of the Interior (DOI) was established in 1849. The DOI was charged with managing a wide variety of programs, which included overseeing Indian Affairs, exploring the western wilderness, directing the District of Columbia jail, constructing the National Capital's water system, managing hospitals and universities, improving historic western emigrant routes, marking boundaries, issuing patents, conducting the census, and researching the geological resources of the United States. As the country matured during the last half of the 19th Century, so did the DOI and its mission began to evolve as some of these functions moved to other agencies at the same time the DOI acquired new responsibilities.

With information from Robert Utley and Barry Mackintosh, *The Department of Everything Else: Highlights of Interior History*, 1988, pp. 1-2.

Surface Lands Managed by the Department of the Interior



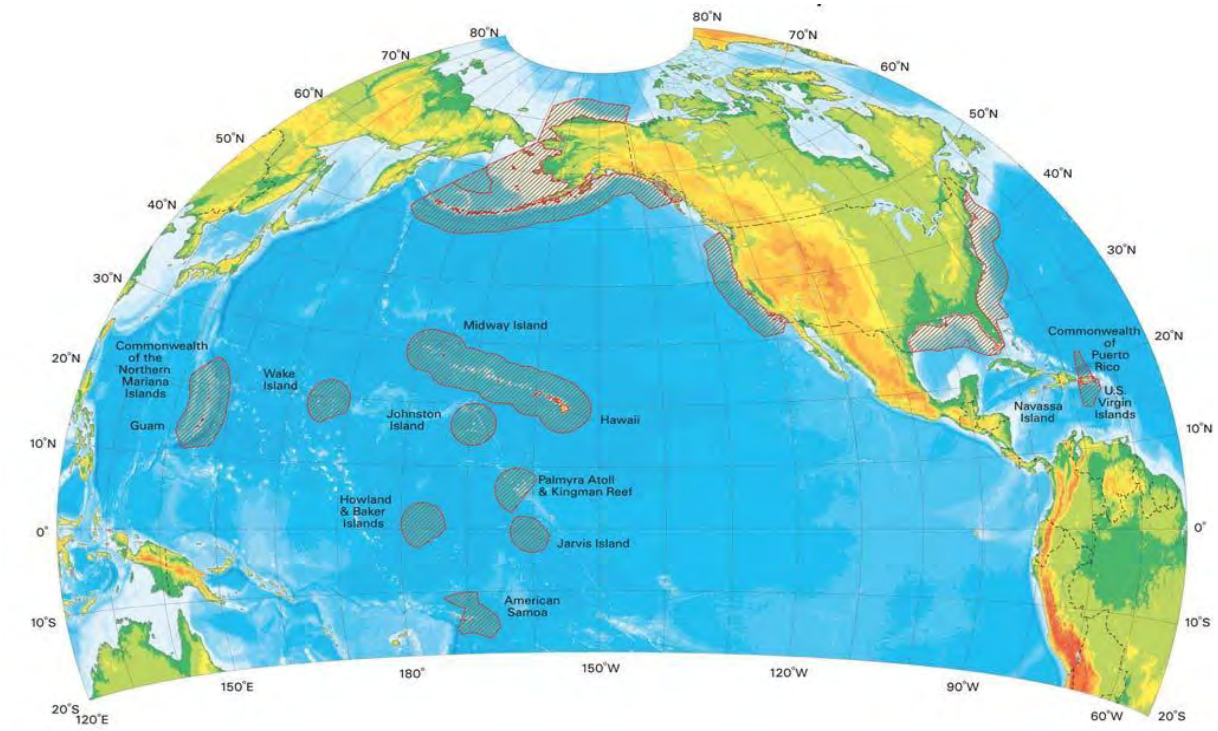
USGS Map, Oct 2014 (except for US Territories that are identified on next graphic)

Following Theodore Roosevelt's conservation summit and the awakening of the conservation movement at the beginning of the 20th Century, there was an increasing urgency and expanding congressional mandate to protect and more effectively manage the nation's natural resources. In 1905, management of the federal forests changed from the Department of the Interior to the United States Forest Service within the Department of Agriculture. Its Chief, Gifford Pinchot, introduced better forestry methods. Pinchot sought to turn public land policy from one that disposed of resources to private parties, to one that maintained federal ownership and management of public land. Pinchot argued that scientific management of forests and natural resources was profitable. He generally opposed preservation for the sake of preservation. During the 1960's and 1970's the DOI's authorizing statutes shifted to put more emphasis on the preservation, management, and use of public lands and natural and cultural resources.

Today, the DOI manages the Nation's public lands and minerals, including providing access to more than 480 million acres of public lands, 700 million acres of subsurface minerals, and 1.7 billion acres of the Outer Continental Shelf. The DOI is the steward of 20 percent of the Nation's lands, including national parks, national wildlife refuges, and other public lands; manages resources that supply 30 percent of the Nation's energy; supplies and manages water in the 17 Western States and supplies 15 percent of the Nation's hydropower energy; and upholds Federal trust responsibilities to 573 federally recognized Indian tribes and Alaska Native villages. The DOI is responsible for migratory bird and wildlife conservation, historic preservation, endangered species conservation, surface-mined lands protection and restoration, mapping, geological, hydrological, and biological science

for the Nation, and financial and technical assistance for the insular areas (many of which are depicted in the following graphic).

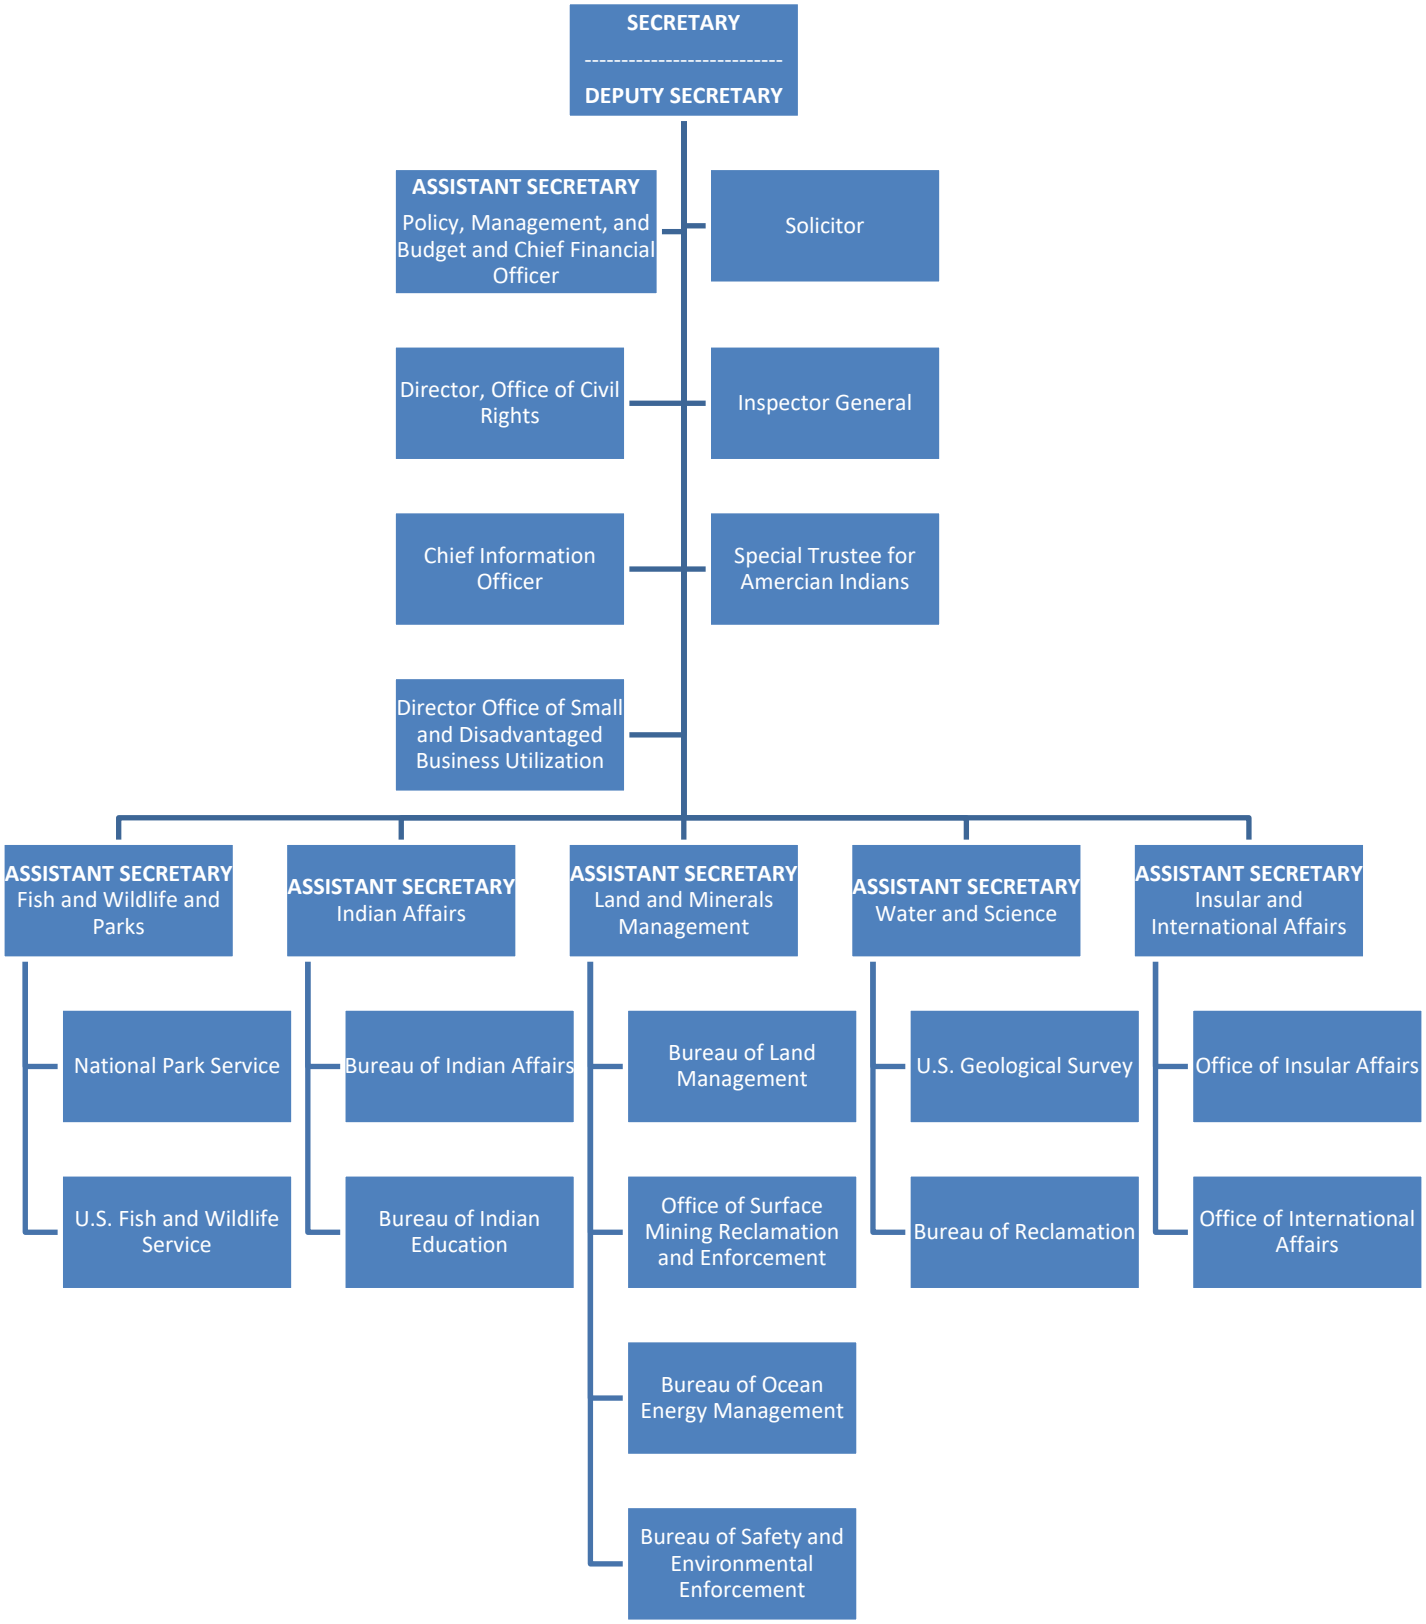
United States Continental Shelf Boundary Areas



National Geophysical Data Center, Sep 2001

The DOI's programs encompassed in this Strategic Plan cover a broad spectrum of activities that are performed by 10 bureaus and multiple offices and are captured in the following presentation of each entity's unique mission and set of responsibilities. The Strategic Plan's six mission areas capture the vitality, inventiveness, and potential of the bureaus and offices and the DOI's 70,000 dedicated and skilled employees. Along with our hardworking and skilled employees, over 350,000 much appreciated volunteers annually contribute their time in support of bureau and office missions, bringing unique local knowledge to park operations, assisting in recovery from natural disasters, and participating in environmental education, among other activities. We cannot effectively address all our responsibilities alone, so it is critical to strengthen partnerships with our sister federal agencies with related missions. In the federal family, we share forest, minerals, rangeland, and wildland fire management responsibilities with the US Department of Agriculture's Forest Service. We share water resource management and hydroelectric power generation responsibilities with the US Army Corps of Engineers, and we share fishery and endangered species management responsibilities with the Department of Commerce's National Marine Fisheries Service. In some ways, our relationships with state, tribal, and local government are even more important. We operate within the bounds of state water law, and respect state authority over resident wildlife. We deal with tribal governments on a government to government basis, respecting each other's authority and jurisdiction. We share land use planning responsibilities with local government, so we must make our own land management plans in a way that is mindful of the goals and plans of those local government neighbors.

US Department of the Interior Organization Chart



Bureau and Office Summaries

Bureau of Land Management (BLM)

- Manages public lands for the benefit of all Americans under the dual framework of multiple use and sustained yield on nearly 250 million surface acres, as well as 700 million acres of subsurface mineral estate. Priorities include:
  - Making full use of the Nation's domestic energy and mineral sources, including conventional and renewable energy sources;
  - Serving American families by providing outdoor recreation opportunities that are key to the Nation's heritage and its economy; and
  - Managing working landscapes to support sustainable livestock grazing operations; and timber and biomass production.
  - Developing and maintaining strong partnerships with State, local, and private stakeholders in shared conservation stewardship.

Office of Surface Mining Reclamation and Enforcement (OSMRE)

- Protects the environment during coal mining through Federal programs, grants to states and Tribes, and oversight activities.
- Ensures the land is reclaimed afterwards.
- Mitigates the effects of past mining by pursuing reclamation of abandoned coal mine lands.

Bureau of Ocean Energy Management (BOEM)

- Manages access to renewable and conventional energy resources of the Outer Continental Shelf (OCS);
- Administers nearly 3,000 active fluid mineral leases on over 16 million OCS acres;
- Oversees 4 percent of the natural gas and 18 percent of the oil produced domestically; and
- Oversees lease and grant issuance for off shore renewable energy projects.
- Manages leasing for marine mineral resources such as sand to facilitate beach replenishment and coastal nourishment projects.

U.S. Geological Survey (USGS)

- Produces information to increase understanding of natural hazards such as earthquakes, volcanoes, and landslides.
- Conducts research and delivers assessments on oil, gas, and alternative energy potential, production, consumption, and environmental effects.
- Conducts reliable scientific research in land resources, mineral assessments, and water resources to inform effective decision making and planning.
- Provides science information that supports natural resource decisions.
- Produces topographic, geologic, hydrographic, and biogeographic data and maps.

Bureau of Safety and Environmental Enforcement (BSEE)

- Fosters secure and reliable energy production from the 1.7 billion acre U.S. Outer Continental Shelf (OCS) for America's energy future.
- Conducts inspections, permitting, incident and equipment failure analysis, oil spill preparedness and enforcement programs aimed at promoting a culture of safety and reducing risk to those who work offshore.
- Supports the technical expertise to engage opportunities and to meet challenges to tap the full potential of OCS energy resources.

Bureau of Reclamation (BOR)

- Manages, develops, and protects water and related resources in an environmentally and economically sound manner in the interest of the American public.
- Largest wholesale supplier of water in the Nation
- Manages 492 dams and 338 reservoirs.
- Delivers water to 1 in every 5 western farmers and more than 31 million people.
- America's second largest producer of hydroelectric power.

Fish and Wildlife Service (FWS)

- Manages the lands and waters of the 855 million-acre National Wildlife Refuge System, primarily for the benefit of fish and wildlife.
- Manages 73 fish hatcheries and other related facilities for endangered species recovery and to restore native fisheries.
- Protects and conserves:
  - Migratory birds;
  - Threatened and endangered species; and
  - Certain marine mammals.
- Hosts about 48 million visitors annually at more than 560 refuges located in all 50 states and 38 wetland management districts.

Indian Affairs (IA)

- Fulfills Indian trust responsibilities.
- Promotes self-determination on behalf of 573 federally recognized Indian Tribes.
- Funds self-governance compacts and self-determination contracts to support all Federal programs including education, law enforcement, and social service programs that are delivered by Tribal Nations.
- Supports 183 elementary and secondary schools and dormitories, providing educational services to approximately 48,000 students in 23 states.
- Supports 32 community colleges, universities, post-secondary schools, and technical colleges.

Note: IA includes the Bureau of Indian Affairs (BIA) and the Bureau of Indian Education (BIE)

National Park Service (NPS)

- Maintains and manages a system of 417 natural, cultural, and recreational sites for the benefit and enjoyment of the American people.
- Manages and protects over 27,000 historic and prehistoric structures, nearly 44 million acres of designated wilderness, and a wide range of museum collections and cultural and natural landscapes.
- Provides outdoor recreation to nearly 324 million visitors at national park units.
- Provides technical assistance and support to state, tribal and local natural and cultural resource sites and programs, and fulfills responsibilities under the National Historic Preservation Act of 1966.

Insular and International Affairs

- Coordinates federal policy for the territories of American Samoa, Guam, the U.S. Virgin Islands and the Commonwealth of the Northern Mariana Islands.
- Oversees the Department's involvement with oceans policy
- Manages the Department's involvement in international affairs
- Responsible for administering and overseeing U.S. federal assistance to the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau under the Compacts of Free Association, as well as providing technical and financial assistance to all the Insular Areas.

Note: Includes Office of Insular Affairs and Office of International Affairs

Departmental Offices

- Immediate Office of the Secretary, Deputy Secretary, and Assistant Secretaries
- Office of the Solicitor
- Policy, Management and Budget provides leadership and support for the following:
  - Budget, Finance, Performance and Acquisition;
  - Public Safety, Resource Protection, and Emergency Services;
  - Natural Resources Revenue Management;
  - Human Capital and Diversity;
  - Technology, Information and Business Services;
  - Policy and Environmental Management
- Office of Inspector General
- Office of the Special Trustee for American Indians

CROSS-CUTTING PRINCIPLES

As the Department of the Interior (DOI) advances through FY 2018-2022, the following principles guide our leadership, management, and workforce.

Effective and Accountable Leadership - The DOI is committed to being an outstanding steward of approximately 500 million acres of public lands, 700 million onshore subsurface acres, and 1.7 billion acres of the Outer Continental Shelf (OCS) including magnificent vistas, valuable energy and mineral resources, unique ecosystems, range, and treasured natural, cultural, and heritage assets. The management and oversight of these resources require a dedicated cadre of employees, the contributions of volunteers, and the input of stakeholders to inform decision-making. The challenges of managing for a diverse constituency while meeting national goals for energy development and sustaining high levels of recreation and access require technical expertise, the best available science, and an understanding of the balance of development and conservation.

A critical role for DOI's senior executives is providing the necessary leadership to guide the efforts of DOI's offices, bureaus, and field locations in effectively achieving Presidential and Secretarial goals especially through:

- Ensuring cost effective operations and quality customer-centric service to the public;
- Facilitating cooperation and collaboration across organizations within the DOI and its federal and nonfederal partners;
- Ensuring a workplace environment that is safe, fair, and conducive to employee productivity; resolving conflicts as needed; and
- Holding individuals at all levels accountable for their actions.

Empowering the Field - Accomplishing the multi-faceted missions of the DOI involves the skills of 10 bureaus and spans 2,400 locations across the U.S. These locations are often remote and present managers with unique challenges. Managers and experts in the field organization must be allowed to exercise informed judgement and discretion, and must have a skilled workforce to address the issues and manage their operations. The DOI's agency reform plan, developed in response to the President's Executive Order "Comprehensive Plan for Reorganizing the Executive Branch," provides a strategy for better enabling our managers and workforce in the field through regional realignment and executive empowerment, increased colocation, and shifting workforce resources closer to the DOI's field locations.

Engaging the Nation in Cooperative Stewardship - In managing such a broad range of resources for the benefit of the public, the DOI works closely with other federal agencies, state, tribal, territorial, and local governments, and the public. The DOI's reform plan calls for increased coordination across agency lines and levels of government to achieve common goals and resolve differences without expensive and time-consuming litigation. DOI is working to increase its collaborations and partnerships across all levels of government.

Improving Infrastructure - The DOI manages an infrastructure asset portfolio with a replacement value exceeding $300 billion. Most well-known are the DOI's iconic and unique national treasures, which have priceless historical significance. More broadly, the DOI owns approximately 43,000 buildings, 100,000 miles of roads, and 80,000 structures; including dams, laboratories, employee housing, Indian schools, visitor facilities, historic structures and hydropower infrastructure. The related deferred maintenance backlog has grown to over $15 billion in 2016, of which over $11 billion belongs to the National Park Service. DOI is committed to determining how to best address

this backlog and maintain its facilities for the safety and productivity of its workforce, and the continued high quality experience and enjoyment by the American public.

Striking a Regulatory Balance – In accordance with the Executive Order on Enforcing the Regulatory Reform Agenda, the DOI will identify regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The DOI will continue to protect human health and the environment in a responsible, cost-effective manner but in a way that avoids imposing an undue process or economic burden on the public.

Generating Revenue, Jobs, and Economic Activity - The DOI grants access to public lands and offshore areas for all forms of energy development—representing roughly a quarter of the Nation's domestic supplies of oil and natural gas—while ensuring safety, environmental protection and revenue generation for the American public. It is important to the Nation's future that these natural resources are managed wisely and – as appropriate -- made accessible for public use to help generate revenues, enhance national security, create jobs, and grow the U.S. economy.

Restoring Trust - It is critical that the DOI can be trusted to operate in the best interest of the American public. Key to maintaining public trust and confidence in the integrity of government is the adherence to high ethical standards and ensuring that government business is conducted with impartiality, transparency, accountability, and integrity. While many of our employees have important law enforcement responsibilities as part of their jobs, more generally we want the public to primarily view our employees as helpful and friendly technical experts, not as law enforcement. When we do need to perform our law enforcement responsibilities, our preference is to achieve compliance through education and demonstrating a sincere desire to create win-win situations with the public we serve. The DOI embodies this principle, follows the law and holds people accountable. Decisions are based on sound science and the best interest of the public.

The DOI is committed to effective and efficient financial operations and accountability characterized by high quality and timely reporting, robust internal controls, clean audits, and effective follow-up on audit and internal control findings. The DOI utilizes the enterprise Financial and Business Management System for the integration of business functions including budget execution, finance, acquisition, improved internal controls, a secure information technology environment, and a community of business innovation, efficiency, and transparency.

Respect for Tribal Sovereignty – As a steward of tribal trust assets, the DOI plays a critical role for the United States in fulfilling the trust responsibility to Indian tribes. The DOI is committed to effectively meeting that responsibility by assisting tribes and Indian individual land owners to create greater economic opportunities, build safer and healthier communities, and effectively consulting with tribal governments.

OVERVIEW OF THE FY 2018-2022 STRATEGIC PLAN

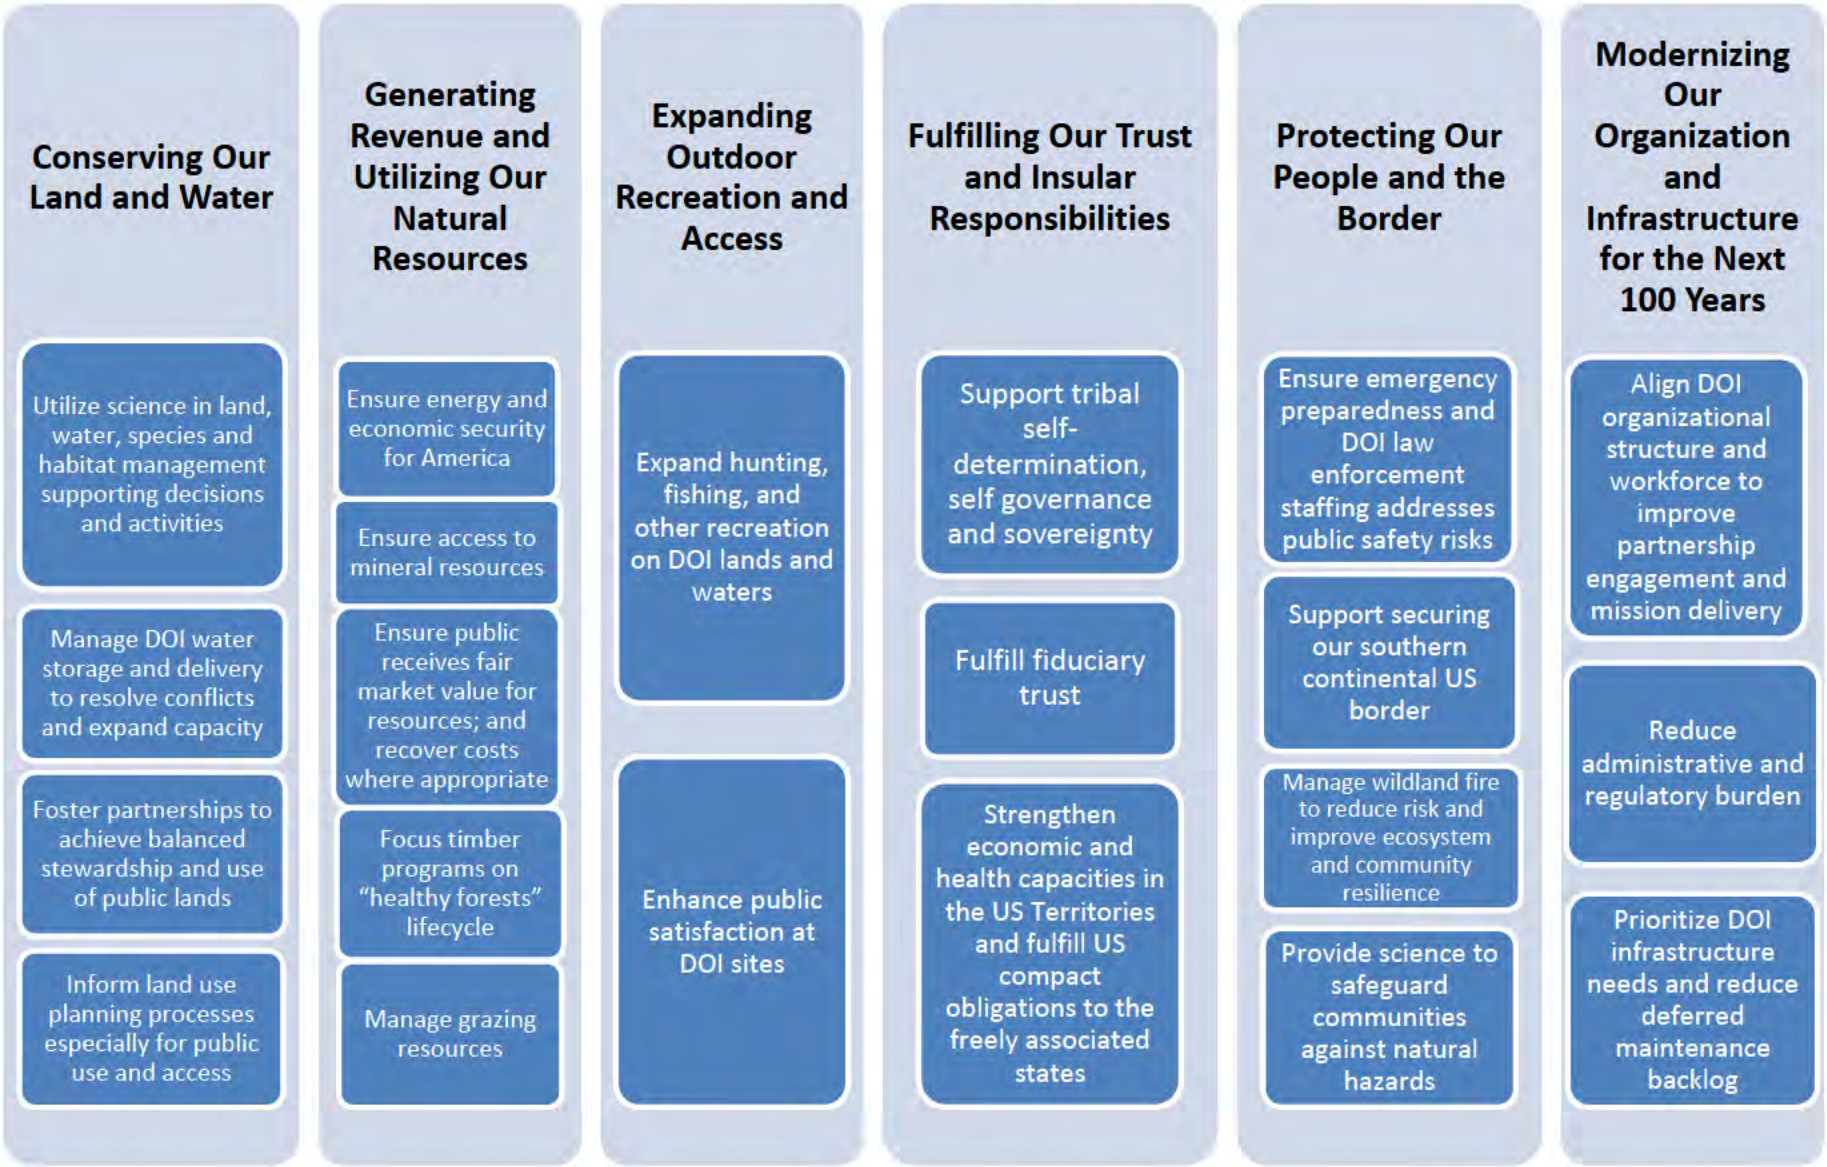
The DOI's FY 2018-2022 Strategic Plan provides the framework for the programs and activities that are performed by 10 bureaus and multiple offices, and take place at approximately 2,400 locations throughout the Nation.

The Strategic Plan facilitates the integration of programs, the allocation and alignment of resources, and collaboration and coordination with stakeholders to achieve key goals. A set of six mission areas, 21 goals, 34 strategies, and approximately 120 performance measures will guide the DOI's activities for the next five years. These mission areas reflect the Secretary of the Interior's priorities, while the goals and strategies describe the means by which those priorities will be achieved.

The mission areas, goals, and strategies that constitute the Strategic Plan are displayed in the Strategic Plan Framework, followed by a description of the mission areas, goals, strategic objectives, and performance measures. An FY 2022 goal is provided for each performance measure that reflects a desirable annual level of achievement that DOI aspires to assuming the availability of a reasonable level of resources. The anticipated level of performance for these measures on an annual basis in consideration of actual resource levels will be reported in the DOI's Annual Performance Plan and Report that is released with the FY 2019 President's budget and available at www.doi.gov/bpp.

There is some continuity of performance measures from the FY 2014-2018 Strategic Plan because the core of our statutory mission remains the same regardless of shifts in policy emphasis resulting from a change in Administrations. Trends in performance related to funding and programmatic plans are available in the DOI's FY 2019 Annual Performance Plan and Report available at www.doi.gov/bpp.

STRATEGIC PLAN FRAMEWORK



Crosscutting principles: Senior executives provide leadership in achieving Presidential and Secretarial goals and are expected to: ensure cost-effective operations and quality service to the public; facilitate organizational cooperation and conflict resolution; ensure workplace environment conducive to employee productivity and safety; and hold individuals accountable for their actions.

DESCRIPTION OF MISSION AREAS

(With Supporting Goals, Strategies, and Performance Measures)

MISSION AREA 1: Conserving Our Land and Water

The DOI ensures that America's natural endowment – the lands and waters of the United States – is conserved for the benefit, use, and enjoyment of current and future generations. The DOI's bureaus use the best available science, modern natural resource management techniques, technology and engineering, efficient decision-making processes, robust partnerships, and improved land use planning to ensure balanced stewardship and use of the public lands and its resources, including wildlife and fish species.

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities

The DOI will ensure that it delivers data, tools, techniques, and analyses that advance understanding of natural resources, the forces that shape them, and the interactions of plants, animals, and people that live within them. Research, monitoring, and remote sensing are necessary to understand and detect changes that affect land resources and processes that are essential to the Nation's economic growth, well-being, and ecological health. These efforts support the DOI in its role as the largest manager of the Nation's land and water resources.

The DOI's land and water management bureaus are stewards of the lands and waters managed by the DOI. These bureaus will utilize the best available scientific data, tools, techniques, and analyses provided by our researchers, our nonfederal government partners, or others to maintain and restore lands and waters and ensure that habitats support healthy fish and wildlife populations.

STRATEGY #1: Apply science to land, water, and species management

The USGS seeks to understand the Nation's environmental, natural resource, and economic challenges with scientific monitoring and research to support the development of management strategies that address the impacts of land use on the availability and sustainability of land and water resources. The USGS helps management agencies by providing them the measures designed to prevent or control invasive species and wildlife disease outbreaks; and apply decision science to actions.

The USGS conducts monitoring, assessments, and research in order to understand and predict changes in the quality and quantity of water resources in response to land-use and management scenarios. Through advanced understanding and integrated modeling of processes that determine water availability, the USGS informs the balanced management of water resources for multiple purposes, including energy production, human and crop consumption, the sustainability of fish and other aquatic communities valued by society, and public enjoyment. The USGS works with land and water resources managers in applying its data and research results to help them make informed decisions for effectively managing the resources with which they are entrusted.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted land and water management research actions	100%
USGS	Millions of people living in targeted watersheds covered by completed water quality models	306.7
USGS	Percent completion of planned water quality sampling and studies for the Nation's groundwater, streams and rivers	100%
USGS	Percent completion of the USGS National Water Census baseline	100%
USGS	Percent completion of U.S. aquifer groundwater availability baseline studies	43%
USGS	Percent completion of targeted species management research actions	100%
USGS	Percent completion of targeted biological threats research actions	100%
USGS	Percent completion of collaborative research projects on factors affecting fish and wildlife habitat	100%

STRATEGY #2: Provide stewardship of land, surface water, streams and shorelines

The Bureau of Land Management, the Fish and Wildlife Service, the National Park Service, and the Bureau of Reclamation manage, maintain and restore uplands, wetlands, lakes, streams and some marine areas through efforts that include controlling invasive plants and animals, restoring land or waters to a condition that is self-sustaining, and ensuring that habitats support healthy fish and wildlife populations. The DOI's Natural Resource Damage Assessment and Restoration program works with the bureaus to assess the impacts of oil spills and hazardous waste sites and coordinates restoration efforts. The Office of Surface Mining Reclamation and Enforcement works with states and tribes to ensure that coal mining is conducted in a manner that protects citizens and the environment during mining, restores the land to beneficial use following mining, and mitigates the effects of historic mining by pursuing reclamation of abandoned mine lands. The DOI aims to balance the conservation of special places with resource development while also providing visitors with opportunities for outdoor recreation.

Bureaus administer their resource management and conservation programs on more than 400 million acres of upland, wetland, and aquatic lands within their jurisdiction. Many of these lands have special status as national parks, seashores, monuments, wildlife refuges, wilderness areas, national conservation lands or wild and scenic rivers. Land managers utilize earth and natural science, social science, partnerships with other DOI bureau, federal, state, local and tribal entities, and other tools and resources (including its front-line managers) in managing these lands and waters.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of DOI acres that have achieved desired conditions	88.9%
BLM, FWS	Percent of DOI riparian (stream/shoreline) miles that have achieved desired conditions	89.2%
BLM, BOR, FWS, NPS	Percent of acres infested with invasive plant species that are under control	0.2%
FWS, NPS	Percent of invasive animal species populations that are under control	8.7%
OSMRE	Percent completion of abandoned mine lands restored by eliminating health, safety, and environmental concerns	57%
OSMRE	Percent of active coal mining sites that are free of off-site impacts	88%
OSMRE	Percent of coal mine acreage reclaimed to beneficial post-mining land use	44%

STRATEGY #3: Provide stewardship of wildlife, bird, fish, and plant species

The Fish and Wildlife Service (FWS) is tasked with the conservation and protection of certain populations of fish, wildlife, plants, and their habitats. The FWS works first to prevent species from becoming listed as threatened or endangered by using the best available science to make land management decisions that might affect species viability. The FWS conducts, consults or coordinates many species management activities in partnership with others including NPS, BLM, Reclamation, and other federal, state, local and tribal agencies and private organizations. The strategy to sustain species focuses on identifying and implementing corrective actions that will lead to species recovery.

Congress passed the Endangered Species Act (ESA) in 1973, to protect and recover imperiled species from becoming extinct and to conserve the habitats upon which they depend. The FWS and the Commerce Department's National Marine Fisheries Service (NMFS) administer the ESA. The FWS has primary responsibility for terrestrial and freshwater organisms, while the responsibilities of NMFS are mainly marine wildlife such as whales and anadromous fish such as salmon.

FWS works with many partners using a range of conservation tools to recover listed species (threatened and endangered) to ensure that they are able to survive on their own in the wild. These tools can include acquiring and restoring habitat, removing invasive species, conducting surveys, monitoring individual populations, and breeding species in captivity to release them into their historic range.

The DOI uses a number of datasets and metrics to track its progress on species listings, downlistings, delistings, critical habitat, scientific findings, and Species Status Assessments (SSA). The SSA is the scientific foundation supporting listing, delisting, and downlisting decisions and recovery plans and includes biological and threats information and analyses that help FWS and its partners better understand the species status. Recovery criteria, describing the conditions of the species when the protections of the act are no longer necessary, address both the biological status in terms of the 3 R's (resiliency, representation and redundancy) and the mitigation of threats necessary to achieve that status. The DOI is working to include more information on critical habitat,

estimated costs of recovery and economic impact of its threatened and endangered species listings and recovery action plans, to provide a more complete perspective to states and the public of the actions being planned for attempting to save each species.

In its Policy Regarding the Role of State Agencies in ESA Activities, FWS coordinates, collaborates, and uses the expertise of state agencies in developing the scientific foundation upon which FWS bases its determinations for listing actions. By September 30, 2018, all FWS decisions on whether to list a species under the ESA will be informed by input from state fish and wildlife agencies, subject to the affected states' willingness to participate (some state fish and wildlife agencies have declined participation due to lack of authority for some species under ESA review). This input should include (but is not limited to) a solicitation of state data and state personnel involvement in the development of SSAs.

Per Section 4(c)(1) of the ESA, FWS is required to review the status of each listed species at least once every 5 years and determine whether it should be: (1) removed from the List (delisted), (2) reclassified from endangered to threatened (downlisted), or (3) reclassified from threatened to endangered (uplisted). By September 30, 2019, for 100% of all species with 5-year reviews recommending downlisting or delisting FWS will have proposed downlisting or delisting rules acted on by the Director, or a new status review initiated if new information indicates the need for an updated assessment prior to initiating rulemaking, within 2 years of the 5-year review recommendation.

The DOI's responsibility to protect fish, wildlife, and native plants transcends jurisdictional boundaries, and includes efforts that affect almost 1,500 species with special status under the Endangered Species Act and more than 1,000 migratory birds that receive Federal protection under the Migratory Bird Treaty Act. The DOI works to combat domestic and international wildlife trafficking by improving enforcement of domestic laws, strengthening international cooperation and global enforcement, promoting legal trade and hunting, and helping to reduce demand for illegal wildlife products. Under Executive Order 13771 of January 30, 2017, i.e. Reducing Regulation and Controlling Regulatory Costs, the DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to private constituents, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient. This activity is described further in the second goal under the sixth Mission Area on reducing administrative and regulatory burden.

Agency Priority Performance Goals:

- ***By September 30, 2018, 100% of proposed species listings will be based on best available information that includes state input and/or data provided through participation in Species Status Assessments (SSA).***
- ***By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species.***

Bureaus	Key Performance Indicators	2022 Goal
FWS	Percent of Threatened or Endangered species listed for 2.5 years or more with a final recovery plan	75%
FWS	Percent of five-year Threatened or Endangered species five-year status review recommendations to downlist or delist acted on within five years *(prior to next status review)*	60%
FWS	Percent of listed species with current five-year reviews *(completed in the last five years)*	90%
FWS	Percent of rules and findings completed based on Threatened or Endangered Species Status Assessments	100%
FWS	Percent of threatened and endangered species listings with proposed critical habitat	100%
FWS	Percent of migratory bird species that are at healthy and sustainable levels	72%
FWS	Percent of fish species of management concern that are managed to self-sustaining levels	23%

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity

The Western U.S. is one of the fastest growing regions of the country, and urbanization has created significant demands for water use and service. The DOI strives to keep its water storage facilities in good condition to ensure safe and reliable water supply. Stretching existing water supplies for multiple uses are among the many significant challenges facing Reclamation. The Bureau of Reclamation is the nation's largest wholesale water supplier and manages water in 17 western states. Reclamation's projects and programs are an important driver of economic growth bringing water to more than 31 million people and providing one of five western farmers (140,000) with irrigation water for 10 million acres of farmland that produce 60 percent of the nation's vegetables and 25 percent of its fruits and nuts. Reclamation's facilities also provide substantial flood control, hydropower, recreation, and fish and wildlife benefits.

The DOI is the lead agency in defining and protecting water rights for Indian tribes and individual Indian land owners. The Bureau of Indian Affairs (BIA) is responsible for maintaining 137 dams on tribal lands. The BIA also provides irrigation water to over 780,000 acres through 17 congressionally authorized irrigation projects.

STRATEGY #1 Manage water resources and delivery

Changes in water supplies, water demands, and the increased duration and frequency of droughts have the potential to affect Reclamation's ability to fulfill its mission. Many rural communities face significant challenges in financing the cost of replacing or upgrading aging and obsolete facilities and systems. Water conservation programs increase the available water supply and contribute to DOI's broader objective of achieving a more sustainable, secure water supply. Protecting and extending the life of aging infrastructure are significant challenges facing Reclamation, and maintenance, rehabilitation, and replacement will become more costly over time. Reclamation

prioritizes infrastructure assets based on detailed design criteria: engineering need, consequence of failure, financial considerations, efficiency opportunities, scheduling, and others.

The Bureau of Indian Affairs (BIA) water management functions are implemented through three complementary programs. The Water Rights Negotiation/Litigation Program defines and protects Indian water rights and settles claims through negotiations if possible, or alternatively, through litigation. The Water Management Program assists tribes in managing, conserving, and utilizing trust water resources. The BIA Irrigation, Power and Safety of Dams program operates and manages irrigation, power, and dam infrastructure. The program sets high standards for maintenance, collaboration with stakeholders, and effective water and power distribution. The BIA manages facilities to ensure they do not present an unacceptable risk to downstream lives and property; and are managed in an economically, technically, environmentally, and culturally sound manner.

Agency Priority Performance Goal: By September 30, 2019, the Bureau of Reclamation will facilitate water conservation capacity of 53,800 acre-feet to help reduce the impact of drought.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]	74%
BOR	Amount of acre feet of water conservation capacity enabled to help address drought	1,392,000
BIA	Percent of projects completed in support of water management, planning, and pre-development.	77%

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands

The DOI will assess, utilize and enhance the most promising of partnership practices and explore the potential for furthering these types of opportunities to work jointly with other individuals and organizations for the benefit of the nation's public lands, waters, and historic and cultural sites and the fish and wildlife species.

STRATEGY #1: Build and maintain partnership programs

Public and private partnerships provide opportunities for greater engagement of people and organizations in caring for and managing the natural, historical, cultural and physical resources across the DOI's 500 million acres. This can be especially beneficial for our national park units, National Wildlife Refuges, wildlife management areas, and national conservation public lands. Support can come from other federal or state agencies, tribal nations, volunteers, non-profit organizations, educational institutions, corporations or foundations through sponsorship or philanthropy. DOI bureaus should endeavor to partner with non-traditional stakeholders to increase our relevance to the American public, rather than just relying on traditional constituencies.

The National Park Service already has the authority from Congress to accept monetary and in-kind gifts, including those collected through the National Park Foundation. Similarly, the Fish and Wildlife Service has authority to accept gifts from some entities, including some non-profits organizations and the federally chartered non-profit National Fish and Wildlife Foundation. The Bureau of Land Management has Congressional authority to accept monetary and other types of donations, along with Congressional authorization to create a Bureau of Land Management Foundation. The BLM works with local, state, federal, and private partners on nearly all of the activities undertaken on public lands, from identifying important fish and wildlife habitat with the state game and fish agencies, working with local rangeland fire protection associations, to providing hunting and fishing opportunities for sports men groups. As permitted under current law, the DOI hopes to develop further philanthropic and sponsorship opportunities, and promote other partnering best practices.

The DOI utilizes migratory bird joint ventures as collaborative, regional partnerships of government agencies, non-profit organizations, corporations, tribes, and individuals that conserve habitat for the benefit of priority bird species, other wildlife, and people. Joint ventures bring these diverse partners together under the guidance of national and international bird conservation plans to design and implement landscape-scale conservation efforts in support of the North American Waterfowl Management Plan and the other bird management plans. These joint ventures use state-of-the-art science to ensure that diverse habitat is available to sustain migratory bird populations for the benefit of those species, other wildlife, and the public. These partnerships have a three-decade record of success, they use non-regulatory solutions and economically sound business approaches, promote working lands conservation, sporting, and outdoor traditions, and support resilient urban and rural communities.

The Department of the Interior and the U.S. Department of Agriculture working near each other in the field continue to pool resources, conduct joint projects and share services under Service First agreements. Service First authority promotes collaborating across bureau and agency boundaries to develop joint solutions to common problems and integrate responses to federal land management issues and opportunities. Bureaus of the Department of the Interior and the U.S. Department of Agriculture cooperate in jointly managing some areas. For example, the National Trail, and Wild and Scenic River Systems span every state of our nation and exceed the length of the interstate highway system. Federal land management agencies, as well as state and local jurisdictions and partners enhance recreational access, conserve the Nation's heritage, and leverage the federal investment to manage these nationally recognized resources cooperatively.

Building new partnerships for infrastructure improvement is a priority at the DOI. There are also numerous volunteer opportunities, where individuals or associations provide service in caring for natural resources and cultural and historic assets on our public lands (see www.volunteer.gov). The DOI will also empower managers in the field to directly engage in further collaboration within the units they manage, identify best practices for collaboration and partnering, provide training and technical support, and encourage field managers to find or create and execute partnerships on a local basis.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Number of estimated work hours in a national park unit, National Wildlife Refuge, or Bureau of Land Management site that are performed or sponsored by a private citizen, National Service participant or non-federal entity	9,870,000
BOR, FWS, CUPCA	Number of non-DOI acres restored, including through partnerships	593,876
FWS	Number of non-DOI acres managed or protected to maintain desired condition, including acres restored through partnerships	602,654
FWS, CUPCA	Number of non-DOI riparian (stream/shoreline) miles restored, including through partnerships	255

GOAL #4: Inform land use planning processes especially for public use and access

The DOI will review and improve its land planning processes to enable expanded access and use of the public lands while restoring a balance between conservation and utilization of the lands, energy and mineral resources, waters, fish and wildlife, and other natural and cultural resources. The DOI will employ the latest available science, land-imaging and other technology tools and datasets to inform land use planning to maximize the societal value of land planning. The DOI land use planning will take into account the land use plans of affected local and state governments.

STRATEGY #1: Assess land use planning processes for public access and use of DOI lands

DOI land use and management plans ensure that the public lands are managed in accordance with the intent of Congress as stated in several authorities including, but not limited to: the Federal Land Policy and Management Act (FLPMA), the National Environmental Policy Act (NEPA), the Endangered Species Act, the National Wildlife Refuge System Administration and Improvement Acts, the Organic Act of 1916 (National Park Service), the Alaska Native Claims Settlement Act, and the Alaska National Interest Lands Conservation Act (ANILCA).

Land use planning efforts vary across bureaus based on enabling legislation. The National Park Service creates management plans to execute its mission. The National Wildlife Refuge system creates Comprehensive Conservation Plans for each refuge as part of their mission. The BLM's mission states that its duty is to sustain the health, diversity, and productivity of America's public lands for the multiple use and enjoyment of present and future generations.

A common thread through all three bureaus' mission is the need to accommodate and benefit the use and enjoyment of these public lands for both present and future generations. Some lands are made available for multiple use and sustained yield, other lands for conservation and preservation values.

The DOI is undertaking the challenge to review and improve its planning processes in ways that can best meet the sometimes-conflicting uses for public lands. The DOI will strive to enhance public participation and input to the planning processes, engage our state, local, and tribal government partners, provide open and understandable decision-making, expedite the decision-making process

so that implementation is not delayed, and ensure that public access and use is appropriately built into every land use plan.

STRATEGY #2: Inform land use planning with mapping and land imaging

The USGS is the lead civilian mapping agency for the Nation and supports the conduct of detailed surveys and the resulting distribution of high-quality and highly-accurate topographic, geologic, hydrographic, and biogeographic maps and data. Remote sensing satellites and aircraft monitor the Earth providing information that is broad, precise, impartial, and easily available. For more than 45 years, Landsat satellites have collected data over the planet's land surface to support global research studies. These data constitute the longest continuous record of the Earth's land surface as seen from space.

High-resolution information results in geologic maps and geospatial products that enable precise planning of civil engineering and transportation infrastructure, versatile urban planning, improved flood projection, timely and accurate emergency response, effective hazard identification and mitigation, and detailed environmental analyses. This information is also used by DOI bureau land managers in exercising their responsibilities to help plan for public land use and access.

In the next decade, the USGS will continue to improve spatial and temporal resolution through research and development of products such as full four-dimensional geologic maps, showing how the complex geologic structure of the Earth has changed through time. Mapping accuracy through cutting-edge technology allows for precise planning for energy development, transportation and pipeline infrastructure projects, urban planning, flood prediction, emergency response, and hazard mitigation.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent of land-area coverage available to the public over the internet through the National Geologic Mapping Database	55.5%
USGS	Percent of foundational topographic information services updated quarterly to support on-demand mapping	100%
USGS	Percent completion of research efforts related to land resource management	100%
USGS	Number of terabytes of remotely-sensed data managed	20,140
USGS	Percent increase of scientific research enhanced with Advanced Research Computation	100%

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources

The DOI provides access to and manages energy and other resources including oil, gas, coal, timber, grazing, and non-energy minerals on public lands and oil and gas on the Outer Continental Shelf (OCS). The DOI is committed to achieve and maintain American energy dominance through responsible productivity of the public lands for the multiple use and economic benefit of present and future generations.

GOAL #1 Ensure energy and economic security for America

The DOI is the steward and manager of much of America's natural resources which include oil, gas, coal, minerals, and renewable energy sources, such as solar, wind, geothermal, and hydropower. There are vast amounts of untapped domestic energy reserves on public lands. DOI is also reinitiating the National OCS Oil and Gas Leasing Program development process, which is a key component of the America First Energy Plan and the Executive Order on Implementing an America-First Offshore Energy Strategy, to bring jobs and prosperity to millions of Americans. Our nation will use the revenues from energy production to rebuild our roads, schools, bridges and public infrastructure. The Department's "all-of-the-above" strategy facilitates development of all energy resources and makes our nation stronger by decreasing dependency on other nations, creating jobs, and helping drive economic growth.

STRATEGY #1: Promote safe and robust oil, gas, coal, and renewable energy resource development

Oil, gas, coal and renewable energy form the cornerstones of our nation's energy base, and the DOI will continue to expand production of both offshore and onshore conventional and renewable U.S. energy resources while ensuring safety and reliability through efficient permitting, appropriate standards, assessment and oversight. As demand for energy resources grows, agencies within the DOI, such as BIA, BLM, BOEM, BSEE, OSMRE, and USGS conduct work that is increasingly critical to understand the exploration, development, quality, supply, and use of our energy resources. This work enables the DOI to advance new sources of efficient energy generation, facilitate the construction of new or upgraded infrastructure including transmission networks, develop resources responsibly, and ensure that the American public receives a fair return on that development.

Agency Priority Performance Goals:

- ***By September 30, 2019, the Bureau of Land Management will eliminate its backlog of fluid mineral Applications for Permits to Drill (APD's) that have been pending for 3 years or more.***
- ***By September 30, 2019, the Bureau of Land Management will process 80% of parcels created for leasing public lands for oil, gas, or other mineral extraction within 180 days.***

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of pending fluid minerals Applications for Permits to Drill (APDs) which are processed	75%
BLM	Percent of high priority fluid mineral cases that have completed inspection during the year	100%

BLM	Percent of coal lease applications processed	15%
BLM	Number of acres of public lands made available for oil and natural gas leasing	25,000,000
BLM, BOEM	Number of megawatts of approved capacity authorized (that year) on public land and the OCS for renewable energy development while ensuring compliant environmental review	2,020
BOEM	Percentage of Exploration and Development Plan reviews completed within statutory timelines	100%
BOEM	Percent of offshore lease sale processes completed, pursuant to the Secretary's approved National OCS Oil and Gas Leasing Program	100%
USGS	Percent completion of targeted energy resource assessments and research	100%
BSEE	Amount of operational offshore oil spilled (in barrels) per million barrels produced	3.1
BSEE	Percent of high risk production facilities and operations inspected	95%
BSEE	Number of recordable injuries per 200,000 offshore man hours worked	.390
BSEE	Percentage of high risk well operation (e.g., drilling) inspections completed	95%

STRATEGY #2: Provide hydropower

The DOI facilitates the development and use of renewable energy that employs hydropower energy to strengthen US energy security, economic vitality, and quality of life. The Bureau of Reclamation (BOR) is the second largest producer of hydroelectric power in the U.S., operating and maintaining 53 hydroelectric power facilities, comprising over 14,700 megawatts of capacity. On average, Reclamation generates 40 million megawatt-hours of electricity each year – the equivalent demand of over 3.5 million U.S. homes, returning over one billion dollars in federal revenue through power sales. Sustainable, low cost hydropower generated by Reclamation projects has provided significant value to the nation, spurring the development of the western U.S. – through the provision of firm electric power to rural communities as well as ancillary service to support western interconnect grid reliability. Reclamation works to promote domestic energy production by enabling new energy generation from hydropower, a renewable source, and facilitating the construction of new or upgraded transmission networks, helping to create new industries and supply chains, driving economic growth and job creation, and helping provide more energy from domestic sources.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Amount of hydropower capability, in megawatts (MW), installed from 2018 through 2022	50
BOR	Percent of hydropower facilities in good condition as measured by the Facility Reliability Rating	73%

BOR	Percent of time that Bureau of Reclamation hydroelectric generating units are available to the interconnected Western electrical system during daily peak demand periods	80%

GOAL #2: Ensure access to mineral resources

The DOI recognizes that public lands are an important source of the Nation's non-energy mineral resources, some of which are critical and strategic. The DOI is committed to ensuring appropriate access to public lands, for orderly and efficient development of these resources under principles of multiple use management.

STRATEGY #1: Manage non-energy mineral development

DOI promotes energy security, environmental protection, and economic development through responsible, science-informed management of mineral resources. The BLM conducts environmental analysis of complex issues necessary to authorize use on BLM public lands and meet the increasing demand for non-energy solid leasable minerals, especially potash and phosphate. BOEM's Marine Minerals Program provides sand and gravel resources to protect and improve coastal infrastructure and the environment locally, regionally and nationally. Additionally, the in-depth science provided by the USGS Mineral Resources Program (http://minerals.usgs.gov) facilitates resource discovery and provides essential information and analyses for strategic, evidence-based economic and geopolitical decisions.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of non-energy mineral exploration and development requests processed	30%
BOEM	Number of sand and gravel requests processed for coastal restoration projects	8
USGS	Percent completion of targeted non-fuel mineral resource assessments and research	100%
USGS	Percent completion of targeted Critical Mineral Early Warning System (CMEWS) analyses and evaluations	100%

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate

Rents, royalties, and bonuses are collected from issuing leases on public lands, and offshore on the OCS, and for the amount of the resource extracted. These resources include oil, gas, coal, forage for grazing, and access to renewable energy resources such as solar, wind, and geothermal. It is important that these financial transactions include appropriate accountability and fair return to the American public. The associated regulations and practices for these fees and collections must also be rational and transparent to ensure businesses that extract and process these resources can function efficiently and profitably in order to support the economic growth and security of the nation.

STRATEGY #1: Ensure accurate and timely accounting and collection of energy revenues

The Department collects, disburses and verifies natural resource revenue generated from issuing leases on public lands, and offshore on the OCS. This revenue is then shared with states and localities according to specific statutory obligations, allocated to various Federal programs, or deposited in the General Fund of the Treasury, thus serving to reduce the deficit. The DOI is committed to managing these transactions accurately, responsibly, and in a timely manner. The Royalty Policy Committee has been reinstated by the Secretary to elicit robust advice and recommendations regarding policies related to royalties from these resources and their benefit to the American public.

The BSEE helps ensure the accuracy of metering from higher risk hydrocarbon sites that experience high volumes of throughput and/or have a past history of noncompliance to help ensure the appropriate financial benefit is obtained for the American people. Additionally, data driven procedures enable the BOEM and the BLM to ensure bid adequacy through a two phased review system for onshore and offshore leasing, and also allow for timely collection and disbursement of mineral and renewable energy revenues by the Office of Natural Resources Revenue (ONRR). ONRR's distributions benefit the Land and Water Conservation Fund, the Historic Preservation Fund, and the Reclamation Fund, helping to ensure America's natural resources and rich history are available to be enjoyed by current and future generations. Distributions to states are used to fund capital projects such as schools, roads, and public buildings. Revenues collected from leases on Indian lands directly benefit members of the Indian community.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
ONRR	Percent of federal and Indian oil and gas revenues disbursed on a timely basis per statute ($ Billions)	98%
BSEE	Percent of oil royalty meters, identified as high-risk using a risk based methodology, where meter provings will be observed	10%

STRATEGY #2: Ensure effective collection and application of recreation fees

The nation's public lands offer many excellent locations for public recreation in the outdoors at national parks and monuments, National Wildlife Refuges, BLM public lands and other locations, in historic sites and buildings and at national treasures such as the Statue of Liberty. Facilities (roads, visitor centers, bathrooms, historic buildings, museums, etc.) that enable visitors to enjoy their public lands and sites are expensive to maintain. All of the major land management bureaus have large backlogs of deferred maintenance at these facilities. The DOI will continuously review its fee structure to determine how best to accommodate visitors enjoyment while collecting fees that help to offset some of the maintenance costs required to keep visitor-facing infrastructure in good shape for visitors. All such reviews of fees and changes will remain consistent with Congressional direction that has been provided through a series of laws including the Federal Lands Recreation Enhancement Act.

The National Park Service established fee structure guidelines in 2006 to standardize rates across the country. The resulting tier system assigns each park unit to a tier and associated entrance fee schedule based on the type of site and the amenities provided for the public. During 2017, the National Park Service initiated a comprehensive review to evaluate and consider bringing entrance fees at all park units into compliance with their assigned tier through a process of public engagement by January 1, 2018. Even with proposed increases, entrance fees remain affordable at $15-$30 per vehicle, which is normally good for several days. The America the Beautiful Pass Annual Pass remains at the price of $80 for one year for unlimited entrance fees for almost all national parks, Fish and Wildlife and BLM sites where fees are required. Congress raised the one-time cost of the America the Beautiful Lifetime Senior Pass for those age 62 or older from the previous fee of $10 to $80 effective in August 2017.

Reviews of other amenity fees (such as for campgrounds and special use permits) will also strive to set fair and equitable fees for activities that visitors enjoy after they enter the park, refuge, or recreation area. The bureaus will seek public comment during any process to review and modify fee amounts to ensure that the public has an opportunity to raise questions and provide comments regarding any fee changes. The bureaus will also identify ways to modernize and enhance fee collection mechanisms that speed access to facilities and/or reduce the cost to the federal government for fee collection.

GOAL #4: Focus timber programs on "healthy forests" lifecycle

The BLM manages forests or woodlands for the benefit of the American public. The BLM maintains a permanent source of timber supply, which supports the production of lumber, plywood, and paper, while also protecting watersheds, regulating stream flow, contributing to the economic stability of local communities and industries, and providing recreational opportunities. Responsible management that reduces fire fuels improves the health and resilience of our forests and helps to prevent forest fires.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to national sources of timber supply. Many tribes now actively participate in management of their forest assets through self-governance and self-determination programs.

STRATEGY #1: Manage sales of timber and forest product resources

Forest management programs within the DOI generate economic benefits through timber harvests on public and Indian trust lands, and restoring forest health. The benefits of healthy forests include typical forest products such as timber and biomass but also include opportunities for recreation and maintenance of watershed health.

The BLM has two focus areas for forest management, the Oregon and California grant lands and the public domain lands. For Oregon and California lands, generating revenue for counties is the primary driver of forest management treatments, while for public domain lands, fire management is the primary driver for forest management. The BLM is currently reviewing its management plans to determine prospects for offering additional timber for sale in the future.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to the national sources of timber supply. Many tribes now actively participate in management of their forest assets through the self-governance and self-determination programs.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of allowable sale quantity (ASQ) timber offered for sale consistent with applicable resource management plans (O&C--Oregon and California--only)	100%
BLM	Volume (mmbf) of wood products offered consistent with applicable management plans	285
BIA	Percent of Annual Allowable Cut prepared and offered for sale or free use	48%

GOAL #5: Manage grazing resources

The BLM manages livestock grazing on over half of its public lands; approximately 18,000 permits and leases are held by ranchers that graze their livestock on over 21,000 grazing allotments throughout BLM managed lands. The BLM's overall objective is to ensure the long-term health and productivity of these lands. BLM uses a variety of methods to accomplish this objective – periodic rest or deferment of grazing in pastures in specific allotments during critical growth periods; vegetation treatments; and projects such as water developments and fences. The terms and conditions for grazing on BLM-managed lands such as stipulations on forage use and season of use are set forth in the permits and leases issued by the Bureau to public land ranchers.

STRATEGY #1: Provide for sustainable forage and grazing

Livestock grazing contributes to food production and adds to local economic stability, and it can be used in certain areas to maintain and improve land health by reducing hazardous fuels and minimizing the likelihood and impact of catastrophic wildfires. The BLM partners with local communities and state and local governments to develop rangeland improvement projects, stewardship contracting, and good neighbor authority in its rangeland management. In recent years, the number of grazing permits and leases processed has decreased due to dramatic increases in litigation and drought. The BLM continues to look for opportunities to streamline the grazing permit process and provide livestock operators greater flexibility in grazing their livestock on public lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of grazing permits and leases processed as planned consistent with applicable resource management plans	16%
BIA	Percent of tribal range units assessed during the reporting year for level of utilization	15%

MISSION AREA 3 Expanding Outdoor Recreation and Access

Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the DOI's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Americans have the opportunity to hunt and fish on public lands managed by the DOI as part of its multiple-use policy that also includes hiking, camping, climbing, boating, wildlife viewing, and other outdoor pursuits.

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters

Hunting, fishing and other outdoor activities contributed $156 billion in economic activity across the United States according to the FWS National Survey of Fishing, Hunting and Wildlife-Associated Recreation. More than 101 million Americans, or 40 percent of the United States' population 16 and older, pursue wildlife-related recreation, which supports 480,000 American jobs.

Following two initial Secretarial Orders issued on his first day, Secretary Zinke issued Secretarial Order 3356 in September, 2017, to further expand public access to lands and waters administered by the DOI, for hunting, fishing, recreational shooting, and other forms of outdoor recreation. In addition, this Order gave greater priority to recruiting and retaining sportsmen and women conservationists, with an emphasis on engaging youth, veterans, minorities, and underserved communities that traditionally have low participation in outdoor recreation activities.

STRATEGY #1: Promote hunting, fishing, and other recreation on DOI lands and waters

There are 372 National Wildlife Refuges and wetland management districts open to hunting and 308 refuges and wetland management districts open to fishing. As practiced on refuges, hunting and fishing do not pose a threat to wildlife populations, and in some instances, are actually necessary for sound wildlife management. For example, deer populations will often grow too large for the refuge habitat to support. If some of the deer are not harvested, they destroy habitat for themselves and other animals and die from starvation or disease. The harvesting of wildlife on refuges is carefully regulated to ensure an appropriate balance between population levels and wildlife habitat. The FWS National Fish Hatcheries continue to be a valuable tool in managing fisheries providing recreation opportunities to America's 36 million anglers who spend $46 billion annually in pursuit of their favored pastime.

There are 76 areas managed by the National Park Service that permit hunting. A total of 51,097,000 acres managed by the NPS are open to hunting at various times during the year, representing approximately 60% of the total acreage of the NPS system. The Bureau of Land Management estimates that over 95 percent of the nearly 250 million acres of BLM-managed public lands are open to hunting.

The recreation areas developed as a result of Bureau of Reclamation water projects are among the Nation's most popular for water-based outdoor recreation. There are 289 Reclamation project areas that have developed recreation facilities and opportunities available for public use. Reclamation has approximately 6.5 million acres of land and water, most of which is available for public outdoor recreation. The 187 developed recreation areas managed by Reclamation or a non-Federal recreation partner draw over 24 million visits annually. The 187 developed recreation areas provide 549 campgrounds, 454 boat launch ramps, and more than 5,500 miles of shoreline.

Bureaus	Key Performance Indicators	2022 Goal
FWS	Number of National Wildlife Refuge acres newly opened to hunting and fishing	250,000
BLM	Number of legal public access transactions completed that facilitate open access to recreation opportunities	20
BLM	Number of newly installed campsites, restrooms, and other facilities that promote public access to BLM-managed public lands	30
BLM, BOR, FWS	Number of individuals participating in outdoor recreation activities at special events	5,420,000

GOAL #2: Enhance public satisfaction at DOI sites

Visitor satisfaction with the quality of experiences on public lands remains very high. Collectively, satisfaction is above 90 percent for the bureaus providing recreation services, e.g., interpretive programs, visitor centers, camping, fishing, hiking, horseback riding, boating, off-highway vehicle driving, wildlife viewing, photography, and climbing. Satisfaction with recreation services provided through facilitated programs remains very high – also above 90 percent.

STRATEGY #1: Enhance the enjoyment and appreciation of our natural and cultural heritage

Survey results show that a sizeable percentage of visitors are satisfied with their experiences at parks, refuges and other public lands. Competition from other forms of entertainment pose challenges to the DOI in its quest to ensure that all Americans understand, appreciate and enjoy the special places protected by the national parks, wildlife refuges and BLM lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of visitors satisfied with the quality of the experience	95%
BLM, NPS	Percent of visitors satisfied with facilitated programs	94%

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities

The DOI upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationships between the Federal government and federally recognized Tribes, and by providing services to individual American Indians, and Alaskan Natives. The U.S. also has important relationships with the affiliated insular areas including the Territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. The DOI administers and oversees Federal Assistance to the three Freely Associated States: The Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

GOAL #1: Support tribal self-determination, self-governance, and sovereignty

The DOI is strengthening the nation-to-nation relationship between the Federal Government and tribal nations because self-determination, sovereignty, self-government, and self-reliance are the tools that will enable tribal nations to shape their own destiny. Tribes have also assumed an expanded role in the operation of Indian programs through Public Law 93-638 contracting. Tribes contract with the Federal Government to operate programs serving their tribal members and other eligible persons.

STRATEGY #1: Support self-governance and self-determination

Self-Governance: Under a self-governance compact, a tribe takes over most or all operations affecting that tribe. The Indian Affairs' Office of Self-Governance (OSG) implements the Tribal Self Governance Act of 1994 by developing and implementing regulations, policies, and guidance in support of self-governance initiatives. Indian Affairs advocates for the transfer of Federal programmatic authorities and resources to tribal governments and supports tribal sovereignty and an expanded role in the operation of Indian programs. The program work includes negotiating annual funding agreements with eligible tribes and consortia, and resolving issues identified in financial and program audits of self-governance operations.

Self-Determination: Under a self-determination contract, a tribe contracts with BIA to take over operation of a program formerly delivered by BIA employees. The funds BIA previously used to run the program transfer to the tribe. Self-determination typically is a program-by-program decision. The Indian Self-Determination Program within BIA works to further American Indian tribes' exercise of self-determination and conducts oversight of self-determination contracts and grants.

Bureaus	Key Performance Indicators	2022 Goal
AS-IA	Percent of Self-Governance Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	99%
BIA	Percent of Self-Determination Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	91%
AS-IA	Percent of P.L. 93-638 contracts with clean audits	90%

GOAL #2: Fulfill fiduciary trust

The DOI has ongoing responsibilities to ensure that trust and restricted Federal Indian-owned lands are managed effectively and to accurately account for revenues and disbursements in a timely and efficient manner. The Office of the Special Trustee for American Indians and the Bureau of Indian Affairs oversee fiduciary trust activities. The DOI assists American Indian and Alaska Native communities in developing capabilities needed to strengthen their communities and maintain economic self-sufficiency. Efforts such as reducing fractionation of Indian lands and developing conservation and resource management plans help tribes maximize economic benefits of their lands. Securing unsubsidized employment reduces dependency on Federal subsidized programs such as childcare assistance, food stamps, and welfare.

Trust assets are crucial to the financial well-being of individual Indian beneficiaries and key components in the economies of tribes. As such, these assets must be managed with great care, paying attention that all financial transactions are completed accurately and as quickly as possible. Since passage of the American Indian Trust Fund Management Reform of 1994, the trust accounts managed by OST are balanced to the penny on a daily basis. OST has also incorporated industry-standard practices, such as a lockbox facility, to shorten the time between the payment of a lease and deposit of those funds into a trust account. For Fiscal Years (FY) 2013 through 2017, OST has received a "clean" audit opinion for Individual Indian Monies (IIM) accounts, attesting to its professionalism in managing these assets. Despite this proven record of success, OST retains a commitment to continual reform, looking for more ways to improve its service to individual Indians and tribes.

The Bureau of Indian Education (BIE) helps provide quality education opportunities starting in early childhood in accordance with tribally identified strategies and needs that contribute to the social well-being of the community and sustain Indian cultures. Tribes directly operate 150 of the 183 BIE funded schools through self-determination contracts and Tribally Controlled Schools Act grants.

STRATEGY #1: Ensure accurate and timely management of fiduciary trust assets

In its effort to promote the fulfillment of fiduciary trust processes, the DOI assists Indian tribes in developing capacity and infrastructure needed to attain economic self-sufficiency on reservations to enhance their quality of life. One critical path is economic development and job creation. The BIA coordinates development of comprehensive tribal programs with the Departments of Labor and Health and Human Services. The DOI offers programs and financial services that encourage start-ups and help position Indian businesses and individuals to compete in today's economy.

Bureaus	Key Performance Indicators	2022 Goal
BIA	Total average gain in earnings of participants that obtain unsubsidized employment through Job Placement Training programs for tribes submitting P.L. 102-477 related reports	$10.82
BIA	Percent of active, supervised Individual Indian Monies (IIM) case records reviewed in accordance with regulations	98%

BIA	Increase in the percentage of submitted land-into-trust applications with determinations (Fee to Trust)	40%
OST	Percent of financial information initially processed accurately in trust beneficiaries' accounts.	99%
OST	Percent of oil and gas revenue transmitted by ONRR recorded in the Trust Funds Accounting System within 24 hours of receipt.	99%
OST	Percent of timeliness of financial account information provided to trust beneficiaries.	100%

STRATEGY #2: Strengthen Indian Education

Improving performance in BIE schools is a challenge the DOI is addressing through initiatives aimed at increasing student achievement. Students at BIE-funded schools receive a culturally relevant, high-quality education that prepares them with the knowledge, skills, and behaviors needed to flourish in the opportunities of tomorrow, become healthy and successful individuals, and lead their communities and sovereign nations to a thriving future that preserves their unique cultural identities.

Bureaus	Key Performance Indicators	2022 Goal
BIE	Percent of students attending BIE-funded schools completing high school with a regular diploma within four years of their 9th grade entry date	69%

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states

The DOI supports the U.S. Territories and Freely Associated States (FAS) through the Office of Insular Affairs (OIA) under the Assistant Secretary for Insular and International Affairs. The U.S.-affiliated insular areas are: the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Residents of these U.S. territories are U.S. citizens or nationals. The DOI also administers and oversees Federal assistance provided to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. The Assistant Secretary Insular and International Affairs and the Office of Insular Affairs carry out these responsibilities on behalf of the Secretary.

STRATEGY #1: Bolster Healthcare Capacity

The Territories and FAS experience significant healthcare challenges. The DOI along with other partners, such as the Department of Health and Human Services (HHS), will work with insular area partners to improve the quality of healthcare across the insular areas. The DOI will make investments to implement corrective action plans which address chronic operational and facility shortcomings at territorial hospitals, which serve their U.S. citizens and nationals, with a focus on those identified by the HHS/Centers for Medicare/Medicaid (CMS) and local elected officials. Additional investments will be made to combat non-communicable and communicable diseases impacting the Pacific and Caribbean islands such as obesity, diabetes, and tuberculosis.

Offices	Key Performance Indicators	2022 Goal
OIA	Percent of Community Water Systems (CWS) that receive health based violations notices from the US Environmental Protection Agency	9%
OIA	Number of new and relapse tuberculosis cases occurring during the calendar year on the islands (per 1,000 people in the population)	1
OIA	Percent of patients with newly diagnosed tuberculosis disease for whom 12 months or less of treatment is indicated, who complete treatment within 12 months	95%
OIA	Infant mortality rate per 1,000 live births (number of deaths to infants from birth through 1 year of age per number of live births)	6

STRATEGY #2: Strengthen Island Economies

Strong local economies provide employment and a viable tax base for citizens in the Insular Areas. The DOI will assist the insular areas to strengthen their economies through strategic investments in infrastructure, public services and technical assistance which will attract and retain private sector investment. The DOI will promote policies and improve Federal coordination on issues impacting insular economies.

Capital investments will be made in basic utilities, hospitals, schools, ports, tourist areas, telecommunications and roads as they create the backbone for increased economic activity. Pursuing renewable energy strategies lessens dependence on oil imports and provides more reliable and affordable energy.

Stable economies and fiscally prudent insular governments foster a more hospitable climate for investment in the islands. Technical assistance will be provided to equip the insular areas with the statistical and management information necessary for informed leadership decision making, expert consultants to effectively improve insular government financial policies and procedures, and strong financial management systems along with technical planning abilities.

The DOI will help create economic opportunity by forging partnerships that bolster tourism and attract industry by promoting the unique island cultures, natural resources, and by preparing the next generation of business leaders. Key indicators of OIA's effectiveness include the following:

Average per capita Gross Domestic Product (GDP): In the four U.S. Territories (Guam, US Virgin Islands, American Samoa, and Commonwealth of the Northern Mariana Islands (CNMI)) for which it is measured, GDP remains a fraction of that for other U.S. citizens in the states. OIA provides technical assistance to the insular areas to assist with economic development planning and execution and supports local planning and education activities related to tourism, agriculture, and aquaculture. In addition, OIA funds infrastructure projects related to economic development, such as fiber optic connectivity, port improvements and renovations to tourist districts.

Cost of electricity: Without indigenous fossil fuels, insular areas face great challenges in achieving reliable, affordable, and secure energy, which can have severe economic effects on the island communities. These areas depend almost entirely on imported petroleum products for energy. The residential cost per kilowatt hour for power in the territories directly impacts the quality of life in

the insular areas and remains over three times higher than the national average. To try to address high electricity costs, the Office of Insular Affairs (OIA) contracts with the Department of Energy's National Renewable Energy Laboratory (NREL) to engage territories and provide energy efficiency and renewable energy assessments, help develop strategic energy plans, and provide technical assistance in reviewing and implementing alternative energy projects. The OIA, through its Empowering Insular Communities grant program, continues to provide funding for the highest priority projects identified in the energy plans including photovoltaic, wind and geothermal development projects, as well as assuring traditional energy plants continue operating.

Offices	Key Performance Indicators	2022 Goal
OIA	Difference in the mean GDP per capita in the 4 US territories compared to the mean GDP per capita in the US	60%
OIA	Difference in the residential cost per kilowatt hour for power from the national average	2X

STRATEGY #3: Fulfill US Compact Obligations

In coordination with the State Department, the DOI will implement compact obligations with three U.S.-affiliated Freely Associated States (FAS): the Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI) and the Republic of Palau (Palau). The DOI will make direct grants to the FSM and RMI under their amended Compacts to provide assistance in six sectors: education, health care, infrastructure, public sector capacity building, private sector development, and environment. The DOI will also continue to support U.S. compact obligations to Palau.

Offices	Key Performance Indicators	2022 Goal
OIA	Ratio of FAS private sector jobs versus total FAS employment	55%
OIA	Ratio of FAS public sector jobs versus total FAS Employment	45%
OIA	Percent of FAS employment attributable to OIA Grants and Programs	30%
OIA	Percent of FAS employee compensation attributable to OIA grants and programs	25%
OIA	Average FAS private sector wage rate as a percentage of average FAS central government wage rate	45%

MISSION AREA 5 Protecting Our People and the Border

Inherent in DOI's management responsibilities of the public lands is the requirement to protect employees and visitors. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices covering four disciplines – law enforcement, emergency management, wildland fire, and natural hazards science. The DOI's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities. Wildland fires potentially endanger lives and property. The Office of Wildland Fire (OWF) coordinates among the DOI's land management bureaus and the US Forest Service to safely, efficiently, and effectively prevent, respond to, and manage the impacts of wildfires. The USGS also protects lives by monitoring and warning of natural hazards such as earthquakes, volcanoes, landslides, and environmental health hazards.

The DOI has land on both the Canadian and Mexican borders, and a presence in the Pacific that exposes Americans to risks from Asia. The Administration is presently emphasizing securing our southern border with Mexico to better protect our country. The DOI has a considerable amount of land that borders Mexico. As such, the DOI's law enforcement officers work in partnership with the US Customs and Border Patrol, Immigration and Customs Enforcement, Drug Enforcement Agency, and tribal, state and local governments to address the flow of illegal immigration, gun and drug trafficking, and to mitigate the impacts associated with these activities, which affect DOI lands and our community partners. In addition, OWF shares wildfire management responsibilities with Mexico along the southern border.

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks

The DOI places a high priority on safety, security, and preparedness, and will uphold its responsibilities for protecting lives, resources, and property through a wide variety of program areas, including law enforcement, health and safety, security, and emergency management. The DOI's preference is to achieve public and visitor compliance with applicable laws and regulations by using techniques that are not confrontational and are designed to elicit voluntary as opposed to coerced compliance.

STRATEGY #1: Ensure public safety on our lands

The Office of Law Enforcement and Security (OLES) provides program direction and oversight on law enforcement policy, border security, drug enforcement, training at the national academy, internal affairs, victims assistance, program compliance, and inspections as well as emergency deployment of DOI law enforcement resources. The Office coordinates with other Federal, state and local agencies (including the Department of Homeland Security, Federal Bureau of Investigation (FBI), and Central Intelligence Agency) on law enforcement and security issues, including infrastructure on the Outer Continental Shelf, the Trans-Alaska pipeline, and gas transmission lines.

To help ensure effective protection of people on DOI lands, each bureau will determine the effective level and distribution of law enforcement staffing for each of its programs on a unit-by-unit basis. The effective level and distribution of staffing needs is dependent on the differing

conditions, levels of risk, and populations served in each unit, captured through a staffing model developed and monitored by each bureau. The DOI's bureaus will engage in developing these staffing models, to determine on a program basis the effective levels of law enforcement staffing that are needed across its units, evaluate the actual level of law enforcement staffing that presently exists, and develop recommendations for better ensuring the effective level of staffing for protecting the people in each unit.

The DOI will strengthen law enforcement in Indian Country by putting more officers on the streets, bolstering tribal courts, and helping fight violent crime and drug abuse. Tribal justice systems are an essential part of tribal governments, which interface with BIA and tribal law enforcement activities. Congress and the Federal courts have repeatedly recognized tribal justice systems as the appropriate forums for adjudicating disputes and minor criminal activity within Indian Country. It is important that the BIA and tribal law enforcement activities complement the operations of the tribal courts to ensure that justice in the tribal forums is administered effectively.

Bureaus	Key Performance Indicators	2022 Goal
OLES	Percent of DOI law enforcement agencies with a current law enforcement staffing plan	100%
BIA	Percent of criminal offenses solved by arrest (Part 1 Offense Clearance Rate)	44%

Strategy 2: Prepare DOI to respond to and recover from emergencies and incidents

The Office of Emergency Management (OEM) promotes all-hazard preparedness and response; ensures continuity of the DOI to perform essential functions during catastrophic events; and assists communities during imminent threats. Collectively, the DOI supports the five National Planning Frameworks (Protection, Prevention, Mitigation, Response, and Recovery) and their related five Federal Interagency Operational Plans, the National Incident Management System, and the National Oil and Hazardous Substances Pollution Contingency Plan while continuing the DOI's mission to protect natural and cultural resources. The DOI's All-Hazards Baseline Operational Plan provides the baseline guidance for how the Department prepares for and responds to emergencies, regardless of type or cause. The OEM leads coordination and information sharing for emergency management regarding communications, public health, environmental health, wildlife health, integrated pest management, invasive species, and occupational safety and health across the DOI's bureaus and offices.

Offices	Key Performance Indicator	2022 Goal
PEM	Average Interior Readiness (I-READ) Index score for emergency preparedness across DOI Bureaus/Offices	91.0%

GOAL 2: Support securing our southern continental US border

The DOI manages 41% of the southwest border of the continental United States. The DOI's managers in the field are daily faced with tough decisions on how to best utilize their law

enforcement assets. An integrated government approach is essential to effectively securing the border and supporting the construction of a physical barrier where needed. Through partnering, federal, state, tribal, and local law enforcement agencies working in proximity to each other have been able to address critical issues like illegal immigration and marijuana smuggling.

STRATEGY #1: Support securing our southern continental US border

The DOI's goal is to increase collaboration among the agencies operating along the border to better understand each other's mission, share resources, and coordinate efforts. This is accomplished by routine interagency coordination, participating in local Border Management Task Force (BMTF) meetings, interagency training, an annual interagency border forum, and law enforcement specific operations.

The US Border Patrol is the main federal agency responsible for patrolling DOI lands adjacent to the US/Mexican Border. The DOI's goal is to work with US Border Patrol to decrease illegal immigration on DOI managed public lands through collaborative efforts with partnering agencies.

Bureaus	Key Performance Indicators	2022 Goal
PMB/OLES	Number of apprehensions on DOI-managed lands	Reduced Annually

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience

The DOI, working with the Department of Agriculture, will improve the way that both agencies manage wildland fire by ensuring that fire management assets are used in the most efficient way possible. The DOI will work with state, local, tribal, and other partners to ensure a coordinated approach to wildland fire management that enables protection responsibilities to be exchanged and resources shared to improve operational efficiency and reduce management duplication. The DOI will continue to integrate science and technology into informing and supporting the firefighters with the appropriate training tools, resources and program support to enable them to work safely and effectively.

The DOI is developing new wildland fire management performance measures to better articulate and determine the efficacy of Department and Administration resources in achieving desired resource conditions that reduce the intensity, severity or negative effects of wildfire. As part of this effort, the Department has established a working group among the four DOI wildland fire bureaus, as well as the U.S. Forest Service, which will explore the feasibility of concepts and principles in wildfire risk mitigation, and examine the value of the strategic placement of fuels treatments as informed by a risk assessment and mitigation plan. This group will develop recommendations for a) establishing outcome-based targets, and b) annually evaluating the performance of the program in meeting the desired objectives of the National Cohesive Wildland Fire Management Strategy. When

completed, the DOI will incorporate the new performance measures into its strategic plan implementation.

STRATEGY #1: Integrate fire ecology, risk management, and collaboration to mitigate wildfire impacts

The Department's Office of Wildland Fire coordinates programs and funding across four bureaus (BLM, FWS, NPS, and BIA) that manage wildland fire programs to implement the National Cohesive Wildland Fire Management Strategy, a science-based collaborative approach to mitigating wildfire risk. The DOI, in partnership with the Department of Agriculture's Forest Service, is committed to the inclusive principles of providing safe and effective response to wildfires, promoting fire-adapted communities, and creating fire-resilient landscapes. The DOI strives to achieve a science-based and technically effective wildland fire management program that is integrated with natural resources programs.

Successful management in fire-adapted communities and landscapes depends on implementation of a broad-based, intergovernmental, collaborative, and national cohesive strategy to address the mounting challenges of escalating fire behavior, increased risk to responders, greater natural and cultural resource losses, and increased threats and losses to communities. The DOI is a lead agency in this collaborative approach with the Forest Service and other Federal, state, tribal, and local governments and stakeholders.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
OWF	Percent of DOI-managed landscape acres that are in desired condition as a result of fire management	36%
OWF	Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan	94%
OWF	Percent of wildfires on DOI-managed landscapes where the initial strategies fully succeeded during the initial response phase	97%

GOAL #4: Provide science to safeguard communities from natural hazards

The USGS helps protect public safety, public health, and property by effectively delivering natural hazards and environmental health science. The Nation's emergency managers and public officials use USGS science to inform citizens of the potential risks these hazards pose to natural systems and the built environment, improve preparation and response activities, and protect the health of the public, which reduce the loss of life and property.

STRATEGY #1: Monitor and assess natural hazards risk and response planning

Responsibilities in natural hazards include the issuing of warnings and advisories for earthquakes, volcanic eruptions, landslides, and coastal erosion; informing warnings issued by other agencies for floods, tsunamis, and wildfires; providing timely information to emergency managers and response officials, the media, and the public to inform and educate communities during and between crises.

The USGS supports these activities by implementing 24x7 operations for seismic, volcanic, and geomagnetic monitoring efforts; maintaining an extensive national network of streamgages measuring rainfall, streamflow, stream height or lake levels; and developing the next generation of tools for rapid evaluation of hazards.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted natural hazards assessments of very high and high-threat regions of the Nation (Index)	4%
USGS	Percent completion of targeted landslide hazard research	8%
USGS	Percent completion of coastal and marine hazards and subsidence research (Index)	87%
USGS	Percent progress towards optimal monitoring capability for natural hazards situational awareness (Index)	52%
USGS	Percent of the National Streamflow Network (NSN) streamgages that are fully operational	88%

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years

The DOI is looking to better ensure effective operations and service delivery through coordinated organizational alignments in the field across bureaus and with other federal and nonfederal partners, and through putting a relatively larger fraction of our employees into the field to serve the public. Expediting environmental analysis and compliance, reducing the cost of space, collocating offices for more convenient public service and improved interagency coordination, and common regional boundaries are all being explored to help improve the DOI's infrastructure and related effectiveness.

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery

The DOI is reevaluating its organizational model to determine how to best achieve its mission of serving the American public, honoring our tribal and fiduciary trust responsibilities, and managing and protecting our land, water and natural resources for the next 100 years.

STRATEGY #1: Ensure effective alignment of DOI organizational structure in the field and with partners

The DOI intends to establish unified regional boundaries for its bureaus in 2018 and to further develop this approach in 2019. The goal is to improve overall operations, internal communications, customer service, and stakeholder engagement. Aligning geographic areas across the DOI will enhance coordination of resource decisions and policies and will simplify how citizens engage with the DOI.

Organizing bureaus with common geographic areas will allow for more integrated and better coordinated decision making across bureaus. Currently, the DOI's bureaus have more than 40 distinct regions, each with its own geographic boundaries. This complicates coordination and hampers the DOI's ability to get things done expeditiously. Having unified regions will help streamline operations and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision. The new regional boundaries currently under discussion – and subject to modification – are expected to have minimal budgetary impact.

To improve customer service and reduce operational costs, sharing functions at field locations has already begun. For a number of years, the Department of the Interior and Department of Agriculture's US Forest Service (USFS) have pooled resources, conducted joint projects, and shared services under Service First agreements where field locations are in close proximity to each other. Service First authority promotes partnering across agency boundaries to develop joint solutions to common problems and to address federal land management issues in an integrated way.

STRATEGY #2: Improve strategic hiring, placement and retention efforts to ensure mission-critical service delivery through data driven processes and increased employee engagement efforts

The DOI is committed to managing America's vast natural and cultural resources with a 70,000-strong and 350 occupation-plus workforce that exemplifies high performance, customer service and

accountability. Historically, it has been difficult to attract certain DOI employees or recruits in certain occupations to positions in headquarters, or even to regional offices, because many of our employees enjoy living in relatively rural areas and because the cost of living is so much higher in large cities. Moving a larger fraction of our staff of some bureaus to relatively more rural and considerably less expensive areas in the West might therefore both reduce payroll cost because fewer employees would receive locality pay, and improve employee retention.

To facilitate strategic human capital planning, the Department has put in place hiring controls to emphasize new hiring for field-related positions rather than administrative and support positions in the Washington, D.C., and Denver, Colorado metropolitan areas.

The DOI will leverage automation to improve employee performance and training opportunities, and examine additional data to determine if operational efficiencies can be gained while minimizing redundancies under the current organizational design.

Data to be analyzed include:

- Federal Employee Viewpoint Survey (*e.g.*, employee engagement)
- Geographic Representation of Bureau Mission Critical Occupations
- Geographic Representation of Administrative and Support Services
- Customer Service data
- Benchmarking cost allocations for administrative and support functions
- DOI Human Capital Framework Evaluations
- Accountability drivers on performance, labor management, EEO, etc.
- Bureau plans in response to the Department-wide Workplace Environment Survey

Offices	Key Performance Indicator	2022 Goal
PHR	Employee engagement index for DOI in the Federal Employee Viewpoint Survey	75%
PHR	DOI's ranking among large agencies in the Partnership for Public Services' Best Places to Work report	1

GOAL #2: Reduce administrative and regulatory burden

Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, directed agencies to "manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations." The DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to the public, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient.

STRATEGY #1: Evaluate and improve the net benefits of regulatory reform initiatives and policies, and identify regulations for repeal, replacement, or modification

On February 24, 2017, President Trump signed Executive Order 13777 entitled, "Enforcing the Regulatory Reform Agenda" to alleviate unnecessary regulatory burdens placed on the American people. The Executive Order established a Regulatory Reform Officer (RRO) for each agency and a Regulatory Reform Task Force. The efforts of the RRO and the task force will help identify

regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The costs of the regulatory and deregulatory actions are measured as the opportunity costs or cost savings to society, as defined in OMB Circular A-4 (i.e. the values reported are the cumulative net savings from deregulatory actions and costs of newly required regulatory actions over multiple years starting in FY 2017). In 2017, the DOI achieved cumulative net savings of $1.15B (net present value) from its deregulatory actions. Goals for subsequent years will be established as the DOI completes its review of target regulations.

Office	Key Performance Indicator	2022 Goal
DOI	Total incremental cost of all EO 13771 regulatory actions and EO 13771 deregulatory actions (including costs or cost savings carried over from previous fiscal years)	TBD
DOI	Number of EO 13771 regulatory actions issued.	TBD
DOI	Number of EO 13771 deregulatory actions issued.	TBD

STRATEGY #2: Improve transparency and timeliness of the infrastructure permitting process

As outlined in the President's Executive Order "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure," and the corresponding Secretarial Order 3355, a significant opportunity exists for agencies to streamline and collaborate on National Environmental Protection Act (NEPA) compliance efforts. The DOI believes this can best be achieved through a unified regional structure adopted across the DOI which focuses on the intersecting issues within the same geographical boundaries.

The DOI is also establishing an Executive Committee for Expedited Permitting (ECEP) to expedite the responsible leasing and permitting of energy and mineral production. More specifically, this involves, but is not limited to, the processing of Applications for Permit to Drill (APD), Expressions of Interest (EOI), coal leasing actions, Right-of-Way (ROW) applications, and harmonization of appurtenant environmental reviews.

Office	Key Performance Indicator	2022 Goal
DOI	*Cross-Agency Priority Goal metric on improving infrastructure permitting to be added*	
BLM	Average amount of time (in days) to process and administratively complete Applications for Permit to Drill	90 days
BLM	Average amount of time (in months) to issue a decision on major right-of-way applications	48 months
BLM	Average amount of time (in days) to process and administratively complete a grazing permit	390 days
FWS	Percent of formal Endangered Species Act Section 7 consultations addressed in a timely manner	100%

GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog

Real property assets are integral to the success of Interior's mission. DOI's real property inventory includes approximately 43,000 buildings and 80,000 structures across six major land-holding bureaus, with a replacement value of approximately $300 billion. DOI manages the full life-cycle requirements of nearly every type of constructed asset found, including visitor centers, dams, schools, health clinics, power generating facilities, housing, hotels, fire stations, campgrounds, roads, water and wastewater treatment plants, offices, and more. Many of these assets have historic or cultural significance that not only support the DOI's mission, but are important to our Nation's heritage.

STRATEGY #1: Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery

The DOI's goal is to balance mission delivery demands with adequate investments in operations and maintenance to sustain the portfolio in an appropriate condition befitting of our role as America's stewards. Appropriately maintained assets enable the DOI to accomplish habitat and resource management, provide outdoor recreation activities, deliver water, fulfill trust and treaty responsibilities, and provide critical economic inputs and job creation for local communities. Adequately constructed and maintained Federal real property supports healthy habitats and populations, availability of safe and reliable public use opportunities, and robust local economies.

A significant factor impacting a sustainable portfolio of constructed assets is DOI's aging infrastructure. Many assets already exceed original design life, and this trend of aging infrastructure continues to threaten mission delivery. Prioritizing repairs on a portfolio scale will ensure the assets condition is maintained at an acceptable level. Effective management of deferred maintenance is a Departmental priority to ensure completion of needed repairs and prevent further deterioration and unsafe conditions. The DOI prioritizes addressing deferred maintenance/repair needs for mission critical activities. Furthermore, proactive maintenance, replacement of components and colocation of programs and staff in owned facilities will help to reduce future costs.

The DOI conserves the Nation's cultural and heritage sites that reflect a rich and diverse history. The DOI safeguards our heritage for the generations that follow, to better understand our country and learn from our past. Many challenges exist in protecting and maintaining historic and archeological sites, especially with the impacts of weather on fragile sites and structures. Sites are exposed to changing weather conditions that cause damage and deterioration of the structures and sites and some locations are vandalized or accidentally damaged by visitors to federal lands.

The Road Construction Program maintains and operates the 29,000 miles of BIA-owned roads and bridges. These roads and bridges serve as the primary access points to tribal communities, without which critical resources and services would not reach tribal members.

The DOI will continue to improve and provide safe, functional, energy efficient, and universally accessible BIA facilities. The DOI is allocating funds to improve its Bureau of Indian Education (BIE) funded schools, and improve the learning environment of BIE students.

Agency Priority Performance Goal: By September 30, 2019, the Department of the Interior will improve the condition of its priority real property assets such that 82% are in the desired state of acceptable condition.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
PAM	Percent of priority assets in acceptable condition (i.e. meet investment objective)	84%
PAM	Amount of priority deferred maintenance (repair) needs/activities addressed (i.e. completed for that year)	$1.2 billion
NPS	Value of NPS deferred maintenance work orders closed ($000)	TBD
BIA, BLM, FWS, NPS	Percent of historic structures on DOI inventory in good condition	57%
BIA, BLM, BOR, FWS, NPS	Percent of museum collections on DOI inventory in good condition	59%
BIA, BLM, FWS, NPS	Percent of archaeological sites on DOI inventory in good condition	67%
BOR	Maintain a completion rate of 95% for Safety of Dam recommendations	95%
BIA	Percent of miles of BIA road in acceptable condition based on the Service Level Index	14%
BIA	Percent of BIA bridges in acceptable condition based on the Service Level Index	69%
BIE	Percent of students in BIE school facilities that are in acceptable condition as measured by the Facilities Condition Index	67%

STRATEGY #2: Provide dependable and efficient information technology

Information Management and Technology (IMT) provides modern and secure technology solutions to advance the DOI's ability to deliver programs and services to the public and our customers. To do so, the DOI must protect its critical information assets from cyber exploitation and attack to ensure that employees and the public can rely on the confidentiality, integrity, and availability of the DOI's data and information systems. The DOI is implementing advanced technologies that will increase visibility into its IMT environment, improve protections around our high-value information assets, and empower its workforce to better detect, respond, and recover from cyber-attacks and breaches. With a more secure computing environment in place, its employees can more easily obtain the tools and data they need to perform the mission securely efficiently and effectively, anywhere and anytime.

The DOI will continue to deploy and mature Continuous Diagnostics and Mitigation (CDM) capabilities that help to fortify its networks and systems. These capabilities provide the DOI with tools necessary to better identify cybersecurity risks on an ongoing basis, prioritize these risks based upon potential impacts, and enable cybersecurity personnel to mitigate the most significant

problems first. Achieving the performance objectives will enable the DOI to meet the requirements of Presidential Executive Order 13800, "Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure." The DOI has adopted the National Institute of Standards and Technology (NIST) Cybersecurity Framework and will work towards implementing and maturing the set of activities known to be effective in managing cybersecurity risks and that are necessary to achieve key cybersecurity outcomes that support the following functions: Identify, Protect, Detect, Respond and Recover.

The DOI is working collaboratively with its user community to understand operational needs better in the field, resulting in expanding network capabilities to improve connectivity in remote areas so employees can be as productive as possible. To improve collaboration, the DOI will enhance its Geospatial Platform capabilities, which is an internet-based tool for sharing trusted geospatial data with the public, government agencies, and partners to meet their mission needs. The DOI will also seek to deliver improved services at a lower cost by consolidating and standardizing IT services and systems, including consolidating and optimizing its data center and network operations and standardizing security, customer support, and administrative functions.

Offices	Key Performance Indicator	2022 Goal
PIO	Percent of unclassified network hardware and software assets appropriately authorized and managed	95%
PIO	Percent completion of DOI's Federal Information Technology Acquisition Reform Act (FITARA) Implementation Plan	100%

APPENDIX A – ACRONYMS

We had written our guidance to have our SESers address the top ten list and SOs. The political leadership team also want our SESers to address the relevant elements of the strategic plan. Did Greg Sheehan sign out the original guidance? If so, we will need to amend it. If not, we can intercept the package and add this additional guidance. Thanks. Steve

Steve,

We need to discuss next steps on this strategic plan on Tuesday morning when I return.

Thanks
Greg

All,
Attached is the new DOI GPRA strategic plan. This, along with the Secretary's Top 10 list, ought to be reflected in the 2018 SES performance standards for your direct reports. With FY 18 already half over, I'd urge you to get FY18 performance plans in place for your SESers ASAP, if you haven't done so already, so they can understand your goals for them and have as much time as possible to accomplish those goals.
Thanks,
Scott

STRATEGIC PLAN FOR FISCAL YEARS 2018 – 2022

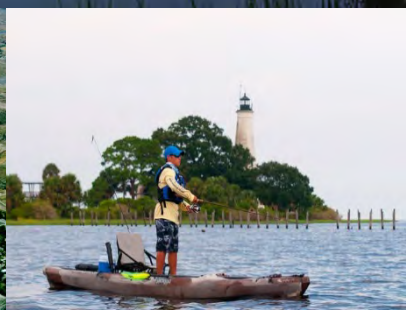

Table of Contents

LETTER FROM THE SECRETARY 1

MISSION AND ORGANIZATION 3

Mission 3

Vision 3

History 3

STRATEGIC PLAN FRAMEWORK 13

DESCRIPTION OF MISSION AREAS 14

MISSION AREA 1: Conserving Our Land and Water 15

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities 15

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity 19

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands 20

GOAL #4: Inform land use planning processes especially for public use and access 22

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources 24

GOAL #1 Ensure energy and economic security for America 24

GOAL #2: Ensure access to mineral resources 26

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate 26

GOAL #4: Focus timber programs on “healthy forests” lifecycle 28

GOAL #5: Manage grazing resources 29

MISSION AREA 3 Expanding Outdoor Recreation and Access 30

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters 30

GOAL #2: Enhance public satisfaction at DOI sites 31

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities 32

GOAL #1: Support tribal self-determination, self-governance, and sovereignty 32

GOAL #2: Fulfill fiduciary trust 33

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states 34

MISSION AREA 5 Protecting Our People and the Border 37

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks 37

GOAL 2: Support securing our southern continental US border 38

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience 39

GOAL #4: Provide science to safeguard communities from natural hazards 40

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years 42

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery 42
GOAL #2: Reduce administrative and regulatory burden 43
GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog 45
APPENDIX A – ACRONYMS 48

LETTER FROM THE SECRETARY

The Department of the Interior's Strategic Plan for Fiscal Year 2018-2022 is our bold vision for the future under President Donald J. Trump. As the chief stewards of our public lands, it is our job to ensure that these lands continue to be used "for the benefit and enjoyment of the people," as the words engraved into the Roosevelt Arch at Yellowstone National Park so proudly proclaim.

We will restore the American conservation ethic that built our nation. Among the American traditions that made our country great was a philosophy of multiple-use on our public lands. I am an admirer of President Theodore Roosevelt – he had it right. As President Roosevelt once remarked, "It is not what we have that will make us a great nation; it is the way in which we use it."

Our public lands are our greatest treasures, and all Americans should be able to experience these treasures. One of my top priorities as Secretary of the Interior is public access to public land. Recognizing that hunting and fishing is an integral part of the American heritage, we must do more to ensure that all Americans can enjoy these sports – not just the wealthy elite. Americans should also be proud of their public lands, which is why investing in American infrastructure and addressing the maintenance backlog at our National Parks is critically important.

While "benefit and enjoyment" includes recreation, it also includes traditional uses like grazing and timber harvesting. Our mandate is multiple-use of public lands, and multiple-use also includes the development of natural resources as we seek to leverage American energy for American strength. Americans should have the right to make a living off the land, and one of our most critical responsibilities at Interior is upholding this right.

If we are going to preserve our heritage, we must bolster our standing in the world. It is in the economic and national security interest of the United States to pursue a policy of American energy dominance. An America-First energy policy is one which maximizes the use of American resources while freeing us from dependence on foreign oil.

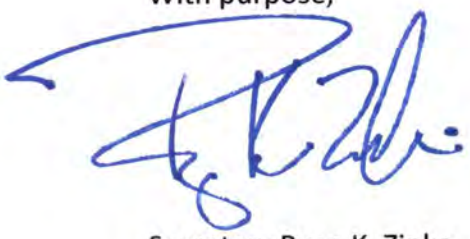
American energy dominance requires aggressive regulatory reform. With our strategic plan, the Interior Department has a unique opportunity to cut the burdensome, unnecessary regulations that have suppressed job creation and wealth generation. Regulatory reform also includes reduced permitting times. The Trump Administration will not deregulate or streamline at the expense of environmental standards or worker safety, but we will strike a balance and strive toward regulatory certainty going forward when creating a bureaucratic framework.

Along with our conservation stewardship responsibilities, we must also be the greatest champion of our tribal nations. Native Americans and Alaska Natives are proud people with a rich history. Sovereignty has to have meaning, and the days of empty promises to our tribal communities are over. Our priorities in Indian Country will be self-determination, government-to-government interaction, and empowerment.

To accomplish our goals, a reorganization of the Department is necessary. We will chart a path forward for the next 100 years at Interior, as Teddy Roosevelt did over a century ago. As a former Navy SEAL, I have long believed that a healthy front line makes for a healthy operation – it is in this spirit that the reorganization plan will focus on our front lines and how we can better engage those on the ground.

Our strategic plan will restore trust in local communities. The federal government has a long way to go when it comes to being a good neighbor, but I am confident we can get there. With a renewed focus on conservation and a bold approach to energy, the Department of the Interior can lead the way in making America great again. This is our desired outcome.

With purpose,



Secretary Ryan K. Zinke
United States Department of the Interior

MISSION AND ORGANIZATION

Mission

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

Vision

The Department of the Interior strives to fulfill a vision to:

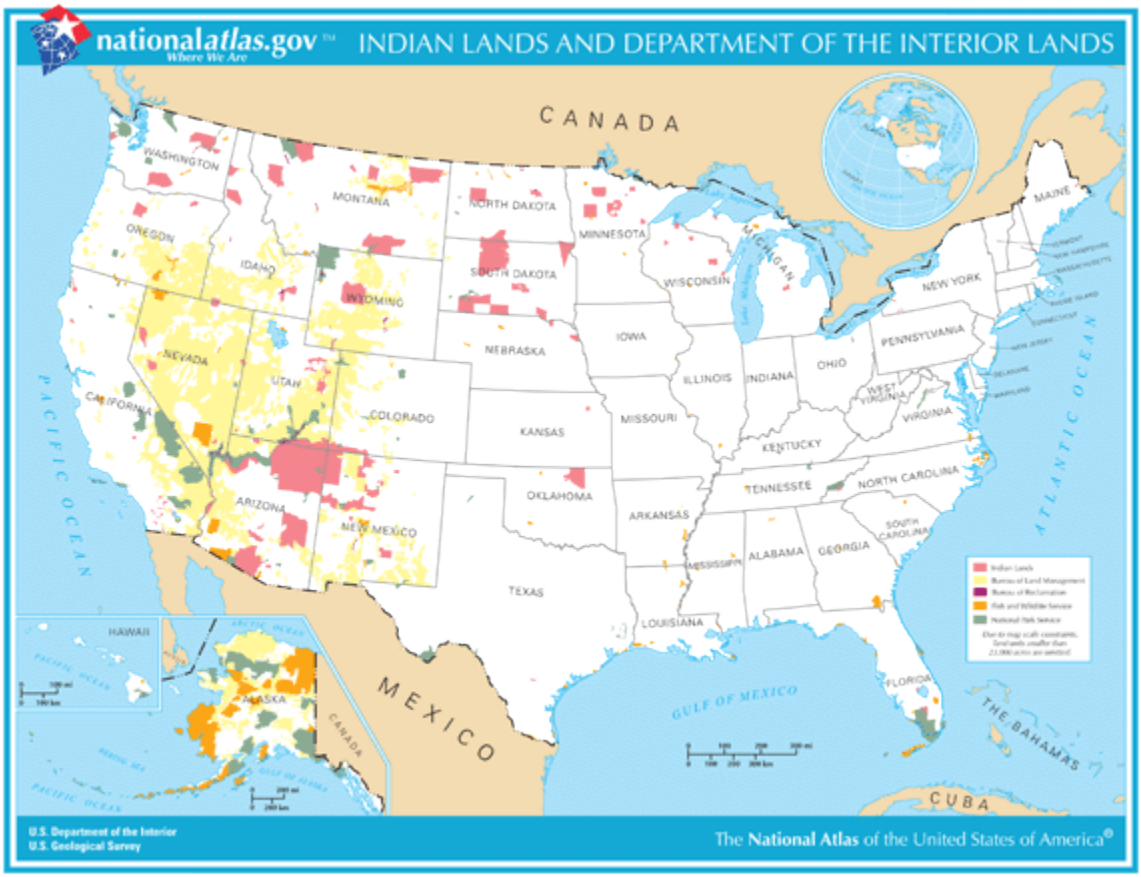
- *Promote energy dominance and critical minerals development* to create jobs for Americans, insulate our nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so that our people can be healthier, more fully enjoy the wonderful features of their federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

History

The Department of the Interior (DOI) was established in 1849. The DOI was charged with managing a wide variety of programs, which included overseeing Indian Affairs, exploring the western wilderness, directing the District of Columbia jail, constructing the National Capital's water system, managing hospitals and universities, improving historic western emigrant routes, marking boundaries, issuing patents, conducting the census, and researching the geological resources of the United States. As the country matured during the last half of the 19th Century, so did the DOI and its mission began to evolve as some of these functions moved to other agencies at the same time the DOI acquired new responsibilities.

With information from Robert Utley and Barry Mackintosh, *The Department of Everything Else: Highlights of Interior History*, 1988, pp. 1-2.

Surface Lands Managed by the Department of the Interior



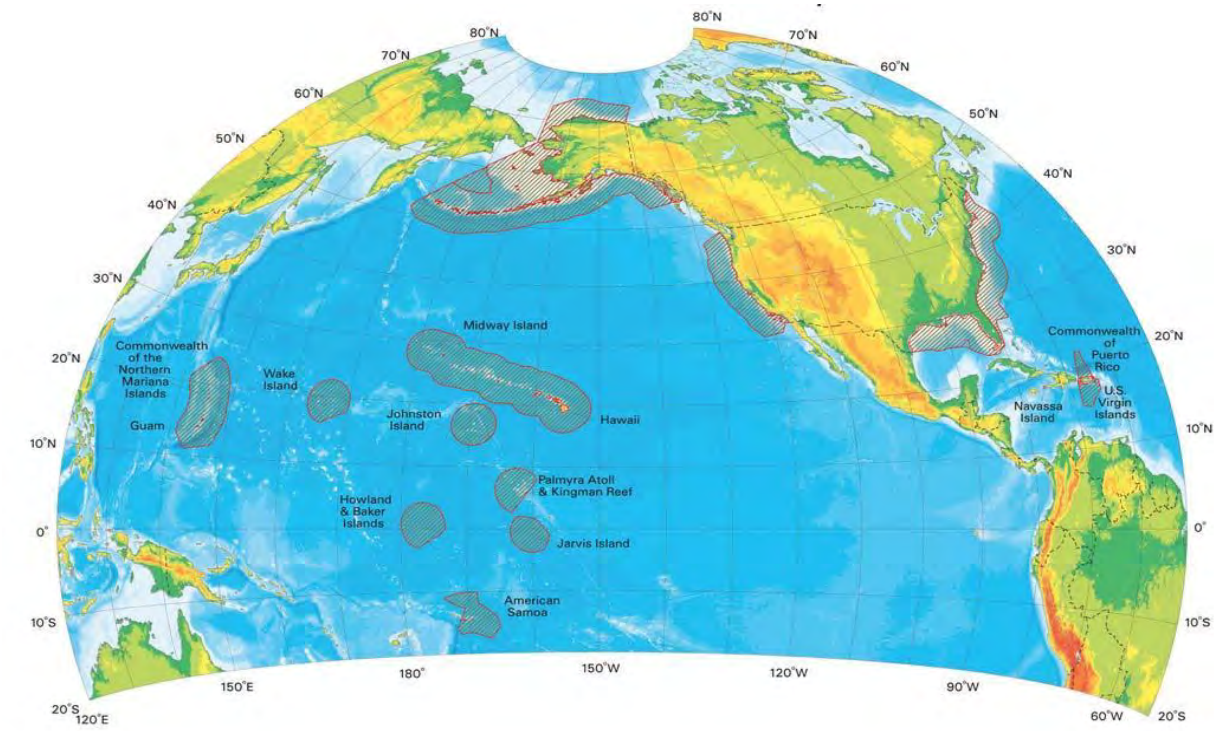
USGS Map, Oct 2014 (except for US Territories that are identified on next graphic)

Following Theodore Roosevelt's conservation summit and the awakening of the conservation movement at the beginning of the 20th Century, there was an increasing urgency and expanding congressional mandate to protect and more effectively manage the nation's natural resources. In 1905, management of the federal forests changed from the Department of the Interior to the United States Forest Service within the Department of Agriculture. Its Chief, Gifford Pinchot, introduced better forestry methods. Pinchot sought to turn public land policy from one that disposed of resources to private parties, to one that maintained federal ownership and management of public land. Pinchot argued that scientific management of forests and natural resources was profitable. He generally opposed preservation for the sake of preservation. During the 1960's and 1970's the DOI's authorizing statutes shifted to put more emphasis on the preservation, management, and use of public lands and natural and cultural resources.

Today, the DOI manages the Nation's public lands and minerals, including providing access to more than 480 million acres of public lands, 700 million acres of subsurface minerals, and 1.7 billion acres of the Outer Continental Shelf. The DOI is the steward of 20 percent of the Nation's lands, including national parks, national wildlife refuges, and other public lands; manages resources that supply 30 percent of the Nation's energy; supplies and manages water in the 17 Western States and supplies 15 percent of the Nation's hydropower energy; and upholds Federal trust responsibilities to 573 federally recognized Indian tribes and Alaska Native villages. The DOI is responsible for migratory bird and wildlife conservation, historic preservation, endangered species conservation, surface-mined lands protection and restoration, mapping, geological, hydrological, and biological science

for the Nation, and financial and technical assistance for the insular areas (many of which are depicted in the following graphic).

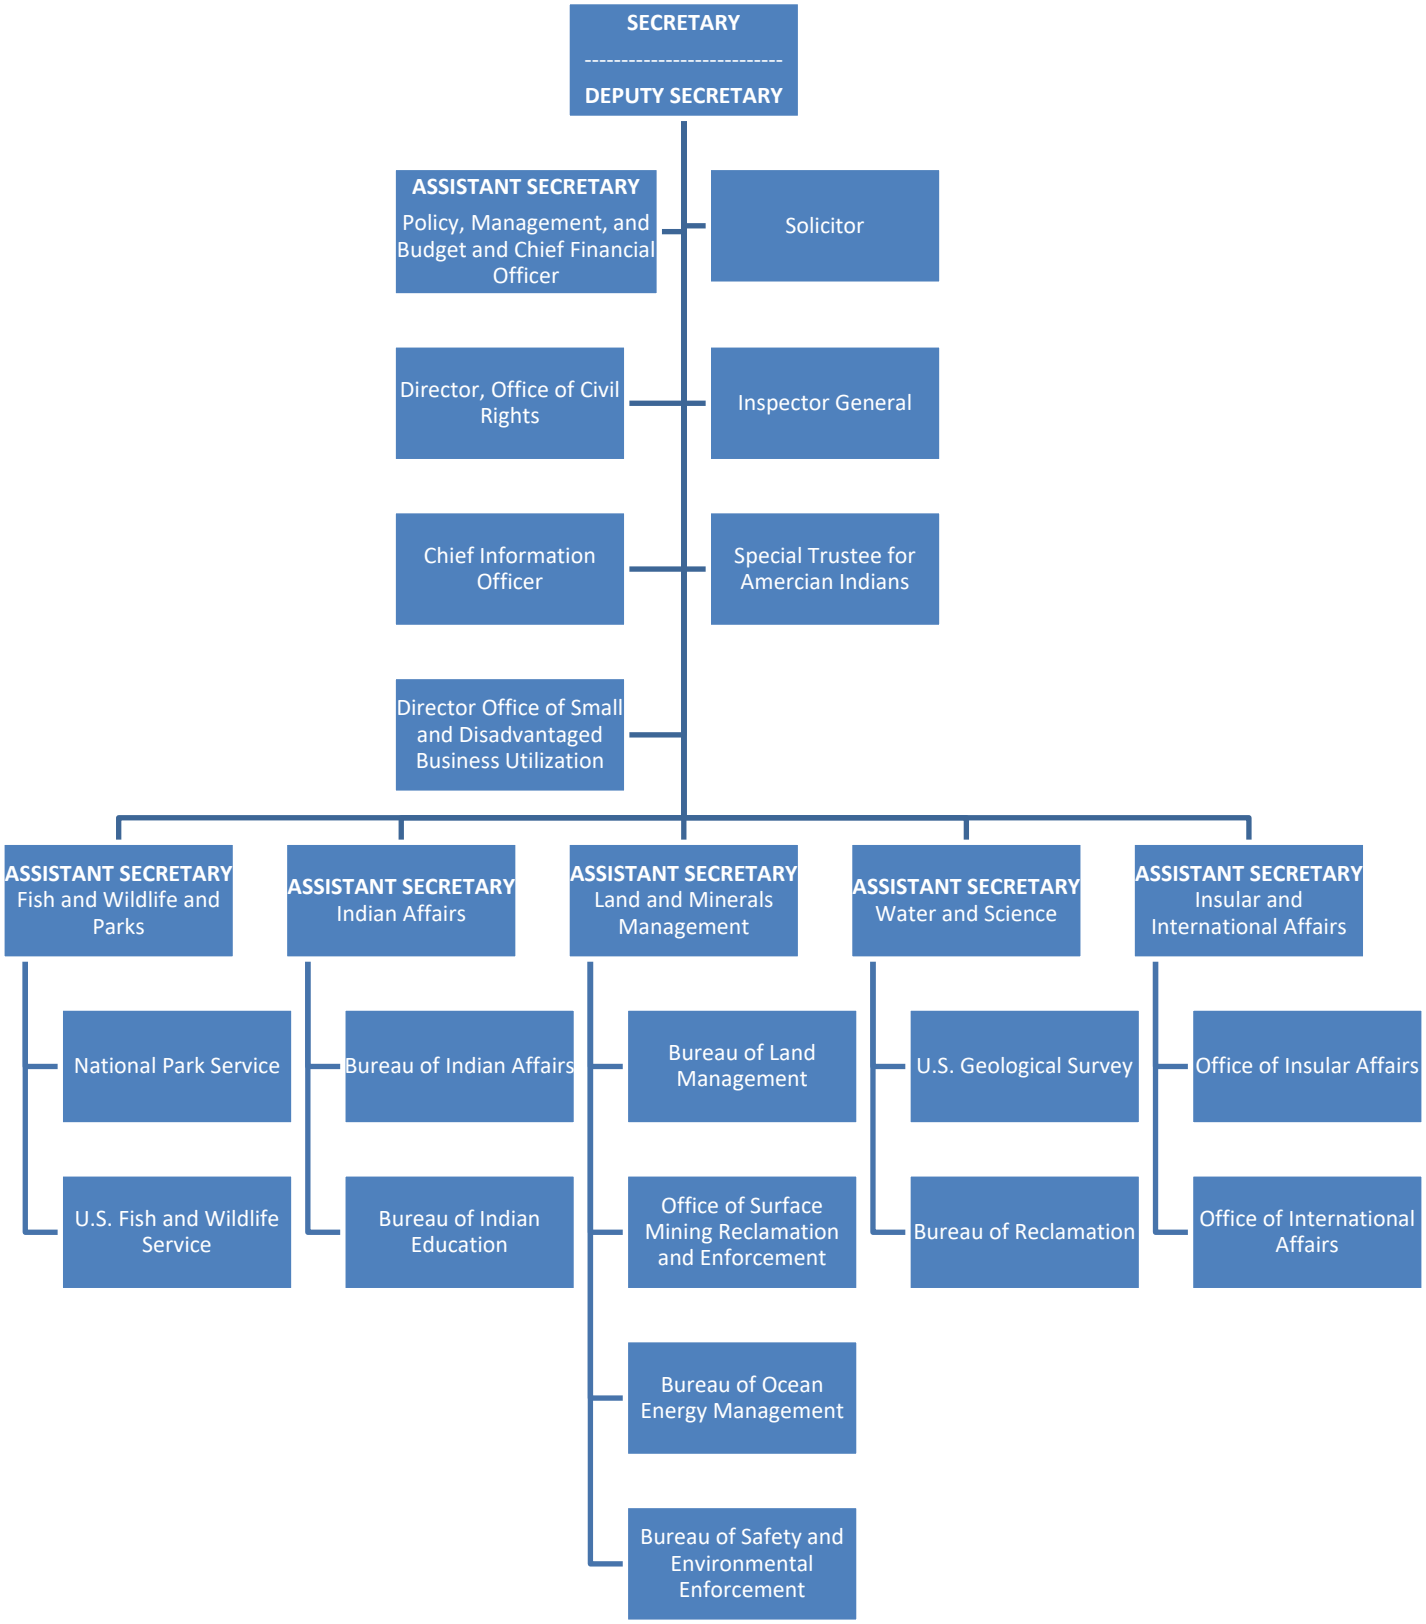
United States Continental Shelf Boundary Areas



National Geophysical Data Center, Sep 2001

The DOI's programs encompassed in this Strategic Plan cover a broad spectrum of activities that are performed by 10 bureaus and multiple offices and are captured in the following presentation of each entity's unique mission and set of responsibilities. The Strategic Plan's six mission areas capture the vitality, inventiveness, and potential of the bureaus and offices and the DOI's 70,000 dedicated and skilled employees. Along with our hardworking and skilled employees, over 350,000 much appreciated volunteers annually contribute their time in support of bureau and office missions, bringing unique local knowledge to park operations, assisting in recovery from natural disasters, and participating in environmental education, among other activities. We cannot effectively address all our responsibilities alone, so it is critical to strengthen partnerships with our sister federal agencies with related missions. In the federal family, we share forest, minerals, rangeland, and wildland fire management responsibilities with the US Department of Agriculture's Forest Service. We share water resource management and hydroelectric power generation responsibilities with the US Army Corps of Engineers, and we share fishery and endangered species management responsibilities with the Department of Commerce's National Marine Fisheries Service. In some ways, our relationships with state, tribal, and local government are even more important. We operate within the bounds of state water law, and respect state authority over resident wildlife. We deal with tribal governments on a government to government basis, respecting each other's authority and jurisdiction. We share land use planning responsibilities with local government, so we must make our own land management plans in a way that is mindful of the goals and plans of those local government neighbors.

US Department of the Interior Organization Chart



Bureau and Office Summaries

Bureau of Land Management (BLM)

- Manages public lands for the benefit of all Americans under the dual framework of multiple use and sustained yield on nearly 250 million surface acres, as well as 700 million acres of subsurface mineral estate. Priorities include:
  - Making full use of the Nation's domestic energy and mineral sources, including conventional and renewable energy sources;
  - Serving American families by providing outdoor recreation opportunities that are key to the Nation's heritage and its economy; and
  - Managing working landscapes to support sustainable livestock grazing operations; and timber and biomass production.
  - Developing and maintaining strong partnerships with State, local, and private stakeholders in shared conservation stewardship.

Office of Surface Mining Reclamation and Enforcement (OSMRE)

- Protects the environment during coal mining through Federal programs, grants to states and Tribes, and oversight activities.
- Ensures the land is reclaimed afterwards.
- Mitigates the effects of past mining by pursuing reclamation of abandoned coal mine lands.

Bureau of Ocean Energy Management (BOEM)

- Manages access to renewable and conventional energy resources of the Outer Continental Shelf (OCS);
- Administers nearly 3,000 active fluid mineral leases on over 16 million OCS acres;
- Oversees 4 percent of the natural gas and 18 percent of the oil produced domestically; and
- Oversees lease and grant issuance for off shore renewable energy projects.
- Manages leasing for marine mineral resources such as sand to facilitate beach replenishment and coastal nourishment projects.

U.S. Geological Survey (USGS)

- Produces information to increase understanding of natural hazards such as earthquakes, volcanoes, and landslides.
- Conducts research and delivers assessments on oil, gas, and alternative energy potential, production, consumption, and environmental effects.
- Conducts reliable scientific research in land resources, mineral assessments, and water resources to inform effective decision making and planning.
- Provides science information that supports natural resource decisions.
- Produces topographic, geologic, hydrographic, and biogeographic data and maps.

Bureau of Safety and Environmental Enforcement (BSEE)

- Fosters secure and reliable energy production from the 1.7 billion acre U.S. Outer Continental Shelf (OCS) for America's energy future.
- Conducts inspections, permitting, incident and equipment failure analysis, oil spill preparedness and enforcement programs aimed at promoting a culture of safety and reducing risk to those who work offshore.
- Supports the technical expertise to engage opportunities and to meet challenges to tap the full potential of OCS energy resources.

Bureau of Reclamation (BOR)

- Manages, develops, and protects water and related resources in an environmentally and economically sound manner in the interest of the American public.
- Largest wholesale supplier of water in the Nation
- Manages 492 dams and 338 reservoirs.
- Delivers water to 1 in every 5 western farmers and more than 31 million people.
- America's second largest producer of hydroelectric power.

Fish and Wildlife Service (FWS)

- Manages the lands and waters of the 855 million-acre National Wildlife Refuge System, primarily for the benefit of fish and wildlife.
- Manages 73 fish hatcheries and other related facilities for endangered species recovery and to restore native fisheries.
- Protects and conserves:
  - Migratory birds;
  - Threatened and endangered species; and
  - Certain marine mammals.
- Hosts about 48 million visitors annually at more than 560 refuges located in all 50 states and 38 wetland management districts.

Indian Affairs (IA)

- Fulfills Indian trust responsibilities.
- Promotes self-determination on behalf of 573 federally recognized Indian Tribes.
- Funds self-governance compacts and self-determination contracts to support all Federal programs including education, law enforcement, and social service programs that are delivered by Tribal Nations.
- Supports 183 elementary and secondary schools and dormitories, providing educational services to approximately 48,000 students in 23 states.
- Supports 32 community colleges, universities, post-secondary schools, and technical colleges.

Note: IA includes the Bureau of Indian Affairs (BIA) and the Bureau of Indian Education (BIE)

National Park Service (NPS)

- Maintains and manages a system of 417 natural, cultural, and recreational sites for the benefit and enjoyment of the American people.
- Manages and protects over 27,000 historic and prehistoric structures, nearly 44 million acres of designated wilderness, and a wide range of museum collections and cultural and natural landscapes.
- Provides outdoor recreation to nearly 324 million visitors at national park units.
- Provides technical assistance and support to state, tribal and local natural and cultural resource sites and programs, and fulfills responsibilities under the National Historic Preservation Act of 1966.

Insular and International Affairs

- Coordinates federal policy for the territories of American Samoa, Guam, the U.S. Virgin Islands and the Commonwealth of the Northern Mariana Islands.
- Oversees the Department's involvement with oceans policy
- Manages the Department's involvement in international affairs
- Responsible for administering and overseeing U.S. federal assistance to the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau under the Compacts of Free Association, as well as providing technical and financial assistance to all the Insular Areas.

Note: Includes Office of Insular Affairs and Office of International Affairs

Departmental Offices

- Immediate Office of the Secretary, Deputy Secretary, and Assistant Secretaries
- Office of the Solicitor
- Policy, Management and Budget provides leadership and support for the following:
  - Budget, Finance, Performance and Acquisition;
  - Public Safety, Resource Protection, and Emergency Services;
  - Natural Resources Revenue Management;
  - Human Capital and Diversity;
  - Technology, Information and Business Services;
  - Policy and Environmental Management
- Office of Inspector General
- Office of the Special Trustee for American Indians

CROSS-CUTTING PRINCIPLES

As the Department of the Interior (DOI) advances through FY 2018-2022, the following principles guide our leadership, management, and workforce.

Effective and Accountable Leadership - The DOI is committed to being an outstanding steward of approximately 500 million acres of public lands, 700 million onshore subsurface acres, and 1.7 billion acres of the Outer Continental Shelf (OCS) including magnificent vistas, valuable energy and mineral resources, unique ecosystems, range, and treasured natural, cultural, and heritage assets. The management and oversight of these resources require a dedicated cadre of employees, the contributions of volunteers, and the input of stakeholders to inform decision-making. The challenges of managing for a diverse constituency while meeting national goals for energy development and sustaining high levels of recreation and access require technical expertise, the best available science, and an understanding of the balance of development and conservation.

A critical role for DOI's senior executives is providing the necessary leadership to guide the efforts of DOI's offices, bureaus, and field locations in effectively achieving Presidential and Secretarial goals especially through:

- Ensuring cost effective operations and quality customer-centric service to the public;
- Facilitating cooperation and collaboration across organizations within the DOI and its federal and nonfederal partners;
- Ensuring a workplace environment that is safe, fair, and conducive to employee productivity; resolving conflicts as needed; and
- Holding individuals at all levels accountable for their actions.

Empowering the Field - Accomplishing the multi-faceted missions of the DOI involves the skills of 10 bureaus and spans 2,400 locations across the U.S. These locations are often remote and present managers with unique challenges. Managers and experts in the field organization must be allowed to exercise informed judgement and discretion, and must have a skilled workforce to address the issues and manage their operations. The DOI's agency reform plan, developed in response to the President's Executive Order "Comprehensive Plan for Reorganizing the Executive Branch," provides a strategy for better enabling our managers and workforce in the field through regional realignment and executive empowerment, increased colocation, and shifting workforce resources closer to the DOI's field locations.

Engaging the Nation in Cooperative Stewardship - In managing such a broad range of resources for the benefit of the public, the DOI works closely with other federal agencies, state, tribal, territorial, and local governments, and the public. The DOI's reform plan calls for increased coordination across agency lines and levels of government to achieve common goals and resolve differences without expensive and time-consuming litigation. DOI is working to increase its collaborations and partnerships across all levels of government.

Improving Infrastructure - The DOI manages an infrastructure asset portfolio with a replacement value exceeding $300 billion. Most well-known are the DOI's iconic and unique national treasures, which have priceless historical significance. More broadly, the DOI owns approximately 43,000 buildings, 100,000 miles of roads, and 80,000 structures; including dams, laboratories, employee housing, Indian schools, visitor facilities, historic structures and hydropower infrastructure. The related deferred maintenance backlog has grown to over $15 billion in 2016, of which over $11 billion belongs to the National Park Service. DOI is committed to determining how to best address

this backlog and maintain its facilities for the safety and productivity of its workforce, and the continued high quality experience and enjoyment by the American public.

Striking a Regulatory Balance – In accordance with the Executive Order on Enforcing the Regulatory Reform Agenda, the DOI will identify regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The DOI will continue to protect human health and the environment in a responsible, cost-effective manner but in a way that avoids imposing an undue process or economic burden on the public.

Generating Revenue, Jobs, and Economic Activity - The DOI grants access to public lands and offshore areas for all forms of energy development—representing roughly a quarter of the Nation's domestic supplies of oil and natural gas—while ensuring safety, environmental protection and revenue generation for the American public. It is important to the Nation's future that these natural resources are managed wisely and – as appropriate -- made accessible for public use to help generate revenues, enhance national security, create jobs, and grow the U.S. economy.

Restoring Trust - It is critical that the DOI can be trusted to operate in the best interest of the American public. Key to maintaining public trust and confidence in the integrity of government is the adherence to high ethical standards and ensuring that government business is conducted with impartiality, transparency, accountability, and integrity. While many of our employees have important law enforcement responsibilities as part of their jobs, more generally we want the public to primarily view our employees as helpful and friendly technical experts, not as law enforcement. When we do need to perform our law enforcement responsibilities, our preference is to achieve compliance through education and demonstrating a sincere desire to create win-win situations with the public we serve. The DOI embodies this principle, follows the law and holds people accountable. Decisions are based on sound science and the best interest of the public.

The DOI is committed to effective and efficient financial operations and accountability characterized by high quality and timely reporting, robust internal controls, clean audits, and effective follow-up on audit and internal control findings. The DOI utilizes the enterprise Financial and Business Management System for the integration of business functions including budget execution, finance, acquisition, improved internal controls, a secure information technology environment, and a community of business innovation, efficiency, and transparency.

Respect for Tribal Sovereignty – As a steward of tribal trust assets, the DOI plays a critical role for the United States in fulfilling the trust responsibility to Indian tribes. The DOI is committed to effectively meeting that responsibility by assisting tribes and Indian individual land owners to create greater economic opportunities, build safer and healthier communities, and effectively consulting with tribal governments.

OVERVIEW OF THE FY 2018-2022 STRATEGIC PLAN

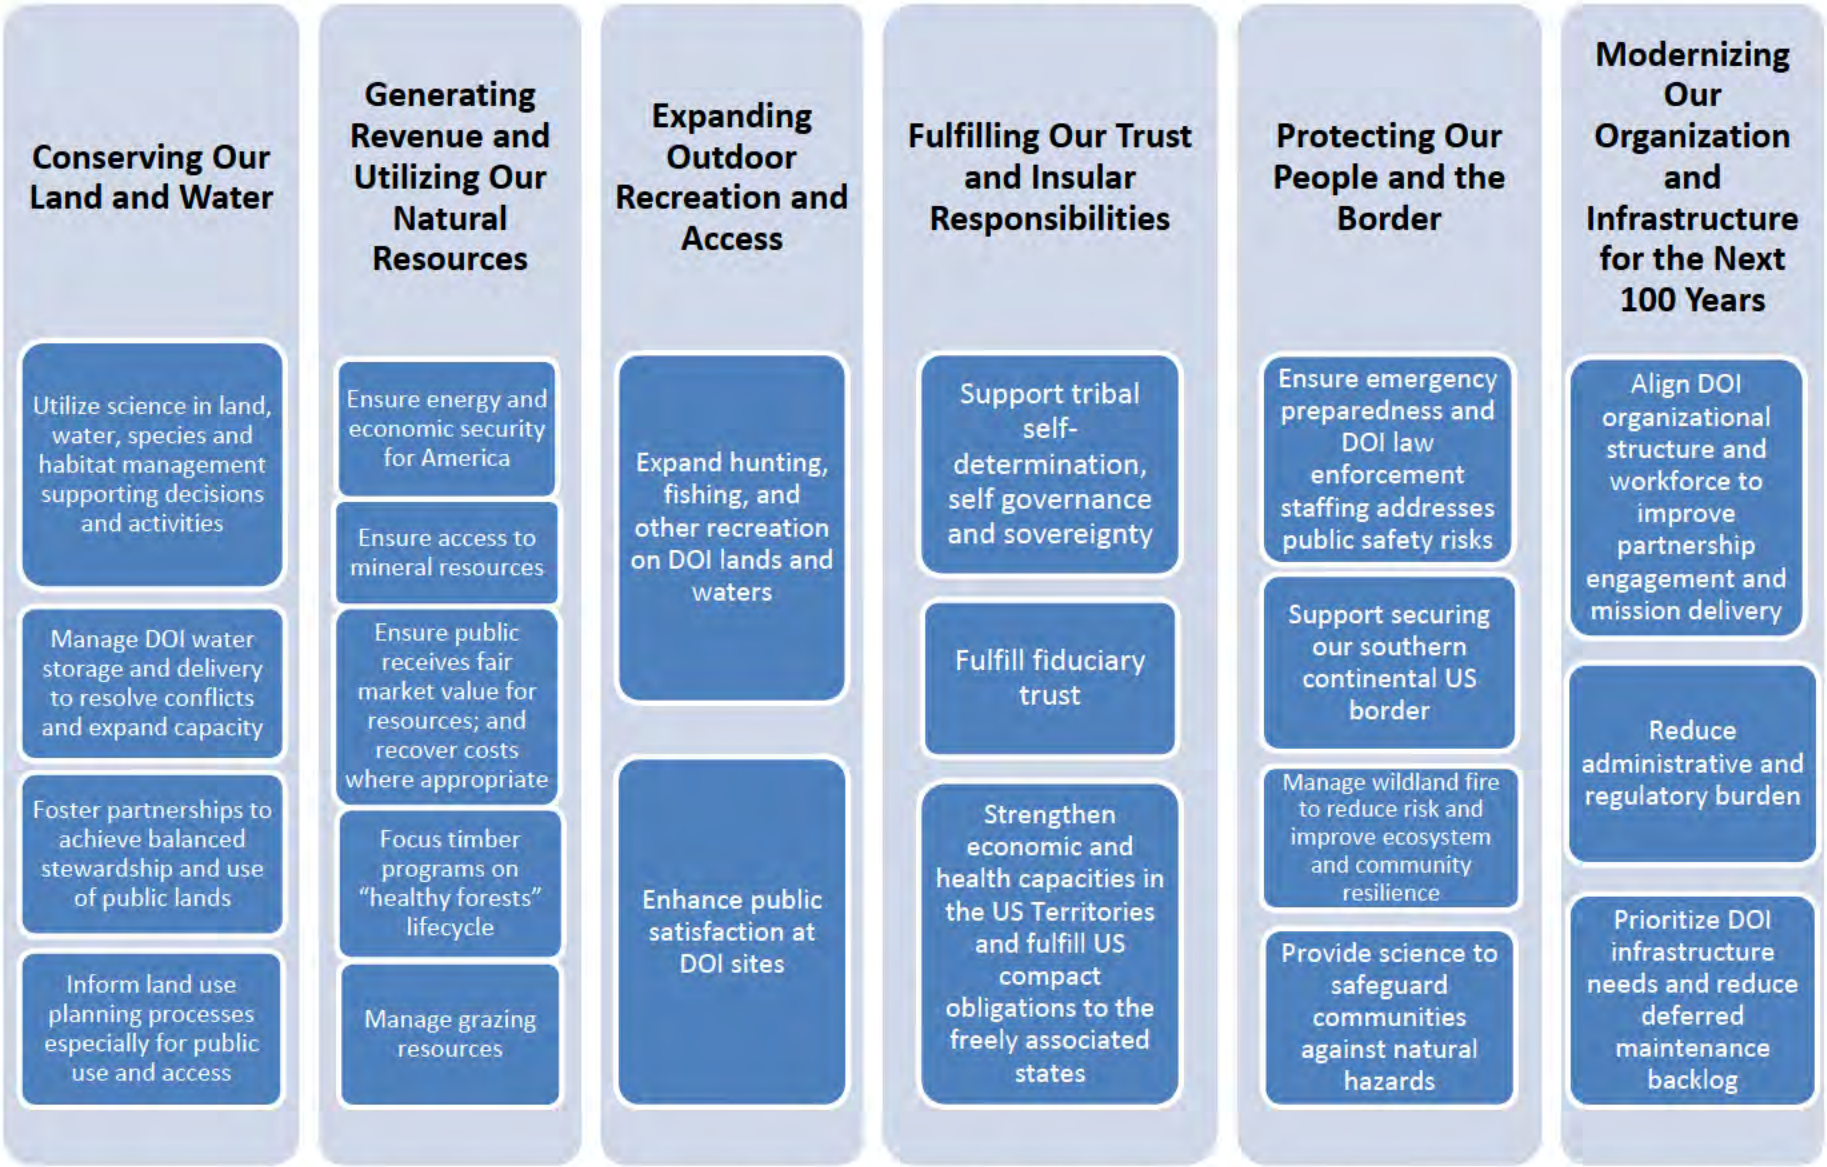
The DOI's FY 2018-2022 Strategic Plan provides the framework for the programs and activities that are performed by 10 bureaus and multiple offices, and take place at approximately 2,400 locations throughout the Nation.

The Strategic Plan facilitates the integration of programs, the allocation and alignment of resources, and collaboration and coordination with stakeholders to achieve key goals. A set of six mission areas, 21 goals, 34 strategies, and approximately 120 performance measures will guide the DOI's activities for the next five years. These mission areas reflect the Secretary of the Interior's priorities, while the goals and strategies describe the means by which those priorities will be achieved.

The mission areas, goals, and strategies that constitute the Strategic Plan are displayed in the Strategic Plan Framework, followed by a description of the mission areas, goals, strategic objectives, and performance measures. An FY 2022 goal is provided for each performance measure that reflects a desirable annual level of achievement that DOI aspires to assuming the availability of a reasonable level of resources. The anticipated level of performance for these measures on an annual basis in consideration of actual resource levels will be reported in the DOI's Annual Performance Plan and Report that is released with the FY 2019 President's budget and available at www.doi.gov/bpp.

There is some continuity of performance measures from the FY 2014-2018 Strategic Plan because the core of our statutory mission remains the same regardless of shifts in policy emphasis resulting from a change in Administrations. Trends in performance related to funding and programmatic plans are available in the DOI's FY 2019 Annual Performance Plan and Report available at www.doi.gov/bpp.

STRATEGIC PLAN FRAMEWORK



Crosscutting principles: Senior executives provide leadership in achieving Presidential and Secretarial goals and are expected to: ensure cost-effective operations and quality service to the public; facilitate organizational cooperation and conflict resolution; ensure workplace environment conducive to employee productivity and safety; and hold individuals accountable for their actions.

DESCRIPTION OF MISSION AREAS

(With Supporting Goals, Strategies, and Performance Measures)

MISSION AREA 1: Conserving Our Land and Water

The DOI ensures that America's natural endowment – the lands and waters of the United States – is conserved for the benefit, use, and enjoyment of current and future generations. The DOI's bureaus use the best available science, modern natural resource management techniques, technology and engineering, efficient decision-making processes, robust partnerships, and improved land use planning to ensure balanced stewardship and use of the public lands and its resources, including wildlife and fish species.

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities

The DOI will ensure that it delivers data, tools, techniques, and analyses that advance understanding of natural resources, the forces that shape them, and the interactions of plants, animals, and people that live within them. Research, monitoring, and remote sensing are necessary to understand and detect changes that affect land resources and processes that are essential to the Nation's economic growth, well-being, and ecological health. These efforts support the DOI in its role as the largest manager of the Nation's land and water resources.

The DOI's land and water management bureaus are stewards of the lands and waters managed by the DOI. These bureaus will utilize the best available scientific data, tools, techniques, and analyses provided by our researchers, our nonfederal government partners, or others to maintain and restore lands and waters and ensure that habitats support healthy fish and wildlife populations.

STRATEGY #1: Apply science to land, water, and species management

The USGS seeks to understand the Nation's environmental, natural resource, and economic challenges with scientific monitoring and research to support the development of management strategies that address the impacts of land use on the availability and sustainability of land and water resources. The USGS helps management agencies by providing them the measures designed to prevent or control invasive species and wildlife disease outbreaks; and apply decision science to actions.

The USGS conducts monitoring, assessments, and research in order to understand and predict changes in the quality and quantity of water resources in response to land-use and management scenarios. Through advanced understanding and integrated modeling of processes that determine water availability, the USGS informs the balanced management of water resources for multiple purposes, including energy production, human and crop consumption, the sustainability of fish and other aquatic communities valued by society, and public enjoyment. The USGS works with land and water resources managers in applying its data and research results to help them make informed decisions for effectively managing the resources with which they are entrusted.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted land and water management research actions	100%
USGS	Millions of people living in targeted watersheds covered by completed water quality models	306.7
USGS	Percent completion of planned water quality sampling and studies for the Nation's groundwater, streams and rivers	100%
USGS	Percent completion of the USGS National Water Census baseline	100%
USGS	Percent completion of U.S. aquifer groundwater availability baseline studies	43%
USGS	Percent completion of targeted species management research actions	100%
USGS	Percent completion of targeted biological threats research actions	100%
USGS	Percent completion of collaborative research projects on factors affecting fish and wildlife habitat	100%

STRATEGY #2: Provide stewardship of land, surface water, streams and shorelines

The Bureau of Land Management, the Fish and Wildlife Service, the National Park Service, and the Bureau of Reclamation manage, maintain and restore uplands, wetlands, lakes, streams and some marine areas through efforts that include controlling invasive plants and animals, restoring land or waters to a condition that is self-sustaining, and ensuring that habitats support healthy fish and wildlife populations. The DOI's Natural Resource Damage Assessment and Restoration program works with the bureaus to assess the impacts of oil spills and hazardous waste sites and coordinates restoration efforts. The Office of Surface Mining Reclamation and Enforcement works with states and tribes to ensure that coal mining is conducted in a manner that protects citizens and the environment during mining, restores the land to beneficial use following mining, and mitigates the effects of historic mining by pursuing reclamation of abandoned mine lands. The DOI aims to balance the conservation of special places with resource development while also providing visitors with opportunities for outdoor recreation.

Bureaus administer their resource management and conservation programs on more than 400 million acres of upland, wetland, and aquatic lands within their jurisdiction. Many of these lands have special status as national parks, seashores, monuments, wildlife refuges, wilderness areas, national conservation lands or wild and scenic rivers. Land managers utilize earth and natural science, social science, partnerships with other DOI bureau, federal, state, local and tribal entities, and other tools and resources (including its front-line managers) in managing these lands and waters.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of DOI acres that have achieved desired conditions	88.9%
BLM, FWS	Percent of DOI riparian (stream/shoreline) miles that have achieved desired conditions	89.2%
BLM, BOR, FWS, NPS	Percent of acres infested with invasive plant species that are under control	0.2%
FWS, NPS	Percent of invasive animal species populations that are under control	8.7%
OSMRE	Percent completion of abandoned mine lands restored by eliminating health, safety, and environmental concerns	57%
OSMRE	Percent of active coal mining sites that are free of off-site impacts	88%
OSMRE	Percent of coal mine acreage reclaimed to beneficial post-mining land use	44%

STRATEGY #3: Provide stewardship of wildlife, bird, fish, and plant species

The Fish and Wildlife Service (FWS) is tasked with the conservation and protection of certain populations of fish, wildlife, plants, and their habitats. The FWS works first to prevent species from becoming listed as threatened or endangered by using the best available science to make land management decisions that might affect species viability. The FWS conducts, consults or coordinates many species management activities in partnership with others including NPS, BLM, Reclamation, and other federal, state, local and tribal agencies and private organizations. The strategy to sustain species focuses on identifying and implementing corrective actions that will lead to species recovery.

Congress passed the Endangered Species Act (ESA) in 1973, to protect and recover imperiled species from becoming extinct and to conserve the habitats upon which they depend. The FWS and the Commerce Department's National Marine Fisheries Service (NMFS) administer the ESA. The FWS has primary responsibility for terrestrial and freshwater organisms, while the responsibilities of NMFS are mainly marine wildlife such as whales and anadromous fish such as salmon.

FWS works with many partners using a range of conservation tools to recover listed species (threatened and endangered) to ensure that they are able to survive on their own in the wild. These tools can include acquiring and restoring habitat, removing invasive species, conducting surveys, monitoring individual populations, and breeding species in captivity to release them into their historic range.

The DOI uses a number of datasets and metrics to track its progress on species listings, downlistings, delistings, critical habitat, scientific findings, and Species Status Assessments (SSA). The SSA is the scientific foundation supporting listing, delisting, and downlisting decisions and recovery plans and includes biological and threats information and analyses that help FWS and its partners better understand the species status. Recovery criteria, describing the conditions of the species when the protections of the act are no longer necessary, address both the biological status in terms of the 3 R's (resiliency, representation and redundancy) and the mitigation of threats necessary to achieve that status. The DOI is working to include more information on critical habitat,

estimated costs of recovery and economic impact of its threatened and endangered species listings and recovery action plans, to provide a more complete perspective to states and the public of the actions being planned for attempting to save each species.

In its Policy Regarding the Role of State Agencies in ESA Activities, FWS coordinates, collaborates, and uses the expertise of state agencies in developing the scientific foundation upon which FWS bases its determinations for listing actions. By September 30, 2018, all FWS decisions on whether to list a species under the ESA will be informed by input from state fish and wildlife agencies, subject to the affected states' willingness to participate (some state fish and wildlife agencies have declined participation due to lack of authority for some species under ESA review). This input should include (but is not limited to) a solicitation of state data and state personnel involvement in the development of SSAs.

Per Section 4(c)(1) of the ESA, FWS is required to review the status of each listed species at least once every 5 years and determine whether it should be: (1) removed from the List (delisted), (2) reclassified from endangered to threatened (downlisted), or (3) reclassified from threatened to endangered (uplisted). By September 30, 2019, for 100% of all species with 5-year reviews recommending downlisting or delisting FWS will have proposed downlisting or delisting rules acted on by the Director, or a new status review initiated if new information indicates the need for an updated assessment prior to initiating rulemaking, within 2 years of the 5-year review recommendation.

The DOI's responsibility to protect fish, wildlife, and native plants transcends jurisdictional boundaries, and includes efforts that affect almost 1,500 species with special status under the Endangered Species Act and more than 1,000 migratory birds that receive Federal protection under the Migratory Bird Treaty Act. The DOI works to combat domestic and international wildlife trafficking by improving enforcement of domestic laws, strengthening international cooperation and global enforcement, promoting legal trade and hunting, and helping to reduce demand for illegal wildlife products. Under Executive Order 13771 of January 30, 2017, i.e. Reducing Regulation and Controlling Regulatory Costs, the DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to private constituents, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient. This activity is described further in the second goal under the sixth Mission Area on reducing administrative and regulatory burden.

Agency Priority Performance Goals:

- ***By September 30, 2018, 100% of proposed species listings will be based on best available information that includes state input and/or data provided through participation in Species Status Assessments (SSA).***
- ***By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species.***

Bureaus	Key Performance Indicators	2022 Goal
FWS	Percent of Threatened or Endangered species listed for 2.5 years or more with a final recovery plan	75%
FWS	Percent of five-year Threatened or Endangered species five-year status review recommendations to downlist or delist acted on within five years *(prior to next status review)*	60%
FWS	Percent of listed species with current five-year reviews *(completed in the last five years)*	90%
FWS	Percent of rules and findings completed based on Threatened or Endangered Species Status Assessments	100%
FWS	Percent of threatened and endangered species listings with proposed critical habitat	100%
FWS	Percent of migratory bird species that are at healthy and sustainable levels	72%
FWS	Percent of fish species of management concern that are managed to self-sustaining levels	23%

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity

The Western U.S. is one of the fastest growing regions of the country, and urbanization has created significant demands for water use and service. The DOI strives to keep its water storage facilities in good condition to ensure safe and reliable water supply. Stretching existing water supplies for multiple uses are among the many significant challenges facing Reclamation. The Bureau of Reclamation is the nation's largest wholesale water supplier and manages water in 17 western states. Reclamation's projects and programs are an important driver of economic growth bringing water to more than 31 million people and providing one of five western farmers (140,000) with irrigation water for 10 million acres of farmland that produce 60 percent of the nation's vegetables and 25 percent of its fruits and nuts. Reclamation's facilities also provide substantial flood control, hydropower, recreation, and fish and wildlife benefits.

The DOI is the lead agency in defining and protecting water rights for Indian tribes and individual Indian land owners. The Bureau of Indian Affairs (BIA) is responsible for maintaining 137 dams on tribal lands. The BIA also provides irrigation water to over 780,000 acres through 17 congressionally authorized irrigation projects.

STRATEGY #1 Manage water resources and delivery

Changes in water supplies, water demands, and the increased duration and frequency of droughts have the potential to affect Reclamation's ability to fulfill its mission. Many rural communities face significant challenges in financing the cost of replacing or upgrading aging and obsolete facilities and systems. Water conservation programs increase the available water supply and contribute to DOI's broader objective of achieving a more sustainable, secure water supply. Protecting and extending the life of aging infrastructure are significant challenges facing Reclamation, and maintenance, rehabilitation, and replacement will become more costly over time. Reclamation

prioritizes infrastructure assets based on detailed design criteria: engineering need, consequence of failure, financial considerations, efficiency opportunities, scheduling, and others.

The Bureau of Indian Affairs (BIA) water management functions are implemented through three complementary programs. The Water Rights Negotiation/Litigation Program defines and protects Indian water rights and settles claims through negotiations if possible, or alternatively, through litigation. The Water Management Program assists tribes in managing, conserving, and utilizing trust water resources. The BIA Irrigation, Power and Safety of Dams program operates and manages irrigation, power, and dam infrastructure. The program sets high standards for maintenance, collaboration with stakeholders, and effective water and power distribution. The BIA manages facilities to ensure they do not present an unacceptable risk to downstream lives and property; and are managed in an economically, technically, environmentally, and culturally sound manner.

Agency Priority Performance Goal: By September 30, 2019, the Bureau of Reclamation will facilitate water conservation capacity of 53,800 acre-feet to help reduce the impact of drought.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]	74%
BOR	Amount of acre feet of water conservation capacity enabled to help address drought	1,392,000
BIA	Percent of projects completed in support of water management, planning, and pre-development.	77%

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands

The DOI will assess, utilize and enhance the most promising of partnership practices and explore the potential for furthering these types of opportunities to work jointly with other individuals and organizations for the benefit of the nation's public lands, waters, and historic and cultural sites and the fish and wildlife species.

STRATEGY #1: Build and maintain partnership programs

Public and private partnerships provide opportunities for greater engagement of people and organizations in caring for and managing the natural, historical, cultural and physical resources across the DOI's 500 million acres. This can be especially beneficial for our national park units, National Wildlife Refuges, wildlife management areas, and national conservation public lands. Support can come from other federal or state agencies, tribal nations, volunteers, non-profit organizations, educational institutions, corporations or foundations through sponsorship or philanthropy. DOI bureaus should endeavor to partner with non-traditional stakeholders to increase our relevance to the American public, rather than just relying on traditional constituencies.

The National Park Service already has the authority from Congress to accept monetary and in-kind gifts, including those collected through the National Park Foundation. Similarly, the Fish and Wildlife Service has authority to accept gifts from some entities, including some non-profits organizations and the federally chartered non-profit National Fish and Wildlife Foundation. The Bureau of Land Management has Congressional authority to accept monetary and other types of donations, along with Congressional authorization to create a Bureau of Land Management Foundation. The BLM works with local, state, federal, and private partners on nearly all of the activities undertaken on public lands, from identifying important fish and wildlife habitat with the state game and fish agencies, working with local rangeland fire protection associations, to providing hunting and fishing opportunities for sports men groups. As permitted under current law, the DOI hopes to develop further philanthropic and sponsorship opportunities, and promote other partnering best practices.

The DOI utilizes migratory bird joint ventures as collaborative, regional partnerships of government agencies, non-profit organizations, corporations, tribes, and individuals that conserve habitat for the benefit of priority bird species, other wildlife, and people. Joint ventures bring these diverse partners together under the guidance of national and international bird conservation plans to design and implement landscape-scale conservation efforts in support of the North American Waterfowl Management Plan and the other bird management plans. These joint ventures use state-of-the-art science to ensure that diverse habitat is available to sustain migratory bird populations for the benefit of those species, other wildlife, and the public. These partnerships have a three-decade record of success, they use non-regulatory solutions and economically sound business approaches, promote working lands conservation, sporting, and outdoor traditions, and support resilient urban and rural communities.

The Department of the Interior and the U.S. Department of Agriculture working near each other in the field continue to pool resources, conduct joint projects and share services under Service First agreements. Service First authority promotes collaborating across bureau and agency boundaries to develop joint solutions to common problems and integrate responses to federal land management issues and opportunities. Bureaus of the Department of the Interior and the U.S. Department of Agriculture cooperate in jointly managing some areas. For example, the National Trail, and Wild and Scenic River Systems span every state of our nation and exceed the length of the interstate highway system. Federal land management agencies, as well as state and local jurisdictions and partners enhance recreational access, conserve the Nation's heritage, and leverage the federal investment to manage these nationally recognized resources cooperatively.

Building new partnerships for infrastructure improvement is a priority at the DOI. There are also numerous volunteer opportunities, where individuals or associations provide service in caring for natural resources and cultural and historic assets on our public lands (see www.volunteer.gov). The DOI will also empower managers in the field to directly engage in further collaboration within the units they manage, identify best practices for collaboration and partnering, provide training and technical support, and encourage field managers to find or create and execute partnerships on a local basis.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Number of estimated work hours in a national park unit, National Wildlife Refuge, or Bureau of Land Management site that are performed or sponsored by a private citizen, National Service participant or non-federal entity	9,870,000
BOR, FWS, CUPCA	Number of non-DOI acres restored, including through partnerships	593,876
FWS	Number of non-DOI acres managed or protected to maintain desired condition, including acres restored through partnerships	602,654
FWS, CUPCA	Number of non-DOI riparian (stream/shoreline) miles restored, including through partnerships	255

GOAL #4: Inform land use planning processes especially for public use and access

The DOI will review and improve its land planning processes to enable expanded access and use of the public lands while restoring a balance between conservation and utilization of the lands, energy and mineral resources, waters, fish and wildlife, and other natural and cultural resources. The DOI will employ the latest available science, land-imaging and other technology tools and datasets to inform land use planning to maximize the societal value of land planning. The DOI land use planning will take into account the land use plans of affected local and state governments.

STRATEGY #1: Assess land use planning processes for public access and use of DOI lands

DOI land use and management plans ensure that the public lands are managed in accordance with the intent of Congress as stated in several authorities including, but not limited to: the Federal Land Policy and Management Act (FLPMA), the National Environmental Policy Act (NEPA), the Endangered Species Act, the National Wildlife Refuge System Administration and Improvement Acts, the Organic Act of 1916 (National Park Service), the Alaska Native Claims Settlement Act, and the Alaska National Interest Lands Conservation Act (ANILCA).

Land use planning efforts vary across bureaus based on enabling legislation. The National Park Service creates management plans to execute its mission. The National Wildlife Refuge system creates Comprehensive Conservation Plans for each refuge as part of their mission. The BLM's mission states that its duty is to sustain the health, diversity, and productivity of America's public lands for the multiple use and enjoyment of present and future generations.

A common thread through all three bureaus' mission is the need to accommodate and benefit the use and enjoyment of these public lands for both present and future generations. Some lands are made available for multiple use and sustained yield, other lands for conservation and preservation values.

The DOI is undertaking the challenge to review and improve its planning processes in ways that can best meet the sometimes-conflicting uses for public lands. The DOI will strive to enhance public participation and input to the planning processes, engage our state, local, and tribal government partners, provide open and understandable decision-making, expedite the decision-making process

so that implementation is not delayed, and ensure that public access and use is appropriately built into every land use plan.

STRATEGY #2: Inform land use planning with mapping and land imaging

The USGS is the lead civilian mapping agency for the Nation and supports the conduct of detailed surveys and the resulting distribution of high-quality and highly-accurate topographic, geologic, hydrographic, and biogeographic maps and data. Remote sensing satellites and aircraft monitor the Earth providing information that is broad, precise, impartial, and easily available. For more than 45 years, Landsat satellites have collected data over the planet's land surface to support global research studies. These data constitute the longest continuous record of the Earth's land surface as seen from space.

High-resolution information results in geologic maps and geospatial products that enable precise planning of civil engineering and transportation infrastructure, versatile urban planning, improved flood projection, timely and accurate emergency response, effective hazard identification and mitigation, and detailed environmental analyses. This information is also used by DOI bureau land managers in exercising their responsibilities to help plan for public land use and access.

In the next decade, the USGS will continue to improve spatial and temporal resolution through research and development of products such as full four-dimensional geologic maps, showing how the complex geologic structure of the Earth has changed through time. Mapping accuracy through cutting-edge technology allows for precise planning for energy development, transportation and pipeline infrastructure projects, urban planning, flood prediction, emergency response, and hazard mitigation.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent of land-area coverage available to the public over the internet through the National Geologic Mapping Database	55.5%
USGS	Percent of foundational topographic information services updated quarterly to support on-demand mapping	100%
USGS	Percent completion of research efforts related to land resource management	100%
USGS	Number of terabytes of remotely-sensed data managed	20,140
USGS	Percent increase of scientific research enhanced with Advanced Research Computation	100%

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources

The DOI provides access to and manages energy and other resources including oil, gas, coal, timber, grazing, and non-energy minerals on public lands and oil and gas on the Outer Continental Shelf (OCS). The DOI is committed to achieve and maintain American energy dominance through responsible productivity of the public lands for the multiple use and economic benefit of present and future generations.

GOAL #1 Ensure energy and economic security for America

The DOI is the steward and manager of much of America's natural resources which include oil, gas, coal, minerals, and renewable energy sources, such as solar, wind, geothermal, and hydropower. There are vast amounts of untapped domestic energy reserves on public lands. DOI is also reinitiating the National OCS Oil and Gas Leasing Program development process, which is a key component of the America First Energy Plan and the Executive Order on Implementing an America-First Offshore Energy Strategy, to bring jobs and prosperity to millions of Americans. Our nation will use the revenues from energy production to rebuild our roads, schools, bridges and public infrastructure. The Department's "all-of-the-above" strategy facilitates development of all energy resources and makes our nation stronger by decreasing dependency on other nations, creating jobs, and helping drive economic growth.

STRATEGY #1: Promote safe and robust oil, gas, coal, and renewable energy resource development

Oil, gas, coal and renewable energy form the cornerstones of our nation's energy base, and the DOI will continue to expand production of both offshore and onshore conventional and renewable U.S. energy resources while ensuring safety and reliability through efficient permitting, appropriate standards, assessment and oversight. As demand for energy resources grows, agencies within the DOI, such as BIA, BLM, BOEM, BSEE, OSMRE, and USGS conduct work that is increasingly critical to understand the exploration, development, quality, supply, and use of our energy resources. This work enables the DOI to advance new sources of efficient energy generation, facilitate the construction of new or upgraded infrastructure including transmission networks, develop resources responsibly, and ensure that the American public receives a fair return on that development.

Agency Priority Performance Goals:

- ***By September 30, 2019, the Bureau of Land Management will eliminate its backlog of fluid mineral Applications for Permits to Drill (APD's) that have been pending for 3 years or more.***
- ***By September 30, 2019, the Bureau of Land Management will process 80% of parcels created for leasing public lands for oil, gas, or other mineral extraction within 180 days.***

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of pending fluid minerals Applications for Permits to Drill (APDs) which are processed	75%
BLM	Percent of high priority fluid mineral cases that have completed inspection during the year	100%

BLM	Percent of coal lease applications processed	15%
BLM	Number of acres of public lands made available for oil and natural gas leasing	25,000,000
BLM, BOEM	Number of megawatts of approved capacity authorized (that year) on public land and the OCS for renewable energy development while ensuring compliant environmental review	2,020
BOEM	Percentage of Exploration and Development Plan reviews completed within statutory timelines	100%
BOEM	Percent of offshore lease sale processes completed, pursuant to the Secretary's approved National OCS Oil and Gas Leasing Program	100%
USGS	Percent completion of targeted energy resource assessments and research	100%
BSEE	Amount of operational offshore oil spilled (in barrels) per million barrels produced	3.1
BSEE	Percent of high risk production facilities and operations inspected	95%
BSEE	Number of recordable injuries per 200,000 offshore man hours worked	.390
BSEE	Percentage of high risk well operation (e.g., drilling) inspections completed	95%

STRATEGY #2: Provide hydropower

The DOI facilitates the development and use of renewable energy that employs hydropower energy to strengthen US energy security, economic vitality, and quality of life. The Bureau of Reclamation (BOR) is the second largest producer of hydroelectric power in the U.S., operating and maintaining 53 hydroelectric power facilities, comprising over 14,700 megawatts of capacity. On average, Reclamation generates 40 million megawatt-hours of electricity each year – the equivalent demand of over 3.5 million U.S. homes, returning over one billion dollars in federal revenue through power sales. Sustainable, low cost hydropower generated by Reclamation projects has provided significant value to the nation, spurring the development of the western U.S. – through the provision of firm electric power to rural communities as well as ancillary service to support western interconnect grid reliability. Reclamation works to promote domestic energy production by enabling new energy generation from hydropower, a renewable source, and facilitating the construction of new or upgraded transmission networks, helping to create new industries and supply chains, driving economic growth and job creation, and helping provide more energy from domestic sources.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Amount of hydropower capability, in megawatts (MW), installed from 2018 through 2022	50
BOR	Percent of hydropower facilities in good condition as measured by the Facility Reliability Rating	73%

BOR	Percent of time that Bureau of Reclamation hydroelectric generating units are available to the interconnected Western electrical system during daily peak demand periods	80%

GOAL #2: Ensure access to mineral resources

The DOI recognizes that public lands are an important source of the Nation's non-energy mineral resources, some of which are critical and strategic. The DOI is committed to ensuring appropriate access to public lands, for orderly and efficient development of these resources under principles of multiple use management.

STRATEGY #1: Manage non-energy mineral development

DOI promotes energy security, environmental protection, and economic development through responsible, science-informed management of mineral resources. The BLM conducts environmental analysis of complex issues necessary to authorize use on BLM public lands and meet the increasing demand for non-energy solid leasable minerals, especially potash and phosphate. BOEM's Marine Minerals Program provides sand and gravel resources to protect and improve coastal infrastructure and the environment locally, regionally and nationally. Additionally, the in-depth science provided by the USGS Mineral Resources Program (http://minerals.usgs.gov) facilitates resource discovery and provides essential information and analyses for strategic, evidence-based economic and geopolitical decisions.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of non-energy mineral exploration and development requests processed	30%
BOEM	Number of sand and gravel requests processed for coastal restoration projects	8
USGS	Percent completion of targeted non-fuel mineral resource assessments and research	100%
USGS	Percent completion of targeted Critical Mineral Early Warning System (CMEWS) analyses and evaluations	100%

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate

Rents, royalties, and bonuses are collected from issuing leases on public lands, and offshore on the OCS, and for the amount of the resource extracted. These resources include oil, gas, coal, forage for grazing, and access to renewable energy resources such as solar, wind, and geothermal. It is important that these financial transactions include appropriate accountability and fair return to the American public. The associated regulations and practices for these fees and collections must also be rational and transparent to ensure businesses that extract and process these resources can function efficiently and profitably in order to support the economic growth and security of the nation.

STRATEGY #1: Ensure accurate and timely accounting and collection of energy revenues

The Department collects, disburses and verifies natural resource revenue generated from issuing leases on public lands, and offshore on the OCS. This revenue is then shared with states and localities according to specific statutory obligations, allocated to various Federal programs, or deposited in the General Fund of the Treasury, thus serving to reduce the deficit. The DOI is committed to managing these transactions accurately, responsibly, and in a timely manner. The Royalty Policy Committee has been reinstated by the Secretary to elicit robust advice and recommendations regarding policies related to royalties from these resources and their benefit to the American public.

The BSEE helps ensure the accuracy of metering from higher risk hydrocarbon sites that experience high volumes of throughput and/or have a past history of noncompliance to help ensure the appropriate financial benefit is obtained for the American people. Additionally, data driven procedures enable the BOEM and the BLM to ensure bid adequacy through a two phased review system for onshore and offshore leasing, and also allow for timely collection and disbursement of mineral and renewable energy revenues by the Office of Natural Resources Revenue (ONRR). ONRR's distributions benefit the Land and Water Conservation Fund, the Historic Preservation Fund, and the Reclamation Fund, helping to ensure America's natural resources and rich history are available to be enjoyed by current and future generations. Distributions to states are used to fund capital projects such as schools, roads, and public buildings. Revenues collected from leases on Indian lands directly benefit members of the Indian community.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
ONRR	Percent of federal and Indian oil and gas revenues disbursed on a timely basis per statute ($ Billions)	98%
BSEE	Percent of oil royalty meters, identified as high-risk using a risk based methodology, where meter provings will be observed	10%

STRATEGY #2: Ensure effective collection and application of recreation fees

The nation's public lands offer many excellent locations for public recreation in the outdoors at national parks and monuments, National Wildlife Refuges, BLM public lands and other locations, in historic sites and buildings and at national treasures such as the Statue of Liberty. Facilities (roads, visitor centers, bathrooms, historic buildings, museums, etc.) that enable visitors to enjoy their public lands and sites are expensive to maintain. All of the major land management bureaus have large backlogs of deferred maintenance at these facilities. The DOI will continuously review its fee structure to determine how best to accommodate visitors enjoyment while collecting fees that help to offset some of the maintenance costs required to keep visitor-facing infrastructure in good shape for visitors. All such reviews of fees and changes will remain consistent with Congressional direction that has been provided through a series of laws including the Federal Lands Recreation Enhancement Act.

The National Park Service established fee structure guidelines in 2006 to standardize rates across the country. The resulting tier system assigns each park unit to a tier and associated entrance fee schedule based on the type of site and the amenities provided for the public. During 2017, the National Park Service initiated a comprehensive review to evaluate and consider bringing entrance fees at all park units into compliance with their assigned tier through a process of public engagement by January 1, 2018. Even with proposed increases, entrance fees remain affordable at $15-$30 per vehicle, which is normally good for several days. The America the Beautiful Pass Annual Pass remains at the price of $80 for one year for unlimited entrance fees for almost all national parks, Fish and Wildlife and BLM sites where fees are required. Congress raised the one-time cost of the America the Beautiful Lifetime Senior Pass for those age 62 or older from the previous fee of $10 to $80 effective in August 2017.

Reviews of other amenity fees (such as for campgrounds and special use permits) will also strive to set fair and equitable fees for activities that visitors enjoy after they enter the park, refuge, or recreation area. The bureaus will seek public comment during any process to review and modify fee amounts to ensure that the public has an opportunity to raise questions and provide comments regarding any fee changes. The bureaus will also identify ways to modernize and enhance fee collection mechanisms that speed access to facilities and/or reduce the cost to the federal government for fee collection.

GOAL #4: Focus timber programs on "healthy forests" lifecycle

The BLM manages forests or woodlands for the benefit of the American public. The BLM maintains a permanent source of timber supply, which supports the production of lumber, plywood, and paper, while also protecting watersheds, regulating stream flow, contributing to the economic stability of local communities and industries, and providing recreational opportunities. Responsible management that reduces fire fuels improves the health and resilience of our forests and helps to prevent forest fires.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to national sources of timber supply. Many tribes now actively participate in management of their forest assets through self-governance and self-determination programs.

STRATEGY #1: Manage sales of timber and forest product resources

Forest management programs within the DOI generate economic benefits through timber harvests on public and Indian trust lands, and restoring forest health. The benefits of healthy forests include typical forest products such as timber and biomass but also include opportunities for recreation and maintenance of watershed health.

The BLM has two focus areas for forest management, the Oregon and California grant lands and the public domain lands. For Oregon and California lands, generating revenue for counties is the primary driver of forest management treatments, while for public domain lands, fire management is the primary driver for forest management. The BLM is currently reviewing its management plans to determine prospects for offering additional timber for sale in the future.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to the national sources of timber supply. Many tribes now actively participate in management of their forest assets through the self-governance and self-determination programs.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of allowable sale quantity (ASQ) timber offered for sale consistent with applicable resource management plans (O&C--Oregon and California--only)	100%
BLM	Volume (mmbf) of wood products offered consistent with applicable management plans	285
BIA	Percent of Annual Allowable Cut prepared and offered for sale or free use	48%

GOAL #5: Manage grazing resources

The BLM manages livestock grazing on over half of its public lands; approximately 18,000 permits and leases are held by ranchers that graze their livestock on over 21,000 grazing allotments throughout BLM managed lands. The BLM's overall objective is to ensure the long-term health and productivity of these lands. BLM uses a variety of methods to accomplish this objective – periodic rest or deferment of grazing in pastures in specific allotments during critical growth periods; vegetation treatments; and projects such as water developments and fences. The terms and conditions for grazing on BLM-managed lands such as stipulations on forage use and season of use are set forth in the permits and leases issued by the Bureau to public land ranchers.

STRATEGY #1: Provide for sustainable forage and grazing

Livestock grazing contributes to food production and adds to local economic stability, and it can be used in certain areas to maintain and improve land health by reducing hazardous fuels and minimizing the likelihood and impact of catastrophic wildfires. The BLM partners with local communities and state and local governments to develop rangeland improvement projects, stewardship contracting, and good neighbor authority in its rangeland management. In recent years, the number of grazing permits and leases processed has decreased due to dramatic increases in litigation and drought. The BLM continues to look for opportunities to streamline the grazing permit process and provide livestock operators greater flexibility in grazing their livestock on public lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of grazing permits and leases processed as planned consistent with applicable resource management plans	16%
BIA	Percent of tribal range units assessed during the reporting year for level of utilization	15%

MISSION AREA 3 Expanding Outdoor Recreation and Access

Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the DOI's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Americans have the opportunity to hunt and fish on public lands managed by the DOI as part of its multiple-use policy that also includes hiking, camping, climbing, boating, wildlife viewing, and other outdoor pursuits.

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters

Hunting, fishing and other outdoor activities contributed $156 billion in economic activity across the United States according to the FWS National Survey of Fishing, Hunting and Wildlife-Associated Recreation. More than 101 million Americans, or 40 percent of the United States' population 16 and older, pursue wildlife-related recreation, which supports 480,000 American jobs.

Following two initial Secretarial Orders issued on his first day, Secretary Zinke issued Secretarial Order 3356 in September, 2017, to further expand public access to lands and waters administered by the DOI, for hunting, fishing, recreational shooting, and other forms of outdoor recreation. In addition, this Order gave greater priority to recruiting and retaining sportsmen and women conservationists, with an emphasis on engaging youth, veterans, minorities, and underserved communities that traditionally have low participation in outdoor recreation activities.

STRATEGY #1: Promote hunting, fishing, and other recreation on DOI lands and waters

There are 372 National Wildlife Refuges and wetland management districts open to hunting and 308 refuges and wetland management districts open to fishing. As practiced on refuges, hunting and fishing do not pose a threat to wildlife populations, and in some instances, are actually necessary for sound wildlife management. For example, deer populations will often grow too large for the refuge habitat to support. If some of the deer are not harvested, they destroy habitat for themselves and other animals and die from starvation or disease. The harvesting of wildlife on refuges is carefully regulated to ensure an appropriate balance between population levels and wildlife habitat. The FWS National Fish Hatcheries continue to be a valuable tool in managing fisheries providing recreation opportunities to America's 36 million anglers who spend $46 billion annually in pursuit of their favored pastime.

There are 76 areas managed by the National Park Service that permit hunting. A total of 51,097,000 acres managed by the NPS are open to hunting at various times during the year, representing approximately 60% of the total acreage of the NPS system. The Bureau of Land Management estimates that over 95 percent of the nearly 250 million acres of BLM-managed public lands are open to hunting.

The recreation areas developed as a result of Bureau of Reclamation water projects are among the Nation's most popular for water-based outdoor recreation. There are 289 Reclamation project areas that have developed recreation facilities and opportunities available for public use. Reclamation has approximately 6.5 million acres of land and water, most of which is available for public outdoor recreation. The 187 developed recreation areas managed by Reclamation or a non-Federal recreation partner draw over 24 million visits annually. The 187 developed recreation areas provide 549 campgrounds, 454 boat launch ramps, and more than 5,500 miles of shoreline.

Bureaus	Key Performance Indicators	2022 Goal
FWS	Number of National Wildlife Refuge acres newly opened to hunting and fishing	250,000
BLM	Number of legal public access transactions completed that facilitate open access to recreation opportunities	20
BLM	Number of newly installed campsites, restrooms, and other facilities that promote public access to BLM-managed public lands	30
BLM, BOR, FWS	Number of individuals participating in outdoor recreation activities at special events	5,420,000

GOAL #2: Enhance public satisfaction at DOI sites

Visitor satisfaction with the quality of experiences on public lands remains very high. Collectively, satisfaction is above 90 percent for the bureaus providing recreation services, e.g., interpretive programs, visitor centers, camping, fishing, hiking, horseback riding, boating, off-highway vehicle driving, wildlife viewing, photography, and climbing. Satisfaction with recreation services provided through facilitated programs remains very high – also above 90 percent.

STRATEGY #1: Enhance the enjoyment and appreciation of our natural and cultural heritage

Survey results show that a sizeable percentage of visitors are satisfied with their experiences at parks, refuges and other public lands. Competition from other forms of entertainment pose challenges to the DOI in its quest to ensure that all Americans understand, appreciate and enjoy the special places protected by the national parks, wildlife refuges and BLM lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of visitors satisfied with the quality of the experience	95%
BLM, NPS	Percent of visitors satisfied with facilitated programs	94%

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities

The DOI upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationships between the Federal government and federally recognized Tribes, and by providing services to individual American Indians, and Alaskan Natives. The U.S. also has important relationships with the affiliated insular areas including the Territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. The DOI administers and oversees Federal Assistance to the three Freely Associated States: The Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

GOAL #1: Support tribal self-determination, self-governance, and sovereignty

The DOI is strengthening the nation-to-nation relationship between the Federal Government and tribal nations because self-determination, sovereignty, self-government, and self-reliance are the tools that will enable tribal nations to shape their own destiny. Tribes have also assumed an expanded role in the operation of Indian programs through Public Law 93-638 contracting. Tribes contract with the Federal Government to operate programs serving their tribal members and other eligible persons.

STRATEGY #1: Support self-governance and self-determination

Self-Governance: Under a self-governance compact, a tribe takes over most or all operations affecting that tribe. The Indian Affairs' Office of Self-Governance (OSG) implements the Tribal Self Governance Act of 1994 by developing and implementing regulations, policies, and guidance in support of self-governance initiatives. Indian Affairs advocates for the transfer of Federal programmatic authorities and resources to tribal governments and supports tribal sovereignty and an expanded role in the operation of Indian programs. The program work includes negotiating annual funding agreements with eligible tribes and consortia, and resolving issues identified in financial and program audits of self-governance operations.

Self-Determination: Under a self-determination contract, a tribe contracts with BIA to take over operation of a program formerly delivered by BIA employees. The funds BIA previously used to run the program transfer to the tribe. Self-determination typically is a program-by-program decision. The Indian Self-Determination Program within BIA works to further American Indian tribes' exercise of self-determination and conducts oversight of self-determination contracts and grants.

Bureaus	Key Performance Indicators	2022 Goal
AS-IA	Percent of Self-Governance Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	99%
BIA	Percent of Self-Determination Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	91%
AS-IA	Percent of P.L. 93-638 contracts with clean audits	90%

GOAL #2: Fulfill fiduciary trust

The DOI has ongoing responsibilities to ensure that trust and restricted Federal Indian-owned lands are managed effectively and to accurately account for revenues and disbursements in a timely and efficient manner. The Office of the Special Trustee for American Indians and the Bureau of Indian Affairs oversee fiduciary trust activities. The DOI assists American Indian and Alaska Native communities in developing capabilities needed to strengthen their communities and maintain economic self-sufficiency. Efforts such as reducing fractionation of Indian lands and developing conservation and resource management plans help tribes maximize economic benefits of their lands. Securing unsubsidized employment reduces dependency on Federal subsidized programs such as childcare assistance, food stamps, and welfare.

Trust assets are crucial to the financial well-being of individual Indian beneficiaries and key components in the economies of tribes. As such, these assets must be managed with great care, paying attention that all financial transactions are completed accurately and as quickly as possible. Since passage of the American Indian Trust Fund Management Reform of 1994, the trust accounts managed by OST are balanced to the penny on a daily basis. OST has also incorporated industry-standard practices, such as a lockbox facility, to shorten the time between the payment of a lease and deposit of those funds into a trust account. For Fiscal Years (FY) 2013 through 2017, OST has received a "clean" audit opinion for Individual Indian Monies (IIM) accounts, attesting to its professionalism in managing these assets. Despite this proven record of success, OST retains a commitment to continual reform, looking for more ways to improve its service to individual Indians and tribes.

The Bureau of Indian Education (BIE) helps provide quality education opportunities starting in early childhood in accordance with tribally identified strategies and needs that contribute to the social well-being of the community and sustain Indian cultures. Tribes directly operate 150 of the 183 BIE funded schools through self-determination contracts and Tribally Controlled Schools Act grants.

STRATEGY #1: Ensure accurate and timely management of fiduciary trust assets

In its effort to promote the fulfillment of fiduciary trust processes, the DOI assists Indian tribes in developing capacity and infrastructure needed to attain economic self-sufficiency on reservations to enhance their quality of life. One critical path is economic development and job creation. The BIA coordinates development of comprehensive tribal programs with the Departments of Labor and Health and Human Services. The DOI offers programs and financial services that encourage start-ups and help position Indian businesses and individuals to compete in today's economy.

Bureaus	Key Performance Indicators	2022 Goal
BIA	Total average gain in earnings of participants that obtain unsubsidized employment through Job Placement Training programs for tribes submitting P.L. 102-477 related reports	$10.82
BIA	Percent of active, supervised Individual Indian Monies (IIM) case records reviewed in accordance with regulations	98%

BIA	Increase in the percentage of submitted land-into-trust applications with determinations (Fee to Trust)	40%
OST	Percent of financial information initially processed accurately in trust beneficiaries' accounts.	99%
OST	Percent of oil and gas revenue transmitted by ONRR recorded in the Trust Funds Accounting System within 24 hours of receipt.	99%
OST	Percent of timeliness of financial account information provided to trust beneficiaries.	100%

STRATEGY #2: Strengthen Indian Education

Improving performance in BIE schools is a challenge the DOI is addressing through initiatives aimed at increasing student achievement. Students at BIE-funded schools receive a culturally relevant, high-quality education that prepares them with the knowledge, skills, and behaviors needed to flourish in the opportunities of tomorrow, become healthy and successful individuals, and lead their communities and sovereign nations to a thriving future that preserves their unique cultural identities.

Bureaus	Key Performance Indicators	2022 Goal
BIE	Percent of students attending BIE-funded schools completing high school with a regular diploma within four years of their 9th grade entry date	69%

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states

The DOI supports the U.S. Territories and Freely Associated States (FAS) through the Office of Insular Affairs (OIA) under the Assistant Secretary for Insular and International Affairs. The U.S.-affiliated insular areas are: the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Residents of these U.S. territories are U.S. citizens or nationals. The DOI also administers and oversees Federal assistance provided to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. The Assistant Secretary Insular and International Affairs and the Office of Insular Affairs carry out these responsibilities on behalf of the Secretary.

STRATEGY #1: Bolster Healthcare Capacity

The Territories and FAS experience significant healthcare challenges. The DOI along with other partners, such as the Department of Health and Human Services (HHS), will work with insular area partners to improve the quality of healthcare across the insular areas. The DOI will make investments to implement corrective action plans which address chronic operational and facility shortcomings at territorial hospitals, which serve their U.S. citizens and nationals, with a focus on those identified by the HHS/Centers for Medicare/Medicaid (CMS) and local elected officials. Additional investments will be made to combat non-communicable and communicable diseases impacting the Pacific and Caribbean islands such as obesity, diabetes, and tuberculosis.

Offices	Key Performance Indicators	2022 Goal
OIA	Percent of Community Water Systems (CWS) that receive health based violations notices from the US Environmental Protection Agency	9%
OIA	Number of new and relapse tuberculosis cases occurring during the calendar year on the islands (per 1,000 people in the population)	1
OIA	Percent of patients with newly diagnosed tuberculosis disease for whom 12 months or less of treatment is indicated, who complete treatment within 12 months	95%
OIA	Infant mortality rate per 1,000 live births (number of deaths to infants from birth through 1 year of age per number of live births)	6

STRATEGY #2: Strengthen Island Economies

Strong local economies provide employment and a viable tax base for citizens in the Insular Areas. The DOI will assist the insular areas to strengthen their economies through strategic investments in infrastructure, public services and technical assistance which will attract and retain private sector investment. The DOI will promote policies and improve Federal coordination on issues impacting insular economies.

Capital investments will be made in basic utilities, hospitals, schools, ports, tourist areas, telecommunications and roads as they create the backbone for increased economic activity. Pursuing renewable energy strategies lessens dependence on oil imports and provides more reliable and affordable energy.

Stable economies and fiscally prudent insular governments foster a more hospitable climate for investment in the islands. Technical assistance will be provided to equip the insular areas with the statistical and management information necessary for informed leadership decision making, expert consultants to effectively improve insular government financial policies and procedures, and strong financial management systems along with technical planning abilities.

The DOI will help create economic opportunity by forging partnerships that bolster tourism and attract industry by promoting the unique island cultures, natural resources, and by preparing the next generation of business leaders. Key indicators of OIA's effectiveness include the following:

Average per capita Gross Domestic Product (GDP): In the four U.S. Territories (Guam, US Virgin Islands, American Samoa, and Commonwealth of the Northern Mariana Islands (CNMI)) for which it is measured, GDP remains a fraction of that for other U.S. citizens in the states. OIA provides technical assistance to the insular areas to assist with economic development planning and execution and supports local planning and education activities related to tourism, agriculture, and aquaculture. In addition, OIA funds infrastructure projects related to economic development, such as fiber optic connectivity, port improvements and renovations to tourist districts.

Cost of electricity: Without indigenous fossil fuels, insular areas face great challenges in achieving reliable, affordable, and secure energy, which can have severe economic effects on the island communities. These areas depend almost entirely on imported petroleum products for energy. The residential cost per kilowatt hour for power in the territories directly impacts the quality of life in

the insular areas and remains over three times higher than the national average. To try to address high electricity costs, the Office of Insular Affairs (OIA) contracts with the Department of Energy's National Renewable Energy Laboratory (NREL) to engage territories and provide energy efficiency and renewable energy assessments, help develop strategic energy plans, and provide technical assistance in reviewing and implementing alternative energy projects. The OIA, through its Empowering Insular Communities grant program, continues to provide funding for the highest priority projects identified in the energy plans including photovoltaic, wind and geothermal development projects, as well as assuring traditional energy plants continue operating.

Offices	Key Performance Indicators	2022 Goal
OIA	Difference in the mean GDP per capita in the 4 US territories compared to the mean GDP per capita in the US	60%
OIA	Difference in the residential cost per kilowatt hour for power from the national average	2X

STRATEGY #3: Fulfill US Compact Obligations

In coordination with the State Department, the DOI will implement compact obligations with three U.S.-affiliated Freely Associated States (FAS): the Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI) and the Republic of Palau (Palau). The DOI will make direct grants to the FSM and RMI under their amended Compacts to provide assistance in six sectors: education, health care, infrastructure, public sector capacity building, private sector development, and environment. The DOI will also continue to support U.S. compact obligations to Palau.

Offices	Key Performance Indicators	2022 Goal
OIA	Ratio of FAS private sector jobs versus total FAS employment	55%
OIA	Ratio of FAS public sector jobs versus total FAS Employment	45%
OIA	Percent of FAS employment attributable to OIA Grants and Programs	30%
OIA	Percent of FAS employee compensation attributable to OIA grants and programs	25%
OIA	Average FAS private sector wage rate as a percentage of average FAS central government wage rate	45%

MISSION AREA 5 Protecting Our People and the Border

Inherent in DOI's management responsibilities of the public lands is the requirement to protect employees and visitors. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices covering four disciplines – law enforcement, emergency management, wildland fire, and natural hazards science. The DOI's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities. Wildland fires potentially endanger lives and property. The Office of Wildland Fire (OWF) coordinates among the DOI's land management bureaus and the US Forest Service to safely, efficiently, and effectively prevent, respond to, and manage the impacts of wildfires. The USGS also protects lives by monitoring and warning of natural hazards such as earthquakes, volcanoes, landslides, and environmental health hazards.

The DOI has land on both the Canadian and Mexican borders, and a presence in the Pacific that exposes Americans to risks from Asia. The Administration is presently emphasizing securing our southern border with Mexico to better protect our country. The DOI has a considerable amount of land that borders Mexico. As such, the DOI's law enforcement officers work in partnership with the US Customs and Border Patrol, Immigration and Customs Enforcement, Drug Enforcement Agency, and tribal, state and local governments to address the flow of illegal immigration, gun and drug trafficking, and to mitigate the impacts associated with these activities, which affect DOI lands and our community partners. In addition, OWF shares wildfire management responsibilities with Mexico along the southern border.

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks

The DOI places a high priority on safety, security, and preparedness, and will uphold its responsibilities for protecting lives, resources, and property through a wide variety of program areas, including law enforcement, health and safety, security, and emergency management. The DOI's preference is to achieve public and visitor compliance with applicable laws and regulations by using techniques that are not confrontational and are designed to elicit voluntary as opposed to coerced compliance.

STRATEGY #1: Ensure public safety on our lands

The Office of Law Enforcement and Security (OLES) provides program direction and oversight on law enforcement policy, border security, drug enforcement, training at the national academy, internal affairs, victims assistance, program compliance, and inspections as well as emergency deployment of DOI law enforcement resources. The Office coordinates with other Federal, state and local agencies (including the Department of Homeland Security, Federal Bureau of Investigation (FBI), and Central Intelligence Agency) on law enforcement and security issues, including infrastructure on the Outer Continental Shelf, the Trans-Alaska pipeline, and gas transmission lines.

To help ensure effective protection of people on DOI lands, each bureau will determine the effective level and distribution of law enforcement staffing for each of its programs on a unit-by-unit basis. The effective level and distribution of staffing needs is dependent on the differing

conditions, levels of risk, and populations served in each unit, captured through a staffing model developed and monitored by each bureau. The DOI's bureaus will engage in developing these staffing models, to determine on a program basis the effective levels of law enforcement staffing that are needed across its units, evaluate the actual level of law enforcement staffing that presently exists, and develop recommendations for better ensuring the effective level of staffing for protecting the people in each unit.

The DOI will strengthen law enforcement in Indian Country by putting more officers on the streets, bolstering tribal courts, and helping fight violent crime and drug abuse. Tribal justice systems are an essential part of tribal governments, which interface with BIA and tribal law enforcement activities. Congress and the Federal courts have repeatedly recognized tribal justice systems as the appropriate forums for adjudicating disputes and minor criminal activity within Indian Country. It is important that the BIA and tribal law enforcement activities complement the operations of the tribal courts to ensure that justice in the tribal forums is administered effectively.

Bureaus	Key Performance Indicators	2022 Goal
OLES	Percent of DOI law enforcement agencies with a current law enforcement staffing plan	100%
BIA	Percent of criminal offenses solved by arrest (Part 1 Offense Clearance Rate)	44%

Strategy 2: Prepare DOI to respond to and recover from emergencies and incidents

The Office of Emergency Management (OEM) promotes all-hazard preparedness and response; ensures continuity of the DOI to perform essential functions during catastrophic events; and assists communities during imminent threats. Collectively, the DOI supports the five National Planning Frameworks (Protection, Prevention, Mitigation, Response, and Recovery) and their related five Federal Interagency Operational Plans, the National Incident Management System, and the National Oil and Hazardous Substances Pollution Contingency Plan while continuing the DOI's mission to protect natural and cultural resources. The DOI's All-Hazards Baseline Operational Plan provides the baseline guidance for how the Department prepares for and responds to emergencies, regardless of type or cause. The OEM leads coordination and information sharing for emergency management regarding communications, public health, environmental health, wildlife health, integrated pest management, invasive species, and occupational safety and health across the DOI's bureaus and offices.

Offices	Key Performance Indicator	2022 Goal
PEM	Average Interior Readiness (I-READ) Index score for emergency preparedness across DOI Bureaus/Offices	91.0%

GOAL 2: Support securing our southern continental US border

The DOI manages 41% of the southwest border of the continental United States. The DOI's managers in the field are daily faced with tough decisions on how to best utilize their law

enforcement assets. An integrated government approach is essential to effectively securing the border and supporting the construction of a physical barrier where needed. Through partnering, federal, state, tribal, and local law enforcement agencies working in proximity to each other have been able to address critical issues like illegal immigration and marijuana smuggling.

STRATEGY #1: Support securing our southern continental US border

The DOI's goal is to increase collaboration among the agencies operating along the border to better understand each other's mission, share resources, and coordinate efforts. This is accomplished by routine interagency coordination, participating in local Border Management Task Force (BMTF) meetings, interagency training, an annual interagency border forum, and law enforcement specific operations.

The US Border Patrol is the main federal agency responsible for patrolling DOI lands adjacent to the US/Mexican Border. The DOI's goal is to work with US Border Patrol to decrease illegal immigration on DOI managed public lands through collaborative efforts with partnering agencies.

Bureaus	Key Performance Indicators	2022 Goal
PMB/OLES	Number of apprehensions on DOI-managed lands	Reduced Annually

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience

The DOI, working with the Department of Agriculture, will improve the way that both agencies manage wildland fire by ensuring that fire management assets are used in the most efficient way possible. The DOI will work with state, local, tribal, and other partners to ensure a coordinated approach to wildland fire management that enables protection responsibilities to be exchanged and resources shared to improve operational efficiency and reduce management duplication. The DOI will continue to integrate science and technology into informing and supporting the firefighters with the appropriate training tools, resources and program support to enable them to work safely and effectively.

The DOI is developing new wildland fire management performance measures to better articulate and determine the efficacy of Department and Administration resources in achieving desired resource conditions that reduce the intensity, severity or negative effects of wildfire. As part of this effort, the Department has established a working group among the four DOI wildland fire bureaus, as well as the U.S. Forest Service, which will explore the feasibility of concepts and principles in wildfire risk mitigation, and examine the value of the strategic placement of fuels treatments as informed by a risk assessment and mitigation plan. This group will develop recommendations for a) establishing outcome-based targets, and b) annually evaluating the performance of the program in meeting the desired objectives of the National Cohesive Wildland Fire Management Strategy. When

completed, the DOI will incorporate the new performance measures into its strategic plan implementation.

STRATEGY #1: Integrate fire ecology, risk management, and collaboration to mitigate wildfire impacts

The Department's Office of Wildland Fire coordinates programs and funding across four bureaus (BLM, FWS, NPS, and BIA) that manage wildland fire programs to implement the National Cohesive Wildland Fire Management Strategy, a science-based collaborative approach to mitigating wildfire risk. The DOI, in partnership with the Department of Agriculture's Forest Service, is committed to the inclusive principles of providing safe and effective response to wildfires, promoting fire-adapted communities, and creating fire-resilient landscapes. The DOI strives to achieve a science-based and technically effective wildland fire management program that is integrated with natural resources programs.

Successful management in fire-adapted communities and landscapes depends on implementation of a broad-based, intergovernmental, collaborative, and national cohesive strategy to address the mounting challenges of escalating fire behavior, increased risk to responders, greater natural and cultural resource losses, and increased threats and losses to communities. The DOI is a lead agency in this collaborative approach with the Forest Service and other Federal, state, tribal, and local governments and stakeholders.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
OWF	Percent of DOI-managed landscape acres that are in desired condition as a result of fire management	36%
OWF	Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan	94%
OWF	Percent of wildfires on DOI-managed landscapes where the initial strategies fully succeeded during the initial response phase	97%

GOAL #4: Provide science to safeguard communities from natural hazards

The USGS helps protect public safety, public health, and property by effectively delivering natural hazards and environmental health science. The Nation's emergency managers and public officials use USGS science to inform citizens of the potential risks these hazards pose to natural systems and the built environment, improve preparation and response activities, and protect the health of the public, which reduce the loss of life and property.

STRATEGY #1: Monitor and assess natural hazards risk and response planning

Responsibilities in natural hazards include the issuing of warnings and advisories for earthquakes, volcanic eruptions, landslides, and coastal erosion; informing warnings issued by other agencies for floods, tsunamis, and wildfires; providing timely information to emergency managers and response officials, the media, and the public to inform and educate communities during and between crises.

The USGS supports these activities by implementing 24x7 operations for seismic, volcanic, and geomagnetic monitoring efforts; maintaining an extensive national network of streamgages measuring rainfall, streamflow, stream height or lake levels; and developing the next generation of tools for rapid evaluation of hazards.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted natural hazards assessments of very high and high-threat regions of the Nation (Index)	4%
USGS	Percent completion of targeted landslide hazard research	8%
USGS	Percent completion of coastal and marine hazards and subsidence research (Index)	87%
USGS	Percent progress towards optimal monitoring capability for natural hazards situational awareness (Index)	52%
USGS	Percent of the National Streamflow Network (NSN) streamgages that are fully operational	88%

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years

The DOI is looking to better ensure effective operations and service delivery through coordinated organizational alignments in the field across bureaus and with other federal and nonfederal partners, and through putting a relatively larger fraction of our employees into the field to serve the public. Expediting environmental analysis and compliance, reducing the cost of space, collocating offices for more convenient public service and improved interagency coordination, and common regional boundaries are all being explored to help improve the DOI's infrastructure and related effectiveness.

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery

The DOI is reevaluating its organizational model to determine how to best achieve its mission of serving the American public, honoring our tribal and fiduciary trust responsibilities, and managing and protecting our land, water and natural resources for the next 100 years.

STRATEGY #1: Ensure effective alignment of DOI organizational structure in the field and with partners

The DOI intends to establish unified regional boundaries for its bureaus in 2018 and to further develop this approach in 2019. The goal is to improve overall operations, internal communications, customer service, and stakeholder engagement. Aligning geographic areas across the DOI will enhance coordination of resource decisions and policies and will simplify how citizens engage with the DOI.

Organizing bureaus with common geographic areas will allow for more integrated and better coordinated decision making across bureaus. Currently, the DOI's bureaus have more than 40 distinct regions, each with its own geographic boundaries. This complicates coordination and hampers the DOI's ability to get things done expeditiously. Having unified regions will help streamline operations and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision. The new regional boundaries currently under discussion – and subject to modification – are expected to have minimal budgetary impact.

To improve customer service and reduce operational costs, sharing functions at field locations has already begun. For a number of years, the Department of the Interior and Department of Agriculture's US Forest Service (USFS) have pooled resources, conducted joint projects, and shared services under Service First agreements where field locations are in close proximity to each other. Service First authority promotes partnering across agency boundaries to develop joint solutions to common problems and to address federal land management issues in an integrated way.

STRATEGY #2: Improve strategic hiring, placement and retention efforts to ensure mission-critical service delivery through data driven processes and increased employee engagement efforts

The DOI is committed to managing America's vast natural and cultural resources with a 70,000-strong and 350 occupation-plus workforce that exemplifies high performance, customer service and

accountability. Historically, it has been difficult to attract certain DOI employees or recruits in certain occupations to positions in headquarters, or even to regional offices, because many of our employees enjoy living in relatively rural areas and because the cost of living is so much higher in large cities. Moving a larger fraction of our staff of some bureaus to relatively more rural and considerably less expensive areas in the West might therefore both reduce payroll cost because fewer employees would receive locality pay, and improve employee retention.

To facilitate strategic human capital planning, the Department has put in place hiring controls to emphasize new hiring for field-related positions rather than administrative and support positions in the Washington, D.C., and Denver, Colorado metropolitan areas.

The DOI will leverage automation to improve employee performance and training opportunities, and examine additional data to determine if operational efficiencies can be gained while minimizing redundancies under the current organizational design.

Data to be analyzed include:

- Federal Employee Viewpoint Survey (*e.g.*, employee engagement)
- Geographic Representation of Bureau Mission Critical Occupations
- Geographic Representation of Administrative and Support Services
- Customer Service data
- Benchmarking cost allocations for administrative and support functions
- DOI Human Capital Framework Evaluations
- Accountability drivers on performance, labor management, EEO, etc.
- Bureau plans in response to the Department-wide Workplace Environment Survey

Offices	Key Performance Indicator	2022 Goal
PHR	Employee engagement index for DOI in the Federal Employee Viewpoint Survey	75%
PHR	DOI's ranking among large agencies in the Partnership for Public Services' Best Places to Work report	1

GOAL #2: Reduce administrative and regulatory burden

Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, directed agencies to "manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations." The DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to the public, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient.

STRATEGY #1: Evaluate and improve the net benefits of regulatory reform initiatives and policies, and identify regulations for repeal, replacement, or modification

On February 24, 2017, President Trump signed Executive Order 13777 entitled, "Enforcing the Regulatory Reform Agenda" to alleviate unnecessary regulatory burdens placed on the American people. The Executive Order established a Regulatory Reform Officer (RRO) for each agency and a Regulatory Reform Task Force. The efforts of the RRO and the task force will help identify

regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The costs of the regulatory and deregulatory actions are measured as the opportunity costs or cost savings to society, as defined in OMB Circular A-4 (i.e. the values reported are the cumulative net savings from deregulatory actions and costs of newly required regulatory actions over multiple years starting in FY 2017). In 2017, the DOI achieved cumulative net savings of $1.15B (net present value) from its deregulatory actions. Goals for subsequent years will be established as the DOI completes its review of target regulations.

Office	Key Performance Indicator	2022 Goal
DOI	Total incremental cost of all EO 13771 regulatory actions and EO 13771 deregulatory actions (including costs or cost savings carried over from previous fiscal years)	TBD
DOI	Number of EO 13771 regulatory actions issued.	TBD
DOI	Number of EO 13771 deregulatory actions issued.	TBD

STRATEGY #2: Improve transparency and timeliness of the infrastructure permitting process

As outlined in the President's Executive Order "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure," and the corresponding Secretarial Order 3355, a significant opportunity exists for agencies to streamline and collaborate on National Environmental Protection Act (NEPA) compliance efforts. The DOI believes this can best be achieved through a unified regional structure adopted across the DOI which focuses on the intersecting issues within the same geographical boundaries.

The DOI is also establishing an Executive Committee for Expedited Permitting (ECEP) to expedite the responsible leasing and permitting of energy and mineral production. More specifically, this involves, but is not limited to, the processing of Applications for Permit to Drill (APD), Expressions of Interest (EOI), coal leasing actions, Right-of-Way (ROW) applications, and harmonization of appurtenant environmental reviews.

Office	Key Performance Indicator	2022 Goal
DOI	*Cross-Agency Priority Goal metric on improving infrastructure permitting to be added*	
BLM	Average amount of time (in days) to process and administratively complete Applications for Permit to Drill	90 days
BLM	Average amount of time (in months) to issue a decision on major right-of-way applications	48 months
BLM	Average amount of time (in days) to process and administratively complete a grazing permit	390 days
FWS	Percent of formal Endangered Species Act Section 7 consultations addressed in a timely manner	100%

GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog

Real property assets are integral to the success of Interior's mission. DOI's real property inventory includes approximately 43,000 buildings and 80,000 structures across six major land-holding bureaus, with a replacement value of approximately $300 billion. DOI manages the full life-cycle requirements of nearly every type of constructed asset found, including visitor centers, dams, schools, health clinics, power generating facilities, housing, hotels, fire stations, campgrounds, roads, water and wastewater treatment plants, offices, and more. Many of these assets have historic or cultural significance that not only support the DOI's mission, but are important to our Nation's heritage.

STRATEGY #1: Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery

The DOI's goal is to balance mission delivery demands with adequate investments in operations and maintenance to sustain the portfolio in an appropriate condition befitting of our role as America's stewards. Appropriately maintained assets enable the DOI to accomplish habitat and resource management, provide outdoor recreation activities, deliver water, fulfill trust and treaty responsibilities, and provide critical economic inputs and job creation for local communities. Adequately constructed and maintained Federal real property supports healthy habitats and populations, availability of safe and reliable public use opportunities, and robust local economies.

A significant factor impacting a sustainable portfolio of constructed assets is DOI's aging infrastructure. Many assets already exceed original design life, and this trend of aging infrastructure continues to threaten mission delivery. Prioritizing repairs on a portfolio scale will ensure the assets condition is maintained at an acceptable level. Effective management of deferred maintenance is a Departmental priority to ensure completion of needed repairs and prevent further deterioration and unsafe conditions. The DOI prioritizes addressing deferred maintenance/repair needs for mission critical activities. Furthermore, proactive maintenance, replacement of components and colocation of programs and staff in owned facilities will help to reduce future costs.

The DOI conserves the Nation's cultural and heritage sites that reflect a rich and diverse history. The DOI safeguards our heritage for the generations that follow, to better understand our country and learn from our past. Many challenges exist in protecting and maintaining historic and archeological sites, especially with the impacts of weather on fragile sites and structures. Sites are exposed to changing weather conditions that cause damage and deterioration of the structures and sites and some locations are vandalized or accidentally damaged by visitors to federal lands.

The Road Construction Program maintains and operates the 29,000 miles of BIA-owned roads and bridges. These roads and bridges serve as the primary access points to tribal communities, without which critical resources and services would not reach tribal members.

The DOI will continue to improve and provide safe, functional, energy efficient, and universally accessible BIA facilities. The DOI is allocating funds to improve its Bureau of Indian Education (BIE) funded schools, and improve the learning environment of BIE students.

Agency Priority Performance Goal: By September 30, 2019, the Department of the Interior will improve the condition of its priority real property assets such that 82% are in the desired state of acceptable condition.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
PAM	Percent of priority assets in acceptable condition (i.e. meet investment objective)	84%
PAM	Amount of priority deferred maintenance (repair) needs/activities addressed (i.e. completed for that year)	$1.2 billion
NPS	Value of NPS deferred maintenance work orders closed ($000)	TBD
BIA, BLM, FWS, NPS	Percent of historic structures on DOI inventory in good condition	57%
BIA, BLM, BOR, FWS, NPS	Percent of museum collections on DOI inventory in good condition	59%
BIA, BLM, FWS, NPS	Percent of archaeological sites on DOI inventory in good condition	67%
BOR	Maintain a completion rate of 95% for Safety of Dam recommendations	95%
BIA	Percent of miles of BIA road in acceptable condition based on the Service Level Index	14%
BIA	Percent of BIA bridges in acceptable condition based on the Service Level Index	69%
BIE	Percent of students in BIE school facilities that are in acceptable condition as measured by the Facilities Condition Index	67%

STRATEGY #2: Provide dependable and efficient information technology

Information Management and Technology (IMT) provides modern and secure technology solutions to advance the DOI's ability to deliver programs and services to the public and our customers. To do so, the DOI must protect its critical information assets from cyber exploitation and attack to ensure that employees and the public can rely on the confidentiality, integrity, and availability of the DOI's data and information systems. The DOI is implementing advanced technologies that will increase visibility into its IMT environment, improve protections around our high-value information assets, and empower its workforce to better detect, respond, and recover from cyber-attacks and breaches. With a more secure computing environment in place, its employees can more easily obtain the tools and data they need to perform the mission securely efficiently and effectively, anywhere and anytime.

The DOI will continue to deploy and mature Continuous Diagnostics and Mitigation (CDM) capabilities that help to fortify its networks and systems. These capabilities provide the DOI with tools necessary to better identify cybersecurity risks on an ongoing basis, prioritize these risks based upon potential impacts, and enable cybersecurity personnel to mitigate the most significant

problems first. Achieving the performance objectives will enable the DOI to meet the requirements of Presidential Executive Order 13800, "Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure." The DOI has adopted the National Institute of Standards and Technology (NIST) Cybersecurity Framework and will work towards implementing and maturing the set of activities known to be effective in managing cybersecurity risks and that are necessary to achieve key cybersecurity outcomes that support the following functions: Identify, Protect, Detect, Respond and Recover.

The DOI is working collaboratively with its user community to understand operational needs better in the field, resulting in expanding network capabilities to improve connectivity in remote areas so employees can be as productive as possible. To improve collaboration, the DOI will enhance its Geospatial Platform capabilities, which is an internet-based tool for sharing trusted geospatial data with the public, government agencies, and partners to meet their mission needs. The DOI will also seek to deliver improved services at a lower cost by consolidating and standardizing IT services and systems, including consolidating and optimizing its data center and network operations and standardizing security, customer support, and administrative functions.

Offices	Key Performance Indicator	2022 Goal
PIO	Percent of unclassified network hardware and software assets appropriately authorized and managed	95%
PIO	Percent completion of DOI's Federal Information Technology Acquisition Reform Act (FITARA) Implementation Plan	100%

APPENDIX A – ACRONYMS

APD	Application for Permit to Drill	I-READ	Interior Readiness (index)
APIPA	Association of Pacific Island Public Auditors	LHP	Landslide Hazard Program
APP	Annual Performance Plan	LIDAR	Light Detection And Ranging
APP&R	Annual Performance Plan and Report	LTRO	Land Title and Records Office
APR	Annual Performance Report	MMBF	Million Board Feet
ARPA	Archeological Resources Protection Act	MR&R	Major Rehabilitations and Replacements
AS-IA	Assistant Secretary for Indian Affairs	MRP	Mineral Resource Program
AS-IN	Assistant Secretary for Insular Affairs	MTS	Mineral Tracking System
AS-PMB	Assistant Secretary for Policy, Management, and	NAGPRA	Native American Graves Protection and
	Budget		Repatriation Act
BIA	Bureau of Indian Affairs	NAWQA	National Water Quality Assessment Program

Hi Steve,

To facilitate the process of getting out the information on performance plans to the SES and include needed language on the Strategic Plan, I was thinking of taking the memo which has already been signed and dated on p 1 but not yet sent out, and adding the Strategic Plan information on p 2 or 3. This way we do not need to do a whole new memo and have it go thru the surnaming/signature process again. Before I proceed, please let me know if this is ok with you?

Many thanks,
Laurie

We had written our guidance to have our SESers address the top ten list and SOs. The

political leadership team also want our SESers to address the relevant elements of the strategic plan. Did Greg Sheehan sign out the original guidance? If so, we will need to amend it. If not, we can intercept the package and add this additional guidance. Thanks. Steve

All,
Attached is the new DOI GPRA strategic plan. This, along with the Secretary's Top 10 list, ought to be reflected in the 2018 SES performance standards for your direct reports. With FY 18 already half over, I'd urge you to get FY18 performance plans in place for your SESers ASAP, if you haven't done so already, so they can understand your goals for them and have as much time as possible to accomplish those goals.
Thanks,
Scott

STRATEGIC PLAN FOR FISCAL YEARS 2018 – 2022

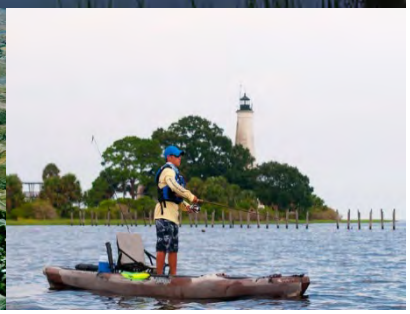

Table of Contents

LETTER FROM THE SECRETARY 1

MISSION AND ORGANIZATION 3

Mission 3

Vision 3

History 3

STRATEGIC PLAN FRAMEWORK 13

DESCRIPTION OF MISSION AREAS 14

MISSION AREA 1: Conserving Our Land and Water 15

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities 15

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity 19

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands 20

GOAL #4: Inform land use planning processes especially for public use and access 22

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources 24

GOAL #1 Ensure energy and economic security for America 24

GOAL #2: Ensure access to mineral resources 26

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate 26

GOAL #4: Focus timber programs on “healthy forests” lifecycle 28

GOAL #5: Manage grazing resources 29

MISSION AREA 3 Expanding Outdoor Recreation and Access 30

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters 30

GOAL #2: Enhance public satisfaction at DOI sites 31

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities 32

GOAL #1: Support tribal self-determination, self-governance, and sovereignty 32

GOAL #2: Fulfill fiduciary trust 33

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states 34

MISSION AREA 5 Protecting Our People and the Border 37

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks 37

GOAL 2: Support securing our southern continental US border 38

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience 39

GOAL #4: Provide science to safeguard communities from natural hazards 40

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years 42

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery 42
GOAL #2: Reduce administrative and regulatory burden 43
GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog 45
APPENDIX A – ACRONYMS 48

LETTER FROM THE SECRETARY

The Department of the Interior's Strategic Plan for Fiscal Year 2018-2022 is our bold vision for the future under President Donald J. Trump. As the chief stewards of our public lands, it is our job to ensure that these lands continue to be used "for the benefit and enjoyment of the people," as the words engraved into the Roosevelt Arch at Yellowstone National Park so proudly proclaim.

We will restore the American conservation ethic that built our nation. Among the American traditions that made our country great was a philosophy of multiple-use on our public lands. I am an admirer of President Theodore Roosevelt – he had it right. As President Roosevelt once remarked, "It is not what we have that will make us a great nation; it is the way in which we use it."

Our public lands are our greatest treasures, and all Americans should be able to experience these treasures. One of my top priorities as Secretary of the Interior is public access to public land. Recognizing that hunting and fishing is an integral part of the American heritage, we must do more to ensure that all Americans can enjoy these sports – not just the wealthy elite. Americans should also be proud of their public lands, which is why investing in American infrastructure and addressing the maintenance backlog at our National Parks is critically important.

While "benefit and enjoyment" includes recreation, it also includes traditional uses like grazing and timber harvesting. Our mandate is multiple-use of public lands, and multiple-use also includes the development of natural resources as we seek to leverage American energy for American strength. Americans should have the right to make a living off the land, and one of our most critical responsibilities at Interior is upholding this right.

If we are going to preserve our heritage, we must bolster our standing in the world. It is in the economic and national security interest of the United States to pursue a policy of American energy dominance. An America-First energy policy is one which maximizes the use of American resources while freeing us from dependence on foreign oil.

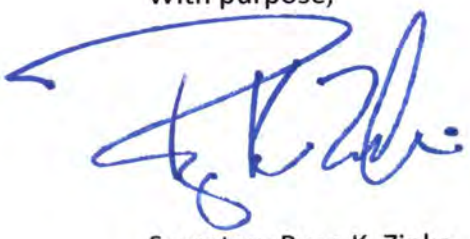
American energy dominance requires aggressive regulatory reform. With our strategic plan, the Interior Department has a unique opportunity to cut the burdensome, unnecessary regulations that have suppressed job creation and wealth generation. Regulatory reform also includes reduced permitting times. The Trump Administration will not deregulate or streamline at the expense of environmental standards or worker safety, but we will strike a balance and strive toward regulatory certainty going forward when creating a bureaucratic framework.

Along with our conservation stewardship responsibilities, we must also be the greatest champion of our tribal nations. Native Americans and Alaska Natives are proud people with a rich history. Sovereignty has to have meaning, and the days of empty promises to our tribal communities are over. Our priorities in Indian Country will be self-determination, government-to-government interaction, and empowerment.

To accomplish our goals, a reorganization of the Department is necessary. We will chart a path forward for the next 100 years at Interior, as Teddy Roosevelt did over a century ago. As a former Navy SEAL, I have long believed that a healthy front line makes for a healthy operation – it is in this spirit that the reorganization plan will focus on our front lines and how we can better engage those on the ground.

Our strategic plan will restore trust in local communities. The federal government has a long way to go when it comes to being a good neighbor, but I am confident we can get there. With a renewed focus on conservation and a bold approach to energy, the Department of the Interior can lead the way in making America great again. This is our desired outcome.

With purpose,



Secretary Ryan K. Zinke
United States Department of the Interior

MISSION AND ORGANIZATION

Mission

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

Vision

The Department of the Interior strives to fulfill a vision to:

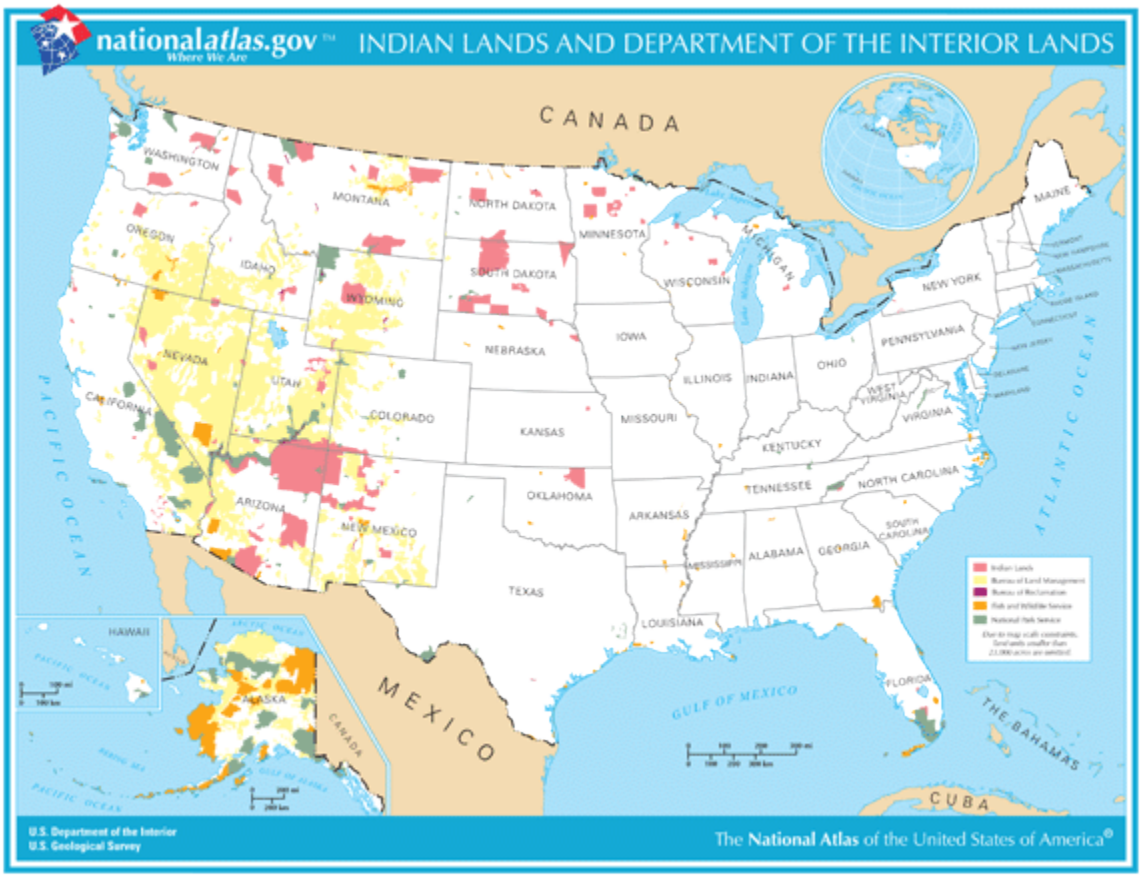
- *Promote energy dominance and critical minerals development* to create jobs for Americans, insulate our nation from volatile political developments overseas, provide additional energy security to allies via surplus domestic supply, and generate revenue for all levels of government so they in turn have the resources to better serve the American people.
- *Increase access to outdoor recreation opportunities for all Americans* so that our people can be healthier, more fully enjoy the wonderful features of their federal lands, and take advantage of hunting, fishing, and other outdoor recreation pursuits that are the roots of the conservation movement.
- *Enhance conservation stewardship* whereby all levels of government and private landowners work cooperatively together in an atmosphere of mutual respect to achieve shared natural resource management goals across landscapes.
- *Improve management of species and their habitats* by focusing our financial and staff resources on improving the status of our nation's fish and wildlife and the healthy habitats that support them, and by streamlining bureaucracy to help us spend relatively more of our funding productively on the ground to better meet societal needs and our own natural resource management responsibilities.
- *Uphold trust and related responsibilities*, recognizing the importance of government-to-government relationships with Indian tribes, Alaska Natives, and insular areas, and respecting self-determination and sovereignty.

History

The Department of the Interior (DOI) was established in 1849. The DOI was charged with managing a wide variety of programs, which included overseeing Indian Affairs, exploring the western wilderness, directing the District of Columbia jail, constructing the National Capital's water system, managing hospitals and universities, improving historic western emigrant routes, marking boundaries, issuing patents, conducting the census, and researching the geological resources of the United States. As the country matured during the last half of the 19th Century, so did the DOI and its mission began to evolve as some of these functions moved to other agencies at the same time the DOI acquired new responsibilities.

With information from Robert Utley and Barry Mackintosh, *The Department of Everything Else: Highlights of Interior History*, 1988, pp. 1-2.

Surface Lands Managed by the Department of the Interior



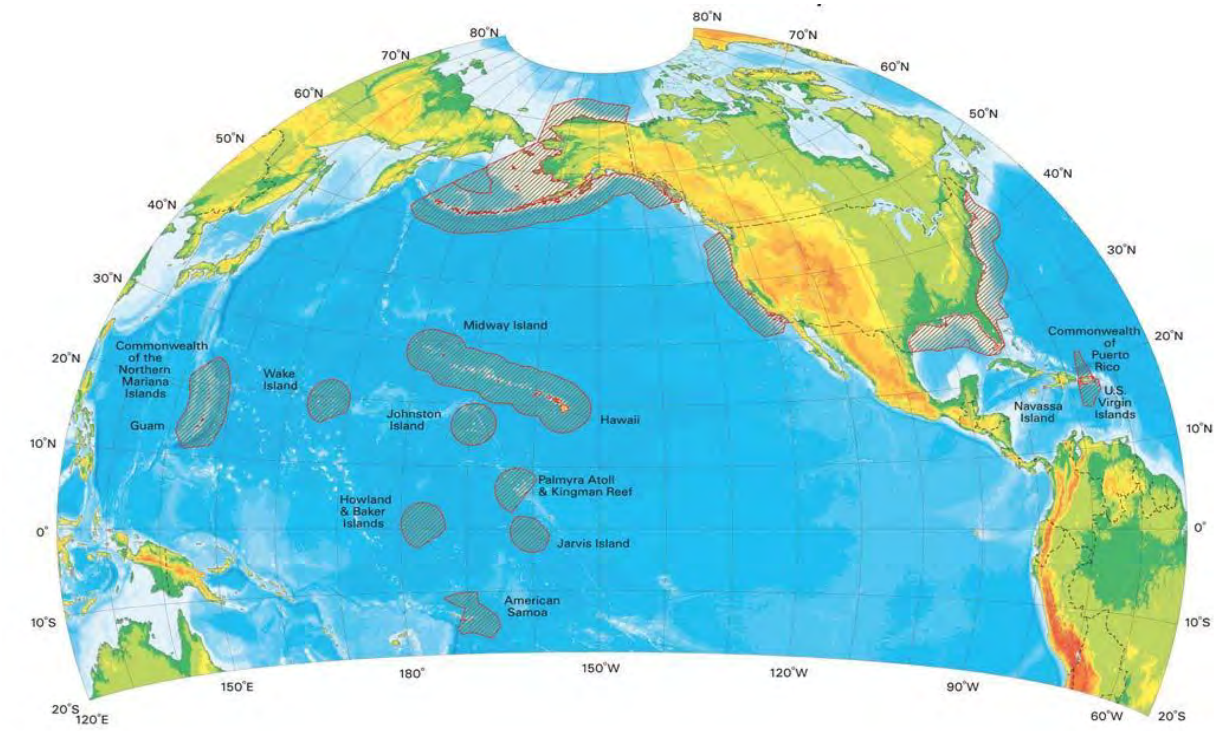
USGS Map, Oct 2014 (except for US Territories that are identified on next graphic)

Following Theodore Roosevelt's conservation summit and the awakening of the conservation movement at the beginning of the 20th Century, there was an increasing urgency and expanding congressional mandate to protect and more effectively manage the nation's natural resources. In 1905, management of the federal forests changed from the Department of the Interior to the United States Forest Service within the Department of Agriculture. Its Chief, Gifford Pinchot, introduced better forestry methods. Pinchot sought to turn public land policy from one that disposed of resources to private parties, to one that maintained federal ownership and management of public land. Pinchot argued that scientific management of forests and natural resources was profitable. He generally opposed preservation for the sake of preservation. During the 1960's and 1970's the DOI's authorizing statutes shifted to put more emphasis on the preservation, management, and use of public lands and natural and cultural resources.

Today, the DOI manages the Nation's public lands and minerals, including providing access to more than 480 million acres of public lands, 700 million acres of subsurface minerals, and 1.7 billion acres of the Outer Continental Shelf. The DOI is the steward of 20 percent of the Nation's lands, including national parks, national wildlife refuges, and other public lands; manages resources that supply 30 percent of the Nation's energy; supplies and manages water in the 17 Western States and supplies 15 percent of the Nation's hydropower energy; and upholds Federal trust responsibilities to 573 federally recognized Indian tribes and Alaska Native villages. The DOI is responsible for migratory bird and wildlife conservation, historic preservation, endangered species conservation, surface-mined lands protection and restoration, mapping, geological, hydrological, and biological science

for the Nation, and financial and technical assistance for the insular areas (many of which are depicted in the following graphic).

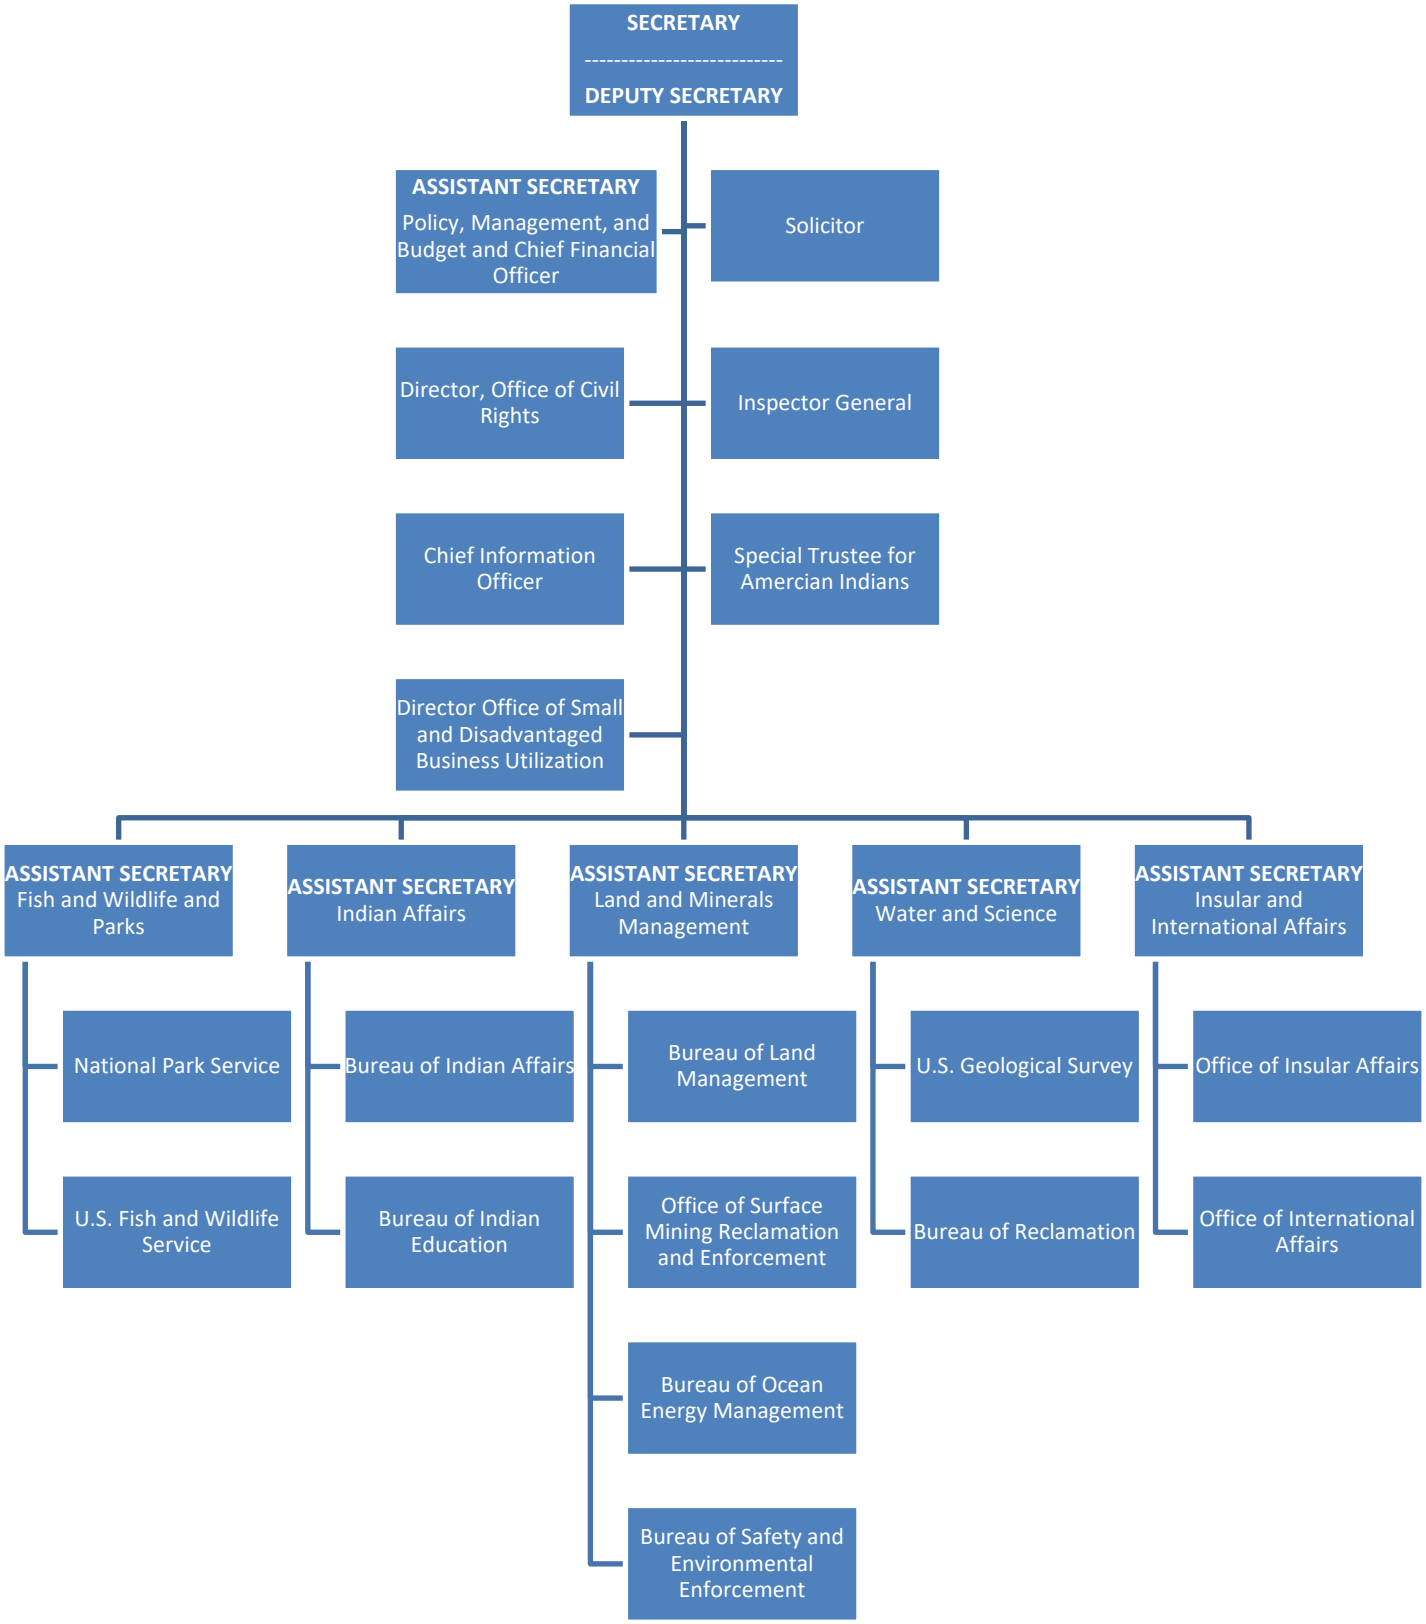
United States Continental Shelf Boundary Areas



National Geophysical Data Center, Sep 2001

The DOI's programs encompassed in this Strategic Plan cover a broad spectrum of activities that are performed by 10 bureaus and multiple offices and are captured in the following presentation of each entity's unique mission and set of responsibilities. The Strategic Plan's six mission areas capture the vitality, inventiveness, and potential of the bureaus and offices and the DOI's 70,000 dedicated and skilled employees. Along with our hardworking and skilled employees, over 350,000 much appreciated volunteers annually contribute their time in support of bureau and office missions, bringing unique local knowledge to park operations, assisting in recovery from natural disasters, and participating in environmental education, among other activities. We cannot effectively address all our responsibilities alone, so it is critical to strengthen partnerships with our sister federal agencies with related missions. In the federal family, we share forest, minerals, rangeland, and wildland fire management responsibilities with the US Department of Agriculture's Forest Service. We share water resource management and hydroelectric power generation responsibilities with the US Army Corps of Engineers, and we share fishery and endangered species management responsibilities with the Department of Commerce's National Marine Fisheries Service. In some ways, our relationships with state, tribal, and local government are even more important. We operate within the bounds of state water law, and respect state authority over resident wildlife. We deal with tribal governments on a government to government basis, respecting each other's authority and jurisdiction. We share land use planning responsibilities with local government, so we must make our own land management plans in a way that is mindful of the goals and plans of those local government neighbors.

US Department of the Interior Organization Chart



Bureau and Office Summaries

Bureau of Land Management (BLM)

- Manages public lands for the benefit of all Americans under the dual framework of multiple use and sustained yield on nearly 250 million surface acres, as well as 700 million acres of subsurface mineral estate. Priorities include:
  - Making full use of the Nation's domestic energy and mineral sources, including conventional and renewable energy sources;
  - Serving American families by providing outdoor recreation opportunities that are key to the Nation's heritage and its economy; and
  - Managing working landscapes to support sustainable livestock grazing operations; and timber and biomass production.
  - Developing and maintaining strong partnerships with State, local, and private stakeholders in shared conservation stewardship.

Office of Surface Mining Reclamation and Enforcement (OSMRE)

- Protects the environment during coal mining through Federal programs, grants to states and Tribes, and oversight activities.
- Ensures the land is reclaimed afterwards.
- Mitigates the effects of past mining by pursuing reclamation of abandoned coal mine lands.

Bureau of Ocean Energy Management (BOEM)

- Manages access to renewable and conventional energy resources of the Outer Continental Shelf (OCS);
- Administers nearly 3,000 active fluid mineral leases on over 16 million OCS acres;
- Oversees 4 percent of the natural gas and 18 percent of the oil produced domestically; and
- Oversees lease and grant issuance for off shore renewable energy projects.
- Manages leasing for marine mineral resources such as sand to facilitate beach replenishment and coastal nourishment projects.

U.S. Geological Survey (USGS)

- Produces information to increase understanding of natural hazards such as earthquakes, volcanoes, and landslides.
- Conducts research and delivers assessments on oil, gas, and alternative energy potential, production, consumption, and environmental effects.
- Conducts reliable scientific research in land resources, mineral assessments, and water resources to inform effective decision making and planning.
- Provides science information that supports natural resource decisions.
- Produces topographic, geologic, hydrographic, and biogeographic data and maps.

Bureau of Safety and Environmental Enforcement (BSEE)

- Fosters secure and reliable energy production from the 1.7 billion acre U.S. Outer Continental Shelf (OCS) for America's energy future.
- Conducts inspections, permitting, incident and equipment failure analysis, oil spill preparedness and enforcement programs aimed at promoting a culture of safety and reducing risk to those who work offshore.
- Supports the technical expertise to engage opportunities and to meet challenges to tap the full potential of OCS energy resources.

Bureau of Reclamation (BOR)

- Manages, develops, and protects water and related resources in an environmentally and economically sound manner in the interest of the American public.
- Largest wholesale supplier of water in the Nation
- Manages 492 dams and 338 reservoirs.
- Delivers water to 1 in every 5 western farmers and more than 31 million people.
- America's second largest producer of hydroelectric power.

Fish and Wildlife Service (FWS)

- Manages the lands and waters of the 855 million-acre National Wildlife Refuge System, primarily for the benefit of fish and wildlife.
- Manages 73 fish hatcheries and other related facilities for endangered species recovery and to restore native fisheries.
- Protects and conserves:
  - Migratory birds;
  - Threatened and endangered species; and
  - Certain marine mammals.
- Hosts about 48 million visitors annually at more than 560 refuges located in all 50 states and 38 wetland management districts.

Indian Affairs (IA)

- Fulfills Indian trust responsibilities.
- Promotes self-determination on behalf of 573 federally recognized Indian Tribes.
- Funds self-governance compacts and self-determination contracts to support all Federal programs including education, law enforcement, and social service programs that are delivered by Tribal Nations.
- Supports 183 elementary and secondary schools and dormitories, providing educational services to approximately 48,000 students in 23 states.
- Supports 32 community colleges, universities, post-secondary schools, and technical colleges.

Note: IA includes the Bureau of Indian Affairs (BIA) and the Bureau of Indian Education (BIE)

National Park Service (NPS)

- Maintains and manages a system of 417 natural, cultural, and recreational sites for the benefit and enjoyment of the American people.
- Manages and protects over 27,000 historic and prehistoric structures, nearly 44 million acres of designated wilderness, and a wide range of museum collections and cultural and natural landscapes.
- Provides outdoor recreation to nearly 324 million visitors at national park units.
- Provides technical assistance and support to state, tribal and local natural and cultural resource sites and programs, and fulfills responsibilities under the National Historic Preservation Act of 1966.

Insular and International Affairs

- Coordinates federal policy for the territories of American Samoa, Guam, the U.S. Virgin Islands and the Commonwealth of the Northern Mariana Islands.
- Oversees the Department's involvement with oceans policy
- Manages the Department's involvement in international affairs
- Responsible for administering and overseeing U.S. federal assistance to the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau under the Compacts of Free Association, as well as providing technical and financial assistance to all the Insular Areas.

Note: Includes Office of Insular Affairs and Office of International Affairs

Departmental Offices

- Immediate Office of the Secretary, Deputy Secretary, and Assistant Secretaries
- Office of the Solicitor
- Policy, Management and Budget provides leadership and support for the following:
  - Budget, Finance, Performance and Acquisition;
  - Public Safety, Resource Protection, and Emergency Services;
  - Natural Resources Revenue Management;
  - Human Capital and Diversity;
  - Technology, Information and Business Services;
  - Policy and Environmental Management
- Office of Inspector General
- Office of the Special Trustee for American Indians

CROSS-CUTTING PRINCIPLES

As the Department of the Interior (DOI) advances through FY 2018-2022, the following principles guide our leadership, management, and workforce.

Effective and Accountable Leadership - The DOI is committed to being an outstanding steward of approximately 500 million acres of public lands, 700 million onshore subsurface acres, and 1.7 billion acres of the Outer Continental Shelf (OCS) including magnificent vistas, valuable energy and mineral resources, unique ecosystems, range, and treasured natural, cultural, and heritage assets. The management and oversight of these resources require a dedicated cadre of employees, the contributions of volunteers, and the input of stakeholders to inform decision-making. The challenges of managing for a diverse constituency while meeting national goals for energy development and sustaining high levels of recreation and access require technical expertise, the best available science, and an understanding of the balance of development and conservation.

A critical role for DOI's senior executives is providing the necessary leadership to guide the efforts of DOI's offices, bureaus, and field locations in effectively achieving Presidential and Secretarial goals especially through:

- Ensuring cost effective operations and quality customer-centric service to the public;
- Facilitating cooperation and collaboration across organizations within the DOI and its federal and nonfederal partners;
- Ensuring a workplace environment that is safe, fair, and conducive to employee productivity; resolving conflicts as needed; and
- Holding individuals at all levels accountable for their actions.

Empowering the Field - Accomplishing the multi-faceted missions of the DOI involves the skills of 10 bureaus and spans 2,400 locations across the U.S. These locations are often remote and present managers with unique challenges. Managers and experts in the field organization must be allowed to exercise informed judgement and discretion, and must have a skilled workforce to address the issues and manage their operations. The DOI's agency reform plan, developed in response to the President's Executive Order "Comprehensive Plan for Reorganizing the Executive Branch," provides a strategy for better enabling our managers and workforce in the field through regional realignment and executive empowerment, increased colocation, and shifting workforce resources closer to the DOI's field locations.

Engaging the Nation in Cooperative Stewardship - In managing such a broad range of resources for the benefit of the public, the DOI works closely with other federal agencies, state, tribal, territorial, and local governments, and the public. The DOI's reform plan calls for increased coordination across agency lines and levels of government to achieve common goals and resolve differences without expensive and time-consuming litigation. DOI is working to increase its collaborations and partnerships across all levels of government.

Improving Infrastructure - The DOI manages an infrastructure asset portfolio with a replacement value exceeding $300 billion. Most well-known are the DOI's iconic and unique national treasures, which have priceless historical significance. More broadly, the DOI owns approximately 43,000 buildings, 100,000 miles of roads, and 80,000 structures; including dams, laboratories, employee housing, Indian schools, visitor facilities, historic structures and hydropower infrastructure. The related deferred maintenance backlog has grown to over $15 billion in 2016, of which over $11 billion belongs to the National Park Service. DOI is committed to determining how to best address

this backlog and maintain its facilities for the safety and productivity of its workforce, and the continued high quality experience and enjoyment by the American public.

Striking a Regulatory Balance – In accordance with the Executive Order on Enforcing the Regulatory Reform Agenda, the DOI will identify regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The DOI will continue to protect human health and the environment in a responsible, cost-effective manner but in a way that avoids imposing an undue process or economic burden on the public.

Generating Revenue, Jobs, and Economic Activity - The DOI grants access to public lands and offshore areas for all forms of energy development—representing roughly a quarter of the Nation's domestic supplies of oil and natural gas—while ensuring safety, environmental protection and revenue generation for the American public. It is important to the Nation's future that these natural resources are managed wisely and – as appropriate -- made accessible for public use to help generate revenues, enhance national security, create jobs, and grow the U.S. economy.

Restoring Trust - It is critical that the DOI can be trusted to operate in the best interest of the American public. Key to maintaining public trust and confidence in the integrity of government is the adherence to high ethical standards and ensuring that government business is conducted with impartiality, transparency, accountability, and integrity. While many of our employees have important law enforcement responsibilities as part of their jobs, more generally we want the public to primarily view our employees as helpful and friendly technical experts, not as law enforcement. When we do need to perform our law enforcement responsibilities, our preference is to achieve compliance through education and demonstrating a sincere desire to create win-win situations with the public we serve. The DOI embodies this principle, follows the law and holds people accountable. Decisions are based on sound science and the best interest of the public.

The DOI is committed to effective and efficient financial operations and accountability characterized by high quality and timely reporting, robust internal controls, clean audits, and effective follow-up on audit and internal control findings. The DOI utilizes the enterprise Financial and Business Management System for the integration of business functions including budget execution, finance, acquisition, improved internal controls, a secure information technology environment, and a community of business innovation, efficiency, and transparency.

Respect for Tribal Sovereignty – As a steward of tribal trust assets, the DOI plays a critical role for the United States in fulfilling the trust responsibility to Indian tribes. The DOI is committed to effectively meeting that responsibility by assisting tribes and Indian individual land owners to create greater economic opportunities, build safer and healthier communities, and effectively consulting with tribal governments.

OVERVIEW OF THE FY 2018-2022 STRATEGIC PLAN

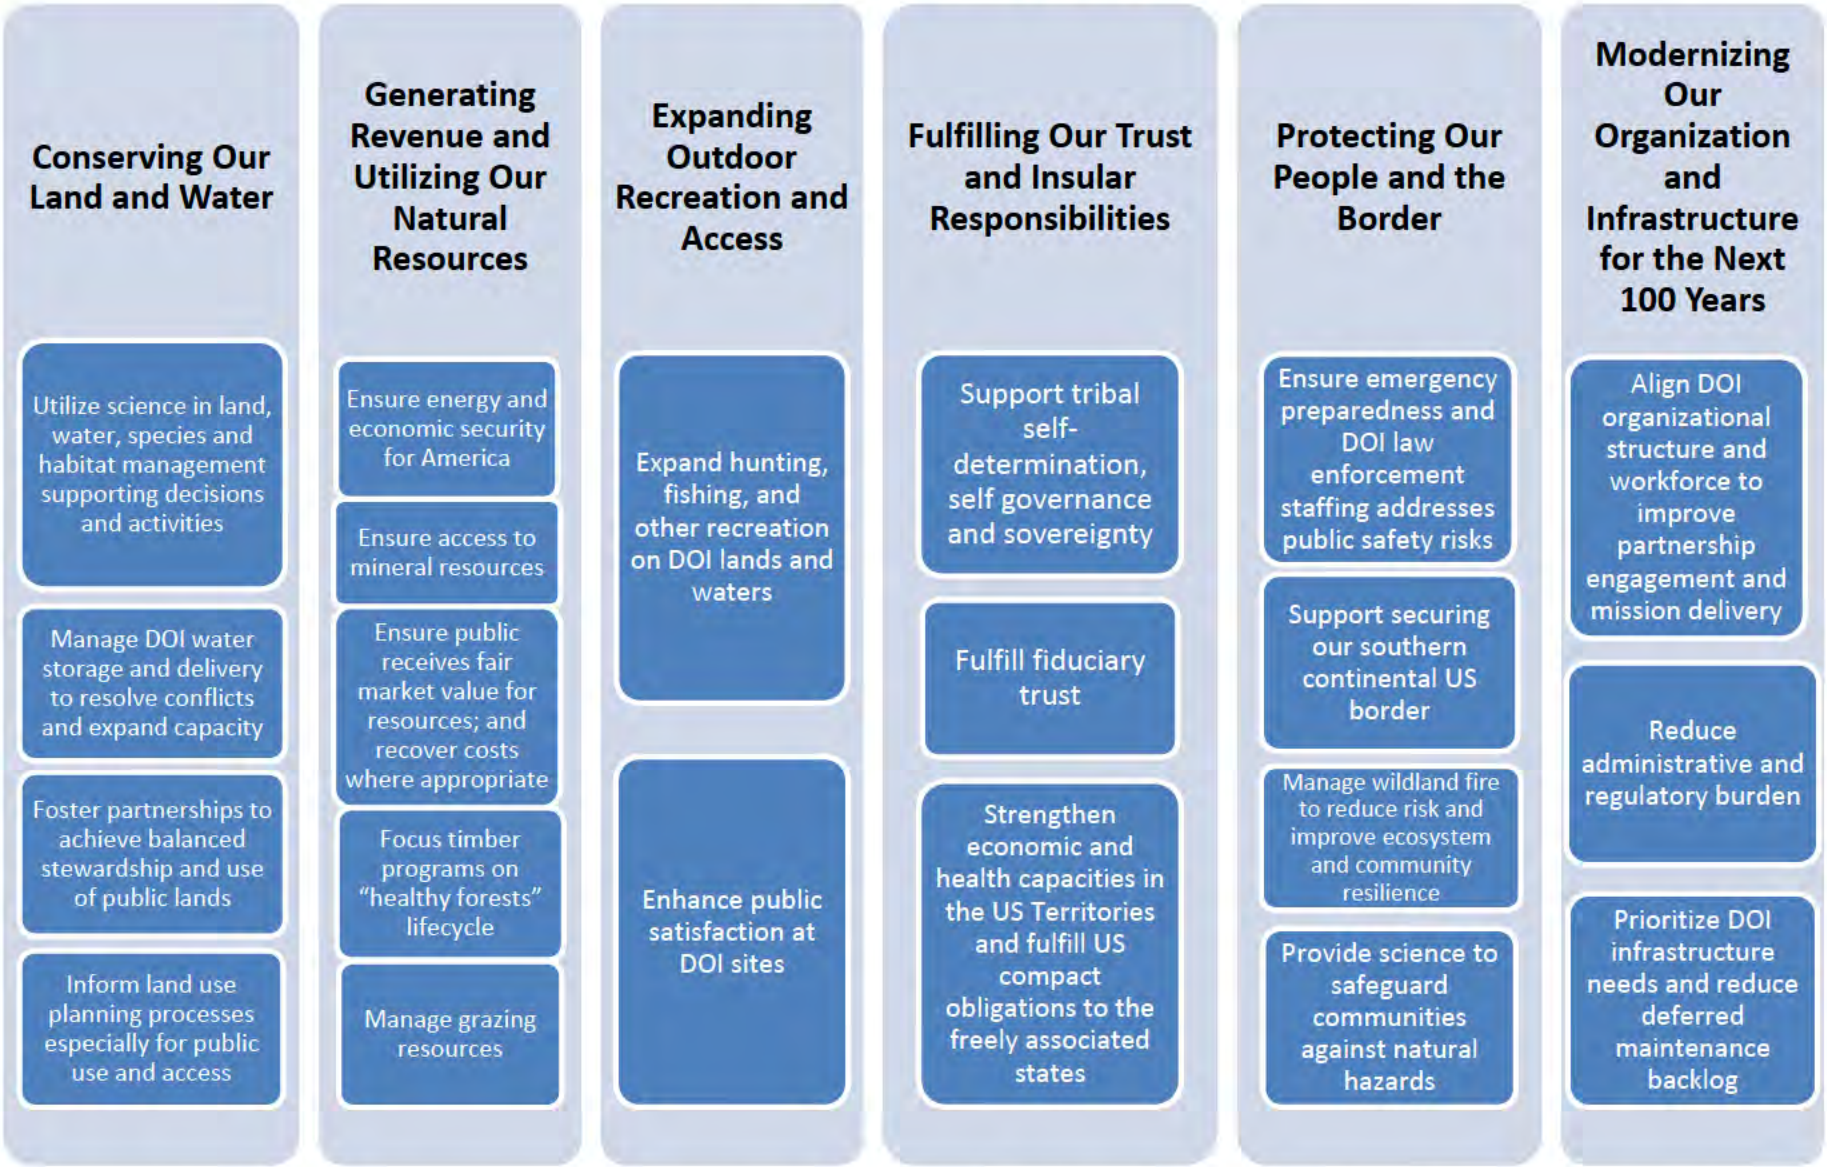
The DOI's FY 2018-2022 Strategic Plan provides the framework for the programs and activities that are performed by 10 bureaus and multiple offices, and take place at approximately 2,400 locations throughout the Nation.

The Strategic Plan facilitates the integration of programs, the allocation and alignment of resources, and collaboration and coordination with stakeholders to achieve key goals. A set of six mission areas, 21 goals, 34 strategies, and approximately 120 performance measures will guide the DOI's activities for the next five years. These mission areas reflect the Secretary of the Interior's priorities, while the goals and strategies describe the means by which those priorities will be achieved.

The mission areas, goals, and strategies that constitute the Strategic Plan are displayed in the Strategic Plan Framework, followed by a description of the mission areas, goals, strategic objectives, and performance measures. An FY 2022 goal is provided for each performance measure that reflects a desirable annual level of achievement that DOI aspires to assuming the availability of a reasonable level of resources. The anticipated level of performance for these measures on an annual basis in consideration of actual resource levels will be reported in the DOI's Annual Performance Plan and Report that is released with the FY 2019 President's budget and available at www.doi.gov/bpp.

There is some continuity of performance measures from the FY 2014-2018 Strategic Plan because the core of our statutory mission remains the same regardless of shifts in policy emphasis resulting from a change in Administrations. Trends in performance related to funding and programmatic plans are available in the DOI's FY 2019 Annual Performance Plan and Report available at www.doi.gov/bpp.

STRATEGIC PLAN FRAMEWORK



Crosscutting principles: Senior executives provide leadership in achieving Presidential and Secretarial goals and are expected to: ensure cost-effective operations and quality service to the public; facilitate organizational cooperation and conflict resolution; ensure workplace environment conducive to employee productivity and safety; and hold individuals accountable for their actions.

DESCRIPTION OF MISSION AREAS

(With Supporting Goals, Strategies, and Performance Measures)

MISSION AREA 1: Conserving Our Land and Water

The DOI ensures that America's natural endowment – the lands and waters of the United States – is conserved for the benefit, use, and enjoyment of current and future generations. The DOI's bureaus use the best available science, modern natural resource management techniques, technology and engineering, efficient decision-making processes, robust partnerships, and improved land use planning to ensure balanced stewardship and use of the public lands and its resources, including wildlife and fish species.

GOAL #1: Utilize science in land, water, species and habitat management supporting decisions and activities

The DOI will ensure that it delivers data, tools, techniques, and analyses that advance understanding of natural resources, the forces that shape them, and the interactions of plants, animals, and people that live within them. Research, monitoring, and remote sensing are necessary to understand and detect changes that affect land resources and processes that are essential to the Nation's economic growth, well-being, and ecological health. These efforts support the DOI in its role as the largest manager of the Nation's land and water resources.

The DOI's land and water management bureaus are stewards of the lands and waters managed by the DOI. These bureaus will utilize the best available scientific data, tools, techniques, and analyses provided by our researchers, our nonfederal government partners, or others to maintain and restore lands and waters and ensure that habitats support healthy fish and wildlife populations.

STRATEGY #1: Apply science to land, water, and species management

The USGS seeks to understand the Nation's environmental, natural resource, and economic challenges with scientific monitoring and research to support the development of management strategies that address the impacts of land use on the availability and sustainability of land and water resources. The USGS helps management agencies by providing them the measures designed to prevent or control invasive species and wildlife disease outbreaks; and apply decision science to actions.

The USGS conducts monitoring, assessments, and research in order to understand and predict changes in the quality and quantity of water resources in response to land-use and management scenarios. Through advanced understanding and integrated modeling of processes that determine water availability, the USGS informs the balanced management of water resources for multiple purposes, including energy production, human and crop consumption, the sustainability of fish and other aquatic communities valued by society, and public enjoyment. The USGS works with land and water resources managers in applying its data and research results to help them make informed decisions for effectively managing the resources with which they are entrusted.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted land and water management research actions	100%
USGS	Millions of people living in targeted watersheds covered by completed water quality models	306.7
USGS	Percent completion of planned water quality sampling and studies for the Nation's groundwater, streams and rivers	100%
USGS	Percent completion of the USGS National Water Census baseline	100%
USGS	Percent completion of U.S. aquifer groundwater availability baseline studies	43%
USGS	Percent completion of targeted species management research actions	100%
USGS	Percent completion of targeted biological threats research actions	100%
USGS	Percent completion of collaborative research projects on factors affecting fish and wildlife habitat	100%

STRATEGY #2: Provide stewardship of land, surface water, streams and shorelines

The Bureau of Land Management, the Fish and Wildlife Service, the National Park Service, and the Bureau of Reclamation manage, maintain and restore uplands, wetlands, lakes, streams and some marine areas through efforts that include controlling invasive plants and animals, restoring land or waters to a condition that is self-sustaining, and ensuring that habitats support healthy fish and wildlife populations. The DOI's Natural Resource Damage Assessment and Restoration program works with the bureaus to assess the impacts of oil spills and hazardous waste sites and coordinates restoration efforts. The Office of Surface Mining Reclamation and Enforcement works with states and tribes to ensure that coal mining is conducted in a manner that protects citizens and the environment during mining, restores the land to beneficial use following mining, and mitigates the effects of historic mining by pursuing reclamation of abandoned mine lands. The DOI aims to balance the conservation of special places with resource development while also providing visitors with opportunities for outdoor recreation.

Bureaus administer their resource management and conservation programs on more than 400 million acres of upland, wetland, and aquatic lands within their jurisdiction. Many of these lands have special status as national parks, seashores, monuments, wildlife refuges, wilderness areas, national conservation lands or wild and scenic rivers. Land managers utilize earth and natural science, social science, partnerships with other DOI bureau, federal, state, local and tribal entities, and other tools and resources (including its front-line managers) in managing these lands and waters.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of DOI acres that have achieved desired conditions	88.9%
BLM, FWS	Percent of DOI riparian (stream/shoreline) miles that have achieved desired conditions	89.2%
BLM, BOR, FWS, NPS	Percent of acres infested with invasive plant species that are under control	0.2%
FWS, NPS	Percent of invasive animal species populations that are under control	8.7%
OSMRE	Percent completion of abandoned mine lands restored by eliminating health, safety, and environmental concerns	57%
OSMRE	Percent of active coal mining sites that are free of off-site impacts	88%
OSMRE	Percent of coal mine acreage reclaimed to beneficial post-mining land use	44%

STRATEGY #3: Provide stewardship of wildlife, bird, fish, and plant species

The Fish and Wildlife Service (FWS) is tasked with the conservation and protection of certain populations of fish, wildlife, plants, and their habitats. The FWS works first to prevent species from becoming listed as threatened or endangered by using the best available science to make land management decisions that might affect species viability. The FWS conducts, consults or coordinates many species management activities in partnership with others including NPS, BLM, Reclamation, and other federal, state, local and tribal agencies and private organizations. The strategy to sustain species focuses on identifying and implementing corrective actions that will lead to species recovery.

Congress passed the Endangered Species Act (ESA) in 1973, to protect and recover imperiled species from becoming extinct and to conserve the habitats upon which they depend. The FWS and the Commerce Department's National Marine Fisheries Service (NMFS) administer the ESA. The FWS has primary responsibility for terrestrial and freshwater organisms, while the responsibilities of NMFS are mainly marine wildlife such as whales and anadromous fish such as salmon.

FWS works with many partners using a range of conservation tools to recover listed species (threatened and endangered) to ensure that they are able to survive on their own in the wild. These tools can include acquiring and restoring habitat, removing invasive species, conducting surveys, monitoring individual populations, and breeding species in captivity to release them into their historic range.

The DOI uses a number of datasets and metrics to track its progress on species listings, downlistings, delistings, critical habitat, scientific findings, and Species Status Assessments (SSA). The SSA is the scientific foundation supporting listing, delisting, and downlisting decisions and recovery plans and includes biological and threats information and analyses that help FWS and its partners better understand the species status. Recovery criteria, describing the conditions of the species when the protections of the act are no longer necessary, address both the biological status in terms of the 3 R's (resiliency, representation and redundancy) and the mitigation of threats necessary to achieve that status. The DOI is working to include more information on critical habitat,

estimated costs of recovery and economic impact of its threatened and endangered species listings and recovery action plans, to provide a more complete perspective to states and the public of the actions being planned for attempting to save each species.

In its Policy Regarding the Role of State Agencies in ESA Activities, FWS coordinates, collaborates, and uses the expertise of state agencies in developing the scientific foundation upon which FWS bases its determinations for listing actions. By September 30, 2018, all FWS decisions on whether to list a species under the ESA will be informed by input from state fish and wildlife agencies, subject to the affected states' willingness to participate (some state fish and wildlife agencies have declined participation due to lack of authority for some species under ESA review). This input should include (but is not limited to) a solicitation of state data and state personnel involvement in the development of SSAs.

Per Section 4(c)(1) of the ESA, FWS is required to review the status of each listed species at least once every 5 years and determine whether it should be: (1) removed from the List (delisted), (2) reclassified from endangered to threatened (downlisted), or (3) reclassified from threatened to endangered (uplisted). By September 30, 2019, for 100% of all species with 5-year reviews recommending downlisting or delisting FWS will have proposed downlisting or delisting rules acted on by the Director, or a new status review initiated if new information indicates the need for an updated assessment prior to initiating rulemaking, within 2 years of the 5-year review recommendation.

The DOI's responsibility to protect fish, wildlife, and native plants transcends jurisdictional boundaries, and includes efforts that affect almost 1,500 species with special status under the Endangered Species Act and more than 1,000 migratory birds that receive Federal protection under the Migratory Bird Treaty Act. The DOI works to combat domestic and international wildlife trafficking by improving enforcement of domestic laws, strengthening international cooperation and global enforcement, promoting legal trade and hunting, and helping to reduce demand for illegal wildlife products. Under Executive Order 13771 of January 30, 2017, i.e. Reducing Regulation and Controlling Regulatory Costs, the DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to private constituents, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient. This activity is described further in the second goal under the sixth Mission Area on reducing administrative and regulatory burden.

Agency Priority Performance Goals:

- ***By September 30, 2018, 100% of proposed species listings will be based on best available information that includes state input and/or data provided through participation in Species Status Assessments (SSA).***
- ***By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species.***

Bureaus	Key Performance Indicators	2022 Goal
FWS	Percent of Threatened or Endangered species listed for 2.5 years or more with a final recovery plan	75%
FWS	Percent of five-year Threatened or Endangered species five-year status review recommendations to downlist or delist acted on within five years *(prior to next status review)*	60%
FWS	Percent of listed species with current five-year reviews *(completed in the last five years)*	90%
FWS	Percent of rules and findings completed based on Threatened or Endangered Species Status Assessments	100%
FWS	Percent of threatened and endangered species listings with proposed critical habitat	100%
FWS	Percent of migratory bird species that are at healthy and sustainable levels	72%
FWS	Percent of fish species of management concern that are managed to self-sustaining levels	23%

GOAL #2 Manage DOI water storage and delivery to resolve conflicts and expand capacity

The Western U.S. is one of the fastest growing regions of the country, and urbanization has created significant demands for water use and service. The DOI strives to keep its water storage facilities in good condition to ensure safe and reliable water supply. Stretching existing water supplies for multiple uses are among the many significant challenges facing Reclamation. The Bureau of Reclamation is the nation's largest wholesale water supplier and manages water in 17 western states. Reclamation's projects and programs are an important driver of economic growth bringing water to more than 31 million people and providing one of five western farmers (140,000) with irrigation water for 10 million acres of farmland that produce 60 percent of the nation's vegetables and 25 percent of its fruits and nuts. Reclamation's facilities also provide substantial flood control, hydropower, recreation, and fish and wildlife benefits.

The DOI is the lead agency in defining and protecting water rights for Indian tribes and individual Indian land owners. The Bureau of Indian Affairs (BIA) is responsible for maintaining 137 dams on tribal lands. The BIA also provides irrigation water to over 780,000 acres through 17 congressionally authorized irrigation projects.

STRATEGY #1 Manage water resources and delivery

Changes in water supplies, water demands, and the increased duration and frequency of droughts have the potential to affect Reclamation's ability to fulfill its mission. Many rural communities face significant challenges in financing the cost of replacing or upgrading aging and obsolete facilities and systems. Water conservation programs increase the available water supply and contribute to DOI's broader objective of achieving a more sustainable, secure water supply. Protecting and extending the life of aging infrastructure are significant challenges facing Reclamation, and maintenance, rehabilitation, and replacement will become more costly over time. Reclamation

prioritizes infrastructure assets based on detailed design criteria: engineering need, consequence of failure, financial considerations, efficiency opportunities, scheduling, and others.

The Bureau of Indian Affairs (BIA) water management functions are implemented through three complementary programs. The Water Rights Negotiation/Litigation Program defines and protects Indian water rights and settles claims through negotiations if possible, or alternatively, through litigation. The Water Management Program assists tribes in managing, conserving, and utilizing trust water resources. The BIA Irrigation, Power and Safety of Dams program operates and manages irrigation, power, and dam infrastructure. The program sets high standards for maintenance, collaboration with stakeholders, and effective water and power distribution. The BIA manages facilities to ensure they do not present an unacceptable risk to downstream lives and property; and are managed in an economically, technically, environmentally, and culturally sound manner.

Agency Priority Performance Goal: By September 30, 2019, the Bureau of Reclamation will facilitate water conservation capacity of 53,800 acre-feet to help reduce the impact of drought.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]	74%
BOR	Amount of acre feet of water conservation capacity enabled to help address drought	1,392,000
BIA	Percent of projects completed in support of water management, planning, and pre-development.	77%

GOAL #3: Foster partnerships to achieve balanced stewardship and use of our public lands

The DOI will assess, utilize and enhance the most promising of partnership practices and explore the potential for furthering these types of opportunities to work jointly with other individuals and organizations for the benefit of the nation's public lands, waters, and historic and cultural sites and the fish and wildlife species.

STRATEGY #1: Build and maintain partnership programs

Public and private partnerships provide opportunities for greater engagement of people and organizations in caring for and managing the natural, historical, cultural and physical resources across the DOI's 500 million acres. This can be especially beneficial for our national park units, National Wildlife Refuges, wildlife management areas, and national conservation public lands. Support can come from other federal or state agencies, tribal nations, volunteers, non-profit organizations, educational institutions, corporations or foundations through sponsorship or philanthropy. DOI bureaus should endeavor to partner with non-traditional stakeholders to increase our relevance to the American public, rather than just relying on traditional constituencies.

The National Park Service already has the authority from Congress to accept monetary and in-kind gifts, including those collected through the National Park Foundation. Similarly, the Fish and Wildlife Service has authority to accept gifts from some entities, including some non-profits organizations and the federally chartered non-profit National Fish and Wildlife Foundation. The Bureau of Land Management has Congressional authority to accept monetary and other types of donations, along with Congressional authorization to create a Bureau of Land Management Foundation. The BLM works with local, state, federal, and private partners on nearly all of the activities undertaken on public lands, from identifying important fish and wildlife habitat with the state game and fish agencies, working with local rangeland fire protection associations, to providing hunting and fishing opportunities for sports men groups. As permitted under current law, the DOI hopes to develop further philanthropic and sponsorship opportunities, and promote other partnering best practices.

The DOI utilizes migratory bird joint ventures as collaborative, regional partnerships of government agencies, non-profit organizations, corporations, tribes, and individuals that conserve habitat for the benefit of priority bird species, other wildlife, and people. Joint ventures bring these diverse partners together under the guidance of national and international bird conservation plans to design and implement landscape-scale conservation efforts in support of the North American Waterfowl Management Plan and the other bird management plans. These joint ventures use state-of-the-art science to ensure that diverse habitat is available to sustain migratory bird populations for the benefit of those species, other wildlife, and the public. These partnerships have a three-decade record of success, they use non-regulatory solutions and economically sound business approaches, promote working lands conservation, sporting, and outdoor traditions, and support resilient urban and rural communities.

The Department of the Interior and the U.S. Department of Agriculture working near each other in the field continue to pool resources, conduct joint projects and share services under Service First agreements. Service First authority promotes collaborating across bureau and agency boundaries to develop joint solutions to common problems and integrate responses to federal land management issues and opportunities. Bureaus of the Department of the Interior and the U.S. Department of Agriculture cooperate in jointly managing some areas. For example, the National Trail, and Wild and Scenic River Systems span every state of our nation and exceed the length of the interstate highway system. Federal land management agencies, as well as state and local jurisdictions and partners enhance recreational access, conserve the Nation's heritage, and leverage the federal investment to manage these nationally recognized resources cooperatively.

Building new partnerships for infrastructure improvement is a priority at the DOI. There are also numerous volunteer opportunities, where individuals or associations provide service in caring for natural resources and cultural and historic assets on our public lands (see www.volunteer.gov). The DOI will also empower managers in the field to directly engage in further collaboration within the units they manage, identify best practices for collaboration and partnering, provide training and technical support, and encourage field managers to find or create and execute partnerships on a local basis.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Number of estimated work hours in a national park unit, National Wildlife Refuge, or Bureau of Land Management site that are performed or sponsored by a private citizen, National Service participant or non-federal entity	9,870,000
BOR, FWS, CUPCA	Number of non-DOI acres restored, including through partnerships	593,876
FWS	Number of non-DOI acres managed or protected to maintain desired condition, including acres restored through partnerships	602,654
FWS, CUPCA	Number of non-DOI riparian (stream/shoreline) miles restored, including through partnerships	255

GOAL #4: Inform land use planning processes especially for public use and access

The DOI will review and improve its land planning processes to enable expanded access and use of the public lands while restoring a balance between conservation and utilization of the lands, energy and mineral resources, waters, fish and wildlife, and other natural and cultural resources. The DOI will employ the latest available science, land-imaging and other technology tools and datasets to inform land use planning to maximize the societal value of land planning. The DOI land use planning will take into account the land use plans of affected local and state governments.

STRATEGY #1: Assess land use planning processes for public access and use of DOI lands

DOI land use and management plans ensure that the public lands are managed in accordance with the intent of Congress as stated in several authorities including, but not limited to: the Federal Land Policy and Management Act (FLPMA), the National Environmental Policy Act (NEPA), the Endangered Species Act, the National Wildlife Refuge System Administration and Improvement Acts, the Organic Act of 1916 (National Park Service), the Alaska Native Claims Settlement Act, and the Alaska National Interest Lands Conservation Act (ANILCA).

Land use planning efforts vary across bureaus based on enabling legislation. The National Park Service creates management plans to execute its mission. The National Wildlife Refuge system creates Comprehensive Conservation Plans for each refuge as part of their mission. The BLM's mission states that its duty is to sustain the health, diversity, and productivity of America's public lands for the multiple use and enjoyment of present and future generations.

A common thread through all three bureaus' mission is the need to accommodate and benefit the use and enjoyment of these public lands for both present and future generations. Some lands are made available for multiple use and sustained yield, other lands for conservation and preservation values.

The DOI is undertaking the challenge to review and improve its planning processes in ways that can best meet the sometimes-conflicting uses for public lands. The DOI will strive to enhance public participation and input to the planning processes, engage our state, local, and tribal government partners, provide open and understandable decision-making, expedite the decision-making process

so that implementation is not delayed, and ensure that public access and use is appropriately built into every land use plan.

STRATEGY #2: Inform land use planning with mapping and land imaging

The USGS is the lead civilian mapping agency for the Nation and supports the conduct of detailed surveys and the resulting distribution of high-quality and highly-accurate topographic, geologic, hydrographic, and biogeographic maps and data. Remote sensing satellites and aircraft monitor the Earth providing information that is broad, precise, impartial, and easily available. For more than 45 years, Landsat satellites have collected data over the planet's land surface to support global research studies. These data constitute the longest continuous record of the Earth's land surface as seen from space.

High-resolution information results in geologic maps and geospatial products that enable precise planning of civil engineering and transportation infrastructure, versatile urban planning, improved flood projection, timely and accurate emergency response, effective hazard identification and mitigation, and detailed environmental analyses. This information is also used by DOI bureau land managers in exercising their responsibilities to help plan for public land use and access.

In the next decade, the USGS will continue to improve spatial and temporal resolution through research and development of products such as full four-dimensional geologic maps, showing how the complex geologic structure of the Earth has changed through time. Mapping accuracy through cutting-edge technology allows for precise planning for energy development, transportation and pipeline infrastructure projects, urban planning, flood prediction, emergency response, and hazard mitigation.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent of land-area coverage available to the public over the internet through the National Geologic Mapping Database	55.5%
USGS	Percent of foundational topographic information services updated quarterly to support on-demand mapping	100%
USGS	Percent completion of research efforts related to land resource management	100%
USGS	Number of terabytes of remotely-sensed data managed	20,140
USGS	Percent increase of scientific research enhanced with Advanced Research Computation	100%

MISSION AREA 2 Generating Revenue and Utilizing Our Natural Resources

The DOI provides access to and manages energy and other resources including oil, gas, coal, timber, grazing, and non-energy minerals on public lands and oil and gas on the Outer Continental Shelf (OCS). The DOI is committed to achieve and maintain American energy dominance through responsible productivity of the public lands for the multiple use and economic benefit of present and future generations.

GOAL #1 Ensure energy and economic security for America

The DOI is the steward and manager of much of America's natural resources which include oil, gas, coal, minerals, and renewable energy sources, such as solar, wind, geothermal, and hydropower. There are vast amounts of untapped domestic energy reserves on public lands. DOI is also reinitiating the National OCS Oil and Gas Leasing Program development process, which is a key component of the America First Energy Plan and the Executive Order on Implementing an America-First Offshore Energy Strategy, to bring jobs and prosperity to millions of Americans. Our nation will use the revenues from energy production to rebuild our roads, schools, bridges and public infrastructure. The Department's "all-of-the-above" strategy facilitates development of all energy resources and makes our nation stronger by decreasing dependency on other nations, creating jobs, and helping drive economic growth.

STRATEGY #1: Promote safe and robust oil, gas, coal, and renewable energy resource development

Oil, gas, coal and renewable energy form the cornerstones of our nation's energy base, and the DOI will continue to expand production of both offshore and onshore conventional and renewable U.S. energy resources while ensuring safety and reliability through efficient permitting, appropriate standards, assessment and oversight. As demand for energy resources grows, agencies within the DOI, such as BIA, BLM, BOEM, BSEE, OSMRE, and USGS conduct work that is increasingly critical to understand the exploration, development, quality, supply, and use of our energy resources. This work enables the DOI to advance new sources of efficient energy generation, facilitate the construction of new or upgraded infrastructure including transmission networks, develop resources responsibly, and ensure that the American public receives a fair return on that development.

Agency Priority Performance Goals:

- ***By September 30, 2019, the Bureau of Land Management will eliminate its backlog of fluid mineral Applications for Permits to Drill (APD's) that have been pending for 3 years or more.***
- ***By September 30, 2019, the Bureau of Land Management will process 80% of parcels created for leasing public lands for oil, gas, or other mineral extraction within 180 days.***

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of pending fluid minerals Applications for Permits to Drill (APDs) which are processed	75%
BLM	Percent of high priority fluid mineral cases that have completed inspection during the year	100%

BLM	Percent of coal lease applications processed	15%
BLM	Number of acres of public lands made available for oil and natural gas leasing	25,000,000
BLM, BOEM	Number of megawatts of approved capacity authorized (that year) on public land and the OCS for renewable energy development while ensuring compliant environmental review	2,020
BOEM	Percentage of Exploration and Development Plan reviews completed within statutory timelines	100%
BOEM	Percent of offshore lease sale processes completed, pursuant to the Secretary's approved National OCS Oil and Gas Leasing Program	100%
USGS	Percent completion of targeted energy resource assessments and research	100%
BSEE	Amount of operational offshore oil spilled (in barrels) per million barrels produced	3.1
BSEE	Percent of high risk production facilities and operations inspected	95%
BSEE	Number of recordable injuries per 200,000 offshore man hours worked	.390
BSEE	Percentage of high risk well operation (e.g., drilling) inspections completed	95%

STRATEGY #2: Provide hydropower

The DOI facilitates the development and use of renewable energy that employs hydropower energy to strengthen US energy security, economic vitality, and quality of life. The Bureau of Reclamation (BOR) is the second largest producer of hydroelectric power in the U.S., operating and maintaining 53 hydroelectric power facilities, comprising over 14,700 megawatts of capacity. On average, Reclamation generates 40 million megawatt-hours of electricity each year – the equivalent demand of over 3.5 million U.S. homes, returning over one billion dollars in federal revenue through power sales. Sustainable, low cost hydropower generated by Reclamation projects has provided significant value to the nation, spurring the development of the western U.S. – through the provision of firm electric power to rural communities as well as ancillary service to support western interconnect grid reliability. Reclamation works to promote domestic energy production by enabling new energy generation from hydropower, a renewable source, and facilitating the construction of new or upgraded transmission networks, helping to create new industries and supply chains, driving economic growth and job creation, and helping provide more energy from domestic sources.

Bureaus	Key Performance Indicators	2022 Goal
BOR	Amount of hydropower capability, in megawatts (MW), installed from 2018 through 2022	50
BOR	Percent of hydropower facilities in good condition as measured by the Facility Reliability Rating	73%

BOR	Percent of time that Bureau of Reclamation hydroelectric generating units are available to the interconnected Western electrical system during daily peak demand periods	80%

GOAL #2: Ensure access to mineral resources

The DOI recognizes that public lands are an important source of the Nation's non-energy mineral resources, some of which are critical and strategic. The DOI is committed to ensuring appropriate access to public lands, for orderly and efficient development of these resources under principles of multiple use management.

STRATEGY #1: Manage non-energy mineral development

DOI promotes energy security, environmental protection, and economic development through responsible, science-informed management of mineral resources. The BLM conducts environmental analysis of complex issues necessary to authorize use on BLM public lands and meet the increasing demand for non-energy solid leasable minerals, especially potash and phosphate. BOEM's Marine Minerals Program provides sand and gravel resources to protect and improve coastal infrastructure and the environment locally, regionally and nationally. Additionally, the in-depth science provided by the USGS Mineral Resources Program (http://minerals.usgs.gov) facilitates resource discovery and provides essential information and analyses for strategic, evidence-based economic and geopolitical decisions.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of non-energy mineral exploration and development requests processed	30%
BOEM	Number of sand and gravel requests processed for coastal restoration projects	8
USGS	Percent completion of targeted non-fuel mineral resource assessments and research	100%
USGS	Percent completion of targeted Critical Mineral Early Warning System (CMEWS) analyses and evaluations	100%

GOAL #3: Ensure public receives fair market value for resources; and recover costs where appropriate

Rents, royalties, and bonuses are collected from issuing leases on public lands, and offshore on the OCS, and for the amount of the resource extracted. These resources include oil, gas, coal, forage for grazing, and access to renewable energy resources such as solar, wind, and geothermal. It is important that these financial transactions include appropriate accountability and fair return to the American public. The associated regulations and practices for these fees and collections must also be rational and transparent to ensure businesses that extract and process these resources can function efficiently and profitably in order to support the economic growth and security of the nation.

STRATEGY #1: Ensure accurate and timely accounting and collection of energy revenues

The Department collects, disburses and verifies natural resource revenue generated from issuing leases on public lands, and offshore on the OCS. This revenue is then shared with states and localities according to specific statutory obligations, allocated to various Federal programs, or deposited in the General Fund of the Treasury, thus serving to reduce the deficit. The DOI is committed to managing these transactions accurately, responsibly, and in a timely manner. The Royalty Policy Committee has been reinstated by the Secretary to elicit robust advice and recommendations regarding policies related to royalties from these resources and their benefit to the American public.

The BSEE helps ensure the accuracy of metering from higher risk hydrocarbon sites that experience high volumes of throughput and/or have a past history of noncompliance to help ensure the appropriate financial benefit is obtained for the American people. Additionally, data driven procedures enable the BOEM and the BLM to ensure bid adequacy through a two phased review system for onshore and offshore leasing, and also allow for timely collection and disbursement of mineral and renewable energy revenues by the Office of Natural Resources Revenue (ONRR). ONRR's distributions benefit the Land and Water Conservation Fund, the Historic Preservation Fund, and the Reclamation Fund, helping to ensure America's natural resources and rich history are available to be enjoyed by current and future generations. Distributions to states are used to fund capital projects such as schools, roads, and public buildings. Revenues collected from leases on Indian lands directly benefit members of the Indian community.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
ONRR	Percent of federal and Indian oil and gas revenues disbursed on a timely basis per statute ($ Billions)	98%
BSEE	Percent of oil royalty meters, identified as high-risk using a risk based methodology, where meter provings will be observed	10%

STRATEGY #2: Ensure effective collection and application of recreation fees

The nation's public lands offer many excellent locations for public recreation in the outdoors at national parks and monuments, National Wildlife Refuges, BLM public lands and other locations, in historic sites and buildings and at national treasures such as the Statue of Liberty. Facilities (roads, visitor centers, bathrooms, historic buildings, museums, etc.) that enable visitors to enjoy their public lands and sites are expensive to maintain. All of the major land management bureaus have large backlogs of deferred maintenance at these facilities. The DOI will continuously review its fee structure to determine how best to accommodate visitors enjoyment while collecting fees that help to offset some of the maintenance costs required to keep visitor-facing infrastructure in good shape for visitors. All such reviews of fees and changes will remain consistent with Congressional direction that has been provided through a series of laws including the Federal Lands Recreation Enhancement Act.

The National Park Service established fee structure guidelines in 2006 to standardize rates across the country. The resulting tier system assigns each park unit to a tier and associated entrance fee schedule based on the type of site and the amenities provided for the public. During 2017, the National Park Service initiated a comprehensive review to evaluate and consider bringing entrance fees at all park units into compliance with their assigned tier through a process of public engagement by January 1, 2018. Even with proposed increases, entrance fees remain affordable at $15-$30 per vehicle, which is normally good for several days. The America the Beautiful Pass Annual Pass remains at the price of $80 for one year for unlimited entrance fees for almost all national parks, Fish and Wildlife and BLM sites where fees are required. Congress raised the one-time cost of the America the Beautiful Lifetime Senior Pass for those age 62 or older from the previous fee of $10 to $80 effective in August 2017.

Reviews of other amenity fees (such as for campgrounds and special use permits) will also strive to set fair and equitable fees for activities that visitors enjoy after they enter the park, refuge, or recreation area. The bureaus will seek public comment during any process to review and modify fee amounts to ensure that the public has an opportunity to raise questions and provide comments regarding any fee changes. The bureaus will also identify ways to modernize and enhance fee collection mechanisms that speed access to facilities and/or reduce the cost to the federal government for fee collection.

GOAL #4: Focus timber programs on "healthy forests" lifecycle

The BLM manages forests or woodlands for the benefit of the American public. The BLM maintains a permanent source of timber supply, which supports the production of lumber, plywood, and paper, while also protecting watersheds, regulating stream flow, contributing to the economic stability of local communities and industries, and providing recreational opportunities. Responsible management that reduces fire fuels improves the health and resilience of our forests and helps to prevent forest fires.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to national sources of timber supply. Many tribes now actively participate in management of their forest assets through self-governance and self-determination programs.

STRATEGY #1: Manage sales of timber and forest product resources

Forest management programs within the DOI generate economic benefits through timber harvests on public and Indian trust lands, and restoring forest health. The benefits of healthy forests include typical forest products such as timber and biomass but also include opportunities for recreation and maintenance of watershed health.

The BLM has two focus areas for forest management, the Oregon and California grant lands and the public domain lands. For Oregon and California lands, generating revenue for counties is the primary driver of forest management treatments, while for public domain lands, fire management is the primary driver for forest management. The BLM is currently reviewing its management plans to determine prospects for offering additional timber for sale in the future.

The BIA manages forests as a trust asset of Indian tribes. Tribally owned forest assets contribute substantially to the national sources of timber supply. Many tribes now actively participate in management of their forest assets through the self-governance and self-determination programs.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of allowable sale quantity (ASQ) timber offered for sale consistent with applicable resource management plans (O&C--Oregon and California--only)	100%
BLM	Volume (mmbf) of wood products offered consistent with applicable management plans	285
BIA	Percent of Annual Allowable Cut prepared and offered for sale or free use	48%

GOAL #5: Manage grazing resources

The BLM manages livestock grazing on over half of its public lands; approximately 18,000 permits and leases are held by ranchers that graze their livestock on over 21,000 grazing allotments throughout BLM managed lands. The BLM's overall objective is to ensure the long-term health and productivity of these lands. BLM uses a variety of methods to accomplish this objective – periodic rest or deferment of grazing in pastures in specific allotments during critical growth periods; vegetation treatments; and projects such as water developments and fences. The terms and conditions for grazing on BLM-managed lands such as stipulations on forage use and season of use are set forth in the permits and leases issued by the Bureau to public land ranchers.

STRATEGY #1: Provide for sustainable forage and grazing

Livestock grazing contributes to food production and adds to local economic stability, and it can be used in certain areas to maintain and improve land health by reducing hazardous fuels and minimizing the likelihood and impact of catastrophic wildfires. The BLM partners with local communities and state and local governments to develop rangeland improvement projects, stewardship contracting, and good neighbor authority in its rangeland management. In recent years, the number of grazing permits and leases processed has decreased due to dramatic increases in litigation and drought. The BLM continues to look for opportunities to streamline the grazing permit process and provide livestock operators greater flexibility in grazing their livestock on public lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM	Percent of grazing permits and leases processed as planned consistent with applicable resource management plans	16%
BIA	Percent of tribal range units assessed during the reporting year for level of utilization	15%

MISSION AREA 3 Expanding Outdoor Recreation and Access

Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the DOI's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Americans have the opportunity to hunt and fish on public lands managed by the DOI as part of its multiple-use policy that also includes hiking, camping, climbing, boating, wildlife viewing, and other outdoor pursuits.

GOAL #1: Expand hunting, fishing, and other recreation on DOI lands and waters

Hunting, fishing and other outdoor activities contributed $156 billion in economic activity across the United States according to the FWS National Survey of Fishing, Hunting and Wildlife-Associated Recreation. More than 101 million Americans, or 40 percent of the United States' population 16 and older, pursue wildlife-related recreation, which supports 480,000 American jobs.

Following two initial Secretarial Orders issued on his first day, Secretary Zinke issued Secretarial Order 3356 in September, 2017, to further expand public access to lands and waters administered by the DOI, for hunting, fishing, recreational shooting, and other forms of outdoor recreation. In addition, this Order gave greater priority to recruiting and retaining sportsmen and women conservationists, with an emphasis on engaging youth, veterans, minorities, and underserved communities that traditionally have low participation in outdoor recreation activities.

STRATEGY #1: Promote hunting, fishing, and other recreation on DOI lands and waters

There are 372 National Wildlife Refuges and wetland management districts open to hunting and 308 refuges and wetland management districts open to fishing. As practiced on refuges, hunting and fishing do not pose a threat to wildlife populations, and in some instances, are actually necessary for sound wildlife management. For example, deer populations will often grow too large for the refuge habitat to support. If some of the deer are not harvested, they destroy habitat for themselves and other animals and die from starvation or disease. The harvesting of wildlife on refuges is carefully regulated to ensure an appropriate balance between population levels and wildlife habitat. The FWS National Fish Hatcheries continue to be a valuable tool in managing fisheries providing recreation opportunities to America's 36 million anglers who spend $46 billion annually in pursuit of their favored pastime.

There are 76 areas managed by the National Park Service that permit hunting. A total of 51,097,000 acres managed by the NPS are open to hunting at various times during the year, representing approximately 60% of the total acreage of the NPS system. The Bureau of Land Management estimates that over 95 percent of the nearly 250 million acres of BLM-managed public lands are open to hunting.

The recreation areas developed as a result of Bureau of Reclamation water projects are among the Nation's most popular for water-based outdoor recreation. There are 289 Reclamation project areas that have developed recreation facilities and opportunities available for public use. Reclamation has approximately 6.5 million acres of land and water, most of which is available for public outdoor recreation. The 187 developed recreation areas managed by Reclamation or a non-Federal recreation partner draw over 24 million visits annually. The 187 developed recreation areas provide 549 campgrounds, 454 boat launch ramps, and more than 5,500 miles of shoreline.

Bureaus	Key Performance Indicators	2022 Goal
FWS	Number of National Wildlife Refuge acres newly opened to hunting and fishing	250,000
BLM	Number of legal public access transactions completed that facilitate open access to recreation opportunities	20
BLM	Number of newly installed campsites, restrooms, and other facilities that promote public access to BLM-managed public lands	30
BLM, BOR, FWS	Number of individuals participating in outdoor recreation activities at special events	5,420,000

GOAL #2: Enhance public satisfaction at DOI sites

Visitor satisfaction with the quality of experiences on public lands remains very high. Collectively, satisfaction is above 90 percent for the bureaus providing recreation services, e.g., interpretive programs, visitor centers, camping, fishing, hiking, horseback riding, boating, off-highway vehicle driving, wildlife viewing, photography, and climbing. Satisfaction with recreation services provided through facilitated programs remains very high – also above 90 percent.

STRATEGY #1: Enhance the enjoyment and appreciation of our natural and cultural heritage

Survey results show that a sizeable percentage of visitors are satisfied with their experiences at parks, refuges and other public lands. Competition from other forms of entertainment pose challenges to the DOI in its quest to ensure that all Americans understand, appreciate and enjoy the special places protected by the national parks, wildlife refuges and BLM lands.

Bureaus	Key Performance Indicators	2022 Goal
BLM, FWS, NPS	Percent of visitors satisfied with the quality of the experience	95%
BLM, NPS	Percent of visitors satisfied with facilitated programs	94%

MISSION AREA 4 Fulfilling Our Trust and Insular Responsibilities

The DOI upholds the Federal government's unique trust responsibilities by fostering the government-to-government relationships between the Federal government and federally recognized Tribes, and by providing services to individual American Indians, and Alaskan Natives. The U.S. also has important relationships with the affiliated insular areas including the Territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. The DOI administers and oversees Federal Assistance to the three Freely Associated States: The Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau.

GOAL #1: Support tribal self-determination, self-governance, and sovereignty

The DOI is strengthening the nation-to-nation relationship between the Federal Government and tribal nations because self-determination, sovereignty, self-government, and self-reliance are the tools that will enable tribal nations to shape their own destiny. Tribes have also assumed an expanded role in the operation of Indian programs through Public Law 93-638 contracting. Tribes contract with the Federal Government to operate programs serving their tribal members and other eligible persons.

STRATEGY #1: Support self-governance and self-determination

Self-Governance: Under a self-governance compact, a tribe takes over most or all operations affecting that tribe. The Indian Affairs' Office of Self-Governance (OSG) implements the Tribal Self Governance Act of 1994 by developing and implementing regulations, policies, and guidance in support of self-governance initiatives. Indian Affairs advocates for the transfer of Federal programmatic authorities and resources to tribal governments and supports tribal sovereignty and an expanded role in the operation of Indian programs. The program work includes negotiating annual funding agreements with eligible tribes and consortia, and resolving issues identified in financial and program audits of self-governance operations.

Self-Determination: Under a self-determination contract, a tribe contracts with BIA to take over operation of a program formerly delivered by BIA employees. The funds BIA previously used to run the program transfer to the tribe. Self-determination typically is a program-by-program decision. The Indian Self-Determination Program within BIA works to further American Indian tribes' exercise of self-determination and conducts oversight of self-determination contracts and grants.

Bureaus	Key Performance Indicators	2022 Goal
AS-IA	Percent of Self-Governance Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	99%
BIA	Percent of Self-Determination Single Audit Act reports submitted during the reporting year for which management action decisions on audits are made within 6 months	91%
AS-IA	Percent of P.L. 93-638 contracts with clean audits	90%

GOAL #2: Fulfill fiduciary trust

The DOI has ongoing responsibilities to ensure that trust and restricted Federal Indian-owned lands are managed effectively and to accurately account for revenues and disbursements in a timely and efficient manner. The Office of the Special Trustee for American Indians and the Bureau of Indian Affairs oversee fiduciary trust activities. The DOI assists American Indian and Alaska Native communities in developing capabilities needed to strengthen their communities and maintain economic self-sufficiency. Efforts such as reducing fractionation of Indian lands and developing conservation and resource management plans help tribes maximize economic benefits of their lands. Securing unsubsidized employment reduces dependency on Federal subsidized programs such as childcare assistance, food stamps, and welfare.

Trust assets are crucial to the financial well-being of individual Indian beneficiaries and key components in the economies of tribes. As such, these assets must be managed with great care, paying attention that all financial transactions are completed accurately and as quickly as possible. Since passage of the American Indian Trust Fund Management Reform of 1994, the trust accounts managed by OST are balanced to the penny on a daily basis. OST has also incorporated industry-standard practices, such as a lockbox facility, to shorten the time between the payment of a lease and deposit of those funds into a trust account. For Fiscal Years (FY) 2013 through 2017, OST has received a "clean" audit opinion for Individual Indian Monies (IIM) accounts, attesting to its professionalism in managing these assets. Despite this proven record of success, OST retains a commitment to continual reform, looking for more ways to improve its service to individual Indians and tribes.

The Bureau of Indian Education (BIE) helps provide quality education opportunities starting in early childhood in accordance with tribally identified strategies and needs that contribute to the social well-being of the community and sustain Indian cultures. Tribes directly operate 150 of the 183 BIE funded schools through self-determination contracts and Tribally Controlled Schools Act grants.

STRATEGY #1: Ensure accurate and timely management of fiduciary trust assets

In its effort to promote the fulfillment of fiduciary trust processes, the DOI assists Indian tribes in developing capacity and infrastructure needed to attain economic self-sufficiency on reservations to enhance their quality of life. One critical path is economic development and job creation. The BIA coordinates development of comprehensive tribal programs with the Departments of Labor and Health and Human Services. The DOI offers programs and financial services that encourage start-ups and help position Indian businesses and individuals to compete in today's economy.

Bureaus	Key Performance Indicators	2022 Goal
BIA	Total average gain in earnings of participants that obtain unsubsidized employment through Job Placement Training programs for tribes submitting P.L. 102-477 related reports	$10.82
BIA	Percent of active, supervised Individual Indian Monies (IIM) case records reviewed in accordance with regulations	98%

BIA	Increase in the percentage of submitted land-into-trust applications with determinations (Fee to Trust)	40%
OST	Percent of financial information initially processed accurately in trust beneficiaries' accounts.	99%
OST	Percent of oil and gas revenue transmitted by ONRR recorded in the Trust Funds Accounting System within 24 hours of receipt.	99%
OST	Percent of timeliness of financial account information provided to trust beneficiaries.	100%

STRATEGY #2: Strengthen Indian Education

Improving performance in BIE schools is a challenge the DOI is addressing through initiatives aimed at increasing student achievement. Students at BIE-funded schools receive a culturally relevant, high-quality education that prepares them with the knowledge, skills, and behaviors needed to flourish in the opportunities of tomorrow, become healthy and successful individuals, and lead their communities and sovereign nations to a thriving future that preserves their unique cultural identities.

Bureaus	Key Performance Indicators	2022 Goal
BIE	Percent of students attending BIE-funded schools completing high school with a regular diploma within four years of their 9th grade entry date	69%

GOAL #3: Strengthen economic and health capacities in the US Territories, and fulfill US compact obligations to the freely associated states

The DOI supports the U.S. Territories and Freely Associated States (FAS) through the Office of Insular Affairs (OIA) under the Assistant Secretary for Insular and International Affairs. The U.S.-affiliated insular areas are: the territories of American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands. Residents of these U.S. territories are U.S. citizens or nationals. The DOI also administers and oversees Federal assistance provided to the three Freely Associated States: the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. The Assistant Secretary Insular and International Affairs and the Office of Insular Affairs carry out these responsibilities on behalf of the Secretary.

STRATEGY #1: Bolster Healthcare Capacity

The Territories and FAS experience significant healthcare challenges. The DOI along with other partners, such as the Department of Health and Human Services (HHS), will work with insular area partners to improve the quality of healthcare across the insular areas. The DOI will make investments to implement corrective action plans which address chronic operational and facility shortcomings at territorial hospitals, which serve their U.S. citizens and nationals, with a focus on those identified by the HHS/Centers for Medicare/Medicaid (CMS) and local elected officials. Additional investments will be made to combat non-communicable and communicable diseases impacting the Pacific and Caribbean islands such as obesity, diabetes, and tuberculosis.

Offices	Key Performance Indicators	2022 Goal
OIA	Percent of Community Water Systems (CWS) that receive health based violations notices from the US Environmental Protection Agency	9%
OIA	Number of new and relapse tuberculosis cases occurring during the calendar year on the islands (per 1,000 people in the population)	1
OIA	Percent of patients with newly diagnosed tuberculosis disease for whom 12 months or less of treatment is indicated, who complete treatment within 12 months	95%
OIA	Infant mortality rate per 1,000 live births (number of deaths to infants from birth through 1 year of age per number of live births)	6

STRATEGY #2: Strengthen Island Economies

Strong local economies provide employment and a viable tax base for citizens in the Insular Areas. The DOI will assist the insular areas to strengthen their economies through strategic investments in infrastructure, public services and technical assistance which will attract and retain private sector investment. The DOI will promote policies and improve Federal coordination on issues impacting insular economies.

Capital investments will be made in basic utilities, hospitals, schools, ports, tourist areas, telecommunications and roads as they create the backbone for increased economic activity. Pursuing renewable energy strategies lessens dependence on oil imports and provides more reliable and affordable energy.

Stable economies and fiscally prudent insular governments foster a more hospitable climate for investment in the islands. Technical assistance will be provided to equip the insular areas with the statistical and management information necessary for informed leadership decision making, expert consultants to effectively improve insular government financial policies and procedures, and strong financial management systems along with technical planning abilities.

The DOI will help create economic opportunity by forging partnerships that bolster tourism and attract industry by promoting the unique island cultures, natural resources, and by preparing the next generation of business leaders. Key indicators of OIA's effectiveness include the following:

Average per capita Gross Domestic Product (GDP): In the four U.S. Territories (Guam, US Virgin Islands, American Samoa, and Commonwealth of the Northern Mariana Islands (CNMI)) for which it is measured, GDP remains a fraction of that for other U.S. citizens in the states. OIA provides technical assistance to the insular areas to assist with economic development planning and execution and supports local planning and education activities related to tourism, agriculture, and aquaculture. In addition, OIA funds infrastructure projects related to economic development, such as fiber optic connectivity, port improvements and renovations to tourist districts.

Cost of electricity: Without indigenous fossil fuels, insular areas face great challenges in achieving reliable, affordable, and secure energy, which can have severe economic effects on the island communities. These areas depend almost entirely on imported petroleum products for energy. The residential cost per kilowatt hour for power in the territories directly impacts the quality of life in

the insular areas and remains over three times higher than the national average. To try to address high electricity costs, the Office of Insular Affairs (OIA) contracts with the Department of Energy's National Renewable Energy Laboratory (NREL) to engage territories and provide energy efficiency and renewable energy assessments, help develop strategic energy plans, and provide technical assistance in reviewing and implementing alternative energy projects. The OIA, through its Empowering Insular Communities grant program, continues to provide funding for the highest priority projects identified in the energy plans including photovoltaic, wind and geothermal development projects, as well as assuring traditional energy plants continue operating.

Offices	Key Performance Indicators	2022 Goal
OIA	Difference in the mean GDP per capita in the 4 US territories compared to the mean GDP per capita in the US	60%
OIA	Difference in the residential cost per kilowatt hour for power from the national average	2X

STRATEGY #3: Fulfill US Compact Obligations

In coordination with the State Department, the DOI will implement compact obligations with three U.S.-affiliated Freely Associated States (FAS): the Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI) and the Republic of Palau (Palau). The DOI will make direct grants to the FSM and RMI under their amended Compacts to provide assistance in six sectors: education, health care, infrastructure, public sector capacity building, private sector development, and environment. The DOI will also continue to support U.S. compact obligations to Palau.

Offices	Key Performance Indicators	2022 Goal
OIA	Ratio of FAS private sector jobs versus total FAS employment	55%
OIA	Ratio of FAS public sector jobs versus total FAS Employment	45%
OIA	Percent of FAS employment attributable to OIA Grants and Programs	30%
OIA	Percent of FAS employee compensation attributable to OIA grants and programs	25%
OIA	Average FAS private sector wage rate as a percentage of average FAS central government wage rate	45%

MISSION AREA 5 Protecting Our People and the Border

Inherent in DOI's management responsibilities of the public lands is the requirement to protect employees and visitors. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices covering four disciplines – law enforcement, emergency management, wildland fire, and natural hazards science. The DOI's Law Enforcement Program has the third largest contingent of Federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, wildlife refuges, and Indian communities and protect people, as well as natural, cultural, and heritage resources from illegal activities. Wildland fires potentially endanger lives and property. The Office of Wildland Fire (OWF) coordinates among the DOI's land management bureaus and the US Forest Service to safely, efficiently, and effectively prevent, respond to, and manage the impacts of wildfires. The USGS also protects lives by monitoring and warning of natural hazards such as earthquakes, volcanoes, landslides, and environmental health hazards.

The DOI has land on both the Canadian and Mexican borders, and a presence in the Pacific that exposes Americans to risks from Asia. The Administration is presently emphasizing securing our southern border with Mexico to better protect our country. The DOI has a considerable amount of land that borders Mexico. As such, the DOI's law enforcement officers work in partnership with the US Customs and Border Patrol, Immigration and Customs Enforcement, Drug Enforcement Agency, and tribal, state and local governments to address the flow of illegal immigration, gun and drug trafficking, and to mitigate the impacts associated with these activities, which affect DOI lands and our community partners. In addition, OWF shares wildfire management responsibilities with Mexico along the southern border.

GOAL 1: Ensure emergency preparedness & DOI law enforcement staffing addresses public safety risks

The DOI places a high priority on safety, security, and preparedness, and will uphold its responsibilities for protecting lives, resources, and property through a wide variety of program areas, including law enforcement, health and safety, security, and emergency management. The DOI's preference is to achieve public and visitor compliance with applicable laws and regulations by using techniques that are not confrontational and are designed to elicit voluntary as opposed to coerced compliance.

STRATEGY #1: Ensure public safety on our lands

The Office of Law Enforcement and Security (OLES) provides program direction and oversight on law enforcement policy, border security, drug enforcement, training at the national academy, internal affairs, victims assistance, program compliance, and inspections as well as emergency deployment of DOI law enforcement resources. The Office coordinates with other Federal, state and local agencies (including the Department of Homeland Security, Federal Bureau of Investigation (FBI), and Central Intelligence Agency) on law enforcement and security issues, including infrastructure on the Outer Continental Shelf, the Trans-Alaska pipeline, and gas transmission lines.

To help ensure effective protection of people on DOI lands, each bureau will determine the effective level and distribution of law enforcement staffing for each of its programs on a unit-by-unit basis. The effective level and distribution of staffing needs is dependent on the differing

conditions, levels of risk, and populations served in each unit, captured through a staffing model developed and monitored by each bureau. The DOI's bureaus will engage in developing these staffing models, to determine on a program basis the effective levels of law enforcement staffing that are needed across its units, evaluate the actual level of law enforcement staffing that presently exists, and develop recommendations for better ensuring the effective level of staffing for protecting the people in each unit.

The DOI will strengthen law enforcement in Indian Country by putting more officers on the streets, bolstering tribal courts, and helping fight violent crime and drug abuse. Tribal justice systems are an essential part of tribal governments, which interface with BIA and tribal law enforcement activities. Congress and the Federal courts have repeatedly recognized tribal justice systems as the appropriate forums for adjudicating disputes and minor criminal activity within Indian Country. It is important that the BIA and tribal law enforcement activities complement the operations of the tribal courts to ensure that justice in the tribal forums is administered effectively.

Bureaus	Key Performance Indicators	2022 Goal
OLES	Percent of DOI law enforcement agencies with a current law enforcement staffing plan	100%
BIA	Percent of criminal offenses solved by arrest (Part 1 Offense Clearance Rate)	44%

Strategy 2: Prepare DOI to respond to and recover from emergencies and incidents

The Office of Emergency Management (OEM) promotes all-hazard preparedness and response; ensures continuity of the DOI to perform essential functions during catastrophic events; and assists communities during imminent threats. Collectively, the DOI supports the five National Planning Frameworks (Protection, Prevention, Mitigation, Response, and Recovery) and their related five Federal Interagency Operational Plans, the National Incident Management System, and the National Oil and Hazardous Substances Pollution Contingency Plan while continuing the DOI's mission to protect natural and cultural resources. The DOI's All-Hazards Baseline Operational Plan provides the baseline guidance for how the Department prepares for and responds to emergencies, regardless of type or cause. The OEM leads coordination and information sharing for emergency management regarding communications, public health, environmental health, wildlife health, integrated pest management, invasive species, and occupational safety and health across the DOI's bureaus and offices.

Offices	Key Performance Indicator	2022 Goal
PEM	Average Interior Readiness (I-READ) Index score for emergency preparedness across DOI Bureaus/Offices	91.0%

GOAL 2: Support securing our southern continental US border

The DOI manages 41% of the southwest border of the continental United States. The DOI's managers in the field are daily faced with tough decisions on how to best utilize their law

enforcement assets. An integrated government approach is essential to effectively securing the border and supporting the construction of a physical barrier where needed. Through partnering, federal, state, tribal, and local law enforcement agencies working in proximity to each other have been able to address critical issues like illegal immigration and marijuana smuggling.

STRATEGY #1: Support securing our southern continental US border

The DOI's goal is to increase collaboration among the agencies operating along the border to better understand each other's mission, share resources, and coordinate efforts. This is accomplished by routine interagency coordination, participating in local Border Management Task Force (BMTF) meetings, interagency training, an annual interagency border forum, and law enforcement specific operations.

The US Border Patrol is the main federal agency responsible for patrolling DOI lands adjacent to the US/Mexican Border. The DOI's goal is to work with US Border Patrol to decrease illegal immigration on DOI managed public lands through collaborative efforts with partnering agencies.

Bureaus	Key Performance Indicators	2022 Goal
PMB/OLES	Number of apprehensions on DOI-managed lands	Reduced Annually

GOAL #3: Manage wildland fire to reduce risk and improve ecosystem and community resilience

The DOI, working with the Department of Agriculture, will improve the way that both agencies manage wildland fire by ensuring that fire management assets are used in the most efficient way possible. The DOI will work with state, local, tribal, and other partners to ensure a coordinated approach to wildland fire management that enables protection responsibilities to be exchanged and resources shared to improve operational efficiency and reduce management duplication. The DOI will continue to integrate science and technology into informing and supporting the firefighters with the appropriate training tools, resources and program support to enable them to work safely and effectively.

The DOI is developing new wildland fire management performance measures to better articulate and determine the efficacy of Department and Administration resources in achieving desired resource conditions that reduce the intensity, severity or negative effects of wildfire. As part of this effort, the Department has established a working group among the four DOI wildland fire bureaus, as well as the U.S. Forest Service, which will explore the feasibility of concepts and principles in wildfire risk mitigation, and examine the value of the strategic placement of fuels treatments as informed by a risk assessment and mitigation plan. This group will develop recommendations for a) establishing outcome-based targets, and b) annually evaluating the performance of the program in meeting the desired objectives of the National Cohesive Wildland Fire Management Strategy. When

completed, the DOI will incorporate the new performance measures into its strategic plan implementation.

STRATEGY #1: Integrate fire ecology, risk management, and collaboration to mitigate wildfire impacts

The Department's Office of Wildland Fire coordinates programs and funding across four bureaus (BLM, FWS, NPS, and BIA) that manage wildland fire programs to implement the National Cohesive Wildland Fire Management Strategy, a science-based collaborative approach to mitigating wildfire risk. The DOI, in partnership with the Department of Agriculture's Forest Service, is committed to the inclusive principles of providing safe and effective response to wildfires, promoting fire-adapted communities, and creating fire-resilient landscapes. The DOI strives to achieve a science-based and technically effective wildland fire management program that is integrated with natural resources programs.

Successful management in fire-adapted communities and landscapes depends on implementation of a broad-based, intergovernmental, collaborative, and national cohesive strategy to address the mounting challenges of escalating fire behavior, increased risk to responders, greater natural and cultural resource losses, and increased threats and losses to communities. The DOI is a lead agency in this collaborative approach with the Forest Service and other Federal, state, tribal, and local governments and stakeholders.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
OWF	Percent of DOI-managed landscape acres that are in desired condition as a result of fire management	36%
OWF	Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan	94%
OWF	Percent of wildfires on DOI-managed landscapes where the initial strategies fully succeeded during the initial response phase	97%

GOAL #4: Provide science to safeguard communities from natural hazards

The USGS helps protect public safety, public health, and property by effectively delivering natural hazards and environmental health science. The Nation's emergency managers and public officials use USGS science to inform citizens of the potential risks these hazards pose to natural systems and the built environment, improve preparation and response activities, and protect the health of the public, which reduce the loss of life and property.

STRATEGY #1: Monitor and assess natural hazards risk and response planning

Responsibilities in natural hazards include the issuing of warnings and advisories for earthquakes, volcanic eruptions, landslides, and coastal erosion; informing warnings issued by other agencies for floods, tsunamis, and wildfires; providing timely information to emergency managers and response officials, the media, and the public to inform and educate communities during and between crises.

The USGS supports these activities by implementing 24x7 operations for seismic, volcanic, and geomagnetic monitoring efforts; maintaining an extensive national network of streamgages measuring rainfall, streamflow, stream height or lake levels; and developing the next generation of tools for rapid evaluation of hazards.

Bureaus	Key Performance Indicators	2022 Goal
USGS	Percent completion of targeted natural hazards assessments of very high and high-threat regions of the Nation (Index)	4%
USGS	Percent completion of targeted landslide hazard research	8%
USGS	Percent completion of coastal and marine hazards and subsidence research (Index)	87%
USGS	Percent progress towards optimal monitoring capability for natural hazards situational awareness (Index)	52%
USGS	Percent of the National Streamflow Network (NSN) streamgages that are fully operational	88%

MISSION AREA 6 Modernizing Our Organization and Infrastructure for the Next 100 Years

The DOI is looking to better ensure effective operations and service delivery through coordinated organizational alignments in the field across bureaus and with other federal and nonfederal partners, and through putting a relatively larger fraction of our employees into the field to serve the public. Expediting environmental analysis and compliance, reducing the cost of space, collocating offices for more convenient public service and improved interagency coordination, and common regional boundaries are all being explored to help improve the DOI's infrastructure and related effectiveness.

GOAL #1: Align DOI organizational structure and workforce to improve partnership engagement and mission delivery

The DOI is reevaluating its organizational model to determine how to best achieve its mission of serving the American public, honoring our tribal and fiduciary trust responsibilities, and managing and protecting our land, water and natural resources for the next 100 years.

STRATEGY #1: Ensure effective alignment of DOI organizational structure in the field and with partners

The DOI intends to establish unified regional boundaries for its bureaus in 2018 and to further develop this approach in 2019. The goal is to improve overall operations, internal communications, customer service, and stakeholder engagement. Aligning geographic areas across the DOI will enhance coordination of resource decisions and policies and will simplify how citizens engage with the DOI.

Organizing bureaus with common geographic areas will allow for more integrated and better coordinated decision making across bureaus. Currently, the DOI's bureaus have more than 40 distinct regions, each with its own geographic boundaries. This complicates coordination and hampers the DOI's ability to get things done expeditiously. Having unified regions will help streamline operations and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision. The new regional boundaries currently under discussion – and subject to modification – are expected to have minimal budgetary impact.

To improve customer service and reduce operational costs, sharing functions at field locations has already begun. For a number of years, the Department of the Interior and Department of Agriculture's US Forest Service (USFS) have pooled resources, conducted joint projects, and shared services under Service First agreements where field locations are in close proximity to each other. Service First authority promotes partnering across agency boundaries to develop joint solutions to common problems and to address federal land management issues in an integrated way.

STRATEGY #2: Improve strategic hiring, placement and retention efforts to ensure mission-critical service delivery through data driven processes and increased employee engagement efforts

The DOI is committed to managing America's vast natural and cultural resources with a 70,000-strong and 350 occupation-plus workforce that exemplifies high performance, customer service and

accountability. Historically, it has been difficult to attract certain DOI employees or recruits in certain occupations to positions in headquarters, or even to regional offices, because many of our employees enjoy living in relatively rural areas and because the cost of living is so much higher in large cities. Moving a larger fraction of our staff of some bureaus to relatively more rural and considerably less expensive areas in the West might therefore both reduce payroll cost because fewer employees would receive locality pay, and improve employee retention.

To facilitate strategic human capital planning, the Department has put in place hiring controls to emphasize new hiring for field-related positions rather than administrative and support positions in the Washington, D.C., and Denver, Colorado metropolitan areas.

The DOI will leverage automation to improve employee performance and training opportunities, and examine additional data to determine if operational efficiencies can be gained while minimizing redundancies under the current organizational design.

Data to be analyzed include:

- Federal Employee Viewpoint Survey (*e.g.*, employee engagement)
- Geographic Representation of Bureau Mission Critical Occupations
- Geographic Representation of Administrative and Support Services
- Customer Service data
- Benchmarking cost allocations for administrative and support functions
- DOI Human Capital Framework Evaluations
- Accountability drivers on performance, labor management, EEO, etc.
- Bureau plans in response to the Department-wide Workplace Environment Survey

Offices	Key Performance Indicator	2022 Goal
PHR	Employee engagement index for DOI in the Federal Employee Viewpoint Survey	75%
PHR	DOI's ranking among large agencies in the Partnership for Public Services' Best Places to Work report	1

GOAL #2: Reduce administrative and regulatory burden

Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs, directed agencies to "manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations." The DOI is reviewing its regulations and administrative processes to determine what cost savings, to the government and to the public, are possible by repealing regulations for which the perceived benefits might not be justified relative to their implementation costs, and which administrative processes could be streamlined or made more efficient.

STRATEGY #1: Evaluate and improve the net benefits of regulatory reform initiatives and policies, and identify regulations for repeal, replacement, or modification

On February 24, 2017, President Trump signed Executive Order 13777 entitled, "Enforcing the Regulatory Reform Agenda" to alleviate unnecessary regulatory burdens placed on the American people. The Executive Order established a Regulatory Reform Officer (RRO) for each agency and a Regulatory Reform Task Force. The efforts of the RRO and the task force will help identify

regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. The costs of the regulatory and deregulatory actions are measured as the opportunity costs or cost savings to society, as defined in OMB Circular A-4 (i.e. the values reported are the cumulative net savings from deregulatory actions and costs of newly required regulatory actions over multiple years starting in FY 2017). In 2017, the DOI achieved cumulative net savings of $1.15B (net present value) from its deregulatory actions. Goals for subsequent years will be established as the DOI completes its review of target regulations.

Office	Key Performance Indicator	2022 Goal
DOI	Total incremental cost of all EO 13771 regulatory actions and EO 13771 deregulatory actions (including costs or cost savings carried over from previous fiscal years)	TBD
DOI	Number of EO 13771 regulatory actions issued.	TBD
DOI	Number of EO 13771 deregulatory actions issued.	TBD

STRATEGY #2: Improve transparency and timeliness of the infrastructure permitting process

As outlined in the President's Executive Order "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure," and the corresponding Secretarial Order 3355, a significant opportunity exists for agencies to streamline and collaborate on National Environmental Protection Act (NEPA) compliance efforts. The DOI believes this can best be achieved through a unified regional structure adopted across the DOI which focuses on the intersecting issues within the same geographical boundaries.

The DOI is also establishing an Executive Committee for Expedited Permitting (ECEP) to expedite the responsible leasing and permitting of energy and mineral production. More specifically, this involves, but is not limited to, the processing of Applications for Permit to Drill (APD), Expressions of Interest (EOI), coal leasing actions, Right-of-Way (ROW) applications, and harmonization of appurtenant environmental reviews.

Office	Key Performance Indicator	2022 Goal
DOI	*Cross-Agency Priority Goal metric on improving infrastructure permitting to be added*	
BLM	Average amount of time (in days) to process and administratively complete Applications for Permit to Drill	90 days
BLM	Average amount of time (in months) to issue a decision on major right-of-way applications	48 months
BLM	Average amount of time (in days) to process and administratively complete a grazing permit	390 days
FWS	Percent of formal Endangered Species Act Section 7 consultations addressed in a timely manner	100%

GOAL #3: Prioritize DOI infrastructure needs and reduce deferred maintenance backlog

Real property assets are integral to the success of Interior's mission. DOI's real property inventory includes approximately 43,000 buildings and 80,000 structures across six major land-holding bureaus, with a replacement value of approximately $300 billion. DOI manages the full life-cycle requirements of nearly every type of constructed asset found, including visitor centers, dams, schools, health clinics, power generating facilities, housing, hotels, fire stations, campgrounds, roads, water and wastewater treatment plants, offices, and more. Many of these assets have historic or cultural significance that not only support the DOI's mission, but are important to our Nation's heritage.

STRATEGY #1: Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery

The DOI's goal is to balance mission delivery demands with adequate investments in operations and maintenance to sustain the portfolio in an appropriate condition befitting of our role as America's stewards. Appropriately maintained assets enable the DOI to accomplish habitat and resource management, provide outdoor recreation activities, deliver water, fulfill trust and treaty responsibilities, and provide critical economic inputs and job creation for local communities. Adequately constructed and maintained Federal real property supports healthy habitats and populations, availability of safe and reliable public use opportunities, and robust local economies.

A significant factor impacting a sustainable portfolio of constructed assets is DOI's aging infrastructure. Many assets already exceed original design life, and this trend of aging infrastructure continues to threaten mission delivery. Prioritizing repairs on a portfolio scale will ensure the assets condition is maintained at an acceptable level. Effective management of deferred maintenance is a Departmental priority to ensure completion of needed repairs and prevent further deterioration and unsafe conditions. The DOI prioritizes addressing deferred maintenance/repair needs for mission critical activities. Furthermore, proactive maintenance, replacement of components and colocation of programs and staff in owned facilities will help to reduce future costs.

The DOI conserves the Nation's cultural and heritage sites that reflect a rich and diverse history. The DOI safeguards our heritage for the generations that follow, to better understand our country and learn from our past. Many challenges exist in protecting and maintaining historic and archeological sites, especially with the impacts of weather on fragile sites and structures. Sites are exposed to changing weather conditions that cause damage and deterioration of the structures and sites and some locations are vandalized or accidentally damaged by visitors to federal lands.

The Road Construction Program maintains and operates the 29,000 miles of BIA-owned roads and bridges. These roads and bridges serve as the primary access points to tribal communities, without which critical resources and services would not reach tribal members.

The DOI will continue to improve and provide safe, functional, energy efficient, and universally accessible BIA facilities. The DOI is allocating funds to improve its Bureau of Indian Education (BIE) funded schools, and improve the learning environment of BIE students.

Agency Priority Performance Goal: By September 30, 2019, the Department of the Interior will improve the condition of its priority real property assets such that 82% are in the desired state of acceptable condition.

Bureaus/ Offices	Key Performance Indicators	2022 Goal
PAM	Percent of priority assets in acceptable condition (i.e. meet investment objective)	84%
PAM	Amount of priority deferred maintenance (repair) needs/activities addressed (i.e. completed for that year)	$1.2 billion
NPS	Value of NPS deferred maintenance work orders closed ($000)	TBD
BIA, BLM, FWS, NPS	Percent of historic structures on DOI inventory in good condition	57%
BIA, BLM, BOR, FWS, NPS	Percent of museum collections on DOI inventory in good condition	59%
BIA, BLM, FWS, NPS	Percent of archaeological sites on DOI inventory in good condition	67%
BOR	Maintain a completion rate of 95% for Safety of Dam recommendations	95%
BIA	Percent of miles of BIA road in acceptable condition based on the Service Level Index	14%
BIA	Percent of BIA bridges in acceptable condition based on the Service Level Index	69%
BIE	Percent of students in BIE school facilities that are in acceptable condition as measured by the Facilities Condition Index	67%

STRATEGY #2: Provide dependable and efficient information technology

Information Management and Technology (IMT) provides modern and secure technology solutions to advance the DOI's ability to deliver programs and services to the public and our customers. To do so, the DOI must protect its critical information assets from cyber exploitation and attack to ensure that employees and the public can rely on the confidentiality, integrity, and availability of the DOI's data and information systems. The DOI is implementing advanced technologies that will increase visibility into its IMT environment, improve protections around our high-value information assets, and empower its workforce to better detect, respond, and recover from cyber-attacks and breaches. With a more secure computing environment in place, its employees can more easily obtain the tools and data they need to perform the mission securely efficiently and effectively, anywhere and anytime.

The DOI will continue to deploy and mature Continuous Diagnostics and Mitigation (CDM) capabilities that help to fortify its networks and systems. These capabilities provide the DOI with tools necessary to better identify cybersecurity risks on an ongoing basis, prioritize these risks based upon potential impacts, and enable cybersecurity personnel to mitigate the most significant

problems first. Achieving the performance objectives will enable the DOI to meet the requirements of Presidential Executive Order 13800, "Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure." The DOI has adopted the National Institute of Standards and Technology (NIST) Cybersecurity Framework and will work towards implementing and maturing the set of activities known to be effective in managing cybersecurity risks and that are necessary to achieve key cybersecurity outcomes that support the following functions: Identify, Protect, Detect, Respond and Recover.

The DOI is working collaboratively with its user community to understand operational needs better in the field, resulting in expanding network capabilities to improve connectivity in remote areas so employees can be as productive as possible. To improve collaboration, the DOI will enhance its Geospatial Platform capabilities, which is an internet-based tool for sharing trusted geospatial data with the public, government agencies, and partners to meet their mission needs. The DOI will also seek to deliver improved services at a lower cost by consolidating and standardizing IT services and systems, including consolidating and optimizing its data center and network operations and standardizing security, customer support, and administrative functions.

Offices	Key Performance Indicator	2022 Goal
PIO	Percent of unclassified network hardware and software assets appropriately authorized and managed	95%
PIO	Percent completion of DOI's Federal Information Technology Acquisition Reform Act (FITARA) Implementation Plan	100%

Subject: Re: Flexibility in FWS construction account
Date: Tuesday, April 17, 2018 11:46:36 AM

"None of the funds provided in this or any other Act shall be obligated for construction of a border barrier in the Santa Ana National Wildlife Refuge"

Even if we could spend money, without the Border Patrol's authority to invoke a waiver of the Refuge Act, there is no way we could find this project compatible with the refuge purposes.

All,

The question has been posed as to the authority and the ability of FWS to use some of its FY 18 construction appropriations account funding to build resource protection structures along the US Mexican border. Apparently there is a 2 mile stretch of land in Texas that is in question.

Jean, can you please schedule a meeting on this topic with POB, FW&P, FWS, and (b)(6), (b)(7)(C)

Thanks,
Scott

Subject:	FIRST DRAFT: Secretary Zinke op-ed on border deployment
Date:	Tuesday, May 8, 2018 3:10:06 PM
Attachments:	0503 SOI border.docx

Hi all,

Attached please find the first draft of an op-ed from the Secretary on the border deployment of 22 LEOs, for policy review. Please let me know if there are any edits to this op-ed by **COB tomorrow, Wednesday, May 9**. Thank you!

BORDER OP-ED, SECRETARY ZINKE

A strong border is a key pillar of a nation of laws. The U.S. Department of the Interior manages one-fifth of our nation's territory, including approximately 39-percent of the American border with Mexico.

Illegal activity at the border, from drug smuggling to unlawful entry, puts the safety of the American people at risk. As a government whose first responsibility is to its citizens, securing our borders is our solemn obligation. Since taking office as Secretary of the Interior in March 2017, protecting our people and the border has been one of my top priorities.

Last month, President Donald J. Trump ordered the deployment of National Guard troops to the southern border, so that we may achieve this mission. This operation will get underway in a few days. What our nation needs most at the border is a wall, but in the meantime, sending more resources to protect American sovereignty and stop the inflow of illegal substances is the best strategy. I applaud the President for his leadership on this critical issue.

At Interior, we are standing with the President and the American people. I am working with our Secretary of Homeland Security, Kirstjen Nielsen, to develop a plan that realizes the President's vision of a strong border. Border Patrol has provided Interior with four public land sites on the border where we can best support the administration's efforts: South Texas National Wildlife Refuge (Texas), Amistad National Recreation Area (Texas), Cabeza Prieta National Wildlife Refuge (Arizona), and Organ Pipe Cactus National Monument (Arizona).

To these places, I am sending a total of 22 law enforcement officers—some from the Fish and Wildlife Service, and others from the National Park Service—on Interior's first deployment. We will begin this operation on May 14, 2018 and sustain our presence at the border for at least 90 days. Previous leaders have kicked the can of border security down the road, but as illegal drugs pour across the border and illegal immigration continues to threaten our country, we have reached the end of this road.

Drugs—opioids in particular—are causing a national crisis. The opioid epidemic has affected communities in every corner of the country. I was recently in Arizona, touring the southern border. Over a six-month period of time in 2017, reports indicate that at least 716 people died from opioid-related overdoses in the state[1].

The amount of drugs coming into our country from Mexico is especially an issue for Native Americans. Mexico is the primary source for heroin in the United States, according to a Drug Enforcement Administration report from 2017[2]. As Secretary of the Interior, one of my responsibilities is to be the greatest champion of our Indian nations. In recent years, American

[1] https://www.azcentral.com/story/news/local/arizona-health/2018/01/05/716-opioid-overdose-deaths-6-months-2017-real-time-tracking-arizona-health-services/1000809001/
[2] https://www.dea.gov/docs/DIR-040-17_2017-NDTA.pdf

Indian communities have experienced a higher increase in opioid overdose deaths than has any other group in America.

While I was in Arizona, I also met with multiple Native American tribes to discuss law enforcement efforts to combat the problem of opioids. We have established a law enforcement task force to address the opioid epidemic. An April drug raid in New Mexico seized $2.5 million worth of methamphetamine and more than $20,000 worth of marijuana, along with smaller amounts of heroin and other narcotics.

In coordination with the Indian nations, we are cracking down on the dealers who are selling out our kids. If we can cut off the supply chain for some of these drugs at the border, however, we will be much better off.

To do this, we will need to work with our partners. Interior is fortunate to have a close relationship with Border Patrol, and inter-agency collaboration has made enforcement a much easier task. We will continue to work in close concert with Border Patrol and Homeland Security to achieve the President's vision of a safe and sovereign America.

President Trump is a law-and-order president, and we are restoring the rule of law.

Subject:	SECOND DRAFT: Secretary Zinke op-ed on border deployment
Date:	Wednesday, May 9, 2018 11:34:58 AM
Attachments:	0503 SOI border.docx

Hi all,

Attached, please find the second draft of the Secretary's op-ed on law enforcement border deployment. We are thinking of placing in Arizona or Texas (if Texas, I will tweak slightly to be more Texas-focused, as opposed to Arizona-focused, as it is now).

From yesterday's first draft, I have incorporated edits from Greg, Todd Willens, and (b)(6), (b)(7)(C), (b)(6), (b)(7)(C), (b)(6), (b)(7)(C). Scott, I added in a nod to the resources angle as well, as you requested, near the front of the op-ed.

Please let me know by **COB tomorrow, Thursday, May 10** if this is alright to go on to the Secretary for his edits and review. Thank you all for your help on this!

Subject:	THIRD DRAFT (TX placement, narrower focus): Secretary Zinke op-ed on border deployment
Date:	Monday, May 21, 2018 12:30:09 PM
Attachments:	0503 SOI border.docx

Hi all,

Given some recent developments, including our successful start to the border deployment, we have decided to rework the op-ed to feature a specific focus on the deployment. It is now tailored for placement in a Texas newspaper, too. The latest draft is attached.

Please let me know by **COB tomorrow, Tuesday, May 22** if this is alright to go on to the Secretary for his edits. Thank you all for your help (and patience, given the changes and different drafts!) on this.

Eli Nachmany
Speechwriter, Office of Communications
U.S. Department of the Interior
(202) 706-9285

BORDER OP-ED, SECRETARY ZINKE

President Donald J. Trump has been clear: we have to build a border wall and secure the southern border from illegal activity. As President Trump's Secretary of the Interior—the chief steward of our public lands—I am responsible for overseeing approximately 40-percent of the U.S.-Mexico border. At Interior, we are stepping up our law enforcement efforts on these lands to support the President's mission, because a secure border is a key pillar of a nation of laws.

Last month, President Donald J. Trump ordered the deployment of National Guard troops to the southern border, so that we may achieve this mission. What our nation needs at the border is a wall, but in the meantime, sending more resources to protect American sovereignty and stop the inflow of illegal substances is the best strategy. I applaud the President for his leadership on this critical issue.

Illegal activity at the border puts the safety of the American people at risk. This activity can take many forms, from drug smuggling and violence to unlawful entry. Since taking office, protecting our people, our natural and cultural resources, and our border has been one of my top priorities. As a government whose first responsibility is to its citizens, securing our borders is our solemn obligation.

I am working with our Secretary of Homeland Security, Kirstjen Nielsen, to execute a plan that fulfills this obligation. Border Patrol has provided Interior with public land sites on the border where we can best support the administration's efforts.

To these places, I sent 22 law enforcement officers—some from the U.S. Fish and Wildlife Service, and others from the U.S. Park Police—on Interior's first deployment. We began this operation on May 14, 2018. Previous leaders have kicked the can of border security down the road, but as illegal drugs pour across the border and violence continues to threaten our country, we have reached the end of this road.

We are already witnessing positive results. Within the first 48 hours of the deployment, Department of the Interior federal law enforcement made 13 arrests and seized an illegal firearm. Because of this initial success, I have sent additional law enforcement to the border. These law enforcement officers are brave patriots – time and again, they represent the thin blue line between chaos and justice.

In Texas, Interior holdings on the border span from the Santa Ana and Lower Rio Grande Valley National Wildlife Refuges (under the Fish and Wildlife Service) to the Amistad National Recreation Area (under the National Park Service), among others. All told, Interior oversees about 258 miles of borderlands in the Lone Star State.

To be successful in defending these lands, along with our border in states like New Mexico, Arizona, and California, we will need to work with our partners. Interior is fortunate to have a

close relationship with Border Patrol, and inter-agency collaboration is a necessary component of strong enforcement of the law. We will continue to work in close concert with Border Patrol and Homeland Security to achieve the President's vision of a safe and sovereign America.

President Trump is a law-and-order president, and we are restoring the rule of law.

Introduction

The Department of the Interior (DOI) conserves and manages the Nation's natural resources and cultural heritage for the benefit and enjoyment of the American people, provides scientific and other information about natural resources and natural hazards to address societal challenges and create opportunities for the American people, and honors the Nation's trust responsibilities or special commitments to American Indians, Alaska Natives, and affiliated island communities to help them prosper.

The Department manages the Nation's public lands and minerals, including providing access to more than 530 million surface acres of public lands, 700 million acres of subsurface minerals, and 1.7 billion acres of the Outer Continental Shelf. The Department is the steward of 20 percent of the Nation's lands, including national parks, national wildlife refuges, and the public lands. It manages resources providing approximately 19 percent of the Nation's energy; delivers and manages water in the 17 Western states and supplies 17 percent of the Nation's hydropower energy; and upholds Federal trust responsibilities to 567 federally recognized Indian tribes, Alaska Native communities, and insular areas. The Department also partners with states to manage wildlife, promote healthy forests and suppress fire, manage energy resource development (oil, gas, hydro, geothermal, wind, solar) on its lands and offshore areas, promote outdoor recreation (including hunting, fishing, boating, hiking, biking, etc.) and provide mapping, geological, hydrological, and biological science for the Nation.

This Annual Performance Plan and Report (APP&R) is prepared in compliance with the requirements of the Government Performance and Results Act (GPRA) Modernization Act of 2010, P.L. 111-352. The APP&R provides an assessment of the Department's progress toward achieving its Strategic Plan goals using a collection of key performance indicators, including the results over the past five years and targets for the next two years. As part of this program performance assessment, the APP&R also displays corresponding funding investments and strategic actions planned for the next two years. This information is used for planning and provides transparency and accountability to the public.

Bureau and Office Summaries

Bureau of Land Management (BLM)

- Manages public lands for the benefit of all Americans under the dual framework of multiple use and sustained yield on nearly 250 million surface acres, as well as 700 million acres of subsurface mineral estate. Priorities include:
  - Making full use of the Nation's domestic energy and mineral sources, including conventional and renewable energy sources;
  - Serving American families by providing outdoor recreation opportunities that are key to the Nation's heritage and its economy;
  - Managing working landscapes to support sustainable livestock grazing operations; and timber and biomass production; and
  - Developing and maintaining strong partnerships with state, local, and private stakeholders in shared conservation stewardship.

Office of Surface Mining Reclamation and Enforcement (OSMRE)

- Protects the environment during coal mining through Federal programs, grants to states and Tribes, and oversight activities.
- Ensures the land is reclaimed afterwards.
- Mitigates the effects of past mining by pursuing reclamation of abandoned coal mine lands.

Bureau of Ocean Energy Management (BOEM)

- Manages access to renewable and conventional energy resources of the Outer Continental Shelf (OCS).
- Administers nearly 3,000 active fluid mineral leases on over 16 million OCS acres;
- Oversees 4 percent of the natural gas and 18 percent of the oil produced domestically;
- Oversees lease and grant issuance for offshore renewable energy projects; and
- Manages leasing for marine mineral resources such as sand to facilitate beach replenishment and coastal nourishment projects.

U.S. Geological Survey (USGS)

- Produces information to increase understanding of natural hazards such as earthquakes, volcanoes, and landslides.
- Conducts research and delivers assessments on oil, gas, and alternative energy potential, production, consumption, and environmental effects.
- Conducts reliable scientific research in land resources, mineral assessments, and water resources to inform effective decision making and planning.
- Provides science information that supports natural resource decisions.
- Produces topographic, geologic, hydrographic, and biogeographic data and maps.

Bureau of Safety and Environmental Enforcement (BSEE)

- Fosters secure and reliable energy production from the 1.7 billion-acre U.S. Outer Continental Shelf (OCS) for America's energy future.
- Conducts inspections, permitting, incident and equipment failure analysis, oil spill preparedness and enforcement programs aimed at promoting a culture of safety and reducing risk to those who work offshore.
- Supports the technical expertise to engage opportunities and to meet challenges to tap the full potential of OCS energy resources.

Bureau of Reclamation (BOR)

- Manages, develops, and protects water and related resources in an environmentally and economically sound manner in the interest of the American public.
- Largest wholesale supplier of water in the Nation.
- Manages 492 dams and 338 reservoirs.
- Delivers water to 1 in every 5 western farmers and more than 31 million people.
- America's second largest producer of hydroelectric power.

Fish and Wildlife Service (FWS)

- Manages the lands and waters of the 855 million-acre National Wildlife Refuge System, primarily for the benefit of fish and wildlife.
- Manages 73 fish hatcheries and other related facilities for endangered species recovery and to restore native fisheries.
- Protects and conserves:
  - Migratory birds;
  - Threatened and endangered species; and
  - Certain marine mammals.
- Hosts about 48 million visitors annually at more than 560 refuges located in all 50 states and 38 wetland management districts.

Indian Affairs (IA)

- Fulfills Indian trust responsibilities.
- Promotes self-determination on behalf of 573 federally recognized Indian Tribes.
- Funds self-governance compacts and self-determination contracts to support all Federal programs including education, law enforcement, and social service programs that are delivered by Tribal Nations.
- Supports 183 elementary and secondary schools and dormitories, providing educational services to approximately 48,000 students in 23 states.
- Supports 32 community colleges, universities, post-secondary schools, and technical colleges.

Note: IA includes the Bureau of Indian Affairs (BIA) and the Bureau of Indian Education (BIE)

National Park Service (NPS)

- Maintains and manages a network of 417 natural, cultural, and recreational sites for the benefit and enjoyment of the American people.
- Manages and protects nearly 27,000 historic and prehistoric structures, nearly 44 million acres of designated wilderness, and a wide range of museum collections and cultural and natural landscapes.
- Provides outdoor recreation to nearly 324 million visitors at National Park units.
- Provides technical assistance and support to state, tribal and local natural and cultural resource sites and programs, and fulfills responsibilities under the National Historic Preservation Act of 1966.

Departmental Offices

- Immediate Office of the Secretary, Deputy Secretary, and Assistant Secretaries
- Office of the Solicitor
- Policy, Management and Budget provides leadership and support for the following:
  - Budget, Finance, Performance and Acquisition;
  - Public Safety, Resource Protection, and Emergency Services;
  - Natural Resources Revenue Management;
  - Human Capital and Diversity;
  - Technology, Information and Business Services;
  - Policy and Environmental Management;
  - Natural Resource Damage Assessment;
  - Wildland Fire Management; and
  - Native Hawaiian Relations
- Office of Inspector General
- Office of the Special Trustee for American Indians

Insular and International Affairs

- Coordinates federal policy for the territories of American Samoa, Guam, the U.S. Virgin Islands and the Commonwealth of the Northern Mariana Islands.
- Oversees the Department's involvement with oceans policy.
- Manages the Department's involvement in international affairs.
- Responsible for administering and overseeing U.S. federal assistance to the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau under the Compacts of Free Association, as well as providing technical and financial assistance to all the Insular Areas.

Note: Includes Office of Insular Affairs and Office of International Affairs

Data Accuracy and Reliability

The Department ensures the accuracy and reliability of the performance data in its Annual Performance Plan and Report (combined) and in measuring progress towards its Agency Priority Goals, in accordance with the five data quality specifications in the GPRA Modernization Act of 2010 for:

- Means used to verify and validate measured values: All performance data reported in the Annual Performance Plan & Report and on http://www.performance.gov/ by the Department is subject to the data verification and validation standards initially published in 2003 and reissued in 2007 (see https://www.doi.gov/performance/data-validation-and-verification). Implementing organization heads or chief officials confirm in writing the validity of the data. In the case of Agency Priority (Performance) Goals, senior officials in the implementing organization personally present the data on a quarterly basis to the Deputy Secretary.

- Sources for the data: Program managers provide performance data based on their observations that can include extrapolations of selected representative samples or history adjusted for estimates of changing conditions. These data are tracked and maintained in separate systems. Following review by the providing bureau or office, data are collected, reviewed, integrated, and maintained by the Department's Office of Planning and Performance Management in its Annual Performance Plan & Report (APP&R) that is available at the Department's Budget and Performance Portal (www.doi.gov/bpp), and on the www.performance.gov website.

- Level of accuracy required for the intended use of the data: Performance data reported in the Annual Performance Plan & Report and on http://www.performance.gov/ is used for management purposes, as a representative indicator of progress in relation to a target or goal established by the corresponding implementing organization. The accuracy of the information is that which is considered necessary to provide a reasonable representation of the progress made relative to a target or goal for discussion purposes, to help:
    - determine if the progress is considered adequate;
    - provide understanding of the ability for the processes and methods being implemented to achieve the goal;
    - indicate if any further exploration or evaluation is needed to better ensure achievement of the goal; and
    - whether alternative action, including adjusting funding levels, facilities, workforce, IT capabilities, etc., is needed to help better ensure achievement of the goal.

- Limitations to the data at the required level of accuracy: Performance data are subject to potential errors from the use of estimations and extrapolations (especially where direct measurement is impractical and/or too costly), individual observation, miscommunication, and/or failure to effectively employ the guidance described in the performance measure template or the "Indicator" description in http://www.performance.gov/. However, based on multiple review levels and accuracy certifications, these limitations are not significant.

- How the agency has compensated for such limitations if needed to reach the required level of accuracy: The measurement procedures for each performance measure used in the Annual Performance Plan and Report are described and documented in data measurement templates posted on the OMB MAX website, or described in the "Indicator" block for each Agency Priority (Performance) Goal on http://www.performance.gov/. Along with the implementing organization's official assurance of faithfully employing the data verification and validation standards, submitted data are reviewed within the context of the scope and nature of the activity, plans, and experience to help confirm accuracy. Following review and verification by the submitting bureau or office, the data are reviewed again (within corresponding trends and programmatic context) by the Department's Office of Planning and Performance Management to determine if further consultation with the data provider is necessary to adjust or correct the reported data before publication. Senior management and leadership consider this level of accuracy to be acceptable in their use of the data. Experience in using the data, historical trend and programmatic context assessments, and bureau data quality certifications indicate that the limitations are considered minor and compensating measures are not considered necessary.

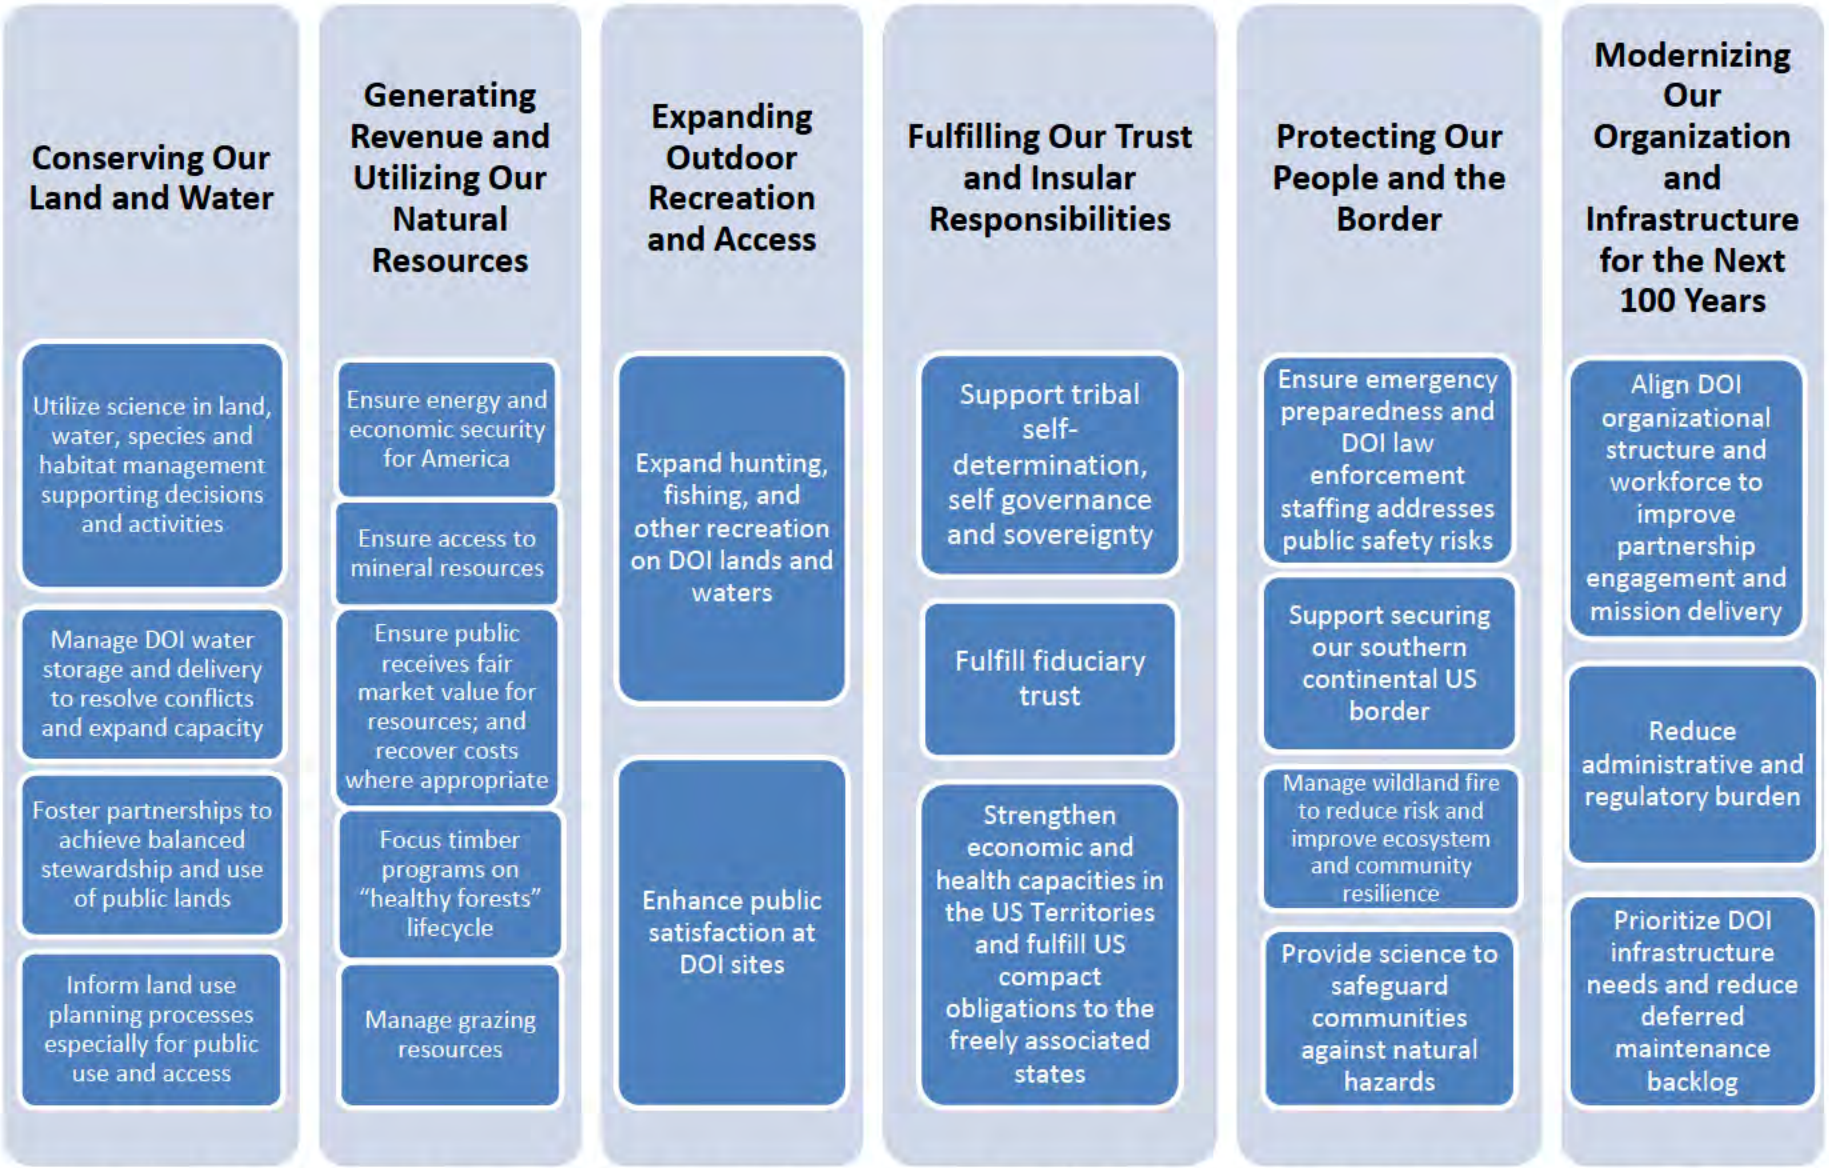
- In addition to employing the Department's data validation and verification standards, and internal reviews of submitted data, the best "test" of the data's accuracy is in its use. Agency Priority (Performance) Goal data are reviewed during quarterly status reviews where senior officials report their data directly to the Department's Deputy Secretary and is made publicly available through http://www.performance.gov/. Annual performance plan and report information is provided with historical, organizational, and supporting context to provide the reader with a fuller perspective of the data and is reviewed annually at the "strategic objective" level.

How to Use the Annual Performance Plan & Report

The Annual Performance Plan and Report is organized by the Mission Areas, Goals, and Strategic Objectives of the Department's FY 2018-2022 Strategic Plan. The APP&R provides the performance and funding details of each contributing bureau and program to present the progress made and plans for achieving each goal. Each section contains seven components:

1. Identification of the relevant Mission Area, Goal, and Strategic Objective.
2. Program Performance Overview – a concise explanation of the progress made in implementing the strategic objective and attaining the related strategic goal. This section also includes, where applicable, a summary of FY 2017 accomplishments, risks, and major management challenges. (The next edition of this plan and report will be created after FY 2018 results are available and will be updated to summarize FY 2018 accomplishments.)
3. Public Benefit – a review of what the public gains from our efforts.
4. DOI Strategic Plan Performance Measures – this section reports on the performance measures for achieving the GPRA goals in the Strategic Plan. For each performance measure, actual performance is reported for FY 2014 through FY 2017. In addition, performance targets are provided for fiscal years 2018, 2019, and 2020.
5. Bureau Supporting Performance Measures and/or Milestones – this section contains bureau-specific performance measures and/or milestones that support achievement of the goals and strategies. For each measure or milestone, actual data are provided for FY 2014 through FY 2017. Target data are provided for fiscal years 2018, 2019, and FY 2020.
6. Strategic Actions planned through FY 2020 – this section contains a bulleted list of strategic actions that highlight some of the key, significant activities planned through the budget year of FY 2020 to attain the performance targets associated with the Department's FY 2020 budget request.
7. Key Funding Sources – this section contains estimates of funding budgeted for programs that support the goal and strategies. Funding estimates are based on actual enacted amounts for FY 2014 through FY 2017. Amounts for FY 2018, 2019, and 2020 are based on the Department's 2018 appropriations, 2019 budget request and 2020 budget submission to OMB, respectively.

FY 2018-2022 Strategic Plan Framework



Crosscutting principles: Senior executives provide leadership in achieving Presidential and Secretarial goals and are expected to: ensure cost-effective operations and quality service to the public; facilitate organizational cooperation and conflict resolution; ensure workplace environment conducive to employee productivity and safety; and hold individuals accountable for their actions.

Mission Area 1: Conserving Our Land and Water

Mission Area 1: Conserving Our Land and Water

Goal #1: Utilize Science in Land, Water, Species, and Habitat Management for Decisions and Activities

Strategy #1: Apply science to land and species management

Program Performance Overview: Overall, performance improved from FY 2016 to FY 2017, with seven of eight strategic plan measures improving performance or remaining level. Performance between 2017 and 2018 was mixed, with water measures improving. USGS will maintain the core functions of its missions and prioritize its activities to ensure the most essential scientific knowledge and tools are delivered to land managers and policy makers for decision-making.

Performance in the monitoring and assessing of the Nation's water availability and quality shows steady improvement from FY 2014 through FY 2017. This level of performance indicates programs are effectively applying funding toward needed research, monitoring, and assessments to inform decision makers about water availability and quality.

Public Benefit: The USGS conducts scientific monitoring and research to support management strategies that address the impacts of land use and environmental change on the availability and sustainability of resources. The USGS supports management agencies by identifying conservation measures designed to preclude the need for listing species as endangered or threatened; recover listed species; and prevent or control invasive species and wildlife disease outbreaks.

The USGS conducts monitoring, assessments, and research to understand and predict changes in the quality and quantity of water resources in response to land-use and management scenarios. Through advanced understanding and integrated modeling of processes that determine water availability, the USGS informs the balanced management of water resources for multiple purposes, including energy production, the sustainability of fish and other aquatic communities valued by society, and public enjoyment.

Strategic Plan Performance Measures

Strategic Plan Performance Measures	Bureau	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Target	2019 Target	2020 Target	2014-2020 Trend

Strategic Actions Planned through FY 2020

U.S. Geological Survey

Ecosystems (ECO):

- Deliver data to Federal and State managers and the public on distribution of aquatic invasive species through a Web-based platform that serves as an early warning and alert system for new invasions with tools to identify potential invaders after large storm events.
- Provide data, technical expertise, and capacity to facilitate rapid response by states to new invasions of invasive plants and animals and develop species-specific controls to minimize application costs and ecological effects of treatments including targeted chemicals for Asian carp and zebra and quagga mussels, pheromones (chemical substances) for sea lamprey, and microbes to control mosquitoes, common reed, and cheatgrass.
- Test and refine new molecular and remote sensing technologies including environmental DNA (eDNA), drones, and infrared remote sensing to identify invasive species early in an invasion when chances of eradication success are highest.
- Support early detection and rapid response for invasive reptiles such as Burmese pythons and Argentine black and white tegus in Florida, boa constrictors in the U.S. Virgin Islands, and brown tree snakes in Guam, including the Brown Tree Snake Rapid Response Team. Improve the power of early detection tools and develop containment and control methods as part of the intergovernmental team preventing the spread of Asian carp into the Great Lakes and reducing their effects elsewhere in the Nation.
- Conduct population assessments for the following: Great Lakes forage fish used by states, tribes, and provinces to manage a $7 billion commercial and recreational fishing industry; migratory birds used by National Flyway Councils to manage

waterfowl hunting in the United States in cooperation with Canada and Mexico; and North American bats to understand impacts of the invasive fungal disease white-nose syndrome on control of insects that threaten agriculture and human health.

- Provide maps of real-time and forecasted plant and animal activity used by resource managers to predict and manage invasive species, insect pests, wildlife disease, recreational opportunities, and habitats within and across protected areas.
- Develop scientific information and tools for use by Interior bureaus and other federal, state and tribal agencies to design and site energy, transportation, and other infrastructure to reduce conflict with wildlife and comply with laws and regulations.
- Provide research and decision support tools to address the science needs of the U.S. Fish and Wildlife Service's 7-year work plan for species listing decisions. Develop science and tools to identify habitat required to maintain target populations of federally listed species, candidate species, migratory species, and other species of management concern.
- Provide surveillance, diagnostics, source tracking, and management tools including vaccine development for nationally significant wildlife diseases such as avian influenza in birds, white nose syndrome in bats, and chronic wasting disease in large game species such as deer and elk.
- Provide science to inform decisions about planning, managing, and using coastal areas for purposes as varied as resource management, economic development, and hazard mitigation.
- Provide research and decision support tools to manage Interior lands to reduce the risks of fire, invasive species, wildlife disease, and harmful algal blooms. Provide information on the most cost-effective and successful land and water conservation and restoration practices to support Interior lands and trust responsibilities.
- Provide integrated science to improve degraded large-scale ecosystems which provide surrounding communities with services such as clean water, flood control, and natural resources for multi-faceted economies based on outdoor recreation, commercial seafood harvest, and tourism.

Water Availability and Use Science Program (WAUSP):

- Conduct National Water Census activities such as developing tools and models to estimate water use; operationalizing field-scale evapotranspiration (ET) estimation techniques; refining models to estimate streamflow in ungaged basins; and developing an integrated approach for evaluating water availability for human and ecological use, infrastructure, security, and economic optimization.
- Continue support for completion of the National Water Census water budget component baseline estimates by 2022.
- Measure and analyze water use information in cooperation with other federal agencies, states, localities, tribes, and partners to determine the amount of water, where, and how it is used in support of water resources management.
- Complete two, and continue work on the remaining five, regional groundwater availability studies, providing resource managers more information and new tools to understand groundwater resources and make management decisions in their area.
- Conduct studies at Water Science Centers across the Nation in cooperation with state, local, regional, and tribal partners that provide the data and tools necessary for resource managers to make management decisions regarding water availability now

and into the future. These local studies will help to inform the National Water Census and national level efforts about water availability.

National Water Quality Program (NWQP):

- Support long-term, nationally consistent monitoring of sediment, nutrients, and pesticides at 65 stream sites located on large inland and coastal rivers that drain to regionally and nationally important estuaries. These sites are used to track changes in the amounts of nutrients, sediments, and other contaminants delivered to important receiving waters and how contaminant concentrations and loads are changing over time.
- Provide regional-scale modeling of current and projected surface-water and groundwater quality in selected major river basins and important principal aquifers. These models provide predictions of where concentrations of nutrients, sediments, and pesticides are likely to occur at levels that would impair water quality.
- Initiate efforts to apply state-of-the-science sensor technology to monitor and forecast changes on a near real-time basis for key water-quality constituents or their surrogates—such as salinity, sediment, algal toxins (e.g., from harmful algal blooms), and other contaminants—that can impair water quality and adversely affect the health of humans and aquatic ecosystems.

National and Regional Climate Adaptation Science Centers (NRCASC):

- Provide national level synthesis of environmental change important to Departmental resource management priorities.
- Conduct gap analysis of climate impacts and adaptation needs for Interior bureaus.
- Provide summaries of best adaptation practices and state of the science for climate change impacts to managers.
- Advance the science in the design of adaptation strategies for Departmental resource management.

Mission Area 1: Conserving Our Land and Water

Goal #1: Utilize Science in Land, Water, Species, and Habitat Management for Decisions and Activities

Strategy #2: Provide stewardship of land, surface water, stream, and shorelines

Strategy #3: Provide stewardship of wildlife, bird, fish, and plant species

Program Performance Overview: Land and water health and wildlife management performance measures showed generally stable performance trends over the past several years. Programs that were able to sustain performance generally did so because of redirection of resources to higher priority activities, multi-year efforts coming to fruition in 2014-2016, or sustained results from prior-year efforts remaining intact. In 2016, some performance benefitted from additional funds made available to help celebrate the National Park Service's Centennial (1916-2016). There is some potential for declining performance due to the limited ability to address the risk of pervasive and persistent problems, such as invasive species. Performance in maintaining and preserving migratory birds, fish populations, and endangered species is positive.

More recently, in 2017, the Department met or exceeded the performance targets on 9 of the 11 measures targeted in 2017 in these two strategies to improve land and water health and recover and sustain species. Favorable weather, the ability to redirect funds to priority projects, additional partner support, and the deployment of invasive species strike teams and volunteers led to better-than-expected performance in many areas.

Public Benefit: The Department provides stewardship for over 500 million acres of public lands, together with associated waterways and plant and animal species. Land in desired condition is valued for recreational opportunities (including fishing and hunting), and vast open spaces, which contribute to public enjoyment and health. Maintaining or improving the condition of stream and shoreline miles benefits fish populations, enhances wildlife habitat, and contributes to a balanced ecology. The Nation's forests, mountains, wetlands, grasslands, and deserts host biological diversity that is critical to overall ecosystem health, and species survival and well-being. The Department is working to compile more information on critical habitat, estimated costs of recovery and the economic impact of its threatened and endangered species listings to provide a more complete picture to states, tribes, and the public.

Performance Trend Clarifications

Fluctuations in a year's funding may cause spikes in performance. Redefinitions of activities, such as increases to the denominator of measures based on better science data also cause some performance to change even when the resources and the level of effort addressing these activities remain relatively constant from year to year. For example:

- In 2014, the BLM conducted many new surveys and updates to treated acres of invasive plant areas, resulting in both the number of acres infested and the number of acres treated to change in 2015 for the measure tracking percentage of baseline acres infested with invasive plants.

Strategic Actions Planned through FY 2020

Fish and Wildlife Service

- Continue to work collaboratively with private landowners and other conservation partners to voluntarily protect, conserve, and restore their lands to keep working lands in traditional uses while improving habitat, and water quality to benefit species.
- Work with state and federal partners, using early detection, rapid assessment, containment, rapid response, and control efforts, to prevent the spread of Asian Carp into the Great Lakes and the expansion of Asian Carp's range in the upper Mississippi, Ohio and Missouri River basins.
- Continue existing ecosystem restoration efforts in the Klamath Basin, Chesapeake Bay, Everglades, and California Bay Delta.
- Continue maintenance and limited improvements to visitor facilities, including parking areas, kiosks, interpretive signs, trails, and boardwalks.
- Conduct the environmental review of Gulf Coast restoration projects funded by Deepwater Horizon and RESTORE Act funds so that projects can move through the review process in a timely fashion.

- Continue to combat illegal wildlife trafficking through strengthening law enforcement, reducing demand for illegally traded wildlife, and expanding international cooperation and commitment to address the threat.

Bureau of Land Management

- Continue to develop and conduct science-based strategic and essential conservation actions to maintain sustainable populations of wildlife.
- Restore and maintain habitats to support populations of native wildlife and plants.
- Work with states, tribes, and other partners to conserve big game winter range and migration corridors.
- Implement on-the-ground conservation in priority areas in partnership with others while providing access to energy resources and minerals.
- Work closely with state fish and wildlife agencies on wildlife resource issues, including support for implementation of State Wildlife Action Plans, which establish broad-scale wildlife priorities and identify the species and habitats of greatest conservation need.
- Address the population of wild horses and burros above the appropriate management level by increasing adoptions and sales, including incentivizing adoptions, seeking authority to transfer animals to local, state, and other federal agencies for use as work animals, as well as extending the use of contraceptives and spaying and neutering animals before returning them to the range.
- Continue working with leading universities and U.S. Geological Survey scientists to better refine wild horse and burro population growth suppression methods and overall herd management techniques.

National Park Service

- Conduct natural resources conservation and protection and complete a strategic selection of projects to focus resources toward the National Park Service's most critical high-priority natural resource needs in parks. Projects may include preservation of air and water quality and geological, paleontological, and marine resources; addressing invasive plants and animals; and the restoration of disturbed lands and riparian areas.
- Protect bats by conducting measures to control and manage White-Nose Syndrome and protect cave ecosystems.
- Dedicate special effort to the management of invasive quagga and zebra mussels, which threaten delicate aquatic ecosystems, renewable energy generation, fishing, and boating.

Bureau of Reclamation

- Evaluate strategies to continue efficient management of invasive species and their impact to project operations.

- Collaborate with the California Department of Food and Agriculture to target invasive species infestations in the Redding, Calaveras, Chowchilla, and Tulare areas that could be a threat to resources near conveyance systems of the Central Valley Project.
- Implement riparian restoration on non-DOI lands in partnership with other agencies.
- Reassess and monitor the implementation of the Platte River Program's Land, Adaptive Management, and Integrated Monitoring and Research Plans.
- Assess and monitor water quality parameters at the Palo Verde Diversion Dam on the lower Columbia River, in accordance with National Pollutant Discharge Elimination Permit and Aquatic Application Plan.
- Refine and implement long-term water reliability strategies to meet Optimum Refuge Water Supply to ensure the 19 Central Valley Project refuges annually receive water of specified quantity, timing, and suitable quality to support their wetland and aquatic environments.
- Focus effort to maintain the Long-Term Experimental and Management Plan Environmental Impact Statement operation of Glen Canyon Dam in cooperation with NPS, USGS, and the Department of Energy Argonne National Lab.
- Re-assess and advance the Middle Rio Grande Collaborative Program agreement to provide funds for the purchase of water and support Rio Grande silvery minnow during periods of low flow in the Middle Rio Grande River.

Office of Surface Mining Reclamation and Enforcement

- Restore abandoned mine lands to improve environmental quality and reduce the potential for exposure of hazards to the public.
- Sustain training and technical assistance to states and tribes for area-wide reclamation planning.
- Provide technical support and assistance to states and tribes to help develop and support best practices in mining and reclamation.
- Ensure prompt problem identification and resolution at mine sites to prevent off-site impacts.
- Improve and accelerate mine plan reviews to ensure energy is available to meet security and economic needs.

Mission Area 1: Conserving Our Land and Water

Goal #2: Manage DOI Water Storage and Delivery to Resolve Conflicts and Expand Capacity

Strategy #1: Manage water resources and delivery

Program Performance Overview: The Department is providing a much-needed capability in the West to deliver water through its reservoirs and dams, and support water supplies through support for new water storage and conservation. Performance is trending upward, primarily due to funding for WaterSMART (Sustain and Manage America's Resources for Tomorrow) and related water conservation programs. Enhancing water storage takes years for construction to be completed.

Reclamation strives to keep its facilities in good condition to ensure the reliable supply of water and stretch existing water supplies that can be made available for other uses. In 2017, 80% of Reclamation's facilities were evaluated as being in good condition, a decrease of one percent from the previous fiscal year. The water facility inventory dropped by one from 343 to 342 because the Tehama Colusa Fish Facility in the Mid-Pacific Region was decommissioned, taken apart, filled in, and disconnected from the river. Reclamation prioritizes infrastructure assets based on detailed design criteria: engineering need, consequence of failure, financial considerations, efficiency opportunities, scheduling, and others.

Many rural communities face significant challenges in financing the cost of replacing or upgrading aging and obsolete facilities and systems. The water conservation programs, i.e., WaterSMART, Title XVI, CALFED, Yakima River Basin Water Enhancement, and Upper Colorado River Recovery Implementation, contribute by increasing the available water supply and contribute to the Department's broader objective of achieving a more sustainable, secure water supply. In FY 2017, Reclamation provided funding for projects that will increase potential water savings of 37,777 acre-feet. While only 12 of 43 Water and Energy Efficiency Grant projects were awarded in FY 2017, the water savings from the remaining 31 projects will be reported in FY 2018. Cumulatively, projects funded from 2010-2017 have enabled 1,182,599 acre-feet of water conservation capacity.

Public Benefit: Reclamation is the largest supplier and manager of water in the 17 Western States, bringing water to more than 31 million people and providing one of five western farmers (140,000) with irrigation water for 10 million acres of farmland that produce 60 percent of the nation's vegetables and 25 percent of its fruits and nuts. Reclamation's facilities also provide substantial flood control, hydropower, recreation, and fish and wildlife benefits. The Western U.S. is one of the fastest growing regions of the country, and urbanization has created demands for water, power, and recreational facilities. Changes in water supplies, water demands, and the increased duration and frequency of droughts have the potential to affect Reclamation's ability to fulfill its mission.

Strategic Actions Planned through FY 2020

Bureau of Reclamation

- Utilize ranking systems for prioritizing maintenance, environmental, conservation, and planning activities to meet all of Reclamation's water challenges, addressing aging infrastructure maintenance needs and ensuring the delivery of water and power.
- Assess the energy-saving benefits resulting from water conservation and the use of renewable hydroelectric energy.
- Seek new WaterSMART grant proposals and provide cost-shared funding for water conservation and efficiency projects.
- Issue WaterSMART grants funding opportunity for water marketing activities.
- Launch WaterSMART grants funding opportunity for Small-Scale Water Efficiency Projects.
- Advance the implementation of section 4009(c) of the Water Infrastructure Improvements for the Nation Act (P.L. 114-322) through the Title XVI Program.
- Monitor safety and implement required modifications with state-of-the-art design upgrades to ensure safety of dams.
- Verify and validate data used to report facility Operations and Maintenance (O&M) information, including major rehabilitations and replacements data and annual O&M costs.
- Install wide-head turbines to improve efficiencies.

Bureau of Indian Affairs

- Maintain and expand a managerial environment with tribes that promote healthy watersheds and sustainable, secure water supplies.
- Continue to provide technical assistance to the tribes for protection of tribal water resources through self-assessments required to define and characterize goals for tribal water as well as areas of improvement regarding BIA performance servicing tribes.
- Continue to provide administrative cost support for tribes who are engaged in the protection of Indian water rights as well as maintain records through P.L. 93-638 and track individual contracts that provide annually funded projects as managed by tribes
- Prioritize maintenance and rehabilitation activities to increase the irrigated acreage served by improving project canals.
- Continue to increase the number of maintenance projects completed in the Facilities Maintenance Management System (Maximo).
- Continue to ensure compliance with operating guidance and provide training opportunities to improve project operations.

Mission Area 1: Conserving Our Land and Water

Goal #3: Foster Partnerships to Achieve Balanced Stewardship and Use of Public Lands

Strategy #1: Build and maintain partnership programs

Program Performance Overview: Performance in FY 2017 was positive with most of the measures exceeding their planned targets for FY 2016. The measures for non-DOI lands vary widely from year to year depending on the projects that finish that year and partner support and engagement. In 2017, targets for these measures are different from past years due to internal reorganizations and reallocation of resources, but in many cases show positive results over some prior years. On DOI lands, the acres restored or improved using partnerships are tabulated in the measure for acres in desired condition within Goal 1, Strategy 2 "Provide stewardship of land, surface water, streams and shorelines." Many other activities with partners also bring benefits to both DOI and non-DOI lands, waters, and species and other metrics throughout the Department capture these activities. Working closely and cooperatively with state and local governments and private landowners is a proven tool for achieving resource management objectives.

Public Benefit: Public-private partnerships provide opportunities for greater engagement of people and organizations in caring for and managing the natural, historical, cultural and physical resources across the Department's 500 million acres. This can be especially beneficial for our national park units, National Wildlife Refuges, wildlife management areas, and national conservation lands. Support can come from other federal or state agencies, tribal nations, volunteers, non-profit organizations, educational institutions, corporations or foundations through sponsorship or philanthropy. Some programs within the Department also work on stewardship of non-DOI lands providing technical and financial assistance to private landowners, tribes and schools on a voluntary basis to help meet the habitat needs of federal trust species. For example, since 1988, the Partners for Fish and Wildlife program within FWS has worked with more than 45,000 landowners and thousands of conservation partners to successfully restore over four million acres of wetland and upland habitat and over ten thousand miles of streams to benefit numerous fish and wildlife species.

	FWS	579	727	413	308	205	178	410	

Strategic Actions Planned through FY 2020

Fish and Wildlife Service

- The National Wildlife Refuge System will train and supervise approximately 36,000 volunteers that contribute more than 1.4 million hours annually to conservation and recreation programs.
- Continue to work collaboratively with private landowners and other conservation partners to voluntarily protect, conserve, and restore their lands to keep working lands in traditional uses while improving habitat, and water quality to benefit species.
- Work with state and federal partners, using early detection, rapid assessment, containment, rapid response, and control efforts, to prevent the spread of Asian Carp into the Great Lakes and the expansion of Asian Carp's range in the upper Mississippi, Ohio and Missouri River basins.

- Continue working with local partners on ecosystem restoration efforts in the Klamath Basin, Chesapeake Bay, Everglades, and California Bay Delta.
- Retain maintenance capacity for the National Conservation Training Center to preserve the campus as the leading facility to engage, educate, and employ conservation professionals.

National Park Service

- Cultivate partnerships with federal and non-federal entities to support resource management. Examples include NPS coordination of the Cooperative Ecosystem Studies Unit (CESU) national network for research, technical assistance, education, and capacity building, as well as administration of the Rivers, Trails, and Conservation Assistance (RTCA) and National Natural Landmarks (NNL) programs to support conservation and recreation.
- Foster interest in volunteerism through volunteer.gov, NPS.gov, and social media channels.

Total	---	---	---	---	120,056	98,876	63,759	

Mission Area 1: Conserving Our Land and Water

Goal #4: Inform Land Use Planning Processes Especially for Public Use and Access

Strategy #1: Assess land use planning process for public access and use of DOI lands

Program Performance Overview: The Department is undertaking the challenge to redesign and improve its planning processes in ways that can best meet the sometimes-conflicting uses for public lands. The improved land use planning processes will engage our state and local government partners and provide the public with the maximum possible input into the planning process and result in the best possible public access to public lands and waters.

Public Benefit: The Department's land use and management plans ensure that the public lands are managed in accordance with the intent of Congress as stated in several authorities including, but not limited to: the Federal Land Policy and Management Act (FLPMA), the National Environmental Policy Act (NEPA), the Endangered Species Act, the National Wildlife Refuge System Administration and Improvement Acts, the Organic Act of 1916 (National Park Service), and the Alaska National Interest Lands Conservation Act (ANILCA).

A common thread through all three bureaus' (BLM, FWS, NPS) missions is the need to accommodate and promote the use and enjoyment of the public lands for both present and future generations. There are lands deemed important for their scenic, recreational, hunting, fishing, scientific, historical, archaeological, or wildlife conservation values. Other lands are made available for multiple use and sustained yield that recognizes the Nation's need for domestic sources of minerals, food, timber, and fiber.

Mission Area 1: Conserving Our Land and Water

Goal #4: Inform Land Use Planning Processes Especially for Public Use and Access

Strategy #2: Inform land use planning with mapping and land imaging

Program Performance Overview: The USGS conducts national-focused Earth-system science, along with its many partners, to deliver an understanding of the Earth's complex geologic structure, biology, and hydrology. Products include geologic maps, three-dimensional geologic models, interpretive studies, and scientific publications, all of which are essential for informed public policy decision making and economic development. Overall, performance improved from 2016 to 2017, with eight of ten performance measures improving or remaining level. Mapping and land remote sensing is expected to improve due to modest increases in funding. This improvement in performance indicates that national coverage is increasing for baseline geological maps, research, and assessments for informing land manager and policymaker decision making.

The USGS's Three-Dimensional Elevation Program (3DEP) supplies up-to-date topographic information and precise three–dimensional representations and models of natural and man-made features. By 2019, the USGS plans to acquire 3DEP-quality topographic information for 45 percent of the Nation.

Public Benefit: The USGS is the lead civilian mapping agency for the Nation and supports the conduct of detailed surveys and the resulting distribution of high-quality and highly-accurate topographic, geologic, hydrographic, and biogeographic maps and data. Remote sensing satellites and aircraft monitor the Earth providing information that is broad, precise, impartial, and easily available. For more than 45 years, Landsat satellites have collected data over the planet's land surface to support global research studies. These data constitute the longest continuous record of the Earth's land surface as seen from space.

High-resolution elevation information in geologic maps and geospatial products enable precise planning of civil engineering and transportation infrastructure, versatile urban planning, improved flood projection, timely and accurate emergency response, effective hazard identification and mitigation, and detailed environmental analyses.

Strategic Actions Planned through FY 2020

U.S. Geological Survey

National Land Imaging Program (NLIP):

- Continue to develop the Landsat 9 ground and flight systems in close collaboration with the National Aeronautics and Space Administration (NASA) with a target launch in fiscal year 2021 to replace an older satellite (Landsat 7).
- Continue operation of Landsat 7 and Landsat 8 satellites to monitor water use, moisture content in soil and vegetation, and provide valuable insight on changing terrestrial surface conditions.
- Continue to support the Land Change Monitoring, Assessment, and Projection's suite of utilities including access to Landsat Analysis-Ready Data (ARD) and land change products for all contiguous U.S. lands (i.e., the lower 48 States and the District of Columbia).
- Investigate and adapt unmanned aircraft technology to support many science needs (e.g., surface water dynamics, groundwater surveys, coastal erosion, fault line surveys, microclimate studies, wildlife surveys, coal mine reclamation, and harmful algal blooms) in difficult to access areas, at lower human risk and at lower cost than traditional methods.

Land Change Science Program (LCS):

- Update the National Land Cover Database (NLCD) to track land cover change from 1992 through 2016. Currently, the database identifies changes through 2011. (A new release is scheduled in FY 2019 to track changes through 2016. This will provide resource managers recent information to support resource management plans and assessments.)
- Conduct research and national-scale synthesis of natural patterns of drought and extreme events on terrestrial and aquatic communities, providing data to improve capabilities of resource managers and Interior bureaus to anticipate future changes in water availability and impacts on society, agriculture, and natural resources

- Conduct analysis of long-term drivers, patterns, and impacts of sea-level change on coastal regions and infrastructure in support of natural resource management.
- Conduct research and applications designed to understand and reduce risk to natural disasters, including developing evacuation response scenarios to tsunamis and characterizing and monitoring the wildland urban interface risk from wildfire.

Core Science Systems (CSS):

- Continue to collect high-resolution light detection and ranging (lidar) elevation data to achieve the first-ever cycle of nationwide lidar coverage by 2037 to support topographic map production.
- Continue acquisition of high-resolution interferometric synthetic aperture radar (IfSAR) elevation data for the State of Alaska by 2021; develop more efficient means of updating hydrography data; and continue to produce topographic maps.
- Revise 92 percent of topographic maps for Alaska by the end of 2020 using the updated elevation and hydrography data. These new maps and data are used in a broad range of applications including infrastructure planning, recreation, navigation safety, hazards mitigation, and Arctic wildlife assessments.
- Continue acquisition of high-resolution hydrography data (NHDPlusHR) for the Nation to support flood risk management; infrastructure improvements; and energy resource management and complete 84 percent of the Nation's NHDPlusHR data by the end of 2020.
- Make available, through the National Geologic Map Database, detailed geologic maps covering an additional 32,000 square miles of the continental United States, in partnership with State Geological Surveys, to support the objectives of Secretarial Order 3359 for national energy and mineral exploration.
- Continue efforts to design, build, and interpret a seamless three-dimensional geologic framework for the Nation based on new and prior geologic mapping at regional to local scales to improve mineral, energy, earthquake and landslide hazards assessments, ground water analyses, and infrastructure development. Enhance the USGS's high performance computing capabilities to support USGS and Interior computational and management challenges, and enable more timely data transfer, analysis, and delivery of completed research results to support smart decisions on Secretarial priorities related to natural resource assessment and use.
- Support the use and development of field-based technology and related standards for purposes of expediting and expanding digital field data capture and real-time interpretation, data preservation, and dissemination.
- Continue development of the USGS's National Biogeographic Map to provide analytical tools for the examination of selected species, habitats, protections, and habitat conditions.
- Continue to provide foundational data for emergency response and mitigation efforts to support public safety after major natural disasters.

- Prioritize efforts to preserve, expose, and reuse valuable physical geoscience samples (e.g., drilling cores and rock and sediment samples) and data (e.g., borehole logs, GIS databases, and maps). NGGDPP would provide support for approximately 8 state data preservation projects.
- By 2020, reach the goal of 765 total scientists using the USGS high performance computing capability through intensive outreach and training.
- Work to make geologic maps publicly available for 55.2 percent of the U.S. (by FY 2022) through the National Geologic Map Database by Optimizing the use of geological and geophysical surveys and national digital geospatial datasets to expand opportunities for the development of subsurface geologic interpretations, increase the interpretive resolution of surface mapping and boost geologic mapping productivity.

Goal #1: Ensure Energy and Economic Security for America

Strategy #1: Promote safe and robust oil, gas, coal, and renewable energy resource development

Program Performance Overview: The Department is modernizing policies and leveraging science and technology to achieve energy dominance, promote development of our Nation's vast energy resources, and expand production of both offshore and onshore conventional and renewable U.S. energy resources consistent with the newly developed National OCS Oil and Gas Leasing Program, the America First Energy Plan, and the Executive Order on Promoting Energy Independence and Economic Growth.

Onshore, BLM's processing of Applications for Permit to Drill (APDs) is consistent with previous performance, largely due to modernizing the Automated Fluid Minerals Support System (AFMSS) and attaining the authority to collect higher processing fees to provide the necessary workforce.

Starting in 2017, the BLM focused on all high priority inspections (e.g., production, drilling, abandonment, workover, idle well or environmental) rather than being limited to production related inspections. The BLM plans to significantly increase the number of acres of public lands made available for oil and gas leasing. Providing access to these resources on public lands will help make our nation stronger by decreasing our dependency on other nations, creating jobs, and helping drive economic growth. The BLM expects the number of coal lessee applications processed to return to a level of about 3 per year.

Offshore, BOEM's success with high priority oil and gas development activities, including plan administration, economic analyses, and resource evaluation, enabled the Department to meet established lease sale targets.

The Department facilitates the development and use of renewable energy that employs wind, solar, geothermal, and hydropower energy, as part of an "all-of-the-above" energy strategy. Connecting renewable energy projects to the transmission grid and key markets is central to making renewable energy generation projects viable. Performance has been strong with an increase of over 16,000 megawatts of capacity approved in the last 7 years.

Science and safety are essential to a robust and secure domestic energy-enabling environment. BOEM integrates science across program areas and planning activities, conducting extensive research necessary for environmental studies and environmental assessments for offshore energy resources. Additionally, science provided by the USGS Energy Resources Program (http://energy.usgs.gov) facilitates energy resource discovery and responsible development.

Performance measures for both oil spill and recordable injuries were on target and consistent with recent performance, bolstered by BSEE Oil Spill Research focused on preventing and/or mitigating oil spills, and collaborative work between BSEE and BOEM to establish appropriate permitting and oversight processes to ensure safety of offshore operations.

Public Benefit: The Department oversees vast resources that expand the production of energy in the U.S., promote energy security, and help drive job growth and the economy. Six Department bureaus, BLM, BOEM, BSEE, USGS, FWS and the Bureau of Reclamation (BOR), work to promote safe and reliable domestic energy exploration, development and production.

Strategic Actions Planned through FY 2020

Bureau of Land Management

Oil and Gas Management

- Continue advancing the Administration's priority of Generating Revenue and Utilizing Our Natural Resources by streamlining a variety of processes, such as Applications for Permits to Drill (APDs), which will simultaneously address concerns over permitting backlogs.
- Improve internal processes to simplify and streamline the leasing process to alleviate unnecessary impediments and burdens and expedite the offering of lands nominated for lease.
- Improve and streamline land-use planning, increasing efficiencies and decreasing time for completion allowing for a reduced APD backlog, streamlined permitting process, and a fair return to the taxpayer through inspection and enforcement.
- Build upon ongoing activities to implement an overall strategy that includes refining and updating the Automated Fluid Minerals Support System, creating Right-of-Way Strike Teams, establishing APD targets, and increasing interagency coordination.
- Work towards newly established Agency Priority Goals on processing of parcels created to lease public lands for oil, gas, or other minerals and on elimination of APD backlogs.
- Continue coordination with the BLM's cadastral survey, lands, and realty programs to enhance efficient processing of oil and gas activities.

Coal Management

- Continue advancing the Administration's priority of Generating Revenue and Utilizing Our Natural Resources by streamlining permitting for Federal coal mining and rights-of-way, which will simultaneously address concerns over backlogs.
- Provide assistance from the BLM Energy and Minerals Task Force to BLM State and Field offices to expedite the leasing and permitting of energy minerals including updating surface and sub-surface data layers and Public Lands Survey System data.
- Continue processing Lease by Application, Lease Modification Applications, and trespass cases to ensure that the public receives fair return for its non-renewable coal resources.

Renewable Energy

- Continue to process pending applications for new wind, solar and geothermal projects.
- Focus on streamlining review processes.

Bureau of Ocean Energy Management

- Conduct five lease sales
    - Gulf of Mexico Central Planning Area Sale 247 (March 2017)
    - Alaska Cook Inlet Sale 244 (June 2017)
    - Gulf of Mexico Regionwide Sale 249 (August 2017)
    - Gulf of Mexico Regionwide Sale 250 (March 2018)
    - Gulf of Mexico Sale 251 (August 2018)
- Allocate resources to support a programmatic environmental analysis, initiate environmental studies, advance modeling capabilities, and conduct outreach to public stakeholders.
- Initiate a new National OCS Oil and Gas Leasing Program development process
- Efficiently process site assessment and construction and operations plans for existing leases including thorough engineering and environmental reviews.
- Assess and determine the path forward for renewable energy leasing on the Atlantic Outer Continental Shelf (OCS).
- Continue to identify areas that appear suitable for renewable energy development on the Pacific OCS.
- Conduct thorough environmental reviews and consultations of potential OCS leasing activities offshore the Atlantic and Pacific coasts.
- Plan and hold at least two commercial wind energy lease sales in Atlantic or Pacific OCS states that ensure fair return to the United States.
- Finalize a decision on issuance of a research lease for a national wave energy testing facility off the shore of Oregon.

Bureau of Reclamation

- Collaborate with the Department of Energy and the Army Corps of Engineers through the Memorandum of Understanding for Hydropower framework to help meet the Nation's needs for reliable, affordable, and environmentally sustainable hydropower.
- Support the development of non-federal hydropower at existing Reclamation facilities through the Lease of Power Privilege and Federal Energy Regulatory Commission licensing processes.
- Leverage Reclamation's Hydropower Efficiency Research Systems initiative to improve operational efficiencies at Reclamation power plants.

Bureau of Safety and Environmental Enforcement

- Implement an inspection strategy that is based on annual planning and incorporates regulatory compliance, risk, management systems and performance-based techniques or methodologies.
- Keep pace with technological innovations that enable development and production in frontier areas and resolve technological challenges such as development in high pressure/high temperature environments.
- Maintain diligent oversight of end-of-life facilities and reservoirs to ensure maximum resource recovery, safe operations and strengthen decommissioning/idle iron compliance.
- Champion oil spill preparedness principles and practices including the verification of current industry capabilities and the advancement of oil spill response research and technologies.
- Focus on improvements to current efforts involving the Offshore Energy Safety Institute, Safe OCS and BAST-Best Available and Safest Technologies.
- Refine permitting review strategies to support timely development and accurately reflect the risks and phases of development of the Outer Continental Shelf (OCS).
- Reform overly burdensome regulations while sustaining safety and environmental protection.
- Foster active engagement with renewable energy stakeholders with a goal of supporting a safe, robust, and technically innovative offshore wind energy industry on the OCS.

Fish and Wildlife Service

- Continue to work with all federal and other partners to design energy projects that will facilitate energy development while protecting the environment.
- Invest funds to streamline energy project consultation and permitting with public and private partners.

U.S. Geological Survey – Energy Resources Program

- Release additional USGS assessments of undiscovered, technically recoverable oil and gas resources in U.S. and non-U.S. basins, including in strategic areas of national interest. Continue the underlying geological, geophysical and geochemical research that underpins the assessments.
- Expand unconventional oil and gas research efforts that begun in 2016 on the geologic causes of variability in the recovery of petroleum and water, and studies of baseline water quality.
- Continue research into geothermal resources aimed at improving the viability of Enhanced Geothermal Systems (EGS) and studying environmental impacts of geothermal energy development on Federal lands.
- Support USGS gas hydrate studies with the USGS Coastal-Marine Hazards and Resources Program and contribute to Department of Energy (DOE) and industry-sponsored cooperative gas hydrate projects.

Mission Area 2: Generating Revenue and Utilizing Our Natural Resources

Goal #1: Ensure Energy and Economic Security for America

Strategy #2: Provide hydropower

Program Performance Overview: The Bureau of Reclamation is the second largest producer of renewable hydropower in the United States and operates 52 hydroelectric power facilities, with 14,700 megawatts of capacity. Reclamation generates an average 40 million megawatt-hours of electricity each year. In 2017, 85% of Reclamation's hydropower facilities were evaluated as being in good condition, a decrease of two percentage points from the previous fiscal year but like prior years. Reclamation employees were proactive in identifying deficiencies contributing to lower Facility Reliability Rating (FRR) scores and acted to correct the most significant deficiencies using a risk-based prioritization methodology.

Reclamation administers a comprehensive power operations and maintenance program to ensure hydropower facilities are reliable, safe, economical, and efficient. Reclamation coordinates with Department of Energy and power customers to strategically identify, fund, and implement capital and technological investments that deliver operational benefits and reduce risk. Program performance is measured by hydropower facility availability during peak electricity demand periods.

Public Benefit: The Bureau of Reclamation works to promote domestic energy production by enabling new energy generation from hydropower, facilitating the construction of new or upgraded transmission networks, helping to create new industries and supply chains, driving economic growth and job creation, and helping provide more energy from domestic sources.

Strategic Plan Performance Measures

Strategic Actions Planned through FY 2020

Bureau of Reclamation

- Collaborate with the Department of Energy and the Army Corps of Engineers through the Memorandum of Understanding for Hydropower framework to help meet the Nation's need for reliable, affordable, and environmentally sustainable hydropower.
- Support the development of non-federal hydropower through the Lease of Power Privilege and Federal Energy Regulatory Commission licensing processes.
- Leverage Reclamation's Hydropower Efficiency Research Systems initiative to improve operational efficiencies at Reclamation power plants.

- Assess opportunities for federal and non-federal hydrokinetic, conventional, and pumped storage hydropower development.
- Collaborate with stakeholder groups and regulatory agencies to improve and streamline non-federal hydropower permitting processes.
- Provide power operations and maintenance-related support services and collaboration with other Federal, tribal, state, and local governments, power industry constituencies, and other interested parties.
- Support hydropower data acquisition, analysis, and archiving initiatives to improve operational performance, asset management, and regulatory compliance at Reclamation power plants.
- Assess progress of initiatives in deferred maintenance reporting, power related security, and risk-based asset management studies.

Key Funding Sources

Key Funding Sources (dollars in thousands)	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Request	2019 Request	2020 Request	2014 - 2020 Trend
Bureau of Reclamation								
Water and Related Resources	56,633	49,620	54,081	56,358	44,452	47,954	49,337	
Mission Area 2: Generating Revenue and Utilizing Our Natural Resources

Goal #2: Ensure Access to Mineral Resources

Strategy #1: Manage non-energy mineral development

Program Performance Overview: The Department promotes economic development and environmental protection through responsible, science-informed management of mineral resources. The BLM conducts environmental analysis of complex issues necessary to authorize use on BLM public lands, to meet the increasing demand for non-energy solid leasable minerals, especially potash and phosphate. Additionally, the science provided by the USGS Mineral Resources Program (MRP) facilitates resource discovery and provides essential information and analyses for strategic, evidence-based economic and geopolitical decisions. BOEM's Marine Minerals Program provides sand and gravel resources to protect and improve coastal infrastructure and the environment locally, regionally and nationally.

Performance for USGS remains level from 2016 through 2017, thereby allowing non-energy mineral research and assessments to keep up with demand. To date, BOEM has conveyed the rights to more than 139 million cubic yards of Outer Continental Shelf (OCS) sediment by executing 52 negotiated agreements for projects in eight states and that have restored over 303 miles of coastline. BLM will increase processing speed for non-energy mineral exploration and development to ensure the Nation is able to meet the demand for mineral materials and non-energy solid leasable minerals through expediting permit approvals while ensuring the American taxpayer receives fair return for mineral materials and leasable mineral commodities.

Based on the President's Executive Order and Secretarial Order 3359, the Department's budget includes funding to help spur critical mineral resource development in the United States. Efforts will include developing advanced topographic, geologic, and geophysical data needed to locate U.S. critical mineral resources to inform private-sector domestic development, reduce dependence on foreign sources, and support job creation and technological innovation.

Public Benefit: Non-energy minerals, including potassium, phosphorus, sodium, potash, lead, and zinc, clay, sand, gravel, and building stone, are vital components of basic industry and life in the United States and support local infrastructure and economic development. As the Nation continues to depend on minerals to manufacture products we rely on every day, from our cell phones and laptops to our cars, the Department will continue to leverage research and assessments to understand and maximize the use of national and global mineral resources while balancing the Nation's mineral needs with the protection of the human, marine, and coastal environments.

Strategic Plan Performance Measures

Inspections and Production Verifications								

Strategic Actions Planned through FY 2020

Bureau of Land Management

- Continue program reform efforts by improving alignment of staffing resources and work prioritization to successfully achieve corrective actions to ensure that mineral materials are sold at fair market value.
- Complete NEPA reviews associated with the potential permitting of three new phosphate mines in Idaho that will sustain current production.
- Continue to work on the Mineral Tracking System which will be used to support the automation and tracking of licenses, leases, permitting and inspection capabilities of the solid minerals program.

Bureau of Ocean Energy Management

- Respond to every request to provide Outer Continental Shelf (OCS) sand and gravel resources that are used primarily for natural infrastructure such as beaches and dunes and to protect coastal investments and habitats locally, regionally, and nationally.
- Develop a National Inventory of OCS Sand Resources; an integrated inventory of the character, quantity, and location of sand resources on the OCS and the habitat they provide.
- Develop a Marine Minerals Information System (MMIS) that provides a framework for historic resource data, current information collected under the Sandy-funded Atlantic Sand Assessment Project (ASAP) and state cooperative agreements, lease-specific information, and future data collection efforts.

U.S. Geological Survey – Mineral Resources Program

- Collect, analyze, and disseminate minerals information and materials flow studies.
- Conduct research on new sources of critical minerals and on the lifecycles of critical minerals.
- Conduct research to understand the genesis and distribution of the critical mineral resources throughout the Nation by collecting, preserving, and disseminating geological, geochemical, and geophysical data and initiating qualitative and quantitative mineral assessments.
- Implement Executive Order 13817 and Secretarial Order 3359 for critical mineral assessments in support of a prioritized nationwide program of topographic, geologic, and geophysical mapping to enhance understanding of the Nation's mineral

resource potential to better manage the supply of critical minerals.

- Continue implementation of a Quality Management System (QMS) for Mineral Resources Program-funded laboratories.

Mission Area 2: Generating Revenue and Utilizing Our Natural Resources

Goal #3: Ensure Public Receives Fair Market Value for Resources; and Recover Costs Where Appropriate

Strategy #1: Ensure accurate and timely accounting of energy revenues

Program Performance Overview: The Department collects, disburses and verifies federal and Indian energy and other natural resource revenue collected from issuing leases on federal lands (and offshore on the outer continental shelf) for the amount of the resource extracted. These resources include oil, gas, coal, and access to renewable energy resources such as solar, wind, and geothermal. To ensure the appropriate accountability and compensation to the American public for the use of these resources, it is important that a fair and appropriate amount of funds are collected and that such transactions are implemented accurately, responsibly, and in a timely manner. The Royalty Policy Committee was reconvened in 2017 to provide advice to the Secretary on the fair market value and the collection of revenue from energy and mineral resources on federal and Indian lands and to advise on the potential impacts of proposed policies and regulations related to revenue collection.

The Office of Natural Resource Revenue (ONNR) maintains a high level of achievement for timely disbursement of federal and Indian revenues, with performance targets averaging 98% over the past five years. ONRR also performs compliance activities to ensure the Department collects revenue due from oil and gas produced on federal lands and waters. The FY 2017 result for timely disbursement of revenues exceeded the target due to a newly streamlined electronic reporting website for companies, which resulted in more efficient and accurate reports and payments from companies.

The BOEM supports timely collection and disbursement of mineral and renewable energy revenues through data driven procedures which help to ensure bid adequacy using a two-phased review system for onshore and offshore leasing. Similarly, the BSEE's risk-based methodology helps to ensure the accuracy of metering from higher risk hydrocarbon sites that experience high volumes of throughput and/or have a history of noncompliance.

Public Benefit: The Department employs data driven procedures to verify, collect and disburse energy and natural resources revenue to several entities and ensure the appropriate financial benefit is obtained for the American people. Revenues collected from leases on Indian lands work directly to benefit members of the Indian community. Distributions to the Land and Water Conservation Fund, the Historic Preservation Fund, and the Reclamation Fund help ensure America's natural resources, landscapes, and rich history are available and enjoyed by current and future generations. States use the distributed funds to support large capital projects such as schools, roads, and public buildings. The Administration's Public Lands Infrastructure Initiative entails dedicating a fraction of new

energy revenues to address deferred maintenance in National Parks, National Wildlife Refuges, and Indian schools. The balance of revenue disbursements is applied to reduce the deficit.

Strategic Plan Performance Measures

Strategic Plan Performance Measures	Bureau	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Target	2019 Target	2020 Target	2014-2020 Trend
Strategy: Ensure accurate and timely accounting of energy revenues									
Percent of federal and Indian revenues disbursed on a timely basis per statute	ONRR	99.5%	99.3%	99.2%	99.4%	98.0%	98.0%	98.0%	
($ Billions)		3.407	2.659	1.910	1.989	2.450	2.450	2.450	
		3.423	2.679	1.926	2.001	2.500	2.500	2.500	
Percent of oil royalty meters (identified as high-risk using a risk-based methodology) where meter provings are observed	BSEE	N/A	N/A	N/A	N/A	6	7	8	

Strategic Actions Planned through FY 2020

Office of Natural Resources Revenue

- Continue phased implementation of an oil and gas revenue and production reporting and verification program on Osage mineral lands. The delegated authority from BIA will add approximately 5,000 leases, 30,000 producing wells, and 800 operators to ONRR's systems, which will increase ONRR's Indian lease administration workload by 82 percent.
- Integrate BOEM's lease data and geospatial data to enable accurate allocation and timely disbursement of qualified Gulf of Mexico Energy Security Act of 2006 related revenues
- Enhance Geospatial Information System capability to enable in-depth analysis of lease revenue related to existing leases and transportation infrastructure.
- Re-compete the Information Technology Systems contract for the operations and maintenance of ONRR's mission critical Minerals Revenue Management Support System (MRMSS), which supports all ONRR in the collection, analysis, disbursement and verification of revenues.
- Expand integration of business intelligence and analytic tools to support mission-critical data exchange and shared business processes.

- Join our DOI leasing partners in standing up the Royalty Policy Committee to provide advice on the fair market value of, and on the collection of revenues derived from, the development of energy and natural resources on Federal and Indian lands.

Bureau of Ocean Energy Management

- Continue to implement, and refine and update, BOEM's fair market value evaluation processes to ensure the government receives the fair market value for outer continental shelf resources.

Bureau of Safety & Environmental Enforcement

- Prioritize inspection and verification activities to ensure oil and gas volumes are accurately accounted for by operators of facilities with high production volumes.

Key Funding Sources

Key Funding Sources (dollars in thousands)	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Request	2019 Request	2020 Request	2014 - 2020 Trend

Total	119,383	121,631	125,519	126,487	128,748	140,625	146,123	
Mission Area 2: Generating Revenue and Utilizing Our Natural Resources

Goal #3: Ensure Public Receives Fair Market Value for Resources; and Recover Costs Where Appropriate

Strategy #2: Ensure effective collection and application of recreation fees

Program Performance Overview: The National Park Service established fee structure guidelines in 2006 to standardize rates across the country. The resulting tier system assigns each park unit to a tier and associated entrance fee schedule based on the type of site and the amenities provided for the public. During 2017, the National Park Service initiated a comprehensive review to evaluate and consider bringing entrance fees at all park units into compliance with their assigned tier through a process of public engagement. All the funds collected would be used to enhance visitor services, with an emphasis on improving infrastructure and deferred maintenance projects.

Public Benefit: The nation's public lands offer many excellent locations for public recreation in the outdoors at national parks and monuments, National Wildlife Refuges, BLM public lands and other locations, in historic sites and buildings and at national treasures such as the Statue of Liberty. Facilities, including roads, visitor centers, bathrooms, historic buildings, museums, etc., that enable visitors to enjoy their public lands and sites. All the major land management bureaus have backlogs of deferred maintenance. The Department will continuously review its fee structure to determine how best to accommodate visitors' enjoyment while collecting fees that help to offset some of the maintenance costs required to keep visitor-facing infrastructure in good shape. All such reviews of fees and changes will remain consistent with Congressional direction that has been provided through a series of laws including the Federal Lands Recreation Enhancement Act.

Strategic Actions Planned through FY 2020

National Park Service

- Support positive visitor experiences by providing enhanced outdoor recreation opportunities and visitor services, managing deferred maintenance for visitor-facing facilities, engaging in habitat restoration to improve wildlife-related recreation, and providing public safety services.
- Implement new technologies to ensure financial integrity of collections.
- Continue to engage stakeholders in efforts to evaluate, update, and standardize fees with the goal of setting fair and equitable rates.

Mission Area 2: Generating Revenue and Utilizing Our Natural Resources

Goal #4: Focus Timber Programs on "Healthy Forests" Lifecycle

Strategy #1: Manage sales of timber and forest product resources

Program Performance Overview: Over the past four years, performance has varied between a high of 80% and a low of 62% of timber resources made available for sale due to litigation stemming from environmental issues and fluctuations in the housing market and transportation costs, affecting the BLM's ability to sell timber, and utilize the by-products. The Department is working to employ sound forestry practices that address the increased risk of wildfire exacerbated by damage from invasive insects.

In 2017, the BLM did not meet its Allowable Sale Quantity (ASQ) due to multiple factors including required protection for species listed under the Endangered Species Act (ESA), and ensuring all timber sales were compatible with new 2016 Resource Management Plans (RMPs) transition plans.

Public Benefit: Timber and by-product sales contribute to the economic stability of local communities and industry. Timber and by-product sales also lead to increased forest health through restoration.

The Public Domain Forest Management program manages over 58 million acres of forests and woodlands mainly in the western states. BLM forests and woodlands serve a variety of purposes and provide many important benefits, offering timber and other forest products and recreational opportunities that support local economies. Such resources serve as valuable wildlife habitat and play an important role in carbon storage and clean water and air. In the process of using timber sales as a tool to restore and treat forests, the program focuses on ecosystem restoration and health, protection, and management for multiple objectives including biodiversity, conservation, and sustainable development for local communities. The program also coordinates with the Wildland Fire management program to leverage funds for hazardous fuels reduction projects.

The Western Oregon Forest Management program includes all costs associated with management, maintenance, and enhancement of forests and woodlands on the public lands, including the Oregon and California (O&C) Grant lands, the Coos Bay Wagon Road lands, and Public Domain land within western Oregon, except for activities directly related to reforestation and forest development. The program offers for sale timber and other forest products in such a way as to sustain a permanent source of timber supply while also maintaining forest health.

Strategic Plan Performance Measures

Strategic Plan Performance Measures	Bureau	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Target	2019 Target	2020 Target	2014-2020 Trend

		N/A	N/A	N/A	N/A	28,473	724,447	721,000	

Strategic Actions Planned through FY 2020

Bureau of Land Management

- Ensure the health and resilience of the Nation's public forest lands as well as the availability of traditional forest products, such as timber through responsible land management.
- Continue to seek strategies to improve efficiency especially in issuing forest product permits, acres of forest restored through sales, biomass utilization, and timber volume offered.

Bureau of Indian Affairs

- Create career development paths to improve employee skills and enhance retention.
- Communicate natural resources funding opportunities to regions and tribes.

Mission Area 2: Generating Revenue and Utilizing Our Natural Resources

Goal #5: Manage Grazing Resources

Strategy #1: Provide for sustainable forage and grazing

Program Performance Overview: In recent years, the amount of time, effort, and cost devoted to issuing grazing permits has increased mostly due to dramatic increases in litigation when permits are appealed during the decision process. Increased litigation is impacting performance and has led to fewer permits processed and a growing backlog in grazing permit renewals. At the same time continued drought requires staff time and other resources needed for permit renewals and lease processing to be used to deal with the effects of drought on the public lands.

The 2017 target was not met for grazing permits and leases processed as planned consistent with applicable resource management plans due to unexpected vacancies in range staffing positions for several months, along with additional permitting restrictions on sage grouse habitat.

Public Benefit: Livestock grazing contributes to food production and adds to local economic stability, and it can be used in certain areas to maintain and improve land health by reducing hazardous fuels, treating invasive weeds, and minimizing the impact of catastrophic wildfires.

Strategic Plan Performance Measures

Strategic Plan Performance Measures	Bureau	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Target	2019 Target	2020 Target	2014-2020 Trend

		13,788	14,058	13,523	13,792	13,764	13,869	14,058

Strategic Actions Planned through FY 2020

Bureau of Land Management

- Continue to streamline the grazing permit process and provide greater flexibility to the American rancher.
- Process Outcome-Based Grazing Authorizations, which allow livestock operators more flexibility to make livestock use adjustments in response to changing conditions such as drought or wildland fire.
- Work with ranchers to address excessive fuels buildup. Targeted grazing, which focuses on intensive grazing in a limited, strategic area, has been useful in influencing wildland fire behavior by breaking up large expanses of relatively homogeneous fuels that burn uniformly with strategically placed buffers of reduced fuels.

Bureau of Indian Affairs

- Provide policy, resources and technical assistance to regions, agencies, and tribes to ensure conservation and sustained yield management on Indian Trust lands.

Mission Area 3: Expanding Outdoor Recreation and Access

Mission Area 3: Expanding Outdoor Recreation and Access

Goal #1: Expand Hunting, Fishing, and Other Recreation on DOI Lands

Strategy #1: Promote hunting, fishing, and other recreation on DOI lands

Program Performance Overview: This Strategic Plan strategy supports and highlights Secretary Zinke's Secretarial Orders 3356 and 3366, to further expand public access to lands and waters administered by the Department, for hunting, fishing, recreational shooting, and other forms of outdoor recreation.

Currently, the Bureau of Land Management estimates that over 95 percent of the nearly 250 million acres of BLM-managed public lands are open to hunting. In addition, in 2017, the Fish and Wildlife Service had 372 National Wildlife Refuges and wetland management districts open to hunting and 308 refuges and wetland management districts open to fishing. As practiced on refuges, hunting and fishing do not pose a threat to wildlife populations, and in some instances, are necessary for sound wildlife management. For example, deer populations will often grow too large for the refuge habitat to support. If some of the deer are not harvested, they destroy habitat for themselves and other animals and die from starvation or disease. The harvesting of wildlife on refuges is carefully regulated to ensure an appropriate balance between population levels and wildlife habitat. The FWS National Fish Hatcheries continue to be a valuable tool in managing fisheries.

The recreation areas developed as a result of Bureau of Reclamation water projects are among the Nation's most popular for water-based outdoor recreation. There are 289 Reclamation project areas that have developed recreation facilities and opportunities available for public use. Reclamation has approximately 6.5 million acres of land and water, most of which are available for public outdoor recreation. The 187 developed recreation areas managed by Reclamation or a non-federal recreation partner draw over 24 million visits annually. These recreation areas provide 549 campgrounds, 454 boat launch ramps, and more than 5,500 miles of shoreline.

Public Benefit: Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the Department's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Americans can hunt and fish on public lands managed by the Department as part of its multiple-use policy which also includes hiking, camping, climbing, boating, wildlife viewing, and other outdoor pursuits. Hunting, fishing and other outdoor activities contributed $156 billion in economic activity across the United States according to the FWS National Survey of Fishing, Hunting and Wildlife-Associated Recreation. More than 101 million Americans, or 40 percent of the United States' population 16 and older, pursue wildlife-related recreation, which supports 480,000 American jobs.

Strategic Actions Planned through FY 2020

Fish and Wildlife Service

- Increase activities that support conservation stewardship in alignment with Secretarial Order 3356 that calls for improving game and habitat management and increasing outdoor recreation opportunities, particularly for hunters, anglers, and sportsmen. Such activities include opening acres of national wildlife refuges to hunting and fishing opportunities while aligning regulations with the states to better increase access and strike a regulatory balance.
- Foster recreational fishing through sustained hatchery production in support of enhancing opportunities for the 58 million recreational anglers in the U.S.

- Welcome more than 48 million visitors to the Refuge System to enjoy educational and interpretive programs, hunting, fishing, wildlife observation, and photography.
- Continue maintenance and limited improvements to visitor facilities, including parking areas, kiosks, interpretive signs, trails, and boardwalks.

National Park Service

- Provide visitor services and protection, including but not limited to interpretive services and facilitated programs, interpretive media such as brochures and wayside exhibits, educational programs, volunteer services, recreational opportunities, visitor facilities, and management of and coordination with commercial services and concessions to enhance the visitor experience.

Bureau of Land Management

- Provide recreation opportunities for tens of millions of visitors, including but not limited to hiking, biking, camping, hunting, fishing, skiing, horse riding, and snowmobiling and off-highway vehicles.
- Collaborate with public and private partners to provide recreation opportunities.
- Implement and support Secretarial Orders 3356 and 3366, which support and expand hunting and fishing access and opportunities, enhance conservation stewardship, improve wildlife management, ensure that public lands and waters are open for hunting, fishing and recreational access, and increase outdoor recreation opportunities for all Americans.
- Assess and improve the bureau's recreation-related websites to identify local opportunities for families to access and enjoy public lands, streamline trip planning and reservation services, and offer updated, engaging, and relevant visitor information.

Mission Area 3: Expanding Outdoor Recreation and Access

Goal #2: Enhance Public Satisfaction at DOI Sites

Strategy #1: Enhance the enjoyment and appreciation of our natural and cultural heritage

Program Performance Overview: Visitor satisfaction with the quality of experiences on public lands remains very high. In 2017, the Department continued its high level of performance in the recreation and visitor experience measure. Survey results show that almost all (about 93%) visitors are satisfied with their experiences at parks, refuges and other public lands and waters. Collectively, satisfaction is above 95 percent for visitors served by facilitated programs.

Public Benefit: Outdoor recreation is integral to a healthy lifestyle for millions of Americans. Visitors to the Department's public lands and waters take advantage of the physical, mental, and social benefits that outdoor recreational experiences provide. Heritage and cultural sites provide insights into our past and the background of our Nation.

Strategic Actions Planned through FY 2020

Fish and Wildlife Service

- Provide safe and accessible facilities for visitors to view/photograph/learn about archaeological sites, historic structures, and historical collections.
- Develop visitor programs, materials, and services that generate interest in cultural and historical structures and artifacts.
- Support innovative community engagement at five high-priority urban refuges and 20 urban partnerships to encourage city dwellers to enjoy the outdoors and connect them with nature.
- Maintain the visibility of Refuge System as an inexpensive, family-friendly place for Americans to reconnect with America's natural and cultural resources.
- Promote new strategies to engage communities in meaningful, collaborative ways to create "stepping stones of engagement" for new audiences to connect with outdoor experiences both on Service lands (Wildlife Refuges) and partner lands.
- Continue maintenance and limited improvements to visitor facilities, including parking areas, kiosks, interpretive signs, trails, and boardwalks.

Bureau of Land Management

- Provide recreation opportunities for tens of millions of visitors, including but not limited to hiking, biking, camping, hunting, fishing, skiing, horse riding, and snowmobiling and off-highway vehicles.
- Collaborate with public and private partners to provide recreation opportunities.
- Implement and support Secretarial Order 3356, which supports and expands hunting and fishing, enhances conservation stewardship, improves wildlife management, and increase outdoor recreation opportunities for all Americans.
- Increase use of realty acquisition tools (such as easements donations, fee simple acquisition, and exchanges) to provide access to public lands for recreational opportunities.

- Assess and improve the Bureau's recreation-related websites to identify local opportunities for families to access and enjoy public lands, streamline trip planning and reservation services, and offer updated, engaging, and relevant visitor information.

National Park Service

- Provide visitor services and protection, including but not limited to interpretive services and facilitated programs, interpretive media such as brochures and wayside exhibits, educational programs, volunteer services, recreational opportunities, visitor facilities, and management of and coordination with commercial services and concessions to enhance the visitor experience.
- Supply visitors with up-to-date interpretive, logistical, and safety information.

Mission Area 4: Fulfilling Our Trust and Insular Responsibilities

Mission Area 4: Fulfilling Our Trust and Insular Responsibilities

Goal #1: Support Tribal Self-Determination, Self-Governance, and Sovereignty

Strategy #1: Support self-governance and self-determination

Program Performance Overview: This strategy focuses on the accountability aspects of supporting tribal self-governance and self-determination programs. Tribes operating under self-governance and self-determination demonstrate financial statement accuracy and compliance with generally accepted accounting principles by obtaining "clean audits." In recent years, performance on tribal audits has fluctuated near 80 percent.

Though the Department met its FY 2016 targets for both clean audits and timeliness of management actions on audits and recommendations, challenges exist including inaccurate documentation filed by tribes to certify how they are spending funds and BIA's failure to review single audits submitted by tribes. BIA also is challenged by a limited number of warranted contracting officers and contracting officers' representatives, who are responsible for monitoring and overseeing contracts. [1]

Public Benefit: Self-governance and self-determination strengthen the government-to-government relationship between the Federal Government and tribal nations. Together, these programs support and strengthen tribal self-governance, sovereignty, self-determination, and self-reliance, applying local expertise and knowledge to managing tribal functions and services.

Strategic Plan Performance Measures

Strategic Actions Planned through FY 2020

Bureau of Indian Affairs - Division of Self Determination

- Continue to monitor monthly Single Audit Reports to ensure timely management decisions are made, and collections are being imposed.
- Continue to provide Audit Training to Awarding Officials responsible for issuing findings and determinations related to A-133 Audits.

Indian Affairs - Office of Self-Governance

- Negotiate funding agreements with tribes.
- Conduct information meetings with tribes considering self-governance.
- Provide curriculum-based Self-Governance Training to new and existing tribes and their federal partners.
- Offer planning and negotiation meetings through teleconference and in-person visits.
- Gain approval for an ongoing Self-Governance Youth internship program.

Mission Area 4: Fulfilling Our Trust and Insular Responsibilities

Goal #2: Fulfill Fiduciary Trust

Strategy #1: Ensure accurate and timely management of fiduciary trusts

Program Performance Overview: The Department's performance in fulfilling fiduciary trust responsibilities to American Indians ranges from 90 to 100 percent as the Department reviews, processes, and carries out trust responsibilities in a timely and accurate manner.

In FY 2017, the Department continued its strong performance in fulfilling its trust responsibilities except for processing times for land-into-trust determinations.

Public Benefit: By fulfilling fiduciary trust responsibilities, the Department provides timely reposting of Indian trust ownership information to beneficiaries and ensures adherence to Indian law and litigation settlements. Responsibility for fiduciary trust oversight of Tribal lands and assets rests with several Departmental offices and programs.

Strategic Plan Performance Measures

Strategic Actions Planned through FY 2020

Office of the Special Trustee for American Indians

- Prioritize the management, reporting, and disbursement of tribal and individual Indian financial trust asset funds ($4.1B in approximately 3,500 tribal trust fund accounts and approximately $8.7M in 404,000 Individual Indian Money accounts).
- Continue to process trust account transactions accurately and timely.
- Record at least 99% of Oil and Gas royalty revenues from the Office of Natural Resources Receipts in beneficiary accounts within 24 hours of receipt.

Bureau of Indian Affairs

Human Services

- Improve the percentage of BIA Regions and Agencies, and Tribes, that receive updates to new policy guidance.
- Determine needs and gaps within the existing tribal welfare assistance structure specific to child assistance and build competency within the social service workforce.
- Partner with the Tribes and the PL 102-477 Program to develop a plan aimed at hiring Tribal General Assistance clients into temporary jobs. The goal of this partnership is mutually beneficial as it will help create a workforce for General Assistance clients.
- Continue to focus efforts on developing implementing quality training on General Assistance. This training will give the social services staff the skills to engage with challenging clients and assist them in obtaining a level of self-sufficiency via General Education Development (GED) or through obtaining employment

- Continue work within the Financial Assistance and Social Services – Case Management System (FASS-CMS) Modernization Initiative with a focus on the development of the Child and Family Services portion of the system, with enhancements to be deployed in FY 2019.
- Continue to boost the BIA workforce through capacity building and deploy tablets or other mobile devices that allow caseworkers access to FASS-CMS to improve case management including Individual Self-Sufficiency Plans (ISPs).
- Provide on-going training on the Native American Children's Safety Act Guidance.
- Deploy the national ICWA database that tracks notices on the FASS-CMS.
- Continue working to build partnerships with Universities and other Organizations on recruiting and increasing the number of Master Level Social Workers to fill IIM Specialist positions across the nation.
- Provide policy oversight, technical assistance, and procedural training to BIA Region and Agency staff on managing and monitoring supervised Individual Indian Monies (IIM) accounts.
- Review active supervised Individual Indian Monies (IIM) case records for compliance with 25 CFR Part 115.427.

Job Placement and Training Program

- Work with tribal Job Placement and Training coordinators to develop plans for job training and employment opportunities for tribal members with a focus on ex-offenders who lack employment skills and need assistance overcoming barriers to employment.
- Work to improve program efficiencies at the tribal level in service delivery and case management.

Land Titles and Records

- Test new standardized performance reports capturing the recording of all transactions in addition to conveyances.
- Collaborate with the Land Buy-Back Program to identify enhancements, procedures, and protocols to address conveyance defects before closeout.
- Release new Division of Land Title and Records Office (LTRO) Mortgage Processing Handbook and Contact Guide to improve lending processing.
- Deploy the new Trust Asset and Accounting Management System (TAAMS) Map Viewer and work with LTRO's to address Legal Land Description Discrepancies for mapping in TAAMS.

Probate

- Report death notifications on a timely basis to begin the probate process.
- Conduct research on a timely basis regarding trust assets and family history for submission to the Office of Hearing and Appeals (OHA) for the adjudication process.

- Perform reviews on a timely basis of the Decision Order issued by OHA for completion.
- Complete and forward all cases to the Division of Land, Title and Records Office for distribution of land interest by the order from OHA.
- Complete and forward all cases promptly to the Office of Special Trustee for distribution of IIM Account by the order from the OHA.

Real Estate Services

- Continue to improve and monitor the timeliness of processing leases utilizing the realty tracking system that identifies locations.
- Provide training to realty field staff utilizing the enhanced realty tracking tool.
- Develop automated solutions to transfer the realty tracking system to the Trust Asset and Accounting Management System for increasing efficiency and data integrity by one record system.
- Update the Leasing Handbook to assist, standardize, and streamline leasing processes and approvals.
- Create and implement systemized training on a national, regional and agency level.

Fee to Trust

- Continue designing and enhancing the automated solutions in the processing of Fee-To-Trust applications in the Trust Asset and Accounting Management System (TAAMS).
- Enhance services and support by conducting outreach to state, local, and tribal governments.
- Implement guidance for the new policy regarding Fee-To-Trust off-reservation cases.

Mission Area 4: Fulfilling Our Trust Responsibilities

Goal #2: Fulfill Fiduciary Trust

Strategy #2: Strengthen Indian Education

Program Performance Overview: The Department of the Interior, in consultation with the Office of Management and Budget, has highlighted this objective as a focus area for improvement. The Bureau of Indian Education (BIE) provides funding to 183 elementary and secondary schools and dormitories serving approximately 48,000 students, with over two-thirds of the schools operated by tribes and the remainder operated directly by BIE. Additionally, BIE funds 32 tribal colleges, universities, tribal technical colleges, and post-secondary schools.

Public Benefit: Providing quality education opportunities starting in early childhood by tribally identified strategies and needs. Tribal communities need an educated citizenry to lead their governments, develop reservation economies, contribute to the social well-being of the community, and sustain Indian cultures.

Mission Area 4: Fulfilling Our Trust and Insular Responsibilities

Goal #3: Strengthen Economic and Health Capacities in the US Territories, and Fulfill US Compact Obligations to the Freely Associated States

Strategy #1: Bolster Healthcare Capacity

Program Performance Overview: Performance metrics for this strategy focus on health issues directly impacting insular area residents.

Community Water System (CWS) Violations: Availability of clean water serves as a key indicator of quality of life and, for this goal, performance is indicated by CWS violation notices from the U.S. Environmental Protection Agency. Continued economic challenges and aging infrastructure impact the insular area residents' ability to maintain water system conditions, but more than 90% of the 131 water systems are free of health-based violation notices each year.

Tuberculosis: The Office of Insular Affairs (OIA) will work to promote health and quality of life by preventing, controlling, and eventually eliminating tuberculosis (TB) from the islands by collaborating with the Territories, Freely Associated States (FAS) and Federal partners. Monitoring TB incidence allows OIA to identify new cases and transmission in the communities since ensuring that patients complete treatment for active TB disease is part of the goal.

Infant Mortality: Infant mortality is considered a basic measure of public health for countries around the world. Over the past decade, the overall infant mortality rate in the United States has improved, declining 15% from 6.9 infant deaths per 1,000 live births in 2005—a recent high—to 5.8 infant deaths per 1,000 live births in 2014. The infant mortality rate in the insular areas is more than double the larger United States. Infant mortality continues to be an extremely complex health issue with many medical, social, and economic factors including race/ethnicity, maternal age, education, smoking and health status.

Public Benefit: The Territories and the Freely Associated States experience significant healthcare challenges. The Department of the Interior along with other partners, such as the Department of Health and Human Services (HHS), will work with insular area partners to improve the quality of healthcare across the insular areas. The Department will make investments to implement corrective action plans to address chronic operational and facility shortcomings at hospitals which serve their U.S. citizens and residents and focus on those factors identified by the HHS/U.S. Centers for Medicare/Medicaid Services (CMS) and local elected officials. Additional investments will be made to combat non-communicable and communicable diseases impacting the Pacific and Caribbean such as obesity, diabetes, and tuberculosis.

Strategic Plan Performance Measures

Mission Area 4: Fulfilling Our Trust Responsibilities

Goal #3: Strengthen Economic and Health Capacities in the US Territories, and Fulfill US Compact Obligations to the Freely Associated States

Strategy #2: Strengthen Island Economies

Program Performance Overview: Performance metrics for this strategy focus on economic issues directly impacting insular area residents. The economic prosperity of the States is important to the United States for national security, diplomatic, and humanitarian purposes.

Average per capita Gross Domestic Product (GDP): In the four U.S. Territories (Guam, US Virgin Islands, American Samoa, and Commonwealth of the Northern Mariana Islands (CNMI)), GDP per capita is 45% of the GDP per capita for the U.S. OIA provides technical assistance to the insular areas to assist with economic development planning and execution and supports local planning and education activities related to tourism, agriculture, and aquaculture. In addition, OIA funds infrastructure projects related to economic development, such as fiber optic connectivity, port improvements, and renovations to tourist districts.

Cost of electricity: Without their own fossil fuel sources, insular areas face great challenges in achieving reliable, affordable, and secure energy. The resulting increased costs can have severe economic effects on the island communities which depend almost entirely on imported petroleum products for energy. The residential cost per kilowatt hour for power in the territories directly impacts the quality of life in the insular areas and remains approximately two times higher than the national average. To try to address electricity costs, OIA contracts with the Department of Energy's National Renewable Energy Laboratory (NREL) to engage territories and provide energy efficiency and renewable energy assessments, help develop strategic energy plans, and provide technical assistance in reviewing and implementing sustainable energy projects. The OIA, through its Empowering Insular Communities grant program, continues to provide funding for the highest priority projects identified in the energy plans including photovoltaic, wind, and geothermal development projects.

Public Benefit: Strong local economies provide employment and a viable tax base for citizens in the insular areas. The Department will assist the insular areas to strengthen their economies through strategic investments in infrastructure, public services, and technical assistance which will attract and retain private sector investment. The Department will promote policies and improve federal coordination on issues impacting insular economies.

Strategic Plan Performance Measures

Mission Area 4: Fulfilling Our Trust Responsibilities

Goal #3: Strengthen Economic and Health Capacities in the US Territories, and Fulfill US Compact Obligations to the Freely Associated States

Strategy #3: Fulfill US Compact Obligations

Program Performance Overview: Performance metrics for this strategy focus on the economic benefits of Compact of Free Association annual financial assistance on Freely Associated States (FAS) residents. Financial assistance is provided through the Office of Insular Affairs.

Public Benefit: In coordination with the State Department, the Department will implement Compact obligations with three U.S.-affiliated Freely Associated States: The Federated States of Micronesia (FSM), the Republic of the Marshall Islands (RMI) and the Republic of Palau (Palau). The Department will make direct grants to the FSM and RMI under their amended Compacts to provide assistance in six sectors: education, health care, infrastructure, public sector capacity building, private sector development, and environment. The Department will request continuing appropriations which support U.S. Compact obligations to Palau.

Strategic Plan Performance Measures

Mission Area 5: Protecting Our People and the Border

Mission Area 5: Protecting Our People and the Border

Goal #1: Ensure Emergency Preparedness & DOI Law Enforcement Staffing Addresses Public Safety Risks

Strategy #1: Ensure public safety on our lands

Program Performance Overview: The Department works to provide visitors and other users to our lands and facilities with a safe environment. Accordingly, the Office of Law Enforcement and Security (OLES) provides program direction and oversight on law enforcement policy, border security, drug enforcement, training at the national academy, internal affairs, victims assistance, program compliance, and inspections as well as emergency deployment of the Department's law enforcement resources. The Security Program provides oversight and compliance of the Department's physical, personnel, and national security programs, in addition to the protection of critical infrastructure such as dams, national monuments, and icons. The Office coordinates with other federal, state and local agencies (including the Department of Homeland Security, Federal Bureau of Investigation (FBI), Central Intelligence Agency, etc.) on all law enforcement and security issues. In addition, the Department coordinates with law enforcement and security partners to assist in the protection of assets that the Department does not own, including infrastructure on the Outer Continental Shelf, the Trans-Alaska pipeline, and gas transmission lines. The Intelligence Program, through the Federal Senior Intelligence Coordinator (FSIC), maintains situational awareness both internationally and domestically, manages the mandated Insider Threat Program, coordinates with the Intelligence Community on matters affecting the Department, and is a partner on the National Joint Terrorism Task Force.

Public Benefit: Inherent in our management of public lands is the obligation to protect DOI employees and visitors to those public lands. Ensuring employee and public safety is complex and requires the resources of multiple bureaus and offices. The Department's Law Enforcement Program has the third largest contingent of federal law enforcement officers in the Executive Branch. Depending on the season, approximately 3,500-4,000 law enforcement officers, rangers, and other employees patrol vast acres of public lands, national parks, wildlife refuges, and Indian communities and protect natural, cultural, and heritage resources from illegal activities.

Strategic Plan Performance Measures

		N/A	N/A	N/A	N/A	21,000	21,000	21,000	

Strategic Actions Planned through FY 2020

Office of Law Enforcement and Security

- Each bureau will determine the effective level and distribution of law enforcement staffing for each of its programs on a unit-by-unit basis.

Bureau of Indian Affairs

- Initiate the upgrade of current GL-8 and GL-9 police officer and supervisory police officer positions to attract and retain qualified personnel and ensure the effective level and distribution of staffing.
- Distribute resources to assist tribally run programs to implement the same goal.

Mission Area 5: Protecting Our People and the Border

Goal #1: Ensure Emergency Preparedness & DOI Law Enforcement Staffing Addresses Public Safety Risks

Strategy #2: Prepare DOI to respond to and recover from emergencies and incidents

Program Performance Overview: The Department plays a vital role in supporting the Federal Emergency Management Agency in its disaster response mission. Within the Department, the Office of Emergency Management (OEM) promotes all-hazard preparedness and response; ensures continuity of the Department to perform essential functions during catastrophic events; and assists communities during imminent threats. To assess its readiness to perform its mission, the OEM has established a readiness index measure that assesses each bureau across four components and then averages the result for the Department. Since 2014, the readiness index has improved slightly.

Public Benefit: The Department's All-Hazards Baseline Operational Plan provides the baseline guidance for how the Department prepares for and responds to emergencies, regardless of type or cause. The OEM leads the efforts for preparedness and response, and leads coordination and information sharing among the emergency management, communications, public health, environmental health, wildlife health, integrated pest management, invasive species, and occupational safety and health mission areas across the Department's bureaus and offices.

Strategic Plan Performance Measures

Mission Area 5: Protecting Our People and the Border

Goal #2: Support Securing Our Southern Continental US Border

Strategy #1: Support securing our southern continental US border

Program Performance Overview: The Department supports the Administration's plan to secure our borders and protect our citizens and resources along the border. The Department continues collaboration efforts by searching for opportunities to share resources and balance efforts. This is accomplished by routine interagency coordination, participating in local Border Management Task Force (BMTF) meetings, interagency training, an annual interagency border forum, and law enforcement specific operations.

The US Border Patrol is the main partner agency responsible for patrolling Department lands adjacent to the US/Mexican Border. The Department works with US Border Patrol in decreasing illegal immigration on DOI-managed public lands through collaborative efforts with partnering agencies.

Public Benefit: The Department manages lands adjacent to 41% of the southwest border of the continental US, 14% of its northern border, and 31% of the southeast border, totaling 1,900 miles along the three borders. With an estimated 500 million visitors a year and over 500 million acres to manage, the Department's managers in the field are faced with tough decisions on how to best utilize their law enforcement assets. One way is by adopting a whole government approach. Through partnering, federal, state, tribal, and local law enforcement agencies working in proximity to each other have been able to address critical issues like illegal immigration, and the natural resource impacts often associated with it.

Strategic Plan Performance Measures

Strategic Actions Planned through FY 2020

Office of Law Enforcement and Security

- Continue interagency coordination by participating in local Border Management Task Force (BMTF) meetings, interagency training, and law enforcement specific operations.

Mission Area 5: Protecting Our People and the Border

Goal #3: Manage Wildland Fire to Reduce Risk and Improve Ecosystem and Community Resilience

Strategy #1: Assess, protect against, and address risk of wildfire

Program Performance Overview: The Department is working to update its forest and rangeland management practices to address the increased frequency, severity, and cost of wildland fires. Uncontrolled wildfire kills people, destroys property, and harms fish and wildlife. The Department's Office of Wildland Fire (OWF) program strives to achieve a risk-based, cost-effective, technically efficient, and scientifically grounded wildland fire management program that safely meets fire and resource management goals. The guiding principles and priorities of the OWF program are to restore and maintain fire-resilient landscapes, promote fire-adapted communities, reduce unplanned human-caused ignitions, and safely and effectively respond to wildfires, through direct program activities and strong federal, tribal, state, and local collaboration. The Department faces challenges from the uncertainties and risk of impacts of natural effects, of increasing risks to firefighters, communities and their assets (e.g., water supplies, recreation areas, infrastructure, etc.) and the increasing need to protect and conserve America's federal and tribal lands. Natural effects such as higher temperatures, spread of invasive plants that burn relatively easily, and earlier arrival of spring make for drier soils, increased likelihood of drought, and a longer wildland fire season.

OWF aligns programs, budgets, and performance to implement the intergovernmental National Cohesive Wildland Fire Management Strategy, a science-based and innovative, collaborative approach to mitigating wildfire risk. The Department sustained its performance at existing levels over the past five years with only minor year-to-year variance for acres in desired condition and initial response strategy success. The measure for treatments has been more variable due to changes in available funding and the set of projects undertaken in a given year.

The Department achieved its targets on one of the three wildland fire measures in FY 2017 and experienced only small deviations from planned targets for the other two measures despite a challenging fire season.

The DOI is developing new wildland fire management performance measures to better articulate and determine the efficacy of Department and Administration resources in achieving desired resource conditions that reduce the intensity, severity or negative effects of wildfire. As part of this effort, the Department has established a working group among the four DOI wildland fire bureaus, as well as the U.S. Forest Service, which will explore the feasibility of concepts and principles in wildfire risk mitigation and examine the value of the strategic placement of fuels treatments as informed by a risk assessment and mitigation plan. This group will develop recommendations for a) establishing outcome-based targets, and b) annually evaluating the performance of the program in meeting the

desired objectives of the National Cohesive Wildland Fire Management Strategy. When completed, the DOI will incorporate the new performance measures into its Strategic Plan implementation.

Public Benefit: Preparedness activities provide the foundation for a safe and effective strategic response to unplanned ignitions and enable land managers to develop collaborative efforts to achieve fire-adapted communities and landscapes that are resilient to the effect of wildfire. Fuel treatments improve the integrity of the forests and rangelands while reducing the risks of high severity wildfires and the impacts of such fires to people, communities, and natural and cultural resources located near or adjacent to federal or tribal lands. Rehabilitation of the most severely damaged lands from high impact wildfires minimizes future threats to life, property, natural and cultural resources to stabilize and prevent unacceptable degradation to these key values. The Department works collaboratively with other federal, tribal, state, and local governments to help protect life and property, limit damages to natural and cultural resources during wildfire response and reduce program and management duplication.

Strategic Plan Performance Measures

		5,757	6,362	6,061	7,527	6,530	6,440	6,075	

Strategic Actions Planned through FY 2020

Office of Wildland Fire

- Foster an integrated approach ensuring that wildland fire management principles and concepts are a fundamental component of resource programs throughout the Department.
- Work collaboratively with federal, tribal, state, and local entities to ensure a coordinated approach to wildland fire response that work across boundaries to manage wildfire risk at a landscape scale and improve ecosystem and community resilience.
- Facilitate shared stewardship of land management by enabling protection responsibilities and resources to be leveraged to gain economic efficiency, reduce management duplication, and meet resource management objectives.
- Develop and implement policies to manage wildland fires to meet safety and protection objectives, manage risk, and achieve resource management objectives.
- Maintain, improve, and implement fire management plans that allow shared interagency resources in training, prevention, and detection to facilitate appropriate responses to wildfire in accordance with land-use plan objectives.
- Identify and conduct fuels treatments to improve the resiliency of Departmental and tribal lands; contribute to community adaptation to fire; and improve the ability to safely and appropriately respond to wildfire.
- Prioritize the Secretary's Wildland Fire Directive to better incorporate active fuels management into resource management planning to reduce the spread, intensity, and/or severity of wildfire. This includes targeted fuels management efforts along the southern border that support national security objectives carried out by the Department of Homeland Security Customs and Border Protection and address the threat of wildfire.
- Provide training, resources, and other program support to ensure that firefighters can safely and effectively perform the full range of their work, including fuels management, prescribed fire, and wildfire response.
- Support community assistance in the form of community education, prevention (to reduce human caused ignitions), and collaborative planning to reduce wildfire risk.
- Support wildland firefighting assistance to rural fire departments, volunteer fire departments, rangeland fire protection associations, and other similar organizations aiding in wildfire response.
- Rehabilitate and restore lands degraded and damaged by wildfire.
- Support the use and integration of cost-effective technology advancements, such as Unmanned Aircraft Systems, in wildfire operations.
- Manage an interagency information technology enterprise portfolio of fire applications and systems to improve wildland fire planning, preparedness, and response.
- Continue to strengthen oversight of wildland fire management program spending and accountability through improved performance and the use of risk management principles to guide decision-making at the strategic and program level.

- Coordinate internal and external communication on the Department's wildland fire management programs and priorities to stakeholders, including the media, Congress, and other partners.

Mission Area 5: Protecting Our People and the Border

Goal #4: Provide Science to Safeguard Communities from Natural Hazards

Strategy #1: Monitor and assess natural hazards risk and response planning

Program Performance Overview: USGS replaced most performance measures in FY 2017 with index measures that capture and portray more information than the previous measures. The index measures represent two or more individual measures from years past. Overall, program performance improved slightly from FY 2016 to FY 2017, with four of five measures improving performance or remaining level, while funding increased marginally. This level of performance indicates that critical natural hazard knowledge and tools are being developed and provided to land managers and policy makers to inform decision making.

Public Benefit: The USGS provides scientific information to emergency responders, policy makers, and the public to reduce the risk of losses from a wide range of natural hazards, including earthquakes, floods, hurricanes, landslides, magnetic storms, tsunamis, volcanic eruptions, and wildfires.

Strategic Plan Performance Measures

Strategic Plan Performance Measures	Bureau	2014 Actual	2015 Actual	2016 Actual	2017 Actual	2018 Target	2019 Target	2020 Target	2014-2020 Trend
Strategy: Monitor and assess natural hazards risk and response planning

Strategic Actions Planned through FY 2020

U.S. Geological Survey
Hazards Program (HAZ):

- Monitor the nation's earthquakes via the Advanced National Seismic System (ANSS) and through support to several regional seismic networks operated by State and university partners; provide 24x7 reporting on domestic and global earthquakes; deliver rapid earthquake impact and situational awareness products to support emergency response; and develop improved methods for continued improvement in the quality and timeliness of real-time earthquake information.
- Deliver real-time earthquake data to NOAA, supporting tsunami monitoring in the Pacific Rim and tsunami disaster alerting in Alaska, Hawaii, Washington, California, and U.S. Territories in the Western Pacific and Caribbean.
- Communicate earthquake information to the public and to key stakeholders, including federal and state emergency response agencies, disaster relief organizations, operators of utilities and lifelines, and communities at risk.
- Improve the USGS National Seismic Hazard Model, which describes the likelihood and potential impacts of earthquakes nationwide, and which serves as the basis of seismic provisions in building codes; revise as needed a model update with input from the Building Seismic Safety Council, which develops building code updates; and maintain associated databases and tools that are widely used by engineers for site-specific engineering design and seismic risk analysis.
- Conduct applied field, laboratory and theoretical research on the causes, characteristics and effects of earthquakes, including investigations of earthquakes related to wastewater disposal and other industrial activities. Support relevant research by expert partners in academia, state agencies and the private sector via competitive grants and cooperative agreements.
- Conduct field investigations of Very-High-Threat volcanoes and generation of volcanic hazard assessments for these volcanoes.
- Finish work on hardening the Alaska Volcano Observatory Operations Room with a new emergency generator to maintain situational awareness and monitoring capability even during power failures caused by human or natural causes.
- Convert 30 analog seismometers and analog telemetry nodes at Alaska monitoring stations to digital seismometers with digital data telemetry to make progress on compliance of monitoring networks with the National Telecommunications and Information Administration (NTIA) restrictions on radio frequency utilization.
- Partner with USGS 3-DEP initiative and other Federal and State agencies to leverage resources towards acquiring high-resolution light distance and ranging (LiDAR) data over Very-High-Threat and High-Threat volcanoes.
- Conduct field, laboratory, and modeling studies of landslide initiation and mobility processes in cooperation with federal, state, academic, and private sector partners to develop, test, and advance tools and methods for landslide monitoring, hazard assessment, and forecasting.
- Provide post-wildfire debris-flow hazard assessments for major wildfires to Burned Area Emergency Response (BAER) Teams, State Geological Surveys, federal, state, and local emergency management and the public.

- Collect observations, conduct studies, and test methods and models to expand the NOAA-USGS partnership for post-wildfire debris-flow early warning beyond the prototype area in southern California to other parts of the western United States.
- Conduct marine geological and geophysical investigations to provide federal, state, and local users with improved assessments of hazard sources (earthquakes, tsunami, and submarine landslides) and their potential impacts on offshore operations, coastal communities and infrastructure.
- Provide regional real-time forecasts of erosion and inundation due to coastal storms, including hurricanes; and long-term forecasts of the likelihood of future coastal change and inundation due to storms, erosion and sea-level rise.
- Conduct field and laboratory studies with other federal and academic partners to characterize marine methane systems and associated sea-bed processes to enhance understanding of their substantial energy resource potential, the risk they represent to offshore operations, and their role in the global carbon system and marine ecological productivity.
- Contribute analyses and expertise to delineate the U.S. Extended Continental Shelf consistent with international law and apply unique USGS expertise to understanding the occurrence and potential of deep-sea mineral resources.

Groundwater and Streamflow Information Program (GWSIP):

- Collect, manage, and disseminate high quality and reliable integrated hydrologic information in real time and over the long term for flood and drought planning, warnings, and forecasting; designing water infrastructure; operating waterways for power production and navigation; managing water rights issues; and assessing safety conditions for water recreational activities.
- Maintain a unified National Streamgage Network of more than 8,200 real-time streamgages, including 3,460 Federal Priority Streamgages that support strategic Federal responsibilities.
- Develop, refine, and apply hazard information and tools to minimize loss of life and property, such as Rapid Deployment Gages (RDG's), Storm Tide Sensors, and Wave Height Sensors.
- Improve data collection and dissemination during hydrologic hazards (floods, droughts, hurricanes) and deploy information tools for water resource managers to minimize loss of life and property.
- Support improvement of flood forecast predictions, drought management, and development of National water prediction capabilities.

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Goal #1: Align DOI Organizational Structure to Improve Partnership Engagement and Mission Delivery

Strategy #1: Ensure effective alignment of DOI organizational structure in the field and with partners

Program Performance Overview: The DOI has established unified regional boundaries for its bureaus in 2018 and will further develop this approach in 2019. The goal is to improve overall operations, internal communications, customer service, and stakeholder engagement. Aligning geographic areas across the DOI will enhance coordination of resource decisions and policies and will simplify how citizens engage with the DOI.

Organizing bureaus with common geographic areas will allow for more integrated and better coordinated decision making across bureaus. Previously, the DOI's bureaus had regions different geographic boundaries. This complicates coordination and hampers the DOI's ability to get things done expeditiously. Having unified regions will help streamline operations and in doing so, provide better service to the American people. Bureaus within a region will focus on common issues, taking a comprehensive approach versus a bureau-centric approach. This culture shift will help us work better together to accomplish one vision.

To improve customer service and reduce operational costs, sharing functions at field locations has already begun. For several years, the Department of the Interior and Department of Agriculture's US Forest Service (USFS) have pooled resources, conducted joint projects, and shared services under Service First agreements where field locations are near each other. Service First authority promotes partnering across agency boundaries to develop joint solutions to common problems and to address federal land management issues in an integrated way.

Public Benefit: The Department is improving its organizational model to determine how to best achieve its mission of serving the American public, honoring our tribal and fiduciary trust responsibilities, and managing and protecting our land, water and natural resources for the next 100 years.

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Goal #1: Align DOI Organizational Structure to Improve Partnership Engagement and Mission Delivery

Strategy #2: Improve strategic hiring, placement and retention efforts to ensure mission-critical service delivery through data driven processes and increased employee engagement efforts

Program Performance Overview: To facilitate strategic human capital planning, the Department will leverage automation to improve employee performance and training opportunities and examine additional data to determine if operational efficiencies can be gained while minimizing redundancies under the current organizational design.

Public Benefit: The Department is committed to managing America's vast natural and cultural resources with a 70,000-strong and 350 occupation-plus workforce that exemplifies high performance, customer service and accountability.

Strategic Actions Planned through FY 2020

Office of Human Resources

The Office of Human Resources will analyze organizational data and recommend strategies for improvement from:

- Federal Employee Viewpoint Survey (e.g., employee engagement)
- Geographic Representation of Bureau Mission Critical Occupations
- Geographic Representation of Administrative and Support Services
- Customer Service data
- Benchmarking cost allocations for administrative and support functions
- DOI Human Capital Framework Evaluations
- Accountability drivers on performance, labor management, EEO, etc.
- Bureau plans in response to the Department-wide Workplace Environment Survey

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Goal #2: Reduce Administrative and Regulatory Burden

Strategy #1: Evaluate and improve the net benefits of regulatory reform initiatives and policies, and identify regulations for repeal, replacement, or modification.

Program Performance Overview: On February 24, 2017, President Trump signed Executive Order (EO) 13777, entitled "Enforcing the Regulatory Reform Agenda," to alleviate unnecessary regulatory burdens placed on the American people. The Executive Order provides direction to identify regulations for repeal, replacement, or modification that eliminate jobs, inhibit job creation, are outdated, unnecessary, ineffective, impose costs that exceed benefits, or rely on data or methods that are not publicly available or insufficiently transparent to meet the standard for reproducibility. In accordance with Executive Order 13771 entitled, "Reducing Regulation and Controlling Regulatory Costs," the costs of the regulatory and deregulatory actions are measured as the opportunity costs or cost savings to society, as defined in OMB Circular A-4.

In 2017, the Department established a Regulatory Reform Task Force, which is guiding implementation of regulatory reform to alleviate unnecessary burdens placed on the American people. Periodically, the Department will review the written input to the Federal Rulemaking Portal: www.regulations.gov to determine whether additional regulations should be targeted for review and considered for suspension, revision, or rescission. The DOI achieved cumulative net savings of $1.15B (net present value) from its deregulatory actions in FY 2017. Goals for subsequent years will be established as the DOI completes its review of target regulations.

Public Benefit: The Department strives to be prudent and financially responsible in the expenditure of funds. In addition to the management of the direct expenditure of taxpayer dollars through the budgeting process, it is essential to manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations. The Administration's policy is that for every new regulation issued, at least two prior regulations be identified for elimination, and that the cost of planned regulations be prudently managed and controlled through a budgeting process.

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Goal #2: Reduce Administrative and Regulatory Burden

Strategy #2: Improve transparency and timeliness of the infrastructure permitting process.

Program Performance Overview: Compliance with permitting requirements is often unnecessarily prolonged and expensive. As outlined in the President's Executive Order "Establishing Discipline and Accountability in the Environmental Review and Permitting Process for Infrastructure," and the corresponding Secretarial Order 3355, a significant opportunity exists to decrease the time required to complete environmental review and authorization for infrastructure projects. The Department believes this can best be achieved through streamlined processing, and unified regional boundaries that focus executive attention on the intersecting bureau issues within the same geography.

Secretarial Order 3355 implementation guidance issued in April 2018 identified the Department's plans to streamline and collaborate on National Environmental Protection Act (NEPA) compliance efforts. In addition to reducing the time and page limits for environmental review documents, the guidance is expected to significantly improve the overall timeliness of major right-of-way applications for water and energy infrastructure projects.

Public Benefit: America needs increased infrastructure investment to strengthen our economy, enhance our competitiveness in world trade, create jobs and increase wages for our workers, and reduce the costs of goods and services for our families. The poor condition of America's infrastructure has been estimated to cost typical American household thousands of dollars each year. Inefficiencies in current infrastructure project decisions, including management of unnecessarily expensive and prolonged environmental reviews and permit decisions or authorizations, have delayed infrastructure investments, increased project costs, and blocked the American people from enjoying improved infrastructure that would benefit our economy, society, and environment. More efficient and effective federal infrastructure decisions can transform our economy, so the Federal Government must change the way it processes environmental reviews and authorization decisions.

		900	959	1,020	948	900	926	954	

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Goal #3: Prioritize DOI Infrastructure Needs and Reduce Deferred Maintenance Backlog

Strategy #1: Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery

Program Performance Overview: Real property assets are integral to the success of the Department's mission. The Department's real property inventory includes approximately 43,000 buildings and 80,000 structures with a replacement value of approximately $300 billion, across six bureaus. Management of deferred maintenance is a Departmental priority to ensure completion of needed repairs and prevent further deterioration and unsafe conditions. The Administration's Public Lands Infrastructure Initiative will go a long way toward addressing the deferred maintenance of our National Parks, National Wildlife Refuges, and Indian schools. The Department will address deferred maintenance/repair needs with priority given to those that support critical mission activities and manage risk to improve the condition of assets. Across the Department, there are currently 51,000 buildings and structures considered highest priority. The Facility Condition Index (FCI) and Asset Priority Index (API) performance measures are key indicators for managing the portfolio in support of the Department's diverse missions. The Bureau of Indian Affairs employs a Service Level Index to determine the conditions of the roads and bridges in tribal communities. The overarching goal is to maximize the efficient use of real property and to optimize expenditures on the real property portfolio.

A significant factor impacting a sustainable portfolio of constructed assets is the aging infrastructure. Many assets already exceed original design life, and this trend continues to increase maintenance demands. Furthermore, the Department's objective is to maintain heritage assets in perpetuity for the benefit of future generations. The Department must continue to maintain and repair these aging assets and cannot simply divest these assets as is typically done in private industry. These examples illustrate why the backlog of deferred maintenance continues to increase, now more than $16 billion.

The Department conserves the Nation's cultural and heritage sites that reflect a rich and diverse history. The Department safeguards our heritage for the generations that follow, to better understand our country's present and learn from our past. Many challenges exist in protecting and maintaining historic and archeological sites, especially with the impacts of weather on fragile sites and structures. Sites are exposed to changing weather conditions that cause damage and deterioration of the structures and sites, and some locations are vandalized or accidentally damaged by visitors to federal lands.

The BIA Road Construction Program maintains and operates the 29,000 miles of BIA-owned roads and bridges. These roads and bridges serve as the primary access points to tribal communities, without which critical resources and services would not reach tribal members. The Department will continue to improve and provide safe, functional, energy efficient, and universally accessible BIA

facilities. The Department is also working to improve its Bureau of Indian Education (BIE) funded schools and improve the learning environment of BIE students.

Public Benefit: The Department manages the full life-cycle requirements of nearly every type of constructed asset, including visitor centers, dams, schools, health clinics, power generating facilities, housing, hotels, fire stations, campgrounds, roads, water and wastewater treatment plants, offices, and more. Many of these assets have historic or cultural significance that not only support the Department's mission, but also are important to our Nation's heritage. Improving our infrastructure means we can better accomplish our mission for the American people.

Strategic Actions Planned through FY 2020

Fish and Wildlife Service

- Complete compliance audits and inspections on dams, bridges, and facilities with seismic risk as required by law. Any deficiencies uncovered are identified for maintenance, deferred maintenance, or line-item construction.
- Continue maintenance and improvements to visitor facilities, including parking areas, kiosks, interpretive signs, trails, and boardwalks.
- Provide safe and accessible facilities for visitors to view/photograph/learn about archaeological sites, historic structures, and historical collections.
- Invest in the Service's aviation program to maintain the DOI fleet and improve pilot safety.

National Park Service

- Maintain efforts to preserve and protect cultural resources, including but not limited to stabilization and preservation of historic and prehistoric structures, protection of archaeological sites, and preservation of museum objects and archival collections.
- Provide focused investments in park resources and projects to document and preserve history in parks. Make competitive grants (via the Historic Preservation Fund) for the preservation of these resources nationwide.
- Strive towards the goals and objectives identified in the NPS Cultural Resource Challenge that provides focus for NPS stewardship and partnership responsibilities for America's cultural heritage. The Challenge promotes collaboration with American Indian Tribes, states, local governments, nonprofit organizations, historic property owners, educational institutions, and others.
- Protect and preserve lands within authorized park boundaries containing irreplaceable resources for the enjoyment of current and future visitors.

Bureau of Land Management

- Continue to ensure that BLM's management approach fully incorporates the Cultural Resource Program. The program is responsible for the diverse, culturally significant, and scientifically important aggregation of archaeological sites, historic structures, and paleontological resources on public lands.
- Prioritize Deferred Maintenance and Capital Improvement projects, emphasizing projects that create jobs in local communities, those that improve recreation access, and those that enhance visitor safety.
- Work closely with the Federal Highway Administration on Federal Lands Transportation Program, Federal Lands Access Programs, and Emergency Relief for Federally Owned Roads to complete high-priority projects will increase public access to BLM lands.
- Protect life, critical infrastructure, and natural and cultural resources through the BLM's Fire and Aviation Program. This will be accomplished by utilizing mitigation, education, and community assistance programs to partner with local entities, homeowners, and business owners on projects to protect homes and the public. The BLM will partner with Rangeland Fire Protection Associations and rural fire departments to protect livelihoods, working landscapes, and local economies by conducting fuels management projects and collaborative efforts to create fuel breaks and reduce flammable vegetation to protect homes, communities, and the public in wildland-urban interface areas.

Bureau of Reclamation

- Complete facility conditions assessments and continue maintenance of museum property management activities for the inventory of fine artwork, archaeological and cultural museum items.

- Assess accountability and control issues related to museum property collections. This includes collections of museum properties, natural history, and art that are cataloged, preserved, and inventoried in accordance with Federal statutes and Departmental directives.
- Maintain the environment (temperature & humidity) inside the museum to protect the artifacts from degradation over time.
- Develop and establish a mitigation strategy for factors that may have negative impacts on the collection's condition.
- Engage law enforcement and install surveillance protections on a continuous basis to prevent theft, destruction, and vandalism of artwork collections and archaeological and cultural resources, especially in facilities not managed by Reclamation.

Indian Affairs

- Continue to assure compliance with applicable cultural resource statutes such as the National Historic Preservation Act, Archaeological Resources Protection Act, and the Native American Graves Protection and Repatriation Act (NAGPRA).
- Work with repositories to designate and train staff to be responsible for and to improve the day-to-day management of museum collections, to ensure the preservation of the collections in perpetuity.
- Continue to catalog and assess the condition of museum objects in all repositories.
- Identify areas of risk with the deferred maintenance and annual work plans.
- Acquire Transportation Facility Maintenance Management Software that will assist program field units engaged in road maintenance activities.
- Continue to update the BIA Roads Maintenance Manual and reassess its applicability to limited field resources.
- Develop guidance for BIA regions and tribal contractors performing the level of service road maintenance assessments for deferred maintenance reporting as well as to implement a uniform assessment schedule for field units.
- Support tribes that are operating their Road Maintenance program through contracts and agreements by increasing capacity through technical assistance, improved guidance, and performance reporting.
- Continue to monitor the installation of signs addressing load posting deficiencies on BIA-owned bridges.
- Develop the BIA Bridge Inspection handbook, improvement plan, and implementation plan regarding the bridge inspection program.

Mission Area 6: Modernizing Our Organization and Infrastructure for the Next 100 Years

Goal #3: Prioritize DOI Infrastructure Needs and Reduce Deferred Maintenance Backlog

Strategy #2: Provide dependable and efficient information technology

Program Performance Overview: Information Management Technology (IMT) supports every facet of the Department's diverse mission. Employees, volunteers, and the public require modern, reliable, secure, and agile IMT services delivered in a cost-effective and transparent manner. The increasing sophistication of cyber-attacks demand increased situational awareness, risk-based implementation of technology, demonstrated resilience in critical technologies, and a dynamically trained cybersecurity workforce. The Department implements many of the capabilities through the Continuous Diagnostics and Mitigation (CDM) program which provides the capabilities and tools that identify, prioritize, and mitigate cybersecurity threats and risks in near real-time. The Department must also implement a multitude of security controls to protect its mission-critical High Value Assets (HVAs) information systems. Key priorities for the Department will be to strengthen the cybersecurity resiliency of these assets by eliminating vulnerabilities and isolating HVA assets from the rest of the network.

The Department's employees and customers desire a computing experience that allows the user to seamlessly access, integrate, analyze, and capture data without sacrificing security. Securing mobile devices is essential for employees and customers to access Departmental data and information from any device. The Department is expanding the number of mobile platforms and devices supported while protecting and securing the data. Departmental users expect a personalized IT experience that is standardized, compatible, and interoperable. With this goal in mind, the Department is developing standard computing and IMT provisioning practices for laptops and mobile devices which enables portability of devices.

The Department also seeks to provide services at a lower cost by consolidating and standardizing IMT services and systems. The OMB's Data Center Optimization Initiative (DCOI) aims to reduce annual costs associated with federal data centers by 25 percent by the end of FY 2018, resulting in $2.7 billion in cost savings and avoidance. Some of these savings will be used to optimize the IMT services provided by the remaining data centers, enabling more cloud computing services and improving public access to information. A primary focus for consolidation is the Department's hosting strategy. The goal is to build a ubiquitous computing environment where IMT and Cloud services are provided seamlessly and on-demand to the customer. The Department will continue to take advantage of federal-wide contracts for optimizing telecommunications and network services.

The Federal Information Technology Acquisition Reform Act (FITARA) was enacted to clarify executive responsibilities and establish accountability for the acquisition and management of resources. Successful implementation of FITARA will lead to more

effective management of IMT assets and, in turn, improve the government's ability to serve the public. It will also increase the number of successful federal technology programs and accountability of trust in using public funds.

Public Benefit: Implementing the Continuous Diagnostics and Mitigation (CDM) program and ensuring the protection of the Department's high value assets will greatly enhance the ability to protect any Personally Identifiable Information (PII) that is collected and stored as well as increase the dependability and survivability of the information technology that provides essential services to the public. Improving network connectivity and expanding the use of mobile devices will allow our employees to more easily obtain the tools and data they need to efficiently and effectively perform their mission to serve the public. The Department exchanges information with a wide range of the public, from scientists working in remote areas to the family planning their next trip to a national park. Today, every government organization and program depend upon the effective and efficient use of IMT assets to securely deliver services and manage internal operations.

Strategic Plan Performance Measures

Strategic Actions Planned through FY 2020

Office of the Chief Information Officer

- Implement Department of Homeland Security Continuous Diagnostics and Mitigation capabilities resulting in automated network monitoring, real-time analysis of critical security-related information, and enhanced risk-based decision-making.
- Protect high value information assets by isolating these assets from the shared computing environment.
- Improve connectivity, with an emphasis on broadband in remote areas and standardized and streamlined Wi-Fi capabilities.
- Optimize Data Centers by reducing the total number of data centers, using Trusted Internet Connections, and promoting

standard services.

- Establish accountability, compliance and risk management functions for improving management of IMT resources.

Appendix A - Major Management Challenges

The following table provides APP&R page references, corresponding action offices, and performance measures that correspond with topics in the DOI Office of Inspector General's (OIG) Report on Major Management Challenges (also referenced in the DOI Agency Financial Report).

MAJOR MANAGEMENT CHALLENGE	AREA OF CONCERN	CORRESPONDING GOAL or STRATEGIC OBJECTIVE	PAGES IN APP&R	BUREAU OR OFFICE	STRATEGIC PLAN PERFORMANCE MEASURES
Energy Management	Revenue collection, verification, and distribution Reduced Offsetting Collections Aging Offshore and Onshore Infrastructure Renewable energy development	Ensure accurate and timely accounting and collection of energy revenues Ensure accurate and timely management of fiduciary trust assets Promote safe and robust oil, gas, coal, and renewable energy resource development Provide hydropower	60-62 85-91 45-52 53-55	• ONRR • BOEM • BSEE • OST • BLM • BOR	• Percent of federal and Indian oil and gas revenues disbursed on a timely basis per statute ($ Billions) • Percent of oil royalty meters (identified as high-risk using a risk-based methodology) where meter provings will be observed • Percent of oil and gas revenue transmitted by ONRR recorded in the Trust Funds Accounting System within 24 hours of receipt • Percent of high priority fluid mineral cases that have completed inspection during the year. • Percent of (offshore) high risk production and facilities operations inspected. • Percent of hydropower facilities in good condition as measured by the Facility Reliability Rating. • Percent of time that Bureau of Reclamation hydroelectric generating units are available to the interconnected Western electrical system during daily peak demand periods. • Number of megawatts of approved capacity authorized on public land and the Outer

					Continental Shelf for renewable energy development while ensuring compliant environmental review • Amount of hydropower capability (in megawatts) installed from 2018 through 2022
Public Safety and Disaster Response	Safety and Security on Public Lands Disaster Response Preparedness and Management Infrastructure Challenges to Safety and Services	Ensure public safety on our lands Prepare DOI to respond to and recover from emergencies and incidents Maintain critical DOI infrastructure and facilities to ensure effective operations and service delivery Manage water resources and delivery	103-105 106-107 127-134 29-33	• OLES • BIA • BIE • BLM • BOEM • BOR • BSEE • FWS • NPS • OSMRE • OWF • USGS	• Percent of agencies with an updated law enforcement staffing plan • Percent of criminal offenses solved by arrest (Part 1 Offense Clearance Rate • Average Interior Readiness (I-READ) Index score for emergency preparedness across DOI Bureaus/Offices • Percent of DOI-managed landscape acres that are in a desired condition as a result of fire management • Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan • Percent of wildfire on DOI-managed landscapes where the initial strategy(ies) fully succeeded during the initial response phase • Percent completion of targeted natural hazards assessments of very high and high-threat regions of the Nation (Index) • Percent completion of targeted landslide hazard research • Percent completion of coastal and marine hazards and subsidence research (Index) • Percent progress towards optimal monitoring capability for natural hazards situational awareness (Index)

					• Percent of the National Streamflow Network (NSN) streamgages that are fully operational • Percent of priority assets in acceptable condition (i.e. meet investment objective) • Amount of priority deferred maintenance (repair) needs/activities addressed • Maintain a completion rate of 95% for Safety of Dam recommendations • Percent of miles of BIA road in acceptable condition based on the Service Level Index • Percent of BIA bridges in acceptable condition based on the Service Level Index • Percent of students in BIE school facilities that are in acceptable condition as measured by the Facilities Condition Index • Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]
Information Technology	Adoption of Revised Security Standards Resolution of Audit Findings and Recommenda-tions Recurring Findings in Vulnerability Scanning Implementation of Continuous	Provide dependable and efficient information technology	135-137	• PIO • BIA • BLM • BOEM • BOR • BSEE • FWS • NPS • OSMRE	• Progress and plans for effective management of IT is discussed using narrative; includes *Federal Information Technology Acquisition Reform Act (*FITARA) implementation and addressing cybersecurity. • Percent of unclassified network hardware and software assets appropriately authorized and managed • Percent completion of DOI's Federal Information Technology Acquisition Reform Act (FITARA) Implementation Plan

	Monitoring and Mitigation Programs Cloud Computing Contingency Planning and Data Backup				
Water Programs	Extreme Drought Rural Water Systems Expanding Water Demand Rehabilitation and Replacement	Manage DOI water storage and delivery to resolve conflicts and expand capacity Apply science to land, water, and species management	29-33 13-17	• BOR • USGS • BIA	• Amount of acre feet of water conservation capacity enabled to help address drought • Percent of projects completed in support of water management, planning, and pre-development. • Percent completion of targeted land and water management research actions • Millions of people living in targeted watersheds covered by completed water quality models • Percent completion of water quality sampling of the Nation's groundwater, streams and rivers • Percent completion of the USGS National Water Census baseline • Percent completion of U.S. aquifer groundwater availability baseline studies • Percent of water infrastructure in good condition as measured by the Facility Reliability Rating (FRR) [high- and significant-hazard dams]
Responsibility to American Indians and Insular Areas	Administration of the Land Buy-Back Program	Fulfill fiduciary trust	85-91	• AS-IA • OST • BIA	• Since its inception, the Land Buy-Back program has paid landowners approximately $900 million and restored the equivalent of

	Energy development and management Indian Country schools Financial management in the Insular Areas	Strengthen Indian education Strengthen island economies	92-93 97-99	• BIE • OIA	nearly 1.7 million acres of land to tribal trust ownership. • Total average gain in earnings of participants that obtain unsubsidized employment through Job Placement Training programs for tribes submitting P.L. 102-477 related reports • Percent of active, supervised Individual Indian Monies (IIM) case records reviewed in accordance with regulations • Increase in the percentage of submitted land-into-trust beneficiaries' accounts • Percent of timeliness of financial account information provided to trust beneficiaries • Percent of students attending BIE-funded schools completing high school with a regular diploma within four years of their 9th grade entry date • Difference in the mean GDP per capita in the 4 US territories compared to the mean GDP per capita in the US • Difference in the residential cost per kilowatt hour for power from the national average • Percent of Freely Associated States (FAS) employment attributable to Office of Insular Affairs (OIA) grants and programs • Percent of FAS employee compensation attributable to OIA grants and programs
Acquisition and financial assistance	Public Law 93-638 Contracts Staff Training and Retention	Support tribal self-governance and self-determination	82-84	• AS-IA • BIA • PAM	• Percent of P.L. 93-638 Title IV contracts (Title IV compact agreements) with clean audits. • Percent of Single Audit Act reports submitted during the reporting year for which management action decisions on audit

					or recommendations are made within 180 days.
Climate Effects	Wildland Fire Costs and Strategy Impact on American Indian and Alaska Native Tribes Water scarcity Impact on Insular Areas	Manage wildland fire to reduce risk and improve ecosystem and community resilience Manage DOI water storage and delivery to resolve conflicts and expand capacity	110-113 29-33	• OWF • BIA • BOR • USGS • OIA	• Percent of DOI-managed landscape acres that are in a desired condition as a result of fire management objectives • Percent of DOI-managed treatments that reduce risk to communities that have a wildland fire mitigation plan • Percent of wildfire on DOI-managed landscapes where the initial strategy(ies) fully succeeded during the initial response phase • Percent of (tribal water) projects completed in support of water management, planning, and pre-development. • Amount of acre feet of water conservation capacity enabled to help address drought • Percent of projects completed in support of water management, planning, and pre-development. • Percent completion of targeted land and water management research actions • Number of people living in targeted watersheds covered by completed water quality models • Percent completion of water quality sampling of the Nation's groundwater, streams and rivers • Percent completion of the USGS National Water Census baseline • Percent completion of U.S. aquifer groundwater availability baseline studies

Appendix B – Program Evaluations

Program evaluations are an important tool in analyzing the effectiveness and efficiency of the Department's programs, and in evaluating whether the programs are meeting their intended objectives. The Department's programs are evaluated through a variety of means, including performance audits, financial audits, management control reviews, and external reviews from Congress, OMB, GAO, OIG, and other organizations, such as the National Academy of Public Administration and the National Academy of Sciences. The Department uses self-assessments to verify that performance information and measurement systems are accurate and support the Department's strategic direction and goals. Data collection and reporting processes are further reviewed and improved using customer and internal surveys.

****

Bureau: BSEE
Title of Program Evaluated: National Academy of Public Administration - Bureau of Safety and Environmental Enforcement: Strategic Organizational Assessment

Strategic Plan Mission Area: Managing Use of the Nation's Resources

Purpose of Program Evaluation: Review BSEE's organizational structure, relationships, systems, policies, and processes; assess results; and present recommendations to build on the progress BSEE has made since its reorganization in FY 2012.

Findings / Actions Taken/Planned in Response to Evaluation: NAPA developed a set of recommendations to assist BSEE in in improving operation of a sustainable and effectively functioning bureau. Most of the recommendations are associated with areas where correction and/or mitigation are within the control of BSEE. Several recommendations, however, require heightened awareness and action by the Department of the Interior, the Office of Management and Budget, and Congress. NAPA's recommendations are listed below.

Recommendations:

1. Maintain a Deconflicted Mission
2. Complete the Inventory and Updating of Bureau Guidance
3. Support the Environmental Compliance Mission
4. Maintain Alignment with BOEM
5. Elevate Decommissioning Issues
6. Improve Alignment with the National Program Manager Model
7. Complete the Environmental Compliance National Program Design

8. Improve Utilization of the Engineering Technology Assessment Center
9. Strengthen Data Stewardship with Knowledge Management
10. Reactivate the Strategic Plan Working Group
11. Continue the Foresight Initiative
12. Enhance Annual and Multi-Year Planning
13. Expand Understanding and Use of Enterprise Risk Management
14. Conduct Targeted Succession Planning for Senior Leadership
15. Increase Integration of Training Programs
16. Increase Fees and Collections
17. Budget for Renewable Energy Compliance and Enforcement
18. Budget for Decommissioning
19. Implement a Change Management Strategy

Action taken: Several the NAPA recommendations are being implemented in conjunction with bureau work to close related Government Accountability Office (GAO) and Office of Inspector General (OIG) audit recommendations. The Change Management Initiative, instituted in mid FY 2017 by BSEE's new Director, also includes actions that address some of the NAPA recommendations. NAPA recommendations that fall outside the work scope of GAO/OIG audit recommendations and the Change Management Initiative are being reviewed by BSEE leadership for potential implementation.

Bureau: BSEE

Title of Program Evaluated: Government Accountability Office - Stronger Leadership Commitment Needed at Interior to Improve Offshore Oversight and Internal Management

Strategic Plan Mission Area: Managing Use of the Nation's Resources

Purpose of Program Evaluation: The GAO audit examined efforts BSEE leadership has made in implementing key strategic initiatives to improve its (1) offshore safety and environmental oversight and (2) internal management.

Findings / Actions Taken/Planned in Response to Evaluation: GAO found that BSEE leadership has started several key strategic initiatives to improve its offshore safety and environmental oversight, but its limited efforts to obtain and incorporate input from within the bureau have hindered its progress. Additionally, BSEE leadership has started several key strategic initiatives to improve its internal management, but none have been successfully implemented, in part, because of limited leadership commitment. Without higher-level oversight within Interior addressing leadership commitment deficiencies within BSEE, the bureau is unlikely to succeed in implementing internal management initiatives.

Recommendations:

1. The Secretary of the Interior should direct the Assistant Secretary for Land and Minerals Management, who oversees BSEE, to establish a mechanism for BSEE management to obtain and incorporate input from bureau personnel and any external parties, such as Argonne National Laboratory, that can affect the bureau's ability to achieve its objectives.
2. The Secretary of the Interior should direct the Assistant Secretary for Land and Minerals Management, who oversees BSEE, to address leadership commitment deficiencies within BSEE, including by implementing internal management initiatives and ongoing strategic initiatives (e.g., Enterprise Risk Management and performance measure initiatives) in a timely manner.
3. The Secretary of the Interior should direct the BSEE Director to address trust concerns that exist between headquarters and the field. BSEE should expand the scope of its employee engagement strategy to incorporate the need to communicate quality information throughout the bureau.
4. The Secretary of the Interior should direct the BSEE Director to increase organizational trust in Integrity and Professional Responsibility Advisor (IPRA) activities. BSEE should assess and amend IPRA guidance to clarify (1) severity threshold criteria for referring allegations of misconduct to the IG and (2) its reporting chain.

Actions taken: BSEE is taking and has completed the following actions to address the GAO recommendations.

1. This recommendation is being addressed with human capital strategic actions, public affairs communication plans, employee engagement handbook, and outreach efforts through a change management initiative.
2. Program offices will consider a revised risk management strategy in FY18 and make adjustments, as necessary, for implementation in FY19. Regarding performance measures, BSEE will integrate vital statistics and performance measurement framework efforts in FY18, and make adjustments, as appropriate, for implementation in FY19.
3. This recommendation is being addressed with human capital strategic actions, public affairs communication plans, employee engagement handbook, and outreach efforts through a change management initiative.
4. BSEE updated case reporting requirements for the IPRA by issuing an Information Memorandum to bureau staff on May 18, 2017, that clarifies applicable guidance on what to do and how to report allegations of employee misconduct. The May 18, 2017, guidance memorandum supersedes the Case Reporting Requirements Information Memorandum

dated October 19, 2015. The updated guidance eliminates the previous requirement for review and assessment by the IPRA Board, composed of the IPRA, the head of Human Resources, and the Deputy Director. Instead, the IPRA is responsible for investigating allegations of serious misconduct involving any employee not accepted for investigation by the OIG. The IPRA manages the process by which allegations of misconduct are reported to the IPRA and investigated, and the dissemination of results to the appropriate officials.

Bureau: FWS

Title of Program Evaluated: National Fish Hatchery System (NFHS) Propagation Program Analysis

Strategic Plan Mission Area: Expanding Outdoor Recreation and Access

Purpose of Program Evaluation: Outcome Evaluation - To evaluate key NFHS propagation programs to determine their effectiveness in meeting objectives for restoration and recovery.

Findings / Actions Taken/Planned in Response to Evaluation: Findings for Lake Trout and Lahontan Cutthroat Trout propagation programs were the basis of the following actions: 1) Lake trout restoration stocking was discontinued in Lake Superior (as natural reproduction was successfully restored), and 2) Lahontan Cutthroat Trout propagation will continue its significant contribution to recovery efforts.

Bureau: FWS

Title of Program Evaluated: Wildlife and Sport Fish Restoration Program

Strategic Plan Mission Area: Conserving Our Land and Water; Generating Revenue and Utilizing Our Natural Resources; Expanding Outdoor Recreation and Access

Purpose of Program Evaluation: Independent Auditors' Biennial Report on the Audit of Expenditures and Obligations Used by the Secretary of the Interior in the Administration of the Wildlife and Sport Fish Restoration Programs Improvement Act of 2000 for Fiscal Years 2015 through 2016 Report No. 2016-FIN-074. The objective of our work was to determine whether expenditures and obligations used by the Secretary as reported by the U.S. Fish and Wildlife Service (FWS) in administering the Act for FYs 2015 and 2016 were appropriate, adequately supported by appropriate documentation, and complied with administrative requirements of the Act. This performance audit did not constitute an audit of financial statements in accordance with government auditing standards. The Joachim Group was not engaged to and did not render an opinion on the Department of the Interior's or FWS's internal controls over financial reporting or over financial management systems (for purposes of the Office of Management and Budget's Circular No. A-127, *Financial Management Systems,* dated July 23, 1993, as revised).

Findings / Actions Taken/Planned in Response to Evaluation:

1. Internal controls were not operating effectively to ensure that non-payroll costs were accurately recorded. In particular:
    - One of 108 transactions sampled for 2015 for non-payroll transactions was posted to the wrong grant program.
    - Three of 108 transactions for travel for 2015 were not allocated between the appropriate grant programs.
    - One of 108 transactions for travel for 2015 was posted to the wrong grant program.
    - Two of 118 transactions for travel for 2016 were not allocated between the appropriate grant programs.
    - Two transactions for travel for 2016 were posted to the wrong grant programs.

2. Policy and procedures were not effective to ensure full compliance with Act provisions and to ensure that funds for WR/SFR programs would be used only for purposes allowable by the Act. We identified these instances of non-compliance:
    - FWS's practice for charging personnel time did not fully comply with provisions of the Act. These provisions limit personnel who can charge time to the Act to only full-time staff members who spend 100 percent of their time managing the Act or part-time staff members who do so for at least 20 hours a week (repeat finding).

- $559 allocated to the Act for support costs was not allowed because the funds were not directly attributable to administering the Act.
- $332,952 allocated to the Act for overhead by regions was not allowed because the funds were either already assessed or should have been assessed to the Act by FWS HQ through its cost allocation methodology process.
- $2,075 in travel costs were not allowed because they did not directly relate to managing WR/SFR grants.
- $38,231 in travel costs was not appropriate because they included personal travel at government expense.

FWS continued its efforts to strengthen controls and comply with the Act's provisions through training, monitoring, and other management initiatives. Continued diligence is required for full compliance and to ensure that funds for the programs are used only for purposes allowable by the Act.

Bureau: FWS

Title of Program Evaluated: Ecological Services

Strategic Plan Mission Area: Conserving Our Land and Water

Purpose of Program Evaluation: The Government Accountability Office (GAO) was asked to review deadline litigation brought under Section 4 of the ESA. The report examines (1) the number and scope of deadline suits filed against the Services during fiscal years 2005 through 2015 under Section 4 of the ESA, and (2) the outcomes of these suits and the effect, if any, the suits had on the Services' implementation of our Section 4 programs. GAO-17-304

Findings / Actions Taken/Planned in Response to Evaluation: FWS has initiated several changes to help improve Section 4 program implementation, including developing a 7-year work plan that prioritizes the order for completing overdue actions and revising information requirements for listing petitions.

Bureau: FWS

Title of Program Evaluated: Midway Atoll National Wildlife Refuge (NWR)

Strategic Plan Mission Area: Fulfilling our Trust and Insular Responsibilities

Purpose of Program Evaluation: To fulfill the secretarial order's directive that FWS manage Midway in accordance with the National Historic Preservation Act (NHPA), to ensure that the public, including key parties that have previously expressed interest in historic preservation issues on Midway, are notified about future FWS undertakings that may have an adverse effect on historic properties so that they have an opportunity to provide comment and input. GAO-16-382

Findings / Actions Taken/Planned in Response to Evaluation: The FWS Cultural Resources Team, as part of their responsibilities in support of NHPA, developed and will maintain a database of historic resources that tracks maintenance/preservation actions, dates, costs, and participants.

Bureau: FWS

Title of Program Evaluated: Wildlife and Sport Fish Restoration Program

Strategic Plan Mission Area: Modernizing Our Organization and Infrastructure for the Next 100 Years

Purpose of Program Evaluation: To improve transparency in the grant merit-review process

Findings / Actions Taken/Planned in Response to Evaluation: The Service issued an update to the 'Notice of Funding Opportunity (NOFO) Template' that all programs use for developing program-specific NOFOs. Also, developed new guidance 'Establishing Written Application Review and Selection Procedures' that ensures discretionary programs include all the required elements from 2 **********CFR 200, Departmental policy, and other best practices in their written procedures.

---

All,

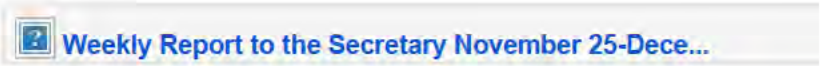
Attached is the Weekly Report to the Secretary in both Word and Google Doc formats.

Please let me know if you have any questions.

Thanks and have a Happy Thanksgiving!

Matthew Dermody
Special Assistant
Office of the Deputy Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, DC 20240
202-513-7778 (office)
202-570-5029 (cell)

NOTE: Every email I send or receive is subject to release under the Freedom of Information Act.



WEEKLY REPORT
DEPARTMENT OF THE INTERIOR
NOVEMBER 25-DECEMBER 1, 2018

OFFICE OF THE SECRETARY

Week Ahead Schedule of Meetings, Hearings, and Travel

Chief of Staff Scott Hommel will be in the office.

Deputy Chief of Staff Katharine MacGregor will be out of the office on travel November 26 and will return on November 27th. She will be staffing the Secretary in California.

Deputy Chief of Staff for Operations Michael Argo will be in the office.

OFFICE OF COMMUNICATIONS

Deputy Director Russell Newell will be in the office

OFFICE OF CONGRESSIONAL AND LEGISLATIVE AFFAIRS

John Tanner, Director, will be in the office and in meetings on Capitol Hill all week.

Micah Chambers, Deputy Director will be in the office and in meetings on Capitol Hill all week.

Reports to Congress and Congressional Testimony:

1. **PUBLIC LANDS INFRASTRUCTURE FUND/RESTORE OUR PARKS ACT:** DOI continues the ongoing process of supporting the Public Lands Infrastructure Fund, which was included in both the President's FY19 Budget and the Infrastructure proposals. The House Committee on Natural Resources conducted a business meeting to mark up this legislation ON Wednesday, March 12, 2018. On March 6, 2018, DOI testified at a House Natural Resources oversight hearing on the maintenance issue, highlighting the need for maintenance updates on public lands. On March 7, the Secretary joined Senators Alexander, Daines, Capito, Gardner and Tillis to introduce language that was built off of the FY19 Budget proposal, the National Parks Restoration Act. The bill has bipartisan, bicameral support. On March 20, 2018, the NPS Deputy Director, Daniel Smith testified before the House Natural Resources Federal Lands Subcommittee on the bill. On April 17, the Senate Energy and Natural Resources Committee held a hearing to Examine Deferred Maintenance and Operational Needs of the National Park Service. A compromise between the two competing bills on park maintenance was reached and a new bill, Restore Our Parks Act, was introduced in the Senate. OMB and the Department support the constructs of the text and testified on July 11, 2018 before the Senate Energy committee in support of the legislation. Chairman Bishop, Ranking Member Grijalva and Rep. Simpson

introduced companion legislation in the House on July 25, 2018. On Sept 13, 2018 H.R. 6510 was reported out of the House Natural Resources Committee by voice vote with no recorded "no" votes. Senate Committee on Energy and Natural Resources held a markup for S. 3172 on Tuesday. The bill was reported out of Committee with a vote of 19-4. OCL is working with House and Senate committees and the Secretary is reaching out to congressional leadership to ensure this bill is enacted before the end of the year.
Timing: Ongoing
Contact: Micah Chambers, Deputy Director, Congressional and Legislative Affairs

2. **CONGRESSIONAL ACTION TO IMPROVE FOREST MANAGEMENT AND HELP PREVENT WILDFIRES**
The House-passed Farm bill includes a provision that would create a categorical exclusion to expedite timber salvage operations in response to catastrophic events on public lands. The Senate's version of the Farm bill did not include anything related to timber salvage. The conference committee for the Farm bill is working on their report and the timber salvage language has not been agreed to. OCL is working with Congressional committees on Agriculture, Congressional leadership, and White House office of Legislative Affairs to ensure the House-passed timber catex language is included in the final package that will be voted on by Congress.
Timing: Ongoing
Contact: John Tanner, Director, Office of Congressional and Legislative Affairs

3. **SUSAN COMBS, NOMINEE FOR ASSISTANT SECRETARY FOR POLICY MANAGEMENT AND BUDGET:** Ms. Combs' nomination to this position was announced on July 10, 2017. She was reported favorably out of the Senate Committee on Energy and Natural Resources on Aug 3, 2017. Her nomination was returned to the President on January 3, 2018. She was re-nominated on January 8, 2018 and reported favorably out of committee again on January 30. She has been awaiting full Senate action since then. Senator Nelson from Florida has a hold on this confirmation; he has indicated that he does not intend to lift his hold until after the Proposed Plan for the national offshore continental shelf oil and gas-leasing program is released. Nelson's office is not responding to phone calls.
It has been 498 days since her nomination was first announced.
Timing: Ongoing until confirmation
Contact: John Tanner, Director, Congressional and Legislative Affairs

4. **DAVID VELA, NOMINEE FOR THE DIRECTOR OF THE NATIONAL PARK SERVICE:** Mr. Vela's nomination was sent to the Senate on September 6. He spent the month of September meeting with Senators prior to his confirmation hearing. Senate Committee on Energy and Natural Resources held a hearing on November 15. OCL sent back his written responses to questions from the Committee on Nov 20.
It has been 75 days since his nomination was received in the Senate.
Timing: Ongoing until confirmation
Contact: John Tanner, Director, Office of Congressional and Legislative Affairs

5. **Aurelia Skipwith, Nominee for the Director of the Fish and Wildlife Service:** On November 13, President Donald J. Trump nominated Aurelia Skipwith to be the Director of the U.S. Fish and Wildlife Service. Skipwith currently serves as Deputy Assistant Secretary for Fish and Wildlife and Parks in the Department of the Interior. The Senate Committee for Environment and Public Works will hold a hearing for Ms. Skipwith in early 2019. OCL is working with the nominee to prepare her for the hearing.
   It has been 7 days since she has been nominated.
   Timing: Ongoing until confirmation
   Contact: John Tanner, Director, Office of Congressional and Legislative Affairs

OFFICE OF INTERGOVERNMENTAL AND EXTERNAL AFFAIRS

Todd Wynn, Director, will be
Ben Cassidy, Senior Deputy Director, will be

Tim Williams, Deputy Director, will be in the office all week.

OFFICE OF RECREATION

Rick May, Senior advisor, will be on personal leave until December 3.

OFFICE OF THE DEPUTY SECRETARY

Week Ahead Schedule of Meetings, Hearings, and Travel

Deputy Secretary David Bernhardt will be in the office all week.

Assistant Deputy Secretary Todd Willens will be in the office all week.

Associate Deputy Secretary Jim Cason will be in the office all week..

Immediate Announcements and Actions (within the next 14 days)

The Deputy Secretary will sign a Memorandum of Agreement with the Department of Defense to implement the Memorandum of Understanding signed in September to expand the role of the DOD liaison at DOI to include all DOD related issues at Interior. Once the MOA is signed by both departments, the liaison will be housed in the Deputy Secretary hallway.

OFFICE OF THE EXECUTIVE SECRETARIAT AND REGULATORY AFFAIRS

Week Ahead Schedule of Meetings, Hearings, and Travel

Julie Lillie will be out of the office from Weds. afternoon, November 21 thru Friday, November 23.

Bivan Patnaik will be in the office and Acting for Julie from Wednesday, November 21 thru Friday, November 23.

Immediate Announcements and Actions (within the next 14 days)

- Interagency Reviews Under E.O. 12866—DOI received for comment the following documents that are undergoing E.O. 12866 review at OMB:

  - OPM's final rule on General Schedule Locality Pay Areas-Comments due to OMB by Monday, November 19th.
  - US Forest Service's proposed rulemaking on it's National Environmental Policy Act requirements (RIN 0595-AD31)-Comments due to OMB by Monday, November 26th.
  - CEQ's White Paper on EIS Timelines-Comments due to OMB by Tuesday, November 27th.

- Secretary's Order No. 3371, "The Department of the Interior Freedom of Information Act Program," signed November 20, 2018. This Order designates the Solicitor as the Chief Freedom of Information Act (FOIA) Officer; creates the position of Deputy Chief FOIA Officer (DCFO); establishes a reporting relationship for the Departmental FOIA Officer and Bureau FOIA officers with the DCFO; and creates a team to provide strategic direction for selected FOIA requests that impact Department-level interests.

Committee Meetings:

Made in America Outdoor Recreation Advisory Committee - Committee is scheduled to meet via teleconference on November 30, 2018.

National Park System Advisory Board - Board is scheduled to meet on December 5, 2018 in Washington, DC.

Women's Suffrage Centennial Commission - Commission is scheduled to meet on December 7, 2018 in Washington, DC.

FOIA Litigation Awareness Reviews

Here are the likely cases to go into awareness review in the next two weeks:
Environmental Defense Fund (Benjamin Levitan) [1:18-cv-01116/ OS-2017-00541 and OS-2018-00232] Materials concerning Waste Prevention Rule

New Jersey Attorney General (Gurbir Grewal) [1:18-cv-02338/ OS-2018-00986] Materials and FOIA requests concerning 2019-2024 Outer Continental Shelf Oil and Gas Leasing Program

American Oversight (Austin Evers) [1:18-cv-00656/ OS-2018-00344] Resumes and SF-50s for SES personnel

Joel Clement)

OFFICE OF THE SOLICITOR

NON-LITIGATION MATTERS:

BSEE Well Control Rule. BSEE gave an updated version of portions of the rule package to SOL for surname review on November 6. BSEE sent the remaining portions on November 14. SOL will provide its edits and comments by November 20. The BSEE Director has scheduled a surname event with the Deputy Secretary and ASLM on November 29.

BSEE/BOEM FONSI for Pacific Programmatic Environmental Assessment on Drilling Activities. SOL-DMR is reviewing in the Finding of No Significant Impact (FONSI) for the programmatic environmental assessment (PEA) for future well drilling activities in the Pacific. The PEA and FONSI are currently scheduled to publish on December 4, but this timing and plan may be reconsidered in light of the *EDC v. BOEM* decision (that held a PEA and FONSI for well stimulation activities was immediately challengeable as a final agency action, among other issues).

ASSISTANT SECRETARY FOR FISH AND WILDLIFE AND PARKS

Week Ahead Schedule of Meetings, Hearings, and Travel

From November 26-30, Principal Deputy Assistant Secretary Andrea Travnicek will be in the office.

From November 26-30, Deputy Assistant Secretary Aurelia Skipwith will be in the office.

From November 26-30, Deputy Assistant Secretary Ryan Hambleton will be in the office.

From November 26-30, NPS Acting Director Dan Smith will be in the office.

On November 26-30, FWS Principal Deputy Director Margaret Everson will be in the office.

Immediate Announcements and Actions (within the next 14 days)

U.S. Fish and Wildlife Service

NEW ITEMS

On or about November 30, FWS plans to send to the *Federal Register* a notice reopening the comment period for the proposal to list the West Coast Distinct Population Segment (DPS) of fisher as a threatened species. The proposed DPS boundary includes northern California, Oregon, and Washington. This notice is not expected to be controversial; however, there are many parties interested in the potential listing including landowners, agencies, tribes,

environmental organizations, and congressionals. Planned outreach includes a regional press release and notifications to congressionals and stakeholders. FWS is required by a court order to submit the final listing determination to the *Federal Register* by March 22, 2019, therefore, the target date for submitting this comment period reopening is November 30.

On December 6, Ft. Niobrara NWR will host a meeting with the NPS to begin a planning effort to colocate Niobrara National Scenic River and Ft. Niobrara NWR operations in Nebraska. The effort will combine office space, visitor services, and law enforcement at one location on refuge land near the Niobrara River. Currently, NPS occupies GSA space in town, and FWS has an old office building and visitor contact station that needs to be replaced. The effort is expected to result in cost savings by combining operations at one facility. The NPS has contracted an architectural and engineering firm to prepare concept drawings to support this effort. (11/21/2018)

UPDATED ITEMS

During the week of November 26, FWS will publish in the *Federal Register* a proposed list of revisions to the List of Migratory Birds protected by the Migratory Bird Treaty Act (MBTA) - also known as the 10.13 list. The proposed revisions will add 66 species to the list and remove 7, to bring the total number of protected species to 1,085. The proposed update is based on taxonomic changes, or new evidence of natural occurrence in the United States or U.S. territories. The list was last updated in 2013. If-asked talking points will be available. (Updated 11/21/2018)

During the week of November 26, FWS will publish in the *Federal Register*, a list of bird species that are found in the U.S. and its territories, but that are not protected by the Migratory Bird Treaty Act (MBTA). This list, which consists of nonnative, human-introduced species, is required under the Migratory Bird Treaty Reform Act of 2004. It was last updated in 2005. If-asked talking points will be available. (Updated 11/21/2018)

During the week of November 26, FWS plans to make a final determination on a proposed reclassification of the southern Selkirk Mountains population of woodland caribou by defining the entire Southern Mountain Caribou population as a distinct population segment (DPS) and listing it as endangered. In 2012, FWS designated critical habitat for the southern Selkirk Mountains population, which will remain unchanged. Several non-governmental organizations (International Fund for Wildlife, Kettle Range Conservation Group, Selkirk Conservation Alliance, Kootenai Environmental Alliance, Center for Biological Diversity, Idaho Conservation League) will likely view our final determination favorably. The Pacific Legal Foundation (and Bonner County as represented by PLF) is likely to challenge the determination. Idaho may view the listing of the DPS and endangered determination unfavorably. Outreach includes a regional news release, social media, emails, and phone calls. This package has cleared DOI. (Updated 11/21/2018)

During the week of November 26, FWS plans to make a final listing determination for the meltwater lednian stonefly and the western glacier stonefly, located in Montana and

Wyoming. Interested stakeholders include WildEarth Guardians, Xerces Society, Center for Biological Diversity, and the states of Montana and Wyoming. Wyoming has expressed opposition to the listing. Planned outreach will include a regional news release, web updates, and congressional/stakeholder notifications. This package is pending DOI clearance. (Updated 11/21/2018)

During the week of November 26, FWS plans to propose to designate a nonessential experimental population of California condor in northern California and Oregon to help meet recovery goals for the species. This action is being taken in concert with the NPS and the Yurok Tribe in support of recovery goals for the condors. The condors would be reintroduced at Redwood National Park. The primary state agencies -- California Department of Fish and Wildlife, Oregon Department of Fish and Wildlife, and California Department of Parks and Recreation -- have expressed interest in condor recovery through participation in an MOU. There is a possibility that there may be some localized opposition to condor reintroduction in the area, but FWS does not foresee concerted opposition given California's action banning the use of lead ammunition effective in 2019. There will be a 60-day public comment period for the proposed rule. The Northern California California Condor Restoration Program Environmental Assessment will also be made available for public review and comment. Public meetings will be held in California and Oregon. Planned outreach will include a regional news release and notification to stakeholders, tribes, and members of Congress. This package is pending DOI clearance. (Updated 11/21/2018)

During the week of November 26, FWS plans to make a final listing determination for the trispot darter, a fish that occurs in Alabama, Georgia, and Tennessee, propose a 4(d) rule, and propose critical habitat for the darter. In total, approximately 181 river miles and 16,735 acres in the Coosa River system in Alabama, Georgia, and Tennessee fall within the boundaries of the proposed critical habitat designation. These actions are not controversial. Stakeholders include the Center for Biological Diversity; the states of Alabama, Georgia, and Tennessee; and local landowners. The statutory deadline for publication of the final listing rule was October 4. Planned outreach will include notifications to stakeholders and relevant members of Congress and a news release to regional media. This package is pending DOI clearance.(Updated 11/21/2018)

During the week of November 26, FWS plans to announce the availability of 26 draft recovery plan amendments for 42 species across the United States. These 26 draft recovery plan amendments are a subset of a larger effort under way to revise up to 182 recovery plans for up to 305 listed species in order to achieve a Department of the Interior goal of having all recovery plans contain quantitative criteria for what constitutes a recovered species by September 30, 2019. FWS does not anticipate controversy or opposition to the plans, however, there may be some locally controversial species (i.e., Hawaiian petrel, Newell's Townsend's shearwater, and Sacramento prickly poppy). Planned outreach will include a national news release, regional news releases, and notification to stakeholders and partners. Plans will also be posted to web. This package is pending DOI clearance. (Updated 11/21/2018)

During the week of November 26, FWS plans to propose critical habitat for the Sonoyta mud turtle in Arizona. The proposed designation includes approximately 12 acres in one unit on National Park Service land. As the proposed designation is limited to a small area within National Park Service lands, it is not expected to be controversial. Planned outreach includes a regional news release. This package is pending DOI clearance. (Updated 11/21/2018)

During the week of November 26, FWS plans to make a proposed listing determination for the Franklin's bumble bee, an invertebrate native to Oregon and California. FWS has also determined that critical habitat designation for this species is not prudent. This action is not expected to be opposed, and media coverage is expected to be neutral. Interested stakeholders include the Xerces Society (the petitioner), U.S. Forest Service, Bureau of Land Management, the Oregon Department of Agriculture, the California Department of Fish and Wildlife, and local landowners. A regional news release to all interested parties and the media is planned. (Updated 11/21/2018)

During the week of November 26, FWS will publish a notice calling for nominations for individuals to be considered to fill at least two vacancies in the membership of the International Wildlife Conservation Council. The Council advises the Secretary of the Interior on issues including anti-poaching programs, wildlife trafficking, and efforts to increase awareness of the conservation and economic benefits of United States citizens traveling to foreign nations to engage in hunting. This notice could be controversial due to ongoing litigation pertaining to the Council and because international wildlife conservation through trophy hunting is a controversial subject nationwide. No outreach is planned. (Updated 11/21/2018)

On or around November 26, FWS and NOAA Fisheries plan to send to OMB the draft final revised regulations pertaining to interagency cooperation pursuant to section 7 of the Endangered Species Act (50 CFR 402) and the procedures for listing of species and designation of critical habitat pursuant to section 4 of the act (50 CFR 424). They will also send the draft final withdrawal of the blanket 4(d) rule for newly listed threatened species (50 CFR 17) to recognize the difference between endangered and threatened species and align with NOAA Fisheries' current practice. The comment period opened on July 25; it closed September 24. (Updated 11/21/2018)

On or around November 26, FWS will post a draft environmental impact statement (EIS) for a request for an incidental take permit in Lewis County and Thurston County, Washington. The applicant, Skookumchuck Wind Energy LLC, is requesting a 30-year permit under the ESA for take of threatened marbled murrelets incidental to operation and maintenance of a new 38-turbine wind energy facility. The applicant also requested incidental take authorization for bald eagles and golden eagles under the Bald Eagle and Golden Eagle Protection Act in the same the same permit. FWS anticipates take of up to 85 murrelets, 146 bald eagles, and 50 golden eagles over the 30-year term of the permit. Following a public comment period, FWS will evaluate public input, finalize the EIS, and determine whether to issue the permit. This item is potentially controversial. Planned outreach will include a targeted bulletin to local media and notifications to stakeholders and relevant members of Congress.(Updated 11/21/2018)

On or around November 26, FWS will invite tribes and interested parties to comment on a draft environmental assessment (EA) that analyzes a scientific take permit application from the Oregon Department of Fish and Wildlife to take common ravens in association with a scientific experiment. This experiment would assess the effects of removing ravens on sage-grouse population recovery in the Baker Priority Area of Conservation, just east of Baker City, Oregon. There will be a 30-day public comment period. There may be some controversy from conservation groups in Oregon. In addition to tribes and interested parties, FWS will notify congressionals of the draft EA. No media outreach is planned. (Updated 11/21/2018)

On or about November 30, FWS plans to send to the *Federal Register* a notice announcing the availability of comprehensively revised boundaries for the second batch of Coastal Barrier Resources System (CBRS) units included in the Hurricane Sandy Remapping Project, affecting 310 units in six states: Connecticut, Maryland, Massachusetts, New York (Long Island), Rhode Island, and Virginia. The notice will announce a 120-day public comment period and also advise of upcoming public meetings to be held via webcast. Landowners, state, and local officials will likely support the removal of certain areas from the CBRS and similarly oppose the addition of such areas to the CBRS. Taxpayer groups, recreational interest groups, and conservation groups will likely support the additions to the CBRS. Outreach will include a news release; letters to Congress, NGOs and federal, state, local, and tribal officials; social media; and a stakeholder outreach toolkit available to local officials. This package is pending DOI clearance. (Updated 11/21/2018)

ONGOING ITEMS

On or around November 26, a proposed change to the implementing regulations for the Migratory Bird Treaty Act (MBTA) is expected to clear DOI. The rule: 1) defines the scope of the MBTA as it applies to conduct resulting in the injury or death of protected migratory birds and 2) reduces permitting burdens by modifying existing permit exceptions and proposing new ones. This proposed regulation will be consistent with the Department Solicitor's Opinion M–37050. After clearing DOI, the rule has to go to OMB-OIRA for interagency review, which usually takes 90 days. FWS will coordinate with DOI regarding outreach. (Updated 11/14/2018)

On November 30, FWS will host information webinars outlining next steps in developing a 12-month finding on a petition to list the monarch butterfly under the Endangered Species Act. Attendees include state agency directors and tribal staff. FWS was petitioned to list the monarch in 2014 and issued a positive 90-day finding indicating the petition was substantial. FWS is now finalizing a species status assessment and evaluating the monarch conservation database and other information to determine whether listing the monarch is warranted. The 12-month finding is due June 30, 2019. (Updated 11/14/2018)

On November 30, FWS plans to release a draft comprehensive conservation plan and environmental assessment (CCP/EA) for Ruby Lake NWR, located in northeastern Nevada. The draft CCP/EA describes and evaluates alternatives for management and use of

Ruby Lake NWR for the next 15 years. The region will host a public open house in Elko, Nevada, on December 11 to share information and receive input on the draft plan. The plan is a bit controversial locally because any change to water levels may affect the fishing. The refuge is working to address this concern. (11/14/2018)

On or around November 30, FWS anticipates opening the 45-day public comment period for the draft National Bison Range comprehensive conservation plan (CCP) and environmental impact statement (EIS). This will permit FWS to publish the final EIS by April 26, 2019, in compliance with Secretarial Order 3355. The draft CCP and EIS detail three alternatives that would guide management of the refuge, located in western Montana, during the next 15 years. Outreach, including a news release and public meetings, will be sent to DOI for approval following feedback from the November 2 briefing about the EIS with the Mountain-Prairie Regional Director and DOI. (Updated 10/31/2018)

On or around December 1, FWS plans to publish the FY 2016 Recovery Report to Congress. The Recovery Report provides an update on the progress of federally protected species toward recovery between October 1, 2014, and September 30, 2016 (fiscal years 2015 and 2016). FWS does not anticipate controversy or opposition to the report. Planned outreach will include congressional notifications and posting the report to the web. (Updated 11/07/2018)

National Park Service

NEW ITEMS

On or around November 30, a contract will be awarded for a report summarizing public comment received on the Alaska Sport Hunting and Trapping proposed rule. On November 16, the NPS issued a solicitation for vendors to submit proposals for content analysis of this public comment. (11/21/2018)

On or after November 30, Olympic National Park expects to begin a 30-day public scoping period for a proposed road relocation and rehabilitation project. The road is the Olympic Hot Springs Road in the Elwha Valley in Olympic National Park. An environmental assessment will be prepared for the project, which will be released for public review in March or April 2019. A public meeting is scheduled to held in Port Angeles, Washington, on December 13. (11/21/2018)

By December 1, National Register staff will return documentation for the Water Avenue Historic District in Selma, Alabama, to the nominating authority. This submission updates the existing 2005 National Register listing and proposes expansion of the district's boundary to include archeological resources along the banks and on the bottom of the Alabama River as well as the Edmund Pettus Bridge. The proposed changes were supported by the Alabama State Historic Preservation Officer and state review board, who forwarded letters of opposition from Alabama State Senator Jim McClendon and from a sport diver, raising concerns regarding restriction of access to submerged resources. Listing the National Register does not affect public access to submerged sites, and the state of Alabama issues

permits that grant access to wrecks and submerged sites by sport and recreational divers, provided they do not excavate or remove artifacts from the site. (11/21/2018)

On December 3, Ninety Six National Historic Site in South Carolina will host a public meeting to discuss the park's Environmental Assessment and Equestrian Use Management Plan. The draft environmental assessment will be released to the public for a 30-day comment period on November 19. (11/21/2018)

On December 3, a press release will announce changes to Jewel Cave National Monument's visitor center hours and days of operation, which will be temporarily reduced from December 17 through February 2019. This change coincides with the scheduled closure of the cave in order to make necessary improvements for visitor safety. (11/21/2018)

On or around December 6, the Northeast Regional Director will sign the Hopewell Furnace National Historical Site Trail Plan Finding of No Significant Impact (FONSI). The selected action will improve wayfinding and signage throughout the park and add a 0.8 mile hiking trail to connect the western and eastern areas of the park. The improvements will include signage, which will allow the trail users to move seamlessly from adjacent public land to the park land, provide clarity of trail use, and ensure the safety of trail users. The availability of the signed FONSI will be announced through the park website, park social media, and a press release to local newspapers. (11/21/2018)

On December 7, Padre Island National Seashore is set to release Novillo Line Camp: Natural, Cultural, and Visitor Use Enhancements Environmental Assessment (EA) for a 30-day comment period. The EA analyzes the environmental effects to develop an Interpretive Trail and Boardwalk. The boardwalk would provide visitors access to the seashore to see the historic features and to learn about the island's ranching history. Construction through the dunes will mitigate the visual impact of the boardwalk within the historic landscape and will avoid impacts from construction in wetlands. (11/21/2018)

UPDATED ITEMS

On November 30, George Washington Memorial Parkway will begin work on the third and final phase of the U.S. Marine Corps War Memorial rehabilitation project. This phase will improve infrastructure, lighting and landscaping. This work complements the recent rehabilitation of the memorial, which included adding new engravings. The NPS will plan a formal celebration with the U.S. Marine Corps at the end of the project, sometime in 2019. This project was made possible by a $5.37 million donation by David Rubenstein. The Notice to Proceed was issued on November 9. Originally scheduled for October 9, the issuance was delayed because the contractor was unable to provide several deliverables necessary to proceed. (Updated 11/21/2018)

On December 3**,** Chesapeake and Ohio Canal National Historical Park will open a 30-day public review period for the draft Environmental Assessment to reconstruct, raise and stabilize the historic stone wall and one-mile stretch of towpath from McMahon's Mill to Lock 42 in Williamsport, Maryland. The project will reduce the impacts of high water, which

deteriorates historic features of the towpath and degrades the park visitor experience. (Updated 11/21/2018)

Between December 7-10, Arlington Memorial Bridge will be closed to all traffic. The closure is scheduled to begin at 9 p.m. on Friday, December 7, and end at 5 a.m. on Monday, December 10. The closure will allow workers to transfer the weight of the former draw span to temporary supports. Workers will also begin cutting the former draw span and preparing it for removal. The date of this work may change if there is bad weather or if workers encounter unexpected complications. (Updated 11/21/2018)

ONGOING ITEMS

During the month of November and the first half of December, the South Florida NPS units will sponsor three Marine Protected Area (MPA) managers/scientists from Indonesia through the DOI International Technical Assistance Program. They will shadow NPS staff to learn about the various activities required to set up and manage MPAs in south Florida. Throughout their trip NPS will coordinate meetings and field trips to interact with our Federal, State, University, and non-profit partners. (Updated 10/31/2018)

On November 26, Grand Teton National Park will initiate a 30-day public comment period on a Mountain Goat Management Plan/Environmental Assessment. Mountain goats are not native to the park. Without immediate intervention, the mountain goat population is expected to grow rapidly and could contribute to the potential extirpation of the native bighorn sheep herd within the park. The plan analyzes three alternatives; 1) no action, 2) lethal removal, and 3) lethal and nonlethal removal (preferred alternative). The preferred alternative includes several tactical options that allow for capture and translocation activities with other federal and state wildlife agencies, accredited zoos, and/or other authorized entities in acquiring goats, as well as lethal removal. A public open house in Jackson, Wyoming, will be held during the comment period. There is no stated opposition at this time, but possible interest from animal rights organizations and hunters is anticipated. Local and regional media attention is also likely. (Updated 1/14/2018)

On or after November 26, the NPS will announce the award of six Battlefield Land Acquisition grants, funded through the Land and Water Conservation Fund. The grants will be awarded to Government sponsors, in partnership with non-profits, for battlefield protection through fee simple and easement purchase. The grants will total $1,528,318.83 and protect 396 acres at five Civil War battlefields: Averasborough, NC; Bentonville, NC; Fisher's Hill, VA; Opequon, VA; and Summit Point, WV. (11/14/2018)

Between November 26-30, the Deputy Director Exercising the Authority of the Director will issue a letter congratulating six tribes in Virginia that received Federal recognition via H.R. 984, the Thomasina E. Jordan Indian Tribes of Virginia Federal Recognition Act of 2017. The six new federally recognized tribes are: Chickahominy Indian Tribe, Rappahannock Tribe, Inc., Chickahominy Indian Tribe - Eastern Division, Upper Mattaponi Tribe, Nansemond Indian Tribe, and the Monacan Indian Nation. (Updated 11/14/2018)

Between November 26-30, the NPS will release an environmental assessment for safety improvements for Memorial Circle area of the George Washington Memorial Parkway for a 30-day public review. The purpose of this project is to improve transportation safety at and near the circle, reduce risks at key locations within the corridor and reduce conflicts among trail, walkway, and roadway users, while maintaining the memorial character of the area. The review will be announced via news release. (11/07/2018)

Between November 26 - December 7, Manassas National Battlefield Park is planning a 35-45 acre controlled burn. In addition to maintaining the park's cultural landscape and improving wildlife habitat, the burn takes a proactive planned approach to fire management. The park successfully completed its first-ever controlled burn in April 2018. A burn scheduled for September 2018 was postponed because of especially wet weather conditions. (Updated 10/31/2018)

On November 28, Glen Canyon National Recreation Area will meet with the Navajo Nation and representatives from their Department of Justice to discuss future operations at Antelope Point Marina, proposed amendments to the 1970 Quadrilateral Agreement, the 1994 Memorandum of Understanding and 2003 Bridge Agreement – all of which expire in 2020. The Quadrilateral Agreement was signed by the BIA, BOR, NPS, Secretary of the Interior, and Navajo Nation. The agreement provides a mechanism for the administration, development and management of commercial and recreational facilities along the shared GLCA/Navajo Nation boundary. The 1994 MOU was signed by the NPS, BIA, and Navajo Nation concerning the development concept plan (DCP) for Antelope Point, and is tiered from the Quadrilateral Agreement. The 2003 Bridge Agreement between the Navajo Nation and the NPS details the administration of the Antelope Point area. This agreement also tiers off the Quadrilateral Agreement and 1994 MOU. This meeting is a follow up to continue discussions that began during a May 23, 2018, meeting. (Updated 11/14/2018)

On November 28, the 400 Years of African-American History Commission will hold its first meeting at Fort Monroe, Virginia. Authorized by Public Law 115-102, the purpose of the commission is to develop and carry out activities throughout the United States to commemorate the arrival of enslaved Africans in the English colonies in 1619. (11/14/2018)

Through November 30, at night, workers will close several lanes on roads that pass under the east and west ends of Arlington Memorial Bridge. The closures will occur on Washington Boulevard, the northbound lanes of the George Washington Memorial Parkway, and the Rock Creek and Potomac Parkway. The contractor will detour drivers during the closures. The closures are necessary in order to remove granite balustrades from the bridge. (11/07/2018)

On November 30, the 30-day comment period will close for the for the General Management Plan Amendment and Environmental Impact Statement for Point Reyes National Seashore and the north district of Golden Gate National Recreation Area. The park will host public meetings on November 14 and 15. (Updated 11/07/2018).

On November 30, the Made in America Outdoor Recreation Advisory Committee will be holding a teleconference to discuss draft recommendations on how the DOI reorganization can be structured and implemented to encourage public-private partnerships and expanded recreational opportunities. (10/17/2018)

In late November, Golden Gate National Recreation Area will begin setup by artists of the exhibit *Future IDs at Alcatraz*. As part of the park's Arts in Parks program this exhibit highlights the history of incarceration at Alcatraz, and a perspective from incarcerated persons into the challenges and opportunities of reentry into society. Works/performances of artists who have been incarcerated have been displayed on Alcatraz in the past, offering an opportunity to reflect on today's stories and experiences of systems-impacted individuals while reflecting on Alcatraz Island's history. (11/07/2018)

Until December 2, Washita Battlefield National Historic Site will commemorate the 150th anniversary of Lt. Col. George Armstrong Custer's attack on the sleeping village of noted Cheyenne Peace Chief Black Kettle. Events will begin on November 24. On November 27, the actual anniversary date, there will be a special sunrise ceremony and then Cheyenne Public School students will join later in the day through the work of our Teacher Ranger Teacher program. On December 1, the park will host a commemoration event. Representative Frank Lucas will participate as well as community and tribal leaders and state officials. The event will include a ground-breaking ceremony for new accessible facilities. (11/14/2018)

On December 2, the Old Stone House at Rock Creek Park will partially reopen with the rest opening in 2019 following upgrades to exhibits. To welcome the community back to the renovated facility, the park will host a public holiday open house (weather-permitting) on December 15. The site has been closed since late October 2017 for a fire suppression system installation and structural rehabilitation. Old Stone House - built in 1765 - is the oldest intact building in Washington, DC. (11/16/2018)

On or after December 3, NPS will release the Joshua Tree National Park's Cottonwood Area Visitor Center/Environmental Assessment for a 30-day public review and comment. The document addresses proposed facility improvements to visitor use management at Joshua Tree National Park. The project is situated in the Cottonwood area in the southeast portion of the park. The plan addresses immediate and long-term issues concerning resource protection, visitor use, and administration of the Cottonwood Springs visitor center area and associated trails. The plan provides guidance on improvements to areas including the visitor center, and associated trails, as well as improvements to supporting NPS operational facilities such as the maintenance area buildings, fee station, staff housing, and staff offices. DSC is providing project management support to develop and release the EA, in coordination with the region and the park personnel. (11/14/2018)

Between December 4-18**,** the acting National Capital Regional Director is expected to sign a Finding of No Significant Impact for the George Washington Memorial Parkway, Arlington County and Vicinity Boathouse Environmental Assessment FONSI (Plan/EA). The plan/EA evaluates the proposed construction and operation of a non-motorized boathouse on lands

administered by the George Washington Memorial Parkway along the Potomac River along with a series of low-impact access points to the river to accommodate canoes and kayakers. While originally scheduled for early November, a delay in the state historic preservation office pushed back the signing. (Updated 10/31/2018)

On December 5, the National Park System Advisory Board will be holding its meeting in Washington, DC. The Board advises the NPS Director and the Secretary on matters relating to the NPS, the National Park System, and programs administered by the NPS. (10/03/2018)

On December 7, the NPS Southeast Region is requesting to schedule a briefing for the Executive Review Team in order to release the Final Environmental Impact Statement (FEIS) for the Big South Fork National River and Recreation Area (BISO) Contaminated Mine Drainage Mitigation and Treatment System Plan for publication. The briefing is required by Step 5 of the DOI NEPA Document Clearance Process. The administrative draft, draft record of decision, and briefing materials will be submitted to the Review Team no less than one week prior to the scheduled briefing, as requested. Expected participants, in addition to the Review Team, are listed on the briefing request form that was submitted. (11/14/2018)

15-60 Day Look-Ahead

U.S. Fish and Wildlife Service

NEW ITEMS

By December 28, FWS will award up to $200,000 in small ($25,000 or less) grants for white-nose syndrome (WNS) communications and research, administered by the Wildlife Management Institute. The grants will be awarded to non-federal government applicants addressing three priority topics: outreach, education programs, and tools for communicating about WNS; gaps in knowledge of bat life history, habits, and ecological interactions relevant to managing WNS; and tools and strategies to improve survival rates for bats vulnerable to WNS. No news release is planned. FWS will coordinate with grant recipients for individual outreach. (11/21/2018)

On or around December 14, FWS plans to send to the *Federal Register* a notice announcing a six-month extension of the final determination of whether to list the Panama City crayfish, found in Florida, as a result of substantial scientific disagreement concerning the species. This notice will also reopen the comment period on the proposed rule to list the species for an additional 30 days. The Panama City crayfish listing is controversial, but filing a six-month extension is not expected to be controversial. Stakeholders include St. Joe's Development Company, Florida Fish and Wildlife Conservation Commission, and city and county governments. In addition, U.S. Representative Neal Dunn has expressed opposition to the proposed listing of the species. The statutory deadline for publication of the extension notice is January 3, 2019; therefore, FWS plans to submit it to the *Federal Register* by December 14.

On or around December 14, FWS plans to send to the *Federal Register* a notice of availability (NOA) announcing the availability of a second batch of 29 draft recovery plan amendments for 42 species across the United States. These recovery plan amendments are a subset of a larger effort under way to revise up to 182 recovery plans for up to 305 listed species in order to achieve the Department of the Interior Agency Priority Performance Goal: "By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species." FWS does not anticipate controversy or opposition to the plans; however, there may be some locally controversial issues. Planned outreach includes a national news release, with regional news releases and notification of stakeholders and partners. Plans will also be posted to the web.

UPDATED ITEMS

On or around December 10, FWS and the binational Jaguar Recovery Team will announce completion of the final recovery plan for the jaguar. The plan sets goals for improving the species' status through its entire 19-country range and provides a framework for achieving recovery. The recovery plan focuses on the cat's population in northwestern Mexico and the southwestern United States – recommending site-specific conservation actions and borderland dispersal corridors such that the population can most effectively rebound and contribute to the entire species' recovery. Recovery team and cooperating partners have been advised. Planned outreach includes news release, social media, and emails to congressional offices and stakeholders. (Updated 11/21/2018)

On or around January 10, FWS plans to publish a proposed rule to allow the baiting of brown bears on Kenai NWR, which is permitted under Alaska state hunting regulations. The rule would also allow the discharge of firearms along the Kenai and Russian rivers during certain times of the year; allow the use of snowmobiles, all-terrain vehicles, and utility task vehicles on certain lakes when there is adequate snow and ice cover; and increase access to the refuge by bicycle and game cart. This proposed rule would be available for a 60-day public comment period and is likely to be strongly opposed by those who believe that baiting of wildlife for hunting is unethical or who oppose hunting (particularly of large predatory mammals). FWS plans to notify stakeholders directly by email and issue a news release to Alaska media announcing the proposed rule and public comment period. (Updated 11/21/2018)

On or around January 18, FWS plans to send to the *Federal Register* a proposed delisting determination on the Borax lake chub, an endemic fish species in Oregon, due to recovery. The primary threats to the chub have been reduced or eliminated. Potential stakeholders include the state, The Nature Conservancy, and the Bureau of Land Management. This action is not controversial. FWS does not anticipate negative reaction from environmental groups. This action will likely receive the most interest at the local and regional level. Planned outreach includes a regional news release and communication with congressional offices, local, and state officials, and invested stakeholders. (Updated 11/21/2018)

On or around January 18, FWS plans to send to the *Federal Register* a proposed delisting determination on the running buffalo clover, located in Indiana, Kentucky, Missouri, Ohio,

Pennsylvania, and West Virginia. FWS has developed a regional news release, a Flickr site for images, social media, fact sheet, and FAQs. Stakeholders include members of Congress and recovery partners, including state agencies. Some NGOs could question the delisting proposal because one of the delisting criterion was not met in the exact manner specified in the recovery plan. (Updated 11/21/2018)

ONGOING ITEMS

On or around December 5, FWS will release a draft habitat conservation plan and environmental assessment for a 30-day public comment period for North Allegheny Wind LLC, a wholly owned subsidiary of Duke Energy Renewables Inc. The company prepared a habitat conservation plan at its 35-turbine North Allegheny Wind facility in Blair and Cambria counties, Pennsylvania, for the long-term conservation of the endangered Indiana bat. The plan would cover 25 years of operation and includes measures to avoid and minimize impacts to Indiana bats, primarily through feathering turbines during high-risk periods. A local news release is planned. (Updated 11/14/2018)

On or around December 14, FWS plans to send to the *Federal Register* a final rule revising the nonessential experimental population (NEP) of red wolves in North Carolina under section 10(j) of the Endangered Species Act. FWS anticipates opposition from North Carolina Wildlife Resources Commission and the North Carolina Farm Bureau, as they have officially requested the termination of this NEP. While some nearby landowners favor the previous rule, others are in favor of the revised rule. The governor's office has expressed support for maintaining the existing NEP. Although national and local environmental groups will support the continuation of an NEP in North Carolina, they will likely oppose any alternative that does not provide full protection under the Endangered Species Act. Interested stakeholders include Defenders of Wildlife, the Red Wolf Coalition, Red Wolf Species Survival Plan cooperators, and other non-governmental organizations that support red wolf conservation. Planned outreach includes a news release, social media, emails, and phone calls to congressional offices and stakeholders. FWS is a defendant in a lawsuit brought by the Red Wolf Coalition challenging previous red wolf actions. (Updated 11/14/2018)

On or around December 14, FWS plans to publish the FY 2017 Federal and State Endangered and Threatened Species Expenditures Report to Congress. This report provides a compilation of reasonably identifiable expenditures for the conservation of listed species reported independently by federal and state agencies. Expenditures are reported for species that were listed during FY 2017 through September 30, 2017. FWS does not anticipate controversy or opposition to the report. Planned outreach includes congressional notifications and posting the report to the FWS website. (Updated 11/07/2018)

On or around December 14, FWS plans to send to the *Federal Register* a proposal to delist the gray wolf due to recovery. This proposed rule does not have any effect on the separate listing of the Mexican wolf as endangered under the ESA. This proposal will replace the June 13, 2013, proposed rule to delist the gray wolf in the contiguous United States and Mexico. The ESA listing status of the gray wolf in the United States will continue to garner a high level of interest from states, tribes, sportsmen, and non-governmental organizations. This

action is expected to be controversial. FWS expects that a rulemaking resulting in delisting gray wolves will be litigated by one or more opposing stakeholders. Planned outreach includes a national news release, social media, emails, and phone calls. (Updated 10/31/2018)

On or around December 14, FWS plans to send to the *Federal Register* 12-month findings on petitions to list 13 species: Cedar Key mole skink, Florida sandhill crane, Fremont County rockcress, Frisco buckwheat, Ostler's peppergrass, Frisco clover, MacGillivray's seaside sparrow, Ozark pyrg, pale blue-eyed grass, San Joaquin Valley giant flower-loving fly, striped newt, Tinian monarch, and Tippecanoe darter. FWS does not anticipate these actions to be controversial. Planned outreach will include news releases, with supporting FAQs as needed, and notifications to stakeholders and members of Congress. FWS is required by settlement agreement to submit the finding for MacGillivray's seaside sparrow to the *Federal Register* by December 14.

On or around December 14, FWS will announce availability of the draft recovery plan for the eastern massasauga rattlesnake for a 30-day comment period. The snake was listed in 2016 as threatened. FWS has worked with state agencies and other experts to develop the plan, which outlines management actions and criteria needed to achieve delisting. Among management actions are habitat protection and management, population management and monitoring, education and outreach, and research. A news release is planned. FWS will have some key messages to address any possible controversy that this recovery plan promotes the recovery of a venomous snake. (Updated 11/14/2018)

By December 14, FWS plans to publish a proposed rule for the 2019 spring/summer Alaska subsistence migratory bird harvest for a 30-day public review and comment period. In order for the 2019 spring/summer subsistence migratory bird hunting to occur legally, the final rule must be published by April 2. Only administrative changes are being proposed, and the publication of both the proposed and final rules is not controversial. FWS will distribute a press release to Alaska media and send email notification to stakeholders when both the proposed and final rules are published. (10/24/2018)

On or around January 4, FWS plans to send to the *Federal Register* a proposal to designate critical habitat of approximately 36 stream miles and 3,100 acres of occupied habitat for the meltwater lednian stonefly and approximately 6.5 stream miles and 643 acres of occupied habitat for the western glacier stonefly. All populations of western glacier stonefly and all but one population of meltwater lednian stonefly occur on federal land (NPS and U.S. Forest Service). One population of meltwater lednian stonefly occurs on tribal land. All populations of both species are located in Montana and Wyoming and occur in wilderness or areas managed as wilderness. Planned outreach will include a regional news release, web updates and congressional/stakeholder notifications. (Updated 11/14/2018)

On or around January 4, FWS plans to send to the *Federal Register* a proposed critical habitat designation for the Texas hornshell in New Mexico and Texas. The proposed designation includes 463 river miles. FWS is considering the exclusion of 345 river miles of the proposed critical habitat designation due to a current Candidate Conservation Agreement

and Candidate Conservation Agreement with Assurances, and national security concerns. Interested stakeholders include water users (e.g., river authorities or agricultural industry), congressional delegations, and the state game and fish agencies. Planned outreach includes a news release and FAQs. (Updated 11/14/2018)

On or around January 11, FWS plans to send to the *Federal Register* a proposed listing determination and proposed critical habitat designation for the Wright's marsh thistle, a plant native to New Mexico. FWS will propose 64 acres of critical habitat. This action is not expected to be opposed, and media coverage is expected to be neutral. Interested stakeholders include WildEarth Guardians (the petitioner), U.S. Forest Service, Mescalero Apache Tribe, the State of New Mexico, and local landowners. A regional news release to all interested parties and the media is planned. (Updated 11/14/2018)

On or around January 11, FWS plans to send to the *Federal Register* a proposed listing determination and proposed 4(d) rule on the Hermes copper butterfly, located in San Diego County, California, and Baja California, Mexico. FWS will also propose critical habitat for the species in California. The proposed critical habitat designation covers approximately 35,200 acres in San Diego County, California. Approximately 30 percent of the designation is on federal land, 15 percent is on state land, and the remainder is on local or privately owned land. FWS is exempting 2,389 acres of land from Marine Corps Air Station Miramar. These actions are not expected to be controversial. Stakeholders include the State of California, federal and state agencies, tribes, the Center for Biological Diversity, San Diego Natural History Museum, Xerces Society, U.S. Marine Corps, and local landowners. Planned outreach will include a regional news release, Congressional notifications, and stakeholder outreach to local governments, including county agencies, tribes, the public, scientific entities, and conservation groups. (Updated 11/14/2018)

National Park Service

NEW ITEMS

(CLOSE HOLD) During the week of December 10, the NPS will announce the contract award for food & beverage services and other associated services at Stinson Beach within Golden Gate National Recreation Area. The new 10-year contract will offer similar services as the existing contract. (11/21/2018)

The NPS first nationwide fee-free day will occur on January 21, 2019, Martin Luther King, Jr. Day. The other fee free days will be April 20, First Day of National Park Week/National Junior Ranger Day; August 25, National Park Service Anniversary; September 28, National Public Lands Day; November 11, Veterans Day. The public announcement was made on November 19. (11/21/2018)

UPDATED ITEMS

On January 18, the prospectus for glacier landing air taxis and scenic tours at Denali will close. The Alaska Region issued the prospectus on November 8. By November 15, the

Alaska Region will issue a prospectus for glacier landing air taxis and scenic tours at Denali National Park and Preserve. This solicitation is for four concession contracts, with a 10-year term of January 1, 2020, to December 31, 2029. (Updated 11/21/2018)

ONGOING

During December, the District of Columbia's Department of Energy and the Environment will release a Feasibility Study for the Anacostia River Sediments Project. This study was originally planned for release in late September / early October but has been delayed. The Feasibility Study is an evaluation of alternatives to remediate contamination within the river sediments that include polycyclic aromatic hydrocarbons, polychlorinated biphenyls, pesticides, and metals. The National Park Service is a co-lead on this effort due to our jurisdiction over the bed of the Anacostia River using the NPS Comprehensive Environmental Response, Compensation, and Liability Act authority. The release of the study will be followed by a 30-day comment period. (09/26/2018)

On December 10-11, Lake Mead National Recreation Area will hold public meetings for the General Management Plan Amendment/Low-Water Plan (EA). The plan provides a long-term strategy for addressing operational needs to maintain lake access and provide safe and diverse recreational opportunities at lake elevations above 950 feet. (10/31/2018)

On December 11, the public comment period closes for development concept ideas for the residence area of Jimmy Carter National Historic Site. The effort would guide park management in decisions about future cultural and natural resource conditions, as well as visitor experience opportunities for the structures, facilities and gardens associated with the Carter home. (11/14/2018)

On December 14, the NPS Southeast Region is scheduled to brief the Executive Review Team in order to release the Draft Environmental Impact Statement for the Big Cypress National Preserve Backcountry Access Plan and Wilderness Study for public review. This briefing is required by Step 4 of the DOI NEPA Document Clearance Process. The administrative draft and briefing materials will be submitted to the Review Team one week prior to the scheduled briefing. The request letter was sent the week of November 5. (11/21/2018)

On or about January 5, the NPS will assume front desk operations at the First Ladies National Historic Site (FILA) in Canton, Ohio, from the nonprofit partner that has been providing that service. This is another step in the partnership transition. The on-site non-profit partner, the National First Ladies Library (NFLL), will now focus on building a philanthropic program, creating volunteer opportunities, developing research education programs, networking with other sites and organizations that share the park mission, and advocating for the National Historic Site. The NPS will be responsible for Site management, maintenance, preservation, and operations. (10/31/2018)

On or around April 2019, the NPS will display an exhibit on Treasured Landscapes at the United Nations Headquarters in New York for the annual kickoff of the upcoming General

Assembly. The request was made through the office of UN Ambassador Nikki Haley. (Updated 09/05/2018)

Awareness

U.S. Fish and Wildlife Service

NEW ITEMS

FWS has received complaints that a veterinarian associated with an FWS-permitted Manatee Rescue, Rehabilitation and Release program (MRP) improperly treated manatees under the authority of the MRP. FWS approved the program under the U.S. Marine Mammal Protection Act and U.S. Endangered Species Act. In response to the information in the complaints, FWS is requiring that MRP-associated zoos prohibit the veterinarian from undertaking any activity with manatees while FWS evaluates the situation more fully. The affected zoos are ZooTampa, Homosassa, and Jacksonville Zoo. ZooTampa and Homassasa, where incidents allegedly occurred, have received letters from FWS notifying them that the veterinarian is prohibited from activities involving manatees. Jacksonville Zoo, for which no incidents have been reported to FWS, received a similar letter. (11/21/2018)

In 1993, under U.S. Marine Mammal Protection Act authority, FWS placed a young polar bear called Yupik on permanent loan with a Mexican zoo via a Letter of Authorization (LOA). On November 13, an NGO shared with FWS a Mexican news report that Yupik had died. Subsequently, on November 13, FWS received a letter from the zoo that provided notification of Yupik's death and information required as a condition of the LOA. A group of NGOs previously alleged poor treatment of the bear by the zoo and evaluation of the allegations by FWS resulted in a September 28 proposed revocation of the LOA. Those same NGOs are now calling for repatriation of the bear’s body. FWS is working with the Solicitor's office to determine its next steps. (11/21/2018)

The Woolsey Fire in California burned significant portions of the Santa Monica Mountains, impacting habitat for several federally listed species and consuming 83 percent of NPS land in the Santa Monica Mountains National Recreation Area. Species impacted by the Woolsey Fire may include California red-legged frogs, least Bell’s vireos, southwestern willow flycatchers, Coastal California gnatcatchers, and several plants including the Santa Monica Mountains dudleya, Conejo dudleya, Marcescent dudleya, Lyon’s pentachaeta, Braunton’s milkvetch, and Santa Cruz Island fringepod. When deemed safe, FWS will work with NPS and other land managers to survey portions of burned areas to gain a better understanding of the impacts and recovery strategies for listed species. (11/21/2018)

Migrant caravans are expected to arrive in the San Diego region over the next several days and request asylum in the United States. FWS anticipates higher Customs and Border Protection (CBP) activity along the shoreline of Border Field State Park and Tijuana Slough NWR during this time as operations are increased in anticipation of the arrival of migrant caravans. The caravans are expected to go to the San Ysidro Port of Entry. If the Port of Entry closes or is overwhelmed with processing requests for asylum, CBP indicated the

potential for mass excursions of migrants into Border Field State Park, and by extension, into Tijuana Slough NWR, which is approximately one mile north from the U.S.-Mexico border. (11/21/2018)

National Park Service

NEW ITEMS

On November 15, Point Reyes National Seashore was notified by the Stewart Horse Camp concession operator that they will not be able to fulfill their contract to operate during 2019. The park is working to identify potential options to maintain operations at this location. There is strong interest in this issue from the equestrian community and they have conducted a letter writing campaigns urging the park to keep equestrian services available to the public. (11/21/2018)

On or after November 20 (pending DOI approval), the NPS will announce the award of nine grants to State and Tribal Historic Preservation Offices for the recovery of historic sites damaged by Hurricanes Harvey, Irma, and Maria. The grants total $48,500,000. Funds were appropriated as emergency supplemental funding from the Historic Preservation Fund.

ONGOING ITEMS

Organ Pipe Cactus National Monument continues to see a presence of individuals claiming affiliation with Veterans on Patrol (VOP). The VOP leader is a self-described veterans' rights activist turned advocate for those impacted by the migrant sex trafficking trade. VOP was connected with the Malheur Refuge occupation and the Bundy standoff. VOP members conduct "patrols" in areas accessible to the public that are situated along the United States/Mexico international border. VOP members practice the open carry of firearms while within the Monument. Information gained from recent contacts with VOP indicate their intentions to be in the area for a sustained period of time (approximately three months). NPS law enforcement personnel remain in close communication with the NPS Investigative Services Branch, Federal Bureau of Investigation, United States Border Patrol and Pima County Sheriff's Office regarding the aforementioned activities. (11/7/2018).

ASSISTANT SECRETARY FOR INDIAN AFFAIRS

Week Ahead Schedule of Meetings, Hearings, and Travel

Assistant Secretary-Indian Affairs (AS-IA) Tara Sweeney will be in the office. On November 28, 2018, she will address the BIA Providers Conference by video from Washington, DC to address her framework for Indian Affairs to empower Indian Country.

Principal Deputy Assistant Secretary-Indian Affairs (PDAS-IA) John will be in Anchorage, Alaska, to meet with Tribes on Friday, November 30 to discuss the unique history, challenges, and opportunities faced by Alaska Native Tribes recognized under the 1936

amendments to the Indian Reorganization Act (IRA) and how the amendments impact BIA services to them.

Deputy Assistant Secretary for Policy and Economic Development (DAS-PED) Mark Cruz will be in the office.

Acting Bureau of Indian Affairs (BIA) Director Darryl LaCounte will be in the office.

BIA Deputy Director – Field Operations Jim James will be in the Albuquerque office.

Bureau of Indian Education (BIE) Director Tony Dearman will be teleworking this week.

Acting Deputy Assistant Secretary–Management (DAS-M) Jason Freihage will be in the office.

Acting Chief of Staff Rich Myers will be in the office.

Immediate Announcements and Actions (within the next 14 days)

Assistant Secretary for Indian Affairs

UPDATED ITEMS

AS-IA is expected to approve the following Tribal-State gaming compact amendments this week: Osage Nation, Kaw Nation, Confederated Tribes of the Coos, Lower Umpqua and Siuslaw Indians, Santa Ynes, Dry Creek, Karuk Tribe, Habematolel Pomo of Upper Lake, Big Valley Band of Pomo Indians, La Jolla Band of Luiseno Indians, Mechoopda Indian Tribe, San Pasqual Band, Torrez Martinez Desert Cahilla Indians, and Twenty-Nine Palms Band of Mission Indians.

On December 5 - 6, 2018, Indian Affairs will hold the last two of five tribal consultation sessions in Bethel and Kotzebue, Alaska, to discuss how it might better implement the Alaska IRA's federal acknowledgement provisions and the legal authority of the Secretary to take land into trust in Alaska, per the Dear Tribal Leader and Dear Alaska Native Corporation CEO letters dated July 2, 2018.

ONGOING ITEMS

November 24, 2018, is the due date for approval of Seminole Tribe of Florida's amendments to its Revenue Allocation Plan to allow per capita payments away from a set dollar amount to a percentage allocated among a range of categories. The Amendment provides the Tribe with flexibility in annual budgetary needs and dispenses with the need for the Tribe to amend the RAP twice a yearly (once based on the annual budget projection and again based on actual expenses).

On November 30, 2018, PDAS-IA Tahsuda will lead a listening session with Tribal leaders

and Alaska Native Corporations on the Alaska amendment to the Indian Reorganization Act.

Early December is the Office of Indian Gaming's target date for briefing PDAS-IA Tahsuda on the Redding Rancheria's application to acquire land in trust in Shasta County, California, in order to relocate its existing Win River gaming facility. The Department signed an agreement with the Tribe to close its existing casino prior to opening the new casino.

December 2, 2018, is the due date for approval of Tunica-Biloxi Indian Tribe's amendments to its Revenue Allocation Plan to resume limited per capita payments to minor tribal members and provide for enhanced services for elderly tribal members' healthcare and housing assistance. The Amendment also creates a permanent endowment fund to provide support and stability to tribal programs and services. The Tribe has requested a meeting with ASIA in mid-October.

December 2-4, 2018, BIA Chief of Division of Facilities, Maintenance, and Construction will participate in the National Council for School Facilities annual meeting in Washington, DC.

December 3, 2018, the AS-IA Senior Policy Advisor will attend the Violence Against Women Act (VAWA) Inter-Tribal Work Group (ITWG) meeting in Palm Springs, California.

December 4, 2018, the AS-IA Senior Policy Advisor will present at the Tribal Law & Order Act (TLOA), Indian Alcohol and Substance Abuse (IASA), Tribal Action Plan Work Group (TAP) workshop called Essentials for Developing a Community-Driven Tribal Action Plan.

December 5, 2018, is the due date for approval of the Kaw Nation's modification to its Off-Track Wagering Compact, which has been in effect since May of 2001. The existing Compact specified a location for Off-Track Wagering in Newkirk, Oklahoma. The Tribe and the State negotiated a modification to change the location to the Tribe's trust land in Braman, Oklahoma, which is eligible for gaming. The Office of Indian Gaming recommends that the Amendment be approved. If approved, ASIA will sign a Federal Register Notice and approval letters to the Osage Nation and the Governor of Oklahoma, as well as the Compact Amendment. This compact amendment makes no substantive changes to the underlying Off-Track Wagering Compact approved by AS-IA on May 25, 2001.

December 5, 2018, the AS-IA Senior Policy Advisor will participate on a SAMHSA Opioid panel workshop to discuss TLOA IASA activities related to Interior.

December 5, 2018, is the tentative date for a Senate Committee on Indian Affairs oversight hearing for BIE and BIA to provide an update on the status of addressing GAO's recommendations for Indian energy and the BIE.

The final approval letter for the Saginaw Chippewa Tribe of Michigan's Revenue Allocation Plan Amendment is pending AS-IA signature. The Tribe is revising their educational requirements, instituting grace periods, and including the ability to receive a minor's trust fund at 20 years old.

The final approval letter for the San Pasqual Band's Revenue Allocation Plan Amendment is pending SOL surname. The Tribe is incorporating the 2014 Tribal General Welfare Exclusion Act and prior RAP approvals into the original document.

The Office of Indian Gaming is processing a request for AS-IA review from the Wyandotte Nation (Oklahoma/Kansas) to acquire in trust for gaming a 10.53-acre parcel of land in Park City, Sedgwick County, Kansas, (Park City parcel), overturning the denial of its previous application by the Assistant Secretary in 2014 (mandatory trust acquisition).

Indian Affairs' internal workgroup continues to work on developing a plan for decoupling BIE and BIA in the FY 2020 budget. The workgroup includes representatives of BIA, BIE, DAS-M (including IT, CFO), the AS-IA Office and Interior PMB.

Bureau of Indian Affairs

NEW ITEMS

December 9-14, 2018, BIA will present a poster summarizing the final chapter of the 4th National Climate Assessment (NCA4), entitled *Tribes and Indigenous Peoples*, for the American Geophysical Union conference in Washington, DC.

UPDATED ITEMS

The week of December 3, 2018, BIA will be holding a Superintendents Leadership Course for BIA agency superintendents. The agenda will include presentations on harassment in the workplace, litigation assistance, orders of succession, procurement processes, ethics, and a number of other topics.

The week of December 3, 2018, the Division of Property Management plans to provide property management training to class attendees at the BIA Superintendent Orientation Class 7 in Albuquerque, New Mexico.

By early December, BIA, the Office of Regulatory Affairs & Collaborative Action (RACA) and the Office of the Solicitor plan to finalize a new handbook addressing how BIA Realty staff processes mortgages of leasehold interests held in trust or restricted status.

ONGOING ITEMS

November 26-29, 2018, BIA is hosting its BIA Providers Conference for Tribes at the Dena'ina Civic and Convention Center in Anchorage, Alaska.

November 28-29, 2018, the Indian Energy Service Center (IESC) Executive Management Group (EMG) will meet in Lakewood, Colorado. This meeting is rescheduled from the previous date of November 6, 2018.

Bureau of Indian Education

UPDATED ITEMS

On December 4-6, 2018, the Bureau of Indian Education Standards, Assessments, and Accountability Negotiated Rulemaking Committee will hold a meeting in Arlington, Virginia, per the Federal Register notice published August 2. The next meeting will be held in person in Spring 2019.

ONGOING ITEMS

On November 30, 2018, BIE, alongside its comprehensive center partners, will present the Strategic Direction and its accountability monitoring system to the Department of Education as well as report on progress for the first quarter of work.

On November 30, 2018, On November 30, 2018, the Southwestern Indian Polytechnic Institute's Office of Institutional Research, Effectiveness and Planning will begin distributing reporting forms for the American Indian Higher Education Consortium's American Indian Measures of Success report.

15-60 Day Look-Ahead

Assistant Secretary for Indian Affairs

NEW ITEMS

December 11, 2018, Assistant Secretary Sweeney plans to host a Tribal roundtable with the Secretary in the Office of the Secretary at Main Interior.

December 31, 2018, is the due date for approval of a Tribal-State gaming compact between the Nooksack Tribe and the State of Washington. The compact is currently in review with the Office of Indian Gaming.

ONGOING ITEMS

Early December is the Office of Indian Gaming's target date for briefing PDAS-IA Tahsuda on the Coquille Tribe's application to acquire land into trust for gaming within the City of Medford, Jackson County, Oregon.

On December 12, 2018, Indian Affairs will hold the last of five tribal consultation sessions by teleconference, to discuss how it might better implement the Alaska IRA's federal acknowledgement provisions and the legal authority of the Secretary to take land into trust in Alaska, per the Dear Tribal Leader and Dear Alaska Native Corporation CEO letters dated July 2, 2018.

December 20, 2018, is the deadline for submitting written comments, by midnight EST and via email, on the how Interior might better implement the Alaska IRA's federal acknowledgement provisions and the legal authority of the Secretary to take land into trust in Alaska, per the Dear Tribal Leader and Dear Alaska Native Corporation CEO letters dated July 2, 2018.

On January 22, 2019 through January 25, 2019, the Self-Governance Advisory Committee meeting will place at the Embassy Suites DC Convention Center, 900 10th Street, NW, Washington, DC. Representatives of the Office of the Assistant Secretary—Indian Affairs are invited to attend on the morning of Friday, January 25, 2019.

AS-IA is reviewing a request from Arapaho Tribe of the Wind River Indian Reservation (Wyoming) to place land in trust for gaming. ASIA will determine whether to accept approximately 6.3 acres of land in trust for the Arapaho Tribe under the authority of a statute specific to the Tribe. The Office of Indian Gaming recommends that ASIA also determine that the Tribe's request meets the requirements of the Indian Gaming Regulatory Act's "within reservation boundaries exception." The property is located within the exterior boundaries of the Wind River Reservation and is currently being used for gaming, a convenience store, a smoke shop and retail fuel sales. Because there is no change in use, this trust acquisition is subject to a Categorical Exclusion under NEPA.

Hannahville Indian Community submitted amendments to its Revenue Allocation Plan for approval to allow for per capita deductions for child support and debts owed to the Tribe.

Indian Affairs expects to issue an updated National Policy Memorandum (NPM) on Real Property Leasing Space Utilization and Space Request Policy. The original NPM expired in June 2018. The updated NPM references the IA Facilities Investment Review Board (FIRB), which will provide oversight of the real property leasing program and ensure that real property leases comply with applicable laws, policies, and procedures. The FIRB charter is in the process of being approved, and once it has been signed, the program will move forward with surnaming the NPM.

Indian Affairs expects to issue a new Indian Affairs Manual (IAM) chapter regarding corrective deeds and affidavits to provide the process to correct a deed on Indian land.

Bureau of Indian Affairs

ONGOING ITEMS

December 10-12, 2018, BIA Office of Justice Services senior managers will be receiving training and meeting with senior managers from the U.S. Department of Justice to discuss law enforcement issues at the Indian Country Leadership Summit, in Columbia, South Carolina.

On December 11-12, 2018, the BIA Realty Specialist for Mineral Leasing will provide

training on the BIA portion of the onshore energy and mineral lease management interagency standard operating procedures at the Denver Business Center.

December 17-20, 2018, BIA Office of Justice Services will host Opioid Community Awareness Meetings at Yurok Tribe, Cahto Tribe, and Bishop-Paiute Tribe, respectively.

The final rule updating BIA's operation of Indian Electric Power Utilities (25 CFR 175) is currently in surname pending AS-IA signature. This rule revises regulations addressing electric power utilities of the Colorado River, Flathead, and San Carlos Indian irrigation projects to use plain language, update definitions, lengthen a regulatory deadline, and make other minor changes. The comment period on the proposed rule closed on February 27, and BIA received no relevant comments on the rule.

Bureau of Indian Education

NEW ITEMS

December 6-7, 2018, BIE will participate in the U.S. Department of Education 2018 Combined Federal Programs Meeting in Washington DC.

Through January 20, Dr. Daniel Wildcat will be serving as Acting President of Haskell University. Dr. Venida Chenault will be teleworking during that time.

On January 29, 2019, the BIE Associate Deputy Director for Bureau-Operated Schools will host a meeting of all off-reservation Bureau-operated boarding schools at Sherman Indian School to address urgent needs and long-term planning.

Through May 2019, BIE will be hosting a series of safety webinars to address: Winter Safety, Winter Driver Safety & Environmental Compliance (Paint, Ballasts and Bulbs), Safety – 3607 Purpose and Process & OSHA Logs, Collateral Duty Safety Officers & Safety Committees, and topics determined by a three-month trending.

ONGOING ITEMS

BIE is working with BIA Office of Indian Services to review and update their memorandum of agreement on Public Law 93-638 contract administration for BIE programs, to clarify the respective responsibilities of BIE and BIA, identify training opportunities for BIE staff in FY19, and further evaluate BIE delegated authority for 638 awarding officials.

BIE is developing a report entitled "Bureau Operated Schools' Site Visits and Recommendations on Native American Language, History, and Culture" that will compile current qualitative and quantitative data on Native American language, history, and culture. Site visits are necessary at the two schools remaining for inclusion.

December 12-14, 2018, BIE Special Education staff and technical assistance providers will meet to develop a revised technical assistance plan for the special education unit to meet

Individuals with Disabilities Education Act (IDEA) requirements and demonstrate continuous improvement.

Through December 14, 2018, BIE is conducting the Indian School Equalization Program (ISEP) monitoring for General Education, Special Education, English Language Learners, Native Language Learners and Gifted and Talented.

By January 7, 2019, BIE expects to announce the availability of 21st Century Community Learning Centers Draft Application for the 2019-2022 cohort to BIE owned and operated schools, and expects to establish an application deadline of March 1, 2019.

Awareness

Bureau of Indian Affairs

NEW ITEMS

The Camp Fire burned 630 trust acres on the Chico Rancheria and the Berry Creek Rancheria is under evacuation. It is unknown at this time how the fire has impacted the Mooretown Rancheria.

ONGOING ITEMS

BIA's Office of Indian Services, Division of Human Services (DHS) is partnering with the Department of Justice and the BIA's Office of Justice Services to expand the Justice Department's Tribal Access Program for National Crime Information (TAP): the federal government's essential program that provides Tribes with access to national crime information databases. TAP offers federally recognized tribes the ability to access and exchange data with national crime information databases for both civil and criminal purpose, which allows tribes to more effectively serve and protect their communities by ensuring the exchange of critical data.

Bureau of Indian Education

ONGOING ITEMS

Retrocession of Borrego Pass: A review of the retrocession checklist was completed to ensure that the areas for School Operations had reasonable timeframes and staff accountable to carry out the efforts to ensure training and processes are shared with the school for a clean transition.

Pine Hill progress update: The Project Manager confirmed that the Contractor is completing site mobilization and performing a more detailed building-by-building assessment to complete the work plan for the lightning protection systems. The Contractor is on site and proceeding according to the schedule.

Staff at Haskell Indian Nations University (Haskell) are working with the Office of the Solicitor, Office of Civil Rights, and Southwestern Indian Polytechnic Institute (SIPI) staff on final drafts of a new policy implementing the Executive Order, "Nondiscrimination on the Basis of Race, Sex, Color, National Origin, Disability, Religion, Age, Sexual Orientation, and Status as a Parent in Federally Conducted Education and Training Programs and a new policy on consensual relationships between employees and students.

BIE is in the process of analyzing the Child Count – Individuals with Disabilities Education Act (IDEA) Part C Child Count for the BIE. To date, BIE has received 112 applications IDEA Part B applications for the 2018-19 school year. BIE senior leadership is working with the three Area Directors' special education staff to ensure schools complete their applications for funding.

BIE received a notice from the U.S. Department of Education, Office of Special Education Programs (OSEP), that OSEP selected BIE for an on-site visit, based on the relative number of intensive and targeted areas across all States. Next week BIE will schedule a call to discuss the DMS notice and the upcoming visit. A formal letter from OSEP will be forwarded to the BIE Director and discussion will take place regarding the visitation date(s).

ASSISTANT SECRETARY INSULAR AND INTERNATIONAL AFFAIRS

Week Ahead Schedule of Meetings, Hearings, and Travel for the upcoming week, November 25 –December 1

TRAVEL

AS-IIA Domenech has no planned travel.

OIA Director Pula has no planned travel.

INT Director Karen Senhadji has no planned travel.

Senior Advisor Sarah Jorgenson has no planned travel.

Oceans Program Coordinator Liza Johnson has no planned travel. Note that Liza will be out on maternity leave from mid-December to April 1.

Immediate Announcements and Actions within 14 days

NEW ITEMS

OIA Western Governors' Association Annual Meeting: OIA staff are compiling briefing documents for the Deputy Secretary in advance of his attendance at the Western Governors' Association annual meeting in Honolulu, HI from December 11-13. The meeting focus will

be on biosecurity and invasive species, and representatives from the insular areas as also expected to be in attendance.

INT Launch Event in South Africa: DOI-ITAP will participate in launch event meetings from December 1- 7, in Cape Town, South Africa, with Western Cape Government representatives and selected contractors, to mark the beginning of technical assistance to improve state of readiness for large-scale shale gas development in the rural area of the Central Karoo, in South Africa. This work is funded by the U.S. State Department.

OCEANS Ocean Policy Committee Meeting: The second Ocean Policy Committee meeting of the Subcommittee Co-Chairs and agency senior policy contacts will occur on Wednesday December 5th at the Eisenhower Executive Office Building. Assistant Secretary Domenech and the Ocean, Great Lakes, and Coastal Program Coordinator will attend. Agenda items include presentation and discussion on the Ocean Science and Technology Subcommittee priority research and technology needs, a briefing on the soon-to-be-released Science and Technology for America's Oceans: A Decadal Vision, Ocean Resource Management Subcommittee data product and report on regional data needs, and discussion of other potential interagency initiatives.

OCEANS DOI Senior Ocean Policy Team and Regional Ocean Contacts Meeting: On December 5, the DOI Senior Ocean Policy Team and the Regional Ocean Contacts will meet jointly to discuss implementation of actions in support of Executive Order 13840: *Regarding Ocean Policy to Advance the Economic, Security, and Environmental Interests of the United States*, the FY19 Oceans Working Capital Fund activities, and other ocean, Great Lakes, and coastal actions to be jointly undertaken across DOI bureaus and regions.

OCEANS Extended Continental Shelf Executive Committee Meeting: The Executive Committee of the Extended Continental Shelf (ECS) Task Force will meet on December 6. The Ocean, Great Lakes, and Coastal Program Coordinator will attend representing DOI as the Vice Chair of the Executive Committee. The purpose of this meeting is to discuss and decide upon the updated ECS Project Plan and timeline.

UPDATED ITEMS

OIA Appointment of Open Associate Justice of American Samoa Position: Seven applicants were vetted for this vacancy. UPDATE: Acting Solicitor Jorjani and OIA Director Pula have completed the second series of telephone interviews with the candidates. A memo of recommendation is being compiled, and will be sent to the Secretary to assist him in making the appointment.

OIA INDOPACOM Liaison: OIA is working with INDOPACOM to finalize an MOU to fill an OIA liaison to INDOPACOM, a full-time position housed in Honolulu. UPDATE: It is expected that INDOPACOM will send an updated memo to OIA this week.

OIA Parole Visa Policies Relating to the Commonwealth of the Northern Mariana Islands (CNMI) and Guam: UPDATE: DHS held a conference call with Federal partners to

discuss the overview of the parole visa issue. It was noted on this call that before the Federal Register notice moves forward, OMB is waiting for CNMI to recover from the recent typhoon to the point that the Governor of CNMI is able to travel to DC for a meeting. At this time, no meeting is scheduled.

OIA Meeting with NSC on IndoPacific Strategy: AS-IIA has been working with NSC and the interagency to update and to finalize an IndoPacific strategy, which encompasses some of OIA's work and objectives in the territories and freely associated states. UPDATE: A follow-up meeting is tentatively scheduled for the end of next week.

ONGOING ITEMS

OIA Region 12 Facilitator for DOI Reorg: OIA Director Pula is the Facilitator for Region 12, which consists of Hawaii and the U.S. Territories in the Pacific. Mr. Pula and the other regional facilitators continue to work through the six mission functions to populate information in the focused areas of Collaborative Conservation, Recreation, Permitting, Information Technology, Human Resources Management, and Procurement.

OIA FAS Trust Funds Quarterly Meeting: OIA Director Pula will attend and chair the Trust Fund Committee meetings for the Marshall Islands and the Federated States of Micronesia in Washington, D.C., the week of November 26.

OIA Island Government Finance Officers' Association Meeting: On December 4-6, the Winter Island Government Finance Officers' Association meeting will take place in Honolulu. OIA Director Pula is planning to attend. Participation is expected from the heads of finance for each insular government as well as permanent staff members with a work-related focus on finance office performance measurements and audit improvement initiatives within each finance office. OIA funds two participants from each of the seven insular areas to attend this meeting.

OIA White House Initiative on Asian Americans and Pacific Islanders: OIA staff continue to work on action items for the White House Initiative on Asian Americans and Pacific Islanders, which seeks to work to improve the quality of life for Asian Americans and Pacific Islanders across the nation through increased access to, and participation in, federal programs in which they may be underserved. It focuses on four cross-cutting ideas: data disaggregation, language access, capacity building, and workforce diversity.

OIA November and December OIA Leadership and Audit Training: OIA-funded government oversight and audit training continue to take place in USVI and Florida:
-December 2: USVI Executive leadership program in Tampa, Florida
-December 3-7: Writing and communicating audit results and contract/procurement auditing in St. Thomas, USVI.

OIA DHS Public Charge Rule: The Ambassadors of the Federated States of Micronesia, the Marshall Islands and Palau have voiced their concern with the implications of the proposed changes to the DHS rules addressing *public charges*, that is, aliens entering the

United States who are unable to care for themselves without becoming a *public charge*. The rule is currently out for public comment until December 10, after which there may be additional revisions. Questions surround travel by eligible citizens of the freely associated states (FAS), since it is not clear how a traveler would be determined to be a *public charge* as FAS citizens visa-free under the Compact. Palau Ambassador Kyota asked about the possibility of an exception for FAS citizens and requested intervention by the Secretary of State with the Secretary of Homeland Security.

OIA Economic Reports on the Freely Associated States: Economic reports on the three freely associated states are being compiled and are all expected to be completed by the end of December. The Marshall Islands report is expected next at the end of November.

INT Fish Passage Barrier Field Assessment in Vietnam: DOI-ITAP is conducting a field assessment of fish barriers in the Ho Chi Minh City area through November 27. The activity is under DOI-ITAP's Smart Infrastructure for the Mekong and is funded by USAID.

INT Ashland Oregon Forensics Lab and Washington DC Visit: DOI-ITAP will host a high level delegation from the Philippines to tour the DOI/Fish & Wildlife Service's National Wildlife Forensics Laboratory in Ashland, Oregon, and Washington DC, December 2-8. During the Ashland visit, the delegation will learn about the benefits such a facility can bring to the Philippines and Southeast Asia in general as well as the equipment and technical capacity needed to manage a forensics lab. The delegation will also meet with their counterparts in Washington, DC. This work is funded by USAID/Philippines.

INT Marine Protected Areas Exchange: Through December 22, DOI-ITAP will facilitate a professional learning exchange for five Marine Protected Areas (MPA) and sustainable fisheries experts from the Indonesian provinces of Maluku and West Papua to travel to the U.S. to learn from NPS and FWS about DOI approaches to MPA management. This work is funded by USAID.

INT Potential USGS Meeting with Pakistani Ambassador: Pakistan's Ambassador to the U.S. requested a meeting with the USGS Director to discuss hazards and other topics of mutual interest. The State Department's Pakistan Desk is supportive of USGS taking this meeting. The meeting date has not been confirmed but is expected to take place in November.

INT Coordinate Intra-Agency and Interagency International Activities in Support of the DOI Mission and U.S. Foreign Policy: INT is developing a searchable spreadsheet of all international agreements and organizations in which DOI participates. So far, there are about 300 initial entries, and INT is compiling additional information to support these entries (points of contact, upcoming related meetings, etc.) to be provided by bureaus.

INT Modernize International Travel Clearance System, Passport and Visa Operations: INT staff have been working to develop a standard international travel clearance system for all of DOI, and updated guidance for DOI staff to follow for international travel. In addition, INT staff continue to automate passport and visas procedures for more efficient processing.

OCEANS U.S. Coral Reef Task Force (USCRTF) Watershed Partnership Initiative Interagency Working Group: On November 28, EPA and NOAA will host the Watershed Partnership Initiative Working Group to continue discussions on development of sustainability plans for the three USCRTF priority watershed sites and share lessons learned to watersheds across the seven U.S. coral reef jurisdictions. The Ocean, Great Lakes, and Coastal program coordinator will attend and represent DOI.

OCEANS U.S. Coral Reef Task Force (USCRTF) Restoration Working Group: On November 29, the CNMI and NOAA will host a meeting of the Restoration Working Group to discuss implementation of USCRTF Resolution 40.1 on Coral Reef Restoration, development of a framework for action and workplan, discuss restoration efforts in each of the 7 U.S. coral reef jurisdictions, and share lessons learned. The Ocean, Great Lakes, and Coastal program coordinator will attend and represent DOI.

OCEANS Ocean Reporting Tool Briefing for OSTP, CEQ and ORM Staff: On November 29, NOAA's National Ocean Service is briefing OSTP and CEQ on the Ocean Reporting Tool and NOS's next generation of products for the aquaculture industry and coastal management community. The Ocean Reporting Tool web-based, report-centric tool for coastal and ocean planners. It provides summary statistics and interpretive analysis for five main topics: general information, energy and minerals, natural resources and conservation, transportation and infrastructure, and economics and commerce. The Ocean Resource Management Subcommittee (ORM) staff will attend, including the Ocean, Great Lakes, and Coastal Program Coordinator.

15-60 Day Look-Ahead

NEW ITEMS

OIA Gubernatorial Inaugurations in Territories: Guam and the Virgin Islands will be swearing in their respective governors on Monday, January 7, 2019. Governor-elect Lou Leon Guerrero will be sworn in as Guam's first female governor, and the Virgin Islands will swear in the winner of the November 20, 2018 run-off election between incumbent Governor Kenneth Mapp and candidate Albert Bryan. CNMI Governor Ralph Torres, who succeeded Governor Eloy Inos upon his death in office, will be sworn in for his first term on Monday, January 14, 2019. It is possible that Assistant Secretary Domenech will attend some of the Gubernatorial Inaugurations.

INT Secretarial Trip to Israel: INT is coordinating with the Office of Scheduling and Advance, U.S. Embassy Israel, the Israel desk at the Department of State and Israeli counterparts to prepare for a Secretarial visit, which is scheduled to occur January 28-31, 2019. During the visit, the Secretary will sign a Memorandum of Understanding to expand cooperation on conservation, natural and cultural resource management, and protected areas. He will also meet with senior level officials from the Israeli government to discuss the bilateral relationship.

ONGOING ITEMS

OIA 2019 Interagency Group on Insular Areas (IGIA) Senior Plenary Session: OIA will send out to all Federal stakeholders a *save the date* notification for the 2019 IGIA Senior Plenary Session to be held on February 25, 2019, between 1:00 p.m. and 4:00 p.m. at The White House.

OIA Graduate School USA Activities in January: OIA's funded Graduate School USA, contracted and supported by OIA's Technical Assistance Program, is supporting multiple activities focused on financial education, oversight, and accountability for the CNMI, RMI, and FSM in January 2019:
-Saipan, CNMI; January 2019: *TBD if Typhoon Yutu will impact the timing of this event at this time.
-Majuro, RMI; January 14-18, 2019: The New Uniform Grant Guidance, Majuro, RMI. This course offers a high-level overview of the changes in grants management regulations in *The Uniform Guidance: Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards.*
-Pohnpei, FSM; January 21-25, 2019: The New Uniform Grant Guidance, Pohnpei, FSM. This course offers a high-level overview of the changes in grants management regulations in *The Uniform Guidance: Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards.*
-Majuro, RMI; January 28-31, 2019: Developing Interim Procurement Regulations, Majuro, RMI.

OIA Census Compact Surveys: With funding from OIA, the U.S. Census has begun its work in Guam and the Commonwealth of the Northern Mariana Islands (CNMI) as part of the next five-year enumeration of migrants from the freely associated states (FAS) in Hawaii, Guam, the CNMI and American Samoa, as required by the Compact of Free Association (Public Law 108-188). The enumeration is used as the basis for distributing $30 million provided under the Compact to help offset the economic and social impact of migrants from the FAS in the affected jurisdictions. Surveys have begun and are expected to be completed by spring 2019. OIA and Census Officials plan to meet with staff on the Hill to give an update on the status of the enumeration.

OIA U.S. Government-Wide Comprehensive Report on Federal Grants to the Insular Areas: OIA staff are working to take over an existing database from HHS and to gather information from across the Federal Government on Federal grants to the insular areas. Completion is targeted for March 2019.

INT Coral Triangle Initiative Senior Officials' Meeting, Philippines: DOI-ITAP will participate in the annual Senior Officials' Meeting of the Coral Triangle Initiative on Coral Reefs, Fisheries and Food Security (CTI-CFF), to be held in Manila, December 10-14. This annual priority-setting meeting of the marine and fisheries conservation coalition of the six Coral Triangle Countries will set out the 2019 goals for the organization and its Regional Secretariat, which receives DOI-ITAP technical support. The work is funded by USAID.

INT Lithium Scoping Mission, Argentina: A DOI-ITAP team consisting of five USGS experts will travel to Salta, Argentina, and the surrounding area, from Dec 12-22, to assess the availability of lithium and evaluate extraction protocols. The group will work with Ministry counterparts. The work is part of DOI-ITAP global energy program and is funded by the Department of State.

INT Education and Interpretation Workshop, Indonesia: A DOI-ITAP team, consisting of one NPS and two FWS experts, will travel to Jakarta, Indonesia, from January 4-19, to deliver education and interpretation training to counterparts, under the USAID funded Indonesia Terrestrial Protected Areas project. Activity is funded by USAID/Indonesia.

INT Roundtable Tribal Discussions: Indian Affairs is in the early planning stages for a possible series of cross-border discussions between U.S. Tribes and Canadian/Mexican indigenous communities. Discussions will address violence against indigenous women, trafficking, and other issues that Tribes wish to discuss. These roundtable discussions will inform the ongoing annual trilateral working group meetings between the U.S., Canadian, and Mexican governments to address violence against indigenous women and girls. INT is supporting Indian Affairs to ensure coordination with State Department and the Canadian and Mexican governments.

INT Coordination of DOI Review of Description of Environmental Cooperation in North America: At the request of USTR, INT is coordinating review within DOI of brief factual summaries of environmental cooperation and trade-related transboundary environmental issues among the three countries that are parties to the U.S.-Mexico-Canada Agreement (USMCA), the successor agreement negotiated to the NAFTA. The summaries will be part of the informational materials accompanying the text of the USMCA when the Administration sends it to Congress.

INT Repatriation Ceremony with Embassy of Mexico: INT is working with NPS, DHS, State, Mexico's Foreign Affairs Ministry (SRE), and others to plan the repatriation of 500+ arrowheads and other artifacts that were illegally smuggled from Mexico into Big Bend National Park and confiscated there in April 2016. INT is working on a scheduling request shortly to determine Secretary Zinke's interest/availability in participating in a repatriation ceremony, likely to be held at the Mexican Embassy sometime late this year or early next.

AWARENESS

OIA USVI Gubernatorial Runoff Election: Since no candidate received a majority of the vote in the November 6 Gubernatorial election, a runoff election is being held on November 20 between former island Labor Commissioner Albert J. Bryan, Jr. (Democratic) and current Governor Kenneth E. "Ken" Mapp (Independent).

OIA CNMI Postponed Election Results: Delegate Gregorio Kilili Camacho Sablan (Independent) won reelection receiving 9,150 votes out of a total 14,349 votes cast. Governor Ralph Torres (Republican) also won reelection with 8,992 votes out of a total 14,342 votes cast.

OIA Typhoon Yutu: Recovery efforts led by FEMA and DOD continues. Due to rapid improvement on the typhoon recovery in Tinian, Tinian Mayor Joey San Nicolas announced that efforts will now begin focusing on long-term recovery. The typhoon damaged or downed 1,141 power poles, 676 transformers, and 671,220 linear feet of conductors on Saipan, and on Tinian, there are 797 downed or damaged power poles, 105 transformers, and 507,015 linear feet of conductors. In addition, while the Saipan International Airport opened back up to commercial operations, it can only accommodate a limited closed commercial flights, so many tourism locations, including the Imperial Pacific Casino, have closed until more tourists can reach the island.

OIA Guam GDP: The Bureau of Economic Analysis released estimates of gross domestic product for Guam for 2017, which show that real GDP increased 0.2. Percent in 2017 after increasing 0.3 percent in 2016. The growth in the Guam economy reflected an increase in consumer spending, which rose for the 7th year in a row. Overall, investment spending contributed negatively to the economy. Although territorial government spending on construction and equipment increased, this growth was offset by a decline in construction activity on defense and private sector projects. Exports of services, which consists primarily of spending by tourists, decreased after increasing for three years. Although total arrivals increased slightly, tourism spending decreased, reflecting declines in average spending by visitors.

OIA USVI Students Win First Place in HP Competition: Five University of the Virgin Islands students won the 2nd Annual Hewlett Packard HBCU Business Challenge competition on November 12. The competition is designed to inspire future talent, foster emerging careers in technology, and increase student business acumen. The students worked as a team to develop business plans tackling real-world challenges that are core to HP's business, including Personal Computer (PC) Services Innovation and Office Print Relevance.

INT Upcoming Official Senior Travel and Significant Meetings:

PETTY: Assistant Secretary for Water and Science Tim Petty will travel to Vancouver, Canada to participate in the DOS-led Columbia River Treaty negotiations from December 10-13.

Additional International Travel and Meetings:

FWS		
11/25/18	Japan	Jerome Ford, Ken Richkus, Nanette Seto, Peter Ward
11/26/18	Iceland, Denmark, China	Cynthia Jacobson
12/1/18	China	Richard Lanctot
12/1/18	Indonesia	Robert Register
NPS		
11/26/18	United Kingdom	Moss Rudley

11/26/18	Mozambique	Michelle Gray, Meredith Hardy, and David Morgan
11/27	Mozambique	Dave Conlin
12/1	Italy	Diana Allen

USGS

11/18/18	Indonesia	Jeremy Dale Pesicek
11/19/18	China	Stephen DeLong and Rufus Catchings
11/21/18	Costa Rica	Saud Amer
11/24/18	Brazil	Laura DeCicco, Lindsay Renee Carr, and Matthew Miller
11/24/18	Saudi Arabia	Ned Field
11/24/18	Egypt, Zambia	Jeff Doebrich
11/24/18	Costa Rica	Wayne Belcher

11/30/18	China	Brennan Nowak, Dennis Helder, and Christopher Engebretson
11/30/18	Italy	Kimberlie Perkins
11/30/18	Afghanistan	Robert Seal
12/01/18	Burma, Laos	Nina Burkhardt

INT International Memoranda of Understanding and Documents Under Development for Signature:

-Australia: Letter of Intent on critical minerals (addressing existing MOU), in development. Requested by the Secretary and his counterpart Minister Canavan. INT is working with USGS and Australian counterparts to finalize language and specify additional cooperative activities to be undertaken on critical minerals. We are awaiting further review from the Australians (they are currently reviewing the latest draft) as well as information about the Minister's availability.

-Israel: MOU to strengthen cooperation on biodiversity conservation, protected areas, and cultural and historical heritage, in development. Requested by Israeli government and recommended by U.S. Embassy Jerusalem, for signature by Secretary Zinke during a visit to Israel January 28-31. INT is coordinating review and clearance with relevant Israeli and State Department counterparts.

-The Netherlands: MOU on offshore wind energy cooperation, in surname. Requested by BOEM and Dutch counterparts, for signature in conjunction with a potential visit to the U.S. by the Dutch Prime Minister early 2019. INT is supporting BOEM as needed.

-New Zealand: MOU on wildland fire cooperation, in development. Requested by DOI and USDA to update existing wildfire arrangement, and continue mutual assistance on wildfires as needed, for signature by the U.S. Ambassador to New Zealand in early 2019 by U.S. Embassy New Zealand. INT is coordinating with Office of Wildland Fire, as they work with New Zealand counterparts and the Departments of Agriculture and State.

-Norway: MOU on energy cooperation, in development. Requested by DOI Energy Counselor and Deputy Chief of Staff, for Secretarial signature when the Norwegian counterpart travels to Washington, DC, early 2019. INT is supporting BOEM as needed, and BOEM is working with Norwegian counterparts and Department of State.

-Vietnam: MOU to strengthen cooperation on law enforcement to combat wildlife trafficking, in development. Requested by FWS law enforcement, Department of State, and Vietnamese counterpart, for senior-level signature when the Vietnamese counterpart travels to Washington, DC, early 2019. INT is coordinating with FWS Office of Law Enforcement.

ASSISTANT SECRETARY FOR LAND AND MINERALS MANAGEMENT

Week Ahead Schedule of Meetings, Hearings, and Travel

ASLM Joe Balash will be in Washington, D.C. attending regularly scheduled meetings.

Principal Deputy Assistant Secretary Casey Hammond will be in Washington, D.C. attending regularly scheduled meetings.

Deputy Assistant Secretary Gary Lawkowski will be in Washington, D.C. attending regularly scheduled meetings.

BSEE Director Scott Angelle will be on annual leave on 11/26

BLM Deputy Director Brian Steed will be in Washington, D.C. attending regularly scheduled meetings.

Immediate Announcements and Actions (within the next 14 days)

Bureau of Land Management

NEW ITEMS

November 28. BLM-WY. The Casper Field Office will offer for sale by competitive bid 300,178 tons of leonardite from 151 acres of land in Converse County, Wyoming, with a contract lasting a maximum of 10 years. The BLM will sell the material in one lot. Leonardite is a mineral used in drilling mud and as an amendment to agricultural fields. Interested parties may submit bids in person at the field office. The sale is not controversial, and the BLM does not anticipate media interest. (11/16/18)

November 30. The Oregon State Office plans to issue a decision regarding Ascot Resources' application to conduct hardrock mineral prospecting at Goat Mountain in the Gifford Pinchot National Forest in Washington. The BLM is responsible for issuing the prospecting permits. The Forest Service consented to issuance of the prospecting permits on April 13, 2018. The proposal is to drill 63 less-than-3-inch holes from 23 pad sites. All drill sites are within or adjacent to existing USFS forest roads or decommissioned former logging and mineral exploration roads. Minerals applied for are copper, molybdenum, silver, gold, and associated minerals. This issue is controversial and has generated significant media and Congressional attention over the years. (10/15/18)

November 30. BLM-CO. The Colorado River Valley Field Office will release a draft business plan for public review as an initial step to modifying its campground fee structure. Currently, only two of its six campgrounds charge fees for camping - $10 per night. Under the proposal, all six campgrounds would charge $20 per night for camping, and a new $5 day-use fee would be charged at the popular Wolcott boat ramp on the Eagle River. The fees are needed to fund the necessary maintenance and improvements at these facilities. Following the public comment period, the Field Office will present the proposal to the State and Washington offices. Recreation fee increases must also be approved by the Northwest Resource Advisory Council, which will consider the proposal at a future meeting in 2019. Before implementing any new recreation fees, the Western Slope No Fee Coalition, will likely oppose the fee proposal. If approved, the Field Office anticipates implementing the new fees in summer 2020. (11/16/18)

November 30. BLM-CO. The San Luis Valley Field Office plans to post the Environmental Assessment and Decision Record (DR) for the acquisition of the Treasure Pass Diversion Ditch. A 30-day appeal period will commence before the field office closes on the property. The property will be acquired with $2.76 million appropriated by Congress in Fiscal Year 2016 under the Land and Water Conservation Fund. The acquisition will include a water right, a ditch easement across land managed by the U.S. Forest Service and a constructed ditch infrastructure. The water supply will be used to support wetlands management objectives and recreational/sportsmen use at the Blanca Wetlands Area of Critical Environmental Concern. (11/16/18)

November 30. BLM-UT. The Price Field Office will release for public review and comment an Environmental Assessment for the North Huntington Grazing Permit Renewal. The field office is processing grazing permit renewal application from Hatch Livestock Company for 46 AUMs on 1,300 acres of public land north of Huntington in Emery County. The comment period will run for 15 days. This proposal may garner interest from Western Watersheds Project. (11/16/18)

November 30. BLM-UT. The Price Field Office will release for public review and comment an Environmental Assessment for the Swasey Boat Ramp Extension Project. The Field Office has completed the EA to improve the boat ramp to reduce safety hazards for approximately 6,500 annual river users in Desolation and Gray Canyons. The comment period will run for 15 days. (11/16/18)

December 5 and 6. BLM-NM will hold an oil and gas lease sale for 114 nominated parcels administered by BLM-NM throughout New Mexico, Oklahoma and Texas totaling 89,320 acres. The parcels are within the jurisdictions of the Rio Puerco, Roswell, Carlsbad, Oklahoma and Farmington Field Offices. (11/16/18)

UPDATED ITEMS

Mid- Late November. BLM-AK anticipates publishing a Federal Register notice to revoke seven Public Land Orders (PLOs) issued in 1972 by the Department of the Interior. The package is currently with the ASLM for review (DTS Lands 186). This order will affect 1,153,609 acres of BLM-managed land withdrawn near the Fortymile area of Alaska. The action will open those acres to surface entry, mining and mineral leasing, subject to valid existing rights. The PLOs were issued pursuant to Sec. 17(d)(1) of the Alaska Native Claims Settlement Act (ANCSA). Over the years, ANCSA Sec. 17(d)(1) withdrawals have been amended, modified, or corrected, and the Eastern Interior Fortymile Resource Management Plan and Record of Decision, finalized in 2016, recommended partial revocation of these withdrawals. ASLM Plans to sign the PLOs in mid November (7/20/18)

November 28. BLM-MT and BLM-WY will publish Notices of Intent to prepare Supplemental EISs and potential amendments for the BLM-MT Miles City and BLM-WY Buffalo approved RMPs in response to a court order. In March 2018, the U.S. District Court of Montana found the two RMPs violated NEPA and the Administrative Procedures Act with respect to range of alternatives for coal leasing and air quality cumulative effects analysis. The Court ordered the BLM to complete supplemental EISs by November 29, 2019. The BLM anticipates hiring a contractor to assist with NEPA writing and administrative record preparation. The NOIs were approved by the DOI Internal Review Team and are scheduled for publication on November 28. (10/12/18)

November 30. BLM-ID. The Boise District anticipates submitting to the DOI Assistant Secretary for Land and Minerals Management a new Record of Decision for the Final Environmental Impact Statement (EIS) for the Bruneau-Owyhee Sage-Grouse Habitat (BOSH) Project. The Final EIS, which was developed in cooperation with state and federal agencies, analyzes the removal of encroaching Western juniper on 726,000 acres of sagebrush steppe in Owyhee County. This project builds on proactive land management policies and practices to conserve the region's remaining sagebrush habitat, which supports significant economic activity such as ranching and recreation, as well as abundant wildlife including mule deer, elk, pronghorn antelope and golden eagles. (2/21/18)

Early December. BLM-WY plans to release the Final EIS for the Riley Ridge to Natrona Pipeline project (RRNP), pending approval by the DOI Internal Review Team. The RRNP is a FAST-41 project that consists of three right-of-way applications: two for a 240-mile long underground pipeline and one for a 230-kV transmission line. The project also includes proposals for two hydrogen sulfide injection wells and other project components like roads, valves and flow lines. WO/DOI canceled the original October 26 briefing and has tentatively scheduled a new briefing for November 30. (10/16/18)

Late-November. BLM-CA anticipates signing a Decision Record for the Keystone Exploratory Drilling Project. NPS is a cooperating agency and will issue a separate decision, because of water rights to a spring and an existing water pipeline that crosses the Park. All drilling would occur outside the National Park and would be supported by existing roads and pads, with several of the drill sites on existing road surfaces. Less than one acre of new disturbance is anticipated. By regulation, the area in which the project lies requires a plan modification rather than a notice; while a plan already existed, modifications were significant enough to warrant an EA to analyze potential effects. This project may draw attention from environmental organizations. (4/20/18)

Early December. BLM-ID. The BLM expects to publish the the Draft Environmental Impact Statement (EIS) and Notice of Availability for the proposed Caldwell Canyon Mine by early December pending the outcome of the NEPA Review Team briefing on November 20. (8/10/18)

Ongoing. BLM-CA. The BLM Litchfield Corrals facility has received 653 wild horses gathered by the Modoc National Forest from its Devil's Garden Herd Territory. Gather operations have concluded with 932 wild horses removed. Horses received at Litchfield will be available for private placement through BLM's adoption and sales programs.

Late November. The BLM-AZ State Office submitted a Notice of Proposed Withdrawal Extension to extend Public Land Order No. 7384 in order to withdraw 1,988 acres from surface entry and mining for an additional 20-years. This extension would protect the Bureau of Reclamation's Lake Pleasant New Waddell Dam investment, which is a component of the Central Arizona Project's (CAP) Regulatory Storage Division. Publication of the notice also provides an opportunity to comment on the application and to request a public meeting. The timing for this extension is critical because the existing withdrawal expires on April 19, 2019, at which time the area will be open to the general land laws, including location and entry under the United States Mining Law. To extend the PLO prior to the April 19, 2019 expiration date and allow for the required 90-day public comment period, the Notice of Withdrawal Extension needs to be approved and published in the Federal Register as soon as possible. The package is under review in Washington DC. (8/17/18) DTS L190

Early December. BLM-CO. The Uncompahgre Field Office has prepared the Notice of Proposed Supplementary Rules for Travel Management on Public Lands in Montrose, Delta, San Miguel, and Ouray counties. The Uncompahgre Field Office is planning for publication in the Federal Register in mid-November (pending WO and DOI approval) and the Federal Register package is currently under review in Washington. (8/21/18) DTS2294

Late November. BLM-OR/WA. Lakeview District will brief DOI on the Tucker Hill Perlite Mine Expansion FEIS this week (Nov. 13-16) and expects the FEIS and ROD with EPA on Dec 7

Late November. BLM-WY. The Rock Springs Field Office will release the North Dutch John Well #1 EA, FONSI and DR. Public interest in the pending decision likely will be high because the proposed well is located in the Greater Little Mountain Area, a popular hunting and fishing destination. The proposed action includes drilling a single well, constructing a well pad, upgrading a two-track road and building an access road. The proponent has committed to several mitigation measures including moving the well ped location, applying timing restrictions for crucial mule deer winter range, installing erosion control devices, burying associated pipelines and managing weeds. The BLM determined the impacts to the area would be minimal due to the mitigation measures agreed on by the proponent. (10/23/18)

December 7. BLM-MT/DK. The anticipated publication date in the Federal Register of a Notice of Availability for the Lewistown Draft Resource Management Plan (RMP) and Draft Environmental Impact Statement (EIS) has been set. The Draft RMP/EIS will address management of 651,200 surface acres and 1,196,800 acres of federal mineral interests in central Montana for the next 10-15 years. Key issues include travel management, access, oil and gas leasing, and timber sales. (6/15/18) DTS 2231 / FRN at DTS 2233

December 7. BLM-MT/DK. The anticipated publication date in the Federal Register of a Notice of Availability for the Missoula Draft Resource Management Plan (RMP) and Draft Environmental Impact Statement (EIS) has been set. The Draft RMP/EIS will address management of 163,000 surface acres and 268,000 acres of federal mineral interests in northwestern Montana for the next 10-15 years. Key issues raised in public meetings conducted by the Missoula Field Office include recreation along the popular Blackfoot River, forestry management, hunting, and access to public lands. The RMP will incorporate regional fish and wildlife conservation strategies for species such as the grizzly bear and Canada lynx, as well as new information related to recreation uses, land acquisitions, and forest health. (6/15/18) DTS 2230/FRN at DTS 2232

December 14. BLM-ID plans to issue final decisions for the Rockville Grazing Allotment that address protests received on the proposed decisions. BLM-ID State Office and Boise District Office staff briefed the BLM Director on these decisions on November 7. (3/23/18)

December 14. BLM-ID. BLM-Idaho expects to issue 22 Curlew Grazing Permit Renewal decisions after completion of the Environmental Assessment, Determination, and Finding of No Significant Impact. (7/27/18)

ONGOING ITEMS

November 26. BLM-CO. The White River Field Office will release a preliminary Environmental Assessment (EA) of a trailhead expansion proposal from the U.S. Forest Service for the White Creek Trail, a popular hiking and horseback trail, particularly for hunters. The majority of the trail is on National Forest lands, but the beginning of the trail crosses a 40-acre parcel of BLM land. The Forest Service has applied for a right-of-way to expand the parking area pull-out to accommodate more vehicles and horse trailers and to

address current safety concerns. At present, visitors park their vehicles along a county road. (11/9/18)

November 28. BLM-CO. The Little Snake Field Office is hosting a public hearing to receive comments on the Environmental Assessment (EA) for Peabody Twentymile Coal LLC's Coal Lease-by-Application, fair market value and maximum economic recovery. The notice for the hearing and the 30-day public comment period published in the Federal Register on Nov. 6. The public comment period will close December 6, 2018. (5/29/18)

November 29. BLM-ES will hold a sealed-bid competitive coal lease sale at the Southeastern States District Office in Flowood, Mississippi. A 160-acre Federal coal tract will be offered in Jefferson County, Alabama, adjacent to the existing Narley Mine No. 3. This Federal coal is being offered for sale after careful review by the BLM-Eastern States (BLM-ES) in response to a coal Lease by Application (ALES-55199) filed by the Best Coal Company. The BLM completed an Environmental Assessment for this coal lease sale following a public hearing on November 20, 2014, and issued a Decision Record and a Finding of No Significant Impact on February 16, 2015. This lease was offered for sale April 14, 2016, however, bids received at that time did not meet the Fair Market Value. As the Federal coal vein is accessible in a currently operating mine, jobs may be lost if it cannot be developed.

November to Early December. The BLM-CA State Office submitted a draft Environmental Impact Statement (EIS) Developmental Briefing Scheduling Request on November 5 to the Department Review Team to discuss the summary of public comments received on the Bakersfield Field Office's Notice of Intent to prepare a supplemental EIS and potential Resource Management Plan amendment on the potential impacts of hydraulic fracturing during new oil and gas production. This planning effort is in response to a 2017 settlement agreement. The briefing request is in preparation for public release of the scoping report in early December. (10/30/18)

December. BLM-AK anticipates releasing the Coastal Plain Oil and Gas Leasing Program Draft Environmental Impact Statement (EIS) to the public. Publication of the Notice of Availability in the Federal Register begins a 45-day public comment period. BLM-Alaska plans to hold public meetings on the Draft EIS in Anchorage, Arctic Village, Fairbanks, Fort Yukon, Kaktovik, Utqiaġvik, Venetie, and Washington, D.C. (9/20/18)

Late November. WO-200 & BLM-CA/NV/ID/UT/WY/CO/OR. The seven states plan to publish Final Environmental Impact Statements (EISs) and Proposed Plan Amendments for the seven states associated with Greater Sage-Grouse/sagebrush conservation plans adopted in 2015. The target publication date for these documents and the associated Notices of Availability (NOAs) may need to be adjusted to allow state government partners and the Department of the Interior time to develop Memorandums of Agreement that address DOI's new policy on compensatory mitigation. (10/12/18)

Late November. BLM-CO. The Grand Junction Field Office is preparing a Notice of Realty Action to convey 188.04 acres to the Grand Junction Regional Airport to accommodate a

second runway at the airport. The conveyance is in conformance with the Grand Junction RMP and the Field Office is planning for a publication in the Federal Register in late November. (9/11/18)

November 26. BLM-NV. The public comment period ends for the Las Vegas Field Office's proposed recreation and public purposes lease of approximately 15 acres of public land to the Clark County School District for an elementary school and related facilities. The proposed elementary school is located in the southwest area of the Las Vegas Valley. The 15 acres would include five school buildings, parking for school staff, public parking, busing with pick-up and drop-off points for students, elementary classrooms, fenced-off play area, areas for basketball courts, ball fields, bike racks, shaded rest areas, turf play area, playgrounds, tetherball court area, and utilities.

Late November. BLM-OR/WA. Lakeview District is responding to public comments regarding a draft Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) analyzing the potential effects of a wild horse gather and fertility control plan for the 399, 714-acre Beatys Butte Herd Management Area. The document is expected to be signed by the end of November 2018, and a gather scheduled in the fall of 2019. (10/23/18)

Late November. BLM-AK is preparing a Federal Register notice providing constructive notice of a decision approving 84.05 acres for conveyance to Chugach Alaska Corporation, the Alaska Native Regional Corporation for the Chugach Region. Chugach Alaska Corporation will receive title to the surface and subsurface estates of certain lands under Sec. 14(h)(1) of the Alaska Native Claims Settlement Act (ANCSA). Conveyance of the lands being approved will move Chugach Alaska Corporation further in completing its entitlement under ANCSA. There is no action associated with this Notice other than providing constructive notice and it is not expected to be controversial. (10/26/18)

Late November. BLM-CA. The Environmental Services Associates (ESA), an environmental consulting firm under contract with the Santa Margarita Water District, will submit a SF299 ROW application and other necessary information to the BLM for a water pipeline right-of-way (ROW) in the Cadiz Valley, within San Bernardino County. ESA representatives met with the BLM California State Office staff in October to discuss the next steps, which include submitting the ROW application along with the necessary resource surveys, establish a Cost Recovery Account, support the permitting process, including potentially providing funding for a third party contractor to develop the necessary ESA, NHPA, and NEPA compliance documentation. The Needles FO is awaiting these actions from ESA. The project is highly controversial. The Department and the BLM have received a number of letters in both support and opposition for the project, including from Cadiz Inc., labor unions, water districts, and environmental organizations. Senator Feinstein (D-CA) is also opposed to the project. A bill to prevent the project was introduced in the state legislature and advanced, but did not pass. (Originally entered 9/18/18; updated with next steps 10/19/18))

Late November. BLM-NV. The Mount Lewis Field Office will be issuing the Record of Decision (ROD) for the 3 Bars Ecosystem and Landscape Restoration Project—a

programmatic Environmental Impact Statement (EIS) proposing to treat up to 127,000 acres of sagebrush steppe, riparian habitat, pinyon juniper woodland, and aspen groves within a 749,810-acre area in part of the field office. The Notice of Availability for the Final EIS was published October 18, 2016. (8/24/18)

Late November. BLM-UT. The St. George Field Office and Utah State Office have been working with Utah Aspen Development, LLC, and Green Springs Aspen, LLC, on the purchase of two parcels of land totaling 165 acres. These parcels are located in the Beaver Dam Wash National Conservation Area (NCA) and will be managed consistent with the objectives of the NCA management plan. The appraisals are complete and a preliminary title opinion has been requested. Following approval of the title, the BLM will accept the title transfer from the respective entities via Warranty Deeds in accordance with the approved escrow instructions. A final Certificate of Inspection and Possession will then be completed and the final title opinion obtained. (10/9/18)

Late November. BLM-WY. The Buffalo Field Office will issue the I-90 Corridor Travel Management Plan (TMP) EA, following approval by WO/DOI. WO/DOI paused this effort while they review the Draft TMP. The planning area contains 108,437 acres of BLM-administered land along I-90 between Buffalo and Gillette, Wyoming. Most of the planning area is in Johnson County, with the southeastern portion in Campbell County. The I-90 corridor has a high density of oil and gas wells and associated infrastructure at or near the end of production. As required by regulation, once the wells reach the end of their life cycle, the well pads, roads and other infrastructure must be reclaimed or left in place to maintain public access. BLM-WY analyzed alternatives that would keep certain oil and gas roads open and sought input on the alternatives during three public scoping meetings in June. During the scoping period, local landowners expressed their desire for the roads identified in the alternatives to be closed, as these roads primarily provide access only to private lands or isolated parcels of public lands. Environmental groups created controversy by proposing that the BLM was allowing oil and gas operators to neglect reclamation obligations by leaving these roads open. Therefore, the BLM selected an alternative that addresses the concerns raised by the public and that will allow operators to continue their reclamation obligations, closing 521 miles out of a total 624 miles of oil and gas-related roads. The roads remaining open will provide the increased level of access desired by local landowners, as identified during the scoping period. (10/12/18)

Late November. BLM-NV. The Battle Mountain District, Mount Lewis Field Office will publish the Supplemental Environmental Impact Statement (EIS) for the Eureka Moly-Mount Hope Project. On December 28, 2016, the United States Court of Appeals for the Ninth Circuit partially reversed and vacated the BLM's decision with respect to certain aspects of the agency's air quality and cumulative air impacts analysis. The court also remanded to the BLM to clarify the status of any public water reserves (PWR). The Supplemental EIS will provide updated information and discussion regarding certain air quality data and analysis used in the original EIS, and will provide clarifying language regarding PWRs potentially impacted by the project. The district is currently preparing briefing materials and will be sending up a briefing request in mid-November. (8/24/18)

Late November. BLM-ID. The Shoshone Field Office anticipates a Notice of Realty Action to publish in the Federal Register identifying certain public lands (13.78 acres) in Lincoln County as suitable for classification for conveyance to Lincoln County under the provisions of the Recreation and Public Purposes Act (R&PP). Lincoln County proposes to use the land for operating and maintaining a municipal solid waste transfer station that accepts only non-hazardous waste for transfer to the Milner Butte Landfill. In 2015, Lincoln County applied to acquire up to 30 acres of BLM-managed public lands under the R&PP Act for the purpose of operating and maintaining an existing solid waste transfer station, which was mistakenly constructed on public lands in 1993-94 without authorization. The BLM and Lincoln County have agreed to resolve the unauthorized use through a Memorandum of Understanding until the public lands are conveyed to the County. Conveyance of the public land via the R&PP Act for uses outlined in the R&PP Plan of Development will allow Lincoln County to continue utilizing the existing waste transfer station in its current location to accept only non-hazardous and household hazardous waste as permitted by Idaho Department of Environmental Quality. (8/28/18)

Late November. BLM-AK. The proposed Ambler Road project would provide an all-season industrial access road to promote exploration, development, and production of mineral resources in the Ambler mineral belt in northwest Alaska's Kobuk Valley. BLM is the lead Federal agency for the Environmental Impact Statement (EIS) and is currently anticipating not receiving full funding from the proponent to complete the EIS process until late November. The schedule depends on the applicant's decision to continue to fund the cost-recovery agreement with the BLM and to fund the third-party contractor to begin drafting the EIS. A Notice of Availability for the Draft EIS must be published by December 30 for the project to be in accordance with the timelines outlined in Secretarial Order #3355, which require a Record of Decision for the EIS be signed in April 2019. The EIS process dates will be revised once funding is received from the applicant. (9/28/18)

November 26. BLM-NV. The Ely District, Caliente Field Office plans to begin the Silver King Herd Management Area (HMA) wild horse helicopter gather to remove up to 980 wild horses. The gather is necessary due to over-population, the presence of Greater Sage-Grouse, public safety, and private lands issues. The gather is part of the approved 2018 National Gather Schedule dated May 25, 2018, but was pushed back into FY19 due to higher-priority emergency gathers. The appropriate management level for the HMA is 60-128, and the current population is estimated at 1,224 animals. (9/4/18)

November 28. BLM-UT. The BLM-Utah will hold a competitive sale of federal coal on approximately 2,114 acres 30 miles south of Panguitch near Alton, Utah. The tract contains approximately 40.9 million tons of in-place coal and an estimated 30.8 million tons of recoverable coal. The sealed bid opening will take place at the Utah State Office in Salt Lake City. The BLM anticipates that the sale will be considered controversial but is not aware of any planned protests. The BLM will publish a legal notice for three weeks in the legal section of newspapers in Kanab (Kane County) where the tract is located and St. George (Iron and Washington Counties) where the largest population in the area resides. (9/11/18) DTS 2345

November 29. BLM-OR/WA. The Federal Energy Regulatory Commission (FERC) is conducting a meeting with the Cooperating Agencies (including BLM) on the Pacific Connector Gas Pipeline Project in Portland, Oregon. The FERC recently issued a notice of schedule anticipating the issuance of a final order on November 29, 2019. This is a FAST-41 and a One Federal Decision project. The proposed Pacific Connector Gas Pipeline is a 235-mile, 36-inch-diameter high-pressure natural gas transmission line that would traverse the state of Oregon. If constructed, the pipeline would have the capacity to move approximately one billion cubic feet of natural gas per day. Approximately 41 miles of the project would cross BLM public lands and approximately 30 miles of the project would cross national forest system lands managed by three national forests. (10/9/18)

November 29. BLM-AZ. The public comment period ends for the Draft Environmental Impact Statement (DEIS) for the Proposed Ten West Link Transmission Line Project and draft amendments to the Yuma Field Office Resource Management Plan and California Desert Conservation Area Plan. The next step will be to evaluate the comments and prepare the Final EIS. (7/20/18)

November 30. BLM-AZ. The public comment period ends for the Kingman Travel Management Plan and associated environmental assessment (EA) for BLM-managed public lands near the communities of Kingman, Wikieup, Bullhead City, Dolan Springs, Meadview, and Golden Valley in Mohave County.

Early December. BLM-CO. The Gunnison Field Office has prepared a Notice of Realty Action on its proposal to convey approximately 43.09 acres of public land under the Recreation and Public Purposes Act to the Town of Lake City. The land is located about one mile south of Lake City. The Lake City Ski Hill community ski area would continue to operate under the conveyance. The field office is planning for a December publication in the Federal Register (pending WO and DOI approval).(4/24/18) DTS2329

Early December. BLM-ID. The Four Rivers Field Office is working with the City of Caldwell regarding the Mallard Park Recreation and Public Purposes (R&PP) patent. The City of Caldwell currently holds an R&PP lease with the BLM and is seeking patent of those lands, which total 29.57 acres. Developments constructed since the lease was instituted include sidewalks, parking lots, vault toilets, multiple gazebos, sports courts, an amphitheater and landscaping. The park has widespread support. This project is expected to be completed as soon as the environmental site assessment is completed. The patent will be issued to the City of Caldwell in December. (10/16/18)

Early December. BLM-OR/WA. The Burns District plans to begin conducting research to evaluate the safety, complication rate, and feasibility of ovariectomy via colpotomy (spay) on wild horse mares at Oregon's Wild Horse Corral Facility. Since the release of the draft Environmental Assessment (EA) for this research (June 29, 2018), very strong activist campaign has arisen in opposition. The Cloud Foundation, American Wild Horse Campaign and Animal Welfare Institute jointly filed on September 21, 2018 for Injunctive Relief in the District of Oregon against the spay research. The complaint is specific to the spay procedures and does not involve the pending gathering of wild horses (expected to begin October 2)

from the Warm Springs Herd Management Area, which was also part of the EA. The complaint focuses heavily on alleged violations of First Amendment rights to observe and document the research, even though in-person observation from less than fifteen feet away is allowed, along with photography/filming. All public observation opportunities were developed with the safety of the horses, handlers, veterinarians, and public in mind. (9/25/2018)

Early December. BLM-ES. The BLM-Eastern States anticipates publishing a Federal Register notice for the solicitation of bids for a competitive 10-year renewable lease of the Equestrian Facility at the Meadowood Special Recreation Management Area (SRMA) near Lorton, Virginia. (4/20/18)

Early December. BLM-ES expects to publish in the Federal Register a Public Land Order for the U.S. Coast Guard's relinquishment of Lot 22 of the Jupiter Inlet Lighthouse Outstanding Natural Area (ONA) in Florida. (4/11/18)

Early December. BLM-ES. The BLM-Eastern States proposes transfer by quiet title deed a former railroad right-of-way (ROW) to the Village of Forsyth in Macon County, Illinois. The transfer was requested by the Village of Forsyth for use as a recreational trail, under authority of the National Trails System Act. The ROW is 200 feet wide and totals approximately 18 acres. This action has been reviewed by the Pittsburgh Field Solicitor's Office and the Washington Solicitor's Office. The transfer is supported by Congressman Rodney Davis (R-13-IL). (4/20/18)

Early December. BLM-NV. The Winnemucca District anticipates releasing the Notice of Intent to prepare an Environmental Impact Statement (EIS) for a proposed expansion of the Coeur Rochester and Packard Mines in the Federal Register. The silver mine currently employs about 302 people and is located approximately 26 miles northeast of Lovelock, in Pershing County, Nevada. (10/30/18)

Early December. BLM-WY expects to publish in the Federal Register the Notice of Availability for the Draft Environmental Impact Statement (EIS) for the proposed Moneta Divide Oil and Gas Development Project. Publication will begin a 90-day public comment period. Located near Lysite, Wyoming, the proposed project could recover up to 18 trillion cubic feet of natural gas and 254 million barrels of oil over its estimated 65-year lifespan and could support approximately 6,400 jobs during its 15-year development phase. The Draft EIS analyzes: amendments to the Casper Resource Management Plan, including establishment of a Production Area and increased protections for the Cedar Ridge Traditional Cultural Property and potential impacts to approximately 1.2 million acres of Greater sage-grouse Priority Habitat Management Areas. The Review Team briefing for this project is scheduled for November 30. (6/22/18)

Early December. BLM-CO is preparing a Notice of Proposed Withdrawal and Transfer of Jurisdiction of two isolated BLM-managed parcels totaling 120 acres in Mesa County to the National Park Service's Colorado National Monument. The parcels are adjacent to the National Monument and are not contiguous with other BLM lands. The Colorado National

Monument's 2005 General Management Plan identified the two parcels as important for improving public access to popular trailheads. The notice would segregate the lands from location and entry under the mining laws for two years while studies are completed to recommend a 50-year withdrawal and transfer of jurisdiction. The segregation would not close the lands to mineral or geothermal laws, or mineral material laws. BLM-CO is planning for a December 2018 publication in the Federal Register(pending WO and DOI approval). (7/20/18)

Early December. BLM-ID. The Burley Field Office will issue a decision on the proposed modification of an existing mining Plan of Operations submitted by Sawtooth Stone LLC. The proposed modification would expand current operations by 33 acres to facilitate the quarrying of "Oakley Stone," a locatable mineral that has been determined to be an uncommon variety of micaceous quartzite. A 30-day scoping period for the plan of operations began in late October and a decision anticipated early December. (10/16/18)

Early December. BLM-NV will be requesting to brief the Review Team on the Draft EIS Development for the Yellow Pine Solar Project. In 2016, Yellow Pine Solar, LLC requested an amended right-of-way authorization for the construction, operation, maintenance, and decommissioning of a 250-megawatt photovoltaic power plant.

Early December. BLM-CO. BLM Colorado will close on its purchase of Eagle County Open Space's Two Bridges site (16.98 acres) along the Upper Colorado River for $500,000 through the Land and Water Conservation Fund. The appraised fair market value of the property (located in the Colorado River Valley Field Office) is $850,000. The acquisition supports perpetual river access throughout the Upper Colorado River Special Recreation Management Area for fishing and other water-related recreation. The SRMA is heavily used throughout the year. (10/9/18)

Early December. BLM-CO will close on its purchase of Eagle County Open Space's State Bridge site (11.5 acres) along the Upper Colorado River for $1 million through the Land and Water Conservation Fund. The appraised fair market value of the property is $1,425,000. The acquisition supports perpetual river access throughout the Upper Colorado River Special Recreation Management Area for fishing and other water-related recreation. The SRMA is heavily used throughout the year. (10/9/18)

December 4. BLM-AZ. The Hassayampa Field Office will hold a public meeting regarding a proposed Recreation and Public Purposes (R&PP) Act lease of a 1,046-acre parcel of public land in the Vulture Mountains for recreation development by Maricopa County. Under the proposal, the Maricopa County Parks and Recreation Department would develop a variety of recreation facilities at the site, including a visitors center, picnic tables and shelters, archery range, equestrian facilities, nature playground, restrooms with showers, campgrounds and interpretive kiosks. Portions of the Vulture Mine Road would also be improved and realigned by the Maricopa County Department of Transportation in order to improve access to the area. BLM has prepared an environmental assessment (EA). The EA provides analysis of the direct, indirect and cumulative effects of the R&PP lease and the right-of-way for the road improvements. The meeting will be held in Wickenburg, Ariz., and include presentations by

the BLM and Maricopa County. A 30-day public review period will also run from Nov. 20 until Dec. 19. (11/9/18)

December 6. The BLM-ES will participate in a second conference call with DoD and other parties who have an interest in energy development, and the gas storage agreements currently in place for Ft. Knox. An initial conference call was held on October 18, 2018, with personnel from the Office of the Deputy Assistant Secretary of the Army for Energy and Sustainability, Fort Knox, and BLM Southeastern States District Office. Discussion was centered on data sharing for 26 legacy gas wells. One of the topics for the December 6 call will be the development of an Implementation Plan for the newly enacted legislation addressing oil and gas development. The BLM is working in coordination with Fort Knox, Louisiana Gas & Electric, and the state of Kentucky to implement the new legislation and facilitate the successful execution of each entity's mission, including DoD's goal to achieve energy resilience at Fort Knox. (10/26/18)

December 10-13. BLM-NV. The Navy will host public meetings to discuss land withdrawals associated with the Fallon Naval Air Station expansion. The meetings will be held at the following locations: Hawthorne and Gabbs on December 10; Austin and Eureka on December 11; Fallon on December 12; Lovelock and Reno on December 13. These public meetings are pursuant to Public Land Order 7873, published in the Federal Register August 31, 2018: https://bit.ly/2qhEhHz (DTS 2127) (10/29/18)

December 10. BLM-UT. The Salt Lake Field Office, in coordination with the Utah State Office, plans to submit to the BLM Washington Office a recommendation to extend a 20-year withdrawal of 2,714.22 acres of public land from location and entry under the U.S. mining laws to protect aspects of the Central Utah Project. The existing withdrawal is located in the Uinta Wasatch Cache National Forest, in Utah County, and will expire in December 2019. The Central Utah Project is administered by the Secretary of the Interior through the Office of the Assistant Secretary for Water and Science. The project's Diamond Fork System consists of pipelines, tunnels, power plants, transmission lines, access roads, and other related structures that convey water from Strawberry Reservoir to the Wasatch Front. The Utah County Commission and the Governor's Office (via the Public Lands Policy Coordination Office) have expressed support for the withdrawal extension. (5/18/18)

December 11. BLM-WY plans to offer three parcels totaling 720 acres in its quarterly competitive oil and gas lease sale. The BLM originally planned to offer 581 parcels in this sale, but delayed leasing 579 parcels until February to comply with a District Court order mandating longer public input periods for lease sales in sage-grouse habitat. (11/9/18)

December 12. BLM-AK is scheduled to hold an oil and gas lease sale for the National Petroleum Reserve in Alaska (NPR-A). The BLM received nominations for 254 available tracts (approximately 2.9 million acres) for lease. Currently, there are 196 authorized leases in the NPR-A covering 1,384,352 acres. This lease sale is the 14th since 1999 and will be the second to occur via video livestream. The Federal Register package with the Notice of the Sale published November 9. (10/5/18) DTS 2370

December 12-13. BLM-AK. The Western Arctic Caribou Herd Working Group invited BLM-Alaska to present an update on the Ambler Road Environmental Impact Statement (EIS) at the 2018 meeting in Anchorage. On June 18, 2018, the Working Group submitted a letter to Central Yukon Field Manager Tim LaMarr requesting that the Ambler Road EIS not be subject to the NEPA page and time limits imposed by Executive Order 13807 and Secretarial Order 3355. The group asked that the BLM also address its concerns at the December meeting. The group includes subsistence users, Alaskan hunters, reindeer herders, hunting guides, transporters, and conservationists. The Ambler Mining District Industrial Access Project is a proposal from the Alaska Industrial Development and Export Authority (a state economic development agency) to build a 211-mile long gravel industrial road connecting the Ambler Mining District with the Dalton Highway. The Ambler Road project will cross through the Western Arctic Caribou Herd range. (10/5/18)

December 13. BLM-CO will hold its quarterly oil and gas lease sale. The BLM is offering 23 parcels totaling approximately 8,347 acres in the Colorado River Valley, Grand Junction, Kremmling, Little Snake, Royal Gorge and White River field offices. BLM Colorado submitted a memo on October 2, 2018, to move parcels in Greater Sage-Grouse, big game habitat and parcels in the North Fork Valley to a later sale. BLM Colorado is assessing the October 18, U.S. District Court of Colorado opinion on the Colorado River Valley Field Office Resource Management Plan, and its potential impacts on the field office's parcels for the upcoming sale. The sale's protest period closed Nov. 5. (11/9/18)

December 14. BLM-ID. The Bruneau Field Office anticipates issuing two proposed grazing decisions to renew grazing permits, restore riparian areas, protect cultural resources, and incorporate range improvement projects across 187,537 acres of BLM-administered lands in the Big Springs Allotment. The lands affected lie entirely within a Greater Sage-Grouse Priority Habitat Management Area and contain Wilderness Areas and Wild and Scenic River segments. The Environmental Assessment (EA) was released on August 30, 2017, for public review, and the field manager has been meeting with permittees, state and federal agencies, and other interested publics to address comments on the EA before issuing any decisions. There is no anticipated reduction in Animal Unit Months as a result of the forthcoming decisions. Three environmental groups (Wilderness Watch, Western Watersheds Project, and WildLands Defense) are expected to protest and appeal the decisions. (2/7/18)

Mid-December. BLM-NM. The Las Cruces District Office plans to publish the Final Environmental Impact Statement for the Copper Flat Copper Mining Project. The New Mexico Copper Corporation submitted a proposed mining plan of operations (MPO) that would re-establish the Copper Flat Copper Mine, a poly-metallic mine and processing facility near Hillsboro, N.M., that would produce copper, gold, silver, and molybdenum. If approved, the project is expected to provide 170-270 jobs over the 12-to-16-year life of the mine. The proposed MPO is based on the plan of development the Quintana Mineral Corporation used in its 1982 Copper Flat mining operation. The MPO includes upgrades and modifications based on current engineering designs and regulations and was intentionally developed to re-use the existing foundations, production wells, and water pipeline that were used by the Quintana operation. (5/25/18)

Mid-December. BLM-NV. The Battle Mountain District, Tonopah Field Office will publish the Draft Environmental Impact Statement (EIS) for the Gemfield Mine Project.

Bureau of Ocean Energy Management

UPDATED ITEMS

By late-November, BOEM expects to submit the Final Rule updating its air quality regulations related to oil, gas, and sulfur operations on the OCS to OMB for interagency review. This Final Rule significantly decreases the regulatory burden on industry compared to the Proposed Rule, while still meeting BOEM's statutory responsibilities under the OCSLA. A narrative describing the reduction to costs as compared to the proposed rule (Reduction to Costs Narrative) and the rule text are currently with the Department for review. (8/2/18, DTS #2280 (Rule), DTS #2454 (Reduction to Costs Narrative))

BOEM has prepared multiple Calls for Information and Nominations (Calls) for lease sales proposed for 2019 and 2020 in the 2019-2024 Draft Proposed Program. The GOM Multisale Call (DTS #2378) is in surnaming with ASLM and expected to publish in early December concurrently with the Notice of Intent to prepare an EIS. The Mid-Atlantic Call (DTS #2257), the South Atlantic Call (DTS #2258), the Southern California Call (DTS #2388), and the Chukchi Sea Call (DTS #2385) are currently being held pending direction on the National Program. (9/21/18)

ONGOING ITEMS

By late-November, BOEM expects to publish a Request for Competitive Interest for an area proposed to be used for a right-of-way (ROW) project called Atlantic Link. This is a proposed project connecting onshore wind and hydro power in Canada to the Massachusetts market via a 350 mile HvDC submarine cable traversing the OCS. The notice is in surnaming. (DTS #1773)

In Late November, BOEM expects to publish a Request for Competitive Interest for an area proposed to be used for a right-of-way (ROW) project from Anbaric Development Partners (ADP). The application is for the New York and New Jersey Ocean Grid, an HVDC submarine system which would collect and distribute power generated from existing offshore wind leases to up to six terrestrial landings at locations from Long Island, New York to Cardiff, New Jersey. BOEM has qualified ADP and has posted the application to its website. (10/15/18, DTS #2208)

On November 28, BOEM is holding a meeting of the New York Bight Intergovernmental Task Force in New York City. The focus of the meeting will be to discuss draft Wind Energy Areas prior to BOEM's finalization of the Area ID process. BOEM's Acting Director plans to attend. (10/15/18)

Bureau of Safety and Environmental Enforcement

ONGOING ITEMS

Well Control Rule (WCR) (AA39) - The AA39 proposed rule comment period closed on August 6. Publication in the Federal Register is anticipated for mid to late January, 2019. Submission to OMB is anticipated scheduled for December, 2018. A surnaming event has been scheduled by the Deputy Secretary on Thursday, November 29 at 2:30pm.

The Arctic Rule: BSEE and BOEM continue to make arrangements for the Tribal consultation meetings (targeted for **December 3 thru December 14**). On September 20, 2018, BSEE's and BOEM's Alaska Regional Directors signed the invitation letters, which were then mailed to the potentially affected tribes, ANCSA Corporations, and municipalities. A total of 27 letters were mailed to these entities. During the week of **October 29,** BSEE-AK and BOEM-AK continued their outreach to the tribes, corporations, and municipalities to confirm their interest in this rulemaking and agree on a time to meet. Aside from the Tribal consultation arrangements, the bureaus continue to have internal discussions regarding the key policy options and the data needs for the economic, environmental, and information collection analyses that will support the proposed regulations.

Consideration of Pilot Program for ACT Program (Accelerating Compliance Together) Document was approved by the Deputy Secretary. BSEE is anticipating a **January 1, 2019** implementation for the pilot program. The rollout plan is under development by the Gulf of Mexico region and identifies the required program components and communication materials.

<u>Office of Surface Mining Reclamation and Enforcement</u>

NEW ITEMS

Illinois' Diversion of Abandoned Mined Land (AML) Funds: OSMRE was informed this week by Illinois program officials that the enactment of a new state law, Public Act 100-1107, authorizes the State Treasurer to divert monies from various trust funds for utilization and investment by the State. As we were informed and have confirmed, sometime during the month of October, the State of Illinois "statutorily transferred" $50 million out of the State's AML "Set-Aside" fund. These funds provided to the State for the purpose of treating acid and toxic drainage from abandoned mined lands is funded through AML grants issued by OSMRE. This is not the first time Illinois has similarly inappropriately diverted AML funds, having previously done so in 2005 and 2008. On both previous occasions, OSMRE informed the State that those diversions were considered an inappropriate diversion of federal funds from their intended use and the funds were returned. OSMRE is currently discussing taking a similar action here. Additionally, we were told by Illinois program officials that they believed this "statutory transfer" impacted other Department of the Interior funds from other bureaus as well. We, however, have not yet been able to confirm that occurrence. (11/7/2018)

UPDATED ITEMS

Notice of Intent to File Suit: On or about September 7, 2018, the Secretary and the Acting Director received a Notice of Intent to File Suit over an alleged failure to perform an alleged mandatory duty under the Surface Mining Control and Reclamation Act from the WildEarth Guardians (WEG). WEG alleges that the agency failed to "promptly promulgate regulations to limit toxic blasting emissions at coal mines after granting a petition for rulemaking." SMCRA allows OSMRE 60 days to respond to the NOI before an action can be filed. The Solicitor's Office has provided OSMRE with options to consider in response to the NOI. OSMRE sent response letter to WEG on November 6, 2018, indicating that OSMRE would publish its decision in the *Federal Register* within 90 days. (10/18/2018)

Mason Coal (KY): The Kentucky Division of Mine Reclamation and Enforcement (KYDMR) informed OSMRE that on or about October 25, 2018, it became aware that Mason Coal was operating an underground coal mine and surface facility without a valid mining permit. The operation employs approximately 15-22 employees and estimated production is approximately 100,000 to 110,000 tons per year. Despite the KY requirements and KYDMR's reminders to the operator, Mason failed to renew its mining permit as required. Due to the permit not being renewed, KYDMR notified Mason that the permit had expired and that the company was required to immediately cease mining operations. On or about October 26, 2018, KYDMR received a Restraining Order (Civil Action No. 18-CI-00697; Floyd Circuit Court, Division No. I) enjoining KYDMR "from enforcing the Mine Inspection Report issued by Defendants on or about October 25, 2018, or taking any other action to prevent Plaintiff from continuing its mining operations on the site permitted under surface coal mining and reclamation operation Permit No. 836-5625." KYDMR conducted a follow-up inspection on October 29, 2018, and discovered that the Company was actively mining on an invalid permit. KYDMR informed OSMRE that, due to the court order, it had no other enforcement options and requested technical assistance in determining how to prohibit Mason from illegally conducting surface mining activities without a valid surface mining permit.

Upon notification, OSMRE reviewed the matter, engaged the Office of the Solicitor and concluded that Mason was conducting surface mining activities without a valid mining permit. Pursuant to 30 CFR 843.11(a)(2), the issuance of a Federal Imminent Harm Cessation Order (IHCO) was required. OSMRE issued an IHCO to Mason on November 1, compelling the company to cease coal mining operations. Mason complied with the IHCO and ceased coal production upon receipt of the order. Mason has also filed an application for a new mining permit with the KYDMR. OSMRE is working with Mason and the Office of the Solicitor on further, appropriate abatement options. On November 7, 2018, OSMRE signed a Settlement Agreement (SA) with Mason agreeing not to oppose Mason's request for temporary relief from the IHCO, under the terms of the SA. (11/2/2018)

Rosebud Mine (MT): The OSMRE Western Region is jointly preparing an EIS with the Montana Department of Environmental Quality. The EIS will be used to support a recommendation on the mining plan for Area F of the Rosebud Mine. A draft Final EIS is currently under review by the Office of the Solicitor and the OSMRE Western Region expects to submit its Notice of Availability for the Final EIS to the EPA on or around November 19, 2018, for publication in the Federal Register by Friday, November 30, 2018. The DOI notice

release briefing occurred on Friday, November 9, 2018. The Record of Decision will be issued within 30 days after publication in the *Federal Register*. (9/20/2018)

Coyote Creek Mining (ND): The public scoping period concluded on October 29, 2018. On October 30, 2018, the project conducted a site visit and issues identification meeting at Coyote Creek Mine outside Beulah, ND. Attendees included representatives from OSMRE, BLM, ND Public Service Commission, Otter Tail Power Company, USFWS, and Coyote Creek Mining Company as well as the DOI solicitor. After walking through preliminary issues to be considered for analysis, additional data requests from resource specialists were submitted to the contractor. (10/31/18)

Pollyanna #8 (OK): On July 10, 2018, OSMRE received approval from BLM of the Resource Recovery and Protection Plan and the coal lease modification for the Pollyanna #8 mine. OSMRE held a meeting with OSMRE HQ on August 8 for a kickoff meeting. Georges Colliers Inc. Pollyanna #8 mine is an underground coal mine expected to use room and pillar retreat mining methods. The mine, located in LeFlore County, OK, consists of 3.37 million tons of recoverable coal overlain by 520 private surface acres. The state regulatory authority approved the revision with conditions on July 25, 2018. A call from the contractor on July 24, 2018, working for Georges Colliers Inc. informed OSMRE that the company will complete mining the remaining panels in approximately 2 weeks with an additional 3-4 weeks of retreat mining before completion. Based on issues with BLM's subsidence analysis, however, OSMRE has had to complete a supplemental EA to adequately analyze the impacts of subsidence. OSMRE is scheduled to initiate the public review period on the draft EA and FONSI, on November 20, 2018. Public notice will include posting the two draft documents on the agency's website and electronic notification to interested parties as well as publication in a newspaper of local distribution. The public comment period will close on December 20, 2018. (9/26/2018)

ONGOING ITEMS

On or about October 2, 2018, the Secretary and the OSMRE Regional Director, Western Region, received a **Notice of Intent to File Suit** over an alleged failure to perform a mandatory duty under the Surface Mining Control and Reclamation Act, Administrative Procedures Act, and National Environmental Policy Act, from the WildEarth Guardians (WEG). WEG alleges that the agency failed to "prepare mining plan modifications for expansions of Areas A and B of the Rosebud Mine in Rosebud, Montana, and an associated NEPA analyses." SMCRA allows OSMRE 60 days to respond to the NOI before an action can be brought. The Solicitor's Office is reviewing the NOI. (10/18/2018)

Justice Companies' Bevins Branch Mine: On October 10, 2018, Kentucky Department of Natural Resources (KYDNR) formally requested technical assistance from OSMRE in assessing the flooding problems reported in Pike County, Kentucky, which purportedly, was being caused by the Kentucky Fuel Corporation's, Bevins Branch Mine, which is owned by the Justice Companies. KYDNR believed the mining operation had contributed to the off-site impacts to the citizens and the environment. After conducting an on-site inspection with the State, OSMRE issued an Imminent Danger/Imminent Harm Cessation Order (IDCO/IHCO), with an abatement date of October 17. OSMRE staff, along with a KYDMR

inspector, went to the site on the October 17, to see if the permittee had started abating the violations. The permittee had moved 3 pieces of equipment to the site. After observing the site, the reclamation specialists determined that the IDCO/IHCO should be modified to extend the abatement times and include the notice and abatement requirements of other non-compliant conditions discovered after analyzing the information and findings from last week's technical assistance visit. Based on further review of the technical information, permit requirements, and inspection findings, and after consultation with the Solicitor's Office, OSMRE vacated the original IDCO/IHCO and replaced it with a new IDCO/IHCO. The new IDCO/IHCO more clearly addresses the required abatement and the non-compliance conditions that contributed to the flooding event. In addition, a new off-site impact (slide) was observed and cited. The replacement IDCO/IHCO was completed on October 18, and service of process initiated on Friday, October 19, 2018. The company's remedial measures to satisfy the IHCO were not met. A package of alternative enforcement or other measures was referred to the Knoxville Solicitors for consideration. On November 7, 2018, the Knoxville Field Solicitor's Office submitted the draft package to OSMRE (field office directors, financial office, AVS office, and the Regional Director), SOL DMR, and Deputy Solicitor EMR for review and comment. In order to facilitate timely review and communication, the recipients were asked to consider the package concurrently. Once the Knoxville Field Solicitor's Office receives and incorporates any suggested edits, the package will be elevated to the Acting Director for review and to the Principal Deputy Solicitor for review and approval. (10/16/2018)

Evans-McCurtain Mine is a proposed new coal mine operation located in the State of Oklahoma on approximately 1,300 acres. An OSMRE mining engineer and hydrologist are working with BLM staff on development of the leasing NEPA document. This NEPA document will analyze both the leasing and mining plan decision document effects. This collaboration will reduce the time frames after the lease is issued and the mining plan decision document can begin. The remaining reserves on the proposed lease are recoverable only by underground methods. BLM expects a final decision on the leasing by late November 2018.

15-60 Day Look-Ahead

Bureau of Land Management

NEW ITEMS

Mid-December. BLM-CO. BLM anticipates finalizing a consent order with the Colorado Department of Public Health and Environment to address groundwater contamination from a closed landfill near Fairplay. The landfill, which lies on BLM land, was leased to Park County under a Recreation and Public Purposes lease from the early 1970s to the early 1990s. The landfill was not closed in compliance with solid waste disposal regulations. Groundwater monitoring in several wells in the area (including two residential wells) indicated the presence of a potential carcinogen in levels that exceed regulatory limits. (11/16/18)

December 28. BLM-NM. The Carlsbad Field Office anticipates publishing the Notice of Availability (NOA) for its Proposed Final Resource Management Plan and Environmental Impact Statement. The Plan outlines the BLM's long-term landscape-level plans and goals for public lands in Lea, Chaves, and Eddy Counties. The planning area includes approximately 2.1 million acres of federal surface land and 3 million acres of BLM-managed mineral estate in Chaves, Eddy, and Lea Counties. (11/16/18)

UPDATED ITEMS

December 11. BLM-MT/DK will offer 23 nominated parcels, covering 12,517 acres at the December 2018 oil and gas lease sale. The preliminary parcel worksheet was posted on July 6 for the 15-day scoping period. Parcels impacted (76 lease parcels covering 54,207 acres) by the Preliminary Injunction in Western Watersheds Project v. Zinke (D. Idaho September 21, 2018) were moved to the March 2019 lease sale. A total of 20 parcels (10,586) were moved from the December 2018 sale. The updated Environmental Assessment and final sale notice was posted October 23 for a 10-day protest period. Two protests were received. The 23 parcels/12,517 acres to be leased are located in the Butte Field Office (Lewis and Clark County), Havre Field Office (Blaine, Glacier and Toole counties), and the Miles City Field Office (Big Horn, Dawson and Sheridan counties). (10/16/18)

December 13. BLM-ES will offer 18 parcels totaling 3,195.12 acres at a competitive online oil and gas lease sale. Eight parcels of public domain minerals underlying private surface are in Stone and Cleburne Counties, Arkansas; one privately owned surface parcel overlying public domain minerals is in Muskegon County, Michigan; seven parcels are within the Manistee National Forest, Muskegon County, Michigan; and two parcels are within the Wayne National Forest, Monroe County, Ohio. The sale notice was posted to ePlanning following internal review October 26. The 10-day protest period ended November 5. The Center for Biological Diversity filed a timely protest for the two parcels in the Wayne National Forest. BLM-ES is reviewing and preparing the draft response for SOL review. (10/19/18)

December 14. BLM-CO. The 30-day public comment period for the environmental analyses for BLM-CO's March 2019 oil and gas lease sale will close. BLM is considering offering 26 parcels totaling approximately 14,052 acres in the Colorado River Valley, Grand Junction, Kremmling, Little Snake, Royal Gorge and White River field offices. (11/9/18)

Mid-December. BLM-UT anticipates publishing a Federal Register Notice to announce the Milford Flat Solar Energy Zone competitive lease sale. The BLM responded to substantive comments in the Final Environmental Assessment (EA). Changes were made to the EA and Decision Record to alleviate some of the identified concerns, including deferring one parcel (Parcel D) from the current lease sale. A Decision Record was signed on July 23, 2018 to approve offering three parcels of public land in Beaver County, totaling 4,836 acres. No appeals were received on the decision. Bids will be accepted for a 30-day period concluding in late December. (2/21/18)

Mid-December. BLM-ID. Tri-State Fuel Breaks Project: BLM Idaho expects to request a BLM Director's Office and Review Team briefing regarding publication of a Notice of Availability of a DEIS for a comprehensive system of fuel breaks in southwest Idaho, southeast Oregon and northern Nevada. These fuel breaks will be designed to provide firefighters with safe areas to engage fire, reducing the likelihood of large wildland fires that may spread across hundreds of thousands of acres, impacting sage-grouse habitat and the grazing economy for many years. This effort involves coordination among the Boise, Vale, Winnemucca and Elko BLM Districts. (11/1/18)

Mid-December. BLM-UT. The BLM anticipates publishing a Federal Register Notice to announce the Milford Flat Solar Energy Zone competitive lease sale. The BLM responded to substantive comments in the Final Environmental Assessment (EA). Changes were made to the EA and Decision Record to alleviate some of the identified concerns, including deferring one parcel (Parcel D) from the current lease sale. A Decision Record was signed on July 23, 2018 to approve offering three parcels of public land in Beaver County, totaling 4,836 acres. No appeals were received on the decision. Bids will be accepted for a 30-day period concluding in late December. (2/21/18)

Late December. BLM-NV. The Humboldt River Field Office plans to publish the Draft Environmental Impact Statement for the Marigold Mine Mackay Optimization Project. The proposal includes expanding an existing gold mine to combine existing open pits into three larger pits and extend mine life by up to 10 years, to 2037. (10/29/18)

ONGOING ITEMS

Mid-December. BLM-ID. The Boise District anticipates publishing a Notice of Exchange Proposal announcing 31,026 acres (11 parcels) of federal lands being exchanged for the 23,878 acres (40 parcels) of state land. The Owyhee Land Exchange was proposed for the purpose of acquiring State-owned lands located within or abutting wilderness areas in Owyhee County that were designated by the Omnibus Public Land Management Act of 2009. The BLM is consulting with the tribes and will soon be working with the State Historic Preservation Office and part of the clearance process. The Boise District anticipates at least some local media interest once a notice is issued. (10/30/18)

Mid- December. BLM-NV. The Black Rock Field Office anticipates releasing the draft of the Burning Man Environmental Impact Statement (EIS). (10/1/18)

Bureau of Offshore Energy Management

NEW ITEMS

BOEM received notice on November 6, 2018, that the Assistant Secretary of Commerce had sent a letter to the Secretary of the Interior requesting consultation on the Flower Garden Banks National Marine Sanctuary (FGBNMS) proposed expansion. BOEM has not yet seen the letter. Under Section 4 of Executive Order (EO) 13795, Implementing an America-First Offshore Energy Strategy, BOEM must respond within 60 days of a consultation request with

a determination of the potential impact of the proposed expansion on the development of oil and gas, renewable, and marine mineral resource potential in the area of proposed expansion. (11/16/2018)

ONGOING ITEMS

On December 13, BOEM will be holding a public meeting on the California Offshore Wind Call for Information and Nominations in San Luis Obispo, California. The meeting will be open house format with a short presentation on the Call process and overview of the information BOEM is looking to obtain during the comment period. A laptop station will be available for the public to offer comments on Regulations.gov. The comment period closes on January 28, 2019. (11/5/2018)

Office of Surface Mining Reclamation and Enforcement

ONGOING ITEMS

West Elk Mine (CO): In coordination with the Regional Solicitors Office, OSMRE Western Region will delay the previously scheduled October 22nd submission of a Record of Decision (ROD) and a notice of adoption clearance briefing form to the DOI Review Team for OSMRE's adoption of the 2017 U.S. Forest Service's West Elk Mine Final Supplemental Environmental Impact Statement, Federal Coal Lease Modifications COC-1362 & COC-67232. On September 26, an Initial Action Notice brief was provided. No oral briefing was requested by the DOI Review Team. The cause of the delay is attributed to OSMRE's decision to consider the findings of an imminent report that will be provided by the West Elk Mine to the BLM in accordance with the stipulations of their lease regarding the feasibility of methane capture and flaring. OSMRE is coordinating with the BLM regarding an expedited review and concurrence finding on the report. While OSMRE does not expect the report will change the findings of the ROD, in coordination with counsel, OSMRE agrees that incorporating the findings of the report will be beneficial to the defensibility of the decision. At this time, a date certain for the DOI Review Team notice of adoption clearance briefing and publishing of the notice of adoption in the Federal Register is not known.

Awareness

Bureau of Land Management

Fall 2018. The Biomass Research and Development Board is seeking agency concurrence on the Bioeconomy Initiative Plan (Plan) to be approved by DOI. The Plan lays out the strategy for interagency coordination on bioeconomy research designed to accelerate innovative technologies that harness America's biomass resources. The Board is chaired by United States Department of Agriculture (USDA) and the Department of Energy (DOE). USDA and DOE have the majority of the responsibility for the Plan. BLM sits on the Biomass Research and Development Board. BLM provides biomass from public domain lands; one power plant in Northern California co-produces energy from geothermal resources and biomass harvested from BLM lands.

Bureau of Offshore Energy Management

The BOEM MOU with The Netherlands on offshore wind cooperation has been cleared by the Department. BOEM is currently in discussions with representatives from the government regarding the details of a signing event. Additionally, BOEM has received edits back from the Norwegian energy ministry regarding the draft MOU with DOI on offshore energy and mineral resources cooperation. The Norway MOU is expected to begin the clearance process within DOI by late November. (11/16/18)

BOEM is currently reviewing a draft document related to the London Protocol, entitled "Revision of the Specific Guidelines for Assessment of Platforms or Other Man-Made Structures at Sea" document. BOEM and BSEE comments will be combined and provided to the Department for review by late November. (11/8/18)

The World Ocean Assessment (WOA) is a process established by the United Nations (UN) General Assembly to provide an overall assessment of the state of the marine environment, including socio-economic aspects. The first WOA (WOA-I) was released in 2015 and subsequent WOAs are expected to be generated every five years in order to document trends in the state of the marine environment. WOA-I is comprised of 57 chapters and a technical summary. BOEM contributed to WOA-I at various levels (including co-authoring two chapters: *Chapter 49: Salt Marshes* and *Chapter 22: Other Marine-Based Energy Industries*). The second round of the WOA (WOA-II) plans to build on the first round to provide an updated assessment of the state of the marine environment. WOA-II is expected to include more than thirty chapters plus a technical summary. The Department of State (DOS) is coordinating WOA-II engagement in the United States. The DOS coordinator discussed the WOA-II nomination process at a Subcommittee on Ocean Science and Technology (SOST) meeting and requested federal agencies to circulate the information. BOEM has been requested to provide support on multiple chapters (including: *Chapter 20: Changes in Hydrocarbon Exploration and Extraction* and *Chapter 22: Development in Renewable Energy Sources*). (11/8/18)

BOEM submitted a final Biological Assessment to NMFS for the Gulf of Mexico Geological and Geophysical Programmatic Endangered Species Act Consultation in July 2013. BOEM received a copy of the draft Biological Opinion (BiOp) from NMFS on Friday June 22, 2018. BOEM submitted a summary response of substantive issues with the BiOp to NMFS on September 13, 2018, along with the more detailed track changes comments in the draft BiOp.

NMFS will not meet the original November 1, 2018, deadline or the February 1, 2019, deadline extension for issuance of a final BiOp pursuant to the NRDC litigation. BOEM and NMFS staff initiated a bi-weekly meeting to address and resolve issues and comments in the BiOp. A completion date remains unclear. NOAA has informed BOEM that they will request an extension from the court beyond the February 1, 2019, deadline to issue a final BiOp pursuant to the NRDC litigation. (6/29/18)

On October 22, BOEM submitted a conference approval package to ASLM for 2019 meetings of the National Academies Committee on Offshore Science and Assessment (COSA). BOEM is also planning to contract with the NAS to peer review the BOEM air quality study of the Gulf of Mexico, but is holding moving forward with the peer review pending verbal approval by ASLM (no written authorization is needed). The peer review is particularly time-sensitive because the review should be completed within the term of the underlying study contract. (10/15/18, DTS #2244).

BOEM has finalized its FY19 National Studies List for the Environmental Studies Program (ESP). This list covers both new studies starts, as well as on-going studies. Mandated by Section 20 of the OCSLA, ESP develops, funds, and manages rigorous scientific research specifically to inform policy decisions on the development of energy and mineral resources on the OCS. Research covers physical oceanography, atmospheric sciences, biology, protected species, social sciences and economics, submerged cultural resources and environmental fates and effects. One study on the list (*Atlantic Marine Assessment Program for Protected Species III*) will require additional ASLM approval due to the fact that it will be a new procurement with individual project costs projected to exceed $3,000,000 (pursuant to requirements in Departmental Manual 218). This study is an *Inter-agency Agreement* with NOAA to collect broad scale and long-term data on protected species in the Atlantic OCS. The cost of the study is $6.4 million over 5 years. The request for approval of this study is with ASLM (DTS# 2424). (9/28/18)

BOEM's Pacific Region has accepted the Multi-Obligee Performance Bonds from Beta Operating Company LLC. These bonds will replace the existing surety bonds for decommissioning purposes presently on file with BOEM. On September 28, BOEM sent a letter to the trustee directing it to release the funds from the Trust Account that are being replaced by the new bond. Following receipt of the letter, Aera (the predecessor lessee) requested a meeting with the Regional Director. On October 5, Aera filed an emergency motion in an attempt to block distribution of the funds. On October 10, BOEM was notified that the bank had released all but $1 million of the funds. The $1 million was retained in case there is a lawsuit. On October 30, AERA, Shell, Noble, and Exxon met with the BOEM Acting Director. A follow up meeting was held on November 15. On October 31, the District Court affirmed the ruling of the bankruptcy court's decision that allowed BOEM to direct the Trustee to release the funds. (8/13/18)

Well Stimulation Litigation (Environmental Defense Center & Santa Barbara Channelkeeper, Center for Biological Diversity and Wishtoyo Foundation, and State of California): There were three lawsuits filed in Nov and Dec 2017 that have been consolidated into one case. The claims can be summarized as follows: (A) There are several flaws and faults in the

programmatic EA (released in May 2016) for well stimulation treatments, (B) The California Coastal Commission has had no opportunity to review the activities for consistency with the Coastal Zone Management Act, (C) The government was required but failed to comply with the Endangered Species Act with regard to approval of well stimulation treatments. American Petroleum Institute, ExxonMobil Corporation, and DCOR, LLC, are intervenors. The hearing was held Nov 5 in Los Angeles; the judge concluded that Interior satisfied its obligations under NEPA but did not satisfy its obligations under CZMA and ESA. (11/16/2018)

ASSISTANT SECRETARY FOR POLICY, MANAGEMENT, AND BUDGET

Week Ahead Schedule of Meetings, Hearings, and Travel

Susan Combs, Senior Advisor to the Secretary, exercising the authority of the Assistant Secretary for Policy, Management and Budget, will be on leave Monday and in the office the rest of the week.

Scott Cameron, Principal Deputy Assistant Secretary, will be in the office.

Immediate Announcements and Actions (within the next 14 days)

On December 7, Susan Combs is attending the Women's Suffrage Centennial Commission in Washington, DC.

Deputy Assistant Secretary - Budget, Finance, Grants and Acquisition (DAS BFGA)

UPDATED ITEMS

The FY 2019 reprogramming action regarding FWS' proposal to reorganize administrative functions is pending before the Interior Appropriations Subcommittee. The 30 day review period ends November 29. (11/20/2018)

The Office of Budget is in the process of submitting the FY 2019 reprogramming package to Congress to implement proposed changes in the Office of Policy, Management and Budget organization chart. The letter discloses the proposed changes for two existing Deputy Assistant Secretary positions. (11/20/2018)

ONGOING ITEMS

OMB is targeting the week of November 27 to transmit or passback their FY 2020 funding decisions. Once the passback decisions are received, agencies will have a limited number of days in which to submit appeals. (10/19/2018)

On December 7, the FY 2019 Continuing Resolution providing ongoing appropriations for DOI (with the exception of Bureau of Reclamation and CUPCA) is set to expire. The Office

of Human Capital is updating the OS Contingency Plan employee list for exempt, excepted and non-excepted employees. (11/20/2018)

The Office of Budget is compiling information on estimated damages from hurricanes and other major events (volcanoes) this season to inform Departmental leadership. The Appropriations Committees have requested information. There has been no formal request for this information from OMB. (11/14/2018)

Deputy Assistant Secretary - Public Safety, Resource Protection and Emergency Services (DAS PRE)

NEW ITEMS

From December 4-7, Inter-agency Borderland Coordinator (b)(6), (b)(7)(C) is conducting interagency field visits in CA at scheduled Border Patrol (BP) replacement fence projects. At the request of the BP, (b)(6), (b)(7)(C) will focus on the San Diego and El Centro sectors to discuss replacement projects in San Diego, Tecate, and Calexico. (b)(6), (b)(7)(C) will coordinate with representatives from BP, EPA, FWS and BLM. (11/20/2018)

Deputy Assistant Secretary - Policy and Environmental Management (PEM)

NEW ITEMS

On December 7, the Natural Resource Damage Assessment and Restoration (NRDAR) Executive Board will meet to review and discuss the recommended funding amounts for the Department's natural resource damage assessment cases for Calendar Year 2019. The total amount of funding requested is $3.6 million for damage assessment activities, which includes requests from 23 ongoing cases, 49 cases planning to continue using carryover funds from previous years, and 3 requests for new cases. If approved, the funding will be distributed to case teams during the month of January. The Executive Board is comprised of career senior executives from bureaus and offices affected by NRDAR. (11/20/2018)

Chief Human Capital Officer & Deputy Assistant Secretary - Human Capital and Diversity

UPDATED ITEMS

On November 29, DOI's response to Executive Order 13839: Promoting Accountability and Streamlining Removal Procedures Consistent with Merit System Principles is due to OPM. DOI will report on employee misconduct and performance cases. (11/20/2018)

15-60 Day Look-Ahead

Deputy Assistant Secretary - Public Safety, Resource Protection and Emergency Services (DAS PRE)

ONGOING ITEMS

From December 11-13, Office of Wildland Fire Director Jeff Rupert will attend the Intertribal Timber Council (ITC) quarterly meeting in Portland, OR where he will provide an update on DOI priorities and initiatives to the ITC Fire Subcommittee. (10/24/2018)

Deputy Assistant Secretary - Policy and Environmental Management (PEM)

NEW ITEMS

On December 14, Michaela Noble, the Office of Environmental Policy and Compliance (OEPC) Director, will present to the Council on Environmental Quality (CEQ) on the Department's National Environmental Policy Act (NEPA) streamlining initiatives at CEQ's quarterly NEPA Inter-agency Contacts meeting. (Washington, DC; no press) (11/20/2018)

UPDATED ITEMS

The Office of Policy Analysis (PPA) is collaborating with the Office of Wildland Fire (OWF) on the implementation of a pilot to address fuels treatment, based on PPA's analysis. The expected timeframe to complete a pilot for one wildfire is by the end of December. (11/20/2018)

Chief Human Capital Officer & Deputy Assistant Secretary - Human Capital and Diversity

NEW ITEMS

By January 31, the Office of Civil Rights (OCR) will submit the DOI's No Fear Report for the 1st quarter of FY19, pursuant to the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (the No Fear Act). The report provides summary statistical data pertaining to complaints of employment discrimination filed against the Department by employees, former employees and applicants for employment. (11/20/2018)

By January 31, the Office of Human Capital will issue the revised Departmental policy on developing efficient, effective, and cost-reducing approaches to collective bargaining and use of taxpayer funded union time in light of August 2018 District Court decision that enjoined several provisions of the Executive Orders (13836, 13837, and 13839) on civil service reforms. The policy will continue to highlight the overarching principles and themes intended by the Executive Orders, while following the court's decision. (11/20/2018)

Awareness

Deputy Assistant Secretary - Budget, Finance, Grants and Acquisition (DAS BFGA)

NEW ITEMS

GAO recently met with the Bureau of Indian Affairs, the Bureau of Land Management, and the National Park Service in an entrance conference to discuss "Looting and Trafficking of Native American Cultural Items" in response to requests from the Chairman of the House

Judiciary Committee; Chairman of the House Subcommittee on Crime, Terrorism, Homeland Security, and Investigations; and Congressman Pearce. (Washington DC, no press) (11/20/2018)

UPDATED ITEMS

The FY 2018 Agency Financial Report was issued on time on November 15th. DOI received its 22nd consecutive unmodified (clean) audit opinion. Two prior year significant deficiencies related to controls over Accounts Payable and Information Technology were remediated. One significant deficiency remains related to General Property, Plant, and Equipment. (11/20/2018)

Deputy Assistant Secretary - Policy and Environmental Management (PEM)

NEW ITEMS

For DOI's Reorganization, a list of recommended locations for regional hubs and possible bureau headquarters is currently under review by PMB leadership. (11/20/2018)

PMB is evaluating the costs/benefits to the DOI of the Interior Business Center (IBC). The Office of Policy Analysis (PPA) completed a paper that evaluated IBC's activities and provided some next steps; this paper was provided to PMB decision makers on 11/9/18. A quantitative assessment of the costs and benefits of IBC within DOI is not possible given the lack of readily available data. (11/20/2018)

Chief Human Capital Officer & Deputy Assistant Secretary - Human Capital and Diversity

NEW ITEMS

The Office of Human Capital is meeting with the Veterans Administration on capabilities of the DOI HR SMIS system and possibilities for collaboration. VA is interested in utilizing DOI's SMIS system for their organization including injury and illness records; data reporting; and inspection and abatement system. (11/20/2018)

ASSISTANT SECRETARY FOR WATER AND SCIENCE

Week Ahead Schedule of Meetings, Hearings, and Travel

For the week of November 25, Assistant Secretary Tim Petty is in the DC office with routine, mostly internal, meetings. On Friday, November 30, he is hosting a meet-and-greet, inviting a number of congressional staff who work on Water & Science related issues to get to know our bureau congressional affairs staff and other team members.

On November 25, Reclamation Commissioner Brenda Burman is scheduled to be on vacation for the Thanksgiving holiday. From November 26 – 30 Commissioner Burman will be in San

Diego attending the Association of California Water Agencies (ACWA) conference, for which she will be a keynote speaker on Thursday, November 29.

On November 25 - December 1, USGS Director Jim Reilly will be in Reston, Va./Washington, D.C. On November 27, Director Reilly will attend the State of Education Luncheon in Falls Church, where USGS is a finalist for the 2018 Workforce Development Partner of the Year. On November 28, Director Reilly will tour the National Reconnaissance Office Foundation Lab, Chantilly, VA.

Immediate Announcements and Actions (within the next 14 days)

U.S. Bureau of Reclamation

NEW ITEMS

On November 28, Reclamation plans to release the Coordinated Operations Agreement Environmental Assessment (EA) for a one-week public review and comment period. The EA follows Reclamation's Notice of Negotiation letter, issued this August. The Coordinated Operations Agreement outlines how Reclamation and the California Department of Water Resources (DWR) coordinate operation of the Central Valley Project and the State Water Project, both located in California. Reclamation and DWR began reviewing the agreement in June 2016 and held numerous stakeholder meetings to solicit input throughout the process. Media attention is anticipated, and it will be an item of discussion at the Association of California Water Agencies conference the week of November 26. (11/19/2018)

On November 30, Reclamation plans to release for public review the Draft Environmental Impact Statement/Environmental Impact Report for the proposed Mendota Pool Group (MPG) 20-Year Exchange Program. The proposed project would allow MPG farmers in the Mendota Pool area (California) to continue to pump up to 26,250 acre-feet per year of groundwater of suitable quality to the Mendota Pool for exchange of up to 25,000 acre-feet per year of Central Valley Project water delivered to Westlands via the San Luis Canal for use by MPG farmers. (11/19/2018)

On December 5, Reclamation plans to hold a public meeting for the Bonny Reservoir Resource Management Plan and Environmental Assessment as part of a 30-day public comment period that began in November. Bonny Reservoir is located in eastern Colorado on the Republican River, which flows into Kansas and Nebraska. In 2011, Colorado decided to drain the reservoir in order to comply with the 1943 Republican River Compact between Colorado, Kansas and Nebraska. (11/19/2018)

On December 6, Reclamation plans to issue a news release announcing the draft Finding of No Significant Impact and Environmental Assessment on the Clipper Center Lateral Pipeline Project located in Delta County, Colorado. The project would replace approximately 4.3 miles of open irrigation ditch with buried pipe. The purpose of the project is to prevent seepage and reduce salinity loading in the Colorado River Basin. Local media interest is anticipated. (11/19/2018)

Between December 10-14, Reclamation plans to submit a report to Congress and governors of the seven Colorado River Basin States regarding the Operations of Glen Canyon Dam (Arizona) for water years 2017 and 2018. The report is prepared and submitted annually in accordance with provisions of the 1992 Grand Canyon Protection Act (Public Law 102-575) (GCPA). Five agencies within the Department of the Interior have responsibilities and undertake actions pursuant to the GCPA and have submitted sections for this report. No news release is anticipated and media interest is expected to be light. (11/19/2018)

Between December 10-14, Reclamation plans to submit a recommendation from the Glen Canyon Dam Adaptive Management Work Group (AMWG) for consideration by the Secretary. The AMWG is a federal advisory committee tasked with providing the Department of the Interior with input and recommendations on the operation of Glen Canyon Dam (Arizona). The AMWG recommends, by consensus, continued implementation of the Adaptive Management Program triennial budget and work plan for fiscal years 2018 through 2020. The Secretary's decision regarding the recommendation will be distributed to AMWG members, other relevant stakeholders, and to the five Department agencies with associated responsibilities. No news release is anticipated and media interest is expected to be moderate. (11/19/2018)

UPDATED ITEMS

Between November 25 and December 14, Reclamation plans to announce the projects selected to receive Title XVI, Water Reclamation and Reuse funding. Reclamation provides funding through the Title XVI Water Reclamation and Reuse Program for projects that reclaim and reuse municipal, industrial, domestic or agricultural wastewater and naturally impaired ground or surface waters. (09/10/2018)

Between November 25 and November 30, Reclamation plans to provide the FY 2019 WaterSMART Water and Energy Efficiency Grant evaluation criteria for a 30-day public review and comment period. (09/10/2018)

Between November 25 and November 30, Reclamation plans to release the final Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) for the proposed extension of the Platte River Recovery Implementation Program. The Program, which is a collaborative effort between the Department of the Interior and the states of Colorado, Wyoming, and Nebraska, provides Endangered Species Act compliance for Reclamation projects along the North and South Platte Rivers in those states. Following the planned release of the EA and FONSI, Reclamation will work with the Department on a Secretarial decision memorandum regarding the program's extension. Congressional authorization will also be required for the proposed extension. (10/29/2018)

Between November 25 and November 30, a Finding of No Significant Impact (FONSI) is planned for the Final Resource Management Plan (RMP) and Environmental Assessment (EA) on Horsetooth, Carter, Pinewood and Flatiron Reservoirs (Colorado). The proposed RMP will update the current 2007 RMP. Larimer County has managed the public recreation

associated with these Colorado-Big Thompson Project facilities since 1954. The current Memorandum of Understanding (MOU) between Reclamation and Larimer County was executed in 1997. (09/04/2018)

ONGOING ITEMS

On November 28, Reclamation plans to issue a news release announcing a 30-day public scoping period in preparation of an Environmental Assessment (EA) addressing public safety in the area southwest of the Third Power Plant, known as Geezer Beach. Geezer Beach is located along the shoreline of Lake Roosevelt, the reservoir behind Grand Coulee Dam in Washington. The EA will analyze the potential effects of a range of alternative actions including: no action, restricting physical access to vehicles on the shoreline, or closing the shoreline to fishing and recreation. The draft EA is scheduled to be available for public comment in February 2019. (11/13/2018)

On November 29**,** Reclamation plans to issue a news release announcing the release of a final Finding of No Significant Impact and Environmental Assessment on the Delta Irrigation Canal Salinity Control Piping Project located in Delta County, Colorado. The project would replace approximately 6.1 miles of open irrigation ditch with buried pipe. The purpose of the project is to prevent seepage and reduce salinity loading in the Colorado River Basin. (11/08/2018)

On November 29**,** Reclamation plans to issue a news release announcing the release of a final Finding of No Significant Impact and Environmental Assessment on the East Side Lateral Piping Project, Phase 9 in Delta and Montrose Counties, Colorado. The project would replace approximately 20.4 miles of open irrigation ditch with buried pipe. The purpose of the project is to prevent seepage and reduce salinity loading in the Colorado River Basin. (11/08/2018)

On November 29**,** Reclamation plans to issue a news release announcing the release of a draft Finding of No Significant Impact and Environmental Assessment on the Aspen Canal Piping Project located in Delta County, Colorado. The project would replace approximately 5.6 miles of open irrigation ditch with buried pipe. The purpose of the project is to prevent seepage and reduce salinity loading in the Colorado River Basin. (11/08/2018)

From November 27-30, the Association of California Water Agencies (ACWA) will hold its fall conference, "Investing Today for Water Tomorrow," in San Diego, California. Commissioner Brenda Burman and regional directors are scheduled to attend. Commissioner Burman is scheduled to deliver a keynote speech to attendees on November 29. ACWA is the nation's largest statewide coalition of public water agencies with 430 public agency members responsible for 90 percent of the water delivered to California cities, farms and businesses. Media interest is expected. (11/13/2018)

U.S. Geological Survey

NEW ITEMS

On November 27, the Foundation for Fairfax County Public Schools will hold the State of Education Luncheon in Falls Church, Va. where the winners of the 2018 Partner of the Year awards will be announced. The U.S. Geological Survey is one of five finalists for the 2018 Workforce Development Partner of the Year award for its work with Chantilly and South Lakes High School and the STEP program for students with disabilities. Local media will be on hand to report on the awards and USGS Director Jim Reilly will attend the luncheon ceremony. (11/15/2018)

UPDATED ITEMS

On November 23, a new high-visibility USGS Scientific Investigations Report titled, "Federal Lands Greenhouse Gas Emissions and Sequestration: Estimates 2005-14" will be published and available online in the USGS Publications Warehouse. The report and accompanying data set and webmap provide the first-of-its-kind estimates of the greenhouse gas emissions resulting from the extraction and end-use combustion of fossil fuels produced on Federal lands as well as ecosystem carbon emissions and sequestration on those same lands. The estimates included in this report can provide context for future energy decisions as well as a basis to track change in the future. The report is similar to the EPA Inventory of U.S. Greenhouse Gas Emissions and Sinks, but at the State level and only for Federal lands. While USGS is not planning to announce this report, there is already media interest and coverage by mainstream media outlets is expected. (10/2/2018)

On November 29 the NPS will announce the release of a joint National Park Service Resource Report titled "The State of Olympic National Park – The Natural Resource Condition Assessment" The Natural Resource Condition Assessment (NRCA), jointly written by USGS and NPS scientists, is an evaluation report on a subset of important natural resources in U.S. national parks. The Olympic National Park NRCA is the first for this park and concentrates on 12 resources aligned with one of five guiding questions of primary interest to park managers. Researchers evaluated specific measures of Roosevelt elk, riparian vegetation, river geomorphology, salmonid stocks, razor clams, Olympic marmots, sea stars, amphibians, barred/northern spotted owls, balsam woolly adelgid/subalpine fir, invasive non-native plants/native plants, and air quality and contaminants. These resources were identified by USGS and NPS scientists as issues of concern in Olympic National Park related to ecosystem integrity and maintenance of biodiversity. The NRCA identifies emerging issues and information needs and is intended to serve as a platform for natural resource managers to use in developing future resource stewardship priorities and planning. This report is jointly funded by the USGS and the NPS NRCA Program. (10/23/2018)

On December 6, the USGS plans to announce a new geologic-based assessment of undiscovered, technically recoverable continuous oil and gas resources for the Wolfcamp Shale and Bone Spring Formation of the Delaware Basin, Permian Basin Province, of west Texas and southeast New Mexico. The announcement will include links to a USGS Fact Sheet and data release. In 2016, the USGS released an assessment for the Wolfcamp Shale in the Midland Basin portion of the Permian Basin Province, which is the largest assessment of

continuous oil that the USGS has ever announced. Briefings are being scheduled and a news release is planned. (11/5/2018)

In November/December, the USGS will announce a recently published paper that describes new evidence of frequent and large tsunamis along one of the Earth's largest faults, the Alaska-Aleutian megathrust. The paper, titled "Evidence for frequent, large tsunamis spanning locked and creeping parts of the Aleutian megathrust," was published in the *Geological Society of America Bulletin* and a statewide news release is planned. Collaborators on this paper include the University of Rhode Island; University of Nevada, Reno; East Carolina University. (9/6/2018)

In November/December, the USGS will announce a recently published paper that describes the presence of human bacteria and viruses from sewage in some Milwaukee area streams. From April 2009 to March 2011, fecal pollution from human sources was spatially quantified by measuring two human-associated indicator bacteria (HIB) and eight human-specific viruses (HSV) at six stream locations in the Menomonee River watershed in Milwaukee, Wisconsin. Of the eight HSV only three were detected, present in up to 38% of the 228 stream samples, while at least one HSV was detected in all water reclamation facility (WRF) influent samples. HIB occurred significantly more often with higher concentrations than the HSV in stream and WRF influent samples. A negative HSV yield from the most downstream sub-watershed of the Menomonee River, and in contrast, a positive HIB yield from this same sub-watershed emphasizes the complexity in fate and transport properties between HSV and HIB. This study demonstrates the utility of analyzing multiple pathogens for a complete assessment of fecal contamination at the watershed level. A news release is being planned. (10/1/2018)

ONGOING ITEMS

In November, the USGS will announce a new USGS Fact Sheet that summarizes the groundwater quality of the Mississippi embayment-Texas coastal uplands aquifer system. Scientists tested for hundreds of water-quality constituents and characteristics in samples of untreated groundwater from 89 public-supply wells throughout the aquifer. Sample test results were compared to human-health benchmarks. These results show one or more inorganic constituents present at high concentrations in groundwater in about 5 percent of the study area. This aquifer is an important source of drinking water for parts of Texas, Louisiana, Arkansas, Mississippi, Tennessee, Missouri, Kentucky, Illinois and Alabama. A technical announcement is planned. (10/29/2018)

In November, the USGS will announce a new USGS Fact Sheet that summarizes the groundwater quality of the Floridan aquifer system. Scientists tested for hundreds of water-quality constituents and characteristics in samples of untreated groundwater from 60 public-supply wells throughout the aquifer. Sample test results were compared to human-health benchmarks. These results show one or more inorganic constituents present at high concentrations in groundwater in about 14 percent of the study area. This aquifer is an important source of drinking water for all of Florida and parts of Georgia, South Carolina and Alabama. A technical announcement is planned. (10/29/2018)

In November, the USGS will announce a new paper that demonstrates that certain well construction attributes are influential in predicting arsenic concentrations in drinking water. Smaller distances between the top of the well screen and overlying aquitard, and shorter well screen lengths, were each associated with higher probabilities of elevated arsenic concentration. Chronic exposure to arsenic via drinking groundwater is a human health concern worldwide, and Minnesota commonly has elevated arsenic concentrations in well water. This study describes a new, novel, and important finding from an arsenic probability model: Controllable well construction choices (not just location or depth) influence arsenic concentrations in drinking water. The paper will be published in *Water Resources Research* and a technical announcement is planned. (7/23/2018)

In November, the USGS will announce a new online service that provides stakeholders and the public access to groundwater quality information for California. In partnership with the California State Water Resources Control Board, researchers have developed a new California Groundwater-Quality Results Web Map showing how groundwater conditions have changed over time and assessments of groundwater used for both public and domestic drinking supply to evaluate geochemical differences in deep and shallow aquifers. A statewide news release is planned. (10/23/2018)

In late November, the USGS will announce a new Open-File Report that examines mercury methylation and bioaccumulation in striped bass within the lower section of Lake Powell, Utah and Arizona. In 2012, elevated mercury monitoring results led to a Utah/Arizona fish consumption advisory for the lower 100 km of Lake Powell. In 2014 and 2015, USGS researchers collected chemical, physical, and biological data during two synoptic sampling trips on Lake Powell to test three hypotheses associated with a conceptual model developed to explain the observed geographic concentration gradient of mercury in fish tissue samples. Partners include the State of Utah and NPS. A regional news release is planned. (11/5/2018)

15-60 Day Look-Ahead

U.S. Bureau of Reclamation

UPDATED ITEMS

On or about December 30, Reclamation plans to issue a news release announcing a draft Environmental Assessment (EA) for public review and comment related to the proposed Area S Resource Management Plan. The draft EA will evaluate resource management on this small isolated tract of Reclamation land near Fort Klamath, Oregon; including grazing, forest and habitat management, and range improvements. Targeted communication is planned. Media interest is not expected. (11/13/2018)

In January 2019, Reclamation plans to issue a news release announcing the final Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) for the Cottonwood Creek Daylighting project in Boise, Idaho. The final EA and FONSI follow the WaterSMART grant awarded to the Boise River Enhancement Network for their proposal to

restore the natural function of the last 440 feet of Cottonwood Creek. The project supports additional spawning, rearing, and over-wintering fish habitat, all of which are currently limited in the Boise River fishery. (11/13/2018).

ONGOING ITEMS

Between December 10 and 14, Reclamation plans to release the 2019 Annual Operating Plan (AOP) for Colorado River System Reservoirs. It has been finalized and is currently under leadership review. The AOP serves as a single, integrated reference document required by section 602(b) of the Colorado River Basin Project Act of 1968 (Public Law 90-537) regarding past and anticipated operations. In particular, the 2019 AOP contains the projected plan of operation of Colorado River reservoirs for 2019 based on the most probable runoff conditions. The 2019 AOP was prepared by Reclamation in consultation with the seven Colorado River Basin States Governors' representatives, representatives from Mexico, the Upper Colorado River Commission, Native American tribes, appropriate Federal agencies, and a variety of additional stakeholders. If approved, the 2019 AOP will be transmitted by the Secretary of the Interior to Congress and the seven Colorado River Basin States. No news release is anticipated and media interest is expected to be moderate. (11/13/2018)

Around December 10, Reclamation plans to issue a news release for the draft Environmental Assessment (EA) for the proposed modernization of generating units 19-21 in the Third Power Plant at Grand Coulee Dam, Washington. The modernization would ensure continued, reliable hydropower production for 40 years and ensure Reclamation would meet contractual obligations for power generation. Reclamation is issuing a 14-day public comment on the draft EA. (11/13/2018).

On December 12-14, Reclamation staff plan to participate in the annual Colorado River Water Users Association Conference in Las Vegas, Nevada. (11/13/2018)

During the month of November, Reclamation is planning to begin negotiating an update to replace the Garrison Diversion Conservation District's (GDCD) Master Contract in North Dakota to reflect the current project. While this process is ongoing, progress on the Basis of Negotiation (BON) for the Central Dakota Project may be delayed while each party discusses the proposal. (11/13/18)

U.S. Geological Survey

NEW ITEMS

In December, a new USGS paper titled "Dynamic flood modeling essential to assess the coastal impacts of climate change" will be published in *Scientific Reports*. The paper summarizes a decade-long research effort to assess the vulnerability of the California coastal population and infrastructure to hazards (e.g. coastal flooding, beach erosion and cliff retreat) associated with a range of future climate change scenarios. In collaboration with agencies and academics across the world, the USGS developed the state-of-the-art Coastal Storm Modeling System (CoSMoS) to incorporate total water levels during storms and the dynamic

response of the coast into present-day and future hazards assessments. Applied to the urbanized coast of California, with a population of 24 million, this dynamic approach shows that three times more of the population could be exposed to flooding over the 21st century when compared to static approaches that only consider sea level rise. A USGS news release is being considered. (11/19/2018)

Awareness

U.S. Bureau of Reclamation

NEW ITEMS

On November 18, Reclamation reported that teams have recovered two bodies from Strawberry Reservoir, Utah, after their canoe capsized. They were fishing near Chicken Creek West on November 12 when they were tossed into 38-degree water. The State Medical Examiner's Office will determine an official cause of death, but it appears the pair drowned. This is being reported by local media. (11/19/2018)

ONGOING ITEMS

U.S. Geological Survey

NEW ITEMS

USGS recently received approval for a new ASTM International standard titled "Practice for Determination of Uncertainty in Coal Resource Assessments." This standard was based on research and methodology recently developed by the USGS Coal Resources and Reserves Assessment Project. The new standard replaces the traditional measured, indicated, and inferred coal resource categories that provided measurement of uncertainty and was used in all previous USGS coal assessments. (11/19/2018)

On November 27-30, USGS researchers will discuss their work at the 12th biennial Wind Wildlife Research Meeting in St. Paul, Minnesota. The talk titled "Assessing standardization in studies of wind energy impacts on birds and bats: limitations and recommended best practices" is based on a review of nearly 500 reports of wind energy impacts to wildlife and will discuss limitations in interpreting existing data and future research needs. Another talk titled "Where carcasses land – and why it matters" will present a recent preliminary finding that spatial distribution of bat carcasses varies according to wind speed. USGS will also lead a half-day workshop training professionals on how to use the new open source software package GenEst, a generalized estimator of mortality. Participants will have the opportunity to work with example datasets and discuss the models and software with GenEst developers. (11/19/2018)

On November 27-30, staff with the Alaska Climate Adaptation Science Center will host a climate communication workshop at the Alaska Tribal Conference on Environmental Management (ATCEM) in Anchorage, AK. The ATCEM, organized by the Alaska Native

Tribal Health Consortium, is an annual gathering that brings together Tribes, non-profits, and state and federal organizations, for a week of environmental conversations. The discussions focus on finding and implementing solutions to address the unique environmental concerns facing Alaskan communities. (11/20/2018)

On December 2-7, USGS scientists will present at the 2018 American Exploration and Mining Association Annual Meeting in Spokane, WA. Presentations will include an update on the "3DEEP" critical minerals mapping initiative, and progress on the USGS Mineral Deposit Database (USMIN) project in updating and augmenting databases on domestic critical minerals including tin and tungsten, cobalt and platinum group elements, and lithium; and mine locations and characteristics digitized from historical USGS topographic maps. (11/20/2018)

On December 3, the Northwest Climate Adaptation Science Center (CASC) in partnership with the Puget Sound Climate Preparedness Collaborative, the University of Washington Climate Impacts Group, and the Tulalip Tribes to hold a "Deep Dive" workshop on Managing Western Washington Wildfire Risk in a Changing Climate. This workshop is geared towards emergency managers, land managers, local governments, land use planners and permitting agencies, Conservation Districts, and forestry extension. (11/20/2018)

On December 3-7, 2018 USGS Landsat Ground Station Operators Working Group (LGSOWG) will be meeting in Sanya, China, to discuss preparations for the December 2020 launch of Landsat 9. LGSOWG meetings provide an opportunity for the Landsat International Cooperator (IC) Network (organizations that receive and distribute data from Landsat satellite missions) to gather with USGS representatives to discuss topics relevant to the delivery, management, and distribution of Landsat data. This meeting will also include special collaboration topics such as analysis ready data, data cubes, data processing enhancements, collection management, cloud processing, and interest for future missions. The Landsat IC Network currently includes 19 certified Landsat 8 ground stations and 7 certified Landsat 7 ground stations–with several more currently going through the certification process. (11/20/2018)

UPDATED ITEMS

Executive Order 13817/Secretarial Order 3359 milestones: The Department of Commerce is preparing to transmit a whole-of-government strategy to the White House, including major contributions by USGS and BLM in coordination with BOEM. Once transmitted to the White House, the strategy is to be sent for clearance by agencies and key White House components (Office of Science and Technology Policy (OSTP), Office of Management and Budget, Council on Environmental Quality, and Office of the U.S. Trade Representative). USGS and BLM anticipate receiving further direction at the next meeting of the OSTP-led interagency National Science and Technology Council (NSTC) Subcommittee on Critical and Strategic Mineral Supply Chains (CSMSC). The next meeting of the NSTC Subcommittee is on hold pending transmittal of the strategy. The meeting is expected to focus on planning for implementation of the strategy's recommendations, including responsibilities, tracking, and deliverables. Future interagency work through the NSTC Subcommittee is expected to

include review and clearance of a set of more detailed appendixes to the strategy, further supporting interagency implementation efforts. The appendices will likely be published at a later date, potentially as FY2019 products of the NSTC CSMSC. These appendices are expected to include an interagency plan for mapping subsurface mineral resources, based on the USGS-led plan delivered to the Secretary in April; an interagency report on permitting, based on the BLM recommendations delivered to the Secretary in March; an overview of existing trade dependencies for critical minerals, developed in part from USGS data; and an overview of recycling and reprocessing technologies, including brief discussion from USGS on the geologic composition of above-ground resources such as mine wastes, some of which are currently used for production of byproduct critical minerals. (2/9/2018)

ONGOING ITEMS

The White House Office of Science and Technology Policy (OSTP) is conducting final reviews before releasing a National Science and Technology Council (NSTC)-coordinated interagency plan on how to identify and address current research gaps in understanding the health effects of low levels of emerging contaminants in the Nation's drinking water. This plan was requested by Congress in the FY2018 OSTP appropriations language. The plan identifies a number of research gaps and specific roles for USGS Water and Environmental Health Mission Areas, including development of new or improved methods to sample and analyze low levels and complex mixtures of emerging contaminants in drinking water as it is taken from surface or groundwaters and treated, as it transits through municipal water distribution systems and building plumbing, and as it is taken from the tap; helping understand, model, and predict exposures to emerging contaminants in the context of their environmental and water treatment infrastructure drivers; and helping health agencies develop improved tools to enhance assessment of health risks posed by emerging contaminants under realistic exposure scenarios. The other agencies highlighted in the plan include Environmental Protection Agency, National Institutes of Health, Department of Defense, National Institute of Standards and Technology, Center for Disease Control and Prevention, and National Science Foundation. (10/2/2018)

Secretarial Order 3352 milestones: The reprocessing of vintage 2-D seismic data acquired in the mid-1980s over the Section 1002 area of the Arctic National Wildlife Refuge (ANWR) is nearing completion. The USGS is very pleased with the quality of initial time-processing results from the 2D seismic data reprocessing effort. However, the USGS made extensive comments and suggestions based on the depth processing, which will result in additional work to achieve a desired result. A three-week no-cost extension has been agreed to for completing the project, with a final deadline now set for November 30. The USGS continues efforts on resource assessments on Alaska's North Slope to accelerate the evaluation of the Central North Slope (CNS) lands situated between ANWR and the National Petroleum Reserve-Alaska (NPR-A). SAExploration, which has formed a partnership with the Arctic Slope Regional Corporation and the Village of Kaktovik, has submitted a permit application to conduct a 3-D seismic survey on the ANWR coastal plain (1002 Area). SAExploration has indicated that the survey will not be conducted as a consortium but will instead be acquired as a speculative survey open for licensing. Recently, licenses were obtained for two new 3D seismic surveys on CNS State lands and the data were received. The 3D seismic surveys will

be used to prepare an updated assessment of undiscovered conventional oil and gas resources of the CNS scheduled for completion in first quarter of FY 2020. In addition, on October 23-24,the USGS conducted a two-day core workshop at the USGS Core Research Center in Denver for Armstrong Oil and Gas, Oil Search, and Repsol, who are partners in the discovery and upcoming development of significant oil accumulations on Alaska's North Slope. In addition to examining Alaska cores from the USGS archive, the core workshop included cores from seven exploration wells drilled by the partnership, including discovery wells in the Nanushuk and Alpine reservoirs. During the past two years, the partnership has provided the USGS oil and core samples, ancillary data, and access to proprietary cores from multiple wells, thereby enhancing our understanding of the petroleum systems of northeastern National Petroleum Reserve in Alaska and adjacent Alaska state lands. The partners agreed to continue collaborating with the USGS by providing oil and rock samples and ancillary data from delineation wells to be drilled during the 2018-2019 winter drilling season. In addition to these expected data, the USGS has received extended diamondoid data for numerous oil samples that indicate a definite geochemical signature of an oil, condensate, and gas charge from offshore (Beaufort Sea) to onshore (Barrow Arch), which indicates that this high-thermal-maturity charge is partly from Triassic and partly from Jurassic source rocks. These data will inform the USGS assessment of the Central North Slope, which is expected to be completed in December 2019; and will support BLM's management of Federal oil and gas resources in the 1002 Area. In addition, this information will be presented to BOEM next week and will directly inform their 5-year plan for the Beaufort Sea Planning Area; on November 12, USGS, BOEM, and BLM will meet in Anchorage to plan for regional collaborations to inform BOEM's new five-year plans for both the Beaufort and the Chukchi Planning Areas. (5/2/2018)

In support of Executive Order 13807 and Secretarial Order 3355, the Department is seeking to streamline permitting of seismic stations on public lands in California, Oregon and Washington to support earthquake early warning (EEW). Strong bipartisan support in Congress is driving implementation of this capability for the U.S. West Coast, which will allow rapid earthquake detection that can provide alerting in advance of destructive ground shaking. Life-saving applications include slowing trains, halting surgeries, opening fire station doors to prevent jamming, and giving school children time to take cover under desks. The Assistant Secretary for Water and Science is working with counterparts overseeing the relevant land management bureaus to make streamlined EEW station permitting a high priority in order to expedite installations in support of public safety. The initial phase of this initiative focuses on DOI land management bureaus, and a second phase will expand that focus to engage with the Department of Agriculture to expedite permitting on U.S. Forest Service (USFS) lands. These DOI and USFS managed lands are critical because they cover large areas in all three states and provide long-term ownership stability needed for permanent stations. (6/1/2018)

Upcoming USGS Publications

A new USGS-Southwest Climate Adaptation Science Center co-authored paper titled "Provenance is a mixed predictor of invader dynamics in a disturbed wetland ecosystem" will be published and is currently available online in *NeoBiota*. Researchers found that in

Indiana Dunes National Lakeshore wetland complex, the habit, origin, and invasiveness of species contributes to diversity responses in a scale- and context-dependent fashion. Next, they compared the presence and abundance of native and exotic invaders with changes in wetland plant species diversity over a 28-year period by resurveying 22 ponds in the Indiana Dunes National Lakeshore to identify factors correlated with observed changes. Co-authors are from The College at Brockport and Brown University. (11/20/2018)

On November 23, USGS co-authored sections including the executive summary and the agriculture chapter of the *Second State of the Carbon Cycle Report* will be published by the U.S. Global Change Research Program. The Second State of the Carbon Cycle Report (SOCCR-2) discusses North American carbon stocks, fluxes, sources, and processes, and how they interact with global carbon budgets and climate change. Both managed (e.g., agriculture systems), unmanaged, terrestrial, and aquatic systems are evaluated. The first SOCCR was published in 2007 and SOCCR-2 focuses on advances in knowledge since SOCCR-1. (11/19/18)

In November USGS will publish a data release titled "Golden Eagle International Radio Tracking Data, North America, 1992-1999." From 1992-1997, the Department of Defense, Boise State University, and BLM's Raptor Research and Technical Assistance Center - which merged into the USGS - collected telemetry data from 21 golden eagles using the Argos satellite system. This tracking system was used to document local and migratory movements of the golden eagles to better understand their long-term and wide-ranging movements and behaviors. The USGS Data-at-Risk (DaR) Team is preserving and releasing the raw data in an accessible format. (11/19/2018)

In November/December a new USGS paper titled "Mixed-Chemical Exposure and Predicted Effects Potential in Wadeable Southeastern USA Streams" will be published in the *Science of the Total Environment*. Streams in the Southeast U.S. contain complex mixtures of chemicals, including pesticides and pharmaceuticals. 265 of the 475 compounds measured were detected in at least one sample from the 54 streams investigated. The average (median) number of compounds detected in a stream was 83; the maximum number detected was 153. Multiple lines of evidence indicated the potential for risk to aquatic communities in urban streams from widespread exposure to extensive and variable mixtures of pharmaceuticals, pesticides, and wastewater indicator compounds. Overview and Progress of the Pallid Sturgeon Assessment Framework Redesign Process. (11/19/2018)

In November a new USGS paper titled "Recent trends in nutrient and sediment loading to coastal areas of the conterminous U.S. (2002-2012)" will be published in the *Science of the Total Environment*. Evaluation of trends from 2002 to 2012 in loading of nitrogen and phosphorus species and sediment to coastal water around the United States. The study found that, although there have been some decreases in nitrogen loading--particular urban watersheds--nitrogen loading remains elevated relative to historical levels. There was no clear pattern in phosphorus trends. These results likely reflect regulatory actions to reduce point-source nutrient loading in urban areas and the difficulty in reducing nutrient loading from diffuse non-point sources. (11/19/2018)

In November a new USGS paper titled "Effects of Antecedent Streamflow and Sample Timing on Trend Assessments of Fish, Invertebrate, and Diatom Communities" will be published in the *Journal of the American Water Resources Association*. This study found that the amount of flow in a stream and when a biological sample was collected both affected the biological endpoints measured for biological communities. This means that natural variability in streamflow or sample date likely caused all or part of perceived trends in biological endpoints in many cases. Failure to account for this variability may lead to under- or overestimating the likelihood of a trend estimate and/or misdiagnosing potential causes. (11/19/2018)

A new USGS study titled "Introduction and dispersal of non-native bullseye snakehead (*Channa marulius* [Hamilton, 1822]), in the canal system of southeastern Florida, USA" has been accepted for publication in *BioInvasions Records*. More than 160 non-native fish species have been reported in freshwater bodies in Florida, including the bullseye snakehead. Native to Asia, the snakehead has been present in Florida's southeastern canal system for at least 18 years, however, there is no report on the fish's overall distribution. Using records from the USGS Nonindigenous Aquatic Species Database and collection data from the Florida Fish and Wildlife Conservation Commission, USGS scientists created a timeline for the introduction and dispersion of the bullseye snakehead. The USGS NAS program monitors, analyzes, and records sightings of non-native aquatic plant and animal species throughout the U.S. The program was created in response to the passage of the Nonindigenous Aquatic Nuisance Species Control and Prevention Act of 1990. Partners include Florida Fish and Wildlife Conservation Commission. (11/19/2018)

A new USGS study titled "Interannual snow accumulation variability on glaciers derived from repeat, spatially extensive ground-penetrating radar surveys" has been accepted for publication and is available online in *The Cryosphere Discussions*. Measuring the amount and spatial pattern of snow on glaciers is essential to monitoring glacier mass balance and quantifying the water budget of glacierized basins. Using repeat radar surveys for five consecutive years at Gulkana and Wolverine Glacier, researchers found that the spatial pattern in snow distribution is stable over the majority of the glacier and scales with the glacier-wide average. Study findings support the concept that sparse stake networks effectively measure interannual variability in the amount of snow accumulation on glaciers rather than interannual variability in the pattern of snow accumulation on glaciers. (11/19/2018)

In late December a new USGS co-authored paper titled, "Financing agricultural drought risk through ex-ante cash transfers" will be published in *Science of the Total Environment*. Severe food insecurity currently affects some 76 million people, or about one out of every 100 people on the planet. Despite great advances in drought early warning technology, forecast information is only rarely used for triggering and financing early action, such as cash transfers. This study evaluates the cost-effectiveness of forecast-based cash transfers, and suggests that disbursing cash transfers before maize harvesting can often be more cost-effective than initiating ex-post cash transfer after harvesting. (11/20/2018)

In November/December a new USGS-National Climate Adaptation Science Center paper titled “Practical tips to establish an actionable science portfolio for climate adaptation” will be published in *Science and Public Policy*. The paper provides practical suggestions to establish productive dialogue between resource managers and scientists, and broker that conversation as they work side-by-side toward agreed-upon common objectives. These useful tips stem from experience developing and establishing actionable science portfolios (science products and services to inform resource management decisions) within the CASC network and may prove valuable to similar entities committed to delivering climate adaptation science to address resource management concerns. (11/20/2018)

Subject: Weekly Report to the Secretary December 2-8
Date: Thursday, November 29, 2018 2:41:27 PM
Attachments: Weekly Report to the Secretary December 2-8.docx

---

All,

Attached is the Weekly Report to the Secretary in both Word and Google Doc formats. Please let me know if you have any questions.

Thanks,

Matthew Dermody
Special Assistant
Office of the Deputy Secretary
U.S. Department of the Interior
1849 C Street NW
Washington, DC 20240
202-513-7778 (office)
202-570-5029 (cell)

NOTE: Every email I send or receive is subject to release under the Freedom of Information Act.

Weekly Report to the Secretary December 2-8.docx

WEEKLY REPORT
DEPARTMENT OF THE INTERIOR
DECEMBER 2-8, 2018

OFFICE OF THE SECRETARY

Week Ahead Schedule of Meetings, Hearings, and Travel

Chief of Staff Scott Hommel will be attending an offsite meeting at NCTC on December 3-4 and in the office through Thursday, December 6. He will be staffing the Secretary on Friday, November 7.

Deputy Chief of Staff Katharine MacGregor will be attending an offsite meeting at NCTC on December 3-4 and in the office the rest of the week.

Deputy Chief of Staff for Operations Michael Argo will be attending an offsite meeting at NCTC on December 3-4 and in the office the rest of the week.

OFFICE OF COMMUNICATIONS

Director John Bockmier will be attending an offsite meeting at NCTC on December 3-4 and in the office the rest of the week.

Deputy Director Russell Newell will be attending an offsite meeting at NCTC on December 3-4 and in the office the rest of the week.

OFFICE OF CONGRESSIONAL AND LEGISLATIVE AFFAIRS

OFFICE OF INTERGOVERNMENTAL AND EXTERNAL AFFAIRS

Todd Wynn, Director, will be attending an offsite meeting at NCTC on December 3-4

Ben Cassidy, Senior Deputy Director, will be on annual leave December 3 - 7.

Tim Williams, Deputy Director, will be in Casper, WY for Wyoming Stockgrowers on December 1, will be attending an offsite meeting at NCTC on December 3-4 in Albuquerque, NM for New Mexico Stockgrowers on December 5 and in Las Vegas, NV on December 7 and 8 for Western Caucus.

Immediate Announcements and Actions (within the next 14 days

The OEIA team continues to engage external partners and state and local officials on reorganization, the National Park's deferred maintenance backlog, and big game migration corridors.

The OIEA team continues outreach to Western Governors to finalize Sage Grouse plans and is working with their office to provide quotes for press releases

ASLM, BLM and Scheduling continue to coordinate with OIEA on a Grazing and Timber round tables.

The OIEA team is developing an outreach and engagement plan and materials for newly elected officials for December and January in order to proactively reach out to state elected officials.

The OIEA team is continuing outreach and engagement on the state fish and wildlife agency management authority memorandum.

The OIEA team is working with NPS and other departments regarding grants towards Youth Programs as well as upcoming cooperative agreements being signed with external partners relating to youth engagement and internship programs.

OFFICE OF RECREATION

Rick May, Senior advisor, will be attending an offsite meeting at NCTC on December 3-4, and in the office the rest of the week.

OFFICE OF THE DEPUTY SECRETARY

Week Ahead Schedule of Meetings, Hearings, and Travel

Deputy Secretary David Bernhardt will be attending an offsite meeting at NCTC on December 3-4, and will be on official travel December 5-8.

Assistant Deputy Secretary Todd Willens will be in the office all week.

Associate Deputy Secretary Jim Cason will be attending an offsite meeting at NCTC on December 3-4.

Immediate Announcements and Actions (within the next 14 days)

The Deputy Secretary will sign a Memorandum of Agreement with the Department of Defense to implement the Memorandum of Understanding signed in September to expand the role of the DOD liaison at DOI to include all DOD related issues at Interior. Once the MOA is signed by both departments, the liaison will be housed in the Deputy Secretary hallway.

OFFICE OF THE EXECUTIVE SECRETARIAT AND REGULATORY AFFAIRS

Week Ahead Schedule of Meetings, Hearings, and Travel

Julie Lillie will be in the office this week.

Immediate Announcements and Actions (within the next 14 days)

● Interagency Reviews Under E.O. 12866—DOI received for comment the following documents that are undergoing E.O. 12866 review at OMB:

○ US Forest Service's proposed rulemaking on it's National Environmental Policy Act requirements (RIN 0595-AD31)-Comments due to OMB by Monday, November 26th.
○ CEQ's White Paper on EIS Timelines-Comments due to OMB by Tuesday, November 27th.
○ HUD's Proposed Guidance on Applying the Fair Housing Act to Decide Whether a Person's Request to Have an Animal as a Reasonable Accommodation Should Be Granted-Comments due to OMB by Monday, December 3rd.

Committee Meetings:

National Park System Advisory Board - Board is scheduled to meet on December 5, 2018 in Washington, DC.

Women's Suffrage Centennial Commission - Commission is scheduled to meet on December 7, 2018 in Washington, DC.

Congressional Document Production

Production on November 27, 2018 of documents for the May 31, 2018 request from the Surveys and Investigations Division, House Committee on Appropriations, on the BLM Wild Horse and Burro Program. This thirteenth production consists of 195 documents.

FOIA Litigation Awareness Reviews

Here are the likely cases to go into awareness review in the next two weeks:

Sierra Club (Marta Darby) [4:18-cv-03799/ OS-2018-00959] Materials concerning FOIA policies since January 20, 2017

American Oversight (Austin Evers) [1:18-cv-01216/ OS-2018-00570 & OS-2018-00843] Communications with Congressional and Gubernatorial staff regarding offshore drilling

New Jersey Attorney General (Gurbir Grewal) [1:18-cv-02338/ OS-2018-00986] Materials and FOIA requests concerning 2019-2024 Outer Continental Shelf Oil and Gas Leasing Program

Matthew Allen [1:17-cv-02656/ OS-2018-00077] Materials concerning himself

WildEarth Guardians (Jeremy Nichols) [1:18-cv-00232/ OS-2017-00804 et al.] All communications for the Secretary, Deputy Secretary, Vincent DeVito and Katherine MacGregor

Sierra Club (Ellen Richmond) [1:18-cv-01308/ OS-2017-01308] All external communications with multiple IOS personnel

OFFICE OF THE SOLICITOR

No updates to report this week.

ASSISTANT SECRETARY FOR FISH AND WILDLIFE AND PARKS

Week Ahead Schedule of Meetings, Hearings, and Travel

From December 2-4, Principal Deputy Assistant Secretary Andrea Travnicek will be attending an offsite meeting at NCTC . On December 5-6, she will speak at the North Dakota Water Users Convention in Bismarck; on December 7-8, she will speak at the Western Caucus Foundation in Las Vegas.

From December 3-4, Deputy Assistant Secretary Aurelia Skipwith will be attending an offsite meeting at NCTC on December 3-4; she will be in the office the remainder of the week.

From December 2-4, Deputy Assistant Secretary Ryan Hambleton will be attending an offsite meeting at NCTC; he will be in the office the remainder of the week.

From December 3-4, NPS Acting Director Dan Smith will be attending an offsite meeting at NCTC ; on December 5, he will be at the National Park System Advisory Board meeting; he will be on leave on December 6 (½ day) and 7.

From December 3-4, FWS Principal Deputy Director Margaret Everson will be attending an offsite meeting at NCTC; she will be in the office the remainder of the week.

Immediate Announcements and Actions (within the next 14 days)

U.S. Fish and Wildlife Service

UPDATED ITEMS

During the week of December 3, FWS plans to make a final determination on a proposed reclassification of the southern Selkirk Mountains population of woodland caribou by defining the entire Southern Mountain Caribou population as a distinct population segment (DPS) and listing it as endangered. In 2012, FWS designated critical habitat for the southern Selkirk Mountains population, which will remain unchanged. Several non-governmental organizations (International Fund for Wildlife, Kettle Range Conservation Group, Selkirk Conservation Alliance, Kootenai Environmental Alliance, Center for Biological Diversity, Idaho Conservation League) will likely view our final determination favorably. The Pacific Legal Foundation (and Bonner County as represented by PLF) is likely to challenge the determination. Idaho may view the listing of the DPS and endangered determination unfavorably. Outreach includes a regional news release, social media, emails, and phone calls. This package is pending DOI clearance. (Updated 11/28/2018)

During the week of December 3, FWS plans to make a final listing determination for the meltwater lednian stonefly and the western glacier stonefly, located in Montana and Wyoming. Interested stakeholders include WildEarth Guardians, Xerces Society, Center for Biological Diversity, and the states of Montana and Wyoming. Wyoming has expressed opposition to the listing. Planned outreach will include a regional news release, web updates, and congressional/stakeholder notifications. This package is pending DOI clearance. (Updated 11/28/2018)

During the week of December 3, FWS plans to propose to designate a nonessential experimental population of California condor in northern California and Oregon to help meet recovery goals for the species. This action is being taken in concert with the NPS and the Yurok Tribe in support of recovery goals for the condors. The condors would be reintroduced at Redwood National Park. The primary state agencies -- California Department of Fish and Wildlife, Oregon Department of Fish and Wildlife, and California Department of Parks and Recreation -- have expressed interest in condor recovery through participation in an MOU. There is a possibility that there may be some localized opposition to condor reintroduction in the area, but FWS does not foresee concerted opposition given California's action banning the use of lead ammunition effective in 2019. There will be a 60-day public comment period for the proposed rule. The Northern California California Condor Restoration Program Environmental Assessment will also be made available for public review and comment. Public meetings will be held in California and Oregon. Planned outreach will include a regional news release and notification to stakeholders, tribes, and members of Congress. This package is pending DOI clearance. (Updated 11/28/2018)

During the week of December 3, FWS plans to make a final listing determination for the trispot darter, a fish that occurs in Alabama, Georgia, and Tennessee, propose a 4(d) rule, and propose critical habitat for the darter. In total, approximately 181 river miles and 16,735 acres in the Coosa River system in Alabama, Georgia, and Tennessee fall within the boundaries of the proposed critical habitat designation. These actions are not controversial. Stakeholders include the Center for Biological Diversity; the states of Alabama, Georgia, and Tennessee; and local landowners. The statutory deadline for publication of the final listing

rule was October 4. Planned outreach will include notifications to stakeholders and relevant members of Congress and a news release to regional media. This package is pending DOI clearance. (Updated 11/28/2018)

During the week of December 3, FWS plans to announce the availability of 26 draft recovery plan amendments for 42 species across the United States. These 26 draft recovery plan amendments are a subset of a larger effort under way to revise up to 182 recovery plans for up to 305 listed species in order to achieve a Department of the Interior goal of having all recovery plans contain quantitative criteria for what constitutes a recovered species by September 30, 2019. FWS does not anticipate controversy or opposition to the plans, however, there may be some locally controversial species (i.e., Hawaiian petrel, Newell's Townsend's shearwater, and Sacramento prickly poppy). Planned outreach will include a national news release, regional news releases, and notification to stakeholders and partners. Plans will also be posted to web. This package is pending DOI clearance. (Updated 11/28/2018)

During the week of December 3, FWS plans to propose critical habitat for the Sonoyta mud turtle in Arizona. The proposed designation includes approximately 12 acres in one unit on National Park Service land. As the proposed designation is limited to a small area within National Park Service lands, it is not expected to be controversial. Planned outreach includes a regional news release. DOI has cleared this package. (Updated 11/28/2018)

During the week of December 3, FWS plans to make a proposed listing determination for the Franklin's bumble bee, an invertebrate native to Oregon and California. FWS has also determined that critical habitat designation for this species is not prudent. This action is not expected to be opposed, and media coverage is expected to be neutral. Interested stakeholders include the Xerces Society (the petitioner), U.S. Forest Service, Bureau of Land Management, the Oregon Department of Agriculture, the California Department of Fish and Wildlife, and local landowners. A regional news release to all interested parties and the media is planned. (Updated 11/28/2018)

During the week of December 3, FWS will publish a notice calling for nominations for individuals to be considered to fill at least two vacancies in the membership of the International Wildlife Conservation Council. The Council advises the Secretary of the Interior on issues including anti-poaching programs, wildlife trafficking, and efforts to increase awareness of the conservation and economic benefits of United States citizens traveling to foreign nations to engage in hunting. This notice could be controversial due to ongoing litigation pertaining to the Council and because international wildlife conservation through trophy hunting is a controversial subject nationwide. No outreach is planned. (Updated 11/21/2018)

During the week of December 3, FWS plans to send to the *Federal Register* a notice announcing the availability of comprehensively revised boundaries for the second batch of Coastal Barrier Resources System (CBRS) units included in the Hurricane Sandy Remapping Project, affecting 310 units in six states: Connecticut, Maryland, Massachusetts, New York (Long Island), Rhode Island, and Virginia. The notice will announce a 120-day public

comment period and also advise of upcoming public meetings to be held via webcast. Landowners, state, and local officials will likely support the removal of certain areas from the CBRS and similarly oppose the addition of such areas to the CBRS. Taxpayer groups, recreational interest groups, and conservation groups will likely support the additions to the CBRS. Outreach will include a news release; letters to Congress, NGOs and federal, state, local, and tribal officials; social media; and a stakeholder outreach toolkit available to local officials. This package is pending DOI clearance. (Updated 11/28/2018)

During the week of December 3, FWS plans to publish the FY 2016 Recovery Report to Congress. The Recovery Report provides an update on the progress of federally protected species toward recovery between October 1, 2014, and September 30, 2016 (fiscal years 2015 and 2016). FWS does not anticipate controversy or opposition to the report. Planned outreach will include congressional notifications and posting the report to the web. (Updated 11/28/2018)

On or about December 14, FWS plans to send to the *Federal Register* a notice reopening the comment period for the proposal to list the West Coast Distinct Population Segment (DPS) of fisher as a threatened species. The proposed DPS boundary includes northern California, Oregon, and Washington. This notice is not expected to be controversial; however, there are many parties interested in the potential listing including landowners, agencies, tribes, environmental organizations, and congressionals. Planned outreach includes a regional press release and notifications to congressionals and stakeholders. FWS is required by a court order to submit the final listing determination to the *Federal Register* by March 22, 2019. (Updated 11/28/2018)

On December 19, FWS will host information webinars outlining next steps in developing a 12-month finding on a petition to list the monarch butterfly under the Endangered Species Act. Attendees include state agency directors and tribal staff. FWS was petitioned to list the monarch in 2014 and issued a positive 90-day finding indicating the petition was substantial. FWS is now finalizing a species status assessment and evaluating the monarch conservation database and other information to determine whether listing the monarch is warranted. The 12-month finding is due June 30, 2019. (Updated 11/28/2018)

ONGOING ITEMS

On or around December 10, FWS and the binational Jaguar Recovery Team will announce completion of the final recovery plan for the jaguar. The plan sets goals for improving the species' status through its entire 19-country range and provides a framework for achieving recovery. The recovery plan focuses on the cat's population in northwestern Mexico and the southwestern United States – recommending site-specific conservation actions and borderland dispersal corridors such that the population can most effectively rebound and contribute to the entire species' recovery. Recovery team and cooperating partners have been advised. Planned outreach includes news release, social media, and emails to congressional offices and stakeholders. (Updated 11/21/2018)

On or around December 14, FWS plans to send to the *Federal Register* a notice announcing a six-month extension of the final determination of whether to list the Panama City crayfish, found in Florida, as a result of substantial scientific disagreement concerning the species. This notice will also reopen the comment period on the proposed rule to list the species for an additional 30 days. The Panama City crayfish listing is controversial, but filing a six-month extension is not expected to be controversial. Stakeholders include St. Joe's Development Company, Florida Fish and Wildlife Conservation Commission, and city and county governments. In addition, U.S. Representative Neal Dunn has expressed opposition to the proposed listing of the species. The statutory deadline for publication of the extension notice is January 3, 2019; therefore, FWS plans to submit it to the *Federal Register* by December 14. (11/21/2018)

On or around December 14, FWS plans to send to the *Federal Register* a notice of availability (NOA) of a second batch of 29 draft recovery plan amendments for 42 species across the United States. These recovery plan amendments are a subset of a larger effort under way to revise up to 182 recovery plans for up to 305 listed species in order to achieve the Department of the Interior Agency Priority Performance Goal: "By September 30, 2019, 100% of all Fish and Wildlife Service recovery plans will have quantitative criteria for what constitutes a recovered species." FWS does not anticipate controversy or opposition to the plans; however, there may be some locally controversial issues. Planned outreach includes a national news release, with regional news releases and notification of stakeholders and partners. Plans will also be posted to the web. (11/21/2018)

On or around December 14, FWS plans to publish the FY 2017 Federal and State Endangered and Threatened Species Expenditures Report to Congress. This report provides a compilation of reasonably identifiable expenditures for the conservation of listed species reported independently by federal and state agencies. Expenditures are reported for species that were listed during FY 2017 through September 30, 2017. FWS does not anticipate controversy or opposition to the report. Planned outreach includes congressional notifications and posting the report to the FWS website. (Updated 11/07/2018)

On or around December 14, FWS plans to send to the *Federal Register* 12-month findings on petitions to list 13 species: Cedar Key mole skink, Florida sandhill crane, Fremont County rockcress, Frisco buckwheat, Ostler's peppergrass, Frisco clover, MacGillivray's seaside sparrow, Ozark pyrg, pale blue-eyed grass, San Joaquin Valley giant flower-loving fly, striped newt, Tinian monarch, and Tippecanoe darter. FWS does not anticipate these actions to be controversial. Planned outreach will include news releases, with supporting FAQs as needed, and notifications to stakeholders and members of Congress. FWS is required by settlement agreement to submit the finding for MacGillivray's seaside sparrow to the *Federal Register* by December 14. (11/21/2018)

By December 14, FWS plans to publish a proposed rule for the 2019 spring/summer Alaska subsistence migratory bird harvest for a 30-day public review and comment period. In order for the 2019 spring/summer subsistence migratory bird hunting to occur legally, the final rule must be published by April 2. Only administrative changes are being proposed, and the publication of both the proposed and final rules is not controversial. FWS will distribute a

press release to Alaska media and send email notification to stakeholders when both the proposed and final rules are published. (10/24/2018)

On or around December 15, FWS will announce availability of the draft recovery plan for the eastern massasauga rattlesnake for a 30-day comment period. The snake was listed in 2016 as threatened. FWS has worked with state agencies and other experts to develop the plan, which outlines management actions and criteria needed to achieve delisting. Among management actions are habitat protection and management, population management and monitoring, education and outreach, and research. A news release is planned. FWS will have some key messages to address any possible controversy that this recovery plan promotes the recovery of a venomous snake. (Updated 11/14/2018)

National Park Service

NEW ITEMS

By December 6, Grand Canyon-Parashant National Monument will release the Tassi Ranch Site Management Environmental Assessment (EA) for a 30-day public review. The project is located in the westernmost edge of the park near Grand Wash Bay. The plan addresses immediate and long-term issues concerning rehabilitation, restoration, and long term care of Tassi Ranch and the surrounding cultural landscape. (11/28/2018)

On December 7, the Southeast Region will brief the DOI Executive Review Team in order to release the Final Environmental Impact Statement for the Big South Fork National River and Recreation Area Contaminated Mine Drainage Mitigation and Treatment System Plan. This briefing is required by Step 5 of the Departmental NEPA Document Clearance Process. The administrative draft and briefing materials will be submitted to the Review Team at least one week prior to the scheduled briefing. (11/28/2018)

On December 8, Mary McLeod Bethune Council House National Historic Site will reopen after being closed for over a year while the park installed a new fire suppression system. The park plans to celebrate the house's reopening during Black History Month in February 2019. (11/28/2018)

On or around December 10, the Northeast Regional Director is expected to sign the Assateague National Seashore Finding of No Significant Impact for relocation of a recreational beach managed by the NPS within the Chincoteague National Wildlife Refuge. The national wildlife refuge is managed by the FWS, however, both bureaus share management responsibilities for the recreational beach under a Memorandum of Understanding. The new facilities will be more sustainable, resilient, and adaptable to storm events so that the beach will continue to support the local tourism-based economy. (11/28/2018)

On or around December 10, Mississippi National Recreational River and Recreation Area will release a newsletter updating the public on the ongoing planning process for the

Coldwater Springs area of the park. A small group has claimed the area to be sacred, and there is public and tribal interest in this project. (11/28/2018)

On or around December 12, the Northeast Regional Director is expected to approve and sign the Cape Cod National Seashore Shorebird Management Plan Finding of No Significant Impact (FONSI). The approved plan maintains visitor access at high visitation areas through flexible management of nesting shorebirds paired with increased shorebird protection in other areas. The availability of the signed FONSI will be announced via press release, on the park web page, through Facebook, and by notifying the town managers within the Seashore boundary. (11/28/2018)

On December 12, a task force composed of the Blue Ridge Parkway's three non-profit partner organizations is meeting to continue discussing opportunities for collaboration and potential consolidation. These three groups (the Blue Ridge Parkway Association, the Blue Ridge Parkway Foundation and Friends of the Blue Ridge Parkway) are responding to the park superintendent's request that they identify ways to enhance collaboration, and have chosen to explore potential consolidation. This past week, the superintendent sent an email to park staff, formal and informal park partners and local congressional offices to inform them of a potential consolidation among the park partners. (11/28/2018)

UPDATED ITEMS

On December 3-14, Manassas National Battlefield Park is planning a 35-45 acre controlled burn. In addition to maintaining the park's cultural landscape and improving wildlife habitat, the burn takes a proactive planned approach to fire management. The park successfully completed its first-ever controlled burn in April 2018. A burn scheduled for September 2018 was postponed because of especially wet weather conditions. (Updated 11/28/2018)

On December 11, Death Valley National Park will release the draft Rogers Peak Multi-Use Instrumentation and Communication Facility Environmental Assessment (EA) for a 30-day public comment period. The document analyzes right-of-way applications for a proposed 28-foot-diameter radome (Navy), a replacement tower up to 99 feet tall (Caltrans), and a new tower up to 99 feet tall (AT&T mobility/cellular). Two communications towers already exist on Rogers Peak, serving Southern California Edison and multiple federal, state, and county agencies. The proposed cell site is expected improve cell service in areas including designated wilderness, and as a result is likely to be opposed by wilderness advocates who believe cell phones impair wilderness character. (Updated 11/28/2018)

ONGOING ITEMS

During the first half of December, the South Florida NPS units will wrap up six weeks of hosting three Marine Protected Area (MPA) managers/scientists from Indonesia through the DOI International Technical Assistance Program. They will shadow NPS staff to learn about the various activities required to set up and manage MPAs in south Florida. Throughout their trip NPS will coordinate meetings and field trips to interact with our Federal, State, University, and non-profit partners. (Updated 10/31/2018)

On December 3**,** Chesapeake and Ohio Canal National Historical Park will open a 30-day public review period for the draft Environmental Assessment to reconstruct, raise and stabilize the historic stone wall and one-mile stretch of towpath from McMahon's Mill to Lock 42 in Williamsport, Maryland. The project will reduce the impacts of high water, which deteriorates historic features of the towpath and degrades the park visitor experience. (Updated 11/21/2018)

On or after December 3, the NPS will release the Joshua Tree National Park's Cottonwood Area Visitor Center/Environmental Assessment for a 30-day public review and comment. The document addresses proposed facility improvements to visitor use management at Joshua Tree National Park. The project is situated in the Cottonwood area in the southeast portion of the park. The plan addresses immediate and long-term issues concerning resource protection, visitor use, and administration of the Cottonwood Springs visitor center area and associated trails. The plan provides guidance on improvements to areas including the visitor center, and associated trails, as well as improvements to supporting NPS operational facilities such as the maintenance area buildings, fee station, staff housing, and staff offices. (11/14/2018)

On December 3, Ninety Six National Historic Site in South Carolina will host a public meeting to discuss the park's Environmental Assessment and Equestrian Use Management Plan. The draft environmental assessment will be released to the public for a 30-day comment period on November 19. (11/21/2018)

On December 3, a press release will announce changes to Jewel Cave National Monument's visitor center hours and days of operation, which will be temporarily reduced from December 17 through February 2019. This change coincides with the scheduled closure of the cave in order to make necessary improvements for visitor safety. (11/21/2018)

Between December 4-18**,** the acting National Capital Regional Director is expected to sign a Finding of No Significant Impact for the George Washington Memorial Parkway, Arlington County and Vicinity Boathouse Environmental Assessment FONSI (Plan/EA). The plan/EA evaluates the proposed construction and operation of a non-motorized boathouse on lands administered by the George Washington Memorial Parkway along the Potomac River along with a series of low-impact access points to the river to accommodate canoes and kayakers. While originally scheduled for early November, a delay in the state historic preservation office pushed back the signing. (Updated 10/31/2018)

On or around December 6, the Northeast Regional Director will sign the Hopewell Furnace National Historical Site Trail Plan Finding of No Significant Impact (FONSI). The selected action will improve wayfinding and signage throughout the park and add a 0.8 mile hiking trail to connect the western and eastern areas of the park. The improvements will include signage, which will allow the trail users to move seamlessly from adjacent public land to the park land, provide clarity of trail use, and ensure the safety of trail users. The availability of the signed FONSI will be announced through the park website, park social media, and a press release to local newspapers. (11/21/2018)

On December 7, Padre Island National Seashore is set to release Novillo Line Camp: Natural, Cultural, and Visitor Use Enhancements Environmental Assessment (EA) for a 30-day comment period. The EA analyzes the environmental effects to develop an Interpretive Trail and Boardwalk. The boardwalk would provide visitors access to the seashore to see the historic features and to learn about the island's ranching history. Construction through the dunes will mitigate the visual impact of the boardwalk within the historic landscape and will avoid impacts from construction in wetlands. (11/21/2018)

On December 7, the NPS Southeast Region is requesting to schedule a briefing for the Executive Review Team in order to release the Final Environmental Impact Statement (FEIS) for the Big South Fork National River and Recreation Area (BISO) Contaminated Mine Drainage Mitigation and Treatment System Plan for publication. The briefing is required by Step 5 of the DOI NEPA Document Clearance Process. The administrative draft, draft record of decision, and briefing materials will be submitted to the Review Team no less than one week prior to the scheduled briefing, as requested. Expected participants, in addition to the Review Team, are listed on the briefing request form that was submitted. (11/14/2018)

Between December 7-10, Arlington Memorial Bridge will be closed to all traffic. The closure is scheduled to begin at 9 p.m. on Friday, December 7, and end at 5 a.m. on Monday, December 10. The closure will allow workers to transfer the weight of the former draw span to temporary supports. Workers will also begin cutting the former draw span and preparing it for removal. The date of this work may change if there is bad weather or if workers encounter unexpected complications. (Updated 11/21/2018)

(CLOSE HOLD) During the week of December 10, the NPS will announce the contract award for food & beverage services and other associated services at Stinson Beach within Golden Gate National Recreation Area. The new 10-year contract will offer similar services as the existing contract. (11/21/2018)
