5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: (b) (6) Date: 2-15-18

Be aware that there may be [redacted] val requirements by your local or state government, as well as required by other F[redacted]rnment to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Houston, TX

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

Same as page 1

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

Darbi Rice (b) (6) [redacted]

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Re: Applications for Import of Sport-Hunted Lion Trophies

Dear Chief Van Norman:

Enclosed please find three applications to import sport-hunted lion trophies. The first applicant is hunting in South Africa, at Khamab Kalahari Game Reserve, an area that has been designated to have "wild" lion by South Africa's Department of Environmental Affairs. Please refer to the attached list and information in the DMA's files, which includes the management plan for this reserve. The applicant is lawfully hunting a lioness as a population control measure, as explained in the attached justification. Please consider that information and the information previously submitted by South Africa's DEA and Conservation Force in making a positive enhancement finding for this applicant.

The second applicant is hunting in Tanzania with Rungwa Safaris/Bundu Safaris. This operator has submitted an enhancement report, which was sent to the DMA in October 2016 and is attached for ease of reference. Please consider that information and the information previously submitted by Tanzania's Ministry of Natural Resources and Tourism/Wildlife Division/Tanzania Wildlife Management Authority and Conservation Force in making a positive enhancement finding for this applicant.

The third applicant is hunting in Zimbabwe in the Dande South concession. This concession incorporates extensive anti-poaching and community investment. We will shortly submit an enhancement report from this operator. Please consider that information and the information previously submitted by Zimbabwe's Parks and Wildlife Management Authority, Conservation Force, and others in making a positive enhancement finding for this applicant.

Please do not hesitate to contact us if you have questions.

Sincerely,

Regina Lennox

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III, Regina Lennox, and other attorneys of the non-profit law firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a threatened-listed African lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that Conservation Force be copied with all correspondence, acknowledgements, notices, and decisions concerning my application to import my trophy at the following address:

Type of Activity:
IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Wright	John	Stephen	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)		(b) (6)	

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Amarillo	TX	79109	Randall	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: un known No ☐

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other [illegible] formation submitted in this application for a permit is complete and accurate to the [illegible] subject me to the criminal penalties of 18 U.S.C. 1001.

(b) (6)

2/18/18
[illegible] or stamped signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Panthera leo melanochaita

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

      Tanzania, likely Rungwa Mpera

   b. Date wildlife is to be hunted:

      August 2019

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      Skin, skull, claws

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

   b. Date wildlife was hunted:

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	Rungwa Game Safaris/Tanzania Bundu Safaris
Business Name:	1-Sable Village
Address:	Kisongo,Arusha
Address:	Tanzania
City:	
State/Province:	
Country, Postal Code:	

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if [redacted], once imported into the United States, cannot be re-exported.

Applicant's signature: [redacted] Date: 2/18/18

Be aware that there [redacted] nts by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Tanzania lion / import applications / request for information

2 messages

Butzler, Julia <julia_butzler@fws.gov> Tue, Jul 24, 2018 at 4:08 PM
To: jjj@conservationforce.org, cf@conservationforce.org
Cc: Mary Cogliano <mary_cogliano@fws.gov>

Mr. Jackson,

We are in the process of reviewing applications for the import of African lions taken from Tanzania. A number of applicants have named you as the representative for all matters concerning the application. I have attached a list of the applications currently pending for which you have been named as the representative.

As you are aware, the U.S. Fish and Wildlife Service must make a finding that the sport-hunting of lions will enhance the survival of the species. As you know, we are now considering applications on a case-by-case basis, as opposed to making country-wide enhancement findings. As such, we would like to give you the opportunity to submit additional information in support of these application requests. This may include (but is not limited to):

>>population status or trend data on the lion population, both the countrywide population and the local population;

>>information on the fees paid (e.g., licenses or trophy fees), recipients of these fees, and use of fees;

>>information about the safari outfitter, professional hunter, concession holder or land owner and their activities to conserve the species (e.g., habitat management or improvement, anti-poaching activities and success of those efforts, efforts to address human-lion conflict, population monitoring, community benefits). Copies of recent reports submitted to TAWA would be particularly helpful.

Do not hesitate to contact me with questions or clarifications.

Thank you,

--
Julia Butzler, Biologist

USFWS ESA Trophy Permit Application #82925C

1 message

Harcum, Heather <heather_harcum@fws.gov> Tue, Sep 10, 2019 at 10:45 AM
To: jjj@conservationforce.org
Cc: cf@conservationforce.org, steve@ascoeq.com

Good morning John Jackson,

I am reaching out in regards to Mr. John S. Wright's application to import an African lion trophy (*Panthera leo melanochaita*) with Rungwa Safaris/Tanzania Bundu Safaris from Rungwa Mperea, Tanzania. This application was received on March 15, 2018.

We are in the process of reviewing applications for these imports and would like to receive the most updated information about the importer. Could you please respond to the following:

1. Confirm the physical address for Mr. Wright (currently we have 3201 S. Travis St. Amarillo, TX 79109). Is the mailing address the same?

2. Confirm the hunt actually occurred, as we received this application prior to the date of the hunt. If so, what were the confirmed dates of the hunt?

3. Was the lion in question taken? If so, on what date and on which hunting block (location) was the lion taken?

4. What is the name of the hunter he worked with?

Thank you and please feel free to reach out if you have any questions or concerns.

Operator Enhancement Report, 2016 to current

1 message

Harcum, Heather <heather_harcum@fws.gov> Thu, Sep 12, 2019 at 7:36 AM
To: info@rungwasafaris.com

Good afternoon,

I am a representative of the United States Fish and Wildlife Service (USFWS), reviewing an import permit application for a lion trophy hunted in Tanzania through Rungwa Game Safaris/Tanzania Bundu Safaris.

We would like receive the most updated information about the operators the importers hunted with. As you may well be aware, the USFWS is now considering applications on a case-by-case basis, as opposed to making country-wide findings.

We currently have your (quite commendable) operator enhancement report from 2013-2015, but would like the most updated information pertaining to allocation of funds, population status, among other additional information about your concession.

Warmly,
--

Heather Harcum | Permits Biologist

Re: HUNTING TERM (2013-2018) PERFOMANCE EVALUATION

The heading above refers.

My Ministry has recently conducted a two years performance analysis for all trophy hunting companies which were allocated hunting blocks for the 2013-2018 hunting term. The analysis involved evaluating utilization of the allocated quota, payment of government dues and compliance with rules and regulations pertaining to trophy hunting.

I wish to inform you that your company showed an outstanding and commendable performance with regards to the underlined criteria.

In light of the above, I would like to congratulate you for performing well and I urge you to keep this spirit up for the remaining part of the 2013-2018 hunting term. Maintaining this performance will automatically qualify your company for renewal of the tenure of ownership of your current hunting block(s) for the 2018-2022 hunting term.

Yours sincerely,

Lazaro Nyalandu

Lazaro S. Nyalandu (MP)

RE: 2018 SEASON ANT-POACHING, BLOCK DEVELOPMENT AND COMMUNITY CONTRIBUTION FOT THE BLOCKS RUNGWA – MPERA GR, SELOUS GR K1

We acknowledge receipt of your letter **Ref. RGS/CD/01/19** dated on **04th April, 2019** regarding to the heading above.

The Authority would like to commend and officially appreciate the commitment to support ant- poaching activities, Block and Community development to **Rungwa Mpera GR, Selous GR K1** hunting blocks for year 2018.

In light of the above, you are reminded to pay all outstanding bills if any before commencement of next hunting season 2019.

We thank you for continued cooperation.

Mary R. Kashangaki,

ANNEX 6 WMA Implementation Strategy
ANNEX 7 Letter of the Director of Wildlife on Lion quota reduction, 2016

NOTE:

This Document has been prepared by the Wildlife Division of the Ministry of Natural Resources and Tourism and by the Tanzania Wildlife Research Institute (TAWIRI) and was concluded in June 2016.

On 1st July 2016 the Tanzania Wildlife Management Authority (TAWA) became operational. This authority is established under the Wildlife Conservation Act no. 5 of 2009, with the Order of the establishment of the Authority which was promulgated in GN. 135 and published in the Gazette of May 9th 2014.

In June 2017, Section 6.3.5 (Age of the harvested lions) has been added to include the analysis on the age of harvested lions and section 7.1 (Harvest levels) has been updated in order to reflect the analysis of the lion harvest.

1. Introduction

The Government and citizens of Tanzania are aware of dependency on natural resources for its livelihoods and socio-economic development. In recent years Tanzania has achieved high overall economic growth due in part to expanding mining and tourism industries, the latter being largely based on terrestrial wildlife, coastal and marine attractions. Government believes tourism, both consumptive and non-consumptive, holds great potential for the socioeconomic development of the country including rural communities through, for example the operations of Wildlife Management Areas in which private companies can invest.

Sustainable management of natural resources is high on the national development agenda.

In this regard, lion has an important role not only as an apex terrestrial carnivore in the Tanzanian ecosystems, but also as a potential provider of economic benefits through its sustainable use both consumptive and non-consumptive.

Lions fill an essential niche in numerous large African predator-prey relationships. The species also ranks very highly amongst preferred animals for tourists. At the same time lions are also important trophy animals in areas where tourist hunting safari operations are conducted.

Apart from the lion's ecological role in the ecosystem, the lion is also an important economic species which brings in a substantial amount of money to the tourist industry. This includes the tourist hunting safari sector.

Tanzania holds the most important lion population in Africa and on Earth and bear this responsibility with improved strategies to maintain this and other species to levels that are not detrimental to their survival; these strategies encompass a variety of conservation issues, such as Community-Based Conservation, Anti-Poaching, Protected Areas and Wildlife Management in general.

Importantly, to give a new impetus to conservation strategic activities, the Government of Tanzania has decided in 2014 to establish the Tanzania Wildlife Authority (TAWA) in order to improve efficiency and effectiveness in managing wildlife resources and their habitats. TAWA is an autonomous body responsible for undertaking conservation of wildlife resources and biodiversity outside National Parks and Ngorongoro Conservation Area. TAWA was officially inaugurated in October 2015 and at the time of writing this NDF (June 2016) the transition of management activities from the Wildlife Division (WD) to TAWA is taking place. Most of TAWA's funding will come directly from user fees such as hunting license fees, hunting block fees, game fees and daily conservation fees. The viability of TAWA will depend on sufficient revenue from safari hunting.

Sustainable utilization, in the form of highly selective and well-monitored safari hunting, can provide the needed revenues to achieve the goals of these strategies. The proceeds from lion safari hunting[1] are re-invested into conservation and sustainable development in local communities. In this way, sustainable sport-hunting of lions provides direct benefits to both conservation of Tanzania's wild lion populations and the people living with the lions in their areas thereby promoting conservation ethics at the national and local level.

[1] In this document the term Safari Hunting or Tourist Hunting is used and preferred over the tem "Trophy Hunting", as the ultimate goal of this hunting is not the pursue for the bigger "trophy", but rather a touristic, recreational and conservation activity.

2. The distribution of African lion (*Panthera leo*) in Tanzania

2.1 Distribution

In Tanzania, wildlife conservation is at first hand a matter of land use. The lion range and habitat fall within the wildlife protected areas, covering about 40% of the country's land area. Wildlife protected areas is the single largest form of land use in Tanzania. Tanzania has different categories of protected areas that are administered by different authorities. They include 16 National Parks, 28 Game Reserves, the Ngorongoro Conservation Area, 44 Game Controlled Areas, 38 Wildlife Management Areas, and 570 Forest Reserves. New categories of protected areas include Ramsar Sites and Nature Reserves. Commitment to gazette more areas, which are critical habitats for wildlife species, is contained in Tanzania's Wildlife Policy (URT 2007) and the Wildlife Conservation Act No.5, 2009.

Protected areas gazetted as hunting areas (304,400 km^2) are ca. 5 times larger than protected areas without safari hunting activity (57,838 km^2) (Figure 1). The Total of Protected areas is more than 360,000 km^2. Protected areas gazetted as hunting areas cover about one third of Tanzania and serve as prime reservoirs of global biodiversity, securing maintenance of natural ecosystems and prey base for lions.

Therefore, the figures reported on page 80017 of Final Rule are not correct i.e. "*For example, in Tanzania, 25–33 percent of the total area, covering over 247,000 km^2 and encompassing 190 hunting units, has been set aside for sport hunting purposes; this has resulted in an area 5.1 times greater than Tanzania's fully protected and gazetted parks (Jackson 2013, p. 6; Barnett and Patterson 2005, p. 61)."* The total area set aside for sport hunting covers 304,400 km^2 and not 247,000 km^2. Also the statement, in the same page, that these hunting areas are not ameliorating the threat of habitat loss, is incorrect as explained below. Habitat loss is not considered a threat to lion in Tanzania, although the issue of human encroachment on protected areas is being addressed including with the support of hunting operators.

The latest comprehensive global assessment of the lion range in Tanzania covered an area of 816,790 km2, i.e. 92.4% of the terrestrial land in Tanzania (Mésochina et al. 2010). This assessment showed a permanent presence range for lion of 516,900 km^2, i.e. 69% of the documented lion range, and a temporary presence range of 232,800 km^2, i.e. 31% of the documented lion range (Figure 2, more details provided in Mésochina et al. 2010). A more updated range assessment exercise which led to similar results can be found in Hamunyela et al 2013.

There are four main subpopulations of lions in the country:

a) Maasailand Ecosystem, mostly in Mara, Arusha, Kilimanjaro and Manyara Regions (north-eastern of Tanzania);

b) Kagera and Kigoma Regions (north-western of Tanzania);

c) Rukwa, Tabora and Mbeya Regions (central and western Tanzania);

d) Selous Ecosystem, mostly in Lindi, Morogoro and Ruvuma Regions (southern Tanzania).

Figure 1: Network of Protected Areas in Tanzania (Source: TAWIRI)

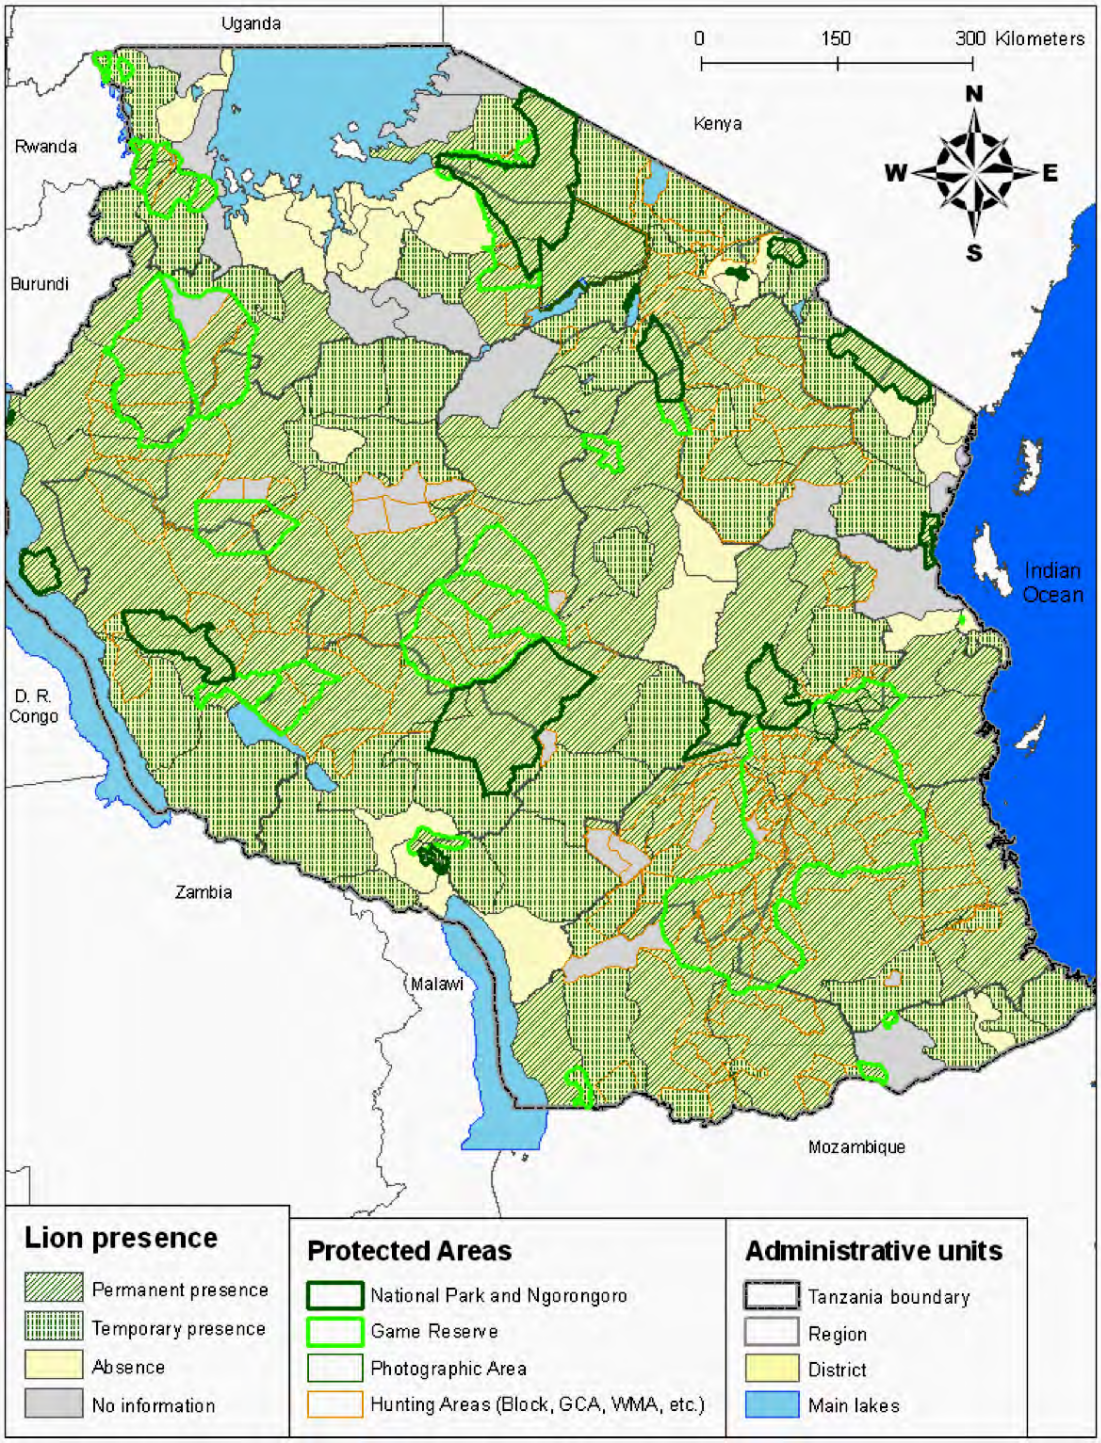

Figure 2: Lion range in Tanzania (by January 2010) for the period 2005-2010. (from Mésochina et al 2010)

3. Population status, census methodologies and recent surveys.

The latest nationwide lion estimates were provided by Ikanda and Packer (2006), and Mésochina et al. (2010). Ikanda and Packer (2006) proposed an estimate of lion abundance of 17,564 [12,208 - 19,320], and Mésochina et al. (2010) and estimate of 16,800.

In the 2010 Mésochina study (2010), a georeferenced database has been set up to collect and analyze the information available (250 bibliographic references) as well as the information generated by specific inquiries (among 321 informants).

According to this assessment, the estimated lion population size of these main subpopulations in 2010 was:

3,700 in the Maasailand Ecosystem;

520 in Kagera and Kigoma Regions;

2,300 in Rukwa, Tabora and Mbeya Regions;

7,200 in the Selous Ecosystem.

Table 1 presents the list of lion census surveys carried out in Tanzania between 2005 and 2015.

In 2014, the Wildlife Division in collaboration with TAWIRI (Tanzania Wildlife Research Institute), launched a national large carnivores survey with the objective to monitor the status and population trends of lion, and other large carnivores, in the safari hunting areas of Tanzania, i.e. Game Reserves, Game Conservation Areas, and Open Areas, in a sample of hunting blocks over the main ecosystems of the country, i.e. Tarangire Manyara, Malagarasi-Moyowosi, Ruaha-Rungwa, and Selous Game Reserve:

- Prior to the surveys, a training workshop on large carnivores census methodologies took place in Lake Manyara National Park, on the 29th–31st July 2014, for 15 ecologists and managers of the Wildlife Division, TAWIRI, and TANAPA (Tanzania National Parks), with a special focus on the track incidence methodology (Funston et al. 2010). This methodology relies on the identification and the count of the spoors left on the ground by the large carnivores along portions of roads and rivers called transects. This is the key standardized technique applied to estimate lion abundance in locations where they are shy and elusive to the presence of humans. Tanzania utilizes also the standardized methodology of call-up surveys but preferentially long term observations of known individuals in Serengeti NP, Ngorongoro CA, and Tarangire NP has served as the primary technique of counting lions.

In 2014 and 2015, two major lion populations were surveyed, in Maasai Steppe Ecosystem (the Simanjiro Plains) and in the Selous Game Reserve:

- In the Maasai Steppe Ecosystem, two surveys were carried out in the Simanjiro Plains: (i) one in the dry season, in August-September 2014; (ii) one in the wet season in April-May 2015, in order to capture possible changes in lion densities due to seasonal movements of prey, hence lions too, in and out of Tarangire National Park. The sample comprised four hunting blocks, 5,386 km2 of the 26,708 km2 (i.e. 20%) covered by the hunting blocks on the eastern border of the Tarangire National Park. In the Tarangire National Park, there is already an ongoing lion project that provides regular population estimates. Results of the sampled portion of the Maasai Steppe provides an estimate of 1.3 lions x 100 km^2 (Equivalent to about 70 lions). The area is a key hotspot of human-lion conflict in Tanzania and lions suffer periodic persecution from Maasai pastoralists which explains the low density.

The final results are not yet available because the Simanjiro Plains are only a part of the Massai Steppe, and cannot therefore be representative of the entire ecosystem.

- In the Selous Game Reserve the survey took place in the typical dry season 2014, October- November 2014, over 10 of the 48 blocks of the Reserve. It covered several sectors, and included the two management regimes, i.e. photographic and hunting, for a total area of 11,385km^2, i.e. 25% of the Reserve. An additional survey took place during the 2015 wet season, in March 2015, in the photographic part of the Reserve. Results are given in table 1 and the final results has been submitted to a scientific journal awaiting publication.

Table 1: Summary of available lion population census surveys **since 2005** in Tanzania.

	Lion population	Management Regime	Size (Km2)	Last survey	No. surveys	Density (No./100 km2)	Source	Pop. Trend
0.	Countrywide	All	816,790	2010	N/A	Variable	Mésochina et al. 2010	Estimate 16.800
1.	Selous	Hunting	44,200	2015	3	3.8-4	Crosmary et al (In prep.)	Stable
2.	Selous	Photographic	800	2015	4	9	Crosmary et al (In prep.)	Stable
3	Selous	Photographic	800	2010	4	9	Brink 2010	Stable
4.	Rungwa GR	Hunting	9000	2012	1	6	Caso (2012)	Unknown
5.	Luganzo GCA	Hunting	2500	2012	1	5	Caso (2012)	Unknown
6.	Tarangire	Hunting	5386	2015	2	1.3	Ikanda et al (Inprep)	Unknown
7.	Moyowosi GR	Hunting	12.432	2007	2	3.3		Unknown
8.	Tarangire NP	Photographic	2800	2015	continuous	7.5	Laiser et al (2014)	Decrease
9.	Ngorongoro	Photographic	250	2014	continuous	22		Stable
10.	Serengeti NP	Photographic	14.763	2014	continuous	12.5		Stable
11.	Katavi NP	Photographic	4279	2005	1	4	Kiffner,2009	Unknown
12.	Lake Manyara NP	Photographic	132	2006	4	20	Ikanda & Kissui per comm	Stable
13.	Enduimet WMA	Photographic	751	2013	2	20	Kissui pers comm	Stable

Over the 516,900 km^2 of permanent lion presence range, 304,400 km^2, i.e. 61%, lie within protected areas gazetted as hunting areas, and 57,838 km^2, i.e. 11.4%, lie within National Parks (Mésochina et al. 2010).

Most lions are found in Protected Areas, with a population size estimated to be around 13,600 (i.e. 81.1%), and around 3,200 individuals in non-gazetted areas (i.e. 18.9%) (Ikanda and Packer 2006; Mésochina et al. 2010).

Of the estimated 13,600 lions in the Protected Areas in 2010, ca. 21.5% are in National Parks, and ca. 56.8% in hunting areas. (see Table VII in Mésochina et al. 2010).The remainder 21.7% are found in protected areas other than National Parks, which are not open for safari hunting, e.g., Forest Reserves etc.

Therefore, the protection of lion habitat and range in Tanzania largely relies on the existence of these areas gazetted as safari hunting areas.

As illustrated in Table 1 the vast majority of lion surveys in Tanzania have taken place in some of the main National Parks, and only sporadically outside these Parks, i.e. in other gazetted

areas or in not gazetted areas (but see Mésochina et al. 2010). Consequently, population trends are so far only available for few populations in some National Parks (Bauer et al. 2015). Therefore, updated information on population size, and on trends, is lacking for most lion populations in Tanzania.

Only in Serengeti NP, Ngorongoro CA, Tarangire NP, and Selous photographic sector (Matambwe) to a lesser extent, there were enough census surveys to reliably assess trends, i.e. with no doubtful interpolation.

Contrary to Bauer et al. (IUCN 2015) results for Matambwe (Selous photographic sector), lion numbers remained stable between 1993 and 2014 in that area.

Bauer et al. (IUCN 2015) selected sites for their assessment with: "The minimum number of census surveys per site over the assessment time period is two". Therefore, they should also have considered sites such as Selous (hunting management part) and Moyowosi GR where 3 and 2 census surveys respectively were carried out between 1993 and 2014.

Bauer et al. (IUCN 2015) kept Katavi National Park (KNP) in their sample, and they put the lion population in KNP at 0(zero), whereas only one census survey was carried out there, the one made by Kiffner et al. (2009) that estimated the adult lion population in KNP at 168 (CL 77-439) individuals in 2005.

Because there was no starting point, the analysis for Katavi could have been performed without doubtful interpolations based on guesstimates or extrapolations (Riggio et al. 2016; Tim Caro *in litt.* 2015). This contradicts what Bauer et al. (2015) wrote: "We did not include population estimates for sites which were based on extrapolation of Lion densities obtained by research in other areas, or informed guesstimates by researchers". And Professor Tim Caro who has worked in Katavi for years, publicly said: "It's simply not true that there are no lions in Katavi. If you go to the park now, you're going to see them around the tourist circuit."
http://www.sciencemag.org/news/2015/10/east-west-africa-could-lose-50-their-lions-2035

Such as for Katavi, one census survey has been carried out in Rungwa Game Reserve and Luganzo Game Controlled Area between 1993 and 2014, but Bauer et al. (2015) did not considered these two areas.

Based on these and other data, Tanzania has sent a letter to IUCN including a rebuttal of their Red List assessment for lion (Annex 1).

The Wildlife Division and TAWIRI have made it a priority to develop better trend data. The WD and TAWIRI launched a national large carnivores survey in 2014, with the objective to monitor the status and population trends of lion, and other large carnivores, in the safari hunting areas of Tanzania. The Wildlife Division is committed to improving the quality of data on Tanzania's lion population.

4. Legislation and Enforcement

Wildlife species in Tanzania, including African lions, are protected by law under the Wildlife Conservation Act No.5 of 2009, and its subsidiary legislations. The Act ensures there is suitable habitat in terms of space and provides for protection of plant species which is source of food for prey species of the African lion. Such habitat and food resources are also protected by other legislation such as the Tanzania National Parks Act (CAP 284 R.E. 2002), implemented and enforced by TANAPA and the Ngorongoro Conservation Area Act (CAP 282 R.E. 2002) implemented and enforced by the Ngorongoro Conservation Area Authority (NCAA).

Wildlife hunting in Tanzania occurs under the natural heritage of resident hunting and safari hunting. The safari hunting sector in Tanzania is governed by the Wildlife Conservation Act, No. 5 of 2009, the Wildlife Conservation (Tourist Hunting) Regulations of 2010 (now 2015) and the Wildlife Conservation (CITES Implementation) Regulations of 2005. The hunting season starts from 1st July to 31st December as per Closed Season Order of 2012.

Tanzania hosts the world's largest lion population and this is by virtue of regulatory mechanisms in place that guides and ensures the species conservation (Wildlife Conservation Act No.5 of 2009), and sustainable utilization as a national resource Wildlife Conservation (Tourist Hunting) Regulation, 2010 (now 2015). The Wildlife Act ensures that the species natural habitat is preserved alongside available prey species. Primarily, this is through a network of protected areas that conform to IUCN categories of protected areas. Secondary, the Act ensures that the species is protected by law even where it occurs beyond protected area boundaries.

4.1 Stakeholders in the conservation of lion.

The Wildlife Division of the Ministry of Natural Resources and Tourism (MNRT) manages safari hunting in Tanzania. It is headed by Director of Wildlife and Assistant Directors responsible for Utilization, Law Enforcement, Development and Training. In Law Enforcement, there are zonal anti-poaching offices headed by zonal anti-poaching Commanders. There are eight anti-poaching zones, namely Arusha, Dar es Salaam, Songea, Tabora, Manyoni, Mwanza, Iringa and Bunda (Figure 1).

The Wildlife Division operates the Tanzania Wildlife Protection Fund (TWPF) which has the objective of facilitating and supporting wildlife conservation, inside and outside protected areas particularly in: anti-poaching operations and law enforcement; operations of the Wildlife Protection Unit; the conservation of wildlife; education, training and awareness creation in wildlife matters; capacity building in wildlife management; wildlife management research and any other activity related to conservation of wildlife.

Local Government Authorities (LGAs), that is District Councils (DC), are responsible for the implementation of wildlife policy within their jurisdictions by formulating and enforcing laws, and preparing sound physical and development plans that protects wildlife and habitat.

Wildlife Management Areas (WMA) represent the community based conservation system of Tanzania and they are seen as a key component of rural development and as one of the best weapons in the fight against illegal utilization. Safari hunting is an important component of WMAs' activities and revenues.

Hunting companies are responsible for supporting the government in the conservation, development and sustainable utilization of wildlife resources through investing in the wildlife sector. According to the Wildlife Conservation Act No. 5 of 2009, hunting companies are required to record and report relevant details of all animals killed, wounded, or captured.

The role of local and international NGOs is to support the government financially and technically in conservation, management and development of wildlife and ecosystem resources. In particular, the role of NGOs is to provide conservation education to the public, financial assistance to research projects and assistance to WMAs in wildlife management.

The following scientific research and conservation projects are beneficiaries of the above arrangements:

- African People and Wildlife Fund- http://afrpw.org/initiatives/wildlife-conservation/maasailand-lion-conservation/
- Ruaha Carnivore Project – www.ruahacarnivoreproject.com
- Serengeti Lion Project – www.lionresearch.org
- http://symbawildlifeconservation.org/alliance_projects/maasai_steppe_lion_conservation_alliance_project_-_mslcap_swc-tz
- The School For Field Studies - http://www.fieldstudies.org/about/research/tanzania

In order to insure that there is inter-agency cooperation in the protection of wildlife resources, the Wildlife Division is working with TANAPA, TAWIRI, NCAA, Police, TISS and Airport Authorities.

5. Safari Hunting in Tanzania

Safari hunting in Tanzania is consistent with a tourism policy of high quality products and low volume tourism and offers a unique experience due to the following reasons:

- Large wilderness hunting areas that assure high appreciation of client experience during hunting;
- Variety of trophy animal species, which are key in the safari hunting sector. These include: Leopard, Lion, Sitatunga, Puku, Gerenuk, Oryx, Greater and Lesser Kudu, Sable Antelope, Buffalo, Crocodile and the Elephant.

Safari hunting is conducted in areas known as hunting blocks designated in Game Reserves (GRs), Game Controlled Areas (GCAs), Open Areas (OAs), Forest Reserves (FRs) and Wildlife Management Areas (WMAs) (Figure 1).

In the current Tourist Hunting Regulations (2015), hunting blocks in Tanzania are classified into five categories based on criteria that include species diversity, the block being within/adjacent to a Game Reserve, bordering National Parks or Ngorongoro Conservation Area, habitat diversity, availability of water for wildlife, human activities, diversity of huntable species and infrastructure.

Hunting companies are allocated hunting blocks for tenure of five years' subject to annual review of the company's performance. The process of allocating hunting blocks for the 2013 to 2018 was concluded in 2011.

The Wildlife Division is evaluating the feasibility to increase the tenure of hunting blocks to ten years as long tenure can enhance sustainability by securing investments.

As prescribed by the Tourist Hunting Regulation, 2015, by 31st December of the third year of the hunting term, companies intending to renew the tenure of ownership of the hunting block must submit their applications to the Ministry, in the form of Performance Reports containing information on several criteria:

- the applicant has been utilizing the hunting block allocated to him and scores at least forty percent of the value of the key animals as specified in the Fourth Schedule to of the Regulations per hunting season;
- the level of revenue collected from photographic tourism depending on the category of the hunting block;
- whether the applicant has been contributing to the villages within and adjacent to his hunting block an amount of not less than USD 5,000.00 for each hunting block annually as a contribution to the implementation of various community development projects;
- the level of the applicant's contribution to the improvement of infrastructure and protection of the environment within his hunting block;
- the level of the applicant's contribution towards anti-poaching operations or defending against any other bad intentioned persons in issues of conservation of wildlife; and
- the applicant's record regarding the export of trophies to relevant clients.

Hunting Blocks are renewed after evaluation by the Hunting Block Advisory Committee established under section 38 of the Wildlife Conservation Act of 2009.

The Performance Reports for this term of Hunting Blocks (2013-2018) were received by 31 December 2015 and contain a wealth of information demonstrating the enormous contribution of hunting to habitat and wildlife conservation and to rural communities' livelihoods.

They are in the process of being forwarded to the Hunting Block Advisory Committee for evaluation.

Hunting Blocks are managed under the quota system whereby each block is assigned with a

specific number per species to be hunted in a given season after advice from the Quota Allocation Committee (See section 6.1).

Costs of management of Hunting Blocks are extremely high. A realistic estimate of costs of management incurred by hunting companies on a yearly basis ranges from 300,000 to 500,000 USD for each block. These costs are block specific and includes a variety of costs such as fuel, graders, camps, salaries, anti-poaching, cars, lorries etc. Lease agreements in Tanzania require assistance with anti-poaching from hunting operators in Hunting Blocks.

Safari hunting has created financial incentives for the development and/or retention of wildlife as a land use across an area of 304,400 km^2 in Tanzania, outside National Parks and NCAA, where Safari hunting is the primary land use as game reserves, or where trophy hunting is a key component of community conservation schemes. This is a system to conserve biodiversity in areas outside strictly protected areas where hunting is prohibited.

Safari hunting is viable in remote parts of the country that are not popular among photo-tourists (e.g. southern Tanzania). Hunting is able to generate revenues under a wider range of scenarios than photo tourism, including remote areas lacking infrastructure, attractive scenery, or high densities of viewable wildlife. Tourist hunting revenues are vital in part because there are not enough tourists to generate income for all protected areas. Even in the most visited countries such as Tanzania, photo tourism revenues are typically sufficient to cover the costs of only some of the parks and certainly not to justify wildlife as a land use outside of strictly protected national parks.

In Tanzania, for the past 6 years, revenues generated by hunting were 3 to 8 times greater than those generated by photographic tourism in areas managed by the Wildlife Division (Table 14 section 11). Hunting revenues can be generated with lower environmental impacts from fossil fuel use and habitat conversion for infrastructure development (among others see Di Minin et al. 2016).

The most important factor to be considered is that habitat and ecosystems conservation is the final objective in the conservation policy of Tanzania.

Safari Hunting is an important tool to maintain biodiversity i.e. a variety of ecosystems and species across Tanzania. Rapid human expansion and conversion of land to agriculture or livestock ranching and illegal activities can be controlled and limited through the value given to wildlife, the presence of hunting operators and the willingness of local communities to collaborate due to the returns they obtain from safari hunting, including protein, which is not generally available from photo tourism.

Research on the impact of hunting on biodiversity has shown that hunting (and its associated management) can be a strong driver in conserving biodiversity, because many of the objectives in hunting (maintaining healthy populations, preserving natural habitats, reducing limiting factors for game) are shared with those of wildlife management and conservation at large. (Fischer et al. 2013).

Financial resources for conservation, particularly in developing countries such as Tanzania, are limited. As such, consumptive (including Safari hunting) and non-consumptive (including photo tourism safaris) uses are both needed to generate funding. Without these, many natural habitats would otherwise be converted into agricultural or pastoral uses. Safari hunting can also have a smaller carbon and infrastructure footprint than ecotourism, and it generates higher revenue from a lower number of uses.

Wild areas of Tanzania provide biodiversity services, i.e. ecosystem services, through the provision of recreational opportunities such as hunting and the aesthetic enjoyment of the wildlife that utilize these landscapes.

Safari hunting plays an important role in the ecosystem services as defined in the Millennium Ecosystem Assessment (MA) (2005), i.e. "the benefits people obtain from ecosystems." Safari Hunting is both a provisioning and cultural service (two of the four categories) of services

identified by the MA.

The Safari hunting system in Tanzania where operators pays fees and other payments to encourage ecosystem and species conservation, and rural livelihoods, could be considered as a Payment for Ecosystem Services (PES). Its contribution in this regard and in the whole framework of Ecosystem Services shall be analyzed further and it is the intention of the Wildlife Division to start working on this subject as a priority.

5.1 Lion hunting in Tanzania

The lion is generally protected from all forms of consumptive use in Tanzania, with the exception of Safari hunting. Safari hunting is highly conservative and strictly controlled and thus does not constitute to the overutilization of the population (Table 5 and Figures 8, 9 and 10).

Safari hunting is an integral part of Tanzania's Lion and Leopard Conservation Action Plan (see section 8.1) because of its role in generating conservation revenue for national authorities and local communities, and its contributions to anti-poaching and habitat preservation. It must be noted that revenues generated from hunting are crucial to maintain the Wildlife Management Areas and are contributing to poverty reduction and socio-economic development.

The safari hunting sector's sustainability would be threatened by the loss of its main attracting product (the lion) combined with the loss of its main markets (the USA and EU). A lot of hunting companies operating will return most (if not all) of their hunting areas to the Wildlife Division to avoid bankruptcy. As a consequence, many protected areas devoted to safari hunting will be converted to agro-pastoral land, leading to the unavoidable extinction of wildlife and natural habitats and the collapse of ecosystem services. This will lead to an ecological disaster in Tanzania.

Hunting practices are managed under the best available science, which offers guidance/regulates quotas and target animal selection (see sections 5, 6 and 7).

5.2 Hunting Regulations of 2015 and their enforcement

The Wildlife Conservation (Tourist Hunting) Regulations, 2010 have been revoked and substituted by the Wildlife Conservation (Tourist Hunting) Regulations, 2015, published on 18th September 2015 in the Supplement No. 34 of the Subsidiary Legislation under Government Notice No. 414. (ANNEX 2). These regulations include five parts: (1) Preliminary Procedure for Application and Allocation of a Hunting Block, (2) Condition and Restrictions Relating to a Hunting Block, (3) Management and Supervision of Professional Hunters and (4) Miscellaneous provisions such as control of hunting quotas, offences and penalties, etc., Offence in Contravention of Standards Set, Offence for Hunting (which includes age restriction limit for lion hunting and related penalties) and (5) General Penalty.

The revision of regulations to address new issues is an important part of Tanzania's adaptive management process for safari hunting as recommended by scientists (e.g. WWF 1997; Whitman et al. 2004; Lindsey et al. 2012).

Huntable lions are defined as lions whose harvest has no negative impact on the sustainability of local lion population dynamic. Research has shown that these are typically males five years of age or more that have usually completed at least one breeding cycle (Whitman et al. 2004).

In light of the above, Tanzania has implemented the following:

- Include an age-based rule into the hunting Regulations;
- Strengthen the existing monitoring procedures for lion safari hunting;
- Develop capacity building within the safari hunting sector.

Within all the African lion range states, Tanzania has been the first country to officially establish age restriction rules on lion hunting at country level. It was clearly stipulated in sections 24(5)(a)

and 24(6) of the Tourist Hunting Regulations of 2010 (now superseded by section 27 (1) of the Tourist Hunting Regulations of 2015) that "*no person shall hunt lion of an age below six years*". Any professional hunter who guides a client to hunt any lion in contravention of the above Regulations commits an offence and upon conviction is liable for penalties, including cancellation of his or her professional hunters' license.

The Wildlife Division, Ministry of Natural Resources and Tourism, has since (i) published a legal guidance document enforcing the 2010 Regulations, (ii) gradually improved the monitoring and control mechanisms of lion safari hunting (see section 6.2) and (iii) continuously raised the professionalism of the hunting sector. These achievements place Tanzania well ahead of any other lion range state in terms of lion safari hunting monitoring, control and penalization of offenders.

These Regulations had as immediate effect to significantly reduce lion harvest and increase the average age of the lions harvested (see sections 6 and 7).

Since their entry into force, the enforcement of the 2010 Regulations has been developed through a participatory process involving representatives of the various stakeholders in Tanzania. Given the current state of knowledge regarding the age diagnosis of lion trophies, it is well recognized by the scientific community that a lion's age cannot be assessed without uncertainty (e.g. Whitman and Packer 2007; Ferreira and Funston 2010). In Niassa National Reserve, Mozambique, Colleen Begg stated that "*The 4-6 year age category is there because we appreciate that it is often difficult to tell the age of lions in this category as there is a lot of variation*." (Begg and Begg 2008). In Zambia, Paula White wrote in an unpublished report that "*While scientists and hunters alike agree that determining the exact age of a wild lion is not possible, assigning individuals to broader age categories is more straightforward*".

Following the guidance document referred above, the Wildlife Division has consequently adopted a system for adjusting the lion quota based on the age of previously harvested trophies (Figure 4) which includes:

- Accepted (6 years-old and above);
- Accepted with penalties (4 and 5 years-old);
- Not accepted with deterrent penalties (under 4 years-old).
- The age categories of lion trophies that can be exported: only trophies assessed to be at least 4 years-old are allowed for export;
- An aged-based lion quota-setting system: lion quotas are set for and allocated to each hunting area according to the age of the lions harvested during the previous hunting season, based on the following system:
- The quota is decreased by 1 for each lion harvested with an age of 4 and 5 years;

The quota is decreased by 2 for each lion harvested with an age under 4 years. In addition, any professional hunter who guided a client to hunt lions under 6 years old commits an offence and is liable on conviction:

- To a fine of US Dollars one thousand or imprisonment for a period not less than six months for the first time of commission of an offence;
- To a fine of US Dollars four thousand or imprisonment for a period not less than one year for the second time of commission of an offence; and
- To a fine of US Dollars ten thousand or imprisonment for a period not less than one year and a cancellation of the Professional Hunters' license for the third time of commission of an offence.

The rationale of this system is to direct hunting intensity to surplus/huntable lions. This strategy is more penalizing than the Niassa points system (Begg and Begg 2008).

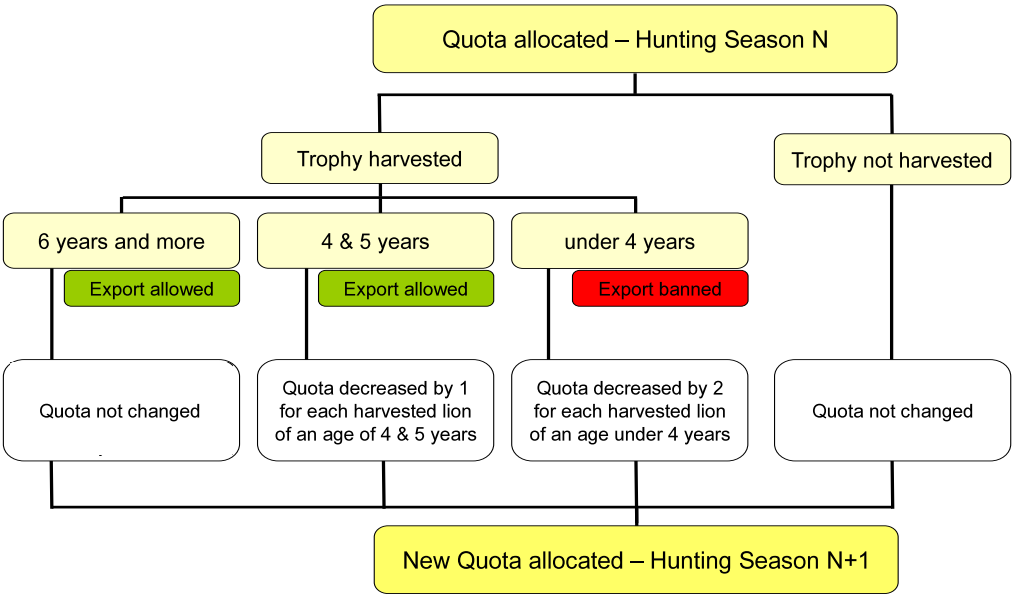

Figure 4: The Wildlife Division System for adjusting the lion quota based on the age of previously harvested trophies.

5.3 Capacity-building of the hunting sector

Before the onset of the 2012 hunting season, the hunting sector was informed of the new rules for enforcing the 2010 Regulations regarding lion hunting, trained for improving data collection (two workshops in 2012) and for identifying old enough huntable lions through (i) the production of written guidelines (age diagnosis of the lions in the field and data collection) and (ii) the organization of training sessions.

Capacity-building of the hunting sector is a continuous activity and there are plans to have workshops, preferentially prior to the hunting season, with hunting operators, professional hunters and Wildlife Division officers.

5.4 Involvement of the hunting sector in Lion Conservation

The mechanisms for monitoring and controlling lion hunting are well accepted by the hunting sector in Tanzania.

Representatives of the hunting sector were involved in the elaboration process of the Amendment of the 2010 Regulations. The Wildlife Division regularly explained the context and the rationale of that Amendment to the sector.

As a result, the hunting sector is well committed to fulfill their duties in regards to lion hunting monitoring and control.

Since 2011, every single lion harvested by hunters in Tanzania has been inspected by the Wildlife Division (i.e. 100%).

Safari operators have contributed and are contributing substantially to Tanzania's enhanced anti-poaching efforts and communities' development. They provide funding, equipment and the technical expertise for repairs, transportation, and most critically, funding for government game scouts as well as their own anti-poaching patrols.

Hunting Companies' anti-poaching teams acting in collaboration with the Wildlife Division Anti-Poaching Units, remove snares, prevent illegal logging, and arrest poachers in a coordinated and continuous effort.

This effort is also pointed toward assistance to rural communities in order to improve their livelihoods. Apart from the annual 5,000 USD contribution which is mandatory under the Tourist Hunting Regulations, the Safari Operators made enormous voluntary contributions aimed at health care, water provision, infrastructure developments for rural communities.(See also section 10)

These contributions amount to more than US$ 5,5 million for the triennium 2013-2015.

Table 2 below illustrate the contribution of Safari Hunting Operators from 2013-2015 and is compiled from information taken from the Operators Performance Reports referred in section 5.

Table 2 Contribution of 45 Safari Hunting Operators for Antipoaching, Block development and community development 2013-2015 (in USD).

Anti-poaching (USD)	Block Development (USD)	Community Development (USD)	TOTAL
1.871.894,00	**1.930.112,49**	**1.776.699,67**	**5.578.706,16**

These contributions include but are not limited to:

- Support of mobile antipoaching teams in collaboration with respective Game Reserve/District Council;
- Provision of graders for maintenances of existing roads;
- Acquisition or deployment of aircrafts/helicopters for aerial patrols, maintenance or development of airstrips, pilot training;
- Donation of 4x4 cars and motorcycles, deployment of boats for antipoaching;
- Donation and installation of radio equipment for communication;
- Donation of GPS devices and satellite mobile phones;
- Donation of firearms and ammunitions for antipoaching teams;
- Donation/building of class rooms/schools for rural communities, donation of stationery for schools;
- Donation/building of boreholes and water tanks for rural communities;
- Support health programs for rural communities.

5.5 Transparency

As recognized since the preparation and implementation of the Carnivore Action Plan of Tanzania (2009), transparency is essential for lion conservation. Tanzania maintains transparency through hunt return forms and requiring a government ranger participate in hunts, which make each hunt visible to the WD. Also, the WD requires annual reports from hunting operators, which allows for oversight of offtakes and understanding of benefits sharing and anti-poaching. The MNRT and WD are overseen by the rest of the government through audits. And Tanzania's wildlife management is transparent to the rest of the world through presentations to the international community on a number of occasions:

- 10th Annual African Wildlife Consultative Forum, 10-12th October 2011, Manzini, Swaziland;
- 7th International Wildlife Ranching Symposium, 12-16th October 2011, Kimberley, South Africa;
- General Meeting of the ACP (a Francophone Association of Professional Hunters), 21st October2011 Paris, France;
- 2nd Workshop of the African Lion Working Group, 10-11th February 2012, Etosha National Park, Namibia;
- 19th Session of the African Forestry and Wildlife Commission of FAO (United Nations Food and Agricultural Organization), 30th September-4th October 2013, Windhoek, Namibia;
- 12th annual meeting of the AWCF (African Forum of Consultation on Wildlife), 3rd-8th November 2013, Livingstone, Zambia;
- Annual General Assembly of the CIC (International Council for Game and Wildlife Conservation), 23rd-26th April 2014, Milano, Italy;
- Annual General Assembly of the AGGC (Association des Guides de Grande Chasse, Professional Hunters' Association), 10th June 2014, Paris, France;
- Game Fair, 13-15th June 2014, Chambord, France.

The USFWS acknowledged on page 80042 of the ESA Final Rule on lion (USFWS 2015) that Tanzania has implemented age restrictions and shown reductions in offtake; however, it reported that transparency (in terms of trophy quality data) and the scientific objectivity of the evaluating body has been questioned. We are puzzled and severely concerned by this unreferenced statement because of the various measures described above. Concerning independency of science this is open to debate knowing that lion scientists are financed from several sources including animal rights groups.

Questionably, and in contrast with the above page of the USFWS ESA Final Rule (USFWS 2015), on page 80024 it is stated: *"Unless reforms are made to the current management of trophy hunting, we expect the declines specifically documented from excessive offtakes in Benin, Cameroon, Tanzania, Zambia, and Zimbabwe to continue. Furthermore, we expect excessive harvests to further contribute to declines in the species across its African range*." This statement is simply untrue for Tanzania. The offtakes are not excessive.

Further, Tanzania's records of its implementation of the age restriction system are open to scrutiny to the international scientific community. Tanzania has requested several times to have independent scientists evaluate its system. Peer reviewers have done so. Tanzania has been and will continue to be open to such checks upon its process.

We are also puzzled by general allegations concerning corruption as reported in the USFWS ESA Final Rule (USFWS 2015).

The Government of Tanzania has taken important steps to address corruption with the support of the international community. Specifically, on hunting, several actions were taken against companies that infringed Laws and Regulations. Such general, unsubstantiated allegations are not helping our relationships. If the USFWS has precise, substantiated information on corruption in hunting practices in Tanzania, we urge the USFWS to provide the Government of Tanzania with facts and evidence in order that our enforcement and judicial system can act accordingly.

We are also requesting USFWS to provide to the Wildlife Division the source material of your statement on page 80017 of the USFWS ESA Final Rule on Lion(USFWS 2015):" *Although we acknowledge the steps many countries have taken to address local community incentives, most of the countries are currently not transparent about the benefits provided to local communities, and due to the high revenue potential, are subject to corruption (Packer 2015, pers. comm.)* as it is highly defamatory.

6. Lion hunting quotas and monitoring

6.1 Hunting quotas

The hunting quotas are based on data and other relevant information available in terms of the following criteria: species distribution, natural breeding history, recruitment rate and population estimates, which partly derived from regularly conducted censuses (large mammals), research work and indices as may be reflected in various reports by field personnel, through specific data forms. In essence, all species that are hunted every year must be included in the annual quotas that are determined by the Quota Allocation Advisory Committee comprised of wildlife conservation experts from TAWIRI, the University of Dar es Salaam, Sokoine University of Agriculture, University of Dodoma, the College of African Wildlife Management and the Wildlife Division (which is the CITES Management Authority). The Committee receive inputs on the wildlife situation from various stakeholders and meet once a year and minutes of the meetings are kept for reference, although in Swahili only.

The Wildlife Division monitors harvesting of lions through its quota system. Hunting companies are obliged to show the number of lions they shoot each hunting seasons through hunting returns, these numbers are verified by records from local wildlife officials (Park managers and District Game Officers) who supervise all hunting. This system also enables the monitoring for quality of trophies using the age restriction system which is implemented Offtakes are monitored through hunt return forms and the participation of government scouts. The system also includes, as explained in section 4.2, a reduction on the quota as a penalty for under-aged lions shot in a given block.

Furthermore, harvesting is also monitored through a CITES trophy export permit system; as lions are harvested for trophy by foreign tourist hunters that must export them. As Lion is a CITES listed species, it can be expected that a high level of international scrutiny will be applied to international trade in the species.

The Wildlife Division utilizes many years of cumulative experience in setting quotas that relies on several verifiable quantitative and qualitative indicators (mainly population estimates and trophy quality and off take levels etc.) that can demonstrate little or non-significant detrimental impacts on the populations.

Further to the discussion in section 2, lion surveys are conducted in several areas although a precise lion inventory is a difficult and sometimes impractical task. Therefore, Tanzania relies on the recommendation of establishing the quotas based on scientific recommended thresholds complemented by the lion aging system.

Until this year, Tanzania maintained a quota of 315 lions as sport-hunting trophies, with the age restrictions as a secondary quota. That number was in line the recommendation of 1 lion/2000Km^2 for most hunting areas, and 1 lion/1000Km^2 for the Selous Game Reserve, given that the lion range in Tanzania of 516,900 km^2 of permanent presence and 232,800 km^2 of temporary presence. This quota was maintained because it was in line with available science and not detrimental to the survival of the species. However, the utilization of this quota was low, almost never above or even at 50% (see Table 5).

Following consultations with the Scientific Authority (TAWIRI), the CITES Management Authority (WD) has decided to introduce a new export quota for lion hunting trophies of 200 specimens. This will be effective at the start of the next hunting season, commencing in 1st July 2016, and an official instruction has been signed by the Director of Wildlife (Annex 7).

This new quota is (i) a reduction of one third of the previous quota and (ii) 25% below the sustainable harvest level suggested by the CITES Scientific Authority (TAWIRI) and Packer et al. (2011), i.e. 1 lion/2000Km^2 for most hunting areas, and 1 lion/1000Km^2 for the Selous Game Reserve and other high density areas, and taking into account the lion range in Tanzania (permanent presence range for lion of 516,900 km2, and a temporary presence range of 232,800 km^2).

The new quota is a further precautionary measure, complementing the strict age restriction regulation implemented since the entry into force of the Tourist Hunting Regulations of 2010. It is a three tier limit, i.e., age, number per square kilometer, and maximum overall number. It made sense to the Management Authority to reduce the quota because the prior quota was never utilized fully, and the low level of offtake in recent years demonstrates Tanzania's commitment to sustainable hunting. (Annex 7).

Therefore, we do not concur with the analysis provided on page 80021 of the USFWS ESA Final Rule (USFWS 2015):

Other range countries continue to have fixed quotas in place and charge a percentage of the quota regardless of success (CAR charges 50 percent; Namibia 100 percent; Tanzania 40 percent; Zambia 60 percent; Zimbabwe 30 percent). This approach facilitates harvesting of trophies even if a sufficiently old lion is not found (Hunter et al. 2013, p. 6). Therefore, harvested lions are often of lower quality, younger, and less desirable male lions, as operators and hunters, who had already paid the trophy fee, had no incentive to be selective. Abolishing fixed-quota fees and only allowing optional quotas will encourage and reward operators who are selective and follow age restrictions (Lindsey et al. 2013a, p. 9; Packer et al. 2006, pp. 5, 9).

In fact, the mandatory payments for key animals required from operators and monitored during the three years' term of Block renewal, are based on the value of the key animals (at least 40% of the value) as stipulated in section 16.5 of Tourist Hunting Regulation 2015 and calculated in accordance with the Fourth Schedule of the same Regulation. It does not mean that the quota is fixed but it is an indicator of hunting performance and wildlife abundance in the assigned hunting block.

The administrative and management system of hunting in Tanzania is complex and this complexity need to be understood before criticizing it.

Tanzania firmly emphasizes that, well before this new significant reduction of hunting quotas, the age restriction provision had already succeeded to decrease offtakes and to maintain them way below the sustainable threshold levels. Indeed, since the implementation of the Tourist Hunting Regulations of 2010 and the adoption of the 5/6-years of age provision to harvest lion an impressive number of very positive results have already been obtained:

- Offtake has been reduced to about 40 lions per year;
- Offtake levels, both at national and regional scales, have been kept way below the sustainable harvest rates suggested by Packer et al. (2011); and
- The average age of the harvested lions has increased, with a proportion of lions above 6 years' old that is ten (10) times higher in 2014 than in 2011.

By implementing the peer-reviewed (independent experts are conducting the lion aging review) age restriction provision six years ago, Tanzania in fact already set up a mechanism that is far stricter than the suggested sustainable offtake threshold levels. Had Tanzania simply followed these suggested thresholds, offtakes would have most probably remained three to four times higher than they have been in the past five years, i.e. at levels prior to the 2010 Hunting Regulations (see Table 5).

In addition to the continued assessment and monitoring of human-lion conflicts and habitat loss outside protected areas, which are unanimously recognized as the two main threats to lion conservation (IUCN, 2006a, b), Tanzania is committed to keep on (i) monitoring lion hunting and (ii) assessing the impact of the Tourist Hunting Regulations of 2010 (amended 2015) on the sustainability of lion hunting.

The pressure and impact of hunting are monitored through measures of hunting statistics such as harvest rates, catch rates, age of harvested males, and estimates population size and structure.

6.2 Mechanisms for monitoring lion hunting in Tanzania and mechanisms for controlling the age of trophies

The monitoring of the lion hunting (Figure 5) is carried out through the implementation of a specific database and a specific safari return form (Figure 6). Based on all hunting permits issued by (and compulsorily returned to) the Wildlife Division, a specific database has been set up to record lion hunting harvests. Regularly updated, the database is used to follow-up lion Safari hunting activity and trophy skulls that must be presented to the Wildlife Division for inspection.

Since mid-August 2011, all professional hunters conducting lion hunting safaris are required to fill in the safari return form for both successful and unsuccessful safaris. With this form general information on the course of the safari, the lion population status and lion Safari hunting success are collated. For the successful lion hunting safaris, additional information like the hunting effort, specific measurements (total length and shoulder height) and specified photographs are taken. Safari return forms and trophy photographs are compulsorily provided by the hunting companies to the Wildlife Division. No CITES export permit can be issued without compliance.

In 2011, a temporary lion hunting database was set up for registering data on lion safari hunting including hunting permits. This database, built from hunting permits and safari return forms, hosted data such as how many lions have been hunted, by which hunting operator, which professional hunter, in which hunting area, for how many hunting days, etc. Such information allowed following-up not only lion safari hunting activity (e.g. hunting effort, hunting success), but also lion trophies submitted by the hunting operators.

Starting in 2012 the Ministry of Natural Resources and Tourism introduced an electronic permitting system for Safari hunting and Photographic Tourism activities in order to increase efficiency, transparency and revenue collection.

The objective of this system was to intensify revenue and data collection, control quota utilization and increase efficiency in issuing hunting permits. Since the system became operational the Ministry has reduced time previously spent in processing hunting permits, collection of revenue and assessment of quota utilization by company.

Hunting companies are required to complete Safari hunting permit application forms. This form requests company information, client particulars, Hunting Safari particulars, list of observers and animals to be hunted. Hunting companies can complete electronically at their office or hard copy and submit at the Hunting offices in Dar or Arusha. After completion of the form, invoices are issued to the company based on the package and number of observers if any. Currently there are 5, 7, 10, 16, 21 and 28 day safaris. After payment of the hunting permit at the account department, accountants confirm the payment online to allow for issuance of hunting permits at the Safari hunting Section.

Hunting companies present a proof of permit payment at the Safari hunting Section and collect hunting permits. However, If the company has pending dues, the system blocks all services until all unpaid invoices are cleared.

After the expiration of hunting package as indicated in the hunting permit, hunting companies are required to submit all hunting permits and pay all government dues within 42 days. Information about the number of wildlife species hunted, areas where hunted, caliber of firearm used, time and block where the game was hunted are recorded in the system. Invoices are created based on the number of game shot. In case of over use of the quota companies are penalized direct from the system.

The system deducts the number of animal hunted from the quota uploaded in the system. The system indicates the quota balance from each animal species. In this regard, over utilization of the hunting quota issued to a company is controlled.

The system is password protected and the user numbers are restricted within the Ministry and they need their own internal account which is monitored by an administrator of the IT section of

the Ministry. The Hunting Companies and Photographic companies can log into to the system to submit their applications. The system can generate daily, weekly, monthly and annual reports and several queries can be made.

6.3 Aging System

Concerning the aging system, we are pleased that USFWS recognized that our lion aging system has decreased legal offtakes. We are puzzled by the transparency remarks raised by USWFS in their Final Rule and we addressed them in section 5.5.

In 2015 stakeholders from the hunting sector were invited to witness the lion aging sessions. In the near future the Tanzania Wildlife Division is going to call more independent reviewers to evaluate its lion aging system.

Given the current state of knowledge, ageing lion trophies requires the use of subjective and objective criteria. In order to diagnose the age of lion trophies as accurately as possible the Wildlife Division uses the whole set of criteria recommended by the scientific community (Smuts et al. 1978; Cheater 2006; Whitman and Packer 2007; Ferreira and Funston 2010; White 2010; Niassa Lion Project). However, the research is on-going for a more objective method, so the Wildlife Division carefully monitors scientific developments likely to improve the age diagnosis of lion trophies. To this end, the Wildlife Division launched in October 2012 a field study to measure various criteria in known age wild lions in collaboration with the Tanzanian Wildlife Research Institute. The results are shown in section 6.3.4.

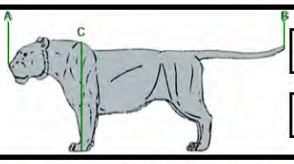
TROPHY MEASUREMENT AND PHOTOGRAPHY

Total length (A-B: tip of the nose to end of the tail): cm

Shoulder height (C: tip of scapula to back of plantar pad): cm



Side view showing the entire body with the hunter positioned directly behind for scale

Side view of the head, neck and shoulder showing mane development

Head down, showing mane development on head and shoulder

Head up, showing mane development on throat and chest

Face head, showing shape and scarces

Frontal view of the teeth, showing coloration and wear on canines and incisors. At time of hunt for color!

Nose, not too close and clearly showing the pigmentation. At time of hunt for color!

BIOLOGICAL SAMPLING

Please note that two blood and two skin samples are required per lion.

Blood sample: Place the filter paper on bullet wound or another source of blood until blood soaks through, air dry for 10-15 minutes in the shade, place in a small plastic bag inside the larger plastic bag and store in a cool place.

Skin sample: Cut a small piece of skin (3-4mm), place it into a tub filled with alcohol 70 or 90° (ethanol) and put the tub in the larger plastic bag.

…thanks for your help!

6.3.1 Inspection of lion trophies

The control of the harvested lion trophies is conducted during ageing sessions where hunting operators are requested to bring the skulls of their lion trophies for inspection at the Wildlife Division. This step is compulsory for the issuance of a CITES export permit.

Upon reception, each skull is identified by a unique code number. A minimum set of 20 pictures of the skull is taken from various angles. The pictures allow potential control of the inspection at a later stage. The inspection of the skull encompasses:

- The measurement of quantitative parameters describing the skull. A set of 15 measurements are taken for describing the skull (e.g. total length, biorbital breadth, canine lengths, etc.). Some of the parameters measured have been shown to predict the lion's age under three years of age only (e.g. skull total length, in Smuts et al. 1978). Some other parameters, to our knowledge, have not been tested yet. The aim of taking new measurements is to test whether new parameters can predict the age of trophies and potentially propose scientific research.

- The detailed qualitative inspection of the skull. Each tooth is carefully inspected in regards to its integrity and erosion; additively the integrity and sharpness of the enamel ridges of the canines are assessed, as well as groves on the lower canines. The diagnosis of age is based on published chronologies of tooth eruption and wear in relation to the age of lions (e.g. Smuts et al. 1978; Whitman and Packer 2007). The closure and obliteration of cranial sutures are also assessed (Smuts et al. 1978).

- The X-ray radiography of an upper pre-molar 2 (PM2). One PM2 is extracted and X-rayed to measure the relative size of the pulp cavity (e.g. Cheater, 2006; Whitman and Packer 2007). The pulp cavity fills as individuals age. In lions, the pulp cavity of the upper PM2 is initially wide, and gradually fills as the lion ages. The cavity is closed by approximately 5 years of age (Whitman and Packer 2007).

All the information recorded during ageing sessions is collated in a specific synthetic ageing form (Figure 7).

6.3.2 Analysis of collated information

Together with the information recorded during the ageing sessions, the measurements of the lion harvested (safari return form) and the analysis of the photographs taken by the professional hunter are collated in the synthetic ageing form.

In the safari return form, professional hunters are asked to measure the total length and the shoulder height of the lion harvested. Shoulder height is a good predictor of the age of a lion younger than 2 years of age (Ferreira and Funston 2010).

Photographs of the lion harvested taken by the professional hunter are used to diagnose the age of the lion harvested based on (i) mane development, (ii) facial markings, (iii) nose pigmentation and (iv) coloration of canines and incisors (Smuts et al. 1978; Whitman and Packer 2007; White 2010; Niassa Lion Project).

A scoring mechanism is then applied to each criterion, resulting in a global score used to assign the harvested lion to an age category (Figure 7).

6.3.3 Validation of the age diagnosis

The integrative approach used by the Wildlife Division for diagnosing the age of lion trophies has been validated through the organization of blind-tests involving renowned lion experts. Lion experts were provided with photographs and measurements of a few lions harvested during the 2011 hunting season and were asked to age them.

The Wildlife Division invited three renowned lion experts to review the ageing process implemented in Tanzania. Each expert has received the full set of information collated (measurements of the skull, pictures of the trophy and the skull, X-ray of an Upper Premolar 2) for a number of samples ranging from 5 to 12 and was asked to diagnose the age of the trophies. Three experts gave the feedback of the blind test at the time by 15/12/2012, resulting in the review of 22 items with repetitions (Table 4). Overall, only five trophies were not attributed to the same age category, of which four shared a common category. As a result, the only discrepancy (i.e. 5% of the trophies reviewed) concerned a case where the reviewer diagnosed an age of 4/5 years while the Wildlife Division attributed the trophy to the CU category (under 4 years).

Table 4. Results of some blind tests conducted by three lion experts.

#	Reviewer I		Reviewer II		Reviewer III		WD
	Raw	WD categories	Raw	WD categories	Raw	WD categories	
A			5 years	To			To
B			5/6 years+	To (CA)			To (CA)
C			4-5 years	To			To
D					5 years	To	To
E			4 years	To			To
F					7/8 years	CA	CA
G	4-5 years	To	5/6 years+	To (CA)	5 years	To	To (CA)
H			4 years	To			To
I					3 years	CU	CU
J	4-5 years	To	4 years	To			To
K	4-5 years	To	5/6 years+	To (CA)			To
L			5 years	To			To
M			3 years	CU	3 years	CU	CU
N	4-5 years	To	3-4 years	CU (To)			CU
O	4-5 years	To	5 years	To			To

Age Category used by the Wildlife Division (WD):

CA 6 years and more

To 4-5 years

CU under 4 years

To (CA) might be 5 years but attributed to CA due to benefit of doubt

Cu (To) might be 3 years but attributed to To due to benefit of doubt

6.3.4 Development of an age diagnosis tool

Given the current state of knowledge in the methodology for ageing lion trophies, it is well recognized by the scientific community that a lion's age cannot be assessed without uncertainty (e.g. Whitman and Packer 2007; Ferreira and Funston 2010).

The Wildlife Division, with the intention of improving its age diagnosis methodology, has recently launched a study in collaboration with TAWIRI. The aim of the study is to develop a quantitative age diagnosis tool. It is well known that pulp cavity of teeth closes with age in mammals. Although the relative sizes of pulp cavities in teeth are frequently used to diagnose age of carnivores (e.g. jackal, wolf, Iberian lynx, coyote, lion), the validation of the technique has received little attention.

For the African lion, we lacked a calibration study measuring the degree of closure of pulp cavity in wild specimen of known-age. Long-term studies on lion populations in Northern Tanzania offer a unique opportunity for improving the knowledge in ageing lion, since birth date are known for a significant number of lions.

TAWIRI has conducted a study in October 2012 and January 2014 where sixteen known-age male lions were sampled (including X-Ray of lion teeth). The dataset has been analysed together with a sample from South African lions to show that there is a positive relationship between pulp cavity closure rate and age in lions of 3-13 years of age, with accuracy of within six months. Findings of the study will enhance the capability of the WD to monitor the ages of hunting-harvested lions and more effectively enforce age restriction.

Now, the Wildlife Division plans to adjust (if necessary) the preliminary age diagnoses resulting from former trophy inspections.

Finally, the protocols for sampling and age estimation of hunted lions are well-established, and significant improvements have been made for estimating lion age.

Thanks also to the above lion aging protocols developed in Tanzania and from data obtained from measurements taken from lions aged 3–13 years for which exact ages were known, a method of calculating the pulp/tooth area ratio, which has been used extensively in forensic science, was recently described and is novel in the study of lion aging. *Ratio Of tooth AReas* (ROAR) offers improved lion age estimates for population modeling and investigations of age-related mortality, and may assist national and international wildlife authorities in judging compliance with regulatory measures involving age (White et al. 2016).

6.3.5 Age of the harvested lions

Since the implementation of the Tourist Hunting Regulations of 2010, and the adoption of the 6 years of age approach in Tanzania, the proportion of harvested males above 6 years old has exponentially increased from 10,6% to 88.2%, whereas the proportion of harvested males below 4 years old decreased from 22.4% to 5.9% (Figure 8).

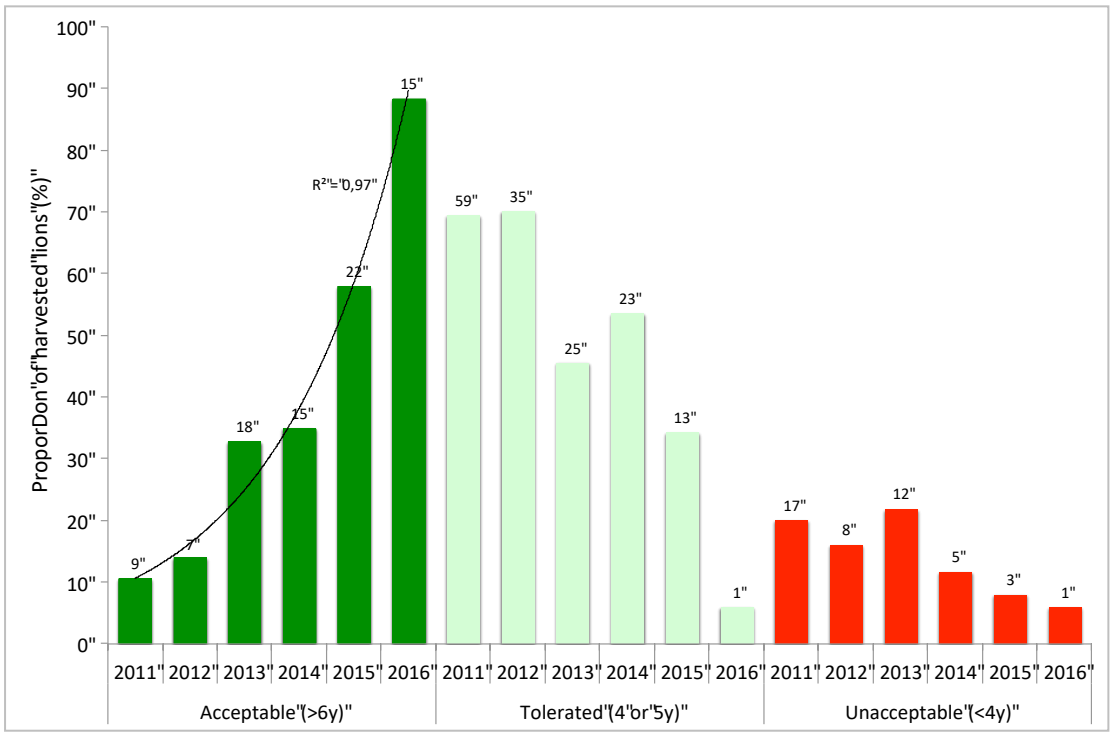

Figure 8: Annual proportion (and number) of harvested lion males in each age category since 2011 in Tanzania.

Similarly, the proportion of harvested lions of six years old and more has drastically increased in almost every ecosystem, but in Serengeti (Figure 9).

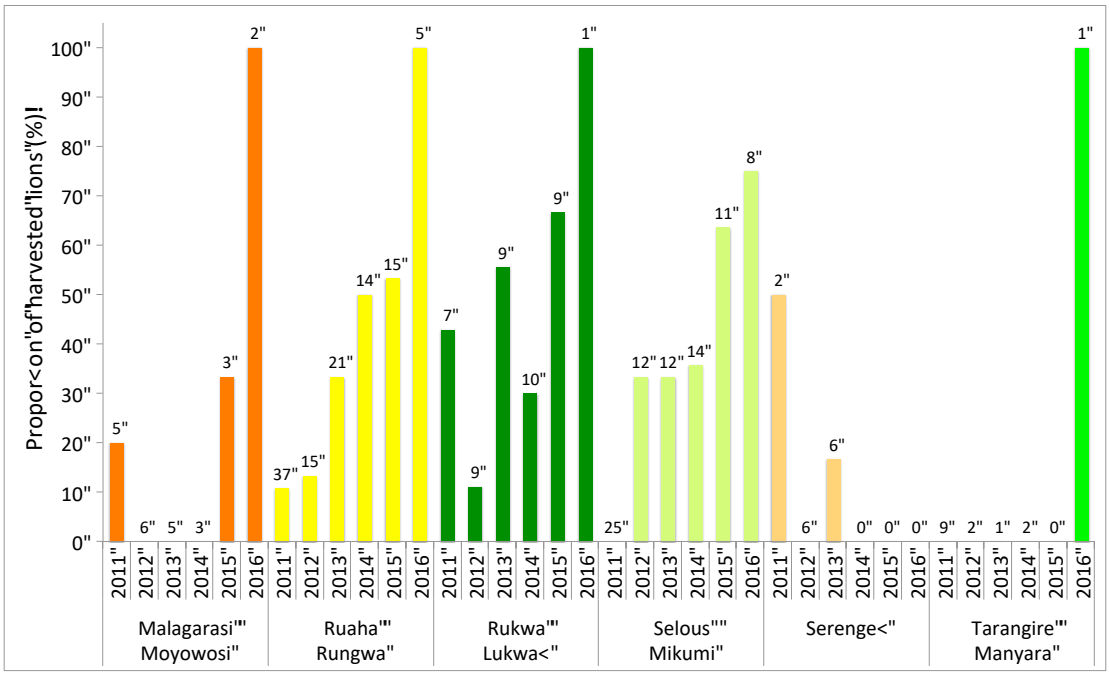

Figure 9: Annual proportion (and number) of harvested lion males of 6 years old and in the main ecosystems of lion range in Tanzania since 2011.

7. Annual harvest levels and international trade

7.1 Harvest levels

Considering the latest available estimate of lion population size in Tanzania (i.e. 16,800; Mésochina et al. 2010), safari hunting harvested a yearly mean of 1.34% (min: 0.53%; max: 2.46%) of lion males ranging in the country, for the past ten years (Table 5). This figure is considered as low and has decreased since the establishment of age restriction rules on lion hunting, i.e. the Tourist Hunting Regulations of 2010.

Table 5: Lion harvest for safari hunting over the past ten years in Tanzania.

Hunting season	Harvest of lion hunting trophies		
	Number	% of lion population	% of adult male population*
2007	146	0.87	2.17
2008	165	0.98	2.46
2009	132	0.79	1.96
2010	101	0.6	1.5
2011	85	0.51	1.26
2012	50	0.3	0.74
2013	54	0.32	0.8
2014	44	0.26	0.65
2015	39	0.23	0.6
2016	19	0.11	0.29

* A conservative adult sex ratio of 0.4:1 was used

Across the main ecosystems of lion range in Tanzania, between 2007 and 2016, average lion harvest rates[2] have remained below the sustainable levels, but in the Ruaha Rungwa and Serengeti ecosystems at some occasions (Figure 10).

[2] As a reminder, the harvest rate is the number of lions harvested per surface area, e.g. per 1,000km^2. This index is used to monitor the hunting pressure on harvested species.

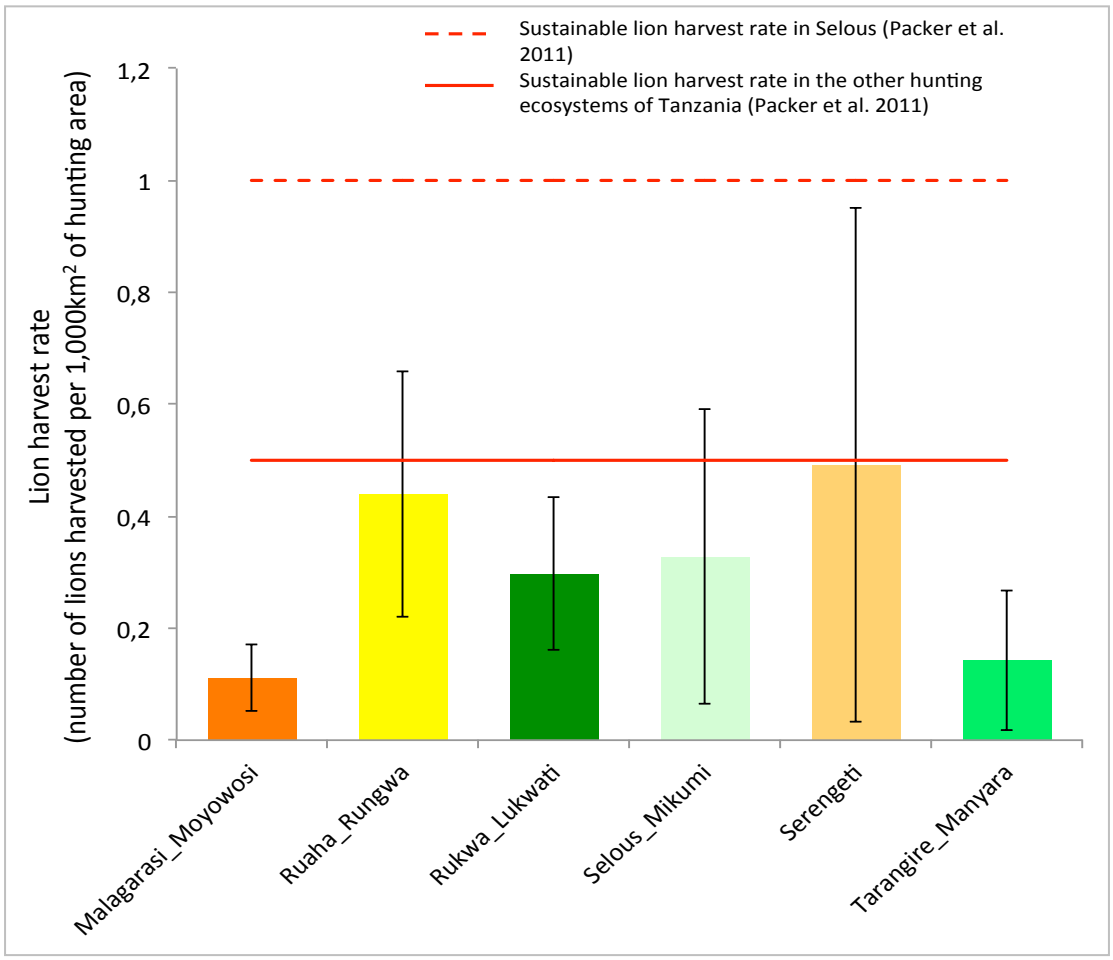

Figure 10: Average regional harvest rates in the main ecosystems of the lion range in Tanzania between 2007 and 2016 (with standard deviations).

The lion harvest rates in the period following the Tourist Hunting Regulations of 2010, were in average lower than the harvest rates of the preceding period, in every ecosystem (Figures 11,12,13). In each ecosystem, harvest rates remained in average below sustainable levels after 2010, while they exceeded sustainable levels in Ruaha Rungwa and Serengeti during the previous period.

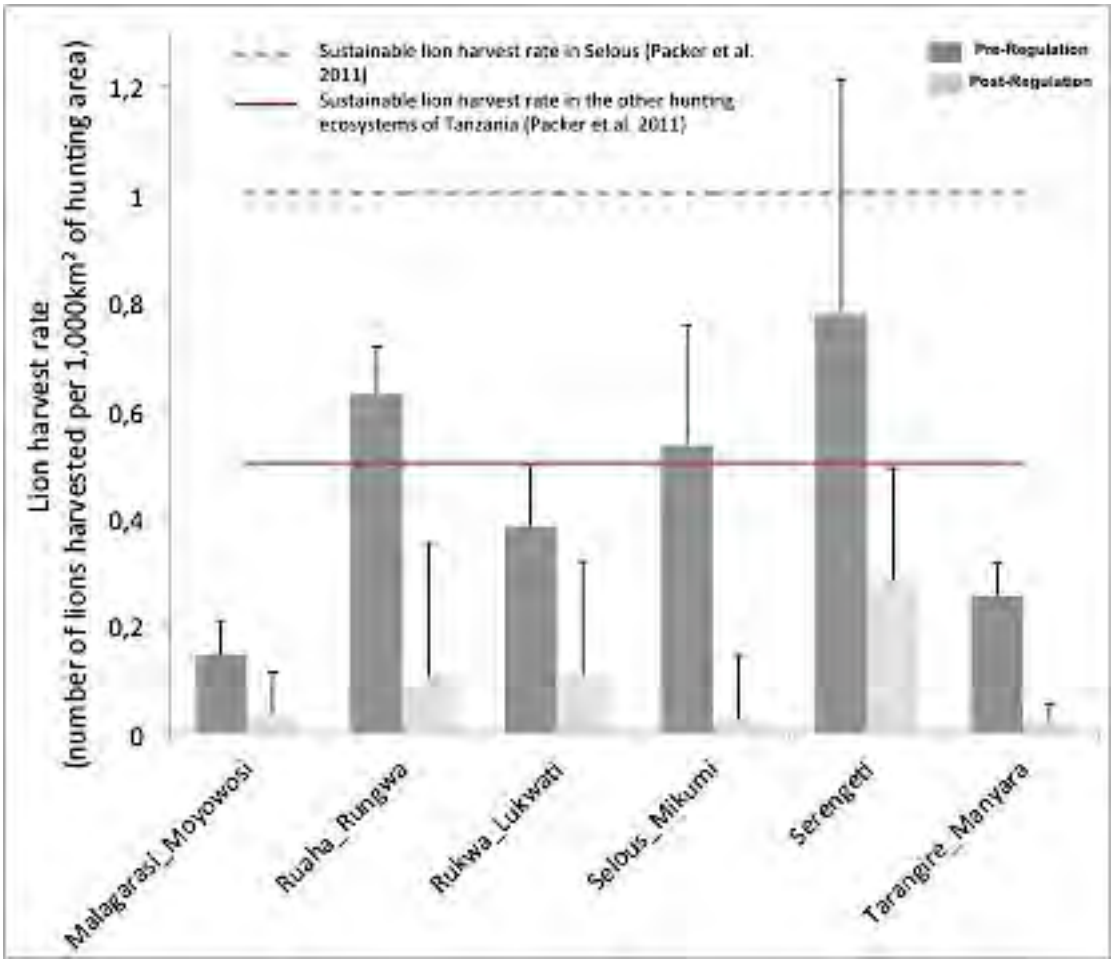

Figure 11: The average lion harvest rates (with standard deviations) across the main ecosystems of the lion range in Tanzania, displayed for two periods, prior 2011, i.e. before the Tourist Hunting Regulations of 2010, and post 2010, i.e. after the Tourist Hunting Regulations of 2010.

Generally, in most ecosystems, harvest rates have declined since 2007, though not continuously (Figure 14). In almost every ecosystem, there was an apparent drastic decline in harvest rates around the year 2011, as the Tourist Hunting Regulations of 2010 started to be implemented.

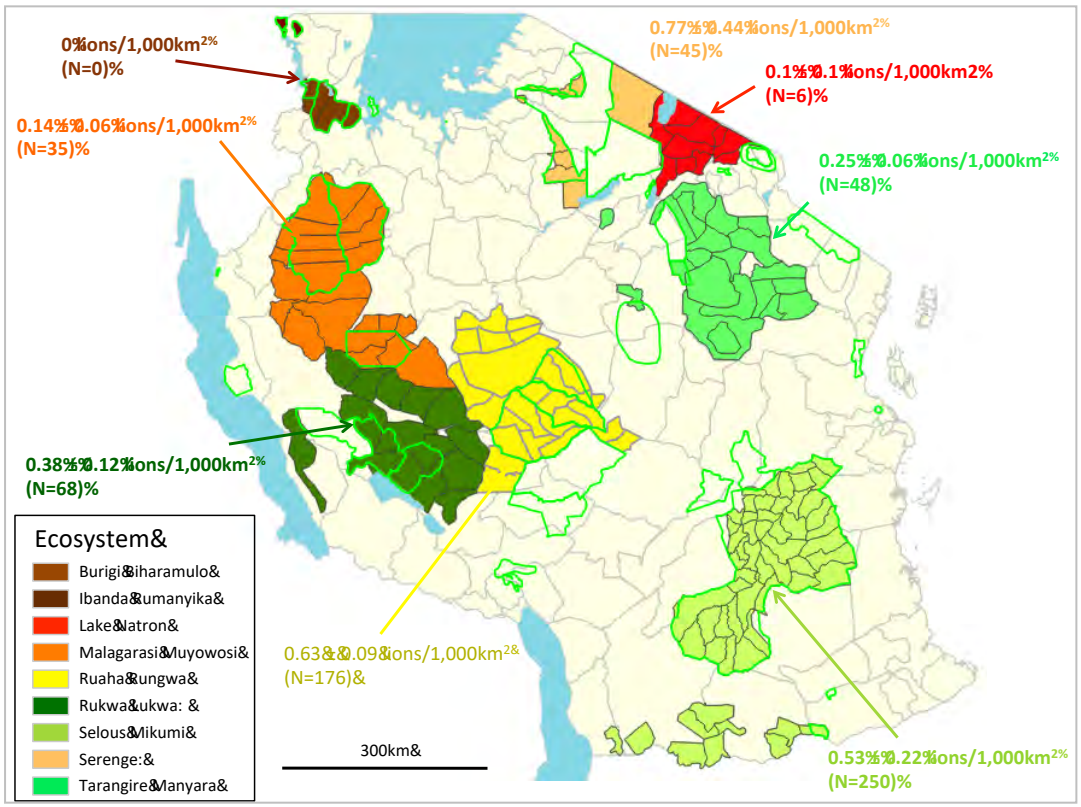

Figure 12: Map of the average harvest rates between 2007 and 2011 across Tanzania.

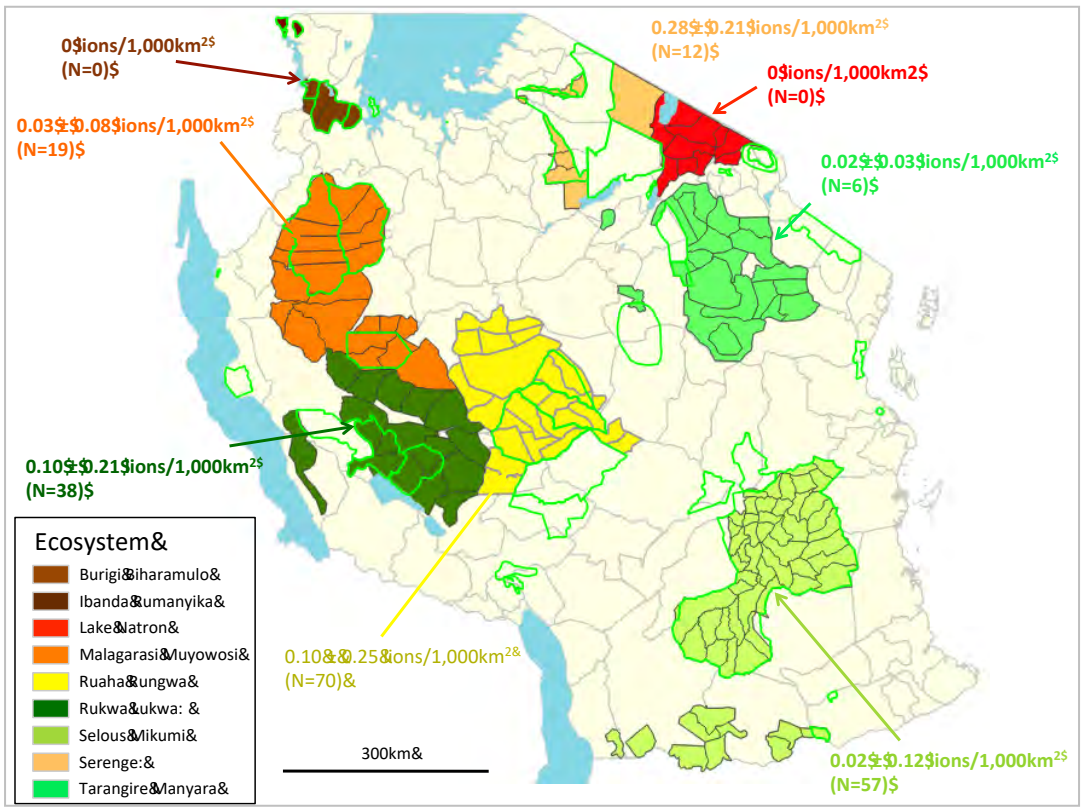

Figure 13: Map of the average harvest rates between 2011 and 2016 across Tanzania.

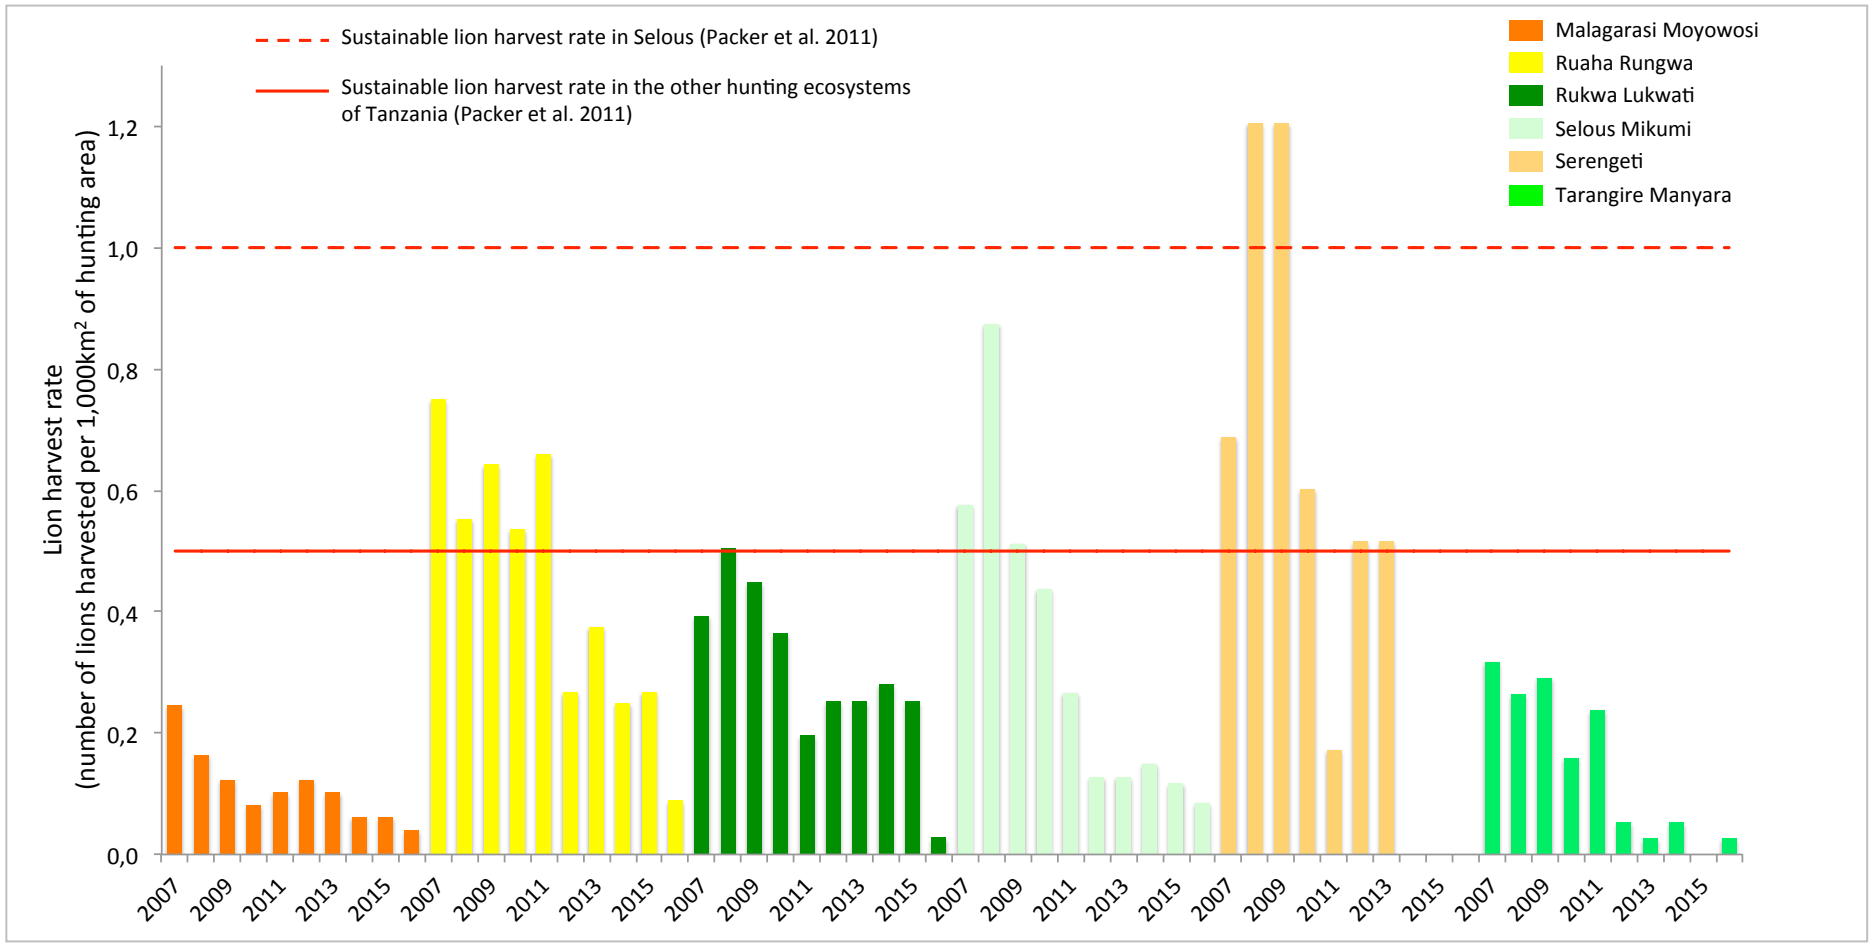

Figure 14: Regional harvest rates in the main ecosystems of lion range in Tanzania since the 2007 hunting season.

Since the introduction of the Tourist Hunting Regulations in 2010, and the adoption of the 6 years of age approach, Tanzania has accomplished tremendous progress in the management of lion trophy hunting:

- The legal framework of lion trophy hunting has been amended, and progressively implemented;
- A nation-wide mechanism has been designed and put in place to inspect all the lion trophies before export every year;
- The public/private partnership has been consolidated, i.e. 100% of the hunting companied have complied with the lion trophy inspection;

The sustainability of lion trophy hunting has been dramatically improved:

- The quotas have been reduced by ca. 50%;
- The number of lions harvested has been reduced by 81%;
- The harvest rates, both at national and regional scales, have reached levels under the threshold of sustainability, i.e. below 1 lion/1,000km2 of hunting areas in the Selous Game Reserve, and 0.5 lions/1,000km2 of hunting area for the rest of the country (Packer et al. 2011);
- The proportion of harvested lions of six years old and more has increased by 88%.

Tanzania's Tourist Hunting Regulations limit acceptable lion trophies to those ages 5 and above, and penalize any professional hunter and client who take a lion under age 5.

The success of the lion aging provisions of the Tourist Hunting Regulations, is due mainly to the involvement and commitment of the hunting sector of Tanzania and its associations (TAHOA and TPHA). Most hunting companies and professional hunters have drastically changed of attitude, as they are consequently very concerned not to harvest an under-age lion.

Since 2011, every single lion trophy harvested by hunters in Tanzania has been inspected by the Wildlife Division (i.e. 100%).

However, this is probably not the only factor. Indeed, in the past years, the growing concern of the international community about the conservation status of the African lion and the management of lion trophy hunting, has not only increased the pressure on the African lion range countries, but also on clients, to mention a few examples:

- The listing of lion under the US Fish and Wildlife Service Endangered Species Act, and the inherent complications for US clients to import their trophy back home;
- The strong opposition to lion trophy hunting by anti-hunting lobbies, and the associated public shaming in the social networks and medias;
- The decision of major airlines and freight companies to stop shipping Africa big five trophies.

This, in addition of the risk to get their trophy confiscated if under-age, may have gradually discouraged clients to book for 21-day safaris packages in Tanzania since 2010, with an important economic loss to Tanzania.

Because diagnosing the age of lion trophies is not an exact science, it may be subject to some inaccuracy and imprecision. At several occasions in the past years, the Wildlife Division has received appeal letters from a few hunting companies that contested the results of age diagnosis for some lions their clients had harvested. For these cases, the Wildlife Division involved an external committee made of lion experts from Tanzania and other lion range countries to review the results for these contested age diagnoses. At most occasions, the reviewing committee confirmed the initial age diagnosis. At few occasions, it updated the diagnosis to the next upper age category.

While the age diagnosis relies on a comprehensive set of criteria comprising external traits, e.g. mane, nose pigmentation, scares, and internal traits, e.g. teeth erosion, skull sutures, pulp cavity, professional hunters can only rely on external traits, which are not always easy to observe in hunting conditions, and not systematically correlated to internal traits, e.g. some young lions can have a well-developed mane.

In addition, morphological traits may vary with geographical location. Typically, the mane tends to be more developed in lions of the northern ecosystems, e.g. Serengeti, than in lions from the southern ecosystems, e.g. Selous.

This complicates the age diagnosis of lions on the ground, in hunting conditions, and may discourage the professional hunters.

While the offtakes and harvest rates have declined, and have been kept below the sustainable levels both at the national and the regional scales, allocated quotas are still above these sustainable levels;

Because lion population censuses have not been carried out across the vast majority of hunting areas in Tanzania during the recent years, but in the Selous Game Reserve, it is not possible to assess the proportion of the lion population being harvested through trophy hunting in Tanzania. However, with less than ca. 50 lions annually harvested in the past three years, this proportion is believed to be very low.

Tanzania is committed to keep on monitoring lion hunting in Tanzania, and to keep on assessing the impact of the Hunting Regulations of 2015 on the sustainability of lion hunting in Tanzania.

7.2 International trade

All data of international trade in plants and animals, or parts and derivatives of plants and animals included in the Appendices of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), are stored in the CITES Trade Database, which is maintained by the UNEP World Conservation Monitoring Centre (UNEP-WCMC). This database represents the official trade figures in CITES-listed species, as reported by CITES Parties in their annual reports to CITES.

We find that the statement of USFWS ESA Final Rule on Lion (USFWS 2015) on page 80024 is probably and partially incorrect in the part concerning trade data, probably due to misunderstanding of the CITES Trade Database. USFWS wrote: *Tanzania, with one of the largest lion populations (Hamunyela et al. 2013, pp. 29, 283; Riggio et al. 2013, p. 32; Ikanda 2008, p. 4; Baldus 2004, pp. 5, 6), was the largest exporter of wild-origin lion trophies, but their exports have decreased significantly since 2008. In 2008, approximately 138 trophies were exported from Tanzania; in 2010, 128 were exported; in 2011, 55 were exported; in 2012, 62 were exported (it should be noted that in 2012 Tanzania established an annual quota to limit trophy hunting to no more than 50 animals (Jackson 2013, p. 7); and in 2013, 11 were exported (UNEP–WCMC 2014, unpaginated). Again, it should be noted that there may be discrepancies between the annual quota and the actual number of trophies exported in a given year (see http://www.cites.org/common/ resources/TradeDatabaseGuide.pdf for additional information). Regardless, the numbers of lion trophies exported by Tanzania according to the UNEP– WCMC CITES Trade Database suggest a decreasing trend.*

While the export and the harvest have rightly significantly decreased thanks mainly to the age-based provisions, Tanzania has never established a hunting quota in 2012 to limit Safari hunting to no more than 50 animals. Most likely the confusion arises from the fact that the offtake has been 50 animals in 2012 as a result of the implementation of the age based restrictions explained fully in this document and that due to the time associated with trophy preparation and export, CITES trade data do not accurately reflect offtake on a year to year basis.

Further the USFWS used a Gross Export report generated from the CITES trade database as referenced in the Supporting Documents for the Final Rule found at Docket FWS–R9–ES–2012–0025 on the website www.regulations.gov.

It is important to note that, according to the guide to using the CITES Trade Database, Gross and Net Export reports tend to overestimate trade levels. as where different quantities have been reported by the importer and the exporter, the larger quantity is presented in the output. (http://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf)

It is important that the Comparative Tabulations Report type is used for the trade analysis.

In a comparative tabulation retrieved from the CITES trade database using the trade terms "skins", "trophies" and "skulls" (as Skulls are sometimes traded separately from a skin or a trophy although most of the times the skin and skull of the same lion are shipped together and double counting can occur, see table 6a and6b for example.), and selecting the year range 2010-2015, Tanzania as the country of export, "All countries" for importing countries, "All sources", "All purposes", selecting "skulls", "skins" and "trophies" for trade terms, searching by taxon: Panthera leo, selecting output type "csv", and selecting report type "Comparative Tabulations", the following data were retrieved and are presented in tables6a, 6b and 6c.

Table 6a Export of *Panthera leo* (Trade Term Skulls) 2010 – 2014 *Source: CITES Trade Database- Comparative Tabulation*

App.	Taxon	Term	Unit	Country	2010	2011	2012	2013	2014

II	*Panthera leo*	skins		TZ	46	6	7	6	1

Table 6c Export of *Panthera leo* (Trade Term Trophies) 2010 – 2014

App.	Taxon	Term	Unit	Country	2010	2011	2012	2013	2014
II	*Panthera leo*	trophies		TZ	20	6	10	3	39

Other exports recorded in Tanzania include parts and derivatives such as specimens for scientific purposes. (CITES trade database). Note that due to the time associated with trophy preparation and export, CITES trade data do not accurately reflect offtake on a year to year basis. As such, lions reported in international trade are not necessarily from Lions harvested in the same year they are exported as international trade may be from harvests in many different hunting seasons which can date back several years.

In any case Tanzania is fully convinced of the correctness of its lion harvest data as reported in Table 5 and will explore with UNEP-WCMC and interested Parties methods to mutually improve CITES Trade Data.

As the quantities reported from the importing countries in some cases and years differs from the quantities reported by Tanzania and in order to improve consistency with the standard procedure adopted by CITES, Tanzania would like to facilitate verification of CITES permits issued, in the following ways:

- Parties should be requested to verify the authenticity of CITES documentation issued by Tanzania through a request for verification of CITES documentation to the CITES Management Authority of Tanzania;
- The CITES Management Authority of Tanzania will provide information to allow permit verification (e.g., provide a copy of the permit or certificate as issued, or verify a copy of the document provided by the importing country); and
- The CITES Management Authority of Tanzania will provide information within 15 business days of the request for verification. If this is impossible, the CITES

Management Authority of Tanzania shall reply within 15 business days and indicate a date by which they consider it will be possible to provide the information requested.

The above illustrated procedure will be communicated to the CITES Secretariat requesting the issuance of a Notification to the Parties.

The level of illegal use of lion parts in Tanzania is currently unknown, and there has so far been no evidence to suggest that it may be a driver for the poaching of lions. Impacts of trade in lion bones and other body parts is recognized as being potentially detrimental to wild lion populations (Williams et al. 2015.), although the bulk of the trade originating from South Africa is from captive-bred specimens. One of the few cases in possession of the Wildlife Division is represented by the arrest, at Dar-es-Salaam airport in 2009, of 4 people trying to smuggle ivory to China in a suitcase that contained also 60 Lion claws and teeth.

8. Lion Management

African lion conservation in Tanzania is implemented through a number of government agencies, under the Ministry of Natural Resources and Tourism. The Director of Wildlife coordinates the activities within the Wildlife Division and other agency such as the TANAPA agencies, Ngorongoro Conservation Area Authority (NCAA), TAWIRI, and at District level through the Tanzania Carnivore Action Plan (2009).

8.1 Management Plans

The Carnivore Action plan published by TAWIRI in 2009 includes an Action Plan for the African Lion and Leopard. (ANNEX 3).

This was the result of the Tanzanian Lion and Leopard Conservation Action Plan Workshop that was held 20th-22nd February 2006 at the Tanzania Wildlife Research Institute (TAWIRI) headquarters in Arusha. The workshop brought together stakeholders to assess existing information and set priorities for conservation of lion *Panthera leo* and leopard *Panthera pardus* in Tanzania. The workshop was attended by 17 participants from TAWIRI, Wildlife Division (WD), Tanzania National Parks (TANAPA), Ngorongoro Conservation Area Authority (NCAA), Forestry and Beekeeping Division (FBD) together with a representative from the hunting community and lion and leopard experts.

The representation of the institutional stakeholders responsible for lion management is nowadays the same with the exception of the Forestry and Beekeeping Division (FBD) of the Ministry of Natural Resources and Tourism that in 2011 was transformed into the actual Tanzania Forest Services (TFS) Agency. http://www.tfs.go.tz.

Since the publication of the Lion and Leopard Action Plan, TAWIRI has implemented it through continued long term monitoring of lion populations in several key areas. Also several surveys were done as indicated on table 1.

Furthermore, it is continuously following issues related to human-lion conflict through several ongoing conflict-mitigation activities. TAWIRI Veterinary Service Unit continues to survey and collate information on diseases of lions and other carnivores. There have been efforts to ascertain and map the entirety of the lion range in Tanzania in order to determine the extent which is protected.

Also as part of implementation of the Action Plan, the Wildlife Division since 2009 is collaborating through a Memorandum of Understanding with the International Foundation for the Management of Wildlife (IGF Foundation). This has resulted in several important achievements in lion conservation such as the 2010 Lion Status report (Mésochina et al. 2010), the lion hunting monitoring system of which the age restriction system is an important component and surveys performed by TAWIRI in collaboration with IGF.

Specific implementation activities on the Lion and Leopard Action plan includes:

Management: The Management and Scientific Authorities have 1) made a countrywide status assessment which has established the extent of the lion range, population size and overall threats (Mésochina et al., 2010). 2); maintained population monitoring of trends in key lion populations (Selous, Serengeti, Ngorongoro and Tarangire); 3) conducted three major population surveys of key lion hotspots (Selous (hunting areas), Rungwa (hunting area), and the Maasai Steppe (Human-lion conflict hotspot); and4) conducted a census of the West Kilimanjaro trans-boundary lion population in conjunction with Kenya Wildlife Authorities.

Mitigation: The Management and Scientific Authorities have i) established a consolation scheme through the Dangerous Animals Damage Consolation Regulations 2011(see section 9.1); and ii) established research priorities and research projects supported by Conservation NGOs to address human-lion conflict among pastoralist communities. This is demographic segment of the human population the most affected by lion damages in Tanzania. These projects aim at improving husbandry practices through enhanced protection of livestock at the bomas and herding. Projects involve communities in the high human-lion conflict regions of Maasai Steppe, Ngorongoro Conservation Area, Ruaha-Rungwa landscape and Rukwa-Katavi ecosystem (see section 4.1).

Socio-economics: The Management Authority has established a system of socio-economic benefits to local communities living with wildlife, including lions. The WD division disburses 25% of hunting fee revenue (including hunted lions) back to District Councils (see section 10). TANAPA has increased its Community Based Conservation programmes which foster development projects in villages surrounding National Parks. Hunting companies have offered substantial support for development in rural communities (see Table 2). Photographic tourism's contribution to conservation is also important and figures and projections are maintained mainly by TANAPA.

Policy and land-use: The Management Authority continued with the establishment of WMAs in order to foster lion conservation at the human-lion interface.

Trade: Management Authority continued with the sustainable utilization of lions through safari hunting. Major amendments have been made to Hunting Regulations (2010 then 2015) for greater sustainability. The sustainable harvest rate has been determined for lions and a pioneering Trophy-Monitoring Programme has been established and is implemented by the Wildlife Division.

The Ministry of Natural Resources and Tourism through its Wildlife Division, depending on the availability of funding, would like to gather the institutional stakeholders which have a responsibility on lion management, in order to update the plan and make it specific for Lion, also in accordance with recent developments in legislations, regulations and strategies on wildlife conservation in Tanzania. The WD is actively looking for donor support for the project.

9. Threats

9.1 Human-lion conflict

In Tanzania, the main source of illegal killing of lions originates from Human-Lion conflict. (Figure 15)

In Tanzania, the human population has significantly increased since 1950 (i.e. 7 million in 1950 against 46 million in 2011) and is projected to increase by 500 per cent or more by 2100 (United Nations 2011). During 2011-2100, six countries are expected to account for half of the world's projected population increase, Tanzania being among them (United Nations 2011). As a result, there is considerable pressure to convert land to agro-pastoral production, and the pressure is expected to increase tremendously, given the above-mentioned projections from the United Nations.

Human-lion conflict occurs when lions become problematic to local communities by threatening, and or attacking human beings and property such as livestock. This year close to 10 attacks occurred on humans and 150+ on livestock (cattle, goats, sheep, dogs etc.) were killed.

Retaliation for these livestock losses is done through spearing, poisoning and ritual hunting.

Although it is impossible to give an exact estimate of how many lions are killed in retaliation of livestock damages or human killings, they should account for a number possibly between 100 and 200 lions. (Ikanda *pers.comm.*). This mainly occurs within pastoral communities which rely on livestock for their livelihoods and indiscriminate killings of lions poses the most significant threat to the species. It is not only a major concern for lion conservation, because it triggers retaliatory killing of lions for attacks on livestock, but especially for human security and lives.

During the past years, simply at the eastern border of Tarangire National Park, large carnivores have carried out approximately 50 attacks on livestock per community each year. Retaliation against livestock depredation killed 6–7 lions per community per year on the Maasai Steppe. This equated to an annual loss of 72–84 lions across 12 communities (Lichtenfeld 2005; Kissui 2008).

Lion attacks on humans are especially high in central and southern Tanzania. Here close to 10 attacks occur annually, but have gone up to over 100 in some years. Between 1990 and 2004, lions killed at least 563 people and injured more than 308. (Packer et al. 2005; Species Survival Commission Cat Specialist Group 2006; Ikanda 2007, Packer et al 2007). The total number of attacks, updated to 2015 has been estimated to more than 1,050 with the majority among the poorer rural people. (Ikanda, pers.comm.). This tremendous loss of human lives puts a major responsibility over the wildlife authorities.

In accordance with the Wildlife Act of 2009 when a lion attacks a human it shall be eliminated and most attack results in lions being killed in problem-animal control. Although the killings are largely controlled, the sheer number of attack incidences can lead to a significant number of killings. Less than 10 lions are killed through official “problem animal control” (PAC) for this reason per year (WD data).

There are various options for human/lion conflict management and how they might be perceived by stakeholders. In this regard Chardonnet et al. (2010) wrote the following and a table (Table 7) that contains some major points:

Prevention of conflict is the key to coexistence. Land-use planning to ensure that human activities are not carried out in wildlife protection areas helps to prevent human/lion conflict; there is also a need for community awareness about behavior, triggers for lion conflict, animal husbandry and planning. Incentives are often needed: a promising approach is to establish innovative insurance schemes supporting best practices. Protection of people and livestock from lions, for example with bomas and wise use of pastoral rangeland is a second strategy. Livestock areas should be selected with regard to wild habitat, and buffer areas should be established between them and carnivore areas. Mitigation by ensuring that people perceive the lions more positively can be applied in cases where human/lion conflict is common. Interest in the benefits generated by lions will increase tolerance; in areas with little photographic tourism, trophy hunting could generate income and give people a sense that the lion population is being controlled.

Table 7 Synthesis of management options. Efficiency, costs and durability are graded from 1 to 4 by increasing value of each variable. Perception is graded as: P = poor, N = neutral, G = good, I = needs incentive, D = donor dependent, S = institutional/commercial support, C = requires community involvement, E = ethical or conservation issues. (From: Chardonnet et al.2010)

Management option	Efficiency	Cost	Durability	Perception
HUMAN MANAGEMENT				
Community awareness	4	2	4	N/S,C
Compensation				
Direct compensation: subsidies and insurance	3	3	3	P,N/I,D,S
Indirect compensation: wildlife valuation	4	3	4	G/D,S,C
LIVESTOCK MANAGEMENT				
Intensifying human vigilance	3	1	2	P,N/I
Livestock guarding animals	4	2	3	N/I
Use of enclosures	4	2,3	3,4	N,G/I
Grazing and herd management	4	1	4	N,G/I
LION MANAGEMENT				
Non-lethal				
Deterrent methods	1,2	2,4	1	P,N/I,D
Translocation of lions	1,2	4	1	P/D,I
Contraception	1	4	1	P/D,E
Lethal				
Off-take by the administration	2	2,3	3,4	P,N/E
Off-take by populations, farmers and breeders	4	1,2	3,4	G/C,E
Off-take by trophy hunters	1	1	3	N,G/I,D,E
ENVIRONMENTAL MANAGEMENT				
Increase alternative prey	3	1	4	N,G
Land use planning				
Planning/manipulating wildlife and village distribution	2,3	3	2,3	P,N/I,O,S,C
Zoning round protected areas	4	3	3,4	N,G/I,S,C

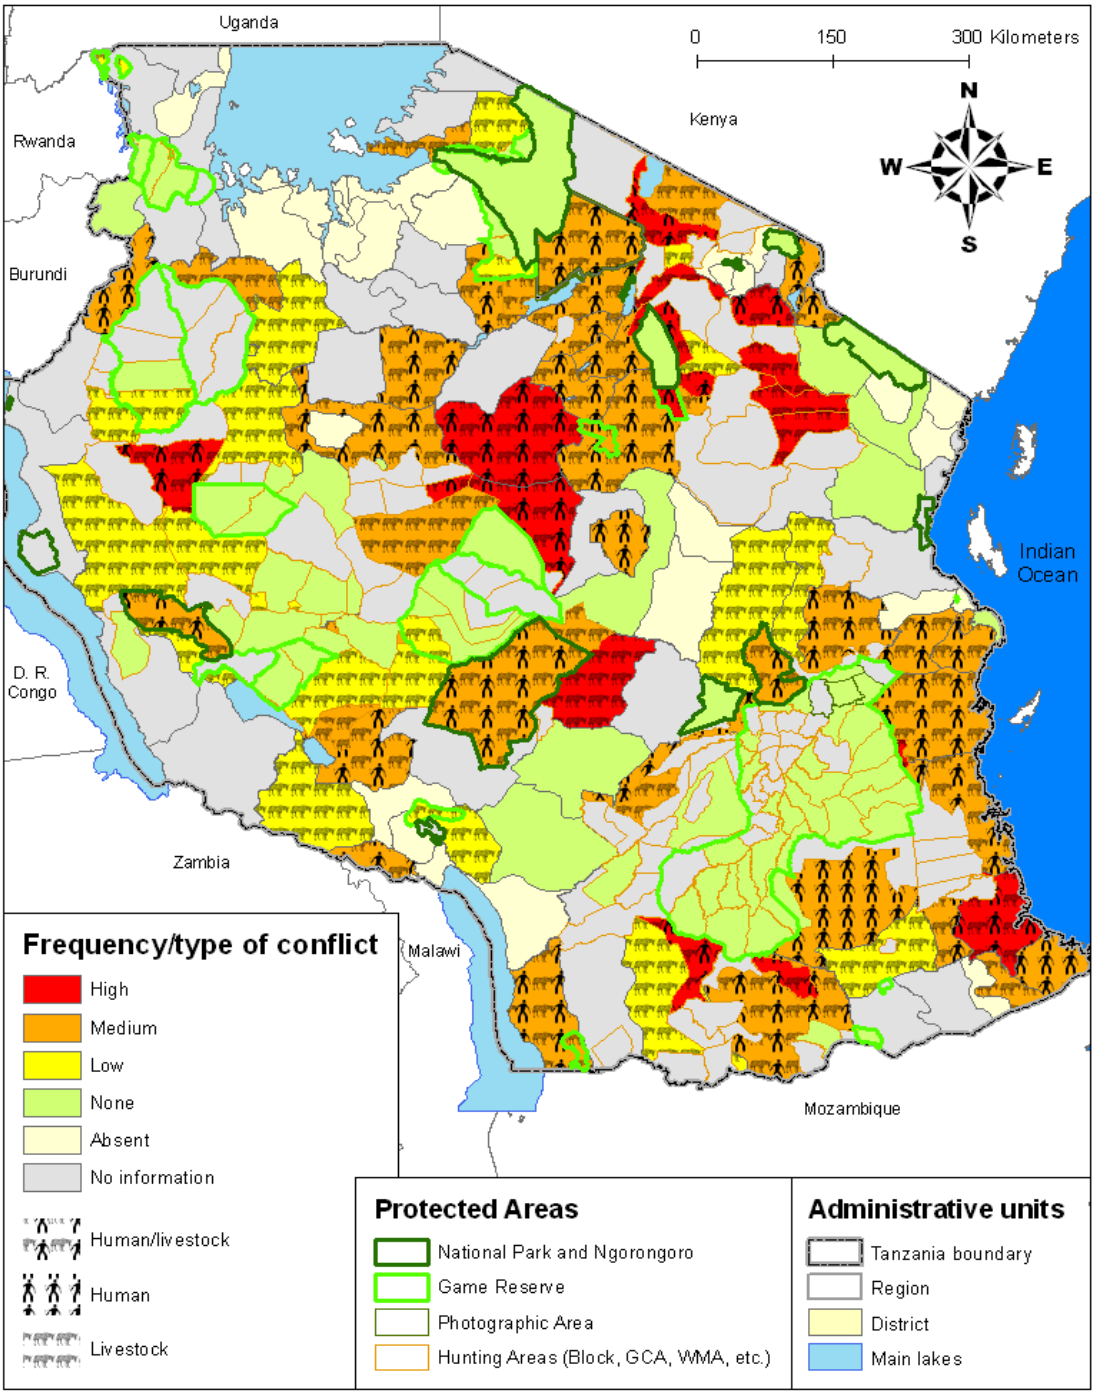

Figure 15: Frequency and type of human/lion conflicts in Tanzania (by January 2010). Absent: lion presence not recorded in the area; None: conflict presence not recorded in the area; Low: conflicts reported once or twice without human death; Medium: conflicts reported every year and/or with at least one human death; High: conflicts reported several times per year and with human casualties and/or a high number of livestock losses. (from Mésochina et al.2010)

As referred in section 8.1, Tanzania established a mitigation scheme for lions and other wildlife species through the Dangerous Animals Damage Consolation Regulations 2011 (Annex 4). This scheme is applied in the entire country where people affected by the loss of relatives and livestock to lions and other wildlife species are consoled through payment-in-kind. The scheme aims to increase human tolerance for lions, hence reduce the number of indiscriminate killings at the human-lion interface.

Wild lion populations outside national parks only have a future if rural people see a direct benefit of coexisting with them. The revenue from official and controlled hunting encourages the lion range states to leave hunting blocks as wilderness areas and refrain from converting them into pastoral rangeland and agricultural land with the associated loss of biodiversity. Together with elephants, lions are the most valuable trophy hunting species and to remove them from the quota would render trophy hunting in many areas less economic or not economic at all. Banning lion trophy hunting or creating international trade barriers for hunters to take home legally obtained trophies removes the economic as well as the management and law enforcement incentives that are necessary for conservation. (Baldus and Michel 2011)

Furthermore, mitigation programs such as the one initiated by Lion Guardians, are aimed at promoting coexistence between lions and local communities, a formidable challenge in a country where lion range covers more than half of a nation experiencing rapid human population growth.

9.2 Habitat loss

Tanzania is the only country which still has a large population of lions outside of gazetted protected areas. The lion is there by virtue of the fact that as a species it is protected wherever it should occur. Nevertheless, this portion of habitat is now increasingly subject to rural population expansion which inevitably leads to the lions and other wildlife being pushed back towards the protected areas which adjoins these marginal lands.

The second biggest potential long-term threat to the Tanzania lion population, after retaliatory killings, is the potential and real loss of habitat and the fragmentation of range through the interruption of access routes and conflicts with people in the absence of effective incentive mechanisms to maintain such habitat. Lions, through their negative impacts on livestock, can easily be excluded from large parts of Tanzania outside protected areas. Without a way of benefiting from lions, lions are regarded as a liability and economic cost to rural communities, who suffer livestock losses and lose human lives to lions. The most effective strategy to prevent this displacement is to integrate lions into rural economies as assets and to demonstrate that lions contribute to the welfare and development of people. The involvement and empowerment of rural people in natural resource management, in combination with economic and financial incentives through sustainable use, and linked with skills development and capacity building, are the main driving forces behind changes in attitudes towards wildlife in communities that owns livestock but not wildlife. This strategy has the ultimate goal of conserving habitats.

Habitat loss can be exacerbated by a decrease in overall revenues from safari hunting; the lack of incentives for safari operators due to international campaigns or decisions by importing countries have the potential to decrease the investments in habitat protection done by the hunting sector, and decrease tolerance of rural communities toward lions with habitat.

Although habitat and range of lions has been documented to be decreasing in a number of lion range countries (Henschel et al., 2010; Riggio et al., 2012), the situation in Tanzania remains different due to substantial conservation measures which have been put in place to secure and ensure continued protection of wilderness areas, most of which harbour lions (Mésochina et al., 2010). However, as noted it the previous paragraphs, there are increasing and potential pressures on habitat as marginal lands are village lands and consequently suffer from rural population expansion through establishment of settlements and agricultural activity. This human encroachment is spreading around and over natural habitats, and is potentially exposing more and more human populations to lions.

Importantly sport hunting is playing and can play an important role in the general framework of management of protected areas to prevent them being abandoned or converted to agriculture and to find ways to improve the lives of people living with wildlife. These habitats are critically important for lion conservation and ecotourism is not a viable alternative in many of them. Tanzania is looking at solutions and best practice guidelines for securing wildlife (including lion)

landscapes and habitats and prioritizing its conservation efforts.

9.3 Poaching

Poaching of lions (not to be confused with retaliatory killings) is recorded in very low numbers in Tanzania (10-20/year). Records mainly come through from anti-poaching records of Wildlife Management Authorities that result from impoundment of body derivatives such as skins, teeth/claws, body fats and bones. These may be sought after for local traditional medicinal use. Poaching mainly occurs outside the Protected Areas (PAs) network, but lions along PAs' boundaries and margins are also incidentally snared as non-target prey.

In general, Tanzania has developed a National Anti-Poaching Strategy that provides an effective program of support to combat poaching and illegal wildlife trafficking in Tanzania through a three-pronged approach: (i) Strengthening law enforcement through investing in capacity building to strengthen law enforcement, establish and maintain national cross- agency mechanisms and streamlining cross-border and regional cooperation through better coordination (ii) Increase capacity of local communities to pursue sustainable livelihood opportunities and eradicate poverty iii) raising awareness in supply, transit and destination countries to help change attitudes towards wildlife crime and building international support. (MNRT 2014).

Furthermore, as a member of the Southern African Development Community (SADC), Tanzania is implementing the SADC Law Enforcement and Anti-Poaching Strategy (SADC 2015), approved by the SADC Ministers responsible for Environment and Natural Resources on 6th November 2015. This strategy will complement the National strategy and will provide, inter alia, for stronger regional cooperation on the issues pertaining to illegal use and trade of wildlife.

9.4 Bushmeat Poaching and Prey Abundance

Poverty stands as the major driver of illegal hunting as households vie for income and sustenance. Livelihoods of illegal hunters have been augmented considerably through revenue generated from bushmeat sales. Illegal hunters use bushmeat both for supplementing household protein and for economic gain. (Knapp,2012)

Poaching for bushmeat is an important livelihood component of rural communities in Tanzania and a vast literature exists on this subject (among others, specific to Tanzania: Ceppi et al. 2014, Knapp 2012, Loibooki et al., 2002, Martin and Caro 2013, Mfunda et al. 2010, Nielsen at al. 2014, Ndibalema and Songorwa 2008, More general: Lindsey et al 2015a and 2015b).

Poaching for bushmeat does not seem to have observably impacted the overall lion's status in Tanzania, but more research is needed to fully understand its impact on lion.

The extent to which bushmeat poaching is depleting lion's prey is not completely known.

Prey abundance is still high in several Tanzanian Ecosystems. As abundance of prey species is highly correlated with lion density (Hayward et al 2007) and as Lions exhibit a strong preference for larger bodied prey including African buffalo, *Syncerus caffer*, (Hayward & Kerley, 2005), data on the main prey species for lion, extracted from TAWIRI aerial surveys reports of 2014 and 2015, are shown in Figures 16 to 20 below.

The figures for Ruaha-Rungwa needs to be interpreted cautiously as the quality of surveys prior to 2009 was not optimal. In this ecosystem during the period 2009 -2015 the buffalo population increased while the zebra population remained stable or had a slight decrease.

Figure 16 Ungulates estimates in the Selous-Mikumi Ecosystem 2009 and 2014

Year of Survey	2009		2014		5-year trend
Surveyed Area	80,390 km2	SE	88,166 km2	SE	
Species name	Estimates		Estimates		
Buffalo	41,493	9,631	78,231	14,122	+ Increase
Hippo	11,333	2,247	23,756	5,503	+ Increase
Puku	6,780	2,269	3,055	899	- decrease
Impala	19,204	3,461	23,677	4,198	+ Increase
Zebra	12,763	1,832	16,240	2,391	+ Increase
Duiker	2,992	702	5,984	550	+ Increase
Eland	2,056	507	5,488	1,359	+ Increase
Giraffe	1,202	387	3,155	1,877	+ Increase
Greater Kudu	78	45	927	255	+ Increase
Hartebeest	10,677	3,860	21,672	2,710	+ Increase
Sable antelope	2,277	833	4,885	985	+ Increase
Warthog	2,979	485	7,691	733	+ Increase
Waterbuck	3,444	753	5,003	1,459	+ Increase
Wildebeest	20,591	5,066	16,939	5,131	Stable?

10. Community partnership, benefit and participation

10.1 Overview

Tanzania firmly believes that wildlife conservation cannot be achieved without taking into account the human dimension which is attached to it. Poverty remains the first and foremost cause of poaching in Tanzania and in the rest of Africa, where nearly 50% of the population live on slightly more than one US dollar a day. Tanzania recently improved its policy on community benefits sharing in hunting and photo tourism fees and governance of the wildlife sector by local communities to achieve poverty reduction through legal and sustainable wildlife utilization.

Tanzania shares with other countries in the region the view that, community-based initiatives and policies must be given the support they need to deliver incomes to local people through legal, regulated wildlife utilization, incomes that are crucial in alleviating poverty. This support shall include the right for local communities to be consulted as equal partners in wildlife conservation. The consequences of ignoring or failing to encourage such community operations, in social contexts steeped in poverty, is well established. Poaching increases, often with the same local people recruited into poaching gangs, by organized criminal syndicates. Community-based natural resource programs are one of the most crucial and important part of the solution to the poaching and illegal trade in wildlife.

An exclusively biological focus on the sustainability of wildlife harvesting and trade can never guarantee sustainable use of any species, in fact it tragically refuses a critical tenet of sustainability as a principle, which requires, in its applications, an ecosystem scale of assessment, in which the social systems with their cultural, economic and political dimensions are embedded. The same applies to an exclusive focus on species rather than to the human and social dimensions of conservation.

Tanzania has been implementing Wildlife Management Areas since 1998, to varying degrees of effectiveness. The regulations governing WMAs were amended several times, and national Wildlife Conservation Act was ultimately revised to more completely devolve authority to the local communities who live side-by-side with wildlife. Under this Act, these communities are better able to benefit from wildlife use (consumptive or non-consumptive). Part V (and especially Section 31) of the Act provides guidance of the establishment and management of the WMAs, and specifically on the legal requirement for benefits sharing between operators, Tanzania's government and communities through WMAs.

The regulations governing WMAs were revised in 2012 to improve benefits sharing in keeping with the policy objectives of the Wildlife Conservation Act of 2009.

In general WMAs are key aspect in fighting poverty through wildlife utilization. If wildlife is seen as an asset and not a nuisance to rural people of Tanzania, they will greatly contribute to its conservation and not to its destruction. The potential of WMAs is enormous to conserve natural resources outside protected areas through consumptive and non-consumptive tourism or other forms of development. In brief WMAs represent the community based conservation system of Tanzania and they are seen as a key component of rural development and as one of the best weapons in the fight against illegal utilization.

Table 9 provides an overview of the revenue sharing generated from safari hunting in WMAs that was in place until July 2015. Of the other lesser fees (game fees, observer fees, conservation fees), the WMA gets 45% while the rest is divided between Wildlife Division, Treasury, and District Council.

Table 9: Revenue sharing generated from safari hunting in Wildlife Management Areas (up to July 2015)

No.	Type of fee	TWPF	WMA	DC	TR
1.	Block fee	25%	75%	0	0
2.	Game fee	25%	45%	15%	15%

3.	Conservation fee	25%	45%	0	30%
4.	Observers fee	25%	45%	0	30
5.	Permit fee	25%	15%	0	60%

TWPF-Tanzania Wildlife Protection Fund, WMA-Wildlife Management Area, DC-District Council, TR-Treasury

The table above shows the situation up to July 2015.

During a Workshop held in Arusha 2nd and 3rd July 2015 the Minister of Natural Resources and Tourism ordered urgent review of the benefit sharing arrangement. Table10 shows the new arrangement for benefit sharing of Safari hunting revenue in the Wildlife Management Areas

Table 10: New proposed revenue sharing generated from safari hunting in Wildlife Management Areas

No.	Type of fee	TWPF	WMA	Change in % to WMAs	DC	TR
1.	Block fee	25%	75%	No Change	0%	0%
2.	Game fee	25%	65%	+20%	10%	0%
3.	Conservation fee	25%	70%	+25%	5%	0%
4.	Observers fee	25%	70%	+25%	5%	0%
5.	Permit fee	25%	70%	+55%	5%	0%

Therefore, the above arrangement replaces Twelfth schedule of the current WMAs Regulations (2012) and they are already in operation pending forthcoming revision of the WMA Regulations, which is in progress and should be published soon.

This ground-breaking initiative places Tanzania right after Namibia in terms of the percentage of revenue sharing in favor of local rural communities in Africa. That is an impressive place to be. It is also an important step towards a full "devolution of authority to local communities" in the context of wildlife and natural resource management on which the Government of Tanzania has formed a national Task Force to analyze institutional arrangements needed to aim at the 100% of revenue sharing as in the Namibian CBRNM framework.

During the above mentioned workshop, other deliberations were taken which include the followings:

- ✓ Review of the WMA Regulations (2012) in order to improve governance in the WMAs. The review included, among other things, the benefits sharing schemes among MNRT, WMA, District Councils, and Treasury. The quick entry into force of this reviewed regulations is of critical importance.
- ✓ MNRT to continue with revenue collection but with improved disbursement to WMA stakeholders in order to avoid delays in disbursement upon payment of relevant fees through the electronic payment system.
- ✓ Review of the Non-Consumptive Regulations (2008) on benefit sharing schemes.
- ✓ Holding of a joint WMA stakeholders meeting annually in order to review progress made and challenges to WMA management.
- ✓ Building capacity of WMAsin many aspects including governance issues, but stakeholders need to agree on what capacity component need to improved.

Therefore, the underlined part of the statement contained in page 80011 of the USFWS ESA Final Rule on Lion (USFWS 2015) is incorrect: *Furthermore, many communities lack the rights over land and in most cases in Botswana, Tanzania, Zambia, and Zimbabwe, the government retains a significant portion of revenue from wildlife; therefore, those that bear the costs of wildlife do not receive benefits, and bushmeat hunting is the only way to benefit from wildlife (Lindsey et al. 2013b, p. 88).*

On the first part of the above-mentioned USFWS statement i.e. "*Furthermore, many communities lack the rights over land"*, we would like to remark that WMAs that are operational

have obtained User Rights in Accordance with the WMA Regulation 2012. Therefore, the statement is incorrect.

As suggested by Kiffner et al. (2016) the key to successful wildlife conservation appears to be protection from (illegal) hunting and increasing people's tolerance of wildlife (among others: Kinnaird & O'Brien, 2012).

Moreover, we would like to add that in May 2014 MNRT announced a joint MNRT – Ministry of Local Government Task Force to better define "devolution of authority to local communities" in the context of wildlife and natural resource management and conservation at the community level. The Task Force will provide indications on ways to improve governance and coordination of all wildlife and natural resource conservation efforts at the district level through clear lines of duties and responsibilities among relevant district/ward/village institutions. This was further discussed during the conservation partners meeting held in September 2014. The process is continuing and is being developed by both MNRT and the Ministry of Local Government.

Table 11 is a partial summary of hunting revenues in selected Wildlife Management Areas. Complete figures are being calculated by the AAC Consortium.

Table 11: Partial summary of hunting revenues in selected Wildlife Management Areas

WMA	CONTRACT	REVENUE ($)				
		2010	2011	2012	2013	2014
BURUNGE	YES 2013	3,685	6,552	7,429	83,573	22,091
ENDUIMET	YES 2014	-	13,718	5,810		71,029
IDODI-PAWAGA		14,208	4,333	2,478	40,660	36,079
IKONA	YES 2014	31,422	61,722	10,677	182,034	226,698
IPOLE		2,834	23,409	13,382	27,148	12,868
LIWALE-MAGINGO	YES 2014	15,907	8,416	4,814	22,252	22,050
MAKAO		-	15,729	17,994	-	28,863
MAKAME-INDEMA	YES 2014					START OPERATIONS
MBARANG'ANDU		4,648	4,909	2,808	30,026	-
MBOMIPA	YES 2013					START OPERATIONS
NGARAMBE-TAPIKA	YES 2014	23,920	24,006	15,783	-	-
TUNDURU		2,875	4,620	2,643	-	-
UKUTU		-	27,758	28,923	31,058	45,054
UYUMBU		1,312	2,860	1,636	13,136	29,828
TOTAL		100,811	198,032	114,377	429,887	494,560

In some WMAs, the revenue accrued is posted on notice bodies to ensure that locals understand the monies that their WMA gets from wildlife conservation activities. Such initiative is happening in Burunge and Enduimet WMAs.

10.2 Policy Achievements

The following are some of the Policy Achievements with regards to WMA establishment and conservation in general:

- ✓ The achievement of a fundamental shift in philosophy and approach regarding wildlife management in Tanzania.
- ✓ The approval of guidelines, laws and regulations including the Wildlife Conservation Act of 2009, and the WMA Regulations of 2012, which are critical in supporting the development of WMAs. Having a supportive legal framework helps the established WMAs flourish; encourages new WMAs to apply for gazetting; and demonstrates to the world that Tanzania is committed to CBNRM for the benefit of its people and wildlife.
- ✓ The gazettment of 21 WMAs that protect wildlife habitats and corridors, covering an area of 27,924Km^2 (roughly 3% of the Tanzania mainland), with 166 villages inhabited by about 480,000 people.
- ✓ The application for gazettment of 17 additional WMAs. Once the process of gazetting is duly completed, all the 38 WMAs will be operational and will extend the available lion, elephant, and other habitat in Tanzania. (Villages outside this process are approaching the government to form new WMAs.)
- ✓ Formation of the Authorized Associations Consortium (AAC), the apex body for all Authorized Associations(AA) As defined in the WMA Regulations of 2012 “Authorized Association” means a community based organization, whose primary objective is to conserve wildlife resources for the benefit of local community members ordinarily residing in that particular area. The AAC plays a critical role in the coordination, advocacy and implementation of WMA-related activities. The AAC provides a platform to the AAs to articulate their views and concerns of different stakeholders, plan and decide on matter of their common interests. The AAC provides an advocacy organization for WMAs, so they can promote policy change at the local and higher levels.The Consortium is a civil society organization intended to provide a platform to the AAs to articulate their views and concerns of different stakeholders, plan and decide on matter of their common interests. The organization was registered on 22nd January, 2010 under the Societies Act Cap. 337 (R.E. 2002), with certificate of registration No. 16619 as an umbrella for all WMAs which have attained" AA” status. The body has been mandated to operate within the framework of Wildlife Conservation Act (2009) and Wildlife Management Areas Regulations (2012).

  The specific objective of AAC includes:

  - *Promoting conservation and sustainable utilization of natural resources in the respective WMAs;*
  - *Fundraising and laying down procedures for use of financial resources in order to improve social services such as schools, infrastructure and hospitals around member WMAs;*
  - *Providing advisory services to AA members (particularly during planning of development projects), marketing, research and control of illegal offtake of natural resources;*
  - *Liaison with government, non-governmental organizations and/or private sector actors in all matter that affect AA members positively or negatively;*
  - *Dealing with issues related to licenses, permits and fees for natural resources based investments/businesses;*

- *Ensuring good public relationships with governments, NGOs and other institutions that work together with member AAs;*
- *Creating an enabling environment for tourism and hunting business in WMAs;*
- *Promoting, training and encouraging Law enforcement and ensuring the rule of law in all WMAs; and*
- *Dealing with all other issues for the benefits of its members but in compliance with existing policies and legislations.*

AAC has finalized a 5 years Strategic Plan for its functioning. (Annex 5)

- ✓ The enhancement of resource and land tenure rights to villagers forming WMAs
- ✓ The disbursement of hunting fees to WMAs to incentivize wildlife conservation. From 2010 to 2014, in excess of USD 1.3 million from safari hunting fees has been disbursed to respective WMAs (Table 11). This amount of money has greatly contributed to poverty reduction through wildlife utilization, both consumptive and non-consumptive.
- ✓ For the first time in 2013, the devolution to WMAs of the power to sign utilization contracts with the private sector (consumptive and non-consumptive). These arrangements which will last for five years (2018) have enabled seven WMAs and therefore the villages and people living there to sign contracts with hunting operators worth more than USD 4.3 million.
- ✓ Under the leadership of AAC, the initiation of a pilot project in 2013 in seven WMAs to establish a ground wildlife monitoring system using scientific based census methods. This system is of paramount important for sustainable wildlife utilization and quota setting. The system uses a customized reporting system based on Namibian MOMS (Management Orientated Monitoring System) which is one of the tools used by the communities in these WMAs to achieve proper wildlife monitoring. Importantly this system will enable WMAs to propose quotas to the Director of Wildlife.
- ✓ The approval of the WMA Implementation Strategy by the Ministry of Natural Resources and Tourism and launch of this strategy during the Arusha Workshop in July 2015 (Annex 6).

The Wildlife Management Area (WMA) Implementation Strategy reviews, summarizes and uses over a decade of positive lessons learned to inform activity implementation across all the WMAs. It is a product of a series of participatory consultative meetings, formal and informal interviews/discussions as well as interactive workshops spanning from August 2009 to September 2012. The objectives of undertaking the preparation of the WMA Implementation Strategy are to: identify challenges and issues facing WMA implementation since the 2003 launch of 16 pilot areas; determine the extent to which the WMA process has laid the foundation for an expanded wildlife-based tourism industry as well as assisted in the protection of wildlife resources; determine the value of WMA process in establishing and strengthening a national approach to CBNRM; develop an adaptive framework for increased acceptance of the WMA concept in addressing poverty but reflecting local conditions, cultural values and institutional choices; and provide important resource base information that will inform any future WMAs in making conservation decisions which will ensure that future generations will not be denied of these precious resources that we enjoy and benefit from. It charts out a course for conservation and development in village land endowed with wildlife. Once operational the strategy will: provide guidance to Government, NGOs, local government, private sectors, and local communities in the implementation of different activities to support development of WMAs; highlight the best WMA management approaches that will enable scaling-up the implementation of WMAs and to secure more and tangible benefits to local communities, districts and the nation; and finally recommend strategic options to overcome WMA implementation challenges. A vision, mission and goal of the Strategy have been developed; a total of eight (8) strategies with a set of implementation mechanisms for each strategy underpin the implementation and form the cornerstone of the WMA Implementation Strategy for the period 2014 - 2019. (MNRT 2014a).

10.3 WMAs benefits

- ✓ Increased protection of ecologically important areas
- ✓ Increased financial benefits to the WD, Districts and villages adjacent to PAs
- ✓ Empowered local communities to manage wildlife resources in the WMAs
- ✓ Empowered local communities to use the revenue obtained for various activities such as community development projects (water, health, education), employment, anti-poaching patrols, advocating conservation awareness, problem animals control, training of village game scouts, and other services to benefit the communities on the whole
- ✓ Provided the private sector with a wider scope to invest in tourism and hunting
- ✓ Improved conservation - wildlife and habitat restoration

11. Revenues and expenditure from safari hunting

As briefly outlined in section 4.1, Tanzania Wildlife Protection Fund (TWPF) was established under Parliament Act No. 21 of 1978 as provided in Section 69 of the' Wildlife Conservation Act (WCA) No. 12 of 1974. The existence of TWPF is also underpinned in the section 91(1) of current WCA No.5 of 2009. TWPF Secretariat supervises and coordinates funding activities as per directives from the TWPF Board of Trustee. Director of Wildlife is the Chief Executive Officer (CEO) of the fund and Administrative Secretary (AS), who is the accounting officer of the fund, is the principal assistant to the CEO.TWPF started its operations in 1983 after receiving seed money from Government Treasury.

TWPF continuously supports Game Reserves in infrastructure development such as road construction and maintenance, staff houses and office construction, water supply system among others. Nevertheless, TWPF supports quarterly direct cost for carrying anti-poaching activities in Game Reserves in order to supplement low budgetary allocation from Government Treasury. This is done in recognition to the contribution of Tourist hunting which is mainly conducted in Game Reserves, which account for over 70% of total TWPF earnings. Similarly, TWPF supports infrastructure development and direct cost for carrying anti-poaching activities in Zonal Anti-Poaching Units (ZAPUs). This is because Protected Areas (PAs) in Tanzania are not fenced and wildlife does not recognize strip boundary demarcations, hence ZAPUs mainly ensure survival of wildlife resources outside core PAs through anti-poaching operations and law enforcement. As a mechanism of providing incentives to the communities in districts that participate in wildlife conservation, TWPF supports community development projects such as building of schools upon screening of submitted proposals based on the stipulated criteria in TWPF guidelines for funding.
To-date, over 74% of the TWPF revenue is obtained from 25% of the total proceeds from the wildlife harvest in Game Reserves and Open Areas (OAs). Other sources include photographic tourism, donations, grants and fortified properties in accordance to Section 110 of Wildlife Conservation Act (WCA) No. 5 of 2009. It is the responsibility of the TWPF to solicit funds from other sources and invest in income generating activities to meet growing demand and challenges in wildlife conservation.

Safari hunting, including lions, is the main source of revenues for the Wildlife Division/TWPF (Table 12) and will be also the main source of revenues for the developing Tanzania Wildlife Authority (TAWA) and therefore for wildlife conservation in the country.

Funds generated from tourist safari hunting benefit lion in Tanzania by:

- Paying for conservation programs;
- Paying for anti-poaching programs, personnel, and equipment;
- Providing direct contributions from safari operators to anti-poaching patrols and scouts, and providing early detection and reporting of poaching incidents, all of which benefits the government by shifting these costs to the private sector;
- Increasing habitat and reducing lion-human conflict by benefiting local communities through Tanzania's growing Wildlife Management Areas (WMAs), including by disbursing 75% of the block fee and 70% of the permit fee to WMAs once it is paid by the concessionaire; and

- Justifying the preservation of most wildlife habitat and helping fund its management.

Table 12: Trend of revenue generated from Safari hunting and photographic tourism accrued to the Wildlife Division/TWPF*

Financial Year (July/June)	Safari hunting	Photographic Tourism(Areas under jurisdiction of WD)
2009/2010	18,444,881.00	2,706,603.00
2010/2011	23,536,347.00	2,863,287.24
2011/2012	15,062,217.75	2,080,978.00
2012/2013	15,917,430.93	3,904,808.35
2013/2014	16,723,425.00	5,016,703.03
2014/2015	16,277,373.00	4,736,187.00
2015/2016*(until May 2016)	12,066,774.00	4,004,038.00

*In US Dollars

75% of the game fees are retained by Treasury and 25% by the Wildlife Division (TWPF); of the 75% collected by Treasury, 25% is send to District Councils where the hunt took place. The District Council (DC), under current administrative procedures, use 60 % of this sum for communities' development projects and 40% for anti-poaching activities.
Treasury reassign part of the revenues to the Ministry during the annual budget exercise.

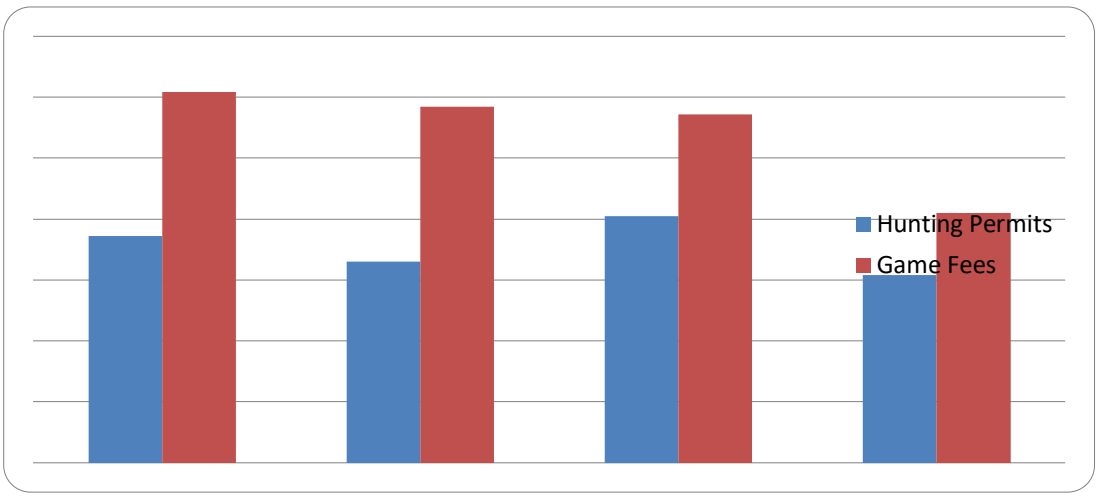
Once fully operational, the Tanzania Wildlife Management Authority (TAWA), will retain 100% of the hunting revenues, thereby changing the above mentioned system. At present there is a transition period and TAWA should be fully operational in the second half of 2016.

All the transactions are retrievable from the electronic permitting system (described in section 4.5).

The Selous Game Reserve is working under a special retention scheme whereby 50% of the revenues are retained by the Game Reserve.

A partial breakdown of the figures in Table 12 is given in Tables 13 and 14

Table 13 Revenues generated from Hunting permits and game fees



Revenues generated from Hunting Blocks varies depending of their categories. The following table 14 shows the revenues generated by hunting blocks fees:

Table 14 Revenues generated from Hunting Blocks

2013/2014	2014/2015	2015/2016
$4,295,000.00	**$4,684,000.00**	**$4,279,000.00**

A lion hunting license includes several fees, described in the Schedules of the Tourist Hunting Regulations of 2015. In particular, the Third Schedule regarding Game Fees values a lion hunt at 4,900 US$(rifle) and 6,125 US$ (bow). The Fifth Schedule applies to a lion hunt as a i) 21-day safari Permit Fee at 1,000 US$ (rifle) and 2,000 US$ (bow), a ii) conservation daily fee at 150 US$ per hunter ($150 x 21 = $3,150), and 100 US$ per observer fees ($100 x 21 = $2,100), and a iii) trophy handling fee at US$ 500.

The total of these fees per lion is a minimum of 9,550 US$ to 11,775 US$, excluding the observer fee (2,100 US$ for a 21 days' safari. Adding that would total 11,650 US$ to 13,875 US$ for each lion.

Lion Safari hunting is central in Tanzania, certainly being the major draw that attracts hunting clients to the country. Twenty-one days' hunting permits includes lion in 50-60% of the cases. Even though lions are not always harvested, the hunter pays for the associated fees and spends money on other fees, which generates income for conservation activities. Twenty-one days' safaris are the greatest generators of revenues from hunting in Tanzania and are required by the Hunting Regulations for lion and elephant.

Table 15: Total number of Hunting Permits per Package from 2012 to 2015

Package	Fee (for rifle. Bow different) IN USD	FY2012-2013	FY2013-2014	FY2014-2015	FY2015-2016
7 DAYS	1,250	0	25	47	29
10 DAYS	1,200	202	163	142	129
14 DAYS	1,100	0	25	36	27
16 DAYS	1,000	28	0	0	0
21 DAYS	1,000	558	479	494	375
28 DAYS	900	0	19	20	9
TOTAL		**788**	**711**	**739**	**569**

Table 15 provides a breakdown of the total number of Hunting permits per Package. For each Package a fee is paid in accordance with the Fifth Schedule of the Tourist Hunting Regulations.

11.1 Revenue from US hunters specific to lions

In section 7.1 we presented data on lion harvests for Safari hunting over the past eight years in Tanzania.

Here we present specific data on lion harvests by US citizens and their contribution to conservation activities in Tanzania.

The United States of America represents the most important single country market for Safari hunting in Tanzania. For example, in 2015, out of a total number of 569 permits to all nationalities (see table 15),242permits were issued to US clients, representing 42.5% of the permits issued. Of these permits, U.S. hunters booked 202 21-day safaris. These U.S. clients generated in FY 2015/2016 (up to January 2016, FY ends June 2016) an approximate revenue for the WD of $ 3,507,000 in permits fees (conservation, observer, trophy handling and package) and game fees.

Table 16 represents the minimum revenue accrued to the Wildlife Division from US hunters and

does not include for example the observer fee (USD100 a day i.e. 2100 USD for a 21 days' safari). Moreover, many hunters book a 21 day safaris which include lion paying the respective 9,550 US$ fees without harvesting a lion. Taking into account the figures in table 17 and the fact that more than 50% and up to 60% of the 21 days' safaris requested a lion, calculations can be made of the revenues generated from hunting permits which includes a lion. Finally, the contribution of the US hunters for lion harvesting is much higher than represented in this table. If all revenues and costs are included, such for example block fees and professional hunter fees, the contribution will increase exponentially.

Table 16: Lions harvested by US citizens 2012-2015 and minimum revenue accrued to the Wildlife Division

Year	Number of Lion Harvested by Hunters from the USA	Minimum Revenue US$ Per Lion*	Total US$
2012/13	30	$ 9,550.00	$286,500.00
2013/14	27	$ 9,550.00	$257,850.00
2014/15	23	$ 9,550.00	$219,650.00
2015/16	19	$ 9,550.00	$171,900.00
Total	99		$ 935,900.00

*Revenue includes only the following; Permit fee, Conservation fee, Game Fee, Trophy handling fee.

Table 17 shows the blocks where lions were harvested by US hunters from 2012 to 2015

Table 17 Blocks where Lions have been harvested by US citizens 2012-2015

Although no lion was hunted in WMAs, at least by US hunters, WMAs are benefitting from 21 days' safaris trough the intercompany hunting arrangement. As defined in section 19 of the Tourist Hunting Regulation 2015 "intercompany hunting" means a situation where the Director of Wildlife has issued an additional hunting permit to a hunting company to conduct hunting in a hunting block belonging to another company for the purpose of enabling a hunting client to obtain species not hunted in its allocated hunting block.

Moreover, lions are harvested in GCAs and OAs thus bringing benefits to communities and alleviating HLC.

11.2 Expenditures by Wildlife Division

The revenues obtained by the different hunting fees from tourist hunters are invested in the operational costs of the protected areas which are under the jurisdiction of the Wildlife Division.

Not only Lion hunting contributes an important percentage to the operational costs (e.g. salaries of anti-poaching personnel, allowances, fuel, health care etc.) of Game Reserves and other hunting areas, but, as indicated in the previous section, it is the main driving species for the booking of 21 days Safaris that are one of the main revenue generators for the WD and the hunting sector.

Funds are distributed by TWPF to 17 Outstations and 8 Zonal Antipoaching Units (ZAPU) as shown in Table 18 that includes Ration Allowances, Drugs and Medicine, Domestic Per Diem, Diesel, Petrol Prosecutions, Casual Laborers, Utility, Motor Vehicles and Water Craft.

The table do not include additional funds distributed as Responsibility Allowances for Head of Station, Projects, and funds for other departments, that represent and additional expenditure also derived from hunting revenues.

Pasiansi Wildlife Training Institute, Likuyu-Sekamanga CBNR Institute and Selous Game Reserve have their own budgets and operates, in part, from funds distributed by TPWF, derived to a great extent from hunting revenues.

All budgets are available upon request.

Table 18. DISTRIBUTION OF FUNDS TO OUTSTATIONS FROM 2012 to 2016 (per Fiscal year) in TZS

Fiscal Year	Amount in TZS	Approximate amount in USD*
2012-2013	1.987.607.442,00	1,242,254
2013-2014	2.631.058.996,00	1,644,411
2014-2015	2.865.194.516,00	1.637,254
2015-2016(partial)	3.828.804.616,00	1,823,240

- Calculated at an average historical rate of exchange. (1USD=1600TZS for 2012-2013 and 2013-2014, 1 USD=1750 TZS for 2014-2015 and 1USD=2100TZS for 2015-2016).

The Wildlife Division is committed to introduce in the budget for the next Fiscal Year 2016-2017 (starting in July), which is in preparation now, a budget line to cover the costs of the lion aging system and of at least one survey from the hunting fee revenues.

12. Conclusions and Non-Detriment Findings

Tanzania is guided by four main principles in its conservation activities:

- Responsibility principle - Responsibility to use resources in an ecologically sustainable, economically efficient and socially just manner
- Precautionary principle - The absence of adequate scientific information shall not be used as a reason for postponing or failing to take conservation and management measures
- Adaptive management principle - Learning-by-doing
- Participatory principle - The importance of full stakeholder participation in the formulation and implementation of decisions

Tanzania has implemented in recent years a series of recommendations deriving from scientific literature to address the management of Safari hunting and enhance its contribution to lion conservation, bearing the responsibility of having the biggest wild lion population in Africa and on Earth.

These include recommendations formulated by various authors (Whitman et al. 2004, 2007; Packer et al. 2006;Palazy et al. 2011;Hunter et al. 2013; Lindsey et al. 2013; and Bauer et al. 2015), and specifically recommendations on the implementation and enforcement of age restrictions (6 years or older); improved, independent trophy monitoring and adaptive management of quotas; implementation of maximum quotas to prevent excessive harvests, until age restrictions and trophy monitoring are in place (Tanzania is even stricter, having maintained and reduced its quota even though age restrictions and trophy monitoring are in place); restriction of harvest to males; and a minimum length of lion hunts of at least 21 days (to allow time for selection and to maximize revenues) fixed- quotas which encourage over-harvest; lack of age restrictions; and hunting of females.

At present, Safari hunting has a very insignificant impact on the lion population and it is not a threat contributing to their potential decline. On the contrary it plays a significant role in maintaining ecosystems, protecting species against illegal activities and providing tangible benefits to Tanzania's economy and the livelihoods of Tanzania's rural people.

Lion Safari hunting is central in Tanzania, certainly being the major draw that attracts hunting clients to the country. Lion trophies are asked for in more than half of the hunting permits yearly issued. The United States of America (U.S.) represents the most important market for Safari hunting in the Tanzania with more than 40%of clients coming from US.

In Tanzania, wildlife conservation is at first hand a matter of land use. Proclaimed protected areas gazetted as hunting areas (304,399.95 km2) are ca. 5 times larger than protected areas without safari hunting activity (57,838 km2). Protected areas gazetted as hunting areas cover about one third of the country and serve as prime reservoirs of global biodiversity, securing maintenance of natural ecosystems and prey base for lions.

Human population in Tanzania has significantly increased since 1950 (i.e. 7 million in 1950 against 46 million in 2011) and is projected to increase by 500 per cent or more by 2100 (United Nations, 2011). During 2011-2100, six countries are expected to account for half of the world's projected population increase, with Tanzania being among them (United Nations, 2011). As a result, there is considerable pressure to convert land to agro-pastoral production, and the pressure is expected to increase tremendously, given the above-mentioned projections from the United Nations.

Financial resources for conservation, particularly in developing countries such as Tanzania, are limited. As such, consumptive (including Safari hunting) and non-consumptive (photo tourism safaris) uses are both needed to generate funding. Without these, many natural habitats would otherwise be converted into agricultural or pastoral uses, producing inevitable habitat loss.

The Safari hunting sector's sustainability would be threatened by the loss of its main attracting

product (the lion) combined to the loss of its main market (the USA). A lot of hunting companies operating will return most (if not all) of their hunting areas to the Wildlife Division to avoid bankruptcy. As a consequence, many protected areas devoted to safari hunting will be converted to agro-pastoral land, leading to the unavoidable extinction of wildlife and natural habitats with collapse of ecosystem services. This negative consequence is that the WD seeks to avoid and is a powerful reason to support regulated, sustainable safari hunting in Tanzania. It is clear, based on the data collected here, that safari hunting in Tanzania benefits the lion by mitigating the primary threats to the lion.

In this document consideration has been given to the population of lion in Tanzania; the quota-setting system which recognizes the scientific formulated thresholds of 1lion/1000km^2 in high density areas and 1lion/2000km^2 in low density areas and the consequent current precautionary quota of 200 lions; the National Carnivore Action Plan; the well developed and implemented age-based harvest policy; the limited harvest and the incentives to conservation represented by the substantial revenues generated by safari hunting for Wildlife Division operations, anti-poaching, and community development. The Scientific Authority has considered the current threats to lion, including loss of habitat and human-lion conflicts, and potential of safari hunting to mitigate those threats.

Safari hunting provides a net benefit to the species, it does not pose a threat to the species, and it is not a detriment to the survival of the species. Regulated safari hunting of lion in Tanzania enhances the survival of the species. Lion is neither endangered nor threatened in Tanzania.

The United Republic of Tanzania expects CITES Parties to implement CITES Resolution Conf. 2.11 with particular reference to paragraph b) that states: "*in order to achieve the envisaged complementary control of trade in Appendix-I species by the importing and exporting countries in the most effective and comprehensive manner, the Scientific Authority of the importing country accept the finding of the Scientific Authority of the exporting country that the exportation of the hunting trophy is not detrimental to the survival of the species, unless there are scientific or management data to indicate otherwise*".

Upon considering all the factors illustrated in this document and in accordance with Article IV of CITES and CITES Resolution Conf.16.7, the Scientific Authority of Tanzania has advised the Management Authority that the low level of off-take generated by safari hunting is not detrimental to the survival of the lion in Tanzania and enhances its survival and the amount of revenues generated by this low level of off-take are of crucial importance for the conservation of the species also because of the benefits it provides to rural communities.

APPENDIX 1 Assessment of the Enhancement and Non-Detriment Findings against the IUCN SSC "Guiding principles on trophy hunting as a tool for creating conservation incentives. Ver. 1.0. IUCN SSC (2012)"

An assessment of the Enhancement and Non-Detriment Finding on Lion in Tanzania against the IUCN SSC GUIDING PRINCIPLES ON TROPHY HUNTING AS A TOOL FOR CREATING CONSERVATION INCENTIVES. VER. 1.0. IUCN SSC (2012), was done by the Wildlife Division and TAWIRI in recognition of the importance of the implementation of these principles to be applied as a guidance to manage trophy hunting as a legal, regulated conservation activity which provides a critical tool to secure a sound social, economic and ecological conservation scenario.

Biological Sustainability

Trophy hunting* can serve as a conservation tool when it:

#	Principle	Remarks
1	**Does not contribute to long-term population declines of the hunted species or of other species sharing its habitat, noting that a sustainably harvested population may be smaller than an unharvested one**	Safari hunting has an insignificant impact on the lion population in Tanzania because the offtake is limited and low. It is not a threat contributing to the population's potential decline. Tanzania sets its lion quota in accordance with sustainable limits (e.g., 1 lion/2,000 $km^2$for normal density or 1 lion per 1,000 $km^2$for high density areas, see Packer et al. (2011)). Considering the latest available estimate of lion population size in Tanzania (i.e. 16,800; Mésochina et al. 2010), trophy hunting harvested a yearly mean of 1.34% (min: 0.53%; max: 2.46%) of lion males ranging in the country, for the past eight years. This figure is considered as low and has decreased since the establishment of age restriction rules on lion hunting, i.e. Tourist Hunting Regulations of 2010. This low offtake is sustainable and generates significant financial and other benefits.
2	**Does not substantially alter processes of natural selection and ecosystem function; that is, it maintains "wild populations of indigenous species with adaptive gene pools." This generally requires that hunting offtake produces only minor alterations to naturally occurring demographic structure. It also requires avoidance of breeding or culling to deliberately enhance population-genetic characteristics of species subject to hunting that are inconsistent with natural selection**	Safari hunting in Tanzania does not substantially alter natural selection or ecosystem processes. Tanzania's limited quota, as further limited by age restrictions, ensures that hunting offtakes do not negatively affect natural processes. This age-based policy was adopted in part to mitigate any social or population impacts from limited safari hunting. (Whitman et al. 2004). Tanzania maintains a large wild lion population (approximately 16,800 (Mésochina et al. 2010)) across a wide permanent and transient range, which contributes to an adaptive gene pool. No captive breeding or breeding for specific characteristics is done for lion in Tanzania.
3	**Does not inadvertently facilitate poaching or illegal trade of wildlife**	Safari hunting in Tanzania does not inadvertently facilitate poaching or illegal trade.

		Poaching and illegal trade in lion products is currently very low in the country, which suggests that the existence of licensed, regulated hunting is help control poaching and not facilitating it. Hunting operators are in the frontlines against poaching. Concession lease agreements require assistance with anti-poaching. Operators spend significant resources on this and must submit annual reports to the Wildlife Division documenting their efforts. Even where anti-poaching is not a legal prerequisite, operators fund their own anti-poaching teams and support government rangers and community scouts.
4	**Does not artificially and/or substantially manipulate ecosystems or their component elements in ways that are incompatible with the objective of supporting the full range of native biodiversity**	Hunting in Tanzania does not manipulate ecosystems in ways that are incompatible with supporting biodiversity. To the contrary, hunting has created financial incentives for the development and retention of wildlife as a land use across an area of 300,400 km^2, where hunting is a primary land use. Hunting areas serve as buffer zones for many national parks. The abandonment of safari hunting as a land use option would put at risk an enormous amount of land that provides habitat for diverse species, at least 44,000 km^2 would be at risk of conversion to other land uses. That is over three-quarters the area of Tanzania's national parks, and is roughly the same amount of area as Kenya's national parks and reserves. (WDPA 2016).

Net Conservation Benefit

Trophy hunting can serve as a conservation tool when it:

#	Principle	Remarks
1	**Is linked to identifiable and specific parcels of land where habitat for wildlife is a priority (albeit not necessarily the sole priority or only legitimate use); and on which the "costs of management and conservation of biological diversity [are] internalized within the area of management and reflected in the distribution of the benefits from the use"**	Hunting in Tanzania is linked to identifiable land areas where providing habitat and sustaining wildlife populations is a priority. Protected areas gazetted as hunting areas (304,400 km^2) are ca. 5 times larger than protected areas without safari hunting activity (57,838 km^2). Protected areas gazetted as hunting areas cover about one-third of Tanzania and serve as prime reservoirs of global biodiversity, securing maintenance of natural ecosystems and prey base for lions. Hunting areas include 28 Game Reserves, 44 Game Controlled Areas, 38 Wildlife Management Areas and 57 Open Areas subdivided in 196 Hunting Blocks.

		As much as possible, the costs and benefits of management and conservation are localized. A realistic estimate of costs of management incurred by hunting companies on a yearly basis ranges from $300,000 to $500,000 per block, which includes the expense of camps, salaries, anti-poaching, fuel, community assistance, etc. Many of the government's costs of maintaining Game Reserves and Game Controlled Areas are transferred to the private sector through private anti-poaching units or contributions towards government rangers and equipment. Further, revenues from hunting are used for anti-poaching, block maintenance and development, and contributions to communities living nearby. In WMAs, which are community-controlled lands, the majority of fees goes to the community, as directed by the Tourist Hunting Regulations (2015). Much of the revenue generated also goes to the communities pursuant to negotiated payments, employment, and voluntary contributions by hunting operators. In hunting areas in particular (as compared to the national parks), the costs and benefits of wildlife in the area are internalized and distributed within the area of management.
2	**Produces income, employment, and/or other benefits that generate incentives for reduction in pressures on populations of target species, and/or help justify retention, enhancement, or rehabilitation of habitats in which native biodiversity is prioritized. Benefits may create incentives for local residents to co-exist with such problematic species as large carnivores, herbivores competing for grazing, or animals considered to be dangerous or a threat to the welfare of humans and their personal property**	Hunting produces direct and indirect income, employment, and other benefits that generate incentives that reduce the threats to wildlife populations in Tanzania. In the period from 2006 to 2013, approximately $115 million accrued to the Wildlife Division from the revenues of trophy hunting. This revenue pays for the daily wildlife conservation work in Tanzania, including research projects, surveys, anti-poaching, and other services. Nearly 80% of the Wildlife Division/TWPF's anti-poaching budget comes from hunting revenue. Hunting generates income for local communities organized as WMAs, which lease the habitat and receive lease payments and revenue and fee shares, as well as voluntary contributions and meat. In 2014, lease payments from hunting operators alone generated $612,000 in revenue for WMAs. Thousands of people are employed in the hunting sector on a permanent basis and many more on a seasonal basis. In just 2014 and 2015 alone, hundreds of new rangers have been employed. Wild areas of Tanzania provide biodiversity services, i.e. ecosystem services, through the

		provision of recreational opportunities such as hunting and the aesthetic enjoyment of the wildlife that utilize these landscapes. Safari hunting plays an important role in the ecosystem services as defined in the Millennium Ecosystem Assessment (MA) (2005), i.e. "the benefits people obtain from ecosystems." Safari Hunting is both a provisioning and cultural service (two of the four categories) of services identified by the MA. The Safari hunting system in Tanzania where operators pays fees and other payments to encourage ecosystem and species conservation, and rural livelihoods, could be considered as a Payment for Ecosystem Services (PES). Its contribution in this regard and in the whole framework of Ecosystem Services shall be analyzed further and it is the intention of the Wildlife Division to start working on this subject as a priority.
3	**Is part of a legally recognized governance system that supports conservation adequately and of a system of implementation and enforcement capable of achieving these governance objectives**	Wildlife species in Tanzania, including African lion, are protected under the Wildlife Conservation Act No.5 of 2009.This Act protects the species' natural habitat and prey, primarily through a network of protected areas and limits on offtake of listed species. The Act is implementing through the Wildlife Conservation regulations. Safari hunting is regulated by the Wildlife Conservation (Tourist Hunting) Regulations updated in 2015. In areas that allow hunting, the Act and Regulations are implemented by the Wildlife Division and the newly operational Tanzania Wildlife Authority (TAWA). Funding comes from the Tanzania Wildlife Protection Fund. District Councils are responsible for setting wildlife management and conservation policy in WMAs, as overseen by the WD. These entities, along with the entities that oversee strictly protected areas such as TANAPA and the NCAA and scientific entities such as TAWIRI, are responsible for implementing the Lion and Leopard Plan. They are all overseen by and report to the MNRT.

Socio-Economic-Cultural Benefit

Trophy hunting can serve as a conservation tool when it:

#	Principle	Remarks
1	**Respects local cultural values and practices (where "local" is defined as sharing living space with the focal wildlife species), and is accepted by (and preferably, co-managed and actively supported by) most members of the local community on whose land it occurs**	The Tourist Hunting Regulations require safari operators to contribute no less than $5,000 per year the communities within and adjacent to their concessions. Operators discuss with the villages how to use the contributions and work with the villages to implement community and infrastructure development and projects. There are currently 21 gazetted Wildlife Management Areas (WMAs) in Tanzania and the majority of these WMAs depend on Tourist Hunting as the only viable investments currently supporting conservation work and community development services. Employment ventures for local communities enable them to meet basic needs at household and community levels. These opportunities are provided by investors also in the hunting sector and WMA Associations.
2	**Involves and benefits local residents in an equitable manner, and in ways that meet their priorities**	WMAs represent the community based conservation system of Tanzania and they are seen as a key component of rural development and as one of the best weapons in the fight against illegal utilization. WMAs provide enhanced protection of critical habitats outside of protected areas and represent the best hope for conserving wildlife outside of Tanzanian protected areas while enhancing rural economic development through consumptive and non-consumptive use investments. In 2012 the regulations governing WMAs were revised to increase benefits-sharing and to vest communities with greater rights to negotiate the leases and elect the safari operators who will oversee the WMA concessions That WMAs benefit local communities is demonstrated by the current registration of 21 WMAs, the pending registration of another 17 WMA and continued enquiries from communities about becoming gazetted.
3	**Adopts business practices that promote long-term economic sustainability**	For the first time in 2013, WMAs has received the power to sign utilization contracts with the private sector (consumptive and non-consumptive). These arrangements which will last for five years (2018) have enabled WMAs and therefore the villages and people living there to sign contracts with hunting operators worth more than USD 4.3 million. The approval of the WMA implementation strategy streamlines the processes to strengthen CBRNM in Tanzania.

		Long-term economic sustainability of community based programs involving trophy hunting depends also on the international framework on trade as international trade restrictions can jeopardize conservation programs.

Adaptive Management: Planning, Monitoring, and Reporting

Trophy hunting can serve as a conservation tool when it:

#	Principle	Remarks
1	**Is premised on appropriate resource assessments and/or monitoring of hunting indices, upon which specific quotas and hunting plans can be established through a collaborative process. Optimally, such a process should (where relevant) include local communities and draw on local/indigenous knowledge. Such resource assessments (examples might include counts or indices of population performance such as sighting frequencies, spoor counts) or hunting indices (examples might include trophy size, animal age, hunting success rates and catch per hunting effort) are objective, well documented, and use the best science and technology feasible and appropriate given the circumstances and available resources**	Licensed, regulated hunting in Tanzania is permitted under an adaptively set quota system. Quotas are set using monitoring data and input from a variety of stakeholders including the Wildlife Division, TAWIRI, government rangers and scouts, local communities, hunting operators, and field biologists. Quotas are set based on population estimates or trend analyses, monitoring data, hunt return data, research work and indices as may be reflected in various reports by field personnel. For lion specifically, following consultations with the Scientific Authority (TAWIRI), the CITES Management Authority (WD) has decided to introduce a new export quota for lion hunting trophies of 200 specimens. This will be effective at the start of the next hunting season, commencing in 1st July 2016. This new quota is (i) a reduction of one third of the previous quota and (ii) 25% below the sustainable harvest level suggested by the CITES Scientific Authority (TAWIRI) and Packer et al. (2011), i.e. 1 lion/2000Km^2 for most hunting areas, and 1 lion/1000Km^2 for the Selous Game Reserve and other high density areas, and taking into account the lion range in Tanzania (permanent presence range for lion of 516,900 km2, and a temporary presence range of 232,800 km^2). The new quota is a further precautionary measure, complementing the strict age restriction regulation implemented since the entry into force of the Tourist Hunting Regulations of 2010. It is a three tier limit, i.e., age, number per square kilometer, and maximum overall number. It made sense to the Management Authority to reduce the quota because the prior quota was never utilized fully, and the lower maximum level of offtake demonstrates Tanzania's commitment to sustainable hunting.
2	**Involves adaptive management of hunting quotas and plans in line with results of resource**	Quotas are set adaptively in line with the results of monitoring. Further, quotas for lion are also managed based on regulatory compliance. If an

	assessments and/or monitoring of indices, ensuring quotas are adjusted in line with changes in the resource base (caused by ecological changes, weather patterns, or anthropogenic impacts, including hunting offtake)	underage lion is harvested, the quota for that area is reduced in the next season to allow the population to age and to penalize the non-compliance. In this way, Tanzania ensures responsible and sustainable offtakes that have limited impact on the lion population. Quotas are reviewed by the Quota Allocation Advisory Committee, comprised of wildlife conservation experts from TAWIRI, the University of Dar es Salaam, Sokoine University of Agriculture, University of Dodoma, the College of African Wildlife Management, and the Wildlife Division. The Committee provides a second review of the quota setting, which doubly ensures the sustainability of the offtakes.
3	**Is based on laws, regulations, and quotas (preferably established with local input) that are transparent and clear, and are periodically reviewed and updated**	Safari hunting in Tanzania is regulated through the Wildlife Conservation Act no.5 of 2009 and a number of Regulations among which the principal one is the Tourist Hunting Regulations recently amended in 2015. As described above. quotas are established in a transparent and participatory way.
4	**Monitors hunting activities to verify that quotas and sex/age restrictions of harvested animals are being met**	The monitoring of the lion hunting is carried out through the implementation of a specific database and a specific safari return form. Based on all hunting permits issued by (and compulsorily returned to) the Wildlife Division, a specific database has been set up to record lion hunting harvests. Regularly updated, the database is used to follow-up lion Safari hunting activity and trophy skulls that must be presented to the Wildlife Division for inspection. Since mid-August 2011, all professional hunters conducting lion hunting safaris are required to fill in the safari return form for both successful and unsuccessful safaris. With this form general information on the course of the safari, the lion population status and lion Safari hunting success are collated. For the successful lion hunting safaris, additional information like the hunting effort, specific measurements (total length and shoulder height) and specified photographs are taken. Safari return forms and trophy photographs are compulsorily provided by the hunting companies to the Wildlife Division. No CITES export permit can be issued without compliance. All offtakes are reviewed by the CITES Scientific Authority (TAWIRI) to ensure the offtakes and subsequent exports are not detrimental to the survival of the species. Also operators are required to submit annual reports on the status of the concessions, anti-poaching, community and block development, and other matters to the Wildlife Authority. These reports are used to assess compliance with the

		Wildlife Conservation Act and the Tourist Hunting Regulations. Operators are required to submit three-year reports to the Wildlife Division to assess their compliance with the requirements of their leases and evaluate whether the concession lease should be renewed. A database of all hunting permits issued by (and compulsorily returned to) the Wildlife Division is used to follow-up lion trophy hunting activity and trophy skulls that must be presented to the Wildlife Division for inspection. When a permit is sought, the system deducts the number of animal hunted from the quota uploaded. The system indicates the quota balance from each animal species. In this regard, over utilization of the hunting quota issued to a company is controlled, and tracked on the harvest end through the hunt return forms. Tanzania also requires that a government ranger must observe all longer safaris for the larger species.
5	**Produces reliable and periodic documentation of its biological sustainability and conservation benefits (if this is not already produced by existing reporting mechanisms).**	The Wildlife Subsector Statistical Bulletin is published every three years and contains important information on conservation activities of the Wildlife Division including Hunting. TAWIRI produces regularly scientific reports and NDFs. Reporting to CITES is done periodically.

Accountable and Effective Governance

A trophy hunting programme can serve as a conservation tool when it:

#	Principle	Remarks
1	**Is subject to a governance structure that clearly allocates management responsibilities**	Tanzania's governance structure is described in the Wildlife Conservation Act No.5 of 2009 and its subsidiary regulations that clearly provides for Institutional arrangements and administration defining the management responsibilities within the relevant Government Authority.
2	**Accounts for revenues in a transparent manner and distributes net revenues to conservation and community beneficiaries according to properly agreed decisions;**	The Wildlife Policy stresses the need for equitable distribution of costs and benefits that considers stakeholders' role in relation to categories of land and efforts invested by the institution in conservation within WMAs. The improvement of benefit sharing arrangements as an incentive to local Communities to conserve wildlife is taking place. Governmental institutions such as TPWF distribute revenues to conservation and community beneficiaries and supports infrastructure development and direct cost for carrying anti-poaching activities in Zonal Anti-Poaching Units (ZAPUs). As a mechanism of

		providing incentives to the communities in districts that participate in wildlife conservation, TWPF supports community development projects such as building of schools upon screening of submitted proposals based on the stipulated criteria in TWPF guidelines for funding. Safari operators contribute substantially and voluntarily, above the prescribed fixed contribution, to Tanzania's enhanced anti-poaching efforts and communities' development. They provide funding, equipment and the technical expertise for repairs, transportation, and most critically, funding for government game scouts as well as their own anti-poaching patrols. Hunting Companies' anti-poaching teams acting in collaboration with the Wildlife Division Anti-Poaching Units, remove snares, prevent illegal logging, and arrest poachers in a coordinated and continuous effort.
3	**Takes all necessary steps to eliminate corruption;**	Several legislations and initiatives are in force in Tanzania to combat corruption including: Prevention and Combating of Corruption Act No. 11 of 2007 The Public Procurement Act, Act 21 of 2004 The Public Services Act, Act 8 of 2002 The Public Finance Act, 2001 The Ethical Codes for Public Officials The 2016 Anti- Corruption Summit was hosted by the British Prime Minister, David Cameron and was held on 12th May, 2016 in London-UK to set up global action to expose, to punish and to drive out corruption in all walks of life. The Summit stirred up the global response in tackling corruption by jointly agreeing to deal with corruption across borders. Among African Heads of state invited was President of the United Republic of Tanzania Dr. John Pombe Magufuli who was represented by the Tanzania Prime Minister, Kassim Majaliwa. The Tanzania Prime Minister presented country Anti-Corruption Commitments and urged that Corruption is a serious crime that needs concerted efforts.
4	**Ensures compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.**	The CITES Management Authority of Tanzania, the MNRT Wildlife Division, ensures compliance of safari hunting to CITES provisions.

APPENDIX 2 - Reference Table to the USFWS Letter and Questionnaire on Lion in Tanzania

The attached table cross-references the sections of the Enhancement and Non-Detriment Findings with the questionnaire directed to the Wildlife Division from the USFWS, dated 15 April 2016.

Question	Responded to in Section(s)
I. OVERVIEW *The lion is listed in Appendix II of CITES. As such, the Scientific Authority of the exporting country must make a determination that the export of a sport-hunted trophy will not be detrimental to the survival of the species (Article III, 2(a)). While the finding that the U.S. Fish and Wildlife Service must go beyond the "Non-detriment" standard, it would be very beneficial to our review if you could provide a copy of a recent "Non-detriment" finding made by your Scientific Authority.*	
II. MANAGEMENT PLAN (a comprehensive plan addressing specific management goals or actions) *1. Does Tanzania currently have a national management plan for lions and, if so, could you please provide a copy? If there is no national plan, have regional plans been developed and adopted, and if so, could you please provide copies?*	8.1.
2. Is your agency the only government agency that is responsible for managing lions within your country? If not, which other agency or organization within your national, regional, or local government is responsible?	8.1
3. Have you developed a mechanism (i.e., adaptive management approach) for implementing the plan(s) and determining its effectiveness? Could you describe how implementation of the plan is progressing and if there are management or logistical problems that still need to be addressed?	8.1
4. Are there any other management plans or conservation plans that contribute to or interact with the lion management plan(s) (i.e., regional plans, hunting concession plans)?	8.1
III. POPULATION STATUS *1. What is the status of lion populations within your country (e.g., population numbers; population trends; sex and age classification)?*	3
2. Do you have a standardized process to conduct population censuses? If so, how often? What areas are censused? Do they include all hunting areas? What is the censusing methodology?	3
3. What is the current distribution of lions within your country (i.e., widespread, environmentally confined to specific areas, confined to national or regional protected areas)?	2 and subsections
4. Even with protection activities and legal intervention, poaching could still occur. Do you have any estimates on the number of specimens lost to illegal killing annually?	9 and subsections
5. What impact are human-lion conflicts having on local or national populations? Is there a standardized national policy to address such conflicts and problem lion control? If so, does this policy include culling of surplus animals and removal of nuisance animals? Is there domestic harvesting of lions for local consumption or use?	9.1

IV. CONSERVATION AND MANAGEMENT *1. Please describe potential threats to the species, such as poaching and human-animal conflicts, and how these threats are being addressed.*	9 and subsections
2. Is your agency currently conducting any research efforts addressing conservation issues involving lions? What about other agencies or departments within your national or regional governments and what are their roles? Are you aware of any NGO projects currently underway that involve lion conservation or management? If so, could you describe such projects or provide contact information to the organization carrying out the work?	3, 4.1
V. HUNTING POLICIES/REGULATIONS *1. Please describe how lion hunting program functions within your country. Specifically, do you have an established national/regional hunting quota? How is this quota determined? Many countries have established age restrictions on harvesting lions. Has your country established such age restrictions and, if so, what are they and how are they implemented?*	5 and subsections 6 and subsections 7 and subsections
2. What format do you use to manage sport hunting (i.e., establishment of national districts under government control, awarding hunting concessions to privately owned operations)?	5 and subsections 6 and subsections
3. If hunting areas/concessions allocated to safari outfitters, how are they allocated? What requirements have been established for the concession holders (i.e., mandatory census activities, assistance to local villages, etc.)? Are concessions awarded on an annual basis or for longer periods? If concession areas are centrally controlled by your government (e.g., several outfitters hunt in the same areas and no one outfitter is responsible for overall management), what mechanism is used to monitor and control outfitter activities?	5 and subsections 6 and subsections
4. How much do hunting licenses cost foreign hunters? How does your government utilize this revenue? Does a percentage go directly to lion conservation efforts or into more general wildlife management efforts? If so, what percentage is allocated to each? Is any of this revenue provided to local communities? If so, what percentage?	11 and subsections 10 and subsections
5. How does the sport-hunting program provide any other tangible benefits, besides revenue, to local communities (i.e., increase employment, jobs in anti-poaching units)?	5 and subsections 10 and subsections

Import of Sport-Hunted Lion PRT#82925C

1 message

Harcum, Heather <heather_harcum@fws.gov> Mon, Dec 23, 2019 at 11:58 AM
To: Rachel Brechbuehler <permits@conservationforce.org>

Good morning Emma,

I wanted to follow up on our phone conversation about Mr. John S. Wright's application, PRT # 82925C. Mr. Wright applied for this permit in March 2018 for a hunt that was supposed to take place in August 2019. I want to confirm whether this hunt was successful for him or not.

Please let me know once you receive this information from Mr. Wright.

Thank you,
Heather Harcum

Subject: [EXTERNAL] Import of Sport-Hunted Lion PRT#82925C (Applicant: John Wright)

Good morning Heather: Still going through old emails of Emma's, so please forgive the lateness of this reply.
I have determined (by reading email strings below) that Mr. Wright DID NOT take his lion for the hunt specified in his application due to the fact that the lion was too young and was still holding a pride. I do not know if there is any other information needed to withdraw his application, or some specific form that I should be using but if so, please let me know.

Regards,
Tammy L. Piker

Re: Applications for Import of Sport-Hunted Lion Trophies

Dear Chief Van Norman:

Enclosed please find three applications to import sport-hunted lion trophies. The first applicant is hunting in South Africa, at Khamab Kalahari Game Reserve, an area that has been designated to have "wild" lion by South Africa's Department of Environmental Affairs. Please refer to the attached list and information in the DMA's files, which includes the management plan for this reserve. The applicant is lawfully hunting a lioness as a population control measure, as explained in the attached justification. Please consider that information and the information previously submitted by South Africa's DEA and Conservation Force in making a positive enhancement finding for this applicant.

The second applicant is hunting in Tanzania with Rungwa Safaris/Bundu Safaris. This operator has submitted an enhancement report, which was sent to the DMA in October 2016 and is attached for ease of reference. Please consider that information and the information previously submitted by Tanzania's Ministry of Natural Resources and Tourism/Wildlife Division/Tanzania Wildlife Management Authority and Conservation Force in making a positive enhancement finding for this applicant.

The third applicant is hunting in Zimbabwe in the Dande South concession. This concession incorporates extensive anti-poaching and community investment. We will shortly submit an enhancement report from this operator. Please consider that information and the information previously submitted by Zimbabwe's Parks and Wildlife Management Authority, Conservation Force, and others in making a positive enhancement finding for this applicant.

Please do not hesitate to contact us if you have questions.

Sincerely,

Regina Lennox

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III, Regina Lennox, and other attorneys of the non-profit law firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a threatened-listed African lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that Conservation Force be copied with all correspondence, acknowledgements, notices, and decisions concerning my application to import my trophy at the following address:

Type of Activity:
IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Threatened-listed lion

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c Middle name or initial	1.d. Suffix
Sullivan	Julian	Allen	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)
N/A	

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Madison	Alabama	35758	Madison	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: Bontebok MA24105C-0 No ☐

(b) (6)

13 of the Code of Federal Regulations and the other application for a permit is complete and accurate to the penalties of 18 U.S.C. 1001.

20 Feb 2018
Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Panthera leo melanochaita

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

      Zimbabwe, Dande South

   b. Date wildlife is to be hunted:

      12 - 24 September 2018

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      skin, skull, teeth, claws -- all parts for life-sized mount

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

   b. Date wildlife was hunted:

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	Name: Anthony Crick
Business Name:	Business Name: HHK Safaris (Pvt) Ltd
Address:	Address: 4 Wayhill Lane West,
Address:	Address: Umwinsidale,
City:	City: Harare
State/Province:	State/Province: Mashonaland Central
Country, Postal Code:	Country, Postal Code: 0000

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data, how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

Please see information submitted by Conservation Force and range states authorities and operators.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: N/A Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one [redacted] into the United States, cann[redacted]

App[redacted] te: 20 Feb 2018

Be a[redacted] or state government, as well [redacted] activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
Conservation Force, 504-837-1233, cf@conservationforce.org

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

[EXTERNAL] Supplement to all outstanding Zimbabwe Lion Permits - CAMPFIRE document

Ms. Brisendine:

The document attached is to be included as supplement to all original import permit applications filed with the U.S. Fish and Wildlife Service listed above.

Since filing these applications we have received additional documentation of conservation efforts for lions in Zimbabwe that further detail the populations as stable and growing. The CAMPFIRE document strongly argues the importance of trophy imports and the value that they provide to communities in Zimbabwe through income flows from tourism and hunting which serve to support sustainable community livelihoods in a way that promotes conservation of wild species and habitat.

The Campfire document details the drastic effects that COVID-19 has had and is having on Zimbabwe's tourism and hunting market, which is in a state of collapse. It is leaving the country uncertain of how wild-life and anti-poaching programs will be supported on the ground in the coming months. This information can be used to predict what might transpire if trophy hunting and imports were to cease to exist and the tragic outcome it could have on the conservation efforts of wildlife in the area.

We ask that you please consider these documents when making your decision on enhancement in each import permit application.

Please feel free to contact me if you have any questions regarding this mater.

Cordially,

Aimee Korver
Permits Paralegal

Attachments
1. CAMPFIRE communities Concern on Import Bans

Open Letter to the United States Fish and Wildlife Service

Dear Dr Mary Cogliano

CAMPFIRE Communities Concern on Import Bans

CA/MPFIRE Association, otherwise known as the Community Areas Management Program for Indigenous Resources in Zimbabwe wishes to register its opposition to continuing campigns for the banning of trophy imports. We are fully aware that the general outrage in both print and social media against sport hunting, which many distant voices refer to as unethical, is aimed at influencing policy action by importing countires.. These arguments, none of which are supported by science, are based on a perfected art of global misinformation and do not represent the views of rural communities who live side by side with wildlife. To us as a people with substantial wildlife populations, trophy hunting is indispensable for conservation and rural livelihoods.

Zimbabwe has one of the most resilient and successful conservation programs in Africa. Its conservation efforts have historically enabled local communities to thrive on sustainable livelihoods in biodiversity-rich landscapes. At least 800 000 households or 2.5 million people (out of a national population of 16 million) benefit directly and indirectly from the sustainable use of wildlife and tourism related investments in their areas. However, our ever growing elephant population has increased the levels of conflict between humans and wildlife in recent years, which, together with recurrent droughts that threaten food security, have made traditional livelihoods more difficult, especially for subsistence farming communities that live in the wildlife rich areas of the country.

Communities in CAMPFIRE areas reside in an environment where conflict between humans and wildlife is common, as both compete for the limited available land and water resources. But this comes at a high price: people in Zimbabwe are paying with their lives for tolerating wild animals in their areas. As recently as 23rd March 2020, Barnabas Mwinga, a 50 year old man, was killed by an elephant in his field in front of his wife and young daughter in Gonono Ward, Mbire District. He is one of seven other people that have needlessly lost their lives to wildlife attacks throughout the country since the beginning of 2020, in addition to the 41 killed in 2019. Yet despite this high cost, wildlife is still highly valued by rural communities who continue to tolerate massive crop destruction and livestock losses from wildlife without compensation. For example, elephant poaching in Mbire District where Barnabas Mwinga was recently killed has gone down from a peak of 40 in 2010 to only 3 elephants poached in 2019 (Figure 1). The decline in poaching incidents is a result of collaborative efforts between the Safari Operator and the hunting clients who invest nearly $100,000 annually into an anti-poaching unit.

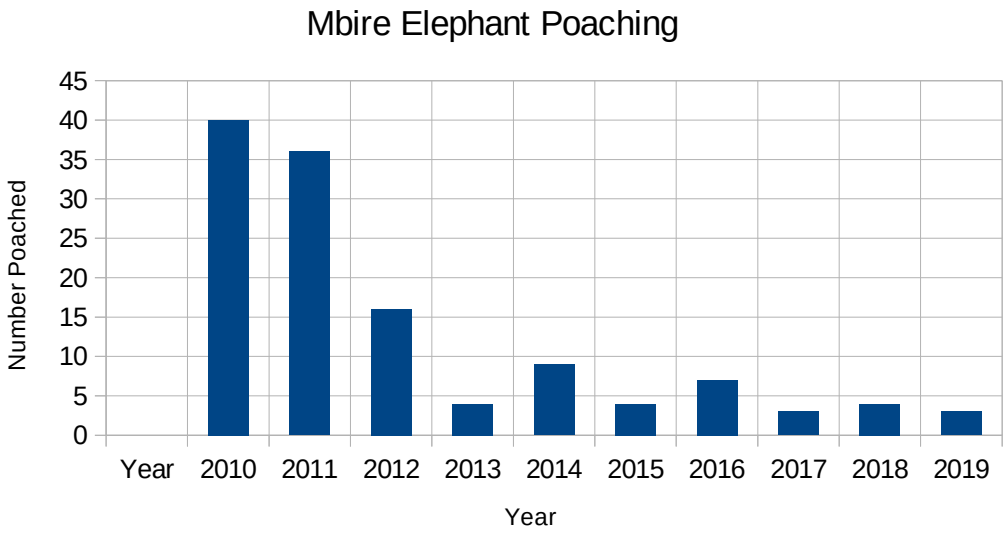

Figure 1: Mbire Elephant Poaching Trends (Source – Mbire Rural District Council)

The aim of the CAMPFIRE programme is to support sustainable community livelihoods in a way that promotes conservation of wild species and habitat. For nearly 30 years, trophy hunting, which relies heavily on the American market, has been cautiously implemented in the absence of other tourism opportunities to achieve this goal. Not only has it resulted in increasing food and livelihood security of rural people, it has also played a role in undermining the drivers of poaching and mitigating human and wildlife conflict. The net impact is seen in securing wildlife habitat and assisting in the regeneration of degraded landscapes.

The financial resources to succeed with this programme in CAMPFIRE areas are heavily dependent on the sustainable hunting of big game, especially elephants. The monies generated from these activities finance the local economies, social services as well as anti-poaching efforts and wildlife management at the District and Ward levels. For example, as can be seen from Table 1 below, the total number of elephants hunted as trophies over nine years is 807 out of a cumulative quota of 1381, from an estimated national population of 83,000 elephants. Hunting quotas are set at no more than 0.5% of the population estimate compared to an elephant population growth of 5% to 6% annually. The levels of off-take (58%) also demonstrate that while hunting is based on controlled numbers for each species annually, it is not uncommon for a client to pay for a full hunt and enjoy the wild experience, but not take a trophy. It is also important to note that communities do not view international hunting clients just as tourists, but as vital conservation partners.

Table 1: Trophy Hunting Quota Summary and Income: 2010-2018

All Districts:	**Elephant**	**Lion**	**Leopard**	**Buffalo**	**Hippo**	**Crocodile**	**Total**

Source: *The Role of Trophy Hunting of Elephant in Support of the Zimbabwe CAMPFIRE Program: Vernon Booth* (in progress).

District and Ward-level institutions in the CAMPFIRE areas rely on income from hunting to provide significant local livelihood benefits (income, jobs, skills) and social services (schools, clinics, irrigation schemes, boreholes) in remote regions where agriculture is marginal and there are very few jobs or other sources of cash income. Table 2 and Table 3 below summarise the impact of pre- and post-elephant trophy import suspension expenditure on the CAMPFIRE programme at the District and Ward level. The District administration costs absorb 89% of the budget with 30% devoted to law enforcement. With the suspension of elephant trophy imports to the USA and Europe in 2016, expenditure on law enforcement dropped from 33% to 9% as a result of District administration having to offset the human and wildlife costs which increased from 1% to 33%. At the Ward level, 46% of the budget is allocated to administration and 54% to community benefits (45% devoted to social services, Table 3).

Table 2: District level expenditure on administration and community benefits: 2010-2018

	Administration			**Community Benefits**			
All District Expenditure	**Administration**	**Law Enforcement**	**Management**	**Assistance to Wildlife Victims**	**Social Services**	**Total**	**Average/ year**

With growing awareness from several years of CAMPFIRE implementation, communities have been demanding their rightful place in the management of wildlife resources for their own benefit. To accommodate this, CAMPFIRE has undergone a review of its policy framework to enable communities to reap greater and more tangible benefits from living in harmony with nature. A key aspect of this review is to establish Community Conservancies that redefine ways in which communities can benefit more from wildlife and other income generation opportunities, as well as the mitigation of human and wildlife conflict. This initiative is being directed under the Global Environment Facility (GEF) 5 and 6 cycles covering five districts with the aim of developing innovative ways to improve the management of wildlife for the benefit or rural people. If trophy hunting and trade here was stopped, the impact on local livelihood would be severe, and both poaching and changes to alternative land use would increase. Non-consumptive tourism currently plays virtually no positive conservation role in the CAMPFIRE areas (<4% of overall income is generated through tourism). Instead of banning the import of trophies, more international oversight and support is needed from importing states, and of in-country CITES controls, to ensure sound sustainable management e.g. quota-setting, permit allocation, independent population surveys; building robust, equitable and transparent benefit allocation mechanisms at local level, particularly where communities have elected to invest their land and time in Community Conservancies.

STOP PRESS: The pressure for imports bans comes at the worst possible time as the Covid-19 pandemic has severely disrupted income flows from tourism and hunting. The collapse of both markets leaves rural people and safari operators with virtually no income, and it is uncertain how wildlife protection and anti-poaching programs will be supported on the ground in the coming months. What remains clear is that trophy import bans will seriously undermine conservation in Zimbabwe, and indeed open floodgates for rural people to destroy wildlife and wildlife habitat through conversion of land for other subsistence uses, even if unviable.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
You may find instructions on how to make your application complete and help avoid unnecessary delays at the following link: .

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
LIMMER	SCOTT	A	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			b (6)

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (DBA)
2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b) (6)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
LAPORTE	COLORADO	80535	LARIMER	USA
2.a. Mailing address (include if different than physical address, include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 2, nonrefundable processing fee.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions.* [50 CFR 13.11(d)]

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   SAME AS PAGE 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   SCOTT A. LIMMER (b) (6) [redacted]

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

(No) Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

N/A

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
      Panthera leo melanochaita or African Lion.
   b. Sex (if known).
      MALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
      ZIMBABWE, MOKORE and UMKONDO RANCHES, SAVE VALLEY CONSERVANCY, BIKITA DISTRICT, MASVINGO PROVINCE, SOUTHEAST LOWVELD. Near cities of MASVINGO and MUTARE. CAMP GIS Coordinates S 20 24' 12.01" E 032 07 01.88"

   b. Date wildlife is to be hunted:
      APRIL 6-26, 2019 or July 1-21, 2020.

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
      MOKORE SAFARIS
      7 STABLE CLOSE
      BORROWDALE
      HARARE, ZIMBABWE
      GARY DUCKWORTH - LIC# 96 Email: garyduckworth@mokore.com
      NEIL DUCKWORTH - LIC# 94 Email: neilduckworth@mokore.com

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

      N/A

   b. Date wildlife was hunted:

      N/A

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

N/A

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

N/A

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). NONE YET - HUNT IS IN 2019.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: CUAN MEREDITH
Business Name: TROPHY CONSULTANTS INTERNATIONAL
Address: 4 JOSIAH CHINAMANO ROAD, BELMONT
City: BULAWAYO
State/Province: MATABELELAND
Country, Postal Code: ZIMBABWE

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Also See attached. Considering species such as Lion, which are trophy hunted in the SVC, it is clear that hunting has aided the conservation of this species (Groom 2012). Population trends show a steady increase in Lion within the SVC from 40 in 2005 to 284 in 2015. Annual predator spoor surveys and aerial surveys show a Lion increase of 710% since 2005.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

Also See attached. Trophy Fee for Lion is $15,000 of which 85% ($12,750) goes to Bikita Rural District Council. I will pay $2100 for a Zim Parks Ranger to be on the Lion hunt, a $2700 levy on Lion trophy fee and daily rate, and a $420 conservation levy. In addition, I will take some Plains Game species and pay trophy and levy fees on those animals. I will pay daily rate of $2500, some of which will fund anti-poaching patrols and water projects.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

Also See attached. In the area I will hunt, Mokore annually spends $60,000 for an 8-man anti-poaching team; $4000 in rewards to community members that turn in traps, snares, guns, and poachers; $10,000 in local village projects; $5500 for pumping water for wildlife; and a large lease fee to the Bikita Council for an adjacent area. Strict lion aging criteria is followed with a $10,000 fine to PH for lions harvested under five (5) years old. Please see enclosures.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import tw

Applicant's signa (b) (6) _____ Date: 03/12/2018

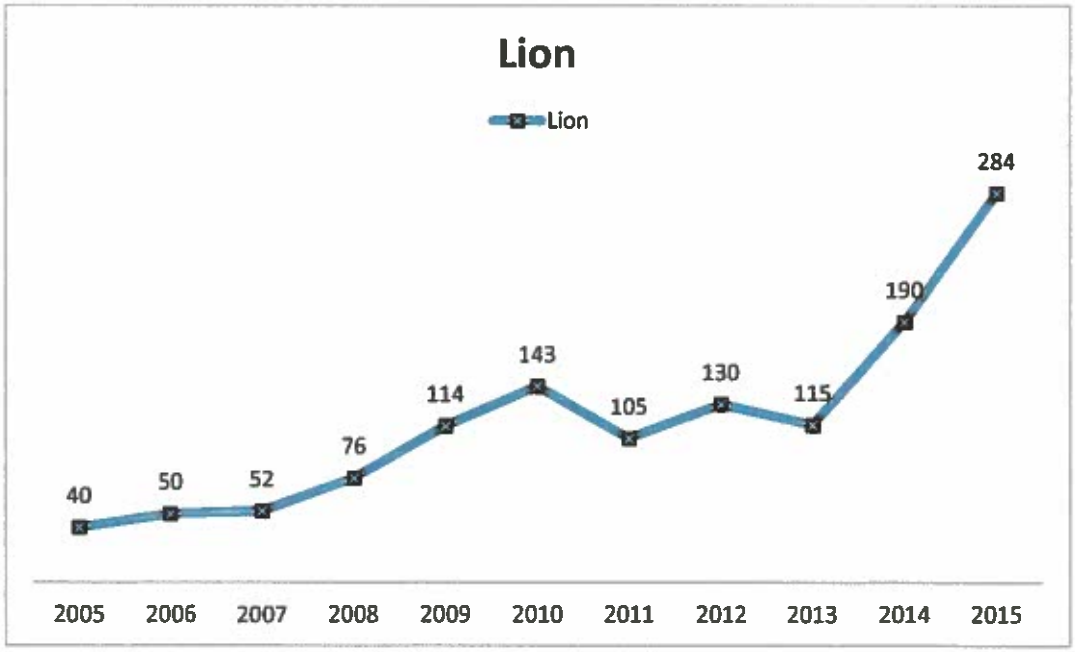
Be aware that there may s by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

SVC Predators 2015 Attached for 9a

When considering species such as Lion, Leopard and Spotted Hyena, all which are Trophy hunted within the SVC, it is clear that hunting has aided the conservation of these species (Groom 2012). Population trends below show slight fluctuation and a steady increase of Lion and Leopard within the SVC. *The recent decrease in Spotted Hyena numbers can be contributed to a rapid increase in lion numbers and species competition.* Further details can be seen in *Lion Hunting in Zimbabwe's Savé Valley Conservancy, A Conservation Success Story, Dr Rosemary Groom, African Wildlife Conservation Fund.*

Populations of Lion (*Panthera leo*) , Leopard (*Panthera pardus*) and Spotted Hyena (*Crocuta crocuta*) can be depicted as follows:



iage 1: Population trends for Lion of the SVC from 2005 to 2015.

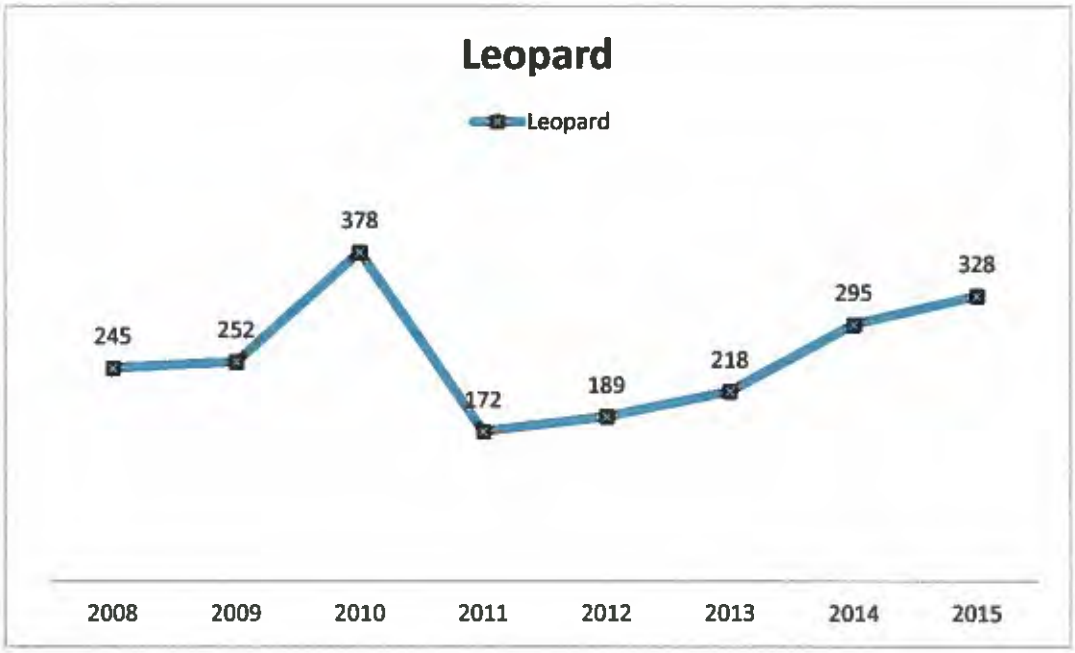


Image 2: Population trends of Leopard for the SVc from 2008 to 2015.

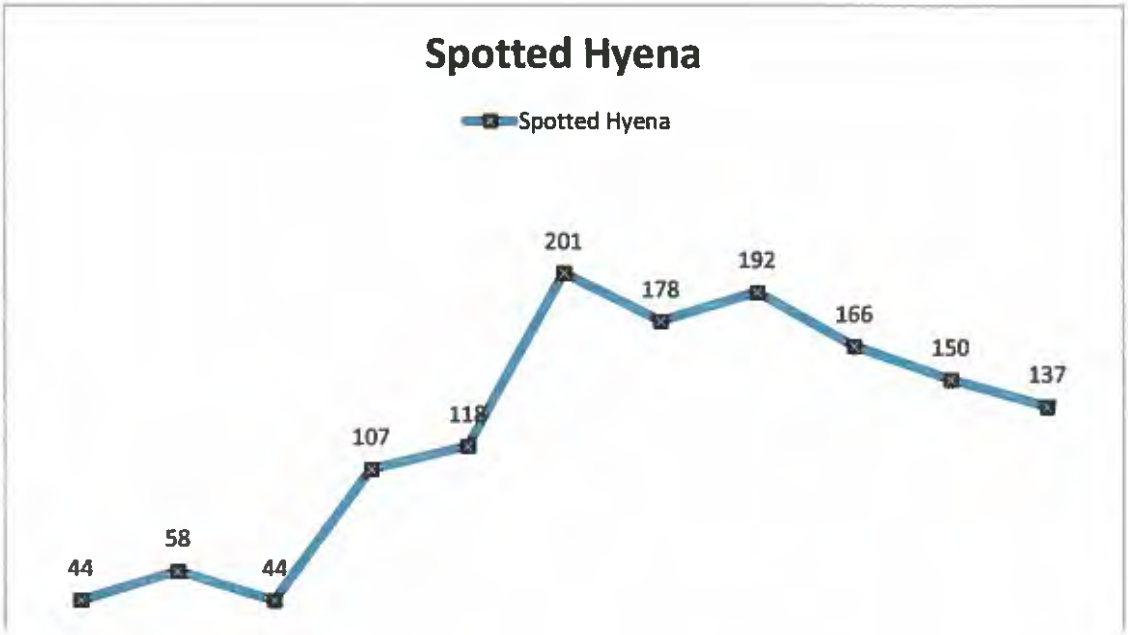


See page #3.

For 9a.

African Wildlife Conservation Fund

Savé Valley CONSERVANCY

Carnivore Densities in the Savé Valley Conservancy

Results of the 2015 Spoor Survey & Wild Dog Monitoring Project

Dr Rosemary Groom and Jessica Watermeyer, African Wildlife Conservation Fund

Introduction

The African Wildlife Conservation Fund carries out an annual large carnivore spoor survey in order to assess population trends of the carnivores in the Savé Valley Conservancy (SVC / the conservancy) to aid management decisions. A standardised methodology is used to ensure consistency through time and comparability with other studies. Since 2008, the spoor surveys have been done using the same roads and the same observer.

Spoor surveys have been shown to be an effective and efficient means to assess wildlife densities (Stander 1998; Funston et al. 2001; Davidson & Romañach 2007; Funston et al 2010) as there is a strong correlation between spoor density and true density. The technique is considered to produce reliable estimates for lions, spotted hyenas, and leopards, when sample sizes (spoor encounter rates) are sufficient. Other carnivores are included in our counts simply to monitor trends over time.

This report presents the results of the October 2015 carnivore spoor survey for the SVC, together with results from the long term wild dog monitoring project, and looks at trends in the main carnivore species over time.

Part of the AWCF team during the 2015 spoor survey

Methodology

The 2015 carnivore spoor survey used the methods pioneered in SVC by Davidson and Romanach (2007), based on those used by Stander (1998) in Namibia. Exactly the same methodology has been used annually since 2008. Road transects were chosen throughout the SVC to represent a fair coverage of all (non-resettled) areas, and these transects were scanned for spoor. The number of kilometres of transects surveyed was chosen to maintain consistency with previous spoor surveys. Thus, for every 6-7km^2 of sample area, 1km of transect was surveyed, creating a penetration density (expressed as a ratio of kilometres of transect surveyed to total sample area) of between 1:6 and 1:7.

The total area of the Savé Valley Conservancy is 3490km^2. However, the effective wildlife area (excluding the 1051km^2 of resettled land), comes to only 2439km^2; 1639km^2 north of the Turgwe river and 800km^2 south of the Turgwe (see Table 1).

In northern SVC, the total length of all transects combined was 258.6km, giving a penetration ratio of 6.34. In southern SVC, the combined transect length was 131.3km, giving a penetration ratio of 6.09. For the conservancy as a whole, 389.9km were driven (penetration ratio 6.26).

Transects surveyed were the same as those used in 2007, 2008, 2009, 2010, 2011, 2012, 2013 and 2014 (Figure 1). Each transect was driven at a speed of between 10 and 20 km/hr with one tracker, AWCF head scout Rueben Bote, sitting on the front of the vehicle scanning for spoor. Transects ranged between 12.6 km and 29.8 km in length, with a mean transect length of 21.7 km.

Each transect survey started as close to sunrise as possible, and wherever feasible was driven from west to east to ensure the best possible tracking conditions. Only tracks less than 24 hours old were counted. Road conditions are generally sandy, such that spoor is relatively easy to see. Where possible, spoor of individual animals were followed to reduce the likelihood of that individual being counted twice on a given transect. Spoor was recorded for all mammalian carnivores bigger than a genet.

Figure 1: Map of the transects driven – October 2015

Results

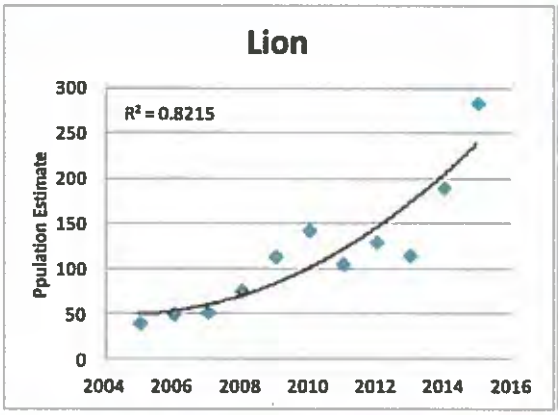
Table 1: Summary of survey parameters (2015)

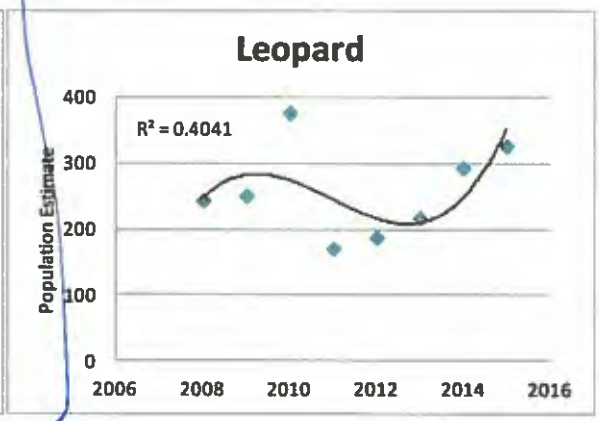
Parameter	Northern SVC	Southern SVC	Total SVC
Area (km^2)	1639	800	2439
Total number of km driven	258.6	131.3	389.9
Penetration ratio	6.34	6.09	6.26

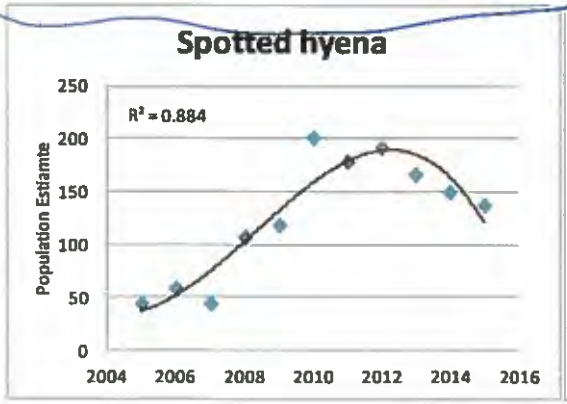
Comparison with previous years

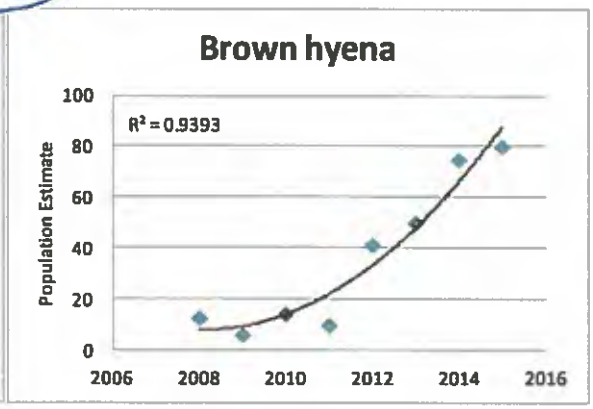
Table 2: Population estimates of the key carnivore species in the **whole of Savé Valley Conservancy** from 2008-2015 (from 2005 – 2015 for lion and spotted hyena). Data for lion, leopard and spotted and brown hyenas and black backed jackal are from spoor surveys; data for wild dogs is from the Lowveld Wild Dog Project's direct monitoring efforts.

Species	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Lion	40	50	52	76	114	143	105	130	115	182	284
Leopard				245	252	378	172	189	218	283	328
Spotted hyena	44	58	44	107	118	201	178	192	166	144	137
Brown hyena				12	6	14	10	41	50	72	80
African Wild dog				45	60	64	61	86	90	84	91
Black backed jackal				188	190	157	141	151	199	219	241









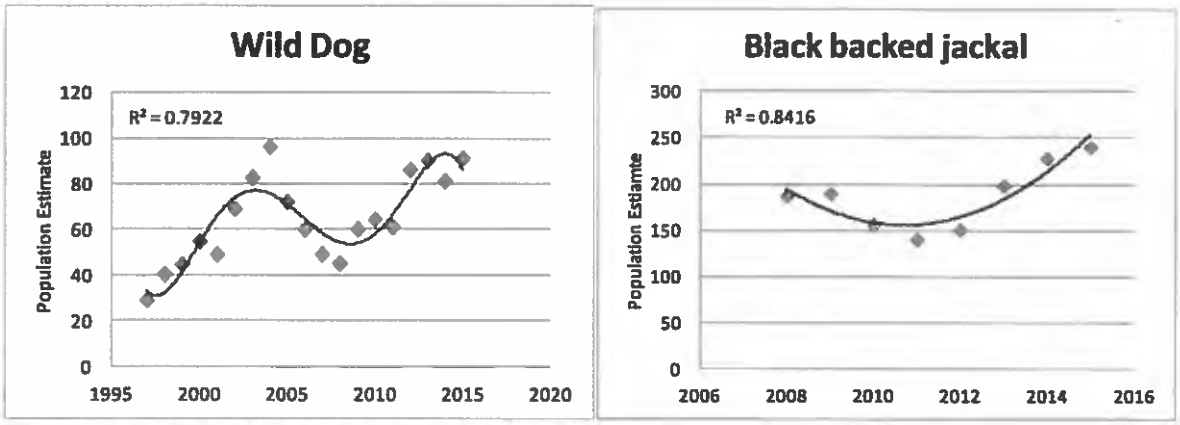


Figure 3: Trends in the populations of key carnivores in SVC for all years for which data is available. Data for lion, leopard and spotted and brown hyenas and black backed jackal are from spoor surveys; data for wild dogs is from the Lowveld Wild Dog Project's direct monitoring efforts. *A breakdown of all survey results for all species between the north and south of the conservancy is given in Appendix 1.*

Discussion

When looking at the graphs, the trend for each species is clear. **The results show a steady increase in all species except spotted hyena, which continue to decline, and African wild dogs which appear to be levelling off.**

Interpretation of results for each species

The **lion population** has increased substantially in the last two years, and there are now an estimated **284 lions** in the whole of the conservancy. This is a notable increase since 2013's estimate of 115 lions and 2014's estimate of 182, and is perhaps a latent effect of no hunting for over several years. However, of the 149 lion tracks we encountered, only 28% were big adult males, with 53% identified as females/juveniles and 15% as young cubs (3% of tracks were unidentified). The number of lions in SVC equates to a **density of 11.7 lions / 100km²**. This is slightly higher than other population estimates of 9.6 lions / 100km² (average over Kruger, Hwange, Selous and Serengeti). With regards to quota considerations, it is important to not only consider the population trend of the species, but age grouping and sex ratios too.

The conservancy's **leopard population** is steadily increasing after a significant drop in numbers in 2011, and there are now an estimated **328 leopards** in the conservancy at a **density of 13.5 leopards / 100km²**. This is higher than that recorded in Phinda and Mkhuze in South Africa (average 9.7 / 100km²; Balme et al. 2009) and in neighbouring Gonarezhou National Park (7.8 / 100km²; Groom & Watermeyer 2015. Derivation of population estimates from spoor densities is controversial for leopards (there are several different equations available which give different numbers) so the numbers themselves should be treated with caution, although the trend is clear. In addition, from the leopard tracks we encountered we picked up a female bias of two females for every male. This should be considered when determining suitable quotas.

Spotted hyenas are the only species to display a declining population trend, from an estimated peak of 192 spotted hyena in 2012 to only **137 spotted hyenas** this year. This translates to a density of **5.6 spotted hyenas / 100km²**, which is significantly lower than other populations (13.5 / 100km² in Kruger (Mills 1985), 17.0 / 100km² in Hwange (Bowler 1992) and 13.5 / 100km² in Gonarezhou National Park (Groom & Watermeyer 2015). This decline could be a result of a number of factors, including prey availability, intra-specific competition, hunting pressure, anthropogenic mortality etc. One should also not overlook the possibility of increasing levels of conflict on the conservancy boundary (many cases of which most likely are unrecorded) which may be starting to have an impact on the population growth rate. **If the population continues to decline, attention must be paid to the potential causes.**

The conservancy's **brown hyena** population continues to show a steady increase. There is now an estimated **80 brown hyena** in the conservancy at a density of **3.3 brown hyenas / 100km²**. Anecdotal evidence (sightings, den sites found etc.) also suggests an increase of brown hyena.

African wild dogs appear to be levelling off, after a population increase following a period of decline. **From our comprehensive and direct monitoring of the species, there are 91 adult and yearling wild dogs in the conservancy (3.7 wild dogs / 100km²)**, with a potential additional 8 adult wild dogs in 3 breakaway/dispersal groups. Average wild dog densities are generally lower (average 2.5 wild dogs / 100km² across five populations; Pole 1999). The spoor survey results estimated 247 wild dogs in the conservancy, but, when counts include pups (as spoor surveys do); the numbers are likely to be higher (particularly in October when densities are highest because it is directly after the denning season). Further, spoor surveys are not an ideal tool to measure wild dog numbers because the potential to 'hit' or 'miss' a large pack of wild dogs during a spoor survey can have a large effect on the results (can usually more than double actual counts).
The long term trends for this species are as expected. Wild dogs are a classic 'boom and bust' species showing major population fluctuations over time. The trend for the species over the last three years, and considering the full historical trend, indicates that we may be in for a population 'bust' or dip; particularly when one considers the increasing lion population (key competing predator) and that the wild dogs may begin to roam outside the boundaries of the conservancy in search of more space/to disperse and thus may more frequently encounter deadly edge effects.

Black backed jackals are increasing after a population dip between 2010 and 2012. There is currently an estimated **240 black backed jackals** in the conservancy at a **density of 9.9 black backed jackals / 100km²**.

Data from the spoor survey suggests there to be **six cheetahs** in the whole conservancy at a **density of 0.2 cheetahs / 100 km²**. This is low compared to an average estimate of 1.0 cheetah / 100km² (IUCN/SSC 2009). Although anecdotal evidence suggests the population may be picking up slightly, we can safely say the population is still very low. Even if accurate population estimates cannot be obtained; only three cheetah tracks were seen in the 389.9km of transects driven. However, spoor surveys are not really appropriate techniques for monitoring cheetah because they use the roads a lot less than other large carnivores, and the species would be more accurately surveyed by a mark recapture camera trap survey using cheetah play trees and other key areas. **The Cheetah Conservation Project Zimbabwe, which has been collecting photographs of cheetah throughout Zimbabwe, and identifying individuals, estimates c. 10 adult cheetahs in SVC (Esther van der Meer, pers comm).**

Word of caution

When interpreting the results in the graphs and tables at the end, please do so with caution, especially to quote specific numbers. For lions and hyenas we are confident that these spoor surveys are relatively accurate in the numbers they predict. Likewise we can trust the numbers for wild dogs, which are from the detailed population monitoring study. For leopards however, while the trends are clear, several different equations (all considered suitable for estimating leopard numbers from spoor) give very different population estimates from each other. The spoor survey technique has not been calibrated for species like jackals, civets, even brown hyenas, so while the data is useful for looking at trends, taking population figures off the graphs for these species is unadvisable.

We would also like to draw attention and slight caution to the fact that we did not pick up a signal African wild cat track for the duration of the survey. Previous results estimated 13 African wild cats in 2014 and nine in 2013.

Acknowledgements

Permission to conduct this research was given by the Research Council of Zimbabwe, with the support of the Zimbabwe Parks and Wildlife Management Authority. The project is hosted by Chishakwe Ranch, and all the work undertaken is thanks to their generosity in providing accommodation and logistical support. Thanks also to all of the landowners and managers in the conservancy for allowing us to conduct this spoor survey on their properties. Rueben Bote deserves special mention for help with spotting and track identification. Funding was provided by Disney Worldwide Conservation Fund, National Geographic Conservation Trust and Columbus Zoo.

IUCN April 2016 Briefing Paper

Case Study 4

Private wildlife lands in Zimbabwe

In Zimbabwe, the devolution of wildlife use rights to landholders in 1975 resulted in a transition from game ranching being a hobby practiced by a few dozen ranchers to some 1,000 landowners and 27,000 km² conserving wildlife by 2,000, with trophy hunting a primary driver of this change (Child, 2009; Lindsey et al., 2009). Although these numbers have declined significantly under the land reform programme, and despite the current challenging economic conditions in the country, some private conservancies continue to play a crucial role in conservation. The following all rely on trophy hunting as the primary source of revenue and they would all be unviable without it; photographic tourism has been tried and has not been a viable alternative.

The Savé Valley Conservancy (SVC), covering 344,000 ha, was created in the 1990s by livestock ranchers who agreed that wildlife management could be a better use of the land than livestock. Cattle ranching operations had eliminated all elephants, rhinos, buffalo and lions, among other species, in the area. Today, SVC has around 1,500 African Elephants, 117 Black Rhinos and 43 White Rhinos, 280 Lions and several packs of the Endangered African Wild Dog. Hunting on the Sango Ranch, SVC's largest property, yields around US$600,000 annually and employs 120 permanent workers who represent more than 1,000 family members (Lindsey et al., 2008; W. Pabst and D. Goosen, pers. comm.; SVC, n.d.; Sango Wildlife; n.d.).

The 323,000-ha Bubye Valley Conservancy (BVC) was converted from a cattle ranch 20 years ago and now has roughly 500 Lions, 700 African Elephants, 5,000 African Buffalo, 79 White Rhinos and, at 202, the third largest Black Rhino population in Africa (see Figure 3). Trophy fees in 2015 generated US$1,380,605. BVC employs approximately 400 people and invests US$200,000 annually in community development projects (BVC, n.d.; B. Leathem, pers. comm.).

The Cawston Game Ranch in Zimbabwe, at 12,600 ha, is much smaller than SVC and Bubye, and thus is more limited in terms of game species it can harbor. When the ranch was purchased a few native game species existed but Common Wildebeest, Plains Zebra, Giraffe, Tsessebe, Common Impala, Bushbuck, Red Hartebeest, Gemsbuck and Waterbuck had to be reintroduced. Approximately 4,500 game animals now inhabit the ranch. Large predators are limited to Leopards, Brown Hyaenas and an occasional Cheetah. Hunting contributes 68% of gross revenues, derived almost wholly from plains game, particularly Sable and Tsessebe. The ranch employs 41 people and its value to local communities is estimated at US$60,000/yr (V. Booth, unpublished data).

For 9c

Mokore Safaris (Pvt), Ltd.
7 Stable Close, Borrowdale, Harare, Zimbabwe.
Operator: Duckworth Family.
garyduckworth@mokore.com
Operating in: Save Valley Conservancy and Sengwa Research Management Area

I. DESCRIPTION OF COMPANY AND CONCESSION

Mokore Safaris has been operating in Save Valley since it's conception in late 1992. It also has been operating the the Sengwa Research Management Area since January 2013. (This is a 5 year lease with first option to roll over for a further 5 years). The Mokore Safaris section in the Save Valley is 35500 acres and provides habitat for a range of species including black and white rhino, buffalo, lion, leopard, cheetah, crocodile, wild dogs, hippo, kudu, eland, elephant, impala, bushbuck, bushpig, hyena, warthog, zebra, giraffe, waterbuck and sable (lion and leopard prey). It is also home to numerous smaller creatures like grysbok, klipspringer, etc. Sengwa Research is 94000 acres and is home to elephant, buffalo, lion, leopard, crocodile, kudu, eland, impala, bushbuck, bushpig, hyena, warthog, zebra, reedbuck and waterbuck (lion and leopard prey). It is also home to numerous smaller creatures like grysbok, klipspringer, etc.

Our company is family-owned and has been operating in this country since 1979. We employ three full time professional hunters, 3 part time Professional Hunters and also 48 men, 5 ladies and 2 casual labour. Altogether our operations support at least 600 dependents in local villages through our continual work on the schools, roads and dams in the neighbouring village areas. Also supplies of meat and school equipment benefits the surrounding communities.

We have a written concession plan with anti-poaching and community components....

II. ANTI-POACHING COMPONENT

Mokore Safaris maintains a 8 man anti-poaching team at an annual cost of over $60,000 in the Save Valley Conservancy and supplement Zimbabwe Parks and Wildlife Authority anti-poaching team with a vehicle driver and four rangers in the Sengwa Research Area.... Each team is equipped with a four-by-four vehicle, uniforms and boots, tents, rations, and radios. Our teams closely cooperate with the Wildlife Authority to conduct daily patrols of the concession and the neighboring properties that were taken during the land reform programme. We supply rations once a week to our scouts and assist the government game scouts in acquiring rations to ensure they are sufficiently equipped for the patrols.

We heavily patrol our areas, conducting approximately 3 patrols per day by vehicle and foot in the Save and the same again in Sengwa Research. In the past year, our teams picked up numerous snares and arrested numerous poachers hunting with dogs. Also in the Sengwa Research Area our teams with Zim Parks Rangers have arrested and also killed a number of ivory poachers. Removing snares protects the lion population by reducing incidental snaring.

We also send out road crews annually to redo the roads in the concessions, to ensure we are able to patrol effectively. These are maintained throughout the year.

In 2015, Mokore Safaris (Zimbabwe) spent approximately $100,000 in our blocks on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 4000 liters of diesel for patrol vehicles. We also spent $ 5500 on diesel for pumping water for wildlife in areas where there is not enough natural water for wildlife to survive. This does not include the costs of water pump and engine maintenance. And we made over $ 4000 in payments of rewards.

COMMUNITY PARTICIPATION

A. Community Assistance Component

Although there are no villages in the concession itself, we share four borders (three in Sengwa and one in Save Valley) with a heavily populated communal district. We make contributions to the two closest villages and the district council. We lease an adjacent area to the concession from the council, and pay a lease fee as well as 85% of trophy fees to the Bikita Rural District Council.

We pledge an annual contribution of at least $10,000 + in projects to the villages. We ask for a list of preferred projects at each local school and clinic. We also do the main roads annually in the Village 26, Bikita and Muchiringi Districts. We annually dredge the local dams. We supply all meat taken from any elephants harvested on our concessions to the local communities as well as supplying meat for any State Functions.

B. Conflict Control

We also take reports from villagers about problem animals and do our best to keep elephant out of community gardens during harvest. This applies to livestock losses through predation too. We obviously try and use all means to discourage problem animals before having to take more drastic control measures.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession including over 30km of piping and 12 waterholes. We drilled, operate, and maintain two boreholes and numerous pans. Pumping costs (diesel usage only) is +-$ 5500/annum. The increased water supply increases the carrying capacity of the concession and the lion's prey base.

V. OTHER INFORMATION

A. Prey Base

Mokore Safaris along with our other partners in the Save Valley Conservancy's anti-poaching efforts, water provision, and fire management have allowed the lion prey base in our concession to grow over the past twenty five years. Please see attached report on the game numbers increases and lion surveys report. In Sengwa research Area we estimate that our plains game (buffalo, kudu, sable, etc.) have increased by 15-20% in the last 3 years. Also, much of our anti-poaching and community assistance efforts are aimed to reduce livestock encroachment into the concession.

B. Lion Population Tracking

Lion are notoriously difficult to survey or census. To track the lion population trend in our concession, Save Valley Conservancy does an annual spoor survey for predators as well and an aerial survey for other species. Due to the fact that we keep tabs on the lion in our concession, we are

assured that the regulated, limited offtake is sustainable. In Sengwa Research we use trophy and age monitoring of all species hunted and manager estimates to regulate our offtakes.

C. Lion Aging Approach

Mokore Safaris has been following an age-based policy for African lion trophies since 2012, when we adopted a company rule not to harvest lion below five years of age, and to be conservative in estimating age.

As a result, on lion hunts we often pass by a number of potential lion before allowing a client to harvest a specimen. Sometimes we do not shoot a lion at all because we are so selective.

D. Lion Hunting Revenue

Lion are our highest-value species. We require 21-day safaris for lion. Our daily rate is $2,500 per day, plus a trophy fee of $15000 (lion). Without this revenue plus the revenue we have already lost due the ivory import bans, our anti-poaching and habitat enhancement efforts will be seriously reduced.

E. U.S. Hunters

Most of our clients (95%) are from the United States. These hunters have a conservation ethic and usually contribute above their fees to anti-poaching or our community compensation fund or community assistance programs.

CONCLUSION

Mokore Safaris' regulated, sustainable-use based hunting program enhances the survival of the lion. Our program helps to preserve and improve available lion habitat. Our anti-poaching program serves to protect and grow the lion's prey base and reduces incidental take of lion by meat poachers. And our community participation and assistance program demonstrates the potential value of wildlife (especially lion) to local communities. Recognizing this value causes the communities to want to protect their wildlife and reduces human-wildlife conflicts.

ensures that the new male will pass on his genes to boost his reproductive fitness, while reducing the fitness of previous pride males.

The social nature of lions and common use of infanticide means that lion populations are greatly impacted by the loss of males. For example, when 72% of the adult males studied in Hwange National Park, Zimbabwe were harvested by hunters, these pride males were replaced by invading males that caused high rates of infanticide and disrupted population stability (Loveridge et al. 2007). Many of the harvested males were sub-adults less than 4 years old and had few opportunities to reproduce, making their loss especially impactful on the long-term stability of the population.

Because of this, trophy hunting must be managed in a way that reduces infanticide to achieve sustainable lion populations and long-term harvests. Simulation models suggest that sustainable trophy hunting can be accomplished by harvesting only adult males that have raised cubs to independence. (Note that females should never be harvested because their removal consistently leads to population decline). The age of physical and sexual maturation in male lion differs slightly between geographic areas of Africa, with males in East Africa maturing by around 4 years (Whitman et al. 2004) and males in southern Africa maturing by 6-7 years (Loveridge et al. 2007). Reproducing and raising cubs to independence typically requires an additional 1-2 years.

Studies have found that to be sustainable (achieve stable lion populations and maximum harvests), trophy hunting should harvest lions in East Africa (Tanzania) older than 6 years (Whitman et al. 2004, 2007) and lions in southern Africa older than 8 years. As a general rule, harvesting males older than 8 years maximizes both the quantity and the quality of the long-term harvest. The science of aging lions in part grew out of the need for more reliable indicators of age to make trophy hunting sustainable.

Resources

Resources for Learning to Age Lions

The ability to accurately age lions takes time and practice to develop, but is the sign of a dedicated and accomplished expert who understands lion biology. We encourage you to take advantage of the other resources that were developed alongside this training by visiting http://AgingTheAfricanLion.org, including:

- Test – Measure your lion aging accuracy
- Photo gallery – Images of known-age lions
- Pocket guides – Quick tips for aging

Before You Begin: Test Yourself!

To see your improvement after taking this training, we encourage you to test your lion aging score online at http://AgingTheAfricanLion/TestYourself.org. When you finish the training, test yourself again!

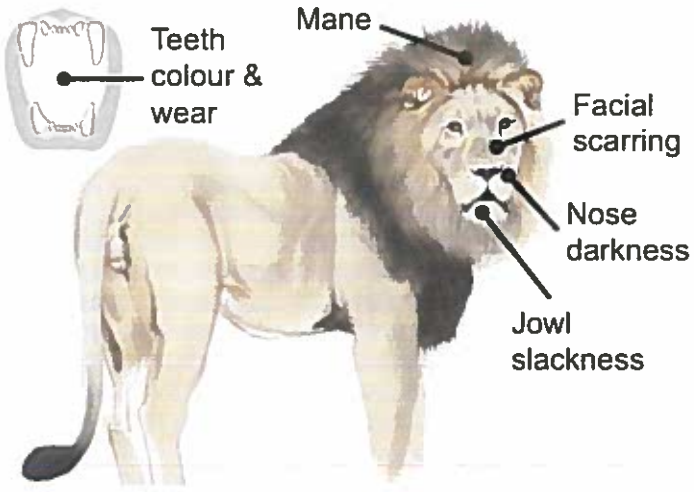
Training

How to Age a Lion

Scientific research on lions across Africa shows that a male lion's appearance changes with five main physical characteristics that can be distinguished into four age classes (Miller et al. 2016):

Aging Characteristics
- Teeth color and wear
- Facial scarring
- Nose darkness
- Mane
- Slack jowl

Age classes
1-2 years
3-4 years
5-6 years
≥7 years



Minor variation in each physical characteristic between lions of the same age means that a single trait should never be used alone to determine age: always reference 3-4 characteristics to reliably narrow down a lion's age. This will ensure the greatest accuracy possible.

Aging Characteristics

1. Teeth Color and Wear

Teeth become more yellow and worn with age.

1-2 years
White, sharp

3-4 years
Light yellow,
sharp or lightly worn

5-6 years
Light yellow,
lightly or heavily worn

≥7 years
Dark yellow, lightly
or heavily worn

2. Facial Scarring

Lions acquire scarring and pocketing on their faces due to fighting.

1-2 years
No scarring

3-4 years
No or light scarring

5-6 years
Light scarring

≥7 years
Heavy scarring

3. Nose Darkness

Lion noses darken from pink to black with age.

1-2 years
Mostly pink
0-30% black

3-4 years
Slightly black
20-60% black

5-6 years
Mostly black
40-70% black

≥7 years
Nearly all black
40-100% black

4. Mane

A male's mane develops from a Mohawk to a full, thick mane covering his forehead and shoulders.

1-2 years
No hair or very short Mohawk on head. No or very sparse mane around face, chest and neck. No shoulder mane.

3-4 years
Long Mohawk on head, bare patches between Mohawk and ears. Short mane around face, chest and neck. No shoulder mane.

5-6 years
No Mohawk. Full, long mane with forehead and shoulders filled in.

≥7 years
Full, long mane, frayed or frizzy hair.

Note: Other traits (facial scarring, teeth wear) will be more indicative of this age.

Note: Some regional differences occur in mane appearance. Lions in southern and high-lying Africa (e.g. Hwange in Zambia and Serengeti in Tanzania) show larger, thicker manes whereas lions in west-central and eastern low-lying Africa (e.g. Niassa in Mozambique and Seleous in Tanzania) show thinner, sparser manes.

5. Slack Jowl

A lion's back lip hangs in about half of individuals older than 7 years.

1-2 years
No slack jowl

3-4 years
No slack jowl

5-6 years
No slack jowl

≥7 years
Slack jowl in 50% of lions in this age group

Next Steps

Mokore Safaris PH Rules

See pg #12.

1. Fuel – All incoming PHs must refuel in the last available garage on the way in and then again on the way out. The receipt from the way out is to be handed in at Mokore Safaris offices for a refund. Please do not arrive in camp with empty tanks and then expect to be refuelled before leaving. For Save Valley hunts please refuel at Nyika on the way in. For Sengwa Hunts please refuel at Gokwe.
2. Paperwork – Please can all PHs fill in the skinners books complete with all measurements and details. Also those hunting in Sengwa please make sure that the measurements of all trophies is completed on the ZPWMA kill returns supplied in the file.
3. Mokore Safaris is attempting to maintain the quality of our herds for the future and so the following will apply (no excuses tolerated):
   a. Any soft – top buffalo will attract a fine as follows:
      i. Over 43" spread - $1000
      ii. 40 – 43" spread - $500
      iii. 35 – 40" spread - $ 200
      iv. Below 35" – fire at will!

b. Any lion under the age of 5 years - $ 10 000
c. Any sable without at least 2" secondary thickening - $200
d. Any elephant under 40 lbs in the Save - $500

Good afternoon Mr. Limmer,

Thank you for your email. Your application, PRT-93127C, is currently pending. As you mention, our office is evaluating each application on a application-by-application basis. As background, on March 1, 2018, in response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service (Service) informed the public that it is revising its procedure for assessing applications to import certain sport-hunted species. We have withdrawn our countrywide enhancement findings for a range of species across several countries, including elephants and lions. In their place, we intend to make findings for trophy imports on an application-by application basis.

The Service is continuing to monitor the status and management of these species in their range countries. We will review each application received for import of sport-hunted trophies and evaluate the information provided in the application as well as other information available to us regarding the status and management of the species to ensure that the hunting program is promoting the conservation of the species. Each application must also meet all other applicable permitting requirements before it may be authorized.

We appreciate your time and consideration.

Just FYI.
****

Please review the U.S. Fish and Wildlife Service's Office of Law Enforcement's webpage on importing and exporting commercial wildlife shipments. Contact the Office of Law Enforcement to see if your situation applies.

Wildlife (including parts and products) imported or exported from the U.S. must be declared to the U.S. Fish and Wildlife Service. Please contact the Wildlife Inspector at the appropriate designated port to learn the requirements for your shipment.

Contact USDA-APHIS to determine their quarantine and health certificate requirements for import and export. Visit their website or call the National Import Export Services (NIES) Call Center: 301-851-3300.

Please check with the CDC for their requirements.

Contact the State and foreign country to check on their requirements.

We encourage permit applicants to review our tips and reminders for completing applications.

We appreciate your time and consideration.

Dear USFWS,

Thanks for getting back to me so quickly. I know you all are very busy.

Your response doesn't really tell me anything new and I understand the process to a degree. The area I would be hunting, the Save Valley Conservancy, is known to have a very healthy lion population. In addition, the Duckworth family of Mokore Safaris, are among the finest of safari operators in all of Africa. I have hunted with them before for plains game and their anti-poaching efforts and other conservation efforts are quite commendable. The amount of snares and gin traps that they have seized and destroyed are amazing in both the SVC in Zimbabwe and in Coutada 9 in Mozambique. Poaching in their areas has slowed to a trickle but they need USA hunters to keep their efforts afloat.

If you know of a better place to apply and be approved, that info would be greatly appreciated.

Thanks,

Scott Alan Limmer

Hello Mr. Limmer,

This email is in regard to your FWS permit application #83127C to import a lion trophy from Zimbabwe. On the application, it was indicated that the hunt was to take place between 4/6/19-4/26/19 or 7/1/20-7/21/20. Please provide the specific date that the lion was taken. Please also confirm which ranch in the Save Valley Conservancy the lion was taken from. Thank you.

Please reply directly to this email with the requested information.

Thank you and let me know if you have any questions.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office ***within 45 calendar days of the date of this email****, your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.*

Hi Mary,

I'm wondering the best way to respond to Mr. Limmer. Since we need the exact DOH and ranch where lion is taken from, it doesn't seem to me that we can issue a permit before the hunt, right? Thank you for your help!!

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Dear Ms. King,

My intention is to wait to hunt until I am issued an import permit from the FWS. I applied for the permit well in advance of the hunt, as recommended by the FWS. When I did not receive the permit, I postponed my hunt while waiting to hear back from the FWS about my application.

I have a deposit on file with Mokore Safaris (owned by the Duckworth Family) so that I can go on the hunt as soon as I receive a permit. I have hunted with the Duckworths before for other species and they are among the best hunter-conservationists in Africa. The Duckworths own and I will hunt on the Mokore Ranch in the middle of the SVC. The Mokore Ranch borders the large Sango Ranch, where I can also make arrangements to hunt a lion. If you have a preference between these two ranches that would increase my chances of obtaining a permit, let me know and I will make the necessary arrangements.

I would appreciate being issued a permit before I go there to hunt a lion. Please let me know if this is possible? Due to the healthy number of lions on the Mokore Ranch, I am told that the chance of success would be near 100%.

Please let me know if there is any other info that you need. I was happy to get your email message.

Respectfully submitted,

Scott Limmer

Dear Ms. King,

What did you find out? I understand that in the past, it was okay to apply for a permit before hunting. I hope the USFWS isn't only issuing permits after a hunt now. That would be a change from before.

I have been very patient and have been waiting to hear back since I filed my application a long time ago. The area I plan to hunt is well managed and I believe it would qualify for a permit in the case by case evaluation.

Please let me know what is going on and if my permit is still being considered.

Thanks,

Scott Limmer

Re: Applications for Import of Sport-Hunted Trophies

Dear Chief Van Norman:

Enclosed please find four applications to import sport-hunted trophies.

- The first applicant is hunting a lion in Namibia at Kalahari Game Lodge, a 400 km^2 property that borders the Kgalagadi Transfrontier Park. This property maintains an increasing population of wild lion. The property is fenced on one side, and species must be managed to conserve the biodiversity and maintain the lion population and habitat quality. The property has identified two lion this year suitable for hunting. The hunting will generate revenues to be reinvested in wildlife management, poaching control, and local employment. Please see the attached letter from the landowner, and please consider this information and the information submitted by Namibia's Ministry of Environment and Tourism in making a positive enhancement finding for this applicant.
- The second applicant is hunting an African lion in the Selous Game Reserve, Tanzania, with Rungwa Game Safaris. We previously provided an enhancement report from Rungwa Game Safaris and have enclosed it again for ease of reference. This company invests heavily in anti-poaching and community livelihoods. Its areas maintain healthy lion populations, and the company abides by a six-year age restriction on trophies. Please consider the enhancement report and the other information provided by Tanzanian authorities and Conservation Force in making a positive enhancement finding for this applicant.
- The third applicant is hunting elephant and lion with Mopane/Nyamvu Safaris in Zambia in 2018 and 2019, respectively. We previously submitted operator enhancement reports from these companies and have enclosed the reports again for ease of reference. These companies together invest over $61,000/year in anti-poaching, $45,000/year in community projects, and $30,000/year in game meat distributed to rural villages. In their concessions, the companies are securing elephant populations and lion prey species from poaching. The companies are recovering populations that had suffered from bushmeat poaching. The companies are enhancing the survival of elephant and lion by addressing the primary threats to each species. Please consider the enclosed enhancement reports and the information provided by Zambian authorities and Conservation Force in making a positive enhancement finding for each of these applications.

Please do not hesitate to contact us if you have questions about these applicants or need further information.

Sincerely,

Regina Lennox

Coordinate System: GCS, Datum: Arc 1960, Units: Degrees

Data source: TAWIRI, 2010

Map production: TAWIRI, 2012

1. Name of area operator: Rungwa Game safaris T Ltd

   a. Years in business: 18 Years

   b. Name of company conducting hunt: Adam Clements Safaris & Melami Hunting safaris co Ltd

   2. Name of concession: _Selous G.R K1 Size in km^2: _332 Sq. Km

   a. Land tenure: _X_ Government lease __ Community __ Private ranch __ Private conservancy

   b. Length of concession agreement: 5 years Can it be renewed? _X_ Yes __ No

   c. Length of renewal, if applicable: ____5Years

   d. Estimated total amount received in trophy fees last year, if applicable: $ 137,000/-

   e. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain:

   Yes, We do Antipoaching control , Community investment & Employment

   f. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city: Morogoro ,Tanzania

   g. If the concession borders a national park, please provide the park name: NO

   h. Description of general and distinctive habitat features and any water features:
   _____
   ____

3. Are there any communities living in the concession? __ Yes _X_ No

   a. If so, estimated number of people or villages in the concession?
   _____

4. Are there communities bordering this concession? __ Yes _X_ No

   a. If so, estimated number of people or villages around the concession?
   _____

5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	Avg	20	Stable	
Lion	Avg	30	Stable	
Leopard	Avg	40	Stable	

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Prey species				

6. Total employment number: _____52

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	5	
Trackers	10	6
Anti-poaching scouts/rangers	5	
Other anti-poaching	13	3
Cooks/housekeepers	10	4
Community coordinators		
Managers	4	
Biologists		
Others: _____	10	

7. Number of staff employed in the off-season: _____25

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	10		
Managers	2		
Maintenance	2		
Road opening/ construction	8		
Community relations personnel			
Others: _____	3		

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: 10

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? : Both

   c. Months during which anti-poaching patrols are conducted: ____April- Dec

   d. Number of anti-poaching patrols per month: ___4 patrols

   e. Description of anti-poaching equipment, vehicles, etc.: land cruiser, radio call, boat, camera etc

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? Game scout

   g. Do you offer rewards to poaching informants leading to arrest? _x Yes __ No

   h. Do you offer rewards to poaching informants upon conviction? _X_ Yes __ No

   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? ____US Dollars_____

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	$3,000	$3,500	$3,500	
Equipment	$1,300	$2,000	$2,000	
Vehicles	$2,650	$2,950	$3,300	
Petrol	$3,000	$3,400	$3,800	
Rewards paid	$1,500	$2,000	$2,000	
Other: _____				
Other: _____				
TOTALS	$11,450	$13,850	$14,600	

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered	8	11	6	
Elephant carcasses observed				

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Lion carcasses observed				
Leopard carcasses observed				
Ivory poachers arrested				
Meat poachers arrested				
Other poachers arrested				
Poachers convicted				
Snares/gin traps collected	10	12	8	
Firearms confiscated	3	2	2	
Vehicles confiscated				
Bicycles confiscated	5	8	5	
Boats/nets confiscated		2	2	
Tusks recovered				
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? _x_ Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? Required by law & Voluntary

c. Does the company provide game meat to nearby communities? __ Yes _X_ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: _____NA_____

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe.
_____NA_____

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? _____

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant				

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

Lion				
Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? _____

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)	$5,000	$5,000	$5,000	Class room
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities	$10,000	$5,000	$5,000	
Water infrastructure improvements				
Sports teams funded				
Construction materials donated				
Other: _____				
Other: _____				
TOTALS	$15,000	$10,000	$10,000	

11. How many U.S. clients did the company have in the past three years, what percentage of the company's clients were from the U.S., and what fees did they pay?

	Hunting elephant	Hunting lion	Hunting leopard	Hunting all species
Number of U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 18 2016:10 2017:10
Percentage of U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015:90 % 2016: 95% 2017: 95%
Trophy fees paid by U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: $220,000 2016: $160,000 2017: $137,000

12. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients: _____95%_____

13. Other information: Please provide a narrative of other enhancement information about the operation, such as any special hunting policies (e.g., aging, size, resting areas), concession improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

14. I declare that the foregoing is true and correct.

Tanzania lion / import applications / request for information

2 messages

Butzler, Julia <julia_butzler@fws.gov> Tue, Jul 24, 2018 at 4:08 PM
To: jjj@conservationforce.org, cf@conservationforce.org
Cc: Mary Cogliano <mary_cogliano@fws.gov>

Mr. Jackson,

We are in the process of reviewing applications for the import of African lions taken from Tanzania. A number of applicants have named you as the representative for all matters concerning the application. I have attached a list of the applications currently pending for which you have been named as the representative.

As you are aware, the U.S. Fish and Wildlife Service must make a finding that the sport-hunting of lions will enhance the survival of the species. As you know, we are now considering applications on a case-by-case basis, as opposed to making country-wide enhancement findings. As such, we would like to give you the opportunity to submit additional information in support of these application requests. This may include (but is not limited to):

>>population status or trend data on the lion population, both the countrywide population and the local population;

>>information on the fees paid (e.g., licenses or trophy fees), recipients of these fees, and use of fees;

>>information about the safari outfitter, professional hunter, concession holder or land owner and their activities to conserve the species (e.g., habitat management or improvement, anti-poaching activities and success of those efforts, efforts to address human-lion conflict, population monitoring, community benefits). Copies of recent reports submitted to TAWA would be particularly helpful.

Do not hesitate to contact me with questions or clarifications.

Thank you,

Re: Applications for Import of Sport-Hunted Trophies

Dear Chief Van Norman:

Enclosed please find four applications to import sport-hunted trophies.

- The first applicant is hunting a lion in Namibia at Kalahari Game Lodge, a 400 km^2 property that borders the Kgalagadi Transfrontier Park. This property maintains an increasing population of wild lion. The property is fenced on one side, and species must be managed to conserve the biodiversity and maintain the lion population and habitat quality. The property has identified two lion this year suitable for hunting. The hunting will generate revenues to be reinvested in wildlife management, poaching control, and local employment. Please see the attached letter from the landowner, and please consider this information and the information submitted by Namibia's Ministry of Environment and Tourism in making a positive enhancement finding for this applicant.
- The second applicant is hunting an African lion in the Selous Game Reserve, Tanzania, with Rungwa Game Safaris. We previously provided an enhancement report from Rungwa Game Safaris and have enclosed it again for ease of reference. This company invests heavily in anti-poaching and community livelihoods. Its areas maintain healthy lion populations, and the company abides by a six-year age restriction on trophies. Please consider the enhancement report and the other information provided by Tanzanian authorities and Conservation Force in making a positive enhancement finding for this applicant.
- The third applicant is hunting elephant and lion with Mopane/Nyamvu Safaris in Zambia in 2018 and 2019, respectively. We previously submitted operator enhancement reports from these companies and have enclosed the reports again for ease of reference. These companies together invest over $61,000/year in anti-poaching, $45,000/year in community projects, and $30,000/year in game meat distributed to rural villages. In their concessions, the companies are securing elephant populations and lion prey species from poaching. The companies are recovering populations that had suffered from bushmeat poaching. The companies are enhancing the survival of elephant and lion by addressing the primary threats to each species. Please consider the enclosed enhancement reports and the information provided by Zambian authorities and Conservation Force in making a positive enhancement finding for each of these applications.

Please do not hesitate to contact us if you have questions about these applicants or need further information.

Sincerely,

Regina Lennox

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Conservation Force
3240 S. I-10 Service Road W., Suite 200
Metairie, Louisiana 70001 USA
T: (504) 837-1233
F: (504) 837-1145
E: cf@conservationforce.org

Signed: (b)(6)

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Van Brunt	Dwight	Steven	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block, U.S. hunters must provide their U.S. address)

(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Kalispell	MT	59901	Flathead	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is ge and belief. I understand that any false statement herein may subject me to the criminal penalties

(b)(6)

03/19/2018

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   John Jackson, Conservation Force, (504) 837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera leo melanochaita - lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Namibia, Kalahari Game Lodge, Karas Region, 25 29'5.22 S, 19 52'37.08 E

   b. Date wildlife is to be hunted: April 28 - May 13, 2018

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Jamy Traut Hunting Safaris, Jamy Traut

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). N/A - Not yet hunted.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	
Address:	Jamy Traut Hunting SAFARIS
City:	Farm Gravenstein 65
State/Province:	Windhoek, Namibia 9000
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

According to the landowner, Kalahari Game Lodge, the lion population on their property is wonderfully stable and increasing. In fact, population has increased to the point that at least two large males we killed in territorial disputes in 2017.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

All trophy fees from this hunt will be used by the landowner to enhance the lion population on the property. Primary applications will be habitat improvement (permitting lion prides to spread to portions of the property currently unused, thereby reducing conflicts) and the continuance of ongoing study. I have paid $20,000 to the professional hunter long ago and will be paying another $30,000+ to the landowner prior to the hunt.

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

The landowner is a wonderful steward of the tremendous wildlife species and population which inhabit their 250K acres. The lion population has been carefully monitored and studied for years. The situation is somewhat pressing, as both population growth and conflict have resulted in the death of at least two mature males in recent months. No lion hunting has taken place for over three years, but the landowner now believes the best course of action is to permit the hunting of one old male to relieve some of the stress on the population, with the hunting fee earmarked for habitat improvement and continued study. The landowner feels that if an old male is not taken soon, that additional conflict will occur and the opportunity lost forever.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand [redacted] States, cannot be re-exported.

    Applicant's signature: (b)(6) Date: 03/19/2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

kalahari
GAME LODGE
NAMIBIA

15 March 2018

To Whom It May Concern,

Enhancement of free roaming Kalahari Lions

The Kalahari Game Lodge (herein KGL) is a private game lodge of 40,000 contiguous hectares bordering the Kgalagadi Transfrontier Park on Namibia's south-eastern border. More specifically, it is approximately 18 kilometers west of the Mata-Mata border post.

While primary commercial activities include game viewing, 4x4 drives, hiking, birding and other tourism activities, KGL has a well-established history of being professionally hunted for plains game and lion. Hunting is not only a meaningful source of revenue, but entirely necessary in order to keep populations balanced and in check. Jamy Traut of Jamy Traut Hunting Safaris has exclusively conducted these hunts since 2011.

At this time, KGL has determined it necessary to take out four lions in order to balance with available food (prey) and habitat (territory size). At least two adult/mature male lions were killed in territorial disputes in 2017, and we believe it now necessary to remove two additional adult males and two adult females as quickly as possible in order to avoid further conflict and loss. These internal population conflicts and potential risks of migration of surplus lions to neighbouring areas where livestock is a major source of income, has been recognized by the Namibian Ministry of Environment and Tourism, and they have granted KGL with permits to hunt two lions during 2018.

Current population – KGL closely monitors lion population numbers. The population is growing dynamically due to natural recruitment (birth) and migration.

KGL currently supports a population of approximately 22 wild lions, distributed as follows:

1 x males age 10+ years
1 x males age 6-9 years
4 x males age 3-5 years

4 x females age 6-9 years
4 x females age 3-5 year

8 x additional lions age under 3 years males & Females

Direkteure / Directors: D.E. Dreyer

kalahari
GAME LODGE
NAMIBIA

Migration – KGL border is fenced and has been for many years. Even with constant monitoring, maintenance and improvement, lions are still entering the property. This recruitment causes immediate conflict with and imposes stress upon existing prides. Given the nature of lions, mortality of both cubs and mature males has become a pressing concern.

Summary – Authorized by the Namibian Government, KGL will be able to selectively remove two adult lions this year. Doing so will provide a significant amount of revenue that will be turned back to the property for game management, relieve stress on the existing lion and plains game populations and contribute also contribute to local employment.

Kind Regards,

DE Dreyer

+ ECOLOGY

+ SPECIES

- REHABILITATION AND CONSERVATION

The Kalahari Game Lodge and it's surrounding 40 000 ha was previously used for farming sheep and cattle. As a result, the livestock fences had to be removed before wildlife could be re-established.

Accordingly, the lodge initiated a number of restoration projects to restore the natural grassland to its unadulterated state and reintroduce the wildlife that naturally occurred in this area. The aim is to restore the Kalahari eco-system that was largely destroyed by farming, which disbursed much of the natural wildlife in Namibia's Kalahari Desert.

Currently, Kalahari Game Lodge is home to the only population of free-roaming Kalahari lion in Namibia. Our aim is to create a conservation area in which these magnificent animals are protected amid surrounding farmlands.

A unique feature of the male lions is their often very dark to almost pitch black manes. This is due to the specific genetic make-up of the Kalahari lion population; accordingly, we are careful not to introduce other genealogies to the region. To see the magnificent beasts in their natural habitat is indeed a wonderful and memorable experience!

In addition to the black-mane Kalahari lion, the lodge is also home to a number of endangered species that roam the dunes. Among them are the brown hyena, pangolin, African hedgehog, and the striped polecat.

Fwd: [EXTERNAL] Namibia Lion permit - Dwight Van Brunt

1 message

Cogliano, Mary <mary_cogliano@fws.gov> Tue, Mar 5, 2019 at 10:39 AM
To: "Brisendine, Amy" <amy_brisendine@fws.gov>

Hi Amy,

I'm forwarding you Dwight Van Brunt's Fed-Ex account number to you so we can send his package by Federal Express once we finalize everyhing. See below...

Thank you,

Mary

---------- Forwarded message ---------

Mary,

Thank you once again!

Is it possible to just use my FedEx account number (290639018)?

If not, I will of course figure out how to do a label. Never done one before...

Dwight

Hi Mr. Van Brunt,

I'm glad to see this is good news to you. If you could email me a pre-paid Federal Express label, then we can easily attach it to a Fed-X envelope and get it out to you as soon as I sign off on it.

Best regards,

Mary

Good morning, Mr. Van Brunt,

Thank you for your understanding. I expect to have your permit finalized by the end of this week. We've been working through these applications, and yours is being processed as we speak and near completion. Please accept my apologies for the delay.

Best regards,

Mary

Subject: Namibia Lion permit

Dear Mr. Van Brunt,

I want to apologize for my delay in getting back to you since our first conversation about your permit application to import a lion, which you hunted in Namibia. When I returned from vacation, I had a large amount of work to accomplish while I was away on vacation, and I was unable to call you before I left a week later for a two and a half week work trip to Angola. While in Angola, I picked up a virus, and was in bed for a week after returning. Today is my first day back in the office in three and a half weeks.

I want to let you know that I received your voicemails, and I understand your concerns, however, please know that we have been processing and issuing lion import permits that meet the regulatory requirements, and there are no indications that will change. Unfortunately, with the new process in place for making enhancement findings on a case-by-case basis, we have a huge backlog of applications to work through. It takes a significant amount of time to draft and finalize each enhancement finding in accordance with our legal obligations, and we're moving as quickly as we can with our current staff resources. I have taken a look at your application, and upon my preliminary look, I didn't notice any large holes in the application you provided. With that said, once the biologist reviews it, she might have some additional questions for you. I cannot guarantee when your application review will be completed, but I can assure you that we are working through each permit application as quickly and diligently as we can.

Thank you,

Mary

From:management@kalaharigamelodge.com.na
To:'John J. Jackson, III' <jjj@conservationforce.org>

John,

Thank you for contacting us for these clarifications.

The 99,000-acre property has a "border fence", but this structure does not preclude the movement of lion on or off the property. The fence has significant variations in height, design and components, and along the Kalahari Gemsbok Park, is not always maintained well, frequently downed by the larger antelope species and burrowed under by warthog and hyena (these holes then expanded by lion as they come and go). Therefore the lions can move between the Game reserve and the National Park, and do so occasionally.

The strong population of natural prey species serves to attract and hold their expanding population here at the Game Reserve. Recruitment from birth as well as migration is consistent to the point of reaching critical mass, which is why the Namibian Government designated two male lions as a problem due to conflicts and population density. Another reason the prides prefer to remain on the Game Reserve property is that they enter into immediate conflict with surrounding landowners should they cross a border.

The (at least) two adult male lions killed in territorial disputes speaks to the density of the current population and its related stresses. As mentioned before, this property has the strongest prey population in the area while the surrounding properties operate as farms/ranches. Lions entering those properties also enter into immediate conflict with landowners as they then prey on sheep and cattle, and are always killed on sight, no matter their age or sex.

By allowing very limited and selective lion hunting on the property, the associated revenue can then be directed to enhancing habitat in a manner that will immediately support more prides. The subject hunt played a critical role in ensuring the viability of our lion habitat for years to come.

I will be standing by should additional clarification be desired.

Kind Regards,

Riaan Beeslaar

Management

NB: Please note no travel is allowed through the Kgalagadi Transfrontier park crossing into another country without a required 2 night stay inside the park

I will be standing by should additional clarification be desired.

Respectfully,

Subject: Dwight Van Brunt - Lion

Priority: Is your Lodge high fenced? How do you have a definitive lion population if the area is not high fenced? Please rush your answer today.

Second, what was your point in pointing out the two males had been killed? Where the lion not free, fenced, so they could avoid the conflict?

Thanks,

John

Memorandum

To: The File

From: Chief, Branch of Permits, DMA

Subject: Enhancement finding for the import of a sport-hunted African lion trophy taken in Namibia in 2018 (PRT-84928C)

Background:

On March 27, 2018, Mr. Dwight Steven Van Brunt submitted an application to the U.S. Fish and Wildlife Service (Service) requesting authorization to import one male African lion (*Panthera leo melanochaita*) sport-hunted trophy taken by Mr. Van Brunt on the property of the Kalahari Game Lodge (KGL), Karas Region of Namibia on May 2, 2018. This subspecies of African lion is listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and is listed as threatened under the U.S. Endangered Species Act (Act). The Act prohibits any person, subject to the jurisdiction of the United States, from conducting certain activities with any endangered species listed under the Act [50 CFR 17.21]. These activities include, among others, import, export, take, interstate or foreign commerce, and apply equally to both wild and captive populations. Otherwise prohibited activities may be permitted, but only if the Service finds that the activity is for purposes that enhance the propagation or survival of the affected species and is determined to be consistent with the purpose of the Act [Section 10(d)]. The primary purpose of the Act is the conservation and continued existence of wild populations of endangered species and the ecosystem on which they depend [Section 2]. Therefore, it is a requirement of the Act and its implementing regulations that the proposed activities of the applicant reduce the threat of extinction or benefit the species in the wild. The issuance criteria at 50 CFR 17.22(a)(2) must be met for a permit to be issued.

After evaluating the information submitted with the application, information provided by the government of Namibia, and other information available to the U.S. Fish & Wildlife Service (Service), the Division of Management Authority (DMA) has determined that the importation of the sport-hunted trophy taken from this wild-managed lion (*P. l. melanochaita*) population within the Karas Region of Namibia on May 2, 2018, enhances the survival of the species, in accordance with the enhancement criteria under 50 CFR 17.32.

U.S. Governance of the Lion:

On December 23, 2015, the Service published in the Federal Register a final rule effective January 22, 2016, listing the lion subspecies *P. l. leo* (Asia and western, central and northern

Africa) as an endangered species under the Endangered Species Act (Act or ESA), and listing the lion subspecies *P. l. melanochaita* (southern and eastern Africa) as a threatened species under the Act with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r) (USFWS 2015; 80 Fed. Reg. 79999). Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita,* whose range includes Namibia, is listed as threatened under the Act and is regulated under an ESA species-specific 4(d) rule [50 CFR 17.40(r)].

Where a rule is promulgated for a threatened species under Section 4(d) of the Act, the species-specific 4(d) rule contains the applicable prohibitions and exceptions for the threatened species (50 CFR 17.31(c)). Under the 4(d) rule for *P. l. melanochaita,* all of the prohibitions and provisions of 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita* specimens (50 CFR 17.40(r)). The prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (which includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act.

Permits may be issued to carry out otherwise prohibited activities involving threatened wildlife species under certain circumstances. Regulations governing permits for threatened species, such as *P. l. melanochaita,* are codified at 50 CFR 17.32.

Of particular relevance to this application, importation of any *P. l. melanochaita* specimen, including a sport-hunted trophy, is prohibited (50 CFR 17.40(r)(1)-(2); 50 CFR 17.31(a); 50 CFR 17.21(b)). A threatened species import permit under § 17.32 is required for the importation of all specimens of *P. l. melanochaita* (50 CFR 17.40(r)(1)-(2)). Accordingly, as we explained when finalizing the 4(d) rule for *P. l. melanochaita*, the Service may authorize the import of a sport-hunted lion trophy from Namibia, but only if it first makes a finding that permitting the import of a trophy would enhance the survival of the species in the wild ((USFWS 2015; 80 Fed. Reg. 79999); 50 CFR 17.40(r)(2); 50 CFR 17.32(a)).

As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance under 50 CFR 17.32. With applications to import sport-hunted trophies, however, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a determination under the Act regarding whether to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information.

The Service has made the required enhancement finding based on this individual application to import a sport-hunted trophy of *P. l. melanochaita*; however as detailed below, relevant information obtained for the country as a whole has been considered, as it contains information pertinent to the Service's evaluation as required by the 4(d) rule for *P. l. melanochaita*.

General considerations:

The Service's threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies).

In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Namibia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Van Brunt's application involving a *P. l. melanochaita* sport-hunted trophy taken from the property of Kalahari Game Lodge (through Jamy Traut Hunting Safaris, Windhock, Namibia), Karas Region, which borders the Kgalagadi Transfrontier Park, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport-hunting, the Service considers the publication, *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, and has, therefore, considered these principles in conjunction with our threatened

species issuance criteria for this determination of enhancement. The IUCN document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The IUCN document lays out the following five guiding principles:

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.,* population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of sport-hunted trophies of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species. As noted in Namibia's NW Lion Management Plan, trophy hunting of lions can be a very lucrative and selective option for turning what is considered a problem by communities into an asset.

In evaluating whether the importation of Mr. Van Brunt's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Namibia's management programs for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. The primary threat to African lions in Namibia currently is human-lion conflict, which Namibia is addressing as evidenced by its 2017 NW Lion Management Plan, while striking a balance between conservation priorities and the needs of people who live with wildlife.

When examining a management program and whether a trophy taken as part of that program meets the issuance criteria, we evaluate a number of factors. Some of the factors we consider include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat ***or*** increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We consider whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable off-take within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examine if the hunting component of the management program supports all of these efforts by looking at whether hunting areas are managed to ensure the long-term survival of the lion, its prey base, and habitat.

Hunting, if properly conducted and well managed, can generate significant economic benefits that contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examine if the trophy hunting provides financial or other resource assistance/capacity to the wildlife department to carry out elements of its management program and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also consider how a U.S. hunter's, in this case, Mr. Van Brunt's, participation in the hunting program contributes to the overall management of lions within a country.

Our review includes an evaluation of whether a management program for *P. l. melanochaita* addresses, but is not limited to: evaluation of population levels and trends; the

biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries, such as Namibia, that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local human communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program can provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On January 13, 2016, the Service sent a letter to Namibia's Ministry of Environment and Tourism (DEA) with a list of questions (USFWS 2016) that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Namibia, and whether that management addresses the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which, when considered in conjunction with the Service's permit issuance criteria, would aid the Service in making the required enhancement findings for permitting the importation of sport-hunted lion trophies.

In response to our January 13, 2016, letter, the government of Namibia provided two documents: the Lion Conservation Strategy for Namibia, and the Human-Lion Conflict Management Plan for North West Namibia. In November 2018, Service representatives from DMA participated in the Wildlife Consultative Forum in Uganda, during which time, they met with government representatives of Namibia and received updated information on the status and management of lions in Namibia. Collectively, these sources of information, the Service's final rule providing protections for the lion under the Act (80 Fed. Reg. 79999), relevant information obtained from other sources, and Mr. Van Brunt's application provide the basis for this finding.

***Management of Lions in Namibia*:**

Namibia's strategy for wildlife conservation aims to ensure people derive benefit from wildlife, and the protection of wildlife is funded by balancing development and conservation needs as a "sustainable socio-ecological system". Forty-four percent of Namibian land is under some form of conservation, and the government employs a different strategy for each land-use type, with the level of protection and community-engagement varying among them:

1) National Parks: Provide the highest level of wildlife protection with low community engagement; funded by the government, non-governmental organizations, and through tourism.
2) Communal Conservancies/Community Forests: Managed sustainable use of wildlife/environment, high community involvement; funded through use of wildlife (such as trophy hunting) and indigenous products; serve as buffer zones around national parks and provide corridors for migration.

3) Freehold/Private Conservancy Game Farms (Ranches): Managed sustainable use of wildlife/environment, owner-driven, no community involvement; funded through use of wildlife (such as trophy hunting) and indigenous products; serve as buffer zones around national parks, and corridors for migration.

The government of Namibia has afforded legal user rights to the wildlife (not just the land) outside of National parks, which has created the opportunity for land owners and communities to benefit through the conservation of wildlife (State Department cable, April 6, 2018).

Hunting plays an important role in Namibia's managed, sustainable use of wildlife. Within communal conservancies, hunting provides economic incentives for communities to manage wildlife responsibly. Private hunting ranches and professional hunters are subject to strict governmental regulation; they are careful to sustainably maintain wildlife on their land, for both business and conservation reasons. Private ranch owners promote ethical hunting, which involves targeting animals of the proper age and sex to sustain the species population (State Department cable, February 1, 2018).

Hunting in Namibia is conducted under a standard code of ethics maintained by the Namibia Professional Hunting Association (NAPHA). All hunting areas are under the strict supervision of the Directorate of Resource Management of Namibia's Ministry of Environment and Tourism (MET). The hunting outfit identified in Mr. Van Brunt's application is a member of the NAPHA (http://www.napha-namibia.com, accessed March 4, 2019). Members are expected to hunt strictly in accordance with the ethical principles as stipulated in NAPHA's Hunting Code. According to the NAPHA website, Hunting Professionals are at all times encouraged to act responsibly towards nature, wildlife and the local population. To qualify as a Hunting Professional in Namibia, applicants must pass both theoretical and practical hunting examinations set by the MET.

Danene van der Westhuyzen, President of NAPHA, presented a "best practice" case study at the 2018 African Wildlife Consultative Forum, demonstrating how placing a value on wildlife led to a total change in attitude towards wildlife by land owners and custodians. Success was achieved through a multi-faceted business model, including conservation hunting, management hunting, meat production, live sales of surplus animals, and tourism. Benefits to land owners from hunting made wildlife an attractive land-use option, encouraging people to maintain or restore wildlife habitat and populations. In 2015, NAPHA spearheaded the formation of the Hunters United Against Poaching Trust for the protection of all wildlife in Namibia through innovative fundraising (AWCF 2018).

In July 2017, the MET published its Lion Conservation Strategy for Namibia. This is the first Namibian species management plan for the Lion, and its development follows from and is guided through the National Policy on the Conservation and Management of Large Carnivores of 2014. The Policy outlined the following strategies:

- Targeted and sustained Research and Monitoring
- Species-specific Large Carnivore Conservation and Management Planning
- Sustainable Utilization of Large Carnivores
- Management of Human-Carnivore Conflict
- Stakeholder Engagement Platforms
- Standard Operational Procedures
- Large carnivore conservation at landscape level.

One of its objectives is to reduce and minimize human-lion conflict (one of the main threats in Namibia) in a participatory, responsible, and accountable manner. Recognizing the need to address and minimize human-lion conflict, in July 2017, the MET published a Human-Lion Conflict Management Plan for North West Namibia. Permits are issued to kill "problem lions" in registered conservancies for trophy hunting. Namibia participates in community-based natural resource management programs (e.g. the Conservancy Self-Insurance Scheme, the Human Wildlife Conflict Policy) that allow "problem lions" to be sold for trophy hunting outside of and along the borders of protected areas. Fees are payable to conservancies and to a fund that has been established for wildlife conservation and rural community development projects (CITES 2014).

Namibia is a Regional leader on transboundary wildlife management, particularly in the northeastern Kavango-Zambezi Transfrontier Conservation Area (KAZA) and along the borders with South Africa and Angola (State Department cable, April 6, 2018).

***Governance of Lions in Namibia*:**

The two documents provided to the Service in July 2017 build on laws and policies that govern Namibia's management of its resources, including the Nature Conservation Ordinance, 1975, and the 2007 Policy on Tourism and Wildlife Concessions on State Land, to protect and manage its wildlife and natural resources. Under the Nature Conservation Ordinance, Ordinance 4 of 1975 of Namibia, the African lion is a classified as a Specially Protected Species. As a Specially Protected Species, one of the protections conveyed to African lions is the prohibition of hunting in game parks and nature reserves, ". . . No person shall, without the written permission of the Minister, hunt any animal in any game park or any nature reserve: provided that a dangerous animal may be killed in defense of a human life or to prevent a human being from being injured. Any person who contravenes or fails to comply with any provision of subsection (1) or any condition, requirement or restriction of any permission granted thereunder, shall be guilty of an offence and liable on conviction . . . to a fine not exceeding R20 000 or to imprisonment for a period of not exceeding five years to both such fine and such imprisonment if such offence relates to the hunting of any other specially protected game."

The Nature Conservation Ordinance, 1975 provides other protections to the African lion as a Specially Protected Species, in particular, the Ordinance provides for the prohibition of hunting in private game parks, "Notwithstanding anything to the contrary in this Ordinance contained, but subject to the provisions of Chapter IV, no person shall without the written approval of the Minister hunt any game or any other wild animal or bird in a private game park". Additionally, the Ordinance states that no person other than the lawful holder of a permit granted by the Minister shall at any time hunt any specially protected game, ". . . and any person who contravenes or fails to comply with any provision of subsection (1) or any condition, requirement or restriction of a permit granted in terms of this section shall be guilty of an offence and liable on conviction- (a) to a fine not exceeding R200 000 or to imprisonment for a period not exceeding twenty years or to both such fine and such imprisonment if such offence relates to the hunting of any elephant or rhinoceros; or (b) to a fine not exceeding R20 000 or to imprisonment for a period not exceeding five years or to both such fine and such imprisonment if such offence relates to the hunting of any other specially protected game."

Namibia is also a Party to CITES and the Convention on Biological Diversity (CBD). Under CITES, certain criteria must be met before Appendix-II-listed species can be exported, including a

finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. Before an export permit may be issued by the Namibia CITES Management Authority, that non-detriment finding must be made; we have received a copy of Mr. Van Brunt's CITES export permit issued by the CITES Management Authority of Namibia.

In addition, Namibia is a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of transfrontier conservation areas, and facilitate community-based natural resources management practices. To implement the SADC Treaty, member states are required to establish management programs for the conservation and sustainable use of wildlife.

***Current Lion Status in Namibia*:**

When the Service listed lions in southern and eastern Africa as threatened under the Act, three primary threats to the species throughout its range were identified: loss of habitat, loss of prey base, and human-lion conflict. Historically lions were distributed throughout Namibia; however, they were extirpated from most parts of the country by the turn of the 20th century. Due to the current focus of wildlife management practices in Namibia, additional habitat loss has been minimized. The lion population in Namibia has increased as a result of Namibia's standards and mechanisms to maintain biodiversity, encouragement of more stable prey bases, and most importantly, reduced loss of lions through human-lion conflict.

Namibia is currently home to a population of approximately 1000 lions, subdivided into two main populations, the Etosha-Kunene population and the Khaudum-Zambezi population. A number of small populations exist on private reserves; most notable is the population on a private reserve in the Kalahari on the edge of Etosha National Park -- Ongava and Etosha Heights Safari Lodge.

Three categories of lions are found in Namibia: wild free-roaming lions in large and open protected areas and other lands used for conservation purposes; managed lions free-roaming in small, fenced reserves; and captive lions that are entirely dependent on humans for their survival.

Hunting and Utilization:

According to the Namibia Professional Hunting Association, the following is required prior to trophy-hunting a lion in Namibia (http://www.napha-namibia.com/legal-information/trophy-hunting-in-namibia, accessed March 6, 2019):

- Permits must be issued prior to the hunt commencing;
- A separate permit must be issued for each individual hunting client;
- An extra, special permit is required for the large cats (leopard, cheetah, and lion).
- It contains an additional list of conditions;
- A permit must be completed in full by the hunting client and the hunting professional (wounded or lost animals must also be indicated on the permit);
- Permits are issued by the MET only; and
- A maximum of two trophies per species may be harvested, per hunting client, per permit.

- All trophy-hunting operators must be registered with the Namibia Tourism Board (NTB).
- Hunting with dogs is not permitted.

According to the CITES database, Namibia has not set a specific annual quota for export of lion trophies[1]. However, authorizations for hunting lions are addressed on a case-by-case basis by Namibia's MET[2]. Reserves maintaining wild-managed lions must submit an application to the provincial authorities requesting a permit. Professional Hunters are obligated to record all completed hunts in a professional hunting register, and this register is used to compile provincial reports on the number of lions taken annually. The level of off-take is also evaluated in the management of the meta-population to ensure that only those animals that no longer meet management goals are removed from the population. These animals are typically older lions that have successfully bred and raised several litters of kittens.

Evaluation:

As stated earlier, the Service evaluates each application in accordance with its threatened species permitting regulations at 50 CFR 17.32 and the issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that the proposed import of the wild-managed lion trophy animal would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

Lions are a key component of the conservation paradigm in Namibia. According to the Namibian Association of Community Based Natural Resource Management (CBNRM) Support Organizations (NACSO)[3], the MET and conservancies work together to monitor wildlife, with the Natural Resources Working Group of NACSO providing technical assistance. The MET issues quotas for the sustainable use of wildlife based upon animal populations and other factors, such as drought. For example, it may be considered prudent to make use of wildlife before it dies as the result of drought. Every aspect of wildlife utilization is subject to strict regulation by the MET, and the Namibia Professional Hunting Association (NAPHA) works to promote and ensure ethical hunting and professional standards. Based on the information available to the Service, the presence of large private reserves such as the KGL, which are authorized by Namibia's MET for trophy-hunting of lions improves the probability of success for lion survival as a whole.

The KGL consists of 40,000 hectares, and although it is fenced, it borders the Kgalagadi Transfrontier Park on Namibia's southeaster border, and lions still can enter the property. As of March 2018, the KGL property maintained approximately 22 lions; at that time, it was determined that it was necessary to remove two older males on the property in order to properly maintain the

[3] NACSO is an association comprising 8 non-government organisations (NGOs) and the University of Namibia.

balance between the available prey and habitat. The applicant submitted an application to hunt one of these animals deemed surplus to the population. The need to protect lion populations from poaching and provide on-the-ground oversight, including 24-hour surveillance, can be prohibitively expensive. The proceeds from trophy-hunting of an older male lion such as the one hunted by Mr. Van Brunt will assist in providing the protection and oversight needed, as well as management of the lions' prey base, and serve to enhance the survival of the species.

Namibia has put into place mechanisms to adequately oversee the harvest of wild and wild-managed lions in Namibia. The objectives of the Lion Conservation Strategy and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that Namibia has established for managing lions. The funds generated by the U.S. hunter's participation (i.e., those of Mr. Van Brunt), contribute to the ongoing benefits that Namibia's conservation strategy provides to lions in the wild; this strategy includes the biological management of lions on private reserves.

Therefore, the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the lion sought to be covered by the permit.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

In evaluating the information provided by the Namibian government and other sources, it appears that the hunting program in Namibia is addressing the three main threats that were identified by the Service when making the determination that the species was threatened with the possibility of extinction under the Act. The fenced reserves, including KGL[4], and national parks are maintaining habitat for lions and ensuring that there is no further habitat loss, provided that the reserves can remain economically viable. In order to maintain a viable population of wild and wild-managed lions, the parks and reserves must maintain biodiversity and a sustainable prey base. Finally, while there is still controversy over the extensive utilization of fencing in Namibia, it does reduce human-lion conflicts as well as the number of lions killed in retaliation for killing livestock. Therefore, the management of lions on these reserves and the limited hunting of lions under this management program contributes to the on-going survival of the species in Namibia. In addition, the off-take of this wild-managed lion provides an indirect benefit to the overall lion population by helping to support the reserve where lion populations participating in meta-population management are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

Namibia closely monitors and controls the harvest of wild and wild-managed lions. According to the Namibian Association of Community Based Natural Resource Management (CBNRM) Support Organizations (NACSO)[5], the MET, and conservancies work together to monitor wildlife, with the

[5] NACSO is an association comprising 8 non-government organisations (NGOs) and the University of Namibia.

Natural Resources Working Group of NACSO providing technical assistance. Every aspect of wildlife utilization is subject to strict regulation by the MET, and the Namibia Professional Hunting Association (NAPHA) works to promote and ensure ethical hunting and professional standards. Based on the information available to the Service, the presence of large private reserves such as the KGL, which are authorized by Namibia's MET for trophy-hunting of lions improves the probability of success for lion survival as a whole. Additionally, since the protection for African lions under the U.S. Endangered Species Act was put into place, the government of Namibia has developed additional conservation mechanisms for the African lion: the Lion Conservation Strategy for Namibia, and the Human-Lion Conflict Management Plan for North West Namibia.

The area where this lion was taken (the KGL) consists of 40,000 hectares. Although it is fenced, it borders the Kgalagadi Transfrontier Park on Namibia's southeaster border, and lions still can enter the property. The need to protect lion populations from poaching and provide on-the-ground oversight, including 24-hour surveillance, can be prohibitively expensive. The proceeds from trophy hunting of an older male lion such as the one hunted by Mr. Van Brunt will assist in providing the protection and oversight needed, as well as management of lions' prey base, and will serve to enhance the survival of the species.

Namibia has put into place mechanisms to adequately oversee the harvest of wild and wild-managed lions in Namibia. The objectives of the Lion Conservation Strategy and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that Namibia has established for managing lions. The harvesting of this lion was conducted in accordance with MET's laws and regulations[6]. Therefore, the issuance of an import permit for a wild-managed lion legally hunted on the property of the KGL under these authorities would not conflict with any programs intended to enhance the survival probably of the species in Namibia.

The need to protect lion populations from poaching and provide on-the-ground oversight, including 24-hour surveillance, can be prohibitively expensive. The proceeds from trophy-hunting of an older male lion such as the one hunted by Mr. Van Brunt will assist in providing the protection and oversight needed, as well as management of lions' prey base, and serve to enhance the survival of the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

Namibia is home to only a small population of around 1000 lions, but according to Namibia's 2017 Lion Conservation Strategy, its lion population in Namibia has slowly increased over the past 20 years. This was mainly due to the expansion of lions into the Kunene Region. In other parts of Namibia, lion habitat is threatened through land use change and fragmentation resulting in human-wildlife conflict and reduction in range available for lions. The Namibian lion population can be subdivided into two populations, the Etosha-Kunene population and the Khaudum-Zambezi population. In addition, there are a number of small populations on private game reserves, such as the KGL.

While the larger free-ranging population of wild lions in the national parks receive only limited direct management activities, reserves such as the KGL require management that is more intensive

[6] http://www.met.gov.na/services/permits-registrationscertificates-licences/173/, accessed March 6, 2019

in order to mimic natural biological and ecological roles of lions. All indications show, that given the threats identified by the Service when listing the species as threatened under the Act, the presence of these reserves, including the KGL as well as the parks, is actively addressing the three causes of lion decline: loss of habitat, loss of prey base, and human-lion conflict. While the concept of lions behind fences has both benefits and drawbacks, it appears to be a major contributor to the on-going survival of lions in the wild in Namibia. While open and unmanaged habitat not impacted by human intervention would be the ideal condition for lion populations in Namibia, as well as throughout its natural range, this is not a viable option within Namibia.

With limited, controlled off-take of lions in a manner that mimics natural processes, the hunt that Mr. Van Brunt has undertaken will contribute to reducing the threat of extinction of lions in Namibia. The KGL consists of 40,000 hectares, and although it is fenced, it borders the Kgalagadi Transfrontier Park on Namibia's southeaster border, and lions still can enter the property. As of March 2018, the KGL property maintained approximately 22 lions; at that time, it was determined that it was necessary to remove two older males on the property in order to properly maintain the balance between the available prey and habitat. The applicant submitted an application to hunt one of these animals deemed surplus to the population. The need to protect lion populations from poaching and provide on-the-ground oversight, including 24-hour surveillance, can be prohibitively expensive. The proceeds from trophy-hunting of an older male lion such as the one hunted by Mr. Van Brunt will assist in providing the protection and oversight needed, as well as management of lions' prey base, and serve to enhance the survival of the species.

Namibia has put into place mechanisms to adequately oversee the harvest of wild and wild-managed lions in Namibia. The objectives of the Lion Conservation Strategy and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that Namibia has established for managing lions. It appears that the permitting activities through Namibia's MET and the implementation of the Lion Conservation Strategy will ensure the long-term survival of lions. The use of hunters such as Mr. Van Brunt in managing the populations on these reserves, particularly taking an older male, is an important element of the success of lion management in Namibia.

Therefore, based on the information available to the Service, the purpose for which this import permit would be issued will likely reduced the threat of extinction facing lions in Namibia.

17.32(a)(2)(v): <u>The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:</u>

There are numerous opinions on the impact that hunting as a management tool has on a species. Based on reviewing comments made during the ESA listing process for lions, as well as information obtained from available literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see benefits that can be realized through a scientifically based hunting program for lions. A large number of comments from some non-governmental organizations (NGOs) and the public indicate that they oppose hunting lions. However, this opposition is primarily based on the perceived ethics of hunting and are not germane to our review process for this application.

Therefore, although some members of the public are opposed to trophy-hunting of lions, based on the information available to the Service, there is general support by scientists, individuals, and other organizations having expertise concerning lions, that the legal harvest and subsequent import of these lion trophies would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

Based on our understanding of the permitting process implemented by Namibia's Ministry of Environment and Tourism, there are requirements in order for this activity to occur by the hunter and the landowner[7]. Hunting in Namibia is conducted under a standard of ethics maintained by the Namibia Professional Hunting Association (NAPHA). In addition, one of the strategic actions of the Lion Conservation Strategy is to ensure trophy hunting contributes directly to lion conservation by providing lion hunting quotas only to landholders that have well managed resident lion populations on their land. This oversight by the MET and the implementation of the Lion Conservation Strategy establishes a framework in which reserves manage their wildlife. The long-term survival of lions, at least in Namibia, is tied directly to the success, both ecologically and economically, of the reserves. The reserves that maintain wild-managed lions, including the KGL, carry out limited hunting in order to maintain the ecology of the ecosystem, and have the expertise and facilities to maintain lions successfully.

Therefore, based on the information available to the Service, the applicant has hunted on a properly permitted reserve that carries out their management practices in accordance with national and provincial regulations, having the expertise, facilities, or other resources available to them to successfully accomplish the objective states in the application.

Conclusion:

Given the current status of wild and wild-managed lions within Namibia and the level of management and oversight provided to them, the harvest and import of this lion as a sport-hunted trophy meets the purposes of the Act. The information reviewed indicates that Namibia is sustainably managing its African lion population; and limited, permitted hunting on private reserves is a part of Namibia's management and conservation strategy. The applicant provided information that he hunted on a properly licensed reserve that is actively managing lions in a manner that will maintain the species on the reserve, and through the national management plan, in a manner that mimics natural processes. The Service has examined the overall conservation and management of the subspecies Namibia, where the specimen originated, and we found that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). We believe that Namibia's management of lions conforms with the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012).

[7] http://www.met.gov.na/services/permits-registrationscertificates-licences/173, accessed March 6, 2019.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service finds that Namibia's trophy-hunting program is managed to ensure the long-term survival of the species and we are able to make a determination that the import of this sport-hunted trophy will enhance the propagation or survival of the species. In conclusion, the Service is able to authorize the import of one male lion trophy taken in Namibia, to Mr. Dwight Steven Van Brunt, Kalispell, Montana. This finding is made based on the reserve where the lion was taken, having been properly permitted and in compliance with national and local regulations.

Permittee:

DWIGHT STEVEN VAN BRUNT
(b)(6) [redacted]
KALISPELL, MT 59901
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted: Not applicable

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Namibia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. Trophy must have been taken during 2018.

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Namibia.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit, source code "W", issued by the Management Authority of Namibia.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. This permit can be photocopied.

Permit Number: MA84928C-0
Effective: 03/15/2019 Expires: 03/14/2020

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
You may find instructions on how to make your application complete and help avoid unnecessary delays at the following link: .

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
PANTELIDIS	ANASTASIOS	N\A	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6) [redacted]			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6) [redacted]

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
WATERFORD	OH	45786	WASHINGTON	U.S.A.

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 2, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** [50 CFR 13.11(d)]

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same as page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Same as page 1

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
1)Panthera leo melanochaita, lion2)Crocodylus niloticus, Nile crocodile 3)Imbabala-Tragelaphus scriptus, bushbu

b. Sex (if known).

1) male 2) male 3) male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

o

N\A

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

Country of Mozambiqe, Province of Tete, District of Zumbo, City of Zumbo,
Ranch: Chawalo Safaris Lodge in Zumbo, Tete, Mozambique

b. Date wildlife was hunted:

Lion was harvested on 7/30/2016
Crocodile was harvested on 8/02/2016
Bushbuck was harvested on 8/03/2016

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Outfitter/guide was Russell Lovemore and Jaco Strauss from Chawalo Safaris

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

EMIAC MOZ LDA
COMPLEXO TESTAFRICA
BAIRRO DA SOALP
CHIMOIO
MOZAMBIQUE

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

All permits/licenses were held and managed by the outfitter.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Senta Van Antwerp
Business Name: EMIAC MOZ LDA
Address: COMPLEXO TESTAFRICA
City: BAIRRO DA SOALPO
State/Province: CHIMOIO
Country, Postal Code: MOZAMBIQUE

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

SEE ATTACHED SHEET

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

SEE ATTACHED SHEET

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

SEE ATTACHED SHEET

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: _(b)(6)_____ Date: 4/4/2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9) a. Do you have any information regarding the population status or trend data on the species hunted?

I do not have any official data on this. What I can say and it will be repeated below, is the fact that we have been incredibly successful in curbing poaching. In the 7 years that we have operated and hunted on Chawalo game numbers have increased dramatically. Our area reaches 800 000 acres in extent, as per safari we were aware of 4 different lion males as well as several females moving within our limited coverage of the area. If we were to consider the average home range of lion males specifically there is every reason to be extremely optimistic in terms of numbers as we covered a total area of roughly 70 000 acres on this safari.

We have subscribed to the ethics and standard of only utilizing lion males of 7 years and older which research has proven as conducted in Tanzania limits and virtually nullifies infanticide, by continuing with these basic management principles as well as the highly controlled off take of 1 lion male per annum on a total of 800 000 acres, there is no reason to assume that our population is under stress or pressure. Furthermore every specie hunted is inspected and aged by means of jaw, should we be deemed to harvest juvenile or continually harvesting prime breeding animals our quota will be reduced for the following season, taking females by accident or mistake is also punished with heavy fines in excess of $5000.

b. In order to hunt, you likely paid for licenses or trophy fees. Do you have any information on how those funds were used by either the landowner, community, or government?

Yes, we did pay for hunting licenses and tag. One third of the tag fees go to the local population, that inhabit the area and villages on the periphery, one third goes to the Tchuma Tchatu program a program that train and equip scouts to protect the area. So this very program train and equip Scouts that compliment our scouts on the ground to curb poaching.

Tchuma Tcatu is a community program, these communities would have zero benefit from wildlife that they share the areas with and I shudder to think what would happen if this incentive or program was to be abolished.

In short these areas would turn to livestock land and we would effectively lose wildlife habitat as the wildlife occurring in these areas would turn into a liability to local communities, this program has been successful to the point of giving wildlife a tangible value within local communities, in cooperation with us as outfitters operating on these areas.

A portion of funds generated from foreign hunting activities by the outfitter also gets paid to the community by the outfitter once a year in November or December and there is a local committee that decides how these funds will be spent within the conservation area as there are ten villages that need to benefit from this. It is used for schools, clinics, water wells and the like. We have also received donations from SCI and they have built and mobilized a clinic which operates on our western

boundary, on the Luangwa river. We have been extremely successful in involving our local communities in a positive way, I can not stress the importance of community involvement enough, in an impoverished country such as Mozambique this is the of the utmost importance.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

As outfitter we have initiated a program whereby a community levy is asked from each foreign hunter this over and above funds generated from the community tax levied to each hunter, is then applied to also improve and benefit the local community on condition that they assist in the protection of the local wildlife by assisting in limiting poaching, controlling the wild fires primarily.

They will also receive rewards and benefits for sound information provided on Lion, Leoapard and elephant movements in the area.

Currently we employ a total of 25 full time anti-poaching scouts these scouts are paid for by the outfitter and inherently by our hunting clients, we have succeeded in curbing poaching to a large degree with countless muzzle loaders (homemade) as well as snares and other equipment used for poaching being confiscated on information supplied directly by members of our local community, and also from our armed - mobilized anti-poaching teams. There is no doubt that poaching could be brought to a complete stop if we were able to encourage more hunters to venture into our area in Mozambique.

As a further note when we took over the area 7 years ago we had knowledge of roughly 40 buffalo, we now have a solid heard of around 250 around camp with various smaller satellite herds scattered throughout the areas entirety, small game such as Duiker, impala, Kudu, Roan, warthog have also made a remarkable comeback, and with that our predator numbers have done exceptionally well. It is of cardinal importance that we continue to fight the illegal trade in wildlife products and the continued support of the international trophy hunting market and our loyal clients and organizations such as SCI and DSC will ensure the resources for us to do so.

The 1 lion, 2 leopard, Crocodile, buffalo and plains game that we receive on quota and the funds generated from these species is integral to the continued survival of wildlife habitat, we need to encourage USFWS to seriously consider an amendment to the lion import policy as it will either aid in the demise or the survival of our natural resources.

My best always,

Jaco Strauss, PH/Outfitter

To whom it may concern,

I feel compelled to write this statement about my many trips to Africa. There is great beauty as well as unimaginable poverty and destruction. While traversing the continent you see the many villages, the wildlife and the ever changing landscape. Over the years some of the familiar areas have been desolated by human incursion from the slash/burn farming, clear cut timbering with ALL trees going to China and strip mining for coal. Some areas are "protected" with the local or national parks label but there is little supervision and the constant human encroachment and poaching result in an ever dwindling wildlife populations. On every trip to Africa with the exception of this one, there were always snares, traps and other cruel methods to poach the game. In the field I did not see or find a single example of poaching but at the lodge there was a nice collection of homemade muzzleloaders/firearms that had been confiscated or surrendered. One of the main reasons for such success are the anti-poaching units employed by Chawalo safaris. During my stay I met 2 of the traveling/patrolling anti-poaching units.

What makes the Chawalo Safaris area so special is the care, effort and expense they have put into making it the most pristine wildlife area that I have ever encountered. There is still a rather sizable human presence but through extensive interactions, education, acts of kindness and monetary rewards the local people have made great strides in preserving the wildlife especially with their efforts to stop all poaching. The funds that are generated through hunting have allowed Chawalo to establish a sound, renewable resource that brings much needed funds to an otherwise poor area.

A side note for consideration, we encountered a couple of young male lions, 2-4 years of age, traveling together. Before I even had a chance, Jaco Strauss (P.H.) said they were too young and he would not allow me to take one. If the cat wasn't at least 7 years old we would not be shooting it. That strong conviction to only harvest mature animals was a refreshing and pride inducing moment. The lion that was eventually harvested was at least 7 years old and a loner. He was mature but it was quite obvious that he was declining in health and stature. The perfect animal to harvest.

Another area where hunting funds have allowed Chawalo to assist in and establish harmony amongst the locals is the creation of Chissavo Clinic. A small medical clinic that treats the locals (and some not so local) residents. After an on-site visit, walk-through and interactions with the patients I was so impressed that I have made the decision to return and donate my services.

When making your determination for importation please consider my personal statement. Chawalo Safaris is not your average or typical outfitter. They have vastly improved the area not just for the wildlife but the locals as well. If all outfitters were half as conscientious and committed we would have a better world.

Thank you for your time,

Anastasios Pantelidis, M.D.

Nelson, Emma <emma_nelson@fws.gov>

Cc: Emma Nelson <emma_nelson@fws.gov>

Dear Mr. Pantelidis,

The following is in response to your phone call today.

As background, on March 1, 2018, in response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service (Service) informed the public that it is revising its procedure for assessing applications to import certain sport-hunted species like the African lion. We have withdrawn our countrywide enhancement findings for a range of species across several countries, including elephants and lions. In their place, we intend to make findings for trophy imports on an application-by application basis.

The Service is continuing to monitor the status and management of these species in their range countries. We review each application received for the import of sport-hunted African lion and evaluate the information provided in the application as well as other information available to us regarding the status and management of the species to ensure that the hunting program is promoting the conservation of the species. Each application must also meet all other applicable permitting requirements before it may be authorized. Therefore, your application is pending at this time.

The application is assigned to Emma Nelson of our office, if any additional information is needed for the application she will contact you directly.

Sincerely,

Anna Barry
Supervisory Policy Specialist

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Kampeter	Andrew	Joseph	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Wardsville	Missouri	65101	Cole	United States

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   same as page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Andrew Kampeter (b) (6) [redacted]

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit. NA

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera Leo Melanochaita, Southern African Lion

   b. Sex (if known). MALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   South Africa, Zululand, Kwa Zulu-Natal Province
   Mkuze Fall Private Game Reserve, Nearest City = Pongola or Nongoma

   b. Date wildlife is to be hunted:
   July 18, 2018 thru Aug 4, 2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   Garry Kelly Safaris, Professional Hunter Sean Kelly

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:
   NA

   b. Date wildlife was hunted:
   NA

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

NA

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

NA

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). NA Dont Have permits yet

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Rupert Dedekind
Business Name: Universal Trophey Service
Address: Plot 114
City: Bashewa
State/Province: Pretoria
Country, Postal Code: 0056

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?
Attached paper

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?
Attached papers

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted
Attached

9a) Do you have any information regarding the population status or trend data on the species hunted?

The current property forms part of the Wild Managed population of Lions in South Africa, as defined in terms of the Biodiversity Management Plan for Lion in South Africa. Furthermore, the property is contributing to the meta-population for the province of KwaZulu-Natal and subscribes to the principles for meta-population management as defined by the provincial conservation authority (Ezemvelo KwaZulu-Natal Wildlife). There are currently 18 lions on the property, of which three are available for offtake. Such offtakes will mimic natural population changes wherein old males are forced out of the pride structure. The property has had lions for the preceeding 10 years and have been managed to ensure the genetic intergrity of the prides on the property.
There are 18 lions on the concession. 5 Males, the rest are females & cubs. We have been advised that there are too many Lions on the concession & have been allocated 3 to take off.

b) In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community or government?

Hunting permit and licences fees are paid to the provincial conservation authority, Ezemvelo KwaZulu-Natal Wildlife, with such funds being utilised to manage sustainable resource use in the province. The funds assist in the processing of hunting permits wherein the sustainability of each application is assessed and approved when appropropriate.
The funds are used in various ways, but mainly for paying scouts for anti poaching initiatives, the re establishment of the species, security, upliftment of the area including fencing & roads.
The permit costs are R1000 & the concession fee is $35 000

c) Do you have information on other funding activities that are being carried out, or were carried out by the safari outfitter, professional hunter, concession holder or land owner that provide a conservation benefit to the species being hunted/species hunted?

The concession is owned by the local community and the funds generated through hunting activities assists in the upliftment of the community through job creation and food provision.
The safari outfitter funds the landowners through the concession fees paid by clients. These funds are used for the protection of game (the $35,000). Should there be no fees, there will be no protection of the game initiatives (scouts).

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported [redacted] onation, or exchange that is reasonably likely to result [redacted] rt a leopard trophy, I understand that I may only import two

(b) (6)

Applicant's signat[redacted] Date: 05/04/2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Panthera leo, African lion, Felidae family

   b. Sex (if known).

      male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

      N/A

   b. Date wildlife is to be hunted: N/A

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      N/A See #3

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      ZIMBABWE, MASHONALAND WEST, RIFA SAFARI AREA, HURUNGWE CONSERVANCY (S16119 B2E029)

   b. Date wildlife was hunted:

      20 MAY 2017

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).
SKIN (LIFE SIZE MOUNT WITH CLAWS); SKULL

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:
TROPHY CONSULTANTS INTERNATIONAL (T.C.I)

4 JOSIAH CHINAMANO ROAD, BELMONT, BULAWAYO, ZIMBABWE

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name: TROPHY CONSULTANTS INTERNATIONAL
Business Name:
Address: 4 JOSIAH CHINAMANO ROAD
Address: BELMONT
City: BULAWAYO
State/Province:
Country, Postal Code: ZIMBABWE

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.
See US Dept of Interior document of 04/11/2017.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: [redacted] Date: 3/28/18

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, **if** different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

Michael McGinnis
(b) (6) [redacted]
(b) (6) [redacted]

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Memorandum

To: The File

From: Chief, Branch of Permits

Subject: Enhancement Finding for Lions Taken as Sport-hunted Trophies in Zimbabwe during 2016, 2017 and 2018

After evaluating the available information from the Government of Zimbabwe, other information available to the U.S. Fish and Wildlife Service (Service), and comments received from interested parties, the Service has determined that permits for the importation of sport-hunted trophies of wild lions (*Panthera leo melanochaita*), which are threatened under the Endangered Species Act (ESA), taken in Zimbabwe during the 2016, 2017, and 2018 calendar years meet the enhancement criteria under the Service's regulations at 50 CFR 17.32. Therefore, applications received for import of such specimens will be considered to have met this requirement. In accordance with the 4(d) rule for *P. l. melanochaita*, 50 CFR 17.40(r), the Service will review each application for import of such specimens on a case-by-case basis and each application will also need to meet all other applicable permitting requirements before it may be authorized. The Service will reassess the situation in Zimbabwe towards the end of the 2018 season to determine if hunts conducted in 2019 and beyond continue to meet the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the ESA was warranted and proposed a rule under section 4(d) of the ESA to provide conservation measures for the African lion. 79 Fed. Reg. 64472. On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the ESA) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under section 4(d) of the ESA, which is set forth at 50 CFR 17.40(r) (USFWS 2015; 80 Fed. Reg. 79999). The effective date of this listing is January 22, 2016. Therefore, as of January 22, 2016, the lion

subspecies *Panthera leo melanochaita*, whose range includes Zimbabwe, is listed as threatened under the ESA and is regulated under an ESA section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the ESA and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the ESA. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 50 CFR 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zimbabwe, but only if it first makes a finding that permitting the import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the ESA to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service has the discretion to make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on a countrywide basis, although individual import permits will be evaluated and issued or denied for each application. While the Service may make enhancement findings for sport-hunted trophy imports of *P. l. melanochaita* on a countrywide basis, the Service encourages the submission of information from individual applicants. We rely on the information available to the Service and may rely on information from sources other than the applicant when making a permitting decision.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits (50 CFR 17.32(a)(2)) , but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita*, including sport-hunted trophies.

Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In that review, we evaluate whether the import contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service will evaluate any application received that involves *P. l. melanochaita* in the context of enhancement of propagation or survival permitting in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits (50 CFR 17.32(a)(2)). These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P. l. melanochaita.* This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of sport-hunted trophies of *P. l. melanochaita* is consistent with the purpose and intent of the Endangered Species Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentives*, if communities that share these resources with wildlife do not

perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities and encourage community support for managing and conserving the hunted species, as well as other species.

When evaluating whether the importation of a trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we will examine how a country's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether trophies taken as part of that program meet the issuance criteria, we study a number of factors. Some of the factors we consider include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We consider whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. A component of a management plan from which trophy imports would meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities and incentives to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examine if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria of 50 CFR 17.32, we will examine if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We will also consider how a U.S. hunter's participation in the hunting program contributes to the overall management of lions within a country.

Management programs for *P. l. melanochaita* are expected to address, but are not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we will work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program would provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding for Lions in Zimbabwe:

On February 1, 2016, the Service sent a letter to the Parks and Wildlife Management Authority in Zimbabwe (ZPWMA) with a list of questions related to management plans, population status, conservation, management, hunting policies, and regulations of Zimbabwe's lion populations. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC)*

Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (IUCN SSC 2012), as it provides useful principles which, when considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement finding for permitting importation of sport-hunted lion trophies.

On February 16, 2016, the Service sent a second request to ZPWMA for specific documents related to the conservation status of lions in Zimbabwe. ZPWMA responded to the Service's request on February 17, 2016, with a copy of *Conservation Status of African Lion in Zimbabwe*, and subsequently, on November 29, 2016, provided a copy of *Enhancement and Non-detriment Finding for Lion (Panthera leo) in Zimbabwe*. The Service has also been corresponding with ZPWMA regarding African elephant management for several years. In this correspondence, ZPWMA, as well as other sources, have provided the Service with documents and information that are relevant to our evaluation of lions in Zimbabwe. These documents, along with the Service's own final rule on the lion listing under the Act, as well as other relevant information from reliable sources and contained in comments received from interested parties, were the basis of this finding.

Governance of Lions in Zimbabwe: The legal framework for Zimbabwe's regulatory mechanism is informed by the Wildlife Policy (1992), which is intended to maintain a protected area network for the conservation of the nation's wild resources and biological diversity. The Wildlife Policy (1992) provides for the Government of Zimbabwe to maintain a network of protected areas known as the Parks and Wild Life Estate, comprised of the country's National Parks, safari areas, botanical gardens, and sanctuary and recreational areas, for the conservation of the nation's wild resources and biological diversity (CITES 2016; ZPWMA 2016). It is intended to create economic activity to enhance rural development and encourages the conservation of wild animals and their habitats outside the protected areas.

ZPWMA was established by the Parks and Wildlife Act of 1996 (Chapter 20:14) [as amended by Act Number 19 of 2001] which came into operation on June 1, 2002, through Statutory Instrument 144C of 2002. The Act provides for the establishment of a Parks and Wildlife Board; establishment of national parks, botanical reserves, botanical gardens, sanctuaries, safari areas and recreational parks; and the preservation, conservation, propagation or control of wildlife, fish, and plants of Zimbabwe and the protection of her natural landscape and scenery. The Parks and Wild Life Act includes sections on virtually every aspect of ZPWMA, including requirements for annual financial audits and reporting to the central government. The Parks and Wild Life Act also provides for substantial penalties for the unlawful possession of or trading in protected wildlife species. In addition, the General Laws Amendment Act (No. 5) of 2010 provides for mandatory imprisonment for poaching.

The Parks and Wildlife Act, Chapter 20:14, devolved authority to manage and benefit from wildlife on communal and private lands to the landholders. In 1982, the legal provisions of this Act were extended to Rural District Councils (RDCs), on behalf of rural communities in communal lands whose areas contain viable populations of wildlife. Communal areas in Zimbabwe are administered by RDCs, which have become a mechanism for implementation of the government's policy of conservation by utilization of natural resources. It enables local communities to manage and benefit from wildlife resources through the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE) established in 1989. CAMPFIRE was developed to encourage reduction in human-wildlife conflicts through conservation-based community development and to provide an economic incentive to improve community tolerance of wildlife, including lions. At the time, the

CAMPFIRE program was the model for community-based conservation efforts in several other African countries and was identified as an innovative program. Under a community-based conservation program, like CAMPFIRE, rural communities should benefit from revenue generated by sport hunting.

As Zimbabwe's premiere wildlife agency, the main functions of the ZPWMA are to control, manage and maintain Zimbabwe's wildlife resources and perform the service function with the primary role of protecting and conserving Zimbabwe's natural heritage for the present and future generations on behalf of the State. It also provides the cornerstone of Zimbabwe's tourism industry (ZPWMA 2015). The rationale behind the establishment of the ZPWMA was to allow for a self-funding mechanism, and thereby reduce its dependence on the national treasury. In January 1996, the Government of Zimbabwe approved the establishment of the Parks and Wild Life Conservation Fund that provides for financing wildlife operations directly from revenues generated through wildlife-related activities. The funding for ZPWMA is therefore coming from revenue generated through sport hunting conducted on state and private lands, concession leases, National Park visitor fees, and other wildlife-related fees. While there have been requests by ZPWMA for funding from the central treasury in the past, to our knowledge, no other significant government funding has been provided, and only limited outside funding from NGOs or other governments appears to be available.

A major component of ZPWMA's mandate is law enforcement. ZPWMA had 2,146 rangers at its establishment in 2002 (ZPWMA 2016); however, by the end 2015, there were 1,448 rangers in post (67% of 2002 level). Of the 1,448 rangers in post, 1,004 are deployable for anti-poaching operations (ZPWMA 2016). Hunting operators are obligated through their concession lease agreements to assist with anti-poaching efforts (ZPWMA 2016). Reportedly, USD590,000 was spent on anti-poaching efforts by Bubye Valley Conservancy (BVC) alone during 2015 (K. Leathem, pers. comm., as cited in du Preez et al. 2016), and USD546,000 is spent annually on anti-poaching by Save Valley Conservancy (SVC) (Lindsey et al. 2012); these expenses are mainly covered by sport-hunting revenue (du Preez et al. 2016). If anyone is found in possession of poached specimens, they must pay a fine of USD5,000 or face a mandatory jail sentence. If convicted of lion poaching, courts could require the payment of a compensation fee of USD20,000 (ZPWMA 2014). Poaching mainly occurs along the boundaries of the protected areas where lions are incidentally snared as non-target prey. Between 2013 and 2015, 21 lions were killed illegally, with six animals killed through snaring in the area adjacent to Hwange National Park in 2015; poverty stands as the major driver of illegal hunting (ZPWMA 2016).

Zimbabwe is a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of trans-frontier conservation areas (TFCA), and facilitate community-based natural resources management practices. To implement the SADC Treaty, member states are required to establish management programs for the conservation and sustainable use of wildlife. According to the ZPWMA *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe*, Zimbabwe has two established TFCAs, the Great Limpopo Trans-frontier Park (GLTP), which includes Gonarezhou National Park, and the Limpopo/Shashe TFCA. Additionally, there are other TFCAs that are in various stages of development, including Lower Zambezi-Mana Pools, Zimbabwe-Mozambique-Zambia (ZiMoZa), Chimanimani, and the Kavango-Zambezi (KAZA) trans-frontier conservation

area (TFCA) initiative, which links 52 million hectares of conservation areas between itself, Botswana, Zambia, Namibia, and Angola (ZPMWA 2016; Masterson 2016). Through TFCAs, wildlife management entities are linking many of the major protected areas by removing boundary fences along national borders that separate many reserves in addition to creating or improving corridors to link good-quality habitat for wildlife (Newmark 2008). The principle of ecological and migratory connectivity lies at the heart of the TFCA initiative linking large protected areas across international boundaries and providing space for wildlife populations.

In addition to Zimbabwe's domestic laws, it is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zimbabwe provided a copy of their CITES non-detriment finding for lions. Their finding applied to all lion exports from Zimbabwe.

Current Lion Status in Zimbabwe: When the Service listed the lion in southern and eastern Africa as threatened under the ESA, three primary threats to the species throughout its range were identified: loss of habitat, loss of prey base, and human-lion conflict. While human population growth clearly has an impact due to lose of available habitat for lions, increasing human population has a direct impact on prey base. Prey availability affects the reproduction, recruitment, and foraging behavior of lions and, as a result, strongly influences lion movements, abundance, and population viability (Winterbach et al. 2012, as cited in USFWS 2015). Lion densities are directly dependent on prey biomass (Hayward et al. 2007). Outside of protected areas, the lion's prey base is much reduced (du Preez et al. 2016); inadequate management and law enforcement has led to poaching of the lion's prey base in Africa for bushmeat, which has been critically depleted (USFWS 2015). Population trends across eastern and southern Africa show that most prey species have declined in recent years, and for Zimbabwe droughts have been a critical factor (ZPWMA 2016). A reduced prey base results in a relatively greater chance of lions encountering livestock (du Preez et al. 2016). While actual losses of livestock to predators may be relatively low, the perceived financial cost to farmers can be high, and lions are persecuted intensely in livestock areas as a consequence. Their scavenging behavior makes them particularly vulnerable to the practice of lacing prey carcasses with poison to eliminate predators (CITES 2016). Co-existence of lions and people is promoted through giving value to lions, through tourism and hunting in CAMPFIRE areas (ZPWMA 2014). The threat to lions from habitat loss is especially present in Sebungwe and the South East Low Veld where the fragmented nature of the protected areas is compounded by increasing human and livestock populations surrounding these areas (ZPWMA 2016).

According to the Service's CoP17 *Consideration of Proposals for Amendment of Appendices I and II*, international trade in lion products is emerging as an additional threat; however, the relative extent to which this threat has contributed to lion population declines is difficult to evaluate accurately (CITES 2016). According to ZPWMA (2016), the illegal local and international trade in lions and their products poses an insignificant risk to the species in Zimbabwe, as there are no records of people found in possession of illegally acquired lion specimens in Zimbabwe. It is not clear what the level of legal trade, if any, occurs within Zimbabwe.

The bulk of Zimbabwe's wildlife occurs within the Parks Estate which includes 11 national parks, 16 safari areas, 16 recreational parks, 6 sanctuaries, 12 botanical reserves and 3 botanical gardens, all spread across the country (Parks and Wildlife Act 2001 Chapter 20:14). Wildlife populations

also occur on the state Forest Areas, Communal CAMPFIRE areas and private conservancies dedicated to wildlife-based land use. According to ZPWMA (ZPWMA 2016), there are approximately 319,317 km^2 of land where some form of wildlife based land use is practiced in Zimbabwe. Lions occur permanently in 45% of this available range (c. 145,00km^2), with the majority occurring in national parks (96% of the all national parks) and safari areas (92% of all safari areas). Lions also occur permanently in 47% of the State forest areas and 66% of privately owned conservancies. The CAMPFIRE areas comprise approximately 247,000km^2 and lions occur in 36% of these areas. Lion are transient in CAMPFIRE, conservancy and resettled areas adjacent to the major protected areas, and move across the border into Zambia, Mozambique, South Africa, and Botswana.

Zimbabwe's main lion range includes the Hwange-Matetsi Ecosystem, Mid Zambezi Valley, Sebungwe, and South East Lowveld. The lion population estimates in Zimbabwe are determined primarily through carnivore spoor surveys, systematic lion collaring, and call-up surveys. According to ZPWMA's *Conservation Status of the African lion (Panthera leo) in Zimbabwe* July 2014 report, starting in 2015, lion spoor surveys will be done at two-year intervals in all wildlife areas, and lion call-up surveys will be done every three years in all major lion areas (ZPWMA 2014). The Service has not received confirmation that these surveys have been conducted since 2015.

ZPWMA (ZPWMA 2016) has estimated that the minimum number of lions that occur on approximately 51,642km^2 of land where reliable survey data are available is approximately 1,900 (range 1,800 – 2,000). The western portion of the country, consisting primarily of Hwange National Park and the surrounding safari areas, forest areas, communal areas and private conservancies, supports approximately 737 lions (or 38% of the overall population). The southern portion of the country, dominated by the two major conservancies (Save and Bubye) and Gonarezhou National Park supports approximately 896 lions (48%). These numbers are supported by several studies. Groom et al. 2014 used call-up surveys to obtain direct estimates of the lion population within Gonarezhou National Park and compared actual lion densities with potential density estimates. In this study, while lions were only seen at five percent of calling stations, this equated to a population estimate of 33 lions, which is consistent with spoor survey results conducted in June 2010 (Groom et al. 2014). A 2015 spoor count survey of Gonarezhou National Park revealed an estimated 125 lions within the park (ZPWMA 2016). From 2007 to present, annual track index surveys at the SVC have been conducted using a standardized methodology (Groom and Watermeyer 2015, as cited in du Preez et al. 2016). Prey availability models suggest that the carrying capacity for this lion population is approximately 271 lions (Hayward et al. 2007). In 2015, the estimated population was 284 lions (du Preez et al. 2016). The Rifa Safari Area was surveyed using camera trapping and spoor counts in 2015, which supported an estimated population of 68 lions. The central and northern portions of the country reportedly support an estimated population of 284 lions (15%). The 12-year (2000-2011) average lion density per 100km^2 is 2.8 in Hwange National Park, 6.0 for South Eastern Lowveld in the SVC, 9.0 in Malilangwe, and 0.8 in Gonarezhou National Park (ZPWMA Annual Report 2013, as cited in ZPWMA 2014).

To manage any population to ensure an appropriate population level and determine whether sport hunting is having a positive effect, it is vital to have sufficient data on population numbers and population trends on which to base management decisions. According to Riggio et al. 2013 (pg.32), and Bjorklund in Riggio et al 2013 (p.32), the minimum number estimated to constitute a viable population is 500 individuals. Hwange National Park, with an estimated population of 559, is the

only area within Zimbabwe that has a viable population as laid out by Riggio et al. 2013. However, the two regions that make up the largest percentage of the country's lion population (Western 38% and Southern 48%) have regional populations of 737 and 896, respectively. The areas within the Central and Northern regions of Zimbabwe, albeit smaller, encompass parks that are part of Transfrontier Conservation Areas, such as the Mana Pools region.

Lion Management in Zimbabwe: In response to discussions surrounding a possible up-listing of lion to Appendix I under CITES at the 13th Meeting of the Conference of the Parties (CoP13), and subsequent workshops involving lion range states, IUCN, ZPWMA, and other key stakeholders held a workshop to develop the *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* which was published by ZPWMA in 2006. The plan responds to regional and international standards set by Treaties such as CITES and the Convention on Biological Diversity (CBD), among others. The plan states, "it will guide the conservation and management of this top predator" which "addresses the needs of th[e] country." The Service is not aware of any additional or updated iterations of the plan since 2006; however, in their 2016 response, *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe*, ZPWMA provides updates on the each of the outputs and respective targets established under the 2006 *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* (ZPWMA 2016).

The 2006 plan identifies a vision that "...lions should be conserved and managed sustainably for their aesthetic, cultural, and ecological values, and the socio-economic development of Zimbabwe." The plan lays out three broad targets to achieve this objective:

- Ensure the persistence of key lion populations and other important populations including those of doubtful viability.
- Human and livestock loss reduced.
- Optimize wildlife conservation-related net benefits to local communities.

All three targets are stepped down to seven specific outputs with their own targets and activities to meet such targets. Although the plan does not identify a time period, some activities do, of which a period of 5 years is the most common. In response to inquiries from the Service, ZPWMA provided a summary of the progress made to implement the 2006 strategy.

While all three of the broad targets appear to serve a valuable role in lion management in Zimbabwe, three of the specific outputs are most relevant to determining if the implementation of the strategy enhances the propagation or survival of the species, as required by the ESA for the issuance of import permits. The first output, "lion populations, their habitats and wild prey effectively conserved and managed in collaboration with local stakeholders" has been broken down into a number of targets: establish a baseline survey and monitoring program; maintain and strengthen capacity for lion conservation, management, monitoring and research; identify and implement best management standards and practices for the hunting program; develop and implement co-management frameworks; and expand the geographic distribution range of lions. According to ZPWMA (2016), baseline surveys have been completed for the Parks Estate using monitoring protocols for key variables (populations, habitats, prey), and selected surveys have been undertaken in areas outside National Parks. Active carnivore research programs conducted by NGOs and research institutions, such as WildCRU, are taking place in various parts of the country; in addition, personnel have been trained in data collection and capture, management, lion aging and analysis. Adaptive age-based criteria for male trophy animals are in place and functioning. The

quota for a certain year is determined by a point system based off the hunts from the previous season. Therefore, ZPWMA is actively working toward meeting the target areas for this output.

The second output, "human-lion related conflicts minimized and, where possible, eliminated" has also been broken down into a number of targets: develop and establish databases on lion-human conflicts; Identify and implement methods to reduce and mitigate livestock losses and lion attacks on humans; and train and properly staff problem animal control (PAC) units to conduct rapid response and precisely target problem animals. According to information from ZPWMA (2016), approaches to mitigate livestock losses and lion attacks on humans are in the process of being tested and implemented in Hwange and methods to mitigate lion attacks on livestock are being implemented as appropriate at selected sites (e.g. Tsholotshe). Data on PAC reports for lion-related problems have been collated, and PAC units at ZPWMA field station and/or RDC levels have been partially established. In Matusadona, Hwange, and Gonarezhou regions, specific awareness and education packages on lion conservation and management have been developed and implemented. The information submitted in the ZPWMA update suggests that they have met one target, and are in the process of implementing the remaining two.

The third output, "(t)he costs and benefits of long-term lion management equitably distributed," is a socio-economic output to establish agreement and implementation of area-specific lion management plans with identified stakeholders in each wildlife region, and implement a transparent mechanism to equitably distribute lion-related income to identified stakeholders." The specific targets for this output are: complete an inventory of stakeholders directly affected by lion conservation, deliver appropriate training and capacity building to prioritized stakeholders, agree to and implement collaboratively developed area-specific lion management plans with identified stakeholder groups in each wildlife region within 5 years, and implement transparent mechanisms to equitably distribute lion-related/generated income to identified stakeholders (groups and/or communities). Current information from ZPWMA shows that they have identified key stakeholders and assessed the financial impacts of lion conservation and the magnitude of socio-economic impacts on each stakeholder group. Limited training has been undertaken for representative stakeholders in Hwange, Matusadona, and Gonarezhou. ZPWMA has also implemented an adaptive management program across four wildlife regions and are in the progress of developing and implementing area-specific lion management plans with identified stakeholder groups. According to ZPWMA, a Management Plan for Hwange has been approved. However, the Service does not have a copy of this plan. With these updates, ZPWMA has made progress toward this output's targets.

The strategy also identifies roles and responsibilities for a number of players in Zimbabwe's lion conservation efforts. According to the strategy, there is a national lion coordinator that is to coordinate all national activities on lion conservation, research, and management including census surveys, setting up monitoring needs and coordinating data on human-lion conflicts. The strategy goes on to identify roles for the field stations, wardens, ecologists and utilization units, which are responsible for ensuring compliance with hunting regulations and maintaining safari-hunting databases. In addition, the strategy identifies roles for CAMPFIRE, safari operators, and professional hunters to facilitate training and ensure compliance with hunting regulations.

The Conservation Strategy and Action Plan for the Lion in Zimbabwe (ZPWMA 2006) borrows language from the *IUCN SSC Conservation Strategy* (2006). It iterates areas in need of improvement regarding lion conservation in Zimbabwe, including standardized lion census methods and surveys, further mitigating human-lion conflicts, and maximizing benefits for rural

communities that live with lions. ZPWMA (2006) notes their intention to review and put in place criteria for age-based identification of male trophy animals, but do not mention if they will be reviewing possible combination strategies. As part of the 2006 lion conservation strategy for eastern and southern Africa, six objectives were established to secure and restore sustainable lion populations, which were housed under the following categories: management, mitigation, socio-economics, policy and land-use, politics, and trade. The strategy was intended to be implemented within 10 years (Macdonald 2016), and Zimbabwe gave an update on progress regarding these objectives in their *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016) that also addressed outputs and targets laid out in their 2006 action plan.

Additionally, to mitigate human-lion conflict, the "Long Shields Guardian Programme" was initiated whereby communities are notified of movements of collared lions into their areas via cell phone, and then have the opportunity to take appropriate action, such as moving cattle. In 2013 alone, 1,850 warnings were passed to the "Long Shields." These actions may reduce the incidents of lions marauding livestock; however, retaliatory killing of lions still occur. Further, as is policy under The Parks and Wildlife Act of 2001, any lions that attack humans or livestock will be lethally eliminated (ZPWMA 2016). Between 2007 and 2013 a total of 1,113 conflict incidents were recorded in the Hwange area in which 915 head of stock were lost to lions.

Hunting and Utilization: Lions are infamously infanticidal (Schaller 1972, as cited in du Preez et al. 2016), which is often used as an argument against sport-hunting of the species (e.g. Packer et al. 2011), where it is feared that the removal of dominant males causes cub mortality that eventually results in lowered population recruitment and survival (Packer et al. 2009). Infanticide, however, may be less of an issue in terms of sport-hunting if age-appropriate males, past their prime and no longer territorial or with dependent cubs, are harvested (Whitman et al. 2004).

The minimum number of lions that occur in approximately 51,642km^2 of land in Zimbabwe, where reliable survey data are available, is estimated to be 1,917 (range 1,800 – 2,000), the majority of which occur in western and southern Zimbabwe. When taking this population estimate into consideration, trophy hunting harvests average 2.7% of adult male lions annually. This percentage has decreased since the establishment of age restrictions on lion hunting (ZPWMA 2016).

Trophy hunting of wildlife is permitted in safari areas, of which there are 16 in Zimbabwe (ZPWMA 2014). According to the Forest Act, Chapter 19:05, there are 24 gazetted indigenous forest areas in Zimbabwe; within these forest areas, lions may be hunted in the following forests: Fuller, Kazuma, Pandamasuwe, Ngamo, Sikumi, Gwayi, Sijarira, and Gwampa (ZPWMA 2014). In 2013, an adaptive quota management system for lion hunting based on the ages of lions hunted was agreed to in Harare, Zimbabwe, during a meeting hosted by ZPWMA and an independent non-governmental conservation organization (du Preez et al. 2016). After reviewing aging techniques, attendees at the July 2013 meeting in Harare, Zimbabwe, were confident that hunters could be expected to categorize lions as being below or above five years of age. In determining quotas for the following years, operators would be rewarded with increased quotas if they hunted animals of six years or older, would not be penalized if they hunted animals five years of age, but would have quotas cut if they hunted animals younger than five years old or if they failed to complete hunt returns (ZPWMA and Panthera 2014). In 2013, only 28% of lions hunted were five years old or older. In 2015, that figure rose to 77.3% (ZPWMA 2016). According to Hunter et al. (2013), an adaptive quota management system utilizing age-based criteria would not only aid in the prevention of over-harvesting lions, but would also prevent excessively conservative quotas. Further,

according to Miller et al. (2016), results indicate that age-based hunting is feasible for sustainably managing threatened and economically significant species such as the lion, but must be guided by rigorous training, strict monitoring of compliance and error, and conservative quotas. No single trait can be relied upon exclusively to precisely age lions. Rather, multiple traits must be examined in combination to cross-validate an individual's age and, according to Whitman et al. (2004), restricting hunting to individuals that are at least six years old is desirable from a biological perspective due to the reduced risk of the loss of pride males and infanticide of cubs associated with the harvest of such individuals (Whitman et al. 2004).

During 2013, operators were requested to submit hunt returns and photos as a trial run to get the adaptive quota system up and running. In 2014, operators were requested to do the same but were informed that the age of the lions hunted in 2014 would determine their lion quotas in 2015 (du Preez et al. 2016). In 2015, there was a marked increase in the age of lions hunted in Zimbabwe as a whole. The majority of lions hunted were on the cusp of 5-6 years of age but were not older than six years. National hunting offtakes for lions in Zimbabwe from 2013 to 2015 were 29, 42, and 47 respectively (Masterson 2016). It appears these do not include illegal forms of hunting offtake.

Previously, Zimbabwe set quotas for the hunting of female lions. Between 1998 and 2004, Zimbabwe maintained a mean quota of 0.3 ± 0.1/100 km^2 for female lions; during the same period, actual offtake was lower at 0.08 ± 0.1/100 km^2, or a mean of 30.6 percent of the quota actually harvested (Loveridge et al. 2007). However, females are the most productive portion of a population; if they are removed from a pride, there is inherent risk that dependent cubs will die and the overall breeding success of the pride will be reduced. Zimbabwe discontinued issuing quotas for female lions in 2011 (USFWS 2015). In 2011, Zimbabwe's quota was set at 101 lions; in 2014, it was reduced to 50 male lions following the implementation of age restrictions (Henschel 2015, pers. comm., as cited in USFWS 2015).

In setting adaptive lion quotas, Zimbabwe uses scientific information including spoor surveys, camera traps, and ranger-based sighting. In CAMPFIRE areas, incidences of human-lion conflict are also taken into consideration where survey information is not readily available, when determining quotas for those areas (ZPWMA 2014). The quota setting process involves all stakeholders, including the ZPWMA, landowners, safari operators, and CAMPFIRE managers and their representatives. During the annual quota-setting workshop, presentations are made by the proponents who then make proposals for quotas. Where it is felt that not enough information has been presented, however, a precautionary quota will still be issued (ZPWMA 2014). The Service is not aware of how precautionary quotas are treated after they are issued, or if there is a protocol for obtaining necessary information when a precautionary quota is put in place.

ZPWMA (2016) mentions seven concessions that are leased on five-year terms, and how these concessionaires pay a five-year "right to lease" fee, annual rental, fixed quota fee (payable if animals are shot or not) and a supplementary quota fee that allows additional animals to be bought as needed. It is unclear to what extent Zimbabwe still utilizes fixed quotas, as du Preez et al. claims fixed quotas are no longer being used by Zimbabwe, but a fixed quota fee is mentioned in ZPWMA (2016). It is also unclear how many animals concessionaires are able to "buy as needed," and how such requests may be accommodated without going over the national quota (ZPWMA 2016).

Between 1999 and 2004, data were collected in and around Hwange National Park that suggested that hunting surrounding the park was having a negative impact on the lion population. Therefore,

sport hunting of lions was suspended in the area surrounding the park between 2005 and 2009. Following the lifting of the moratorium, and by implementing stricter monitoring and hunting guidelines through the Hwange Lion Research Project, the overall Hwange lion population has continued to show a positive trend, and is now estimated at over 550 animals (ZPWMA 2015).

CAMPFIRE is the program through which the Zimbabwean Government has developed the management of wildlife resources to communal farmers. As of July 2014, there are at least 58 Rural Districts that have been granted the Appropriate Authority status to manage wildlife resources in their areas; however, according to *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016), only 16 are actively engaged in some form of wildlife-based land use (ZPWMA 2016). Lions are found in communal areas that are adjacent to major protected areas, and lion hunting is allowed in CAMPFIRE districts (ZPWMA 2014). According to EcoWeb (2015), all income generated by trophy hunting in CAMPFIRE areas was distributed to communities (52%, when they are typically prescribed 55%), rural district councils (RDCs) (44%, when they are typically prescribed 41%), and the CAMPFIRE association (4%). Communities, rather than dividing income by households, typically invest in projects that benefit the communities as a whole, such as schools, clinics, and grinding mills. Councils use funding for patrols, monitoring of hunts, problem animal control, water, and fire management, while the CAMPFIRE association uses their funding to cover administrative costs and representation of the program (EcoWeb 2015).

As agreed upon at the 2013 lion management meeting in Harare, the CAMPFIRE areas in which lions occur are currently exempted from the age restrictions. This approach was adopted as a means of ensuring that impoverished communities obtain the opportunity to benefit from the presence of lions, recognizing the potential negative impacts the species has on the livelihoods of livestock farmers (ZPWMA 2016). According ZWPMA's 2016 response, between 2010 and 2015, lions accounted for 2% of the total income generated from hunts conducted on CAMPFIRE lands and trophy fees accounted for 74% of the total funds generated for CAMPFIRE. Further, U.S. hunters accounted for 51% of the funds generated from hunting in CAMPFIRE areas during the same period. While hunting is allowed in CAMPFIRE areas, it is unclear if American sport hunters conduct lion hunts in these areas; if so, the Service is not aware if sport hunters are exempted from the age restriction in this case, and how this exemption in CAMPFIRE areas is taken into consideration when setting quotas for other portions of the country.

According to the Revised CAMPFIRE Revenue Sharing Guidelines, which were incorporated into the Constitution of the CAMPFIRE Association in 2007, at least 55% of generated revenue from hunting should be devolved to producer communities, no more than 26%, and 15% for management and overhead at RDC level, respectively, and 4% as a levy to the CAMPFIRE Association. According to an undated document (but presumably produced in late 2014, since it references data from 2014 but does not include any references to 2015 data) produced by CAMPFIRE (CAMPFIRE report undated) at least 10 RDCs comply with the Revenue Guidelines.

According to *The Role of Trophy Hunting of Elephant in Support of the Zimbabwe CAMPFIRE Program – December 2016*, a report the Service received on December 17, 2016, the Reserve Bank of Zimbabwe, in collaboration with relevant stakeholders, has established the Tourism Receipts Accounting System (TRAS) that required all outfitters to submit returns listing the revenue generated for hunting activities. This system has been in place for several years, but required manual analysis of the data to extract information on hunting revenue. In January 2015, to account

fully for earnings in the hunting sector, the Reserve Bank of Zimbabwe, in collaboration with relevant stakeholders, introduced the Tourism Receipts Accounting System (TRAS2) a web-based system (TRAS2) that links Safari Operators, ZPWMA Authority, Taxidermists, Shipping Agents, International Marketing Agents, and Reserve Bank. Under this system, all authorized hunts are registered, allowing for the capture of hunting data, such as the origin of clients, value of trophies and hunts, and area hunted, to monitor hunting quota utilization and track hunted trophies. According to the December 2016 report, the Exchange Control Division of the Reserve Bank of Zimbabwe and the ZPWMA are now able to:

1. Assess regional price differentials of similar hunts and the reasons thereof;
2. Present TRAS2 system updates and reports to the users, including international marketing agents;
3. Engage with international marketing agents of sport hunting;
4. Obtain relevant insights on governing of the hunting sector; and
5. Come up with an effective mechanism to fully account for export proceeds from the hunting sector.

The TRAS2 information was utilized in *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016) to provide a breakdown of the source of hunting income, and the amount of funds generated by trophy fees by land category, among other insights, and has proven the TRAS2 system's ability to obtain relevant insights on governing of the hunting sector.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria based on information available to the Service, we have been able to determine that sport-hunted lion trophies taken in 2016 and 2017 would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

Zimbabwe's lion hunting industry generated 9% of all sport hunting revenue in 2015; 51% was contributed by U.S. hunters during 2010-2015 country-wide, and 90% of the sport-hunting market in BVC and SVC during 2005-2015. Based on the information available to the Service, the participation of communities in CAMPFIRE has heralded a reversal in wildlife declines on private land. When the benefits of CAMPFIRE were extended to RDCs, it further aided in the equitable distribution of benefits from trophy hunting to local communities, which incentivizes them to conserve the African lion. In the case of SVC, without the hunting industry, these wildlife areas, which have become conservation havens in the threat of human encroachment across much of Zimbabwe, would not be economically viable, and therefore would not exist.

There was conflicting information presented to the Service on how many lions were included in the quota in 2015. du Preez et al. (2016) reports a national lion hunting quota of 85 with 39 hunted;

ZPWMA (2016) reports that the national lion hunting quota in 2015 was 82 lions, with 49 hunted. When evaluating the lower quota with higher utilization reported by ZPWMA (2016), and taking into consideration the land area of the Parks Estate alone, Zimbabwe did not exceed the best management practice of 0.5 lions/1,000 km^2; the 2015 offtake would have accounted for 0.125 lions/1,000 km^2.

Zimbabwe also has taken into consideration other best management practices, including age-based criteria for an adaptive management strategy, and takes past performance of hunting organizations into consideration when determining future quotas.

Further, sport hunting was essential for the successful transition of SVC from cattle to wildlife (du Preez et al. 2016), in that it provided monetary benefits for the conservation of lions and local communities. BVC donates over 45 tons of meat from sport hunting to the local communities each year. This meat donation is worth over USD100,000 per year. BVC also supports several schools, clinics, and community projects in the three surrounding districts of Mwenezi, Maranda, and Jopempe. The local community sees a direct benefit from the wildlife in BVC, but is also empowered by job opportunities created both with these community projects, as well as on BVC (du Preez et al. 2016).

While Zimbabwe's hunting industry generated approximately 8 million in 2015, not all of this is connected to lion hunting or to U.S. hunters. However, lions are a key component of the hunting industry since they are part of the "Big 5" trophies and draw U.S. hunters to Zimbabwe. Based on the information available to the Service, the funds generated by hunting trophies contribute to the ZPWMA's ability to manage the country's lion populations as well as the success of CAMPFIRE. It appears that without the hunting industry, it would not be economically viable to maintain lions. Although U.S. hunter participation in lion hunts is not enough to make or break the industry, U.S. hunters have played a significant role in the industry in Zimbabwe, previously making up 51% of all hunting in Zimbabwe and 72% of lion hunts within the country. As such, the removal of their participation could have a long-term negative impact.

Further, through the *Strategy and Action Plan*, Zimbabwe has put into place mechanisms to adequately oversee the harvest of lions in Zimbabwe. With an annual harvest of approximately 85 lions, Zimbabwe is not exceeding the limits identified of 0.5 lions/1,000 sq. km. The objectives of the *Strategy and Action Plan* and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that Zimbabwe has established for managing lions. The Service will continue to monitor the effectiveness of the Strategy and Action Plan, and revise our finding as appropriate.

Therefore, based on the information available to the Service. and provided that the reserve where the lion was taken was properly permitted and in compliance with national and local regulations, the purpose for which a permit being requested is adequate to justify removing lions from the wild or otherwise changing their status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit</u>:

The total area under wildlife-based land use and conservation in Zimbabwe amounts to 10.7 million hectares, and represents 27% of the total surface area of the country. Of this, 7.9 million

hectares, or 75% of all conservation land in the country, falls under safari hunting as the primary or only source of revenue. With the CAMPFIRE program, private landholders and RDCs are given the opportunity to benefit from the wildlife on their land, including lion, and incentivize them to conserve the species. Sport hunting of lions by U.S. hunters supports the programs in Zimbabwe that provide the opportunity for locals to see value in lions, which in turn conserve the species in the long-term.

A scientifically based quota is the number of a given species that can be removed from a specific population without damaging the biological integrity and sustainability of that population (WWF 1997). However, full implementation and enforcement of the age-based strategy could potentially cause the need for quotas to become irrelevant or eliminated (USFWS 2015). Age restrictions will naturally restrict offtake to a limited number of individuals that meet the age criteria (Loveridge et al. 2007, Whitman et al. 2004).

Based on the information provided to the Service, it is clear that Zimbabwe has made strides in their management of their lion populations. Although prior to 2011, Zimbabwe allowed the hunting of lionesses and males under 5 years old, they made significant changes to ensure their hunting program is sustainable. In 2011, Zimbabwe restricted the hunting of female lions. In 2013, they proposed an adaptive age-based quota-setting process. In 2015, the development TRAS2 allowed the country to assess regional price differentials of similar hunts and the reasons thereof; present TRAS2 system updates and reports to the users, including international marketing agents; engage with international marketing agents of sport hunting; obtain relevant insights on governing of the hunting sector; and come up with an effective mechanism to fully account for export proceeds from the hunting sector.

According to CITES trade data and Service records, from 2011 to 2016, there were 223 lion trophies imported to the U.S. from Zimbabwe. Best practice would be to import only male lions, as pointed out by Macdonald (2016), but Zimbabwe has already taken the initiative by placing a moratorium on lioness hunting. The fixed-quota concept, in which hunting quotas had to be paid for upfront before the hunting season begins, and results in poor quality trophies and young animals being hunted, has also been abandoned (du Preez et al. 2016). Zimbabwe appears to be transparent in their implementation of the age-based adaptive management strategy (USFWS 2015). The adaptive quota management system for lion hunting based on the ages of lions hunted has been accepted and embraced by all stakeholders. This adaptive quota management system has not only led to a reduced national lion hunting quota, but has also resulted in a significant increase in the age of harvested lions to a level that is considered to have a reduced ecological impact (du Preez et al. 2016).

Between 2005 and 2015, the U.S. market has represented over 90% for the sport-hunting market in both BVC and SVC. If this market was effectively lost due to an inability of prospective clients to import their trophies, it would become unviable to continue managing BVC as a wildlife area in its current form (du Preez et al. 2016). Across all CAMPFIRE districts, from 2010 to 2015, there was a total quota of 140 lions, with actual offtake equaling 45 animals. During this same period, U.S. sport hunters apparently accounted for 51% of Zimbabwe's sport hunting clients; trophy fees represented 74% of CAMPFIRE income, of which lions play a small role. In 2015, lion sport hunting generated USD753,000 in revenue, which accounted for about 9% of all sport hunting revenue in Zimbabwe that year (ZPWMA 2016).

Evaluating the information provided by the Zimbabwe government and other sources, it appears that the hunting program in Zimbabwe is addressing the three main threats that were identified by the Service when making the determination that the species was threatened with the possibility of extinction. The hunting areas are maintaining habitat for lions and ensuring that there is no further loss, provided that the hunting areas can remain economically viable. In order to maintain a viable population of lions, the parks, safari, and CAMPFIRE areas must maintain biodiversity and a sustainable prey base. Finally, Zimbabwe is actively working to reduce human-lion conflicts and the number of lions killed in retaliation for killing livestock. Therefore, the management of lions with in Zimbabwe and the limited hunting of lions contributes to the on-going survival of the species in Zimbabwe.

Provided that the off-take of lions continues to be monitored and the actions identified in the Strategy and Action Plan continue to be implemented, the participation of U.S. hunters in lion hunts would provide an indirect benefit to wild populations by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for a legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

As stated above, Zimbabwe is monitoring and controlling the harvest of lions through permitting under their regulations and through the Strategy and Action Plan. The issuance of import permits for lions legally hunted under these authorities would not conflict with any programs intended to enhance the survival probability of the species in Zimbabwe. If import permits for sport hunted lion trophies from Zimbabwe were to be issued, it would work in favor of, not against, the principal acts governing lion conservation in Zimbabwe. Furthermore, sport hunting opportunities for hunters in CAMPFIRE districts would help local communities realize the value in conserving the African lion.

Therefore, based on the information available to the Service, the issuance of import permits for legally hunted lions does not conflict with known conservation programs and rules.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

With limited, controlled off-take of lions in a manner that would maintain sustainability, the legal hunting activities that U.S. hunters would be involved in would contribute to reducing the threat of extinction of lions. This off-take must be monitored to ensure that it is sustainable and that, to the extent possible, normal lion behavior and ecology are not negatively impacted. It appears that the permitting activities under Zimbabwe's laws and CITES, as well as the implementation of the adaptive age-based lion quota, and a continuation of implementation of the outputs in the *Strategy and Action Plan* will ensure the long-term survival of lions. The utilization of hunters to manage the populations on the reserves is an important element of the success of lion management in Zimbabwe.

Therefore, based on the information available to the Service, the issuance of import permits for legally hunted lions does not conflict with known conservation programs and rules.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be received through a scientifically based hunting program for lions.

Based on the information available to the Service, there is general support by scientists and other persons or organizations having expertise concerning lions that the legal harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

While, over the years, ZPWMA has failed to generate adequate revenue for its operations, U.S. sport hunters play a large role in the hunting industry of Zimbabwe. The Service anticipates that by granting the importation of sport-hunted lion trophies, there would be an increase in funds provided to Zimbabwe's conservation initiatives through this program by U.S. sport hunters. ZPWMA has also been forthcoming in involving relevant stakeholders as well as independent researchers and non-governmental organizations in determining best management practices.

Therefore, based on the information available to the Service, Zimbabwe has the proper expertise, facilities, and other resources to accomplish the objectives laid out in their *Strategy and Action Plan* to enhance the propagation and survival of the species, partly through the utilization of funds generated by U.S. hunters' participation in lion hunts throughout the country.

Conclusion

Given the current status of lions within Zimbabwe and the level of management and oversight provided to them, the Service is able to find that the harvest and import of sport-hunted trophies of lions within Zimbabwe meet the purposes of the ESA. As stated earlier, each application received by the Service for the import of a sport-hunted trophy lion from Zimbabwe will be evaluated on a case-by-case basis. The applicant must have hunted on a properly licensed hunting area within Zimbabwe. The Government of Zimbabwe must continue to implement the *Strategy and Action Plan* in the manner identified in the documents. The on-going adaptive management and limited off-take of lions is important to the survival of lions in Zimbabwe and the Service will reassess lion management within Zimbabwe and whether the importation of sport-hunted trophies enhance the survival of the species at the end of the 2018 hunting season or at which time substantive information becomes available to the Service in the interim.

Although the Service is able to make a finding that the management of lions within Zimbabwe meet the enhancement criteria under the ESA, there are certain documents and data the Service needs to evaluate in order to continue our current finding past the 2018 hunting season. The Service expects to be able to review data from the 2016, 2017, and 2018 hunting seasons to assess the lion populations and ensure that management efforts are enhancing the propagation and survival of the lion within Zimbabwe. Given that Zimbabwe's last management plan for lion was produced in 2006, the Service would like to see an updated plan established. Local management plans, such as the Management Plan for Hwange National Park will be sought. Although Zimbabwe has made progress on their 2006 *Strategy and Action Plan*, the Service will seek updates on further progress of the outputs or targets not yet accomplished. Lastly, the Service will also seek an update on the quota setting process. Specially, we will need further information on the establishment and implementation of precautionary quotas.

Therefore, with the information currently available to the Service, the Service is able to make a determination that the import of lions taken in Zimbabwe in 2016, 2017 and 2018 would meet the issuance criteria under 50 CFR 17.32. In accordance with the 4(d) rule for *P. l. melanochaita*, 50 CFR 17.40(r), the Service will review each application received for import of such specimens on a case-by-case basis and each application will also need to meet all other applicable permitting requirements before it may be authorized.

Enhancement Finding
Applicant: Michael Joseph McGinnis, Jr (PRT – 92335C)

Michael Joseph McGinnis, Jr submitted an application on May 22, 2018, for the importation of one male lion (*Panthera leo melanochaita*) taken from Mashonaland West, RiFa Safari Area, Hurungwe, Zimbabwe, for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the Government of Zimbabwe, other information available to the U.S. Fish & Wildlife Service (Service), and comments received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken during May 20, 2017, from this population meets the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472). On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r) (USFWS 2015; 80 Fed. Reg. 79999). The effective date of this listing is January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zimbabwe, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive,

carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 50 CFR 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zimbabwe, but only if it first makes a finding that permitting the import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P.l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinient to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P.l. melanochaita* taken in Zinmbabwe.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [50 CFR 17.32(a)(2)] , but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provides a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. McGinnis' application involving a *P. l. melanochaita* sport-hunted trophy taken in Zimbabwe, in the context of enhancement of propagation or survival in accordance

with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P. l. melanochaita.* This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.
>
> (b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and

other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of sport-hunted trophies of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentives*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities and encourage community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. McGinnis' trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zimbabwe's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether trophies taken as part of that program meet the issuance criteria, we study a number of factors. Some of the factors we consider

include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We consider whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. A component of a management plan from which trophy imports would meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities and incentives to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examine if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria of 50 CFR 17.32 (a)(2), we will examine if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We will also consider how a U.S. hunter, in this case Mr. McGinnis' participation in the hunting program contributes to the overall management of lions within a country.

The management program in Zimbabwe for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 1, 2016, the Service sent a letter to the Parks and Wildlife Management Authority in Zimbabwe (ZPWMA) with a list of questions related to management plans, population status, conservation, management, hunting policies, and regulations of Zimbabwe's lion populations. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), as it provides useful principles which, when considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement finding for permitting importation of sport-hunted lion trophies.

On February 16, 2016, the Service sent a second request to ZPWMA for specific documents related to the conservation status of lions in Zimbabwe. ZPWMA responded to the Service's request on February 17, 2016, with a copy of *Conservation Status of African Lion in Zimbabwe*, and subsequently, on November 29, 2016, provided a copy of *Enhancement and Non-detriment Finding for Lion (Panthera leo) in Zimbabwe*. The Service has also been corresponding with ZPWMA

regarding African elephant management for several years. In this correspondence, ZPWMA, as well as other sources, have provided the Service with documents and information that are relevant to our evaluation of lions in Zimbabwe. These documents, along with the Service's own final rule on the lion listing under the Act, as well as other relevant information from reliable sources and contained in comments received from interested parties, were the basis of this finding.

Governance of Lions in Zimbabwe: The legal framework for Zimbabwe's regulatory mechanism is informed by the Wildlife Policy (1992), which is intended to maintain a protected area network for the conservation of the nation's wild resources and biological diversity. The Wildlife Policy (1992) provides for the Government of Zimbabwe to maintain a network of protected areas known as the Parks and Wild Life Estate, comprised of the country's National Parks, safari areas, botanical gardens, and sanctuary and recreational areas, for the conservation of the nation's wild resources and biological diversity (CITES 2016; ZPWMA 2016). It is intended to create economic activity to enhance rural development and encourages the conservation of wild animals and their habitats outside the protected areas.

ZPWMA was established by the Parks and Wildlife Act of 1996 (Chapter 20:14) [as amended by Act Number 19 of 2001] which came into operation on June 1, 2002, through Statutory Instrument 144C of 2002. The Act provides for the establishment of a Parks and Wildlife Board; establishment of national parks, botanical reserves, botanical gardens, sanctuaries, safari areas and recreational parks; and the preservation, conservation, propagation or control of wildlife, fish, and plants of Zimbabwe and the protection of her natural landscape and scenery. The Parks and Wild Life Act includes sections on virtually every aspect of ZPWMA, including requirements for annual financial audits and reporting to the central government. The Parks and Wild Life Act also provides for substantial penalties for the unlawful possession of or trading in protected wildlife species. In addition, the General Laws Amendment Act (No. 5) of 2010 provides for mandatory imprisonment for poaching.

The Parks and Wildlife Act, Chapter 20:14, devolved authority to manage and benefit from wildlife on communal and private lands to the landholders. In 1982, the legal provisions of this Act were extended to Rural District Councils (RDCs), on behalf of rural communities in communal lands whose areas contain viable populations of wildlife. Communal areas in Zimbabwe are administered by RDCs, which have become a mechanism for implementation of the government's policy of conservation by utilization of natural resources. It enables local communities to manage and benefit from wildlife resources through the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE) established in 1989. CAMPFIRE was developed to encourage reduction in human-wildlife conflicts through conservation-based community development and to provide an economic incentive to improve community tolerance of wildlife, including lions. At the time, the CAMPFIRE program was the model for community-based conservation efforts in several other African countries and was identified as an innovative program. Under a community-based conservation program, like CAMPFIRE, rural communities should benefit from revenue generated by sport-hunting.

As Zimbabwe's premiere wildlife agency, the main functions of the ZPWMA are to control, manage and maintain Zimbabwe's wildlife resources and perform the service function with the primary role of protecting and conserving Zimbabwe's natural heritage for present and future generations on behalf of the State. It also provides the cornerstone of Zimbabwe's tourism industry (ZPWMA 2015). The rationale behind the establishment of the ZPWMA was to allow for a self-

funding mechanism, and thereby reduce its dependence on the national treasury. In January 1996, the Government of Zimbabwe approved the establishment of the Parks and Wild Life Conservation Fund that provides for financing wildlife operations directly from revenues generated through wildlife-related activities. The funding for ZPWMA is therefore coming from revenue generated through sport hunting conducted on state and private lands, concession leases, National Park visitor fees, and other wildlife-related fees. While there have been requests by ZPWMA for funding from the central treasury in the past, to our knowledge, no other significant government funding has been provided, and only limited outside funding from NGOs or other governments appears to be available.

A major component of ZPWMA mandate is law enforcement. ZPWMA had 2,146 rangers at its establishment in 2002 (ZPWMA 2016); however, by the end 2015, there were 1,448 rangers in post (67% of 2002 level). Of the 1,448 rangers in post, 1,004 are deployable for anti-poaching operations (ZPWMA 2016). Hunting operators are obligated through their concession lease agreements to assist with anti-poaching efforts (ZPWMA 2016). Reportedly, USD590,000 was spent on anti-poaching efforts by Bubye Valley Conservancy (BVC) alone during 2015 (K. Leathem, pers. comm., as cited in Du Preez et al. 2016), and USD546,000 is spent annually on anti-poaching by Save Valley Conservancy (SVC) (Lindsey et al. 2012); these expenses are mainly covered by sport-hunting revenue (Du Preez et al. 2016). If anyone is found in possession of poached specimens, they must pay a fine of USD5,000 or face a mandatory jail sentence. If convicted of lion poaching, courts could require the payment of a compensation fee of USD20,000 (ZPWMA 2014). Poaching mainly occurs along the boundaries of the protected areas where lions are incidentally snared as non-target prey. Between 2013 and 2015, 21 lions were killed illegally, with six animals killed through snaring in the area adjacent to Hwange National Park in 2015; poverty stands as the major driver of illegal hunting (ZPWMA 2016).

Zimbabwe is a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of trans-frontier conservation areas (TFCA), and facilitate community-based natural resources management practices. To implement the SADC Treaty, member states are required to establish management programs for the conservation and sustainable use of wildlife. According to the ZPWMA *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe*, Zimbabwe has two established TFCAs, the Great Limpopo Trans-frontier Park (GLTP), which includes Gonarezhou National Park, and the Limpopo/Shashe TFCA. Additionally, there are other TFCAs that are in various stages of development, including Lower Zambezi-Mana Pools, Zimbabwe-Mozambique-Zambia (ZiMoZa), Chimanimani, and the Kavango-Zambezi (KAZA) trans-frontier conservation area (TFCA) initiative, which links 52 million hectares of conservation areas between itself, Botswana, Zambia, Namibia, and Angola (ZPMWA 2016; Masterson 2016). Through TFCAs, wildlife management entities are linking many of the major protected areas by removing boundary fences along national borders that separate many reserves in addition to creating or improving corridors to link good-quality habitat for wildlife (Newmark 2008). The principle of ecological and migratory connectivity lies at the heart of the TFCA initiative linking large protected areas across international boundaries and providing space for wildlife populations.

In addition to Zimbabwe's domestic laws, it is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species

can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zimbabwe provided a copy of their CITES non-detriment finding for lions. Their finding applied to all lion exports from Zimbabwe.

Current Lion Status in Zimbabwe: When the Service listed the lion in southern and eastern Africa as threatened under the Act, three primary threats to the species throughout its range were identified: loss of habitat, loss of prey base, and human-lion conflict. While human population growth clearly has an impact due to lose of available habitat for lions, increasing human population has a direct impact on prey base. Prey availability affects the reproduction, recruitment, and foraging behavior of lions and, as a result, strongly influences lion movements, abundance, and population viability (Winterbach *et al.* 2012, as cited in USFWS 2015). Lion densities are directly dependent on prey biomass (Hayward *et al.* 2007). Outside of protected areas, the lion's prey base is much reduced (Du Preez et al. 2016); inadequate management and law enforcement has led to poaching of the lion's prey base in Africa for bushmeat, which has been critically depleted (USFWS 2015). Population trends across eastern and southern Africa show that most prey species have declined in recent years, and for Zimbabwe, droughts have been a critical factor (ZPWMA 2016). A reduced prey base results in a relatively greater chance of lions encountering livestock (Du Preez et al. 2016). While actual losses of livestock to predators may be relatively low, the perceived financial cost to farmers can be high, and lions are persecuted intensely in livestock areas as a consequence. Their scavenging behavior makes them particularly vulnerable to the practice of lacing prey carcasses with poison to eliminate predators (CITES 2016). Co-existence of lions and people is promoted through giving value to lions, through tourism and hunting in CAMPFIRE areas (ZPWMA 2014). The threat to lions from habitat loss is especially present in Sebungwe and the South East Low Veld where the fragmented nature of the protected areas is compounded by increasing human and livestock populations surrounding these areas (ZPWMA 2016).

According to the Service's CoP17 *Consideration of Proposals for Amendment of Appendices I and II*, international trade in lion products is emerging as an additional threat; however, the relative extent to which this threat has contributed to lion population declines is difficult to evaluate accurately (CITES 2016). According to ZPWMA (2016), the illegal local and international trade in lions and their products poses an insignificant risk to the species in Zimbabwe, as there are no records of people found in possession of illegally acquired lion specimens in Zimbabwe. It is not clear what the level of legal trade, if any, occurs within Zimbabwe.

The bulk of Zimbabwe's wildlife occurs within the Parks Estate which includes 11 national parks, 16 safari areas, 16 recreational parks, 6 sanctuaries, 12 botanical reserves and 3 botanical gardens, all spread across the country (Parks and Wildlife Act 2001 Chapter 20:14). Wildlife populations also occur on the state Forest Areas, Communal CAMPFIRE areas and private conservancies dedicated to wildlife-based land use. According to ZPWMA (ZPWMA 2016), there are approximately 319,317 km^2 of land where some form of wildlife based land use is practiced in Zimbabwe. Lions occur permanently in 45% of this available range (c. 145,00km^2), with the majority occurring in national parks (96%) and safari areas (92%). Lions also occur permanently in 47% of the State forest areas and 66% of privately owned conservancies. The CAMPFIRE areas comprise approximately 247,000km^2 and lions occur in 36% of these areas. Lions are transient in CAMPFIRE, conservancy and resettled areas adjacent to the major protected areas, and move across the border into Zambia, Mozambique, South Africa, and Botswana.

Zimbabwe's main lion range includes the Hwange-Matetsi Ecosystem, Mid Zambezi Valley, Sebungwe, and South East Lowveld. The lion population estimates in Zimbabwe are determined primarily through carnivore spoor surveys, systematic lion collaring, and call-up surveys. According to ZPWMA's *Conservation Status of the African lion (Panthera leo) in Zimbabwe* July 2014 report, starting in 2015, lion spoor surveys will be done at two-year intervals in all wildlife areas, and lion call-up surveys will be done every three years in all major lion areas (ZPWMA 2014). The Service has not received confirmation that these surveys have been conducted since 2015.

ZPWMA (ZPWMA 2016) has estimated that the minimum number of lions that occur on approximately 51,642km^2 of land where reliable survey data are available is approximately 1,900 (range 1,800 – 2,000). The western portion of the country, consisting primarily of Hwange National Park and the surrounding safari areas, forest areas, communal areas and private conservancies, supports approximately 737 lions (or 38% of the overall population). The southern portion of the country, dominated by the two major conservancies (Save and Bubye) and Gonarezhou National Park supports approximately 896 lions (48%). These numbers are supported by several studies. Groom et al. 2014, used call-up surveys to obtain direct estimates of the lion population within Gonarezhou National Park and compared actual lion densities with potential density estimates. In this study, while lions were only seen at five percent of calling stations, this equated to a population estimate of 33 lions, which is consistent with spoor survey results conducted in June 2010 (Groom et al. 2014). A 2015 spoor count survey of Gonarezhou National Park revealed an estimated 125 lions within the park (ZPWMA 2016). From 2007 to present, annual track index surveys at the SVC have been conducted using a standardized methodology (Groom and Watermeyer 2015, as cited in Du Preez et al. 2016). Prey availability models suggest that the carrying capacity for this lion population is approximately 271 lions (Hayward et al. 2007). In 2015, the estimated population was 284 lions (Du Preez et al. 2016). The Rifa Safari Area was surveyed using camera trapping and spoor counts in 2015, which supported an estimated population of 68 lions. The central and northern portions of the country reportedly support an estimated population of 284 lions (15%). The 12-year (2000-2011) average lion density per 100km^2 is 2.8 in Hwange National Park, 6.0 for South Eastern Lowveld in the SVC, 9.0 in Malilangwe, and 0.8 in Gonarezhou National Park (ZPWMA Annual Report 2013, as cited in ZPWMA 2014).

To manage any population to ensure an appropriate population level and determine whether sport hunting is having a positive effect, it is vital to have sufficient data on population numbers and population trends on which to base management decisions. According to Riggio et al. 2013 (p.32), and Bjorklund in Riggio et al 2013 (p.32), the minimum number estimated to constitute a viable population is 500 individuals. Hwange National Park, with an estimated population of 559, is the only area within Zimbabwe that has a viable population as laid out by Riggio et al. 2013. However, the two regions that make up the largest percentage of the country's lion population (Western 38% and Southern 48%) have regional populations of 737 and 896, respectively. The areas within the Central and Northern regions of Zimbabwe, albeit smaller, encompass parks that are part of Transfrontier Conservation Areas, such as the Mana Pools region.

Lion Management in Zimbabwe: In response to discussions surrounding a possible up-listing of lion to Appendix I under CITES at the 13th Meeting of the Conference of the Parties (CoP13), and subsequent workshops involving lion range states, IUCN, ZPWMA, and other key stakeholders held a workshop to develop the *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* which was published by ZPWMA in 2006. The plan responds to regional and

international standards set by Treaties such as CITES and the Convention on Biological Diversity (CBD), among others. The plan states, "it will guide the conservation and management of this top predator" which "addresses the needs of th[e] country." The Service is not aware of any additional or updated iterations of the plan since 2006; however, in their 2016 response, *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe*, ZPWMA provides updates on each of the outputs and respective targets established under the 2006 *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* (ZPWMA 2016).

The 2006 plan identifies a vision that "...lions should be conserved and managed sustainably for their aesthetic, cultural, and ecological values, and the socio-economic development of Zimbabwe." The plan lays out three broad targets to achieve this objective:

- Ensure the persistence of key lion populations and other important populations including those of doubtful viability.
- Human and livestock loss reduced.
- Optimize wildlife conservation-related net benefits to local communities.

All three targets are stepped down to seven specific outputs with their own targets and activities to meet such targets. Although the plan does not identify a time period, some activities do, of which a period of 5 years is the most common. In response to inquiries from the Service, ZPWMA provided a summary of the progress made to implement the 2006 strategy.

While all three of the broad targets appear to serve a valuable role in lion management in Zimbabwe, three of the specific outputs are most relevant to determining if the implementation of the strategy enhances the propagation or survival of the species, as required by the Act for the issuance of import permits. The first output, "lion populations, their habitats and wild prey effectively conserved and managed in collaboration with local stakeholders" has been broken down into a number of targets: establish a baseline survey and monitoring program; maintain and strengthen capacity for lion conservation, management, monitoring and research; identify and implement best management standards and practices for the hunting program; develop and implement co-management frameworks; and expand the geographic distribution range of lions. According to ZPWMA (2016), baseline surveys have been completed for the Parks Estate using monitoring protocols for key variables (populations, habitats, prey), and selected surveys have been undertaken in areas outside National Parks. Active carnivore research programs conducted by NGOs and research institutions, such as WildCRU, are taking place in various parts of the country; in addition, personnel have been trained in data collection and capture, management, lion aging and analysis. Adaptive age-based criteria for male trophy animals are in place and functioning. The quota for a certain year is determined by a point system based off the hunts from the previous season. Therefore, ZPWMA is actively working toward meeting the target areas for this output.

The second output, "human-lion related conflicts minimized and, where possible, eliminated" has also been broken down into a number of targets: develop and establish databases on lion-human conflicts; Identify and implement methods to reduce and mitigate livestock losses and lion attacks on humans; and train and properly staff problem animal control (PAC) units to conduct rapid response and precisely target problem animals. According to information from ZPWMA (2016), approaches to mitigate livestock losses and lion attacks on humans are in the process of being tested and implemented in Hwange, and methods to mitigate lion attacks on livestock are being

implemented as appropriate at selected sites (e.g. Tsholotshe). Data on PAC reports for lion-related problems have been collated, and PAC units at ZPWMA field station and/or RDC levels have been partially established. In Matusadona, Hwange, and Gonarezhou regions, specific awareness and education packages on lion conservation and management have been developed and implemented. The information submitted in the ZPWMA update suggests that they have met one target, and are in the process of implementing the remaining two.

The third output, "the costs and benefits of long-term lion management equitably distributed," is a socio-economic output to establish agreement and implementation of area-specific lion management plans with identified stakeholders in each wildlife region, and implementing a transparent mechanism to equitably distribute lion-related income to identified stakeholders." The specific targets for this output are: complete an inventory of stakeholders directly affected by lion conservation, deliver appropriate training and capacity building to prioritized stakeholders, agree to and implement collaboratively developed area-specific lion management plans with identified stakeholder groups in each wildlife region within 5 years, and implement transparent mechanisms to equitably distribute lion-related/generated income to identified stakeholders (groups and/or communities). Current information from ZPWMA shows that they have identified key stakeholders and assessed the financial impacts of lion conservation and the magnitude of socio-economic impacts on each stakeholder group. Limited training has been undertaken for representative stakeholders in Hwange, Matusadona, and Gonarezhou. ZPWMA has also implemented an adaptive management program across four wildlife regions and are in the progress of developing and implementing area-specific lion management plans with identified stakeholder groups. According to ZPWMA, a Management Plan for Hwange has been approved. However, the Service does not have a copy of this plan. With these updates, ZPWMA has made progress toward this output's targets.

The strategy also identifies roles and responsibilities for a number of players in Zimbabwe's lion conservation efforts. According to the strategy, there is a national lion coordinator that is to coordinate all national activities on lion conservation, research, and management, including census surveys, setting up monitoring needs and coordinating data on human-lion conflicts. The strategy goes on to identify roles for the field stations, wardens, ecologists and utilization units, which are responsible for ensuring compliance with hunting regulations and maintaining safari hunting databases. In addition, the strategy identifies roles for CAMPFIRE, safari operators, and professional hunters to facilitate training and ensure compliance with hunting regulations.

The Conservation Strategy and Action Plan for the Lion in Zimbabwe (ZPWMA 2006) borrows language from the *IUCN SSC Conservation Strategy* (2006). It iterates areas in need of improvement regarding lion conservation in Zimbabwe, including standardized lion census methods and surveys, further mitigating human-lion conflicts, and maximizing benefits for rural communities that live with lions. ZPWMA (2006) notes their intention to review and put in place criteria for age-based identification of male trophy animals, but do not mention if they will be reviewing possible combination strategies. As part of the 2006 lion conservation strategy for eastern and southern Africa, six objectives were established to secure and restore sustainable lion populations, which were housed under the following categories: management, mitigation, socio-economics, policy and land-use, politics, and trade. The strategy was intended to be implemented within 10 years (Macdonald 2016), and Zimbabwe gave an update on progress regarding these objectives in their *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016) that also addressed outputs and targets laid out in their 2006 action plan.

Additionally, to mitigate human-lion conflict, the "Long Shields Guardian Programme" was initiated whereby communities are notified of movements of collared lions into their areas via cell phone, and then have the opportunity to take appropriate action, such as moving cattle. In 2013 alone, 1,850 warnings were passed to the "Long Shields." These actions may reduce the incidents of lions marauding livestock; however, retaliatory killing of lions still occur. Further, as is policy under The Parks and Wildlife Act of 2001, any lions that attack humans or livestock will be lethally eliminated (ZPWMA 2016). Between 2007 and 2013 a total of 1,113 conflict incidents were recorded in the Hwange area in which 915 head of stock were lost to lions.

Hunting and Utilization: Lions are infamously infanticidal (Schaller 1972, as cited in Du Preez et al. 2016), which is often used as an argument against sport-hunting of the species (e.g. Packer et al. 2011), where it is feared that the removal of dominant males causes cub mortality that eventually results in lowered population recruitment and survival (Packer et al. 2009). Infanticide, however, may be less of an issue in terms of sport-hunting if age-appropriate males, past their prime and no longer territorial or with dependent cubs, are harvested (Whitman et al. 2004).

The minimum number of lions that occur in approximately 51,642km^2 of land in Zimbabwe, where reliable survey data are available, is estimated to be 1,917 (range 1,800 – 2,000), the majority of which occur in western and southern Zimbabwe. When taking this population estimate into consideration, trophy hunting harvests a yearly mean of 2.7% of adult male lions. This figure has decreased since the establishment of age restrictions on lion hunting (ZPWMA 2016).

Trophy hunting of wildlife is legally permitted in safari areas, of which there are 16 in Zimbabwe (ZPWMA 2014). According to the Forest Act, Chapter 19:05, there are 24 gazetted indigenous forest areas in Zimbabwe; within these forest areas, lions may be hunted in the following forests: Fuller, Kazuma, Pandamasuwe, Ngamo, Sikumi, Gwayi, Sijarira, and Gwampa (ZPWMA 2014). In 2013, an adaptive quota management system for lion hunting based on the ages of lions hunted was agreed to in Harare, Zimbabwe, during a meeting hosted by ZPWMA and an independent non-governmental conservation organization (Du Preez et al. 2016). After reviewing aging techniques, attendees at the July 2013 meeting in Harare, Zimbabwe were confident that hunters could be expected to categorize lions as being below or above five years of age. In determining quotas for the following years, operators would be rewarded with increased quotas if they hunted animals of six years or older, would not be penalized if they hunted animals five years of age, but would have quotas cut if they hunted animals younger than five years old or if they failed to complete hunt returns (ZPWMA and Panthera 2014). In 2013, only 28% of lions hunted were five years old or older. In 2015, that figure rose to 77.3% (ZPWMA 2016). According to Hunter et al. (2013), an adaptive quota management system utilizing age-based criteria would not only aid in the prevention of over-harvesting lions, but would also prevent excessively conservative quotas. Further, according to Miller et al. (2016), results indicate that age-based hunting is feasible for sustainably managing threatened and economically significant species such as the lion, but must be guided by rigorous training, strict monitoring of compliance and error, and conservative quotas. No single trait can be relied upon exclusively to precisely age lions. Rather, multiple traits must be examined in combination to cross-validate an individual's age and, according to Whitman et al. (2004), restricting hunting to individuals that are at least six years old is desirable from a biological perspective due to the reduced risk of the loss of pride males and infanticide of cubs associated with the harvest of such individuals (Whitman et al. 2004).

During 2013, operators were requested to submit hunt returns and photos as a trial run to get the adaptive quota system up and running. In 2014, operators were requested to do the same but were informed that the age of the lions hunted in 2014 would determine their lion quotas in 2015 (Du Preez et al. 2016). In 2015, there was a marked increase in the age of lions hunted in Zimbabwe as a whole. The majority of lions hunted were on the cusp of 5-6 years of age but were not older than six years. National hunting offtakes for lions in Zimbabwe from 2013 to 2015 were 29, 42, and 47 respectively (Masterson 2016). It appears these do not include illegal forms of hunting offtake.

Previously, Zimbabwe set quotas for the hunting of female lions. Between 1998 and 2004, Zimbabwe maintained a mean quota of $0.3 \pm 0.1/100$ km^2 for female lions; during the same period, actual offtake was lower at $0.08 \pm 0.1/100$ km^2, or a mean of 30.6 percent of the quota actually harvested (Loveridge *et al*. 2007). However, females are the most productive portion of a population; if they are removed from a pride, there is inherent risk that dependent cubs will die and the overall breeding success of the pride will be reduced. Zimbabwe discontinued issuing quotas for female lions in 2011 (USFWS 2015). In 2011, Zimbabwe's quota was set at 101 lions; in 2014, it was reduced to 50 male lions following the implementation of age restrictions (Henschel 2015, pers. comm., as cited in USFWS 2015).

In setting adaptive lion quotas, Zimbabwe uses scientific information including spoor surveys, camera traps, and ranger-based sighting. In CAMPFIRE areas, incidences of human-lion conflict are also taken into consideration where survey information is not readily available, when determining quotas for those areas (ZPWMA 2014). The quota setting process involves all stakeholders, including the ZPWMA, landowners, safari operators, and CAMPFIRE managers and their representatives. During the annual quota-setting workshop, presentations are made by the proponents who then make proposals for quotas. Where it is felt that not enough information has been presented, however, a precautionary quota will still be issued (ZPWMA 2014). The Service is not aware of how precautionary quotas are treated after they are issued, or if there is a protocol for obtaining necessary information when a precautionary quota is put in place.

ZPWMA (2016) mentions seven concessions that are leased on five year terms, and how these concessionaires pay a 5 year "right to lease" fee, annual rental, fixed quota fee (payable if animals are shot or not) and a supplementary quota fee that allows additional animals to be bought as needed. It is unclear to what extent Zimbabwe still utilizes fixed quotas, as Du Preez et al. claims fixed quotas are no longer being used by Zimbabwe, but a fixed quota fee is mentioned in ZPWMA (2016). It is also unclear how many animals concessionaires are able to "buy as needed," and how such requests may be accommodated without going over the national quota (ZPWMA 2016).

Between 1999 and 2004, data were collected in and around Hwange National Park that suggested that hunting surrounding the park was having a negative impact on the lion population. Therefore, sport hunting of lions was suspended in the area surrounding the park between 2005 and 2009. Following the lifting of the moratorium, and by implementing stricter monitoring and hunting guidelines through the Hwange Lion Research Project, the overall Hwange lion population has continued to show a positive trend, and is now estimated at over 550 animals (ZPWMA 2015).

CAMPFIRE is the program through which the Zimbabwean Government has developed the management of wildlife resources to communal farmers. As of July 2014, there are at least 58 Rural Districts that have been granted the Appropriate Authority status to manage wildlife resources in their areas; however, according to *Enhancement and Non-Detrimental Findings for Panthera leo*

in Zimbabwe ZPWMA 2016, only 16 are actively engaged in some form of wildlife based land use (ZPWMA 2016). Lions are found in communal areas that are adjacent to major protected areas, and lion hunting is allowed in CAMPFIRE districts (ZPWMA 2014). According to EcoWeb (2015), all income generated by trophy hunting in CAMPFIRE areas was distributed to communities (52%, when they are typically prescribed 55%), rural district councils (RDCs) (44%, when they are typically prescribed 41%), and the CAMPFIRE association (4%). Communities, rather than dividing income by households, typically invest in projects that benefit the communities as a whole, such as schools, clinics, and grinding mills. Councils use funding for patrols, monitoring of hunts, problem animal control, water, and fire management, while the CAMPFIRE association uses their funding to cover administrative costs and representation of the program (EcoWeb 2015). As was agreed upon at the 2013 lion management meeting in Harare, the CAMPFIRE areas in which lions occur are currently exempted from the age restrictions. This approach was adopted as a means of ensuring that impoverished communities obtain the opportunity to benefit from the presence of lions, recognizing the potential negative impacts the species has on the livelihoods of livestock farmers (ZPWMA 2016). According ZWPMA's 2016 response, between 2010 – 2015, lions accounted for 2% of the total income generated from hunts conducted on CAMPFIRE lands and trophy fees accounted for 74% of the total funds generated for CAMPFIRE. Further, U.S. hunters account for 51% of the funds generated from hunting in CAMPFIRE areas during the same period. While hunting is allowed in CAMPFIRE areas, it is unclear if American sport-hunters conduct lion hunts in these areas; if so, the Service is not aware if sport-hunters are exempted by the age restriction in this case, and how this exemption in CAMPFIRE areas is taken into consideration when setting quotas for other portions of the country.

According to the Revised CAMPFIRE Revenue Sharing Guidelines, which were incorporated into the Constitution of the CAMPFIRE Association in 2007, at least 55% of generated revenue from hunting should be devolved to producer communities, no more than 26%, and 15% for management and overhead at the RDC level, respectively, and 4% as a levy to the CAMPFIRE Association. According to an undated document (but presumably produced in late 2014, since it references data from 2014 but does not include any references to 2015 data) produced by CAMPFIRE (CAMPFIRE report undated) at least 10 RDCs comply with the Revenue Guidelines.

According to *The Role of Trophy Hunting of Elephant in Support of the Zimbabwe CAMPFIRE Program – December 2016*, a report the Service received on December 17, 2016, the Reserve Bank of Zimbabwe, in collaboration with relevant stakeholders, has established the Tourism Receipts Accounting System that required all outfitters to submit returns listing the revenue generated for hunting activities. This system has been in place for several years, but required manual analysis of the data to extract information on hunting revenue. In January 2015, to account fully for earnings in the hunting sector, the Reserve Bank of Zimbabwe, in collaboration with relevant stakeholders, introduced the Tourism Receipts Accounting System (TRAS2) a web-based system (TRAS2) that links Safari Operators, ZPWMA Authority, Taxidermists, Shipping Agents, International Marketing Agents, and Reserve Bank. Under this system, all authorized hunts are registered, allowing for the capture of hunting data, such as the origin of clients, value of trophies and hunts, and area hunted, to monitor hunting quota utilization and track hunted trophies. According to the December 2016 report, the Exchange Control Division of the Reserve Bank of Zimbabwe and the ZPWMA are now able to:

1. Assess regional price differentials of similar hunts and the reasons thereof;
2. Present TRAS2 system updates and reports to the users, including international marketing agents;
3. Engage with international marketing agents of sport hunting;

4. Obtain relevant insights on governing of the hunting sector; and
5. Come up with an effective mechanism to fully account for export proceeds from the hunting sector.

The TRAS2 information was utilized in *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016) to provide a breakdown of the source of hunting income, and the amount of funds generated by trophy fees by land category, among other insights, and has proven the TRAS2 system's ability to obtain relevant insights on governing of the hunting sector.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. In evaluating each of these criteria based on information available to the Service, we have been able to determine that this impact of a sport-hunted lion trophy animal would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

Zimbabwe's lion hunting industry generated 9% of all sport hunting revenue in 2015; 51% was contributed by U.S. hunters during 2010-2015 country-wide, and 90% of the sport hunting market in BVC and SVC from 2005-2015. Even though 9% may not seem like much, lions are a key component of the sport hunting industry, as they are part of the "Big 5" trophies and draw U.S. hunters to Zimbabwe. Based on the information available to the Service, the participation of communities in CAMPFIRE has heralded a reversal in wildlife declines on private land. When the benefits of CAMPFIRE were extended to RDCs, it further aided in the equitable distribution of benefits from trophy hunting to locals, which incentivizes them to conserve the African lion. As mentioned in the case of SVC, without the hunting industry, these wildlife areas, which have become conservation havens in the threat of human encroachment across much of Zimbabwe, would not be economically viable, and therefore would not exist.

There was conflicting information presented to the Service on how many lions were included in the quota in 2015. Du Preez et al. (2016) reports a national lion hunting quota of 85 with 39 hunted; ZPWMA (2016) reports the national lion hunting quota in 2015 was 82 lions, with 49 hunted. When evaluating the lower quota with higher utilization reported by ZPWMA (2016), and taking into consideration the land area of the Parks Estate alone, Zimbabwe did not exceed the best management practice of 0.5 lions/1,000 km^2; the 2015 offtake would have accounted for 0.125 lions/1,000 km^2.

Zimbabwe also has taken into consideration other best management practices, including age-based criteria for an adaptive management strategy, and takes past performance of hunting organizations into consideration when determining future quotas.

Further, sport hunting was essential for the successful transition of the SVC from cattle to wildlife (Du Preez et al. 2016), in that it provided monetary benefits for the conservation of lions and local communities. The BVC donates over 45 tons of meat from sport hunting to the local communities

each year. This meat donation is worth over USD100,000 per year. BVC also supports several schools, clinics, and community projects in the three surrounding districts of Mwenezi, Maranda, and Jopempe. The local community sees a direct benefit from the wildlife in BVC, but is also empowered by job opportunities created both with these community projects, as well as on BVC (Du Preez et al. 2016).

While Zimbabwe's hunting industry generated approximately 8 million in 2015, not all of this is connected to lion hunting or to U.S. hunters. However, lions are a key component of the hunting industry since they are part of the "Big 5" trophies and draw U.S. hunters to Zimbabwe. Based on the information available to the Service, the funds generated by hunting trophies contribute to the ZPWMA's ability to manage the country's lion populations as well as the success of CAMPFIRE. It appears that without the hunting industry, it would not be economically viable to maintain lions. U.S. hunter participation in lion hunts, in and of itself, is not enough to make or break the industry. However, U.S. hunters have played a significant role in the industry in Zimbabwe, previously making up 51% of all hunting in Zimbabwe and 72% of lion hunts within the country. As such, the removal of their participation could have a long-term impact.

Further, the *Strategy and Action Plan* have put into place mechanisms to adequately oversee the harvest of lions in Zimbabwe. With an annual harvest of approximately 85 lions, Zimbabwe is not exceeding the limits identified of 0.5 lions/1,000 sq. km. The objectives of the *Strategy and Action Plan* and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that Zimbabwe has established for managing lions. The Service will continue to monitor the effectiveness of the Strategy and Action Plan, for consideration in future findings.

Therefore, based on the information available to the Service and provided that the reserve where the lion was taken was properly permitted and in compliance with national and local regulations, the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing their status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit</u>:

The total area under wildlife-based land use and conservation in Zimbabwe amounts to 10.7 million hectares, and represents 27% of the total surface area of the country. Of this, 7.9 million hectares, or 75% of all conservation land in the country, falls under safari hunting as the primary or only source of revenue. With the CAMPFIRE program, private landholders and RDCs are given the opportunity to benefit from the wildlife on their land, including lion, and incentivize them to conserve the species. Sport hunting of lions by U.S. hunters supports the programs in Zimbabwe that provide the opportunity for locals to see value in lions, which in turn conserves the species in the long-term.

A scientifically based quota is the number of a given species that can be removed from a specific population without damaging the biological integrity and sustainability of that population (WWF 1997). However, full implementation and enforcement of the age-based strategy could potentially cause the need for quotas to become irrelevant or eliminated (USFWS 2015). Age restrictions will naturally restrict offtake to a limited number of individuals that meet the age criteria (Loveridge *et al.* 2007, Whitman *et al.* 2004).

Throughout the information provided to the Service, it is clear that Zimbabwe has made strides in their management of their lion populations. Although prior to 2011, Zimbabwe allowed the hunting of lionesses and males under 5 years old, they made significant changes to ensure their hunting program is sustainable. In 2011, Zimbabwe restricted the hunting of female lions. In 2013, they proposed an adaptive age-based setting for hunting quotas. In 2015, the development TRAS2 allowed the country to assess regional price differentials of similar hunts and the reasons thereof; present TRAS2 system updates and reports to the users, including international marketing agents; engage with international marketing agents of sport hunting; obtain relevant insights on governing of the hunting sector; and come up with an effective mechanism to fully account for export proceeds from the hunting sector. Further, Zimbabwe appears to be transparent in their management processes, including their quota setting.

According to CITES trade data and Service records, from 2011 to 2016, there were 223 lion trophies imported to the U.S. from Zimbabwe. Best practice would be to import only male lions, as pointed out by Macdonald (2016), but Zimbabwe has already taken the initiative by placing a moratorium on lioness hunting. The fixed-quota concept, in which hunting quotas had to be paid for upfront before the hunting season begins, and results in poor quality trophies and young animals being hunted, has also been abandoned (Du Preez et al. 2016). Zimbabwe appears to be transparent in their implementation of the age-based adaptive management strategy (USFWS 2015). The adaptive quota management system for lion hunting based on the ages of lions hunted has been accepted and embraced by all stakeholders. This adaptive quota management system has not only led to a reduced national lion hunting quota, but has also resulted in a significant increase in the age of harvested lions to a level that is considered to have a reduced ecological impact (Du Preez et al. 2016).

Between 2005 and 2015, the U.S. market has represented over 90% for the sport-hunting market in both the BVC and SVC. If this market was effectively lost due to an inability of prospective clients to import their trophies, it would become unviable to continue managing BVC as a wildlife area in its current form (Du Preez et al. 2016). Across all CAMPFIRE districts, from 2010 to 2015, there was a total quota of 140 lions, with actual offtake equaling 45 animals. During this same period, U.S. sport hunters apparently accounted for 51% of Zimbabwe's sport hunting clients; trophy fees represented 74% of CAMPFIRE income, of which lions play a small role. In 2015, lion sport hunting generated USD753,000 in revenue, which accounts for about 9% of all sport hunting revenue in Zimbabwe that year (ZPWMA 2016).

Evaluating the information provided by the Zimbabwe government and other sources, it appears that the hunting program in Zimbabwe is addressing the three main threats that were identified by the Service when making the determination that the species was threatened with the possibility of extinction. The hunting areas are maintaining habitat for lions and ensuring that there is no further loss, provided that the hunting areas can remain economically viable. In order to maintain a viable population of lions, the parks, safari, and CAMPFIRE areas must maintain biodiversity and a sustainable prey base. Finally, Zimbabwe is actively working to reduce human-lion conflicts and the number of lions killed in retaliation for killing livestock. Therefore, the management of lions within Zimbabwe and the limited hunting of lions contributes to the on-going survival of the species in Zimbabwe.

Provided that the off-take of lions continues to be monitored and the actions identified in the Strategy and Action Plan continues to be implemented, the participation of U.S. hunters in lion hunts would provide an indirect benefit to wild populations by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for a legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

As stated above, Zimbabwe is monitoring and controlling the harvest of lions through permitting under their regulations and through the Strategy and Action Plan. The issuance of import permits for lions legally hunted under these authorities would not conflict with any programs intended to enhance the survival probability of the species in Zimbabwe. If import permits for sport hunted lion trophies from Zimbabwe were to be issued, it would work in favor of, not against, the principal acts governing lion conservation in Zimbabwe. Furthermore, sport hunting opportunities for hunters in CAMPFIRE districts would help local communities realize the value in conserving the African lion.

Therefore, based on the information available to the Service, the issuance of an import permit for a legally hunted lion does not conflict with known conservation programs and rules.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

With limited, controlled off-take of lions in a manner that would maintain sustainability, the legal hunting activities that U.S. hunters would be involved in would contribute to reducing the threat of extinction of lions. This off-take must be monitored to ensure that it is sustainable and that, to the extent possible, normal lion behavior and ecology are not negatively impacted. It appears that the permitting activities under Zimbabwe's laws and CITES, as well as the implementation of the adaptive age-based lion quota, and a continuation of implementation of the outputs in the *Strategy and Action Plan* will ensure the long-term survival of lions. The utilization of hunters to manage the populations on the reserves is an important element of the success of lion management in Zimbabwe.

Therefore, based on the information available to the Service, the issuance of an import permit for a legally hunted lion will likely reduced the threat of extinction facing lions in Zimbabwe.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be received through a scientifically based hunting program for lions.

Based on the information available to the Service, there is general support by scientists and other persons or organizations having expertise concerning lions that the legal harvest of lions, and the subsequent import of this trophy, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

While, over the years, ZPWMA has failed to generate adequate revenue for its operations, U.S. sport hunters play a large role in the hunting industry of Zimbabwe. The Service anticipates that by granting the importation of sport-hunted lion trophies, there would be an increase in funds provided to Zimbabwe's conservation initiatives through this program by U.S. sport hunters. ZPWMA has also been forthcoming in involving relevant stakeholders as well as independent researchers and non-governmental organizations in determining best management practices.

Therefore, based on the information available to the Service, Zimbabwe has the proper expertise, facilities, and other resources to accomplish the objectives laid out in their *Strategy and Action Plan* to enhance the propagation and survival of the species, partly through the utilization of funds generated by U.S. hunters' participation in lion hunts throughout the country.

Conclusion

Given the status of lions within Zimbabwe at the time Mr. McGinnis' conducted his hunt, and the level of management and oversight provided to lions at that time, the Service is able to find that the harvest and import of Mr. McGinnis' sport-hunted trophy taken in Zimbabwe on May 20, 2017, meets the purposes of the Act. As stated earlier, each application received by the Service for the import of a sport-hunted trophy lion from Zimbabwe will be evaluated on a case-by-case basis. The applicant must have hunted on a properly licensed hunting area within Zimbabwe. The Government of Zimbabwe must continue to implement the *Strategy and Action Plan* in the manner identified in the documents. The on-going adaptive management and limited off-take of lions is important to the survival of lions in Zimbabwe. Although the Service is able to make a finding that the import of this lion meets the enhancement criteria under the Act, the Service will continue to monitor the status and management of the lion in Zimbabwe. Noting that Zimbabwe's last management plan for lion was in 2006, the Service would like to see a current and updated plan that has been established as the national plan and disseminated across the country. The *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (2016), mentions a Management Plan for Hwange National Park; a copy of that and any other developed management plans will be considered in the future. Although Zimbabwe has made progress on their 2006 *Strategy and Action Plan*, the Service will need to be continually updated on further progress of the outputs or targets. Lastly, the Service will also need to review any updates to the quota setting process.

Therefore, with the information available to the Service at the time Mr. House conducted his hunt, and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male lion trophy taken in Zimbabwe, to Mr. Michael Joseph McGinnis, Jr. of Lyndhurst, Virginia.**

LION ZIMBABWE ESA TROPHY

Permit Number: MA92335C-0
Effective: 06/08/2018 Expires: 06/07/2019

Issuing Office:

Department of the Interior
U.S. FISH AND WILDLIFE SERVICE
DIVISION OF MANAGEMENT AUTHORITY
BRANCH OF PERMITS, MS: IA
5275 LEESBURG PIKE
FALLS CHURCH VA 22041-3803

Mary Coghlan
CHIEF, BRANCH OF PERMITS, DMA

Permittee:

MICHAEL JOSEPH MCGINNIS JR.
(b) (6) [redacted]
LYNDHURST, VA 22952
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zimbabwe for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2017 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zimbabwe for the 2017 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit, source code "W", issued by the Management Authority of Zimbabwe.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name		1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Abbott		Marsha	Ann	
2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address	
(b) (6)				

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b) (6)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
McGehee	Arkansas	71654	~~Des~~ Desha	USA
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
(b) (6)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
McGehee	Arkansas	71654	Desha	USA

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6) — 05/18/2018

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera leo melanochaita, African lion

   b. Sex (if known). male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   Zambia, Chanjuzi GMA, Eastern Province.
   nearest city is Lusaka, nearest town is Lundazi

   b. Date wildlife is to be hunted: June 3-July 4, 2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   Muchinga Outfitters, Impanga Safaris Ltd. Lusaka, Zambia

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

   Name:
   Business Name: Impanga Safaris
   Address: P.O. Box 31012
   City: Lusaka
   State/Province:
   Country, Postal Code: Zambia

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

    Applicant's signatur(b)(6) _____ Date: 5/18/18

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Enhancement Finding
Applicant: Marsha Ann Abbott (PRT-93468C)

Marsha Ann Abbott submitted an application on June 1, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken July 3, 2018, or July 4, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Ms. Abbott's application involving a *P. l. melanochaita* sport-hunted trophy taken in Chanjuz GMA, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Ms. Abbott's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Ms. Abbott's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Ms. Abbott's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion

populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident

hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Ms. Abbott's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Ms. Abbott will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Ms. Abbott in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Ms. Abbot.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to her to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Marsha (b) (6) Abbot.**

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted African Lion *(Panthera Leo Melanochiata)* trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Conservation Force
3240 S. I-10 Service Road W., Suite 200
Metairie, Louisiana 70001 USA

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Papapietro	Richard	Antony	Jr.

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business/agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business/agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Henderson NV	89012	Clark USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)
Same

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6) 05/15/2019

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera leo melanochaita (African lion)

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

Zambia - Sichifulo GMA. Nearest Town: Mulobezi. Latitude: 16.82944 Longitude: 25.49640

b. Date wildlife is to be hunted:

July 25 - August 11, 2018

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

Mulimo Safaris, Sichifulo GMA. Professional Hunter Greg Street

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Michael Borman
Business Name:	Bangweulu Taxidermy, Ltd.
Address:	4142/Chifwema Road
City:	New Kasama
State/Province:	Lusaka, Zambia.
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Please see attached.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

Please see attached.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

Please see attached.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import tw

Applicant's sign (b) (6) ate: 5/15/19

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force v.5/3/18

Operator Enhancement Questionnaire

1. Name of area operator: MULIMO SAFARIS
   a. Years in business: 5
   b. Name of company conducting hunt: MULIMO SAFARIS
2. Name of concession: SICHIFULO GMA Size in km²: 3600
   a. Land tenure: __ Government lease X Community __ Private ranch __ Private conservancy
   b. Length of concession agreement: 10 YEARS Can it be renewed? X Yes ~~No~~
   c. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain: YES. ANTI POACHING, COMMUNITY OBLIGATIONS, EMPLOYMENT
   d. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city:
   e. If the concession borders a national park, please provide the park name: KAFUE NATIONAL PARK.
   f. Description of general and distinctive habitat features and any water features: MIOMBO WOODLAND AND PLAIN.
3. Are there any communities living in the concession? ✓ Yes __ No
   a. If so, estimated number of people or villages in the concession? 1000
4. Are there communities bordering this concession? ✓ Yes __ No
   a. If so, estimated number of people or villages around the concession? 5000
5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	AVG		UP	SIGHTINGS
Lion	AVG		UP	SIGHTINGS
Leopard	DENSE		UP	SIGHTINGS
Prey species	AVG		UP	SIGHTINGS

6. Total employment number: 30
   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	1	1

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Trackers	2	2
Anti-poaching scouts/rangers	18	18
Other anti-poaching		
Cooks/housekeepers	1	1
Community coordinators	2	2
Managers		
Biologists		
Others: GENERAL STAFF	14	14

7. Number of staff employed in the off-season: 15

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	10	10	ALL YEAR.
Managers			
Maintenance	5	5	ALL YEAR
Road opening/construction			
Community relations personnel			
Others:			

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: +-20

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? BOTH

   c. Months during which anti-poaching patrols are conducted: ALL

   d. Number of anti-poaching patrols per month: 2 or 3

   e. Description of anti-poaching equipment, vehicles, etc.: RADIO EQUIPMENT / MOTORBIKES.

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? OPERATOR AND GOVERNMENT

   g. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? _____

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts		20 000 $	23000 $	
Equipment		15 000 $	10000 $	
Vehicles		10 000 $	15 000 $	
Petrol		3000 $	4000 $	

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Conservation Force
Operator Enhancement Questionnaire

Rewards paid		1000$	500$	
Other: _____				
Other: Hunting			5000$	
TOTALS		48000$	55500$	

9. Anti-poaching results:

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? ✓ Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? By contract and voluntary.

c. Does the company provide game meat to nearby communities? X Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: 50%

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. NO

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? N/A

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant				
Lion				

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? _____

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)				
Education (e.g., school fees, supplies)		$1000	$2000	
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)		$2000		
Community scout salaries		$8500	$8500	
Other community anti-poaching				
Local government activities				
Water infrastructure improvements		$3000		
Sports teams funded				
Construction materials donated			$6000	
Other: Law Enforcement		$2000	$2000	
Other: _____

Enhancement Finding
Applicant: Richard Anthony Papapietro Jr. (PRT- 93474C)

Richard Anthony Papapietro Jr. submitted an application on June 1, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken from July 25, 2018, through August 11, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively,

except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import

of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Papapietro's application involving a *P. l. melanochaita* sport-hunted trophy taken in Sichifulo GMA, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Papapietro's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Papapietro's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Papapietro's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion

populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident

hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Papapietro's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports

regulatory pathways in support of positive conservation outcomes. Zambia's lion management program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Papapietro will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Papapietro, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Papapietro.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Richard Anthony Papapietro.**

(b) (6)
HENDERSON, NV 89012
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Elder	Chris	L	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b) (6) [redacted]			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address)

(b) (6) [redacted]

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Springdale	AR	72764	Washington	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:
(1) Is raw, processed, or manufactured;
(2) Was legally obtained by the hunter through hunting for his or her personal use;
(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
(iii)The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   P.I. melanochaita (African Lion)

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   S. Luangwa, Zambia in Nyamvu, Nyimba closest town, operator Nyamvu & Mopane Saf

   b. Date wildlife is to be hunted: 7/27/2018-8/17/2018

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Ivory Safaris, Jeff Rann

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Michael Borrman
Business Name: Bangweulu Taxidermy
Address: 41421 Chifwema Rd, New Kasama
City:
State/Province: Lusaka Southern Zambia
Country, Postal Code: 50100

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: _____ Date: _____

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Enhancement Finding
Applicant: Chris L. Elder (PRT-93561C)

Chris L. Elder submitted an application on June 1, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken from July 27, 2018, through August 17, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the

prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Elder's application involving a *P. l. melanochaita* sport-hunted trophy taken in South Luangwa, Nyamvu, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Elder's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Elder's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Elder's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion

populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident

hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Elder's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Elder will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Elder, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Elder.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Chris L. Elder.**

RE: Chris Elder's Notice of Representation, 93561C, Zambian Lion Import

Dear Chief Cogliano:

Enclosed is the original Notice of Representation allowing for Conservation Force to represent Chris Elder's Lion Permit application. The PRT for Mr. Elder's permit application is 93561C. This applicant has already taken his lion and filed his application more than a year ago. Can you please advise the status of his import application

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorney and legal representative for all matters concerning my application for a permit to import a lawfully hunted Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

In the case of a permit an ESA endangered listed species this is also a request for Ten Days Notice before the permit is issued so I and my attorney can know of approval as soon as those that may have opposed the issuance of the permit.

Type of Activity

REISSUANCE, RENEWAL, OR AMENDMENT OF A PERMIT
(For this application, all permits, registrations, and certificates are referred to as a permit.)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details. **Instructions on how to make your application complete and help avoid unnecessary delays are attached.**

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Elder	Chris	L.	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b)(6)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Springdale	AR	72764	Washington	U.S.A.
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 6 and 7**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions* [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6) 09/27/2019

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. REISSUANCE, RENEWAL, OR AMENDMENT OF A PERMIT (For this application, all permits, registrations, and certificates are referred to as a permit.)

NOTE 1: If you are renewing your Designated Port Exemption permit, use form 3-200-2 and submit to appropriate Office of Law Enforcement address. If you are renewing your Import/Export license (required for commercial activities), use form 3-200-3 and submit to appropriate Office of Law Enforcement address.

NOTE 2: This form **cannot** be used for a lost or damaged permit. If you need to replace a lost or damaged permit, please use form 3-200-66. The application **must** be submitted to the office that issued the initial permit. Lost or damaged permit

NOTE 3: Some activities, such as all master files for multiple shipments, Certificate of Scientific Exchange (COSE), circus/traveling exhibits, and artificially propagated plants, can only be re-issued, renewed, or amended by submitting a new application for permits for those activities. Please refer to these application types to determine if another application form would be more appropriate or contact the Division of Management Authority for more information.

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   John Jackson, CONSERVATION FORCE, 504.837.1233; e: CF@conservationforce.org

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

   ☒ No ☐ Yes

   If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. **Permit number.** Enter the permit number to be reissued/renewed/amended. Prt#: MA93561C-0

5. Submit the original permit with this application.

6. **Past activities.** See Attached

   a. Provide copies of all cleared documents and form 3-177 (FWS declaration of wildlife) associated with this permit.
   b. Provide a summary detailing activities conducted under this permit, as well as a brief statement of why you are seeking reissuance/renewal.

7. **Annual Report**. If required by your permit, provide an annual report as conditioned (Please disregard if you have already submitted your annual report.)

8. **Sport-hunted trophies:** If you did not hunt during the hunting season stated in your original application, you are not eligible for a renewal. Please submit a new application form.

9. **Certification -** Complete one of the statements below and supply any additional documentation requested: (original signature is required)

   a. For **NO CHANGES** to original application:

      I certify that the information submitted in support of my original application for the permit indicated above has not changed and is still currently correct. I hereby request reissuance or renewal of this permit.

      Permittee's signature: (b)(6) Date: 09/27/2019

   b. For **CHANGES** to original application:

      On an attached page(s), provide a complete description of any changes (e.g., change in principal officer, personnel, address, location of activities, types of activities). Please sign each attached page. Also note that we may need to request additional information regarding the changes after reviewing your initial request.

      I certify that the information submitted in support of my original application for the permit indicated above is still currently correct EXCEPT for the changes noted on the attached, signed page(s). I hereby request re-issuance or renewal of this permit with the indicated changes.

      Permittee's signature: _____ Date: _____

All international shipment(s) must be through a designated port, unless otherwise authorized. A list of designated ports (where an inspector is posted) is available. If you wish to use a port not listed, please contact either the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2) or the Division of Management Authority.

Dear Colleagues

Mr. Elders Christopher Lynn hunted one Lion trophy on Hunting permit number 0001152. The hunt was conducted in Musalangu GMA in the Eastern part of Zambia.

The Lion was harvested on 10th August 2018.

Therefore, we do confirm that 1 Lion was legally hunted by the client in the 2018.

Kindly facilitate the import.

Best regards

Terry

Dear Terry,

Thank you very much for your reply.

As we already issued Mr. Elder a CITES import permit for 1 lion trophy taken in 2018, we do not intend to approve his second request for another lion trophy, also taken in 2018.

MINISTRY OF TOURISM AND ARTS

OFFICE OF THE PERMANENT SECRETARY

KWACHA HOUSE
CAIRO ROAD
P.O. Box 30575
10101 LUSAKA

NPW/8/1/1

Friday 8th November, 2019.

Mr. Darcy Vargas,
Biologist,
US Fish and Wildlife Service,
MS: IA 5275 Leesburg Pike,
Falls Church, VA 22041-3803
UNITED STATES OF AMERICA

REF: UNITED STATES LION TROPHY IMPORT – CHRIS LYNN ELDER

Reference is made to the above captioned subject matter.

We wish to acknowledge receipt of your letter dated 17th September, 2019, wherein you requested the Department to confirm if Mr. Chris Lynn Elder was authorized to hunt one (01) or two (02) Lions during Zambia's 2018 Lion hunting season.

The Ministry of Tourism and Arts, Department of National Parks and Wildlife (DNPW) would like to confirm to you that Mr. Chris Lynn Elder hunted one (01) Lion and one (01) Leopard on 10th August, 2018 under Ivory Safaris Limited in the Chikwa Game Management Area (GMA) on the following Game Management Area Permit Numbers 1151 and 1152 and Hunting License Numbers Lion 0000732 and Leopard 0000731.

The Department is not aware of any detrimental issues regarding Mr. Chris Lynn Elders possession of the wildlife trophies as all the necessary legal procedures were followed. The Department wishes to thank you most sincerely in anticipation of your usual corporation.

For any queries or clarifications, please do not hesitate to contact the undersigned or directly on the following contact details: info.DNPW@mota.gov.zm or Telephone No. +260 211 278 524.

Yours Faithfully,

Paul Zyambo

Intra-Service Section 7 Biological Evaluation Form

Originating Person: Amy Brisendine Date: April 7, 2020

Telephone Number: 703-358-2005

I. **Service Program and Geographic Area or Station Name**: Branch of Permits, Division of Management Authority, International Affairs

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)

Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, 93561c, Chris L. Elder, has requested a permit to import a trophy of one lion that he lawfully hunted in Zambia. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Zambia on the date specified in the permit application.

The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Zambia.

The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Zambia. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

Determination

No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.** **X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** _____

CHRIS L. ELDER
(b)(6) [redacted]

U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Kirsch	PatricK	L	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite # or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Waconia	MN	55387	Carver	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same as Page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Patrick Kirsch
   (b) (6)

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   LioN , [redacted]

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Tanzania, East Africa. Hunting Block: M'barangandu Wildlife Managed Area

   b. Date wildlife is to be hunted:

   August 28, 2018 thru September 17, 2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Game Frontiers of Tanzania
   Plot 23, Kasanga Street
   Dar es Salaam, Tanzania

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   Not hunted yet

   b. Date wildlife was hunted:

   Not hunted yet

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Not hunted yet

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

Not hunted yet

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Have Not hunted yet

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: Game Frontiers of Tanzania
Address: Plot 23, Kasanga Street
City:
State/Province: Dar es Salaam, Tanzania
Country, Postal Code:

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?
The professional hunter through whom I am hunting has hunted this area eve year for the past 8 years and reports seeing a number of male lions above th age of 6 years. He credits this to the thoughtful and successful game managem practices introduced in 2012. The benefits of which we see today.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?
It is my understanding the govt. is paid $30,000.00 each year by Game Fronti for access to the hunting block with an additional $ 30,000 paid each year to local game department who manages and controls the hunting. In addition, the hunting company employs workers from the village (cont on an she

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

The hunting company each and every year improves the hunting a by grading roads, select and careful burning, construction of watering points, maintenance and expansion of springs, anti-poaching patrols and radio communication with government personnel and by conducting game surveys. It is essential to the (continued

Question 9B. Continued

and makes significant purchases of goods and services. The benefit to the local economy is substantial. Lastly, the hunting company gives the community much needed protein in the form of meat from trophies shot and paid for by the client.

Question 9C. Continued

Success of the hunting business that sound game management practices are followed at all times.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

NA → Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: _____ Date: 5/21/2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Tanzania lion / import application / request for information

1 message

Butzler, Julia <julia_butzler@fws.gov> Tue, Jul 24, 2018 at 4:14 PM
To: (b)(6)

Mr. Kirsch,

We are in the process of reviewing applications for the import of African lions taken from Tanzania.

The U.S. Fish and Wildlife Service must make a finding that the sport-hunting of lions will enhance the survival of the species. We are now considering applications on a case-by-case basis, as opposed to making country-wide enhancement findings that were developed in the past. As such, we would like to give you the opportunity to submit additional information in support of your application. This may include (but is not limited to):

>>population status or trend data on the lion population, both the countrywide population and the local population;

>>information on the fees paid (e.g., licenses or trophy fees), recipients of these fees, and use of fees;

>>information about the safari outfitter, professional hunter, concession holder or land owner and their activities to conserve the species (e.g., habitat management or improvement, anti-poaching activities and success of those efforts, efforts to address human-lion conflict, population monitoring, community benefits). Copies of recent reports submitted to TAWA would be particularly helpful.

Do not hesitate to contact me with questions or clarifications.

Thank you,

--
Julia Butzler, Biologist
Branch of Permits
Division of Management Authority
U.S. Fish and Wildlife Service
(703) 358-1988

Please respond to any requests for information or documentation within 45 days from the date of this message; if not received within 45 days, your application will be considered incomplete and will be placed in our inactive files and we will not complete your request for a permit.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a Last Name	1.b First Name	1.c Middle Name/Initial	1.d. Suffix
Shores	Gary	H	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Wichita Falls	Texas	76302	Wichita	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee—attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera leo Melanochaita Lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Zimbabwe, Dande North Hunting Area

   b. Date wildlife is to be hunted:

   09/13/2018 - 09/3/2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Charlton McCallum Safaris - Keith Wall, ph

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: Please see attached -
Address:
City:
State/Province:
Country, Postal Code:

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Please see info previously provided by EPWMA + Conservation Force

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

Same

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

Same

Subject: September Lion Hunt

Dear Sir,
If we are successful in getting a lion during our September hunt with you at Dande I will need the name of the person o business shipping the trophy to me. The Federal Fish and Wildlife Permit Application asks for the following information:

Name:
Business Name:
Address:
City:
State/Province:
Country, Postal Code:

The trophy/trophies will be shipped to The Wildlife Gallery, Inc.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

    Applicant's signature: (b)(6) _____ Date: 05/03/2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

End of year 2017

Dear Friends,

Thank you all so much for your unwavering support. DAPU has continued to build and evolve consistently throughout 2017. Total recorded snare yields, elephant poaching and illegal netting for the year 2017 are the lowest since the inception of DAPU. To be precise, since 2014 snaring has been reduced by 70% and poached elephants by 66%. We have recorded poached elephants since 2010, and whilst our 2010 and 2011 numbers are not perfectly accurate .... Elephant poaching has been reduced by 92% or from a high of 40 lost in 2010 and a low of 3 lost in 2017.

We are now in the wet season, and rainfall has been scarce and late. Unfortunately that means unless we get good late rains, then 2018 could be a busy year for DAPU simply because local villagers could be very hungry indeed.

We have continued to meticulously document all of our support, deployments, wins and losses and here we share a summary with everyone who so graciously and generously supported all of our efforts both financially and in kind. As we grow from strength to strength we look forward to your continued support.

With Regards,

1. Changes

As mentioned in previous reports, we have added Peter Solomon and Owen Zviwanza to the management side of DAPU. Both go on patrols regularly in order to keep everyone honest.

CMS did a fair number of hunts in the Charara Safari Area in 2017 and we hope that we will continue with this into the future. Charara is a truly beautiful area with great promise and we have committed to a long-term plan for the area.

We had the one disciplinary issue in second period, and none other of any significance. Buzz and I feel that it is overdue for a one week re-training exercise for all DAPU scouts and supervisors and we hope to have this done by April 2018.

3. Peter Stewart fine art

Well know artist Peter Stewart has created the "DAPU collection"
http://www.cmsafaris.com/dapu/DAPU-COLLECTION-2017.pdf.
Peter has undertaken (very graciously) to donate 40% of the proceeds of any of the works in the collection to DAPU. In addition to that, two outstanding oils of Peters were auctioned in 2017 generating over $4,000 for DAPU. So a HUGE thank you to Peter and our two highest bidders!

*** Auction # 1 ***

*** Auction # 2 ***

visit us at www.dapuzim.com

4. The dry season.
Fires, Water, and Poaching

As I am sure most of you are aware, the 2017 rainy season was very kind indeed – in fact one of the best on record. So much so, that we had to get an extension to allow early burning a month late than normal. So luckily we had lots of water all year in Dande North. The East almost made it all year but not quite. DAPU patrols successfully patrolled the big water sources as often as possible to keep on top of the snaring.

One of our goals in 2017 was to improve on fire management as a whole. Starting a bushfire in Zimbabwe is an offence and in 2017 we began treating it as such. Several arrests were made and lots of fines and warnings issued.

Whilst official government figures are yet to be released, we have no doubt what so ever that in Dande, hectares lost to fires in 2017 is the lowest in more than 10 years – in fact probably 20 years.

5. Snaring & general poaching

September to end of December of 2017 was much, much quieter than the same period of 2015 and 2016. In terms of snares picked up and meat poachers arrested the yield is drastically reduced.
This is beginning to prove to be a motivational challenge for DAPU scouts – simply put - we have paid out less $ in rewards. Buzz and I are now exploring ways to index work done to a reward or bonus system.

2017 first second, and third period baseline comparisons.

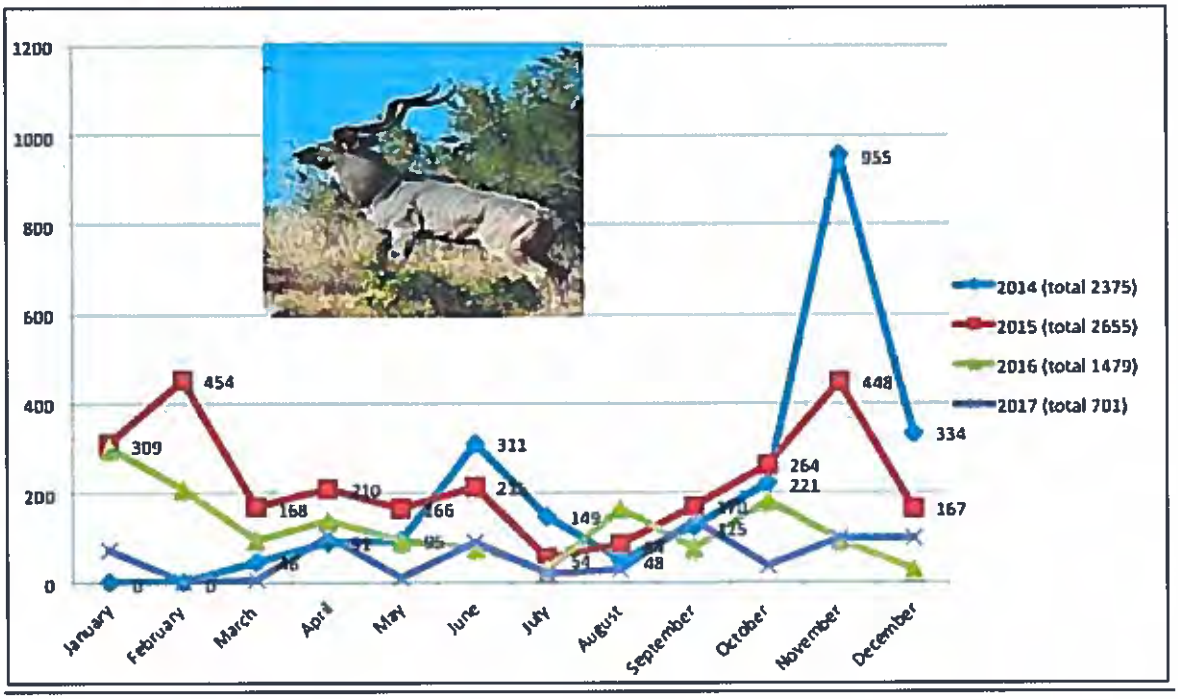
Month	No. of snares	Dogs shot	Meat Poachers convicted	Elephant poachers	Weapons retrieved	Rewards paid
January	71	0	3	0	2	US$784
February	0	0	1	0	0	US$150
March	7	0	0	0	0	US$19
April	103	0	0	0	0	US$133
	181	0	4	0	2	US$1,086.00
May	9	0	0	0	0	US$9
June	89	0	2	0	0	US$118
July	19	1	2	0	0	US$439
August	30	0	0	0	1	US$48
	147	1	4	0	1	US$614
September	139	0	0	2	1	US$1,327
October	36	0	0	0	2	US$68
November	99	0	0	0	1	US$1,574
December	99	0	0	3	0	US$0
	373	0	0	5	4	US$2,969
Total YTD	701	1	8	5	7	US$4,669

2016 first, second and third period baseline comparisons

Month	No. of snares	Dogs shot	Meat Poachers convicted	Elephant poachers	Weapons retrieved	Rewards paid
January	300	0	3	0	0	US$821
February	208	0	0	2	0	US$978
March	95	0	0		0	US$97
April	137	0	1	0	2	US$321
	740	0	4	2	2	US$2,217
May	94	0	5	0	4	US$1,310
June	75	0	0	0	0	US$83
July	27	0	0	0	2	US$67
August	164	1	0	0	0	US$254
	360	1	5	0	6	US$1,714
September	78	0	0	0	1	US$97
October	181	0	1	0	1	US$447
November	92	0	2	0	0	US$442
December	28	0	0	0	0	US$532
	379	0	3	0	2	US$1,518
Total YTD	1479	1	12	2	10	US$5,449

One of the most pleasing things about these trends is that we are getting on top of the "spikes" in poaching. DAPU has worked smarter and harder at the right time, in the danger areas, to counter increased poaching.

2015, 2016 and 2017
Full year snare yields compared

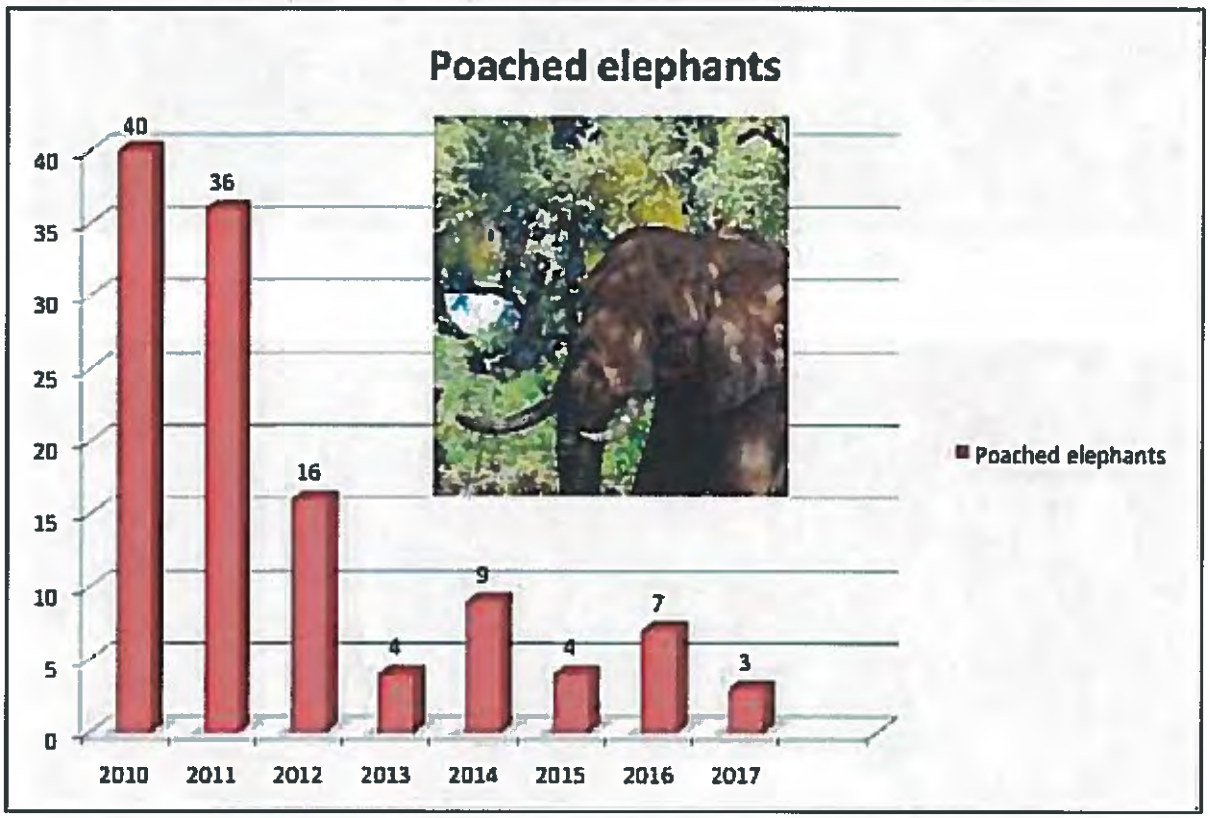


5.Elephant poaching

There were NO elephants poached in the third period of 2017 in the whole of Dande North and East. Therefore with the two lost in the Irira area (ward 2) and one in Chapoto (ward 1) we lost a total of three elephants in 2017. This is a figure that we can be extremely proud of. Obviously zero losses would be even better, but, considering Dande has + 100km's of border with Mozambique and a further 12km's with Zambia... probably we should be very happy indeed.

It must be mentioned that two elephant poachers were arrested and convicted in September and a further three in December 2017. One x AK47 taken out of circulation. We had heard about this AK47 for years and it was especially good news to get this weapon out of the system.

Traditionally as the hunting season slows down, and the presence of hunters also decreases – elephant poaching increases. The most dangerous months for our elephants are January – April, so we will need to be extra vigilant over the next few months until our hunters come back and help us out!



**** Graph showing 8 year elephant carcass count****

**** Parks, DAPU and the Accused (later "the guilty")****

****Bongi with seized ivory N.B. it all looks old ie they were "picked up" – not freshly poached.****

7. Problem Animal Control

Duties for DAPU scouts also include attending to Problem Animal reports (PAC). Obviously "the peak season" for PAC is the cropping season. That said there are cases all year long.

7.1.1 Elephant

None shot in 2017 BUT there have been and will always be sporadic raids by (mostly) young bulls into riverside vegetable gardens and fields. We treat every report as serious and the DAPU teams really react as strongly as they can early on. This normally saves us shooting. Our DAPU crews go onto full time elephant PAC rosters from February through to the end of April.

7.1.2 Lion

One old lioness killed and ate an old man from Kanyemba. He was on his way to the Zambezi to go fishing for his family. The very unfortunate scene was attended to by DAPU and she was shot, close to where she killed. Sporadic killing of livestock persists especially in ward 4 (8 cattle killed in November / December - but no lions shot in that area.

*** Skin and bones***

*** This picture clearly shows the tooth wear –she is an old cat***

7.1.3 Buffalo

Only the one blind old buffalo cow in Pedza villages was destroyed. Buffalo spend allot of time in the villagers gardens at night – normally the villages chase them or fence of gardens as required. In the rainy season they love to eat corn and cotton, which is grown in bigger fields, so that is more problematic as they cannot be fenced.

7.1.4 Crocodile

No one killed or injured that we know of.

7.1.5 Hippo

Hippos continue to generally make a nuisance of themselves along the Mwantanda River in ward 1 and in ward 16 (where the Manyame comes into the Zambezi Valley). Two badly behaved hippo were shot in March by Council but that was all.

7.1.6 Snake bites

Nothing to report.

8. Netting on the Zambezi

DAPU will continue to contribute 200 liters of petrol per month toward efforts to eliminate all illegal fishing in a 50km stretch of the Zambezi River. In 2017 National Parks achieved the following:

8	**Banana boats.**
10	Makoros.
14,340m	Nets burnt.
6	Basket traps.
33	Arrests.
19	Escaped.

Only when we added up the season's haul of nets, boats and poachers did we realize:

1. The scale of the problem.
2. How much work the National Parks crews have done.

We estimate that 85% of all illegal Netting has been stopped. Fisherman reported much improved catches as a whole, with lots of small tiger and bream caught – this can only bode well for all parties in the future.

Obviously lots of illegal fisherman also lay snares and much worse, so this effort is well worth supporting. Please see attached a separate report from National Parks.

***Measuring nets – note the fine gauge ***

Fish traps – Zambezi River 2017

(Funnily enough large gauge holes & eco friendly - just placed in wrong country!

9. Goals for 2017

1	Continue with anti-poaching patrols	Patrols have done well - we have had the quietest year in our history.
2	Early burning will start in May as soon as it is dry enough.	Complete – our most intensive effort in 8 years and surely best in 20 years.
3	Repair firearms where possible or replace	Delivered!!!
4	New boots (on the way).	Stuck in Durban.
5	New uniforms – paid for not delivered.	Delivered.
6	If possible trade in one of the older DAPU vehicles for a newer one.	DSC-F has funded DAPU to the tune of 24,000 dollars towards a new pick up. Delivery expected end of January 2018.
7.	Install New solar pump in East by end of September	Done and pumping!

Aimguard shotguns x 6 per kind favor of a young Harare based hunter

*** 3200m of piping and solar pump installation Dande East, October 2018***

10. Conservation Force

We continue to work hand in hand with John and Chrissie Jackson of Conservation Force. John and Chrissie are proud hunters and legends in the fight for our way of life and the wild places that we all love.

Conservation Force is a registered non – profit 501(c)(3) public foundation.

11. Flying for wildlife and others.

We must extend our thanks to:

1. Flying for Wildlife for their aerial patrols that are conducted on request. These are volunteer pilots in their own machines and they help us at NO cost to DAPU, which is tremendous.

3. Pieter Gertenbach and Charl Grobelar – farmers in the Harare area that are always helping out with mealie meal, fertilizers, soap and other ration items. We use this to supplement the DAPU rations and it is always very well received by the DAPU teams!

4. Trackit (Richard Tennant and Hannes Scholtz) who provide free, real time satellite monitoring of the two DAPU vehicles. This has really saved significantly on fuel and vehicle costs. Also of course we have been able to be much smarter with servicing, and positioning of vehicles.

12. DAPU Income and Expenses 2017

9	Goals for 2017	12
10	Conservation Force	15
11	Flying for wildlife and others	
12	Income and Expenses YTD	16

1. Changes

As mentioned in previous reports, we have added Peter Solomon and Owen Zviwanza to the management side of DAPU. Both go on patrols regularly in order to keep everyone honest.

CMS did a fair number of hunts in the Charara Safari Area in 2017 and we hope that we will continue with this into the future. Charara is a truly beautiful area with great promise and we have committed to a long-term plan for the area.

We had the one disciplinary issue in second period, and none other of any significance. Buzz and I feel that it is overdue for a one week re-training exercise for all DAPU scouts and supervisors and we hope to have this done by April 2018.

3. Peter Stewart fine art

Well know artist Peter Stewart has created the "DAPU collection"
http://www.cmsafaris.com/dapu/DAPU-COLLECTION-2017.pdf.
Peter has undertaken (very graciously) to donate 40% of the proceeds of any of the works in the collection to DAPU. In addition to that, two outstanding oils of Peters were auctioned in 2017 generating over $4,000 for DAPU. So a HUGE thank you to Peter and our two highest bidders!

*** Auction # 1 ***

*** Auction # 2 ***

visit us at www.dapuzim.com

4. The dry season.
Fires, Water, and Poaching

As I am sure most of you are aware, the 2017 rainy season was very kind indeed – in fact one of the best on record. So much so, that we had to get an extension to allow early burning a month late than normal. So luckily we had lots of water all year in Dande North. The East almost made it all year but not quite. DAPU patrols successfully patrolled the big water sources as often as possible to keep on top of the snaring.

One of our goals in 2017 was to improve on fire management as a whole. Starting a bushfire in Zimbabwe is an offence and in 2017 we began treating it as such. Several arrests were made and lots of fines and warnings issued.

Whilst official government figures are yet to be released, we have no doubt what so ever that in Dande, hectares lost to fires in 2017 is the lowest in more than 10 years – in fact probably 20 years.

5. Snaring & general poaching

September to end of December of 2017 was much, much quieter than the same period of 2015 and 2016. In terms of snares picked up and meat poachers arrested the yield is drastically reduced.
This is beginning to prove to be a motivational challenge for DAPU scouts – simply put - we have paid out less $ in rewards. Buzz and I are now exploring ways to index work done to a reward or bonus system.

2017 first second, and third period baseline comparisons.

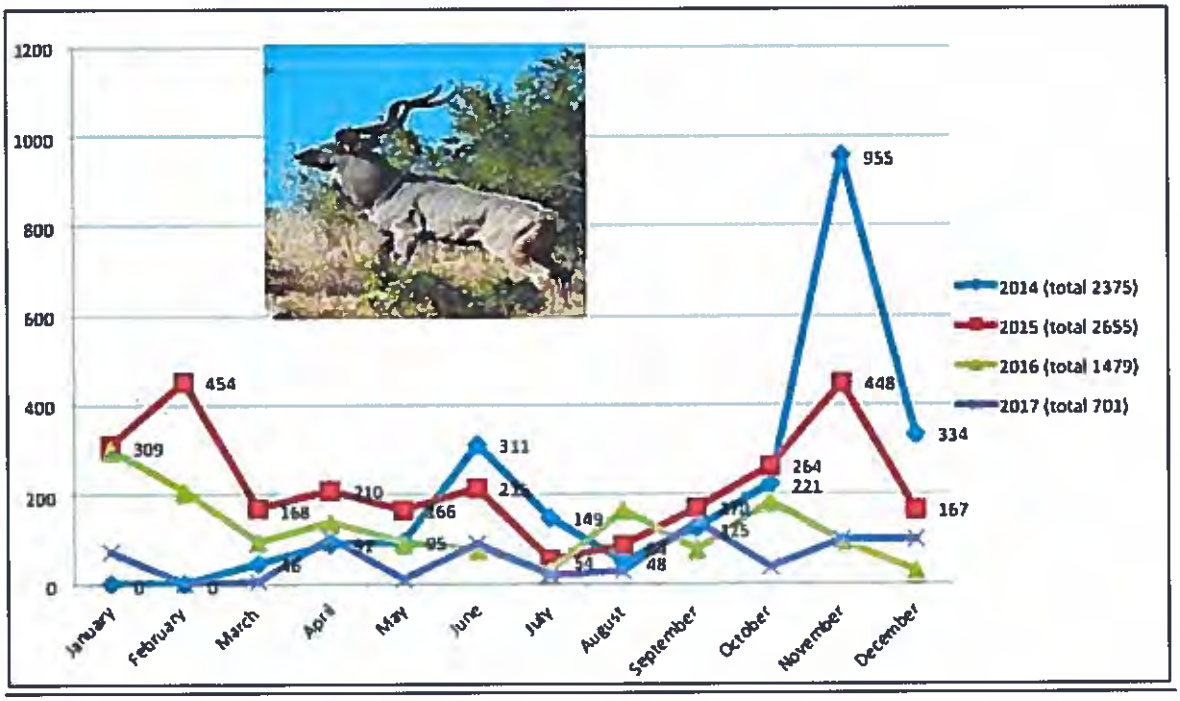
Month	No. of snares	Dogs shot	Meat Poachers convicted	Elephant poachers	Weapons retrieved	Rewards paid
January	71	0	3	0	2	US$784
February	0	0	1	0	0	US$150
March	7	0	0	0	0	US$19
April	103	0	0	0	0	US$133
	181	0	4	0	2	US$1,086.00
May	9	0	0	0	0	US$9
June	89	0	2	0	0	US$118
July	19	1	2	0	0	US$439
August	30	0	0	0	1	US$48
	147	1	4	0	1	US$614
September	139	0	0	2	1	US$1,327
October	36	0	0	0	2	US$68
November	99	0	0	0	1	US$1,574
December	99	0	0	3	0	US$0
	373	0	0	5	4	US$2,969
Total YTD	701	1	8	5	7	US$4,669

2016 first, second and third period baseline comparisons

Month	No. of snares	Dogs shot	Meat Poachers convicted	Elephant poachers	Weapons retrieved	Rewards paid
January	300	0	3	0	0	US$821
February	208	0	0	2	0	US$978
March	95	0	0		0	US$97
April	137	0	1	0	2	US$321
	740	0	4	2	2	US$2,217
May	94	0	5	0	4	US$1,310
June	75	0	0	0	0	US$83
July	27	0	0	0	2	US$67
August	164	1	0	0	0	US$254
	360	1	5	0	6	US$1,714
September	78	0	0	0	1	US$97
October	181	0	1	0	1	US$447
November	92	0	2	0	0	US$442
December	28	0	0	0	0	US$532
	379	0	3	0	2	US$1,518
Total YTD	1479	1	12	2	10	US$5,449

One of the most pleasing things about these trends is that we are getting on top of the "spikes" in poaching. DAPU has worked smarter and harder at the right time, in the danger areas, to counter increased poaching.

2015, 2016 and 2017
Full year snare yields compared

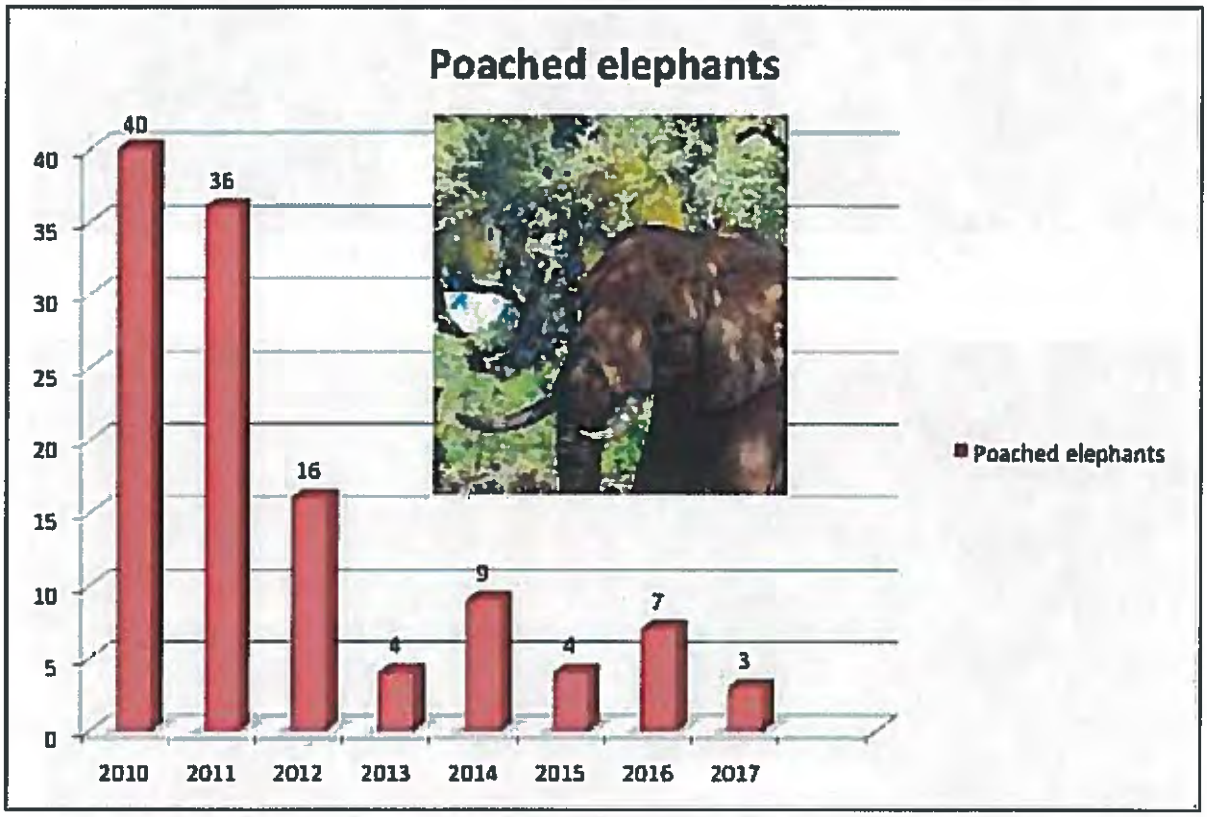


5.Elephant poaching

There were NO elephants poached in the third period of 2017 in the whole of Dande North and East. Therefore with the two lost in the Irira area (ward 2) and one in Chapoto (ward 1) we lost a total of three elephants in 2017. This is a figure that we can be extremely proud of. Obviously zero losses would be even better, but, considering Dande has + 100km's of border with Mozambique and a further 12km's with Zambia... probably we should be very happy indeed.

It must be mentioned that two elephant poachers were arrested and convicted in September and a further three in December 2017. One x AK47 taken out of circulation. We had heard about this AK47 for years and it was especially good news to get this weapon out of the system.

Traditionally as the hunting season slows down, and the presence of hunters also decreases – elephant poaching increases. The most dangerous months for our elephants are January – April, so we will need to be extra vigilant over the next few months until our hunters come back and help us out!



**** Graph showing 8 year elephant carcass count****

**** Parks, DAPU and the Accused (later "the guilty")****

****Bongi with seized ivory N.B. it all looks old ie they were "picked up" – not freshly poached.****

7. Problem Animal Control

Duties for DAPU scouts also include attending to Problem Animal reports (PAC). Obviously "the peak season" for PAC is the cropping season. That said there are cases all year long.

7.1.1 Elephant

None shot in 2017 BUT there have been and will always be sporadic raids by (mostly) young bulls into riverside vegetable gardens and fields. We treat every report as serious and the DAPU teams really react as strongly as they can early on. This normally saves us shooting. Our DAPU crews go onto full time elephant PAC rosters from February through to the end of April.

7.1.2 Lion

One old lioness killed and ate an old man from Kanyemba. He was on his way to the Zambezi to go fishing for his family. The very unfortunate scene was attended to by DAPU and she was shot, close to where she killed. Sporadic killing of livestock persists especially in ward 4 (8 cattle killed in November / December - but no lions shot in that area.

*** Skin and bones***

*** This picture clearly shows the tooth wear –she is an old cat***

7.1.3 Buffalo

Only the one blind old buffalo cow in Pedza villages was destroyed. Buffalo spend allot of time in the villagers gardens at night – normally the villages chase them or fence of gardens as required. In the rainy season they love to eat corn and cotton, which is grown in bigger fields, so that is more problematic as they cannot be fenced.

7.1.4 Crocodile

No one killed or injured that we know of.

7.1.5 Hippo

Hippos continue to generally make a nuisance of themselves along the Mwantanda River in ward 1 and in ward 16 (where the Manyame comes into the Zambezi Valley). Two badly behaved hippo were shot in March by Council but that was all.

7.1.6 Snake bites

Nothing to report.

8. Netting on the Zambezi

DAPU will continue to contribute 200 liters of petrol per month toward efforts to eliminate all illegal fishing in a 50km stretch of the Zambezi River. In 2017 National Parks achieved the following:

8	**Banana boats.**
10	Makoros.
14,340m	Nets burnt.
6	Basket traps.
33	Arrests.
19	Escaped.

Only when we added up the season's haul of nets, boats and poachers did we realize:

1. The scale of the problem.
2. How much work the National Parks crews have done.

We estimate that 85% of all illegal Netting has been stopped. Fisherman reported much improved catches as a whole, with lots of small tiger and bream caught – this can only bode well for all parties in the future.

Obviously lots of illegal fisherman also lay snares and much worse, so this effort is well worth supporting. Please see attached a separate report from National Parks.

***Measuring nets – note the fine gauge ***

Fish traps – Zambezi River 2017

(Funnily enough large gauge holes & eco friendly - just placed in wrong country!

9. Goals for 2017

1	Continue with anti-poaching patrols	Patrols have done well - we have had the quietest year in our history.
2	Early burning will start in May as soon as it is dry enough.	Complete – our most intensive effort in 8 years and surely best in 20 years.
3	Repair firearms where possible or replace	Delivered!!!
4	New boots (on the way).	Stuck in Durban.
5	New uniforms – paid for not delivered.	Delivered.
6	If possible trade in one of the older DAPU vehicles for a newer one.	DSC-F has funded DAPU to the tune of 24,000 dollars towards a new pick up. Delivery expected end of January 2018.
7.	Install New solar pump in East by end of September	Done and pumping!

Aimguard shotguns x 6 per kind favor of a young Harare based hunter

*** 3200m of piping and solar pump installation Dande East, October 2018***

10. Conservation Force

We continue to work hand in hand with John and Chrissie Jackson of Conservation Force. John and Chrissie are proud hunters and legends in the fight for our way of life and the wild places that we all love.

Conservation Force is a registered non – profit
501(c)(3) public foundation.

11. Flying for wildlife and others.

We must extend our thanks to:

1. Flying for Wildlife for their aerial patrols that are conducted on request. These are volunteer pilots in their own machines and they help us at NO cost to DAPU, which is tremendous.

3. Pieter Gertenbach and Charl Grobelar – farmers in the Harare area that are always helping out with mealie meal, fertilizers, soap and other ration items. We use this to supplement the DAPU rations and it is always very well received by the DAPU teams!

4. Trackit (Richard Tennant and Hannes Scholtz) who provide free, real time satellite monitoring of the two DAPU vehicles. This has really saved significantly on fuel and vehicle costs. Also of course we have been able to be much smarter with servicing, and positioning of vehicles.

12. DAPU Income and Expenses 2017

Income	
Bob Schofield	US$100
Burton Foundation	US$2,000
Communites Foundation of Oklahoma	US$2,000
David Adams	US$5,000
David Maple	US$500
DSCF.	US$24,000
Jeff Butterfield	US$250
Jeff Haulbrook	US$2,680
Jerry Beardmore	US$500
Jerry Jurena	US$600
Johnathan Frist	US$4,000
Jytte Merjtsensen	US$2,750
Martinus van der Linden	US$200
Mike Core	US$1,000
Morning Charitable Trust	US$500
Myron Repka	US$2,880
Sylvarnus Charitable Trust	US$6,000
	US$54,960
2017 Hunting clients levies and contributions.	***US$13,116***
Charlton McCallum Safaris	***US$45,540***
Total Income	***US$113,616***

Expenses

 # 1 Wages, rewards and rations.

	Game Scouts	Management Bongi, Muno Alfa & Owen.	Rations	Rewards	Fish poaching (ZAPP)	Total
January	US$1,100	US$1,605	US$770	US$784	US$250	US$4,509

Dear Mr. Gary Shores,

The following is in response to your request regarding the status of your application.

As background, on March 1, 2018, in response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service (Service) informed the public that it is revising its procedure for assessing applications to import certain sport-hunted species. We have withdrawn our countrywide enhancement findings for a range of species across several countries, including elephants and lions. In their place, we intend to make findings for trophy imports on an application-by application basis.

The Service is continuing to monitor the status and management of these species in their range countries. We will review each application received for import of sport-hunted trophies and evaluate the information provided in the application as well as other information available to us regarding the status and management of the species to ensure that the hunting program is promoting the conservation of the species. Each application must also meet all other applicable permitting requirements before it may be authorized.

Because each application now requires an individual finding under the Endangered Species Act, all application both new and ones submitted for renewal, cannot be finalized until this review process has been finalized.

Sincerely,

Anna Barry

Charlton McCallum
S·A·F·A·R·I·S

Dear Friends

For once we timed the end of the 2019 season with the beginning of the much awaited rainy season which has now started in earnest.

2019 has been a fantastic season for CMS in pretty much every department.

Buffalo - this year we really are seeing the benefits of voluntarily reducing our buffalo quota from 120 /year when we got the area to our present quota of 45. Our emphasis has always been on old bulls rather then spread. Considering buff take a good 7 years to develop nice solid bosses we did not see the benefit immediately but rather incrementally and we are expecting to have another excellent year next year.

Elephant - we all know the determent that the US Fish & Wildlife Service ban has had on not only our elephant hunts but the hunts country wide. This ban has also affected ours and others ability to run effective anti-poaching operations that protect the very species that the USFWS unwittingly think that they are protecting with their bans. Despite this we did do a few short elephant bull hunts in Dande which were as always great and successful hunts. Hunting an elephant bull in the Zambezi Valley is the purest and hardest form of hunting today. As a result it is the most rewarding hunt.

We also did two of our Kazuma bulls here we got a 66 and a 55 lbs in 10 days of hunting which was great.

Lion - unlike the ban on elephant the 5 year old rule on lions has indeed helped our quality and quantity of lions in Dande. We have 5 lions on quota in Dande but only sell two full bag lion hunts as we feel that taking two lions a season has no effect what so ever on the overall numbers or dynamics of lion prides in the area. This year we shot two cats that were aged 5 and 7.

Leopard - leopard continue to be excellent in Dande with 75% been shot in day light hours. We have 10 leopards on tag a year and this year we shot 8 nice male leopards of which 6 were taken in day light hours. The two failed leopards we had were unfortunate as one hunter had a nice male in the tree twice but decided the angle was not right and did not shoot and in the end time ran out.

Plains game - as always one comes to Dande to experience fantastic dangerous game hunting and to pick up a few plains game species along the way. Having said that we have had a pretty good year on plains game and have taken some great sable kudu warthog etc. Without doubt our strong anti-poaching patrols picking up snares etc have led to an increase in plains game numbers.

This year we did several hunts in Nyakasanga out of our own tented camp on the banks of the Zambezi. The hunting in this area was absolutely outstanding and it was a privilege to have had a season in this magical area. We will be selling a few buffalo and tuskless packages again there next year.

We also sent two old clients up to Luwire in Niassa in Mozambique. These are clients of ours who have hunted many times with us and all over Africa. They wanted a true wilderness area in as remote a spot as we could find. Luwire is defiantly that!! It's the old Africa that we all dream of!! While not a cheap hunt the experience and quality of the hunt is unbeatable. If you work hard in this area you have a very good chance at a dugga boy in the mid 40" like the two bulls below shot on one hunt. They went 45 and 46. The eland and sable are superb and the plains game and cats top notch also. Next year we will be selling several hunts in this un-spoilt bit of old Africa!

DAPU – continues to grow and has become a force to be reckoned with in the war against poachers. In October we sent our 22 game scouts for retraining. During that month we saw a marked increase in poaching – a sure sign that DAPU when in the field the poaching is limited.

This year we made several arrests of ivory dealers who have sourced the ivory in next door Mozambque and are trying to sell it in Zim. These dealers all received 9 years in jail.

We had less luck with the judicial system with our arrested meat poachers. One poacher we caught that we tracked from a poisoned waterhole was deemed "confused" by the judge and let off. Since then we have engaged private lawyers and law enforcement agents and have had much more success with convictions. This all costs huge amounts of money and we are grateful for all the donations towards DAPU that we receive. For more information on DAPU you can go to www.dapuzim.com

Social Developments - Apart from our 50% joint venture in hunting that sees the communities receiving 50% of the profits from all the hunts CMS has over and above that contributed to several school projects donating desks and school books at one and we are presently building a school block at another school.

We are in the process with generous help from Dallas Safari Club of up grading the national parks accommodation at Usanga Usanga post as well as having put in a super solar borehole that supplies water to the post and their vegetable gardens.

We have also drilled and equipped another solar borehole called Kavave in the east area which is pumping beautifully. This combined with the up grading of Nhemwa, the first solar borehole we have in the east has really made a difference. Buffalo herds that normally have to go to Mozambique when the pans dry up have remained year around which is very exciting indeed.

Sports has always been a great way to engage communities and this year we have supplied 18 sets of soccer uniforms to all the soccer teams in ward 1 and 2. We have also hosted our annual soccer tournament between the two wards which was won this year by ward 1. It was a very festive and successful tournament.

On a personal note i would like to thank everyone that bought my limited edition of my book “Tall Tales” it is now sold out and we are selling trade editions which are only US$45 each. These I have available and if you are interested you can get one through our website or signed at the shows.

All in all I think we can safely say that 2018 has been an excellent year for CMS and 2019 looks well set to follow in this years footsteps! We are excited to have Allan Shearing joining us in Dallas booth #2311 and Reno booth #1839/40 for the first time. Len will also be with Myles and I at the shows. Later on in the year Myles will be on the blazer booth in Salzburg representing us. We very much look forward to seeing everyone at the shows and wish all a Happy Christmas and new year. All the best Buzz, Myles and CMS.

Good day All,

So another year draws to and end, and we are thankful for another successful hunting season. If you make it out to SCI in Reno or DSC in Dallas, pop in and say hi, book a hunt or 2:)

Wishing you all the best for 2019 and hope you all have a lovely and safe Festive Season.

CMS Team

Ms. Brisendine,

Please see the attached letter and document to be included with all applications listed, which should be all outstanding lion import permit applications for trophies coming from Zimbabwe that were filed through Conservation Force.

If you have any questions regarding this matter, please do not hesitate to contact me.

Thank you,

Aimee Korver

Ms. Brisendine:

The document attached is to be included as supplement to all original import permit applications filed with the U.S. Fish and Wildlife Service listed above.

Since filing these applications we have received additional documentation of conservation efforts for lions in Zimbabwe that further detail the populations as stable and growing. The CAMPFIRE document strongly argues the importance of trophy imports and the value that they provide to communities in Zimbabwe through income flows from tourism and hunting which serve to support sustainable community livelihoods in a way that promotes conservation of wild species and habitat.

The Campfire document details the drastic effects that COVID-19 has had and is having on Zimbabwe's tourism and hunting market, which is in a state of collapse. It is leaving the country uncertain of how wild-life and anti-poaching programs will be supported on the ground in the coming months. This information can be used to predict what might transpire if trophy hunting and imports were to cease to exist and the tragic outcome it could have on the conservation efforts of wildlife in the area.

We ask that you please consider these documents when making your decision on enhancement in each import permit application.

Please feel free to contact me if you have any questions regarding this mater.

Cordially,

Aimee Korver
Permits Paralegal

1. CAMPFIRE communities Concern on Import Bans

Open Letter to the United States Fish and Wildlife Service

Dear Dr Mary Cogliano

CAMPFIRE Communities Concern on Import Bans

CA/MPFIRE Association, otherwise known as the Community Areas Management Program for Indigenous Resources in Zimbabwe wishes to register its opposition to continuing campigns for the banning of trophy imports. We are fully aware that the general outrage in both print and social media against sport hunting, which many distant voices refer to as unethical, is aimed at influencing policy action by importing countires.. These arguments, none of which are supported by science, are based on a perfected art of global misinformation and do not represent the views of rural communities who live side by side with wildlife. To us as a people with substantial wildlife populations, trophy hunting is indispensable for conservation and rural livelihoods.

Zimbabwe has one of the most resilient and successful conservation programs in Africa. Its conservation efforts have historically enabled local communities to thrive on sustainable livelihoods in biodiversity-rich landscapes. At least 800 000 households or 2.5 million people (out of a national population of 16 million) benefit directly and indirectly from the sustainable use of wildlife and tourism related investments in their areas. However, our ever growing elephant population has increased the levels of conflict between humans and wildlife in recent years, which, together with recurrent droughts that threaten food security, have made traditional livelihoods more difficult, especially for subsistence farming communities that live in the wildlife rich areas of the country.

Communities in CAMPFIRE areas reside in an environment where conflict between humans and wildlife is common, as both compete for the limited available land and water resources. But this comes at a high price: people in Zimbabwe are paying with their lives for tolerating wild animals in their areas. As recently as 23rd March 2020, Barnabas Mwinga, a 50 year old man, was killed by an elephant in his field in front of his wife and young daughter in Gonono Ward, Mbire District. He is one of seven other people that have needlessly lost their lives to wildlife attacks throughout the country since the beginning of 2020, in addition to the 41 killed in 2019. Yet despite this high cost, wildlife is still highly valued by rural communities who continue to tolerate massive crop destruction and livestock losses from wildlife without compensation. For example, elephant poaching in Mbire District where Barnabas Mwinga was recently killed has gone down from a peak of 40 in 2010 to only 3 elephants poached in 2019 (Figure 1). The decline in poaching incidents is a result of collaborative efforts between the Safari Operator and the hunting clients who invest nearly $100,000 annually into an anti-poaching unit.

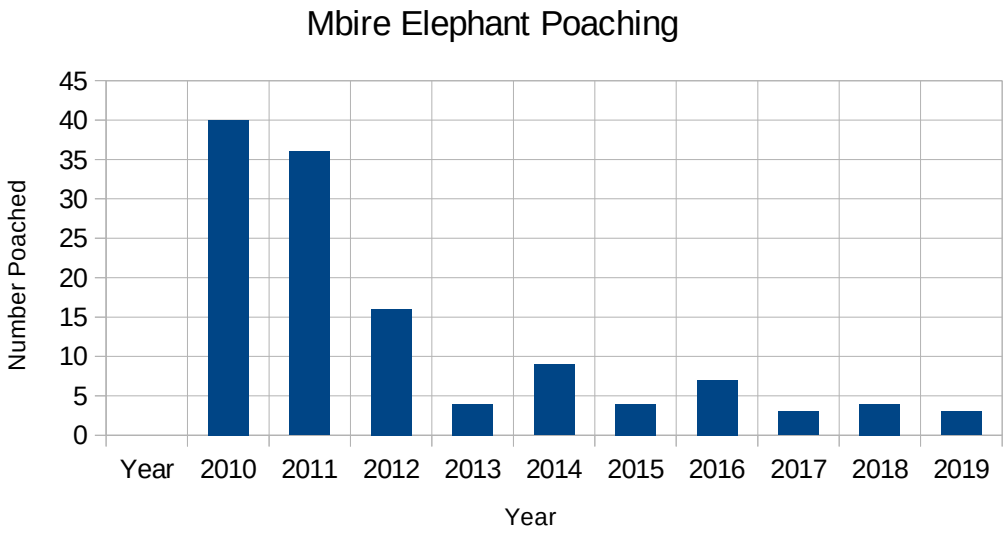

Figure 1: Mbire Elephant Poaching Trends (Source – Mbire Rural District Council)

The aim of the CAMPFIRE programme is to support sustainable community livelihoods in a way that promotes conservation of wild species and habitat. For nearly 30 years, trophy hunting, which relies heavily on the American market, has been cautiously implemented in the absence of other tourism opportunities to achieve this goal. Not only has it resulted in increasing food and livelihood security of rural people, it has also played a role in undermining the drivers of poaching and mitigating human and wildlife conflict. The net impact is seen in securing wildlife habitat and assisting in the regeneration of degraded landscapes.

The financial resources to succeed with this programme in CAMPFIRE areas are heavily dependent on the sustainable hunting of big game, especially elephants. The monies generated from these activities finance the local economies, social services as well as anti-poaching efforts and wildlife management at the District and Ward levels. For example, as can be seen from Table 1 below, the total number of elephants hunted as trophies over nine years is 807 out of a cumulative quota of 1381, from an estimated national population of 83,000 elephants. Hunting quotas are set at no more than 0.5% of the population estimate compared to an elephant population growth of 5% to 6% annually. The levels of off-take (58%) also demonstrate that while hunting is based on controlled numbers for each species annually, it is not uncommon for a client to pay for a full hunt and enjoy the wild experience, but not take a trophy. It is also important to note that communities do not view international hunting clients just as tourists, but as vital conservation partners.

Table 1: Trophy Hunting Quota Summary and Income: 2010-2018

All Districts:	**Elephant**	**Lion**	**Leopard**	**Buffalo**	**Hippo**	**Crocodile**	**Total**

Source: *The Role of Trophy Hunting of Elephant in Support of the Zimbabwe CAMPFIRE Program: Vernon Booth* (in progress).

District and Ward-level institutions in the CAMPFIRE areas rely on income from hunting to provide significant local livelihood benefits (income, jobs, skills) and social services (schools, clinics, irrigation schemes, boreholes) in remote regions where agriculture is marginal and there are very few jobs or other sources of cash income. Table 2 and Table 3 below summarise the impact of pre- and post-elephant trophy import suspension expenditure on the CAMPFIRE programme at the District and Ward level. The District administration costs absorb 89% of the budget with 30% devoted to law enforcement. With the suspension of elephant trophy imports to the USA and Europe in 2016, expenditure on law enforcement dropped from 33% to 9% as a result of District administration having to offset the human and wildlife costs which increased from 1% to 33%. At the Ward level, 46% of the budget is allocated to administration and 54% to community benefits (45% devoted to social services, Table 3).

Table 2: District level expenditure on administration and community benefits: 2010-2018

	Administration			**Community Benefits**			
All District Expenditure	**Administration**	**Law Enforcement**	**Management**	**Assistance to Wildlife Victims**	**Social Services**	**Total**	**Average/ year**

With growing awareness from several years of CAMPFIRE implementation, communities have been demanding their rightful place in the management of wildlife resources for their own benefit. To accommodate this, CAMPFIRE has undergone a review of its policy framework to enable communities to reap greater and more tangible benefits from living in harmony with nature. A key aspect of this review is to establish Community Conservancies that redefine ways in which communities can benefit more from wildlife and other income generation opportunities, as well as the mitigation of human and wildlife conflict. This initiative is being directed under the Global Environment Facility (GEF) 5 and 6 cycles covering five districts with the aim of developing innovative ways to improve the management of wildlife for the benefit or rural people. If trophy hunting and trade here was stopped, the impact on local livelihood would be severe, and both poaching and changes to alternative land use would increase. Non-consumptive tourism currently plays virtually no positive conservation role in the CAMPFIRE areas (<4% of overall income is generated through tourism). Instead of banning the import of trophies, more international oversight and support is needed from importing states, and of in-country CITES controls, to ensure sound sustainable management e.g. quota-setting, permit allocation, independent population surveys; building robust, equitable and transparent benefit allocation mechanisms at local level, particularly where communities have elected to invest their land and time in Community Conservancies.

STOP PRESS: The pressure for imports bans comes at the worst possible time as the Covid-19 pandemic has severely disrupted income flows from tourism and hunting. The collapse of both markets leaves rural people and safari operators with virtually no income, and it is uncertain how wildlife protection and anti-poaching programs will be supported on the ground in the coming months. What remains clear is that trophy import bans will seriously undermine conservation in Zimbabwe, and indeed open floodgates for rural people to destroy wildlife and wildlife habitat through conversion of land for other subsistence uses, even if unviable.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted African Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Conservation Force
3240 S. I-10 Service Road W., Suite 200
Metairie, Louisiana 70001 USA
T: (504) 837-1233
F: (504) 837-1145
E: cf@conservationforce.org

Signed: (b)(6)

Name: Lonnie Kitt

Date: 4/16/2018

Form 3-200-20

Department of the Interior
U.S. Fish and Wildlife Service

Federal Fish and Wildlife Permit Application Form

OMB Control No. 1018-0093
Expires Rev. 08/31/2020

RCVD JUN 14 2018

Return to: U.S. Fish and Wildlife Service
Division of Management Authority (DMA)
Branch of Permits, MS: IA
5275 Leesburg Pike
Falls Church, VA 22041-3803

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Kitt	Lonnie	Jean	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address)

(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Schuyler	Nebraska	68661	Colfax	U.S.A.

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the amount of **$100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force - Phone: (504) 837-1233 Email:cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera, Panthera leo, African Lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Zambia, Luangwa Valley, Nyaminga GMA near Mfuwe Town

   b. Date wildlife is to be hunted: 06/01/2018- 06/21/2018

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Paya Kakuli Safaris - Leon Kachelhoffer, Professional Hunter

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). HAVE NOT HUNTED YET. DO NOT hold PERMITS YET.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: MIKE BORNMAN
Business Name: BANGWEULU TAXIDERMY, LTD.
Address: 4142/K CHIFWEMA ROAD
City: NEW KASAMA, LUSAKA
State/Province:
Country, Postal Code: ZAMBIA 10101

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I und[redacted] United States, cannot be re-exported.

    Applicant's sign[redacted] Date: 05/08/2018

    Be aware th[redacted]val requirements by your local or state governments[redacted]s or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

ENHANCEMENT REPORT

Company & Concession Description

Paya Kakuli Safaris Ltd has been operating in Nyaminga Game Management Area since 2014 .The concession is 840 square kilometers and provides habitat for a range of species including Baboon Buffalo Bushbuck Bushpig Crocodile Duiker Eland Grysbok Hippo Hartebeest Hyaena Impala Kudu Leopard Lion Oribi Puku Roan Antelope Warthog Waterbuck Cooksons Wildebeest Zebra We have a lease with the Dept of National Parks & Wildlife Services of Zambia for seven years, renewable.

The Directors are Zambian born and our Company is family owned and has been operating for seven years.We employ a Resident Professional Hunter and two other Professional Hunters & Camp Staff of 24 including Game Trackers ,Skinners, Chefs Waiters & Cleaners
Our operations support in excess of 200 dependents in the local villages. Our Lease is a comprehensive concession plan which includes anti poaching and community support.

Anti Poaching Component

Paya Kakuli Safaris employs 28 Village Scouts for Anti Poaching and spends $10,000 annually on Law Enforcement, of which $2500 is spent quarterly.Our teams work closely with the National Parks & Wildlife Services conducting comprehensive anti poaching patrols.
We also supply both food rations and fuel for the patrols and provide uniforms boots & caps.
The company has also donated Shotguns ammunition and HF Radios to assist in the anti poaching.Paya kakuli safaris supplied and erected a Transmitter/Repeater Antenna with Radios for communication ease, being vital for our Anti Poaching Patrols, which has led to numerous arrests and confiscations of snares meat and weapons.
Paya Kakuli Safaris has also undertaken the rehabilitation of the Scout Camps. Our Area is heavily patrolled and sweeps are carried out by vehicle and on foot. We also undertake all maintenance of the vehicle for Dept of National Parks & Wildlife. We have erected an an office for the Community Resources Board for Meetings and additionally donated donated bicycles to help them in their endeavours for patrolling and to sensitize and

educate the community. Our contract is such that the monies generated from the Safari Hunting is split 60/40 with dept of national Par4ks and the Local Community. In the years 2016/2017 we generated $320,000 in Area Fees & Trophy Fees.

Community Participation

Paya Kakuli Safaris are committed to support the local community and to this end 50% of the meat derived from our safaris is donated and delivered to them. In addition we have put in 4 Boreholes and Medical Clinic, House for Teaching Staff and a Dormitory for Girls and the School.We have also donated a Motor Vehicle for Community Based Projects and Anti Poaching.

Habitat Protection & Conservation Development

Our anti poaching efforts have allowed the Game Population to improve over the three years we have had the concession. We have deepened 7 of the animal watering holes and have filled these with water from the newly dug boreholes when there is a shortage of water.
In our efforts to survey Lion in our Area we record sightings,spoor and as much data as is known on any individual. Because we are keeping these records we ensure that our limited offtake is sustainable. We also follow the age based policy of not harvesting Lions below the age of 6 years.

The Majority of our Lion and Elephant Hunters are from the United States and these hunters follow conservation ethics that see them contributing above their fees to the community and towards anti poaching in the Hunting Area.
The revenue from Lion and Elephant Hunting are our highest value hunts and generate approximately 50% of our overall revenue and Lion alone approx 35%.

In summation, Paya Kakuli Safaris sustainable hunting program not only enhances the sustainability of the survival of the Lion and all Wildlife in our Area but it also serves to protect the habitat. Revenue generated by the Safari Company demonstrates the value of the Wildlife to the local community and provides an incentive to ensure this natural resource is around for generations to come.

REF: HANDING OVER OF COMMUNITY VEHICLE REGISTRATION NUMBER ABD 561

The captioned subject matter refers.

We are delighted to inform you that after a comprehensive assessment of the Land Cruiser hard top bearing registration number ABD 561 by our Workshop Foreman in presence of His Royal Highness Chief Kazembe, the Wildlife Ranger based in Lundazi and CRB Chairperson, we are hereby beseeching the release of the captioned vehicle to Kazembe Community Resources Board as per agreement embedded in the documented minutes dated 13th February, 2017.

Further, we are also pleased to learn that your company will be rendering free intensive vehicle service once a year for the entire period of the Hunting Concession Agreement amidst the routine auto service requirements that will be financed by the CRB. This gesture will enhance supplementary efforts in maintaining road worthiness of the vehicle while prolonging its life span.

In view of the foregoing, it is a firm anticipation of the Department that all parties involved will abide by the terms of reference vividly stipulated in both the consent letter and minutes. By and large, the Department is therefore not sceptical that the aforementioned vehicle will assist in enhancing the tenets of Community Based Natural Resources Management and resource protection in Lumimba GMA.

Yours faithfully

Dear Sir,

REF: DONATION OF TWO HIGH FREQUENCY (HF) RADIOS

Reference is hereby made to your letter dated 17th May, 2017, in which you pledged to donate two (2) High Frequency Radios under Law Enforcement Pledge for the fiscal year 2017 to Zokwe Camp for communication purposes.

The Department wishes to thank you for this timely gesture that will significantly contribute to the emergency and security communication needs of Zokwe Camp and its surrounding areas. Most importantly, this trend is firmly anticipated to enhance resource protection in the respectively Game Management Area.

Lastly, the Department would like to express its sincere gratitude for the conservation partnership your company has continued exhibiting especially in the areas of resource protection and socio-economic development.

KAZEMBE COMMUNITY RESOURCE BOARD (CRB)
P.O Box 530007
Lundazi

24.03.2018

TO WHOMEVER MAY CONCERN

KAZEMBE COMMUNITY RESOURCE BOARD 2017
RECOMMENDATION REPORT

We the people living within the confines of Kazembe Chiefdom, in order to manage effectively commercial business of Wildlife and other resources, established a Community Resource Board to the powers entrusted in us, under the Zambia Wildlife Act Number 12 of 1998.

An agreement was made and entered on 16th day of March 2015 between the Zambia Wildlife Authority by then but now Department of National Parks and Wildlife (DNPW), the outfitter Pava Safaris and the Kazembe Community, under the Zambia Wildlife Act Number 12 of 1998.

The Parties agree and acknowledged that the agreement shall be governed by and construed in accordance with the Laws of the Republic of Zambia.

Objectives

- To protect Wildlife and other Natural resources and to prevent all forms of illegal use of natural resources.
- To provide an environment conducive to a positive relationship with Safari Hunting companies (and their Clients)
- To increase the population of wildlife in the area.

Benefits from:

- Concession

In 2017, 107,000 USD was received from animals fees and was divided into three categories such as 20% which went to CRB Administration from it 1x6 CRB Office Block was erected at Kazembe Headquarters, 14 Bicycles for CRB members were bought to patrol and sensitize community members on conservation and other office equipment were procured, 35% it was spent on community development e.g. Infrastructure developments such as (Clearing of hunting Roads, 1x10 compartments Girls dormitory was constructed at Kazembe Secondary

School. 3 Teachers houses were Constructed and 1 house at Zokwe for a Nurse was constructed.

45% was spent on 28 Village Scouts salaries who are CRB employees. Field Patrol Rations was bought for 4 Camps used to combust poaching in the area. Patrol gear such as Camping Tents and Uniforms were bought. The Company supported four (4) CRB quarterly meetings on planning and budgeting.

50% of all edible meat was distributed to all VAGs and to DNPW according to the concession agreement.

57000 USD was paid by Safari Company to the Government as a concession fee where 50% goes to the Government and 50% is plowed back to the community.

10000 USDwas spent on Law Enforcement independently of which every quota of the year 2,500USDis spent on field Patrol food packs, for four (4) wildlife camps within the Hunting block.

2120 USDis spent by the company on yearly evaluation meeting by Department ofNational Parks and Wildlife and other stake holders to know the performance of the Company to which 2017 performanceof Companywas tremendously good.

- Obligation

Six (6) Firearms and 50 x 12 bore ammunitions were provided to combust poaching in the Game Management Area within the hunting block.

- Pledge

One Motor Vehicle for the Community was purchased (Land Cruiser) and annually servicing is done by the Safari operator.Maintenance of DNPW Motor Vehicle is as well done by the operator. Four (4) Bore holes in the Community were drilled. Two (2) HF Radios for communication in the area wereprovided by the Safari Companyand (1) Tower was erected for signal.

Financial support and logistics for on the spot anti-poaching activities is provided such as fuel deploying officers in the field, transport costs by taking suspects to and from Court, informer incentives and some other Courtlogistics.

THE DIRECTOR GENERAL,
NATIONAL PARKS AND WILDLIFE (ZAWA),
PRIVATE CHIANGA,
LUSAKA.

Dear Sir,

SAFARI OPERATOR'S COMMITMENT TO KAZEMBE COMMUNITY

Kindly refer to the above captioned subject matter. So far, I have had no problems, dealing with the safari operator, director for safari hunting company **paya – kakuli**. Mr **Faizel Lulat** has had a very good working relationship with me the patron for Kazembe Community Resource Board (CRB) in Nyaminga Hunting Block and the community at large. He has always wanted to consult (ZAWA) and me the now **National Parks and Wildlife** when it comes to the issues to do with Kazembe Community Development, he wants transparency in his dealings. The Community Resource Board for Nyaminga Hunting Block, National Parks and Wildlife should work together in consultation so that there is proper transparency in all transactions. He will always want the consent and the knowledge of the Patron and National Parks and wildlife (ZAWA) before he does anything, as he already made funds available for his obligations to the community to avoid any confusions.

Your assistance and understanding on this matter will highly be appreciated.

Yours Faithfully,

The Patron,

Kazembe Community Resource Board.

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No ____ Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   b. Sex (if known).

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   ZAMBIA
   LUANGWA VALLEY. NYAMINGA GMA NEAR MFUWE TOWN

   b. Date wildlife is to be hunted: JUNE 1ST TO 21ST, 2018

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   PAYA LAKULI SAFARIS. PROFESSIONAL HUNTER LEON VACHELHOFFER

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: MR. MIKE BORNMAN
Business Name: BANGWEULU TAXIDERMY LTD.
Address: 4142/K CHIFWEMA ROAD
City: NEW KASAMA, LUSAKA
State/Province:
Country, Postal Code: ZAMBIA 10101

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

Re: Lion Trophy Application - June 23 Surname

Vargas, Darcy <darcy_vargas@fws.gov>

Thu 9/20/2018 1:14 PM

To: Barry, Anna <anna_barry@fws.gov>

The application states that the lion would be harvested between June 1 through June 21 of 2018.

Conservation Force is referenced.

I am uncertain if the lion was actually harvested because I have been directed not to ask. I personally, think it is important to wait until the lion is hunted so age can be verified for lions hunted in Zambia, but I have been told that I can not require the hunt to have occurred before we issue our permit.

FWS/AIA/DMA/PRT-95152C

Enhancement Finding
Applicant: Lonnie Jean Kitt (PRT-95152C)

Lonnie Jean Kitt submitted an application on June 14, 2017, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy, taken between June 1, 2018, and June 21, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia meets the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United

States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Lonnie Kitt's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Nyaminga GMA, Luangwa Valley, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Lonnie Kitt's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that

have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Lonnie Kitt's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Lonnie Kitt's application were the basis of this finding.

Governance of Lions in Zambia:

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will

regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident

hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Lonnie Kitt's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Lonnie Kitt will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Lonnie Kitt, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Lonnie Kitt.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to Lonnie Kitt, to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service is able to authorize the import of one male wild lion trophy taken in Zambia, to Lonnie Jean Kitt.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Allen	Chad		

(b) (6)

4. E-mail address: lisaQdlclb.com

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

(b) (6)

1.a. City	1.b. State	1.c. Zip code/Postal code	1.e. County/Province	1.f. Country
Cleburne	TX	76033	Johnson	U.S.A

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100. Federal**, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

DHL GWB, LLC Ste W201
1500 Midway Crt,
Elk Grove Village, IL 60007

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Lisa Jamnik 847-690-0690
lisaj@dlclb.com

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera Leo melanochaita

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   n/A

   b. Date wildlife is to be hunted:

   n/A

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   n/A

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   Umfurudzi Game Park, Masanaland West, GIS 686001 Harare

   b. Date wildlife was hunted:

   11/11/2017

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Umfurudzi Park
Richard Tabor

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

Colletts Wildlife Artistery
15 Josiah Chinamano Rd
Belmont, Bulawayo Zimbabwe

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

See attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name:
Address:
City:
State/Province:
Country, Postal Code:

Colletts Wildlife Artistery
15 Josiah Chinamano
Belmont, Bulawayo
Zimbabwe

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

not available

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

not available

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

not available

OMB Control No. 1018-0093
Expires 08/31/2020

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: Susan Jamnik Date: 6/18/2018

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: _____ Date: _____

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

KNOW ALL MEN BY THESE PRESENTS: That, ✓ CHAD E. ALLEN (Full name of individual, partnership, corporation, sole proprietorship, or limited liability company) (Identify) doing business as a ✓ INDIVIDUAL (individual, partnership, corporation, sole proprietor) under the laws of the State of ✓ TEXAS, residing or having a principal place of business at (b) (6) [redacted] CLEBURNE, TX, hereby constitutes and appoints ✓ D&L CHB, LLC (Grantee's Name), its officers, employees, and/or specifically authorized agents, to act for and on its behalf as a true and lawful agent and attorney of the grantor for and in the name, place and stead of said grantor, from this date

In the United States (the "territory") either in writing, electronically, or by other authorized means, to:

Make, endorse, sign, declare, or swear to any customs entry, withdrawal, declaration, certificate, bill of lading, carnet or any other documents required by law or regulation in connection with the importation, exportation, transportation, of any merchandise in or through the customs territory, shipped or consigned by or to said grantor;

Perform any act or condition which may be required by law or regulation in connection with such merchandise deliverable to said grantor; to receive any merchandise;

Make endorsements on bills of lading conferring authority to transfer title; make entry or collect drawback; and to make, sign, declare, or swear to any statement or certificate required by law or regulation for drawback purposes, regardless of whether such document is intended for filing with U.S. Customs and Border Protection;

Sign, seal, and deliver for and as the act of said grantor any bond required by law or regulation in connection with the entry or withdrawal of imported merchandise or merchandise exported with or without benefit of drawback, or in connection with the entry, clearance, lading, unlading or navigation of any vessel or other means of conveyance owned or operated by said grantor, and any and all bonds which may be voluntarily given and accepted under applicable laws and regulations, consignee's and owner's declarations provided for in section 485, Tariff Act of 1930, as amended, or affidavits or statements in connection with the entry of merchandise;

Sign and swear to any document and to perform any act that may be necessary or required by law or regulation in connection with the entering, clearing, lading, unlading, or operation of any vessel or other means of conveyance owned or operated by said grantor;

Authorize other Customs Brokers duly licensed within the territory to act as grantor's agent; to receive, endorse and collect checks issued for CBP duty refunds in grantor's name drawn on the Treasurer of the United States; if the grantor is a nonresident of the United States, to accept service of process on behalf of the grantor;

And generally to transact Customs business, including filing of claims or protests under section 514 of the Tariff Act of 1930, or pursuant to other laws of the territories, in which said grantor is or may be concerned or interested and which may properly be transacted or performed by an agent and attorney;

Giving to said agent and attorney full power and authority to do anything whatever requisite necessary to be done in the premises as fully as said grantor could do if present and acting, hereby ratifying and confirming all that the said agent and attorney shall lawfully do by virtue of these presents;

This power of attorney to remain full force and effect until revocation in writing is duly given to and received by grantee (if the donor of this power of attorney is a partnership, the said power shall in no case have any force or effect in the United States after the expiration 2 years from the dates of its execution);

Grantor acknowledges receipt of ✓ D&L CHB, LLC (Grantee's Name) Terms and Conditions of Service governing all transactions between the Parties.

If the Grantor is a Limited Liability Company, the signatory certifies that he/she has full authority to execute this power on behalf of the Grantor.

IN WITNESS WHEREOF, the said ✓ CHAD E. ALLEN

caused these presents to be sealed and signed: (Signature) (b) (6) [redacted]

(Capacity) ✓ N/A Date: ✓ 10-10-2011

Witness: (if required) N/A

If you are the importer of record, payment to the broker will not relieve you of liability for CBP charges (duties, taxes or other debts owed CBP) in the event the charges are not paid by the broker. Therefore, if you pay by check, CBP charges may be paid with a separate check payable to "U.S. Customs and Border Protection" which shall be delivered to CBP by the broker. Importers who wish to utilize this procedure must contact our office in advance to arrange timely receipt of duty checks.

Thank you for submitting an application to the U.S. Fish and Wildlife Service. The application was received by the Division of Management Authority on 06/27/2018; check number 161088 accompanied the application for AFRICAN LION. Your application has been assigned the following PRT identification number: MA98157C-0While processing time may be less, you should anticipate a minimum of 30 days to process your request, with many requests averaging between 60 to 90 days due to some requests which need to be published in the Federal Register and/or be reviewed by other Service offices. While we are aware that you may want to inquire about the status of your application, we request that you allow our office at least three weeks after the receipt of this notification to make any inquiries. Should you have additional information that you need to provide to our office pertaining to the current request, we ask that you call our office first at 800-358-2104 or email managementauthority@fws.gov to obtain further instructions.

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions* [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

Dear Team Mates:

D & L Customs House Brokers has moved and has a new address. There are several applications here that when the permit(s) is(are) issued must be mailed to D & L's new address. That new address is:

D&L CHB, LLC
2015 S. ARLINGTON HEIGHTS, SUITE 123
ARLINGTON HEIGHTS, IL 60005

The file numbers and person assigned the file(s) are:

98157C	AB
75906C	AB
80967C	MR
80975C	MR
11485C	MR
98158C	SDW
98120C	SDW
98119C	SDW
98118C	SDW
98117C	SDW

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Asal	David	Mark	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			N/A

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Farmville	Virginia	23901	Cumberland	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: MA19855C-0 No ☐

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ertify that the information submitted in this application for a permit is complete and accurate to the ment herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      P.l. melanochaita African Lion

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

      Zambia, Mafunta GMA, Western Province, S15'49028; E025'15474, Kaoma

   b. Date wildlife is to be hunted:

      06/01/2018-06/21/2018

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      Skull, Skin, Claws

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      N/A

   b. Date wildlife was hunted:

      N/A

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

N/A

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

N/A

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	MVU Safaris
Business Name:	MVU Safaris
Address:	Plot # 6980 Katanga Road Lusaka
Address:	P.O. Box 35225 Lusaka
City:	Lusaka
State/Province:	Zambia
Country, Postal Code:	Zambia, 1010

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: _____ Date: _____

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
David Asal (b) (6) [redacted]

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

MVU SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: m1saeed@hotmail.coml

I. DESCRIPTION OF COMPANY AND CONCESSION

Mvu Safaris Zambia Limited has been operating in Mufunta Concession since April 2011. The concession provides habitat for a range of species including Lion, Leopard, Antelopes, Hartebeest and Plains Game. The concession is on the Western boundary of the Kafue National Park. Mvu Safaris has entered into a ten year lease agreement with the wildlife authority and communities and is renewable subject to conducting successful conservation records of the Ecological system.

Our company is a Limited Company and maintains one resident Professional Hunter who also provides the duties of a Camp Manager. Other employees include four game trackers, eighteen anti-poaching scouts, and six camp staff (cooks, cleaning, miscellaneous).Altogether our operations support 152 dependents in local Villages. These beneficiaries come from the local community.

Safari hunting therefore helps not only meet some financial needs of these communities but also prevents them from Illegal hunting activities which have adverse effects on the population of the animals. It therefore follows that most of the revenue for Safari Hunting is derived from hunting of Lion and Leopard. With this in mind Mvu Safaris, the Community and the Wildlife Authorities have an enormous task to prevent the Cats from going into extinction by providing a more robust anti –poaching system to prevent the extinction of cats in these concessions.

II. ANTI-POACHING COMPONENT

Mvu Safaris maintains six groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the wildlife scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

In 2017, Mvu Safaris spent almost $28,000 in Mufunta on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 450 liters of diesel for patrol vehicles. We recorded 228 patrol days and well above 1600 patrol hours. We also made over $3000 in payments of rewards to leads helping in the abduction of poachers. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	$5900	Directly paid and some subsidies to WA
Scout equipment	$5000	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	$6300	For scouts and WA
Rations for WA and community scouts	$7800	
Rewards	$3000	For information and arrests
TOTAL	$28000	

The concession agreement has a clause which requires Mvu Safaris to submit annual reports on the anti-poaching activities and patrols done in each particular year to the wildlife authorities. This report will be taken into account in 2021 whether to renew the concession or not.

Bicycles and firearms recovered from poachers

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the Community Resource Boards (CRB) of about Forty Thousand Dollars ($40,000) annually as per agreement which was entered into in 2011 by Mvu Safaris, the Community and the Wildlife Authorities.

In addition to these direct contributions, we pledge to distribute at least 50% of game meat harvested to the villages.

In the pictue above members of the community waiting to receive Game meat which was legally hunted from Safari

B. Conflict Control

We have very few Human Animal Conflicts and in most cases they are not serious in nature.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans and boreholes which costs approximately Seventeen Thousand Five Hundred Dollars Only ($17500) to maintain annually respectively. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the concession by finding water resource.

V. OTHER INFORMATION

A. Prey Base

Mvu Safaris in Mufunta is still monitoring the population growth of the Lion and Leopard which will result from efforts done so far such as anti-poaching efforts, water provision, and fire management. Mvu Safaris will further engage the wildlife Authorities in monitoring the resources on the ground by positioning cameras in strategic areas so as to monitor the Activities of the Lion and Leopard. We will work extra hard to grow the population of the Species by at least 15% per year. This will be done by introducing a deliberate approach where only old animals will be harvested for trophies and work on very careful allocated quota utilization per year in the block.

We will also engage the wildlife authorities to regulate resident hunting by proposing that animals hunted for food purposes should be female so as to balance the Eco system. We further wish to propose that resident hunting should be closely monitored and supervised because we have had reports in the past where resident hunters would not conduct proper ethical hunting methods in the hunting concession where they get allocated hunting rights per year for their own personal hunting opportunities as residents of Zambia and we wish to bring this anomaly to an end.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lion in our area better. As at now we use Lion tracks and foot prints. Sightings by individuals and the cameras which we used this year to monitor the size and age for the Lion and keep records of the same.

C. Lion Aging Approach

Like other Safari Companies we have been following an age-based policy for African Lion trophies since 2015, after adopting a mutual aging agreement with our wildlife Authorities, and to be conservative in estimating age.

A number of potential Lion Trophy were not hunted this year because of our selectiveness.

Our approach as a company is to hunt lion which has reached an advanced and mature age only of minimum seven (7) years and above.

D. U.S. Hunters

Our largest clientele is from the United States of America (USA). We are happy to report that we have had very good relations with most of these clients who are willing to get out of their way and spend extra in terms of donations to communities and towards anti-poaching programs. Their approach to Safari Hunting has been that of maintaining high ethics of sustainability so as to improve the numbers of species in these concessions.

CONCLUSION

Mvu Safaris regulated, sustainable-use based hunting program enhances the survival of the Lion/Leopard. Our program helps to preserve and improve available Lion/Leopard habitat. Our anti-poaching program serves to protect and grow the cats prey base and reduces incidental off take by meat poachers. And our community participation and assistance program demonstrates the potential value of wildlife (especially Lion) to local communities' .Mvu Safaris has anti-poaching awareness campaign programs also which are done through funding sporting activities. This has helped improve the awareness on poaching in the community and how poaching robes them of the much needed finances generated from these natural resources. We can confirm that the communities in our concession are fully aware of the benefits that Safari Hunting comes along with and the dangers that are posed to this resource if poaching is left to escalate at higher levels. The community is now more than willing to bring to our attention any suspicious activities by some members of the communities.

Subject: 63880C / Lion Trophy Import

Good morning Mr. Asal,

Ref: 63880C

Your referenced application request to import one male African lion trophy from MVU Safaris, Lusaka, Zambia, is under review. However, in order to complete processing your application, we need additional information. Therefore, please provide the following:

1. Provide documentation showing that the lion referenced in your application will be legally hunted within Mafunta GMA, Zambia.

2. Provide documentation that shows the age of the lion you are requesting to import.

3. If you are able to, please provide a signed copy of the MVU Safaris, LTD document enclosed in your application package.

In accordance with 50 CFR 13.11(e), if the requested information is not received by this office by July 22, 2018, (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

R
espectfully,

Darcy Vargas

RCVD JUL 17 2018

4th July, 2018

The Director,
USFWS
United States of America

Dear Sir/Madam,

RE: AGE LIMIT FOR LIONS HUNTED IN ZAMBIA

We hereby wish to confirm that as per requirements by the Zambian government through the Department of National Parks and Wildlife Services, all Lions that are to be exported out of Zambia which were legally hunted are supposed to be five (5) years and above.

Any trophy that fails to meet this requirement is not permited to be exported and the Professional Hunter together with the Safari outfitter will be punished accordingly.

Please do not hesitate to contact the Wildlife Authorities in Zambia for any further clarifications.

Yours faithfully

MUHAMMAD SAEED ESSA
DIRECTOR

MVU SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: m1saeed@hotmail.coml

I. DESCRIPTION OF COMPANY AND CONCESSION

Mvu Safaris Zambia Limited has been operating in Mufunta Concession since April 2011. The concession provides habitat for a range of species including Lion, Leopard, Antelopes, Hartebeest and Plains Game. The concession is on the Western boundary of the Kafue National Park. Mvu Safaris has entered into a ten year lease agreement with the wildlife authority and communities and is renewable subject to conducting successful conservation records of the Ecological system.

Our company is a Limited Company and maintains one resident Professional Hunter who also provides the duties of a Camp Manager. Other employees include four game trackers, eighteen anti-poaching scouts, and six camp staff (cooks, cleaning, miscellaneous).Altogether our operations support 152 dependents in local Villages. These beneficiaries come from the local community.

Safari hunting therefore helps not only meet some financial needs of these communities but also prevents them from Illegal hunting activities which have adverse effects on the population of the animals. It therefore follows that most of the revenue for Safari Hunting is derived from hunting of Lion and Leopard. With this in mind Mvu Safaris, the Community and the Wildlife Authorities have an enormous task to prevent the Cats from going into extinction by providing a more robust anti –poaching system to prevent the extinction of cats in these concessions.

II. ANTI-POACHING COMPONENT

Mvu Safaris maintains six groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the wildlife scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

In 2017, Mvu Safaris spent almost $28,000 in Mufunta on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 450 liters of diesel for patrol vehicles. We recorded 228 patrol days and well above 1600 patrol hours. We also made over $3000 in payments of rewards to leads helping in the abduction of poachers. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	$5900	Directly paid and some subsidies to WA
Scout equipment	$5000	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	$6300	For scouts and WA
Rations for WA and community scouts	$7800	
Rewards	$3000	For information and arrests
TOTAL	$28000	

The concession agreement has a clause which requires Mvu Safaris to submit annual reports on the anti-poaching activities and patrols done in each particular year to the wildlife authorities. This report will be taken into account in 2021 whether to renew the concession or not.

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the Community Resource Boards (CRB) of about Forty Thousand Dollars ($40,000) annually as per agreement which was entered into in 2011 by Mvu Safaris, the Community and the Wildlife Authorities.

In addition to these direct contributions, we pledge to distribute at least 50% of game meat harvested to the villages.

In the pictue above members of the community waiting to receive Game meat which was legally hunted from Safari

B. Conflict Control

We have very few Human Animal Conflicts and in most cases they are not serious in nature.

A number of potential Lion Trophy were not hunted this year because of our selectiveness.

Our approach as a company is to hunt lion which has reached an advanced and mature age only of minimum seven (7) years and above.

D. U.S. Hunters

Our largest clientele is from the United States of America (USA). We are happy to report that we have had very good relations with most of these clients who are willing to get out of their way and spend extra in terms of donations to communities and towards anti-poaching programs. Their approach to Safari Hunting has been that of maintaining high ethics of sustainability so as to improve the numbers of species in these concessions.

CONCLUSION

Mvu Safaris regulated, sustainable-use based hunting program enhances the survival of the Lion/Leopard. Our program helps to preserve and improve available Lion/Leopard habitat. Our anti-poaching program serves to protect and grow the cats prey base and reduces incidental off take by meat poachers. And our community participation and assistance program demonstrates the potential value of wildlife (especially Lion) to local communities' .Mvu Safaris has anti-poaching awareness campaign programs also which are done through funding sporting activities. This has helped improve the awareness on poaching in the community and how poaching robes them of the much needed finances generated from these natural resources. We can confirm that the communities in our concession are fully aware of the benefits that Safari Hunting comes along with and the dangers that are posed to this resource if poaching is left to escalate at higher levels. The community is now more than willing to bring to our attention any suspicious activities by some members of the communities.

Signed: _____

In Reply Refer To:
FWS/AIA/DMA/PRT-63880C

Enhancement Finding
Applicant: David Mark Asal (PRT-63880C)

David Mark Asal submitted an application on November 21, 2017, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken June 1, 2018, through June 21, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Asal's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Mafunta GMA, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Asal's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Asal's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Asal's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion

populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident

hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Asal's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Asal will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Asal, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. David Asal.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to David Asal.**

FALLS CHURCH VA 22041-3803

Mary Coglianese

CHIEF, BRANCH OF PERMITS, DMA

Permittee:

DAVID MARK ASAL
(b) (6) [redacted]
FARMVILLE, VA 23901
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Ellington	Scott	Byron	

(b) (6) [redacted]

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

(b) (6) [redacted] no P.O. Boxes)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Dallas	TX	75201	Dallas	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)
N/A

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
N/A	N/A	N/A	N/A	N/A

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100.** Federal, Tribal, State, and local government agencies and those acting on behalf of such agencies, are exempt from the processing fee—attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. [redacted] miliar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the ***of Title 50***, and I certify that the information submitted in this application for a permit is complete and [redacted] erstand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

Scott Ellington
(b) (6) Dallas, TX 75201

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Sarah Bell Goldsmith
(b) (6)

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

N/A

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo. (Pardus. Member of the Felidae) African Lion.

b. Sex (if known). Male as females are Not allowed to be harvested in Tanzania

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

N/A

b. Date wildlife is to be hunted:

N/A

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

N/A

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

Tanzania. (Area: KIZIGO GAME RESERVE; Region: SINGIDA; GPS: S06.47'67.4", E 034.33'58.1"; Hunting Block: KIZIGO GAME RESERVE CENTRAL; Nearest City: SINGIDA)

b. Date wildlife was hunted:

10/10/2017 (October 10, 2017)

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Safari Company: PALAHALA SAFARIS & HUNTING LTD; BLOCK DD, PLOT # 191; NAIROBI ROAD, SAKINA AREA; ARUSHA-TANZANIA

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

Tanzania Big Game Safaris Ltd and Affiliates
Block DD /Plot 191, Nairobi Road/Sakina Area, Arusha, Tanzania

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).
Attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Mr. Webby Kapaliswa
Business Name:	Tanzania Big Game Safaris, Ltd/
Address:	Block DD /Plot 191
City:	Nairobi Road/Sakina Area
State/Province:	Arusha, Tanzania
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application. Addtl. info attached

a. Do you have any information regarding the population status or trend data on the species hunted?

Over the last few seasons, the outfitters have obtained conclusive data that shows a more than thriving population in the majority of our hunting areas. Population is very healthy and on the increase

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

Tanzania Big Game Safaris and affiliates are associated with an NGO that is called Conservation Foundation Tanzania. Work hand in hand with neighboring villages that are adjacent to the concession areas by educating villagers, building schools, health care needs, finding jobs, etc.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

Tanzania Big Game Safaris has been operating since 1988. The managing director has always been extremely active in Wildlife Conservation. He employs over 5 active anti-poaching teams with over 50 anti-poaching officers that protect a single area. He limits harvesting to male lions over the age of 8

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two l

Applicant's signatu [redacted] (b) (6) _____ Date: 8/1/18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Department of Interior
US Fish & Wildlife Service

Federal Fish and Wildlife Permit Application Form
Form 3-200-20

Mr. Scott Byron Ellington

9. Additional information provided below:

The affiliate companies along with Tanzania Big Game Safaris are all under one-management agreement with Tanzania Big Game Safaris.

Tanzania Big Game Safaris has been operating in Tanzania since 1988. Since its inception, the founder and managing director is Raoul Ramoni. Raoul has always been extremely active in Wildlife Conservation. He has always been a true custodian of the land and wildlife. In addition, he has a very strong and active anti-poaching team working throughout the year in each of the concession areas. In some cases, depending on the size of the area he is managing, he employs over five active anti-poaching teams with over 50 anti-poaching officers that are protecting a single area. They protect this particular area from illegal poachers, woodcutters, illegal miners, illegal fishermen, illegal honey gatherers and illegal cattle herders (bringing cattle to graze) inside the Game Reserves. Due to the very stringent wildlife management program, these areas under his management have a very healthy and sustainable game population. Amongst the game found in these areas, there are an abundance of lions and leopards. The numbers of predators have increased dramatically due to very stringent policies that have been in place for as long as Raoul has been properly managing the areas. Thus, this dramatically limits the harvesting of male lion to only an older more mature male typically over the age of eight years and that is no longer a residing pride member.

Tanzania Big Game Safari's policy targets old lone (Nomad) males that no longer breed and are not associated with any prides with females and/or cubs. The lions that they have harvested in the past have all past the aging process in Tanzania, since its inception.

The numbers of lions that are visible on a normal safari are very impressive. Quite often on a 21 days safari, everyone involved will have the pleasure of sighting between 20 and 35 male lions. Over the last few seasons, they have obtained conclusive data that shows a more than thriving population in the majority of their hunting areas, with the exception of Masailand. Subsequently, the lion populations, due to this very strict management practice, are very healthy and there are a significant amount of lions on the increase. Tanzania is fortunate enough to have the highest density of lion population in Africa. Since 2012, Tanzania put in place a law that would only allow lions over 6 years of age to be hunted. It has been a common practice for our Companies for the last 15 years, not to harvest any males that are younger than 7 years of age.

Tanzania Big Game Safaris and affiliates are associated with an NGO (non governmental organization) that is called Conservation Foundation Tanzania. This has been very active in Tanzania (in many different capacities) since 1994. It is fortunate to be able to work hand in hand with neighboring villages that are adjacent to the concession areas. Educating villagers neighboring these concession areas is a huge advantage in protecting the wildlife living within these eco-systems. Local people are taught that they have the opportunity of finding available jobs with the hunting outfitter whom is managing the concession areas. In addition, the outfitter is able to help the villages with different community projects based on their needs such as building schools for the different ages of the children irrespective of their religion. Another example is the possibility of health care needs such as wheel chairs and medical supplies. School supplies and awareness of potential sponsors for individual students to be able to continue to further education are just a few examples of the benefits

USFWS ESA Lion Trophy Import Application #02691D

1 message

Harcum, Heather <heather_harcum@fws.gov> Mon, Sep 9, 2019 at 11:04 AM
To: (b) (6)

Good morning Sarah,

I am reaching out in regards to Mr. Scott Ellington's application to import an African lion trophy (*Panthera leo melanochaita*) with Mr. Webby Kapaliswa of Palahala Safaris & Hunting Ltd. from the Kizigo Game Reserve in Tanzania, Block DD/Plot 191. This application was received on August 9, 2018.

We are in the process of reviewing applications for these imports and would like to receive the most updated information about the importer. As you may well be aware, the USFWS is now considering applications on a case-by-case basis, as opposed to making country-wide findings. As such could you please respond to the following:

1. Confirm Mr. Ellington's physical address (currently we have 2525 N. Pearl St. #1202, Dallas, TX 75201).

2. An operator report from Palahala Safaris & Hunting Ltd. or its parent company which includes, but is not limited to-
- Population status or trend data on the lion population (countrywide and local to the game reserve/hunting block)
- Information on the fees paid (e.g., license or trophy fees), recipients of these fees, and the use of these fees
- Information about the safari outfitter, professional hunter, concession holder/land owner, and their activities to conserve the species (e.g., habitat management/improvement, anit-poaching activities and success in those efforts, efforts to address human-lion conflict, efforts to maintain prey populations, lion population monitoring, and community benefits). Copies of recent reports submitted to TAWA would be particularly helpful.

Thank you and please feel free to reach out if you have any questions or concerns.

Best regards,

Heather Harcum

TANZANIA BIG GAME SAFARIS "And affiliates"

About Tanzania Big Game Safaris

The affiliate companies along with Tanzania Big Game Safaris are all under one-management agreement with Tanzania Big Game Safaris.

Tanzania Big Game Safaris has been operating in Tanzania since 1988. Since its inception, the founder and managing director is Raoul Ramoni.

Raoul has always been extremely active in Wildlife Conservation. He has always been a true custodian of the land and wildlife.

In addition, he has a very strong and active anti-poaching team working throughout the year in each of the concession areas.

In some cases, depending on the size of the area he is managing, he employs over five active anti-poaching teams with over 50 anti-poaching officers that are protecting a single area. They protect this particular area from illegal poachers, woodcutters, illegal miners, illegal fisherman, illegal honey gatherers and illegal cattle herders (bringing cattle to graze) inside the Game Reserves. Due to the very stringent wildlife management program, these areas under his management have a very healthy and sustainable game population. Amongst the game found in these areas, there are an abundance of lions and leopards. The numbers of predators have increased dramatically due to very stringent policies that have been in place for as long as Raoul has been able to properly manage the areas. Thus, this dramatically limits the harvesting of male lion to only an older more mature male typically over the age of eight years and that is no longer a residing pride member.

Our policy targets old lone (Nomad) males that no longer breed and are not associated with any prides with females and/or cubs.

The lions that we have harvested in the past have all past the aging process in Tanzania, since its inception.

The numbers of lions that are visible on a normal safari are very impressive. Quite often on a 21 days safari, everyone involved will have the pleasure of sighting between 20 and 35 male lions.

Over the last few seasons, we have obtained conclusive data that shows a more than thriving population in the majority of our hunting areas, with the exception of Masailand.

Subsequently, the lion populations, due to this very strict management practice, are very healthy and there are a significant number of lions on the increase. A new challenge that is arising is that there are lions very often venturing into the neighboring villages and end up eating either livestock, dogs and in many cases also humans due to the increase in their numbers.

It has been a common practice for our Companies for the last 15 years, not to harvest any males that are any younger than 7 years.

Tanzania is fortunate enough to have the highest density of lion population in Africa.

Since 2012, Tanzania put in place a law that would only allow lions that were over 6 years of age to be hunted.

Tanzania Big Game Safaris and affiliates are associated with an NGO (non governmental organization) that is called Conservation Foundation Tanzania. This has been very active in Tanzania (in many different capacities) since 1994. It is fortunate to be able to work hand in hand with neighboring villages that are adjacent to the concession areas. Educating villagers neighboring these concession areas is a huge advantage in protecting the wildlife living within these eco-systems. Local people are taught that they have the opportunity of finding available jobs with the hunting outfitter whom is managing the concession areas. In addition, the outfitter is able to help the villages with different community projects based on their needs such as building schools for the different ages of the children irrespective of their religion.

Another example is the possibility of health care needs such as wheel chairs and medical supplies.

School supplies and awareness of potential sponsors for individual students to be able to continue to further education are just a few examples of the benefits

Operator Enhancement Report for 2016 to Current

1 message

Harcum, Heather <heather_harcum@fws.gov> Wed, Sep 11, 2019 at 3:55 PM
To: tbgs@tbgs.co.tz

Good afternoon,

I am a representative of the United States Fish and Wildlife Service (USFWS), reviewing several import permit applications for lion trophies hunted in Tanzania through Tanzania Big Game Safaris.

We would like receive the most updated information about the operators the importers hunted with. As you may well be aware, the USFWS is now considering applications on a case-by-case basis, as opposed to making country-wide findings.

We currently have your (quite commendable) operator enhancement report from 2013-2015, but would like the most updated information pertaining to allocation of funds, population status, among other additional information about your concession.

Warmly,
--

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III, of the non-profit firm CONSERVATION FORCE as my attorney and legal representative for all matters concerning my application for a permit to import a threatened-listed PANTHERA LEO MELANOCHAITA [AFRICAN LION] trophy from TANZANIA.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that this attorney be copied with all correspondence, acknowledgements, notices and decisions concerning my application at the following address:

Enhancement Finding
Applicant: Scott B. Ellington

I. Summary:

Mr. Ellington submitted an application on August 13, 2016, for the importation of one male African lion (*Panthera leo melanochaita*) from Tanzania for the purpose of enhancing the propagation or survival of the species in the wild. This subspecies of African lion is listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and is listed as threatened under the U.S. Endangered Species Act (Act or ESA). As such, export of a hunted African lion from Tanzania requires prior issuance of a CITES export permit from the CITES Management Authority of Tanzania, and import into the United States requires prior issuance of an ESA import permit by the U.S. Fish and Wildlife Service (Service). The Service may authorize the import of a sport-hunted lion trophy from Tanzania, but only if it first makes a finding that permitting import of a trophy would enhance the propagation or survival of the species in the wild.

After evaluating the available information submitted with the application, information provided by the government of Tanzania, and other information available to the Service, the Service has determined that the importation of the sport-hunted trophy taken by Mr. Ellington on October 10, 2017, from the Kizigo Game Reserve in the Singida Region of central Tanzania **meets** the enhancement criteria under 50 CFR 17.32.

The Service recognizes that legal, well-regulated hunting as part of a sound management program can benefit the conservation of certain species by providing incentives to local communities to conserve the species and by putting much-needed revenue back into conservation. We consider whether the management program is actively addressing the current and longer term threats to the subspecies based on sound scientific principles. A management program for a species such as *P. l. melanochaita* is expected to address, at a minimum, an evaluation of population trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating whether the importation of Mr. Ellington's trophy of *P. l. melanochaita* would be authorized in accordance with our permit issuance criteria, we were particularly interested in examining how Tanzania's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. We evaluated how, and how well, the hunting component of the management program addresses these threats by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. We also considered how the participation of a U.S. hunter, in this case, Mr. Ellington, contributes to the overall management of lions within a country.

We work closely with the range countries and interested parties to obtain relevant information. The government of Tanzania has provided a series of documents, including Tanzania's

"enhancement"[1] and non-detriment finding for lions (TAWA, 2016). These documents, verbal updates/presentations at the 16th Annual African Wildlife Consultative Forum (Uganda, November 2018), information received in Mr. Ellington's application, the Tanzania Wildlife Research Institute (TAWIRI), open sources (e.g., IUCN, published literature), and a field mission in November, 2018, were the basis of this finding.

II. U.S. Governance of the Lion:

On December 23, 2015, the Service published in the Federal Register a final rule that, effective January 22, 2016, listed the lion subspecies *P. l. melanochaita* (southern and eastern Africa) as a threatened species under the Act (USFWS 2015; 80 Fed. Reg. 79999); this species is regulated under a species-specific 4(d) rule of the Act, which is set forth at 50 CFR17.40(r).

Where a rule is promulgated for a threatened species under Section 4(d) of the Act, the rule contains the applicable prohibitions and exceptions for the specific species (50 CFR 17.31(c)). Under the 4(d) rule for *P. l. melanochaita* (50 CFR 17.40(r)), all of the prohibitions of 50 CFR 17.31 and permit provisions of 50 CFR 17.32 apply. The prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (which includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of a commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the ESA. Permits may be issued to carry out these otherwise prohibited activities, including importation, under certain circumstances (e.g., scientific purposes or activities that enhance the propagation or survival of the species), in accordance with the Service's regulations at 50 CFR 17.32. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Tanzania, but only if it first makes a finding that permitting the import of a trophy would enhance the survival of the species in the wild (USFWS 2015; 80 Fed. Reg. 79999); 50 CFR 17.40(r)(2); 50 CFR 17.32(a)).

As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the issuance criteria under 50 CFR 17.32. However, in some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service has made the required enhancement finding based on this individual application to import a sport-hunted trophy of *P. l. melanochaita*; however as detailed below, relevant information obtained for the country as a whole has been considered, as it contains information pertinent to the Service's evaluation as required by the 4(d) rule for *P. l. melanochaita*.

[1] Note, although "enhancement finding," is referenced in the document's title, the document is not, nor does Tanzania produce, an enhancement finding under the U.S. Endangered Species Act.

A. General ESA permitting requirements

As we explained when finalizing the 4(d) rule, our threatened species permitting regulations provide issuance criteria for threatened species permits [50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita*, including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the population in the country where the specimen originated and whether that management of the population addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Tanzania contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of Tanzania's lion management plan provides a net benefit to the subspecies and its ecosystem. For example, several components of a management plan by which trophy imports could meet the issuance criteria might be government incentives in place that lead to increased habitat protection for lions by private landowners and communities, and incentives provided to local communities that lead to reductions in the incursion of livestock into protected areas for lions or lead to increases in active management of livestock to reduce conflicts with lions.

The Service evaluates an application involving a *P. l. melanochaita* sport-hunted trophy in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b), the following:

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

B. IUCN guiding principles

In addition to these factors, specifically in relation to sport-hunting, in the 4(d) rulemaking for *P.l. melanochaita*, the Service explained it considers the publication, *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives* (IUCN SSC, 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P.l. melanochaita*. The Service has, therefore, considered these principles in conjunction with our threatened species issuance criteria in making our determination of enhancement concerning import of the sport-hunted *P. l. melanochaita* trophy that is the subject of this permit application. The IUCN document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources". It recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and, more specifically, the conservation of the hunted species.(IUCN SSC, 2012)

The IUCN document lays out the following five guiding principles:

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.,* population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure

that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to developing enhancement findings for the importation of sport-hunted trophies of *P. l. melanochaita* is consistent with the purpose and intent of the ESA. Before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

III. Basis for Finding:

As explained above, any person wishing to conduct an otherwise prohibited activity, including import of *P. l. melanochaita* specimens, must first obtain a permit as required by 50 CFR 17.32; issuance of an import permit for a sport-hunted trophy of *P. l. melanochaita* requires an enhancement finding.

The Service has made the required enhancement finding for this import permit based on this individual application to import a sport-hunted trophy of *P. l. melanochaita* taken in Tanzania. Additionally, as detailed below, relevant information obtained for Tanzania as a whole, has been considered. The government of Tanzania has provided a series of documents, including Tanzania's "enhancement"[2] and non-detriment finding for lions (TAWA, 2016). These documents, verbal updates/presentations at the 16th Annual African Wildlife Consultative Forum (Uganda, November 2018), information received in Mr. Ellington's application, the TAWIRI, open sources (e.g., IUCN, published literature), and a field mission in November, 2018, were the basis of this finding.

On April 14, 2016, the Service sent a letter to Mr. Herman Keraryo, Acting Director of Wildlife for the Wildlife Division of the Ministry of Natural Resources and Tourism (MNRT), with a list

[2] Note, although "enhancement finding," is referenced in the document's title, the document is not, nor does Tanzania produce, an enhancement finding under the U.S. Endangered Species Act.

of questions that would aid the Service in evaluating the overall conservation and management of the lion population in Tanzania, and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives* (IUCN SSC, 2012), as it provides useful principles, which, when considered in conjunction with the Service's permit issuance criteria, would aid the Service in making the required enhancement findings for permitting importation of sport-hunted lion trophies. In response to our April 14, 2016 letter, the MNRT provided a series of documents, including Tanzania's "enhancement" and non-detriment finding for lions.

Upon invitation, a U.S. delegation of Service personnel visited Tanzania in November 2018 to observe the challenges and successes of conserving wildlife, including lions, in Tanzania. This trip allowed first-hand exposure to the on-the-ground implementation of policies and procedures the government has put into place to conserve lions. Detailed discussions with government officials, national experts, land managers, game officers, village leaders, and leaders in the hunting industry, as well as site visits to different models of hunting operations, served to both substantiate and elucidate information provided in documents. We determined that the status of lions and the management approach of Tanzania are substantially as presented, conferring confidence to the conclusions drawn from information provided.

IV. Governance of Wildlife in Tanzania:

In Tanzania, wildlife resources, such as lions, are protected under several Acts of Parliament, establishing the authority for all aspects of wildlife management, including law enforcement activities. The **Wildlife Conservation Act** (WCA) of 2009, which replaced the original WCA of 1974, provides the legal framework for operation of the Wildlife Division under the MNRT, including the appointment of the Director of Wildlife. The WCA provides for the establishment of a Wildlife Protection Unit granted paramilitary status to protect wildlife against unlawful utilization, and a Wildlife Authority to manage all Tanzania wildlife located outside the boundaries of the National Parks and the Ngorongoro Conservation Area. The Wildlife Authority is also responsible for meeting international obligations involving wildlife conservation. The WCA ensures the protection of natural habitat and wildlife through the establishment of a network of Protected Areas (PAs), e.g., Game Reserves, Game Controlled Areas, Wildlife Management Areas, and areas such as wildlife corridors. The **National Parks Act** (CAP 282 R.E. 2002) establishes the legal authority for the creation and management of national parks, granting powers to the Director to enable maintenance and security within national parks, as well as the responsibility for the protection of their wildlife resources. The **Ngorongoro Conservation Act** (CAP 284 R.E. 2002) provides the legal framework for the existence of the multiple land use in the Ngorongoro Conservation Area, its Management Authority under the direction of the Conservator, and the authority for its maintenance and security. The **TAWIRI Act** (CAP 260 R.E. 2002) grants powers to the Director who is responsible for research involving wildlife, and for providing this information to the Wildlife Authorities.

The responsibility for managing Tanzania's wildlife currently falls primarily under four institutions. The **Tanzania Wildlife Research Institute** (TAWIRI) is responsible for conducting and coordinating wildlife research in Tanzania. It functions as the scientific authority for wildlife conservation and management, and the CITES Scientific Authority for Tanzania. The **Tanzania National Parks Authority** (TANAPA) is responsible for managing 15 National Parks with a

total area of 50,872 sq.km. In the national parks, only non-consumptive utilization (tourism game viewing) of wildlife resources is allowed. **Ngorongoro Conservation Area Authority** (NCAA) is responsible for management of only one area, the Ngorongoro Conservation Area, a protected area of 8,300 km^2. It is the only multiple land use wildlife area in Tanzania in which the consumptive utilization of wildlife is not permitted. Both TANAPA and NCAA are parastatal – public organizations, but not directly run by the government; all revenue is kept by the organizations for use in management of these areas.

The Wildlife Division has historically been responsible for the country's wildlife resources located outside the jurisdiction of the Ngorongoro Conservation Area and Tanzania National Parks. However, in response to concerns over questionable management practices and lack of adequate funding for the Wildlife Division to successfully manage wildlife resources, the **Tanzania Wildlife Management Authority** (TAWA) was established in 2014[3]. Also a parastatal organization, TAWA operates with significant autonomy and retains all revenue generated from hunting[4]. TAWA became operational in July 2016, and has since established an aggressive, proactive approach to protecting wildlife. In addition to conducting routine anti-poaching patrols, TAWA is actively building capacity with technology (e.g., GIS), relationships with local communities (e.g., intelligence-led operations), and collaborative efforts on an international scale.

TAWA is responsible for the management of 28 Game Reserves with an area of 112,564 km^2, approximately 38 Game Controlled Areas covering about 161,521 km^2, and Ramsar sites covering 249,856 km^2. There are also District Councils, local government institutions that work in collaboration with the TAWA. These councils oversee wildlife conservation issues and facilitate the establishment and management of Wildlife Management Areas (WMAs) on village lands.

WMAs were established as a new category of wildlife conservation areas consisting of settled and unsettled lands outside PAs, with the goal of allowing for rural communities and private landholders to manage wildlife on their land for their own benefit, shifting wildlife such as lions from a liability to an asset. The framework for WMAs was outlined in Tanzania's Wildlife Policy of 1998 (revised in 2007), with legislation established under the Wildlife Management Areas Regulations of 2002, authorizing the formal establishment of WMAs. From 2010 to 2014, over 1.3 million USD from hunting fees were disbursed to WMAs (TAWA, 2016). In 2012, Tanzania amended its Wildlife Management Area Regulations to provide a new basis for strengthening the links between local communities and wildlife management by addressing the issues of benefit sharing and control over concession allocations. Under the new regulations, the WMAs receive approximately 60-65% of the total hunting revenue occurring within the block. Additionally, WMAs gained the power to sign utilization contracts with the private sector, enabling seven WMAs to sign contracts with hunting operations worth more than 4.3 million USD (TAWA, 2016). The establishment of these WMAs has resulted in an additional 23,700 km^2 of Tanzania's land area being added to its conservation network and increased capacity for protected area management through the training of village game scouts and WMA managers.

The tourism industry, largely wildlife-based, contributes to about 13% of Tanzania's annual Gross National Product and is predicted to increase (WTTC, 2017). The tourist industry generates

[3] Prior to the establishment of TAWA, funding to the Wildlife Division was paid by the central treasury; inadequate funding left the Wildlife Division unable to effectively manage and protect Tanzania's wildlife resources.
[4] The mandate to collect and retain revenue from trophy hunting is enshrined in "The Wildlife Conservation (The Tanzania Wildlife Management Authority) Establishment Order 2014.

almost 6 billion per year (WTTC, 2017) with about 80 million annually going to TANAPA, NCAA, and the Wildlife Division to fund their operations. The three parastatal organizations, TANAPA, NCAA and TAWA, retain 100% of their revenue share. Both TANAPA and NCAA are generally self-sustaining; consequently, National Parks and equivalent areas such as Ngorongoro Conservation Area, with an area covering approximately 38% of all PAs in Tanzania, are adequately funded. The sustainable utilization of resources (i.e., hunting) accounts for 70% of TAWA revenue; therefore, the viability of TAWA will depend, in part, on sufficient revenue from safari hunting. In 2012/2013, the Government of Tanzania re-established the Selous Game Reserve Revenue Retention Scheme, whereby 50% of the revenue generated from photographic tourism and tourist safari hunting is retained in order to meet management and enforcement costs in the Selous Game Reserve, one of the largest protected areas in Africa. Again, the viability of the Selous will depend, in part, on sufficient revenue from safari hunting.

Tanazania is a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Tanzania provided a copy of their CITES non-detriment finding (NDF) for lions, which finds that the export of the species will not be detrimental to the survival of the species in the wild.

Tanzania is also a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of transfrontier conservation areas, and facilitate community-based natural resources management practices. As required of a member state, Tanzania has established management programs for the conservation and sustainable use of wildlife.

V. Status of Lions in Tanzania:

Approximately 40% of all lions in Africa are found in Tanzania (Riggio et al., 2013). The lion range in Tanzania covers over 90% of land (Mesochina et al., 2010), with four main subpopulations:

1. the Maasailand Ecosystem, which encompasses the Mara, Arusha Kilimanjaro and Manyara Regions of northeastern Tanzania;
2. the Kagera and Kigoma Regions of northwestern Tanzania;
3. the Rukwa, Tabora and Mbeya Regions of central and western Tanzania;
4. Selous Ecosystem, which encompasses the Lindi, Morogoro and Ruvuma Regions of southern Tanzania.

TAWIRI presents Tanzania's latest lion population estimates as 16,800 individuals (Mesochina et al., 2010), and 17,564 (12,208-19,320) (Ikanda & Packer, 2006). They estimate that 13,600 (or 81%) of these lions occurred within PAs and approximately 3,200 (or 19%) individuals occurred outside PAs. According to Riggio et al. (2013) and Björklund (2003), the minimum number of lions estimated to categorize an area as a lion stronghold is 500 individuals. The estimated population size of the four main lion ecosystems was 3,700 in the Maasailand Ecosystem, 520 in Kagera and Kigoma Regions, 2,300 in Rukwa, Tabora and Mbeya Regions, and 7,200 in the Selous Ecosystem.

Trend analysis of the lion population in Tanzania is limited due to the sporadic nature and variable methodology of past surveys, as well as the difficulty of obtaining precise lion counts (Brink, Smith, & Skinner, 2013; Funston et al., 2010), but it is suggested that, nationally, far fewer lions exist today than did 50 years ago (Ikanda, 2008). Available information suggests that this may be spatially variable, e.g., declining populations in Katavi and Tarangire (Bauer et al., 2015) and stable populations in the Selous Game Reserve (Packer et al., 2011).

VI. Management of Tanzania's Lion Population

In recognition of the role that Tanzania plays in the conservation of this species, a workshop was held in 2006 to assess available information and to set priorities for conservation of the lion in Tanzania. The Tanzania Lion and Leopard Conservation Action Plan (TAWIRI, 2009) provided an overview of this workshop and outlined a national strategic plan for lion conservation. Habitat loss and increased conflict with humans had been identified as the major threat to the species. The Tanzania Lion and Leopard Conservation Action Plan (Plan) concluded that, for those lion populations existing outside National Parks, well-run trophy hunting programs could be leveraged to successfully manage and conserve lions against these threats. To that point, the majority of permanent lion range in Tanzania lies within protected areas, 61% of which are designated as hunting areas (Mesochina et al., 2010).

A. Hunting:

Hunting of lions is allowed across much of Tanzania. Safari hunting occurs in areas known as hunting blocks, designated in Game Reserves, Game Controlled Areas, Open Areas, Forest Reserves and WMAs. Until recently, blocks were allocated using an administrative process. The government would invite hunting companies to apply to operate a hunting block; interested hunting companies were evaluated by the Hunting Block Advisory Committee. Hunting companies were allocated blocks for a period of five years, with a reporting requirement on the third year to determine compliance under the terms outlined within the hunting block regulations (TAWA, 2016). However, in 2017, it was announced that the block allocation process would be amended to introduce an auction system.

Wildlife hunting in Tanzania is based on hunting regulations set forth in Tourist Hunting Regulations No. 306 (2002). The regulations specify the fees for hunting different species, and further specify a minimum number of hunting days. Hunters are required to purchase a minimum 21-day safari in order to request a permit for the harvest of lions, as well as other specified animals (e.g., elephant, leopard). Hunters must pay a number of different fees for permits and licenses to be granted harvest authorization. The game fee to hunt a lion is the second highest game fee in Tanzania, second only to elephants.

A quota system historically was the primary method of regulating trophy hunting in Tanzania. Annual harvest quotas have been lowered over the past decade, from 520 in 2008-2009 (Lindsey et al., 2013) to 315 in recent years (TAWA, 2016). In 2016, the annual quota was further reduced to 200 individuals (TAWA, 2016). An annual quota of 200 individuals is well within the suggested sustainable 1 lion/2000 km^2 harvest rate identified by Packer et al. (Packer et al., 2011), and 25% below the sustainable harvest level suggested by TAWIRI (TAWA, 2016). However, the Plan noted the lack of scientific justification underlying that system. Furthermore, a quota system is reliant on

accurate population estimates, a near impossibility with lions. A model that simulated the dynamics of populations as a function of both quota size and age at harvest showed that there is almost no negative affect on population size when hunting is restricted to males six years or older (Whitman, Starfield, Quadling, & Packer, 2007). Restricting lion hunting by age would reduce the reliance on population estimates – an intensive and expensive effort that does not reliably return accurate results – while minimizing the effect on a lion population. Tanzania was the first country in African lion range states to officially establish age restriction rules, prohibiting hunting lions of an age below six years (section 27(1) of the Tourist Hunting Regulations of 2015). Violations of this regulation can result in penalties for the professional hunter guiding the offending hunter, including fees and revoking of the professional hunter's license.

Although inspection of trophies are required prior to export, the fundamental difficulties of accurately estimating lion age, as well as a disregard for these regulations, can result in the take of lions younger than six years. Tanzania has consequently maintained a quota system, set by hunting block according to the lions harvested during the previous hunting season. If a trophy lion is estimated to be 4-6 years, the hunter/client may export that lion, but the quota for the hunting block where the trophy was taken is reduced for the following hunting season. If a trophy is taken below the age of 4, there is a reduction of the hunting block's quota of harvestable lions by 2 and potential cancellation of the hunter's license along with other penalties such as the trophy not being eligible for export. If the trophy meets the criteria of 6 years of age or older, the hunting block's quota remains unchanged for the following hunting season. According to MNRT, these regulations have been in place since the 2012/2013 hunting season. For each trophy harvested, a compulsory hunter evaluation form, photos along with presentation of lion skull to officials for inspection and measurements, including tooth x-rays, are necessary prior to the issuance of an export permit (MNRT, 2015; TAWA, 2016).

B. Human-Lion Conflict:

It is difficult to estimate how many lions are killed illegally each year; however, retaliatory killings may be as high as 200 individuals annually (TAWA, 2016). Lions are provided protection from illegal or retaliatory killing under the Fourth Schedule due in part to human/livestock-conflict under the Dangerous Animals Damage Consolation (Government Notice No. 146) of 2011; unauthorized personnel are not permitted to kill a conflict lion unless under exceptional circumstances. Tanzania established a mitigation scheme to protect lions from retaliatory killings. This scheme consoles people affected by the loss of relatives and property through payment in kind, and is intended to increase human tolerance for lions (TAWA, 2016).

VII. Evaluation:

In evaluating whether the importation of Mr. Ellington's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our permit issuance criteria, we examined how Tanzania's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. We considered whether the management program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We evaluated government incentives designed to increased habitat protection for lions by private

landowners and communities, and incentives provided to local communities designed to lead to reductions in the incursion of livestock into protected areas for lions or lead to increases in active management of livestock to reduce conflicts with lions. We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. As such, we examined if the trophy hunting provides financial/resource assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how a U.S. hunter's, in this case, Mr. Ellington's, participation in the hunting program contributes to the overall management of lions within the country.

As stated earlier, the Service has evaluated this application in accordance with our regulations at 50 CFR 17.32 and the issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. In evaluating each of these criteria based on information available to the Service, we have been able to determine for this application that the import of the wild lion trophy animal would enhance the propagation or survival of the species in the wild and qualifies for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the proposed activity in this permit application (import of a trophy hunted lion from Tanzania) has demonstrated the ability to contribute towards positive conservation outcomes that mitigate or improve the status of lions throughout their range while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion that collectively contribute towards continued population declines.

Tanzania faces a growing human population, and a subsequent development of land and increasing rates of human-wildlife interactions. Protection of suitable habitat for both the lion and its prey is essential for the survival of the lion, as well as developing and sustaining the local communities' support for such policies. Wildlife protected areas, in various forms, cover about 40% of Tanzania's land area, and safari hunting has created a financial incentive to maintain these protected areas as a land use. Both the consumptive and non-consumptive utilization of wildlife resources contributes to about 13% of Tanzania's annual Gross National Product and is predicted to increase (WTTC, 2017). The tourist industry generates almost 6 billion per year (WTTC, 2017) with about 80 million annually going to TANAPA, NCAA, and the Wildlife Division to fund their operations.

The companies awarded a hunting block are in a key position to conserve this land for wildlife, and are annually evaluated by the Tanzania government on several criteria, including the maintenance of prey populations, contributions/provision of benefits to the local villages, improvement to infrastructure, protection of the environment, and anti-poaching operations.

Mr. Ellington hunted with Muhesi Safaris, Ltd., a subsidiary of Tanzania Wildlife Company (2000) Ltd., which operates under a management agreement with Tanzania Big Game Safaris. Tanzania Big Game Safaris has developed several programs by which to address the main threats to lion populations.

- The company maintains significant anti-poaching efforts year round, with five active anti-poaching teams, two of which are funded by the Conservation Foundation Trust (CFT), a non-profit organization founded by the Ramoni family. CFT anti-poaching units work in tandem with the game scouts and project managers on ground patrol teams to achieve successful anti-poaching objectives. Anti-poaching teams consist of over 50 anti-poaching government game officers. The teams work to protect against potential threats to habitat loss and the loss of game. Officers protect areas from illegal poachers, woodcutters, illegal miners, illegal fishermen, illegal honey gatherers, and cattle herders within the boundaries of the game reserves. CFT has been involved in operating mobile anti-poaching units equipped with vehicles, including a helicopter for aerial patrols, camping equipment, radios, GPS units, and cameras. Successful operations result in rewards for the game officers. These successes include confiscation of ammunition, gun powder, snares, muzzle loaders, traps, chain saws, spears, knives, machetes, and arrows, along with the parts and products poached including timber, game meat, and fish. Many poachers have been apprehended, arrested, and cases are immediately opened against them when caught. Additionally, concession areas are maintained by clearing existing roads and creating new roads and airstrips

- Education initiatives have begun in surrounding villages pertaining to the conservation of wildlife and their direct benefits to the village members.

- The company protects prey base species by creating a 3,000 liter water storage tank in response to officers noticing prey species dying due to a lack of water in the game reserve area. Teams made two rounds per day to ensure water was maintained within the tank.

- Tanzania Big Game Safaris targets old lone males that no longer breed and are not associated with a pride, females, or cubs. All harvested lions must pass the age requirement of being a minimum of 6 years old for take in Tanzania. It is common practice for companies to not harvest lions younger than age 7, and Tanzania Big Game Safaris rarely harvests lions younger than 8 years of age.

- The company requests reports of all lion sightings, which they track in a database. From 2013-2015, based on the number of reported lion sightings at Rungwa Ikili Game Reserve, where Mr. Ellington conducted his hunt in the Kizigo area, lions within prides have increased gradually from 87 to 110 overall.

It has been stated that upwards of 200 lions are killed annually due to preemptive strikes or as retaliatory actions after some form of direct loss is experienced by an individual or community (TAWA, 2016). In the Ruaha communities surrounding hunting blocks and the Ruaha National Park, researchers reported 35 large carnivores were killed over an 18-month period. Similarly, Lichtenfeld et al. (2015) reported that in 12 communities of the Maasai Steppe region, more than 50 attacks by large carnivores on livestock resulted in retaliatory killing of 72-84 lions. Tanzania established a mitigation scheme to protect lions from retaliatory killings. This scheme consoles

people affected by the loss of relatives and property through payment in kind, and is intended to increase human tolerance for lions (TAWA, 2016).

As described above, we have determined that the government of Tanzania and Tanzania Big Game Safaris contribute towards positive conservation outcomes by addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion, which contributes to improving the status of lions in Tanzania. Further, the fees garnered through Mr. Ellington's hunt will provide revenue to support these positive conservation outcomes.

Therefore, based on the information available to the Service, the purpose for which the permit is being requested, import of this trophy lion, is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

A myriad of issues and factors, largely related to an increasing human population, complicate and put at risk the management of Tanzania's wildlife (Kideghesho, Rija, Mwamende, & Selemani, 2013). It is likely that the lion populations that exist outside of protected areas will continue to decline (Riggio et al., 2013), making the existence of these protected areas all the more important. The trophy-hunting program in Tanzania provides a revenue source necessary to maintain and manage protected areas from encroachment or elimination.

It is a widely supported belief that increasing the benefits for those who live with and bear costs of wildlife damage or injury by wildlife can increase tolerance of wildlife, especially of large carnivores (e.g. lions) (Bencin, Kioko, & Kiffner, 2016; Lindsey et al., 2013; Winterbach, Winterbach, Somers, & Hayward, 2012). Mr. Ellington hunted with a subsidiary of Tanzania Big Game Safaris, which, as outlined below, will provide an indirect benefit to the lion population by generating revenue to help support and maintain a hunting block where lions are found. Tanzania Big Game Safaris is required by Tanzanian law to pay directly a USD 5,000 community development fee to the villages in the hunting area. The company has contributed significantly, aiming to develop and maintain a strong relationship with these villages. These contributions have paid school fees, constructed classrooms and offices, purchased books and school supplies, a water tank, modern pit latrines, desks, computers, printers, and donated wheelchairs through the Wheelchair Foundation. The Service is further encouraged by the recent action taken by the MNRT to amend the WMA regulations enabling these communities to receive a greater proportion of revenues returned on wildlife uses.

Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

The government of Tanzania has implemented a number of policies and regulations to monitor and control the harvest of lions in the country. Therefore, the issuance of an import permit for a

lion legally hunted in Tanzania does not conflict with any programs intended to enhance the survival probably of the species in Tanzania.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

As previously stated, almost 40% of all remaining lions are found in Tanzania. The lions located within protected areas are under the legal authority of MNRT, as well as subjected to direct management activities by hunting companies. All indications show, that given the threats identified by the Service when listing the species as threatened under the ESA, the maintenance of these protected areas by hunting companies is actively addressing the three causes of lion decline: loss of habitat, loss of prey base, and human-lion conflict. The cost of operating a hunting block is considerable, and lion safaris are a large source of revenue for hunting companies. This revenue is, in part, what allows the company to first and foremost maintain a presence in this protected area, and subsequently maintain an anti-poaching program, and to aid in local community development, all factors which reduce the threats faced by lions.

With limited, controlled off-take of lions in a manner that mimics natural processes, the hunt associated with Mr. Ellington's application contributes to reducing the threat of extinction of lions in Tanzania. The utilization of hunters such as Mr. Ellington in supporting the safari hunting industry is an important element of the success of lion management in Tanzania.

Therefore, based on the information available to the Service, the purpose for which this import permit would be issued will likely reduce the threat of extinction facing lions in Tanzania.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting as a management tool, there are numerous opinions on the impact it would have on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and available literature, there is a general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for long periods by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see benefits that can be realized through a scientifically based hunting program for lions. There have been a large number of comments from some Non-Governmental Organizations (NGOs) and the public that oppose hunting any lions. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process for this application.

Therefore, based on the information available to the Service, there is general support by scientists, individuals, and other organizations having expertise concerning lions, that legal and sustainable harvest and subsequent import of these lion trophies would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

The long-term survival of lions in Tanzania is tied directly to the success, both ecologically and economically, of the protected areas. Based on our understanding of the hunting block allocation and management, companies must submit annual reports that address several criteria, including the maintenance of key prey populations, contributions to the local villages, improvement to infrastructure and protection of the environment, and anti-poaching operations.

Therefore, based on the information available to the Service, the applicant hunted in a hunting block with an operator that carries out their management practices in accordance with national regulations, having the expertise, facilities, or other resources available to them to successfully accomplish the objective stated in the application.

VIII. Conclusion

As stated earlier, this application received by the Service for the import of a sport-hunted trophy lion from Tanzania has been evaluated on an individual basis. The major threat facing lions today is the loss of habitat to humans, and the subsequent consequences of living among humans (e.g., decrease of prey base due to bush-meat consumption, increase in human-lion conflict). The occupation and maintenance of hunting areas by hunting concessions -- an industry supported by U.S. hunters such as Mr. Ellington -- protects lion and prey habitat through legal hunting by preventing conversion of such land to other uses, thereby contributing to the enhancement of this species. In addition, the financial benefits to local communities generated from lion safari hunting creates incentives for protection of lions, resulting in fewer lions lost as a result of human-lion conflict, which further contributes to enhancement of this species. Given the status of lions in Tanzania and the level of management and oversight provided to them, it appears that the harvest and import of this lion as a sport-hunted trophy meets the purposes of the Act. The applicant hunted in a hunting block that is actively managing lions in a manner that mimics natural processes. The applicant attests in the application that the hunt occurred on a properly licensed hunting block, and this finding is contingent on the hunting block where the lion was taken, having been properly licensed and fully in compliance with national and local regulations.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of the sport-hunted trophy of this wild lion will enhance the propagation or survival of the species in the

wild. Therefore, the Service **is able to authorize the import of one male trophy lion taken from the wild in Tanzania, to Scott B. Ellington, Dallas, Texas.**

Intra-Service Section 7 Biological Evaluation Form

Originating Person: Heather Harcum Date: 04/06/2020

Telephone Number: 703-358-2104

I. **Service Program and Geographic Area or Station Name**: Branch of Permits, Division of Management Authority, International Affairs

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)
Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, **Scott B. Ellington** (PRT # 02691D) has requested a permit to import a trophy of one lion that he lawfully hunted in Tanzania. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Tanzania on the date specified in the permit application. The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Tanzania. The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Tanzania. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

	Determination
No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.**	**X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** _____

Permittee:
SCOTT B. ELLINGTON
(b)(6) [redacted]

U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12.

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Tanzania for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2017 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Tanzania for the 2017 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit, source code "W", issued by the Management Authority of Tanzania.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Import Permit for Sport-hunted Lion from Tanzania

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
LILLIS	CHRISTOPHER	MICHAEL	

(b)(6)

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (b)(6) boxes)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
MIDLAND	TEXAS	79705	MIDLAND	USA
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)]

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera Leo Genus Pardus (common name) African Lion

   b. Sex (if known).
   Male (females not allowed to be harvested in Tanzania)

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   Tanzania Mkele North Game Control Area
   Region - Katavi Hunting Block Mkele North Control Game Area
   Nearest City Tabora

   b. Date wildlife is to be hunted:
   To be determined as will be on Safari for the duration of 28 days. Dates from Sept. 2 - 29th 2018.

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   Wild Footprints Limited
   Raoul Ramoni
   Johnny Vakas

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name:
Business Name:
Address:
City:
State/Province:
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

The affiliate companies along with Tanzania Big Game Safaris are all under one-management agreement with Tanzania Big Game Safaris. Tanzania Big Game Safaris has been operating in Tanzania since 1988. Since its inception, the founder and managing director is Raoul Ramoni. Raoul has always been extremely active in Wild life conservation. He has always been a true custodian of the land and wildlife. In addition, he has a very strong and active anti-poaching team working throughout the year in each of the concession areas. In some cases, depending on the size of the area he is managing, he employes over five active anti-poaching teams with over 50 anti poaching officers that are protecting a single area. They protect this particular area from illegal poachers, woodcutters, illegal miners, illegal fishermen, illegal honey gatherers and illegal cattle herders (bringing cattle to graze) inside the Game Reserve. Due to the very stringent wildlife management program, these areas under his management have a very healthy and sustainable game population. Amongst the game found in these areas there are an abundance of lions and leopards. The numbers of predators have increased dramatically due to very stringent policies that have been in place for as long as Raoul has been able to properly manage the areas. Thus, this dramatically limits the harvesting of male lion to only an older more mature male type of

Import application / TZ lion / Withdrawn

1 message

Butzler, Julia <julia_butzler@fws.gov> Mon, Aug 26, 2019 at 1:58 PM
To (b)(6)

Mr. Lillis,

Thank you for taking the time to speak with me this afternoon. As discussed, I have withdrawn your application, as well as your brother-in-law's application (Mr. Isbell), to import a lion taken in 2018 from Tanzania.

Sincerely,

--
Julia Butzler, Biologist

(50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
Panthera Leo Genus Pardus (Common name)
African lion

b. Sex (if known).
Male (Females not allowed to be harvested in Tanzania

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
Tanzania Mlele North Game Control Area Region - Katavi hunting Block Mlele North contro Game Area. Nearest City Tabora

b. Date wildlife is to be hunted:
To be determined as will be on Safari for the duration of 28 days. Dates from Sept 2 - 29 sept 201

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
Wild Footprints limited
Raoul Ramoni
Johnny Yakas

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

   Name:
   Business Name:
   Address:
   City:
   State/Province:
   Country, Postal Code:

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted The affiliate companies along with Tanzania Big Game Safaris are all under one management agreement with Tanzania Big Game Safaris, Tanzania Big Game Safaris has been operating in Tanzania since 1989. Since its inception, the founder and managing director is Raoul Bunniface | has always been extremely active in Wildlife Conservation. He has always been a true custodian of the land and wildlife. In addition he has very strong and active anti-poaching team working throughout the year in each of the concession areas. In some cases, depending on the size of the area he is managing, he employs over five active anti-poaching teams with over 50 anti poaching officers that are protecting a single area. They protect this particular area from illegal poachers, wood cutters, illegal miners, illegal fishermen, illegal honey gatherers and illegal cattle herders (bringing cattle to graze) inside the Game Reserve. Due to the very stringent wildlife program, these areas under his management have a very healthy and sustainable game population. Amoungst the game found in these areas, there are an abundance of lions and leopards. The numbers of predators have increased dramatically due to very stringent policies that have been in place for as long as Raoul has been able to properly manage the area. Thus, this dramatically limits the harvesting of male lions to only an older more mature male typically over the age of eight years and that is usually a single male lion

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in [redacted] plying to import a leopard trophy, I understand that I may only import two l[redacted]

Applicant's signatu[redacted] _____ Date: 08/08/2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

To: (b)(6)

Mr. Lillis,

Thank you for taking the time to speak with me this afternoon. As discussed, I have withdrawn your application, as well as your brother-in-law's application (Mr. Isbell), to import a lion taken in 2018 from Tanzania.

Sincerely,

--
Julia Butzler, Biologist

RE: Import applications for RSA Wild Managed Lion Trophies for Fredd Williams, Jacob Williams and Edward Aguilar

Dear Chief Cogliano:

Enclosed please find three applications to import "wild managed" lion trophies that were hunted in the Republic of South Africa. Also attached to each permit application is the 2018 Operator Enhancement report from Graceland Safaris, the hunting operator in this instance.

Please do not hesitate to contact us if you have questions about these permit applications.

Sincerely,

John J. Jackson III

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Williams	Jacob	Walton	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
San Antonio	TX	78261	Bexar	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer (Do not submit photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

(b)(6) 07/28/2018

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo, African Lion

b. Sex (if known). Female

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

Nuutbegin Nature Reserve, Vorstershoop, North West Providence, South Africa

b. Date wildlife was hunted:

June 12-24, 2018 (Date of harvest June 14,2018)

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Graceland Safaris, Rowan Zerf Outfitter Permit No. HO-003/04/2018NW PH Permit No. PH-010/04/2018NW

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

P&A Hunters cc P.O. Box 332, Bela Bela 0480. Farm 34, Droogekloof, Bela Bela 0480 Republic South Africa

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Peter de Villiers
Business Name:	P & A Hunters cc
Address:	PO Box 332 Bela Bela 0480
City:	Farm 34, Droogekloof, Bela Bela 0480

Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

SEE ATTACHED

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

SEE ATTACHED

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

SEE ATTACHED

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

    Applicant's signature: (b)(6) Date: 07/28/2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9.a. (page 4)

Four Lions were introduced from the Tswalo Reserve in 2012. This has swelled to a current group of over 40 lions. There are no spotted Hyena, Leopard or Cheetah left on the reserve as a result of the lion burden. Since all of the males came from the same family there has been no evidence of the males killing off any of the offspring. The Lioness' are breeding incredible well and the survival rate of the cubs is high due to no other predation threat present.

9.b. (page 4)

The Licenses and trophy fees are allocated to the local government Nature Conservation for wages and salaries to further conserve the species and to give the land owners incentives to continue to conserve the species. The land owner is currently face with an overpopulation situation with his lions and they are having a detrimental effect on other species of wildlife on the reserve. The trophy fees have contributed to the staff salaries on the reserve and a large portion towards the anti-poaching units deployed on the reserve to safeguard the lions against the illegal lion bone trade as well as funding for extra armed security for the help protect the reserve's rhinos from being poached. This hunt was the first lion hunt on the reserve since the lions were introduced in 2012. The need to manage the numbers of lions has become a pressing matter as well as needing to raise funds for the aforementioned rhino anti-poaching unit after seven rhinos were poached last year alone.

9.c. (page 4)

The financial contribution of trophy hunting has provided an opportunity to employ members of the poverty stricken local community surrounding the reserve. In the past, hunger and lack of jobs or income has forced people to cross the border from Botswana side to set snares, traps and poach bush meat to feed their families. Having a reserve like Nuutbegin in the Vorstershoop region has begun to remedy some of these problems as people are now being employed by the local taxidermist, butchery and as camp staff and maintenance crew.
The owner is looking to introduce a new bloodline into the reserve to avoid inbreeding, which is costly. In hunting some of the lions on the reserve it provides him with funding to purchase and translocate lions from another region. Removal of some of the dominate reserve lions will also allow for a better opportunity of survival of the new translocated lions into the reserve.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted LIONESS trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

To Whom It May Concern
Veterinary statement

Re: Origen of the Nuutbegin Naluur Reservaal Lions.

I, Gerhardus Scheepers, ID 7404265006087, a veterinarian registration number D99/4295, state that the following information is true and correct as given in the sentences below.

I did the darting and relocation of 4 lions from Tswalo to Nuutbegin in late January 2012. I travelled with them from Tswalo to Nuutbegin and off loaded in the temporary holding boma before being released onto the Reserve.

This all happened between 19 and 22 January 2012. We had to stay a day longer at Tswalo before we could dart and load the lions due to an issue with issuing the permits from North West Nature conservation side.

The darting procedure took place on an afternoon. I darted the female with her two cubs, a male and female, whilst they were feeding on a Blue wildebeest carcass. After being immobilised, a radio collar was fitted to the female and they were loaded into three transport crates and loaded on the back of two vehicles. At the same time Dr Griesel and Gus van Dyk darted the adult male in a different part of Tswalo. He was also fitted with a radio collar, crated and loaded.

We set off at approximately 20h00 from Tswalo on our way to Nuutbegin. Gus and Dylan accompanied us in their own vehicle to Nuutbegin to be with when we off load them. The journey took about 6 hours on road and we off loaded them safe in the holding boma at Nuutbegin.

The morning we inspected them and were happy to see that they are well and no fighting between the male and the cubs. Gys and Dylan were also satisfied and left at about midday on their way back to Tswalo.

These lions have never been bred in a captive facility. They were wild roaming lions originating from the then Kalahari Gemsbok National Park. They are still to this wild and free roaming on Nuutbegin. During 2016 the collars of both the male and female were removed as they stopped working.

Dr G S Scheepers BVSc
D99/4295

16th February 2018

John Power
Terrestrial Ecologist
North-West Province

Dear Mr Power,

Oppenheimer & Son and its subsidiaries, protect and conserve a network of conservation areas throughout southern Africa, where conservation of landscapes and their animal and plant communities are assured. Some of our reserves are large enough to stock large carnivores, such as the lion *Panthera leo*, i.e. Tswalu Kalahari Reserve.

We endeavour to protect lions that are self-sustaining as far as their forage requirements are concerned, while dispersal is facilitated by translocations to ensure gene flow elsewhere, within the framework as suggested by the Lion Biodiversity Management Plan (Lion BMP). Following this, we have, and will continue to translocate lions to other suitable destinations. These lions are wild, yet managed, and will go to receiving destination of the same nature. In this, either sales, or donations are made, and we are fully versant with the nature of the receiving populations, such that no animals will be sent to captivity or any places of questionable nature.

None of our properties have captive facilities which harbour lions, and neither do we/ or have entertained the prospects of any transactions related to captive-bred lions. In fact, as a conservation entity, we are strongly opposed to the captive-bred lion industry, and we absolve ourselves from any association with this industry.

Please feel free to contact me should you have any queries.

With very best wishes,

Dr Duncan MacFadyen

Dear Dr Griesel

SUBJECT: CONFIRMATION OF CLASSIFICATION OF YOUR NUUTBEGIN NATURE RESERVE'S LION POPULATION AS WILD MANAGED

1. Chapter 5 of the Lion Biodiversity Management Plan (BMP) published in terms of the National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004) outlines a meta-population plan for Managed Wild Lions (MWL) in South Africa. The plan proposes a national management system composed of linked regional nodes of properties that simulate a meta-population approach whereby different lion groups living on different properties make-up a node's population, i.e. a single population as if these prides were living together.

2. These populations (nodes) should have different vital rates (i.e. births, deaths, dispersal events, colonization etc.), and there should be some occasional dispersal between populations as well as regular movements between properties within nodes; and Implementation of the national management system will thus mimic population and meta-population dynamics, which in-turn would promote genetic diversity and reduce inbreeding risks.

3. On your request, the Department of Rural, Environment and Agricultural Development (READ), extensively conducted verification work in determining the status of lion population on your Nuutbegin Nature Reserve.

4. We have perused various documentations, including those submitted by yourself as well as the affidavit you made under oath, as portfolio of evidence to ascertain the state of wildness of the said population. And, the department has concluded, from all evidence provided and the scientific report compiled, that indeed the lion population on Nuutbegin Game Reserve can be classified as **Wild Managed Lions** as defined in the Lion Biodiversity Management Plan which is nationally mandated.

5. Attached for your perusal is the scientific report compiled which elaborates on the findings. And, any utilization of the said lions must be in accordance with *the guidelines for the implementation of a meta-population management plan for managed lions in South Africa "SA-2017-9-Add1"*, with specific reference to trophy hunting.

We look forward for your participation in the forging of the Kalahari Savanna Node for Wild Managed Lion management.

Yours Sincerely,

SCIENTIFIC REPORT

SUBJECT : CLASSIFICATION OF NUUTBEGIN NATURE RESERVE LIONS AS A MANAGED WILD POPULATION

19 FEBRUARY 2018

1. BACKGROUND

The Lion (*Panthera leo*) Biodiversity Management Plan (BMP) which was produced in 2015 defined the various categories into which lions are kept and managed in South Africa. These were of three types, firstly, a) captive-bred lions, which are typically kept in small enclosures, and are entirely dependent on humans to provision their food, and they are managed in a highly intensive way, where even their breeding is manipulated for optimal production. Secondly, there are 'managed wild lions', which roam free on fenced in game farms or nature reserves where they are less intensively managed and the lions can sustain themselves from prey they capture, while they can exercise their own choice when it comes to breeding. Thirdly, there are wild lions, which occur in this country only in very large ecosystems, such as the Kgalagadi and Kruger systems. In the North West, the first two categories are applicable.

In 2016 NW READ submitted a list of reserves with details on their area size, population size, and management types to SANBI, so they can be categorised according to the Lion BMP. All four reserves (Madikwe, Pilanesberg, Khamab & Nuutbegin) were assigned to the 'Wild managed lions' category.

The lion population of Nuutbegin Nature Reserve has his grown to about 40 since the introduction of 4 lions in 2012 and hunting is considered to control the population size.

population as the trophies cannot be exported under the CITES source code W, and at present the USA does not allow the import of captive-bred lion trophies (source code C). The Nuutbegin population management adheres to these principles and compliance with US F&WS requirements.

2. PURPOSE

To classify the Nuutbegin Nature Reserve lion population as a wild managed population.

3. DELIBERATIONS

3.1. Nuutbegin acquired 4 lions (2 males/ 2 females) from Tswalu Kalahari Reserve in 2012 (see attached copy of permit no. 648). There are currently about 40 lions on Nuutbegin.

3.2. The founder population of Tswalu was obtained from free roaming lions originating from the Kgalagadi National Park (See attached letters from E. Oppenheimer & Son (PTY) Ltd. dated 16 February 2016 and Zodiac Diereklinick dated 12 February 2018).

3.3. The lions were let out of the pre-release boma on Nuutbegin 10 weeks after arrival.

3.4. No other lions have been introduced to Nuutbegin NR (affidavit Dr Griesel dated 19 February 2018).

3.5. Nuutbegin is 23 000ha in extent and the lions exclusively live of the free roaming wildlife occurring on the farm.

3.6. The founder population of the lions on Khamab Kalahari Reserve Nuutbegin NR also originated from Tswalu. The Khamab population is classified as managed wild.

4. RECOMMENDATION

BSS hereby confirms that the lion population on Nuutbegin NR is managed as a wild population, with only population management to maintain numbers within the limits of the size of Nuutbegin NR.

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: David Griesel
   a. Years in business: 50+
   b. Name of company conducting hunt: Graceland Safaris
   2. Name of concession: Nuutbegin Size in km²: 250
   a. Land tenure: __ Government lease __ Community __ Private ranch _x_ Private conservancy
   b. Length of concession agreement: For the Period of the Hunt Can it be renewed? _x_ Yes __ No
   c. Length of renewal, if applicable: _____
   d. Estimated total amount received in trophy fees last year, if applicable: $ 300,000
   e. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain:

It has not been obligatory, but due to the reserve opening for hunting, members of the local community have been employed by the reserve to facilitate in hunting, game management and more importantly anti-poaching. They have had problems in the past with Rhino Poaching.

   f. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city:

S 25° 28.36' E 022°53.79' - Nearest town is Vorstershoop and the Nearest City is Vryburg

   g. If the concession borders a national park, please provide the park name: _____
   h. Description of general and distinctive habitat features and any water features:

As it is in the Kalahari, it is Semi Arid Desert. The Rainfall is low, but the reserve has a very good infrastructure of watering holes by means of a underground well and pumping facilities to keep water throughout the reserve

3. Are there any communities living in the concession? __ Yes __ No
   a. If so, estimated number of people or villages in the concession? _____
4. Are there communities bordering this concession? _x_ Yes __ No
   a. If so, estimated number of people or villages around the concession? approx 250 on RSA side, Botswana side Unknown, but likely more
5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Elephant	None			
Lion	Dense	45+	4 were introduced in 2012	Aerial and land Survey
Leopard	Sparse	3, but mainly nomadic	Down due to the lions	Sightings and tracks
Prey species	Dense	in the 1000's	Down due to the lions	Aerial and land Survey

6. Total employment number: 25

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	3	1
Trackers	3	2
Anti-poaching scouts/rangers	4	4
Other anti-poaching	4 - Rhino Anti Poaching	4
Cooks/housekeepers	5	
Community coordinators		
Managers	5	5
Biologists	1	
Others: _____		

7. Number of staff employed in the off-season: All those that remain Local

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	8	8	Year round
Managers	3	3	Year round
Maintenance	6	6	Year round
Road opening/ construction	10	10	Contract based
Community relations personnel	unknown		
Others: _____			

8. Anti-poaching efforts:[2]
   a. Number of anti-poaching staff: 8 but when there is evidence of Rhino Poaching, neighbors an extra community members are called upon for additional assistance
   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? both
   c. Months during which anti-poaching patrols are conducted: year round
   d. Number of anti-poaching patrols per month: Daily
   e. Description of anti-poaching equipment, vehicles, etc.: Vehicles, Flashlights and limited firearms
   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? The SAPS
   g. Do you offer rewards to poaching informants leading to arrest? x Yes __ No
   h. Do you offer rewards to poaching informants upon conviction? __ Yes __ No
   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? ZAR

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	32000	35200	38750	
Equipment	20000	20000	20000	uniforms and gear
Vehicles	300000	300000	300000	repayments on vehicles
Petrol	40000	47000	54000	
Rewards paid		15000	19000	Increase in Rhino Poaching
Other: _____				
Other: _____				
TOTALS				

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered		3	7	relating to Rhino

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Elephant carcasses observed				
Lion carcasses observed				
Leopard carcasses observed				
Ivory poachers arrested				
Meat poachers arrested				
Other poachers arrested				
Poachers convicted				
Snares/gin traps collected				
Firearms confiscated			2	
Vehicles confiscated				
Bicycles confiscated

Tusks recovered			2	
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? X Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)?
Medical services and a mobile clinic is run by the reserve for the local community

c. Does the company provide game meat to nearby communities? X Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: R10000 meat was donated. There is not a program per say, it is based on how much meat is available as a result of trophy hunting

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe.
There is no wildlife outside of the reserve as they have all been poached and killed by snares.

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? _____

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

Elephant				
Lion				
Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? Graceland Safaris takes care of their staff families in the form of school fees, medical needs and is currently rebuilding homes of a staff member who's home was burnt down

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)				
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities				
Water infrastructure improvements				
Sports teams funded				
Construction materials donated				
Other: _____

12. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients: 100%

13. Other information: Please provide a narrative of other enhancement information about the operation, such as any special hunting policies (e.g., aging, size, resting areas), concession improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

14. I declare that the foregoing is true and correct.

Signature: _____

Name: Rowan Zen Title: Owner

Graceland Safaris has a strict walk and stalk fair chase policy, and all hunting is done by methods of spot and stalk and track and stalk. We only harvest animals that are past their prime and our company ethos is driven by conservation. As we have several concessions throughout the republic, we do our outmost to not exhaust our natural wildlife heritage and rotate our concessions as often as possible and only take the allocated amount of species and numbers on the concessions as prescribed in the beginning of our seasons. We have our own offsite breeding facility of certain game species to ensure continuing increase in numbers of our wildlife. We have an array of trail cams scattered throughout our concessions for research and census purposes.

Good morning Mr. Williams,

The U.S. Fish and Wildlife Service International Affairs Program works to conserve our nation's wildlife and species of international concern. In order to provide our best customer service, we are currently focusing on processing permit applications and are not providing status updates on permit applications at this time. Once you receive your acknowledgement e-mail indicating your application number, please allow us time to evaluate your application. If we need additional information, we will contact you.

We appreciate your time and consideration.

RE: Import applications for RSA Wild Managed Lion Trophies for Fredd Williams, Jacob Williams and Edward Aguilar

Dear Chief Cogliano:

Enclosed please find three applications to import "wild managed" lion trophies that were hunted in the Republic of South Africa. Also attached to each permit application is the 2018 Operator Enhancement report from Graceland Safaris, the hunting operator in this instance.

Please do not hesitate to contact us if you have questions about these permit applications.

Sincerely,

John J. Jackson III

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Aguilar	Roy	Edward	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, T(b)(6)

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

(b)(6)ress, Apartment #, Suite #, or Room #; no P.O. Boxes)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
San Antonio	TX	78260	Bexar	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Expires 08/31/2020

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo, African Lion

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

Nuutbegin Nature Reserve, Vorstershoop, North West Providence, South Africa

b. Date wildlife was hunted:

June 12-24, 2018 (Date of harvest June 14,2018)

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Graceland Safaris, Rowan Zerf Outfitter Permit No. HO-003/04/2018NW PH Permit No. PH-010/04/2018NW

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

P&A Hunters cc P.O. Box 332, Bela Bela 0480. Farm 34, Droogekloof, Bela Bela 0480 Republic South Africa

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Peter de Villiers
Business Name:	P & A Hunters cc
Address:	PO Box 332 Bela Bela 0480
City:	Farm 34, Droogekloof, Bela Bela 0480
State/Province:	Republic South Africa
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

SEE ATTACHED

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

SEE ATTACHED

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

SEE ATTACHED

OMB Control No 1018-0093
Expires 08/31/2020

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard[redacted]ar.

Applicant's signature: [redacted] Date: 07-28-2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9.a. (page 4)

Four Lions were introduced from the Tswalo Reserve in 2012. This has swelled to a current group of over 40 lions. There are no spotted Hyena, Leopard or Cheetah left on the reserve as a result of the lion burden. Since all of the males came from the same family there has been no evidence of the males killing off any of the offspring. The Lioness' are breeding incredible well and the survival rate of the cubs is high due to no other predation threat present.

9.b. (page 4)

The Licenses and trophy fees are allocated to the local government Nature Conservation for wages and salaries to further conserve the species and to give the land owners incentives to continue to conserve the species. The land owner is currently face with an overpopulation situation with his lions and they are having a detrimental effect on other species of wildlife on the reserve. The trophy fees have contributed to the staff salaries on the reserve and a large portion towards the anti-poaching units deployed on the reserve to safeguard the lions against the illegal lion bone trade as well as funding for extra armed security for the help protect the reserve's rhinos from being poached. This hunt was the first lion hunt on the reserve since the lions were introduced in 2012. The need to manage the numbers of lions has become a pressing matter as well as needing to raise funds for the aforementioned rhino anti-poaching unit after seven rhinos were poached last year alone.

9.c. (page 4)

The financial contribution of trophy hunting has provided an opportunity to employ members of the poverty stricken local community surrounding the reserve. In the past, hunger and lack of jobs or income has forced people to cross the border from Botswana side to set snares, traps and poach bush meat to feed their families. Having a reserve like Nuutbegin in the Vorstershoop region has begun to remedy some of these problems as people are now being employed by the local taxidermist, butchery and as camp staff and maintenance crew.
The owner is looking to introduce a new bloodline into the reserve to avoid inbreeding, which is costly. In hunting some of the lions on the reserve it provides him with funding to purchase and translocate lions from another region. Removal of some of the dominate reserve lions will also allow for a better opportunity of survival of the new translocated lions into the reserve.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted LION trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Dear Mr Power,

Oppenheimer & Son and its subsidiaries, protect and conserve a network of conservation areas throughout southern Africa, where conservation of landscapes and their animal and plant communities are assured. Some of our reserves are large enough to stock large carnivores, such as the lion *Panthera leo*, i.e. Tswalu Kalahari Reserve.

We endeavour to protect lions that are self-sustaining as far as their forage requirements are concerned, while dispersal is facilitated by translocations to ensure gene flow elsewhere, within the framework as suggested by the Lion Biodiversity Management Plan (Lion BMP). Following this, we have, and will continue to translocate lions to other suitable destinations. These lions are wild, yet managed, and will go to receiving destination of the same nature. In this, either sales, or donations are made, and we are fully versant with the nature of the receiving populations, such that no animals will be sent to captivity or any places of questionable nature.

None of our properties have captive facilities which harbour lions, and neither do we/ or have entertained the prospects of any transactions related to captive-bred lions. In fact, as a conservation entity, we are strongly opposed to the captive-bred lion industry, and we absolve ourselves from any association with this industry.

Please feel free to contact me should you have any queries.

With very best wishes,

Dr Duncan MacFadyen

Dear Dr Griesel

SUBJECT: CONFIRMATION OF CLASSIFICATION OF YOUR NUUTBEGIN NATURE RESERVE'S LION POPULATION AS WILD MANAGED

1. Chapter 5 of the Lion Biodiversity Management Plan (BMP) published in terms of the National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004) outlines a meta-population plan for Managed Wild Lions (MWL) in South Africa. The plan proposes a national management system composed of linked regional nodes of properties that simulate a meta-population approach whereby different lion groups living on different properties make-up a node's population, i.e. a single population as if these prides were living together.

2. These populations (nodes) should have different vital rates (i.e. births, deaths, dispersal events, colonization etc.), and there should be some occasional dispersal between populations as well as regular movements between properties within nodes; and Implementation of the national management system will thus mimic population and meta-population dynamics, which in-turn would promote genetic diversity and reduce inbreeding risks.

3. On your request, the Department of Rural, Environment and Agricultural Development (READ), extensively conducted verification work in determining the status of lion population on your Nuutbegin Nature Reserve.

4. We have perused various documentations, including those submitted by yourself as well as the affidavit you made under oath, as portfolio of evidence to ascertain the state of wildness of the said population. And, the department has concluded, from all evidence provided and the scientific report compiled, that indeed the lion population on Nuutbegin Game Reserve can be classified as **Wild Managed Lions** as defined in the Lion Biodiversity Management Plan which is nationally mandated.

5. Attached for your perusal is the scientific report compiled which elaborates on the findings. And, any utilization of the said lions must be in accordance with *the guidelines for the implementation of a meta-population management plan for managed lions in South Africa "SA-2017-9-Add1"*, with specific reference to trophy hunting.

We look forward for your participation in the forging of the Kalahari Savanna Node for Wild Managed Lion management.

Yours Sincerely,

MR. M.J. DENGA

SCIENTIFIC REPORT

SUBJECT : CLASSIFICATION OF NUUTBEGIN NATURE RESERVE LIONS AS A MANAGED WILD POPULATION

19 FEBRUARY 2018

1. BACKGROUND

The Lion (*Panthera leo*) Biodiversity Management Plan (BMP) which was produced in 2015 defined the various categories into which lions are kept and managed in South Africa. These were of three types, firstly, a) captive-bred lions, which are typically kept in small enclosures, and are entirely dependent on humans to provision their food, and they are managed in a highly intensive way, where even their breeding is manipulated for optimal production. Secondly, there are 'managed wild lions', which roam free on fenced in game farms or nature reserves where they are less intensively managed and the lions can sustain themselves from prey they capture, while they can exercise their own choice when it comes to breeding. Thirdly, there are wild lions, which occur in this country only in very large ecosystems, such as the Kgalagadi and Kruger systems. In the North West, the first two categories are applicable.

In 2016 NW READ submitted a list of reserves with details on their area size, population size, and management types to SANBI, so they can be categorised according to the Lion BMP. All four reserves (Madikwe, Pilanesberg, Khamab & Nuutbegin) were assigned to the 'Wild managed lions' category.

The lion population of Nuutbegin Nature Reserve has his grown to about 40 since the introduction of 4 lions in 2012 and hunting is considered to control the population size.

population as the trophies cannot be exported under the CITES source code W, and at present the USA does not allow the import of captive-bred lion trophies (source code C). The Nuutbegin population management adheres to these principles and compliance with US F&WS requirements.

2. PURPOSE

To classify the Nuutbegin Nature Reserve lion population as a wild managed population.

3. DELIBERATIONS

3.1. Nuutbegin acquired 4 lions (2 males/ 2 females) from Tswalu Kalahari Reserve in 2012 (see attached copy of permit no. 648). There are currently about 40 lions on Nuutbegin.

3.2. The founder population of Tswalu was obtained from free roaming lions originating from the Kgalagadi National Park (See attached letters from E. Oppenheimer & Son (PTY) Ltd. dated 16 February 2016 and Zodiac Dierekliniek dated 12 February 2018).

3.3. The lions were let out of the pre-release boma on Nuutbegin 10 weeks after arrival.

3.4. No other lions have been introduced to Nuutbegin NR (affidavit Dr Griesel dated 19 February 2018).

3.5. Nuutbegin is 23 000ha in extent and the lions exclusively live of the free roaming wildlife occurring on the farm.

3.6. The founder population of the lions on Khamab Kalahari Reserve Nuutbegin NR also originated from Tswalu. The Khamab population is classified as managed wild.

4. RECOMMENDATION

BSS hereby confirms that the lion population on Nuutbegin NR is managed as a wild population, with only population management to maintain numbers within the limits of the size of Nuutbegin NR.

VISION PRINTING

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: David Griesel
   a. Years in business: 50+
   b. Name of company conducting hunt: Graceland Safaris
   2. Name of concession: Nuutbegin Size in km²: 250
   a. Land tenure: __ Government lease __ Community __ Private ranch X Private conservancy
   b. Length of concession agreement: For the Period of the Hunt Can it be renewed? X Yes __ No
   c. Length of renewal, if applicable: _____
   d. Estimated total amount received in trophy fees last year, if applicable: $ 300,000
   e. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain:
   It has not been obligatory, but due to the reserve opening for hunting, members of the local community have been employed by the reserve to facilitate in hunting, game management and more importantly anti-poaching. They have had problems in the past with Rhino Poaching.
   f. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city:
   S 25° 28.36' E 022°53.79' - Nearest town is Vorstershoop and the Nearest City is Vryburg
   g. If the concession borders a national park, please provide the park name:
   _____
   h. Description of general and distinctive habitat features and any water features:
   As it is in the Kalahari, it is Semi Arid Desert. The Rainfall is low, but the reserve has a very good infrastructure of watering holes by means of a underground well and pumping facilities to keep water throughout the reserve
3. Are there any communities living in the concession? __ Yes __ No
   a. If so, estimated number of people or villages in the concession?
   _____
4. Are there communities bordering this concession? X Yes __ No
   a. If so, estimated number of people or villages around the concession?
   approx 250 on RSA side, Botswana side Unknown, but likely more
5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Elephant	None			
Lion	Dense	45+	4 were introduced in 2012	Aerial and land Survey
Leopard	Sparse	3, but mainly nomadic	Down due to the lions	Sightings and tracks
Prey species	Dense	in the 1000's	Down due to the lions	Aerial and land Survey

6. Total employment number: 25

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	3	1
Trackers	3	2
Anti-poaching scouts/rangers	4	4
Other anti-poaching	4 - Rhino Anti Poaching	4
Cooks/housekeepers	5	
Community coordinators		
Managers	5	5
Biologists	1	
Others: _____		

7. Number of staff employed in the off-season: All those that remain Local

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	8	8	Year round
Managers	3	3	Year round
Maintenance	6	6	Year round
Road opening/ construction	10	10	Contract based
Community relations personnel	unknown		
Others: _____			

8. Anti-poaching efforts:[2]
   a. Number of anti-poaching staff: 8 but when there is evidence of Rhino Poaching, neighbors an extra community members are called upon for additional assistance
   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? both
   c. Months during which anti-poaching patrols are conducted: year round
   d. Number of anti-poaching patrols per month: Daily
   e. Description of anti-poaching equipment, vehicles, etc.: Vehicles, Flashlights and limited firearms
   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? The SAPS
   g. Do you offer rewards to poaching informants leading to arrest? x Yes __ No
   h. Do you offer rewards to poaching informants upon conviction? __ Yes __ No
   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? ZAR

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	32000	35200	38750	
Equipment	20000	20000	20000	uniforms and gear
Vehicles	300000	300000	300000	repayments on vehicles
Petrol	40000	47000	54000	
Rewards paid		15000	19000	Increase in Rhino Poaching
Other: _____				
Other: _____				
TOTALS				

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered		3	7	relating to Rhino

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Elephant carcasses observed				
Lion carcasses observed				
Leopard carcasses observed				
Ivory poachers arrested				
Meat poachers arrested				
Other poachers arrested				
Poachers convicted				
Snares/gin traps collected				
Firearms confiscated			2	
Vehicles confiscated				
Bicycles confiscated				
Boats/nets confiscated				
Tusks recovered			2	
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? X Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)?
Medical services and a mobile clinic is run by the reserve for the local community

c. Does the company provide game meat to nearby communities? X Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: R10000 meat was donated. There is not a program per say, it is based on how much meat is available as a result of trophy hunting

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe.
There is no wildlife outside of the reserve as they have all been poached and killed by snares.

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? _____

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

Elephant				
Lion				
Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? Graceland Safaris takes care of their staff families in the form of school fees, medical needs and is currently rebuilding homes of a staff member who's home was burnt down

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)				
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities				
Water infrastructure improvements				
Sports teams funded				
Construction materials donated				
Other: _____				
Other: _____				
TOTALS				

11. How many U.S. clients did the company have in the past three years, what percentage of the company's clients were from the U.S., and what fees did they pay?

	Hunting elephant	Hunting lion	Hunting leopard	Hunting all species
Number of U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:
Percentage of U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:
Trophy fees paid by U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:

12. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients: 100%

13. Other information: Please provide a narrative of other enhancement information about the operation, such as any special hunting policies (e.g., aging, size, resting areas), concession improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

14. I declare that the foregoing is true and correct.

Signature: _____

Name: Rowan Zen Title: Owner

Graceland Safaris has a strict walk and stalk fair chase policy, and all hunting is done by methods of spot and stalk and track and stalk. We only harvest animals that are past their prime and our company ethos is driven by conservation. As we have several concessions throughout the republic, we do our outmost to not exhaust our natural wildlife heritage and rotate our concessions as often as possible and only take the allocated amount of species and numbers on the concessions as prescribed in the beginning of our seasons. We have our own offsite breeding facility of certain game species to ensure continuing increase in numbers of our wildlife. We have an array of trail cams scattered throughout our concessions for research and census purposes.

STANDARD CONDITIONS

GENERAL CONDITIONS - ALL PERMITS

1) The Issuing Authority for this licence is : The Northwest Department of Rural,Environment and Agricultural Development (READ), Chief Directorate Environmental Services, Private Bag X 2039, Mmabatho, 2735, hereafter named "the Issuing Authority". 2) This permit, unless otherwise stated, is only valid within the boundaries of the North West Province (hereafter named "the Province") and then specifically as specified on the permit. 3) This permit is valid only : - a) for the specific species, sex and numbers as specified on this permit. b) for the specific activity / activities authorised. c) for the specified methods or instruments authorised. d) for the specific property / locality as specified. e) for the specific day, time or period stipulated. 4) This permit is only deemed valid : - a) in the original format and with the content as issued by the Issuing Authority. b) once it has been printed and the signature of the permit holder has been endorsed thereon in ink. 5) The Issuing Authority reserves the right to amend, withhold, withdraw or cancel any permit at any time. 6) This permit is not transferable to any individual, natural person, juristic person or any other legal identity. 7) Any alterations or attempt thereto, whether electronically or in any other way, shall immediately render it invalid. 8) This permit shall lapse and be deemed invalid when it is altered, lost or destroyed and no copy thereof shall be issued. 9) This permit shall also become invalid as soon as the permit holder loses possession of any animal, plant or derivative as the case may be, as specified on the permit. 10) This permit does not grant the permit holder automatic access to any Protected Area, National Park, Provincial Nature Reserve or privately owned land and : - a) the permit holder must beforehand obtain all other relevant written permissions, documents, rights and licences. b) the permit holder must comply with any other / further conditions or restrictions that the manager / landowner may stipulate at his / her discretion. 11) The permit holder must at all times while performing any restricted activity authorised by this permit, have the permit and all other relevant documentation in his / her possession and without delay make it available upon request by any authorized person. 12) An authorized person must also be allowed access onto the property at any reasonable time for any inspection needed and can remain on such property as long as it is needed to do the inspection. 13) The permit holder must immediately after completion of any activity authorised by this permit, record the required particulars in the space provided therefore or on the annexure or document attached thereto or in the prescribed register related to the permit. 14) The permit holder must return the original signed permit to the Issuing Authority within (14) fourteen days : - a) after performing or completing the authorised restricted activity, or b) after the date of expiry thereof whichever happens first, and c) if applicable furnish the Issuing Authority with a prescribed written feedback report on the results of every activity conducted. 15) The permit holder must retain a copy of the permit together with all other relevant written permissions, documents, rights and licenses for a period of at least (2) two years from date of issue or for as long as the permit holder is in possession of the animal, plant or derivative, whichever period is the longer. 16) If applicable, the permit holder shall apply for the renewal of the permit to the Issuing Authority, on the appropriate application form, at least (3) three months prior to the expiry date thereof. 17) Applications for renewal of this permit will only be processed after the original signed permit together with the prescribed written feedback report has been returned to the Issuing Authority. 18) This permit, during the period of validity thereof, is also subject to : - a) all applicable norms and standards in existence at the time of issuance. b) the provisions of any law in force, in respect of the specific species, activity, method or instrument to which this permit applies. 19) It is the permit holder's responsibility to obtain the correct information on any other legislation, specification, requirement or changes thereto that may be applicable or are required by any other Issuing Authority / Organization / Institute, relating to this permit. 20) By signing this permit, the permit holder declares that he / she is aware of the fact that : - a) any transgression or failure to return the original permit or failure to render the required reports can lead to criminal prosecution and also jeopardize any future applications by or in the name of the permit holder. b) if the permit holder contravenes or fails to comply with any permit condition or requirement, he / she shall be guilty of an offence. 21) The prescribed fees paid to the Issuing Authority for the issue of this permit shall not be refunded.

HUNT - DANGEROUS GAME

1) The permit holder must ensure that : - a) a fire-arm having a barrel caliber of at least 9.525 mm H&H (.375 of an inch H&H) is used to hunt buffalo, elephant, lion, leopard, rhinoceros or hippopotamus. b) the client is escorted by preferably two registered professional hunters who are qualified to hunt the above mentioned dangerous wild animals. c) unless approved and specified on this permit, no prohibited hunting method or instrument is used to hunt an animal. d) the animal which is hunted, is not a "put and take animal" since the animal must qualify as free ranging (wild) for at least a period of

RE: Import applications for RSA Wild Managed Lion Trophies for Fredd Williams, Jacob Williams and Edward Aguilar

Dear Chief Cogliano:

Enclosed please find three applications to import "wild managed" lion trophies that were hunted in the Republic of South Africa. Also attached to each permit application is the 2018 Operator Enhancement report from Graceland Safaris, the hunting operator in this instance.

Please do not hesitate to contact us if you have questions about these permit applications.

Sincerely,

John J. Jackson III

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Williams	Fred	Allen	Jr.

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room # no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
San Antonio	TX	78261	Bexar	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification. I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo, African Lion

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

Nuutbegin Nature Reserve, Vorstershoop, North West Providence, South Africa

b. Date wildlife was hunted:

June 12-24, 2018 (Date of harvest June 14,2018)

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Graceland Safaris, Rowan Zerf Outfitter Permit No. HO-003/04/2018NW PH Permit No. PH-010/04/2018NW

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

P&A Hunters cc P.O. Box 332, Bela Bela 0480. Farm 34, Droogekloof, Bela Bela 0480 Republic South Africa

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Peter de Villiers
Business Name:	P & A Hunters cc
Address:	PO Box 332 Bela Bela 0480
City:	Farm 34, Droogekloof, Bela Bela 0480
State/Province:	Republic South Africa
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

SEE ATTACHED

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

SEE ATTACHED

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

SEE ATTACHED

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leop

Applicant's signature: (b)(6) Date: 7/28/2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9.a. (page 4)

Four Lions were introduced from the Tswalo Reserve in 2012. This has swelled to a current group of over 40 lions. There are no spotted Hyena, Leopard or Cheetah left on the reserve as a result of the lion burden. Since all of the males came from the same family there has been no evidence of the males killing off any of the offspring. The Lioness' are breeding incredible well and the survival rate of the cubs is high due to no other predation threat present.

9.b. (page 4)

The Licenses and trophy fees are allocated to the local government Nature Conservation for wages and salaries to further conserve the species and to give the land owners incentives to continue to conserve the species. The land owner is currently face with an overpopulation situation with his lions and they are having a detrimental effect on other species of wildlife on the reserve. The trophy fees have contributed to the staff salaries on the reserve and a large portion towards the anti-poaching units deployed on the reserve to safeguard the lions against the illegal lion bone trade as well as funding for extra armed security for the help protect the reserve's rhinos from being poached. This hunt was the first lion hunt on the reserve since the lions were introduced in 2012. The need to manage the numbers of lions has become a pressing matter as well as needing to raise funds for the aforementioned rhino anti-poaching unit after seven rhinos were poached last year alone.

9.c. (page 4)

The financial contribution of trophy hunting has provided an opportunity to employ members of the poverty stricken local community surrounding the reserve. In the past, hunger and lack of jobs or income has forced people to cross the border from Botswana side to set snares, traps and poach bush meat to feed their families. Having a reserve like Nuutbegin in the Vorstershoop region has begun to remedy some of these problems as people are now being employed by the local taxidermist, butchery and as camp staff and maintenance crew.
The owner is looking to introduce a new bloodline into the reserve to avoid inbreeding, which is costly. In hunting some of the lions on the reserve it provides him with funding to purchase and translocate lions from another region. Removal of some of the dominate reserve lions will also allow for a better opportunity of survival of the new translocated lions into the reserve.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted LION trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Veterinary statement

Re: Origen of the Nuutbegin Natuur Reservaal Lions.

I, Gerhardus Scheepers, ID 7404265006087, a veterinarian registration number D99/4295, state that the following information is true and correct as given in the sentences below.

I did the darting and relocation of 4 lions from Tswalo to Nuutbegin in late January 2012. I travelled with them from Tswalo to Nuutbegin and off loaded in the temporary holding boma before being released onto the Reserve.

This all happened between 19 and 22 January 2012. We had to stay a day longer at Tswalo before we could dart and load the lions due to an issue with issuing the permits from North West Nature conservation side.

The darting procedure took place on an afternoon. I darted the female with her two cubs, a male and female, whilst they were feeding on a Blue wildebeest carcass. After being immobilised, a radio collar was fitted to the female and they were loaded into three transport crates and loaded on the back of two vehicles. At the same time Dr Griesel and Gus van Dyk darted the adult male in a different part of Tswalo. He was also fitted with a radio collar, crated and loaded.

We set off at approximately 20h00 from Tswalo on our way to Nuutbegin. Gus and Dylan accompanied us in their own vehicle to Nuutbegin to be with when we off load them. The journey took about 6 hours on road and we off loaded them safe in the holding boma at Nuutbegin.

The morning we inspected them and were happy to see that they are well and no fighting between the male and the cubs. Gys and Dylan were also satisfied and left at about midday on their way back to Tswalo.

These lions have never been bred in a captive facility. They were wild roaming lions originating from the then Kalahari Gemsbok National Park. They are still to this wild and free roaming on Nuutbegin. During 2016 the collars of both the male and female were removed as they stopped working.

Dear Dr Griesel

SUBJECT: CONFIRMATION OF CLASSIFICATION OF YOUR NUUTBEGIN NATURE RESERVE'S LION POPULATION AS WILD MANAGED

1. Chapter 5 of the Lion Biodiversity Management Plan (BMP) published in terms of the National Environmental Management: Biodiversity Act, 2004 (Act No. 10 of 2004) outlines a meta-population plan for Managed Wild Lions (MWL) in South Africa. The plan proposes a national management system composed of linked regional nodes of properties that simulate a meta-population approach whereby different lion groups living on different properties make-up a node's population, i.e. a single population as if these prides were living together.

2. These populations (nodes) should have different vital rates (i.e. births, deaths, dispersal events, colonization etc.), and there should be some occasional dispersal between populations as well as regular movements between properties within nodes; and Implementation of the national management system will thus mimic population and meta-population dynamics, which in-turn would promote genetic diversity and reduce inbreeding risks.

3. On your request, the Department of Rural, Environment and Agricultural Development (READ), extensively conducted verification work in determining the status of lion population on your Nuutbegin Nature Reserve.

4. We have perused various documentations, including those submitted by yourself as well as the affidavit you made under oath, as portfolio of evidence to ascertain the state of wildness of the said population. And, the department has concluded, from all evidence provided and the scientific report compiled, that indeed the lion population on Nuutbegin Game Reserve can be classified as **Wild Managed Lions** as defined in the Lion Biodiversity Management Plan which is nationally mandated.

5. Attached for your perusal is the scientific report compiled which elaborates on the findings. And, any utilization of the said lions must be in accordance with *the guidelines for the implementation of a meta-population management plan for managed lions in South Africa "SA-2017-9-Add1"*, with specific reference to trophy hunting.

We look forward for your participation in the forging of the Kalahari Savanna Node for Wild Managed Lion management.

Yours Sincerely,

MR. M.J. DENGA
DIRECTOR – BIODIVERSITY MANAGEMENT

SCIENTIFIC REPORT

SUBJECT : CLASSIFICATION OF NUUTBEGIN NATURE RESERVE LIONS AS A MANAGED WILD POPULATION

19 FEBRUARY 2018

1. BACKGROUND

The Lion (*Panthera leo*) Biodiversity Management Plan (BMP) which was produced in 2015 defined the various categories into which lions are kept and managed in South Africa. These were of three types, firstly, a) captive-bred lions, which are typically kept in small enclosures, and are entirely dependent on humans to provision their food, and they are managed in a highly intensive way, where even their breeding is manipulated for optimal production. Secondly, there are 'managed wild lions', which roam free on fenced in game farms or nature reserves where they are less intensively managed and the lions can sustain themselves from prey they capture, while they can exercise their own choice when it comes to breeding. Thirdly, there are wild lions, which occur in this country only in very large ecosystems, such as the Kgalagadi and Kruger systems. In the North West, the first two categories are applicable.

In 2016 NW READ submitted a list of reserves with details on their area size, population size, and management types to SANBI, so they can be categorised according to the Lion BMP. All four reserves (Madikwe, Pilanesberg, Khamab & Nuutbegin) were assigned to the 'Wild managed lions' category.

The lion population of Nuutbegin Nature Reserve has his grown to about 40 since the introduction of 4 lions in 2012 and hunting is considered to control the population size.

population as the trophies cannot be exported under the CITES source code W, and at present the USA does not allow the import of captive-bred lion trophies (source code C). The Nuutbegin population management adheres to these principles and compliance with US F&WS requirements.

2. PURPOSE

To classify the Nuutbegin Nature Reserve lion population as a wild managed population.

3. DELIBERATIONS

3.1. Nuutbegin acquired 4 lions (2 males/ 2 females) from Tswalu Kalahari Reserve in 2012 (see attached copy of permit no. 648). There are currently about 40 lions on Nuutbegin.

3.2. The founder population of Tswalu was obtained from free roaming lions originating from the Kgalagadi National Park (See attached letters from E. Oppenheimer & Son (PTY) Ltd. dated 16 February 2016 and Zodiac Dierekliniek dated 12 February 2018).

3.3. The lions were let out of the pre-release boma on Nuutbegin 10 weeks after arrival.

3.4. No other lions have been introduced to Nuutbegin NR (affidavit Dr Griesel dated 19 February 2018).

3.5. Nuutbegin is 23 000ha in extent and the lions exclusively live of the free roaming wildlife occurring on the farm.

3.6. The founder population of the lions on Khamab Kalahari Reserve Nuutbegin NR also originated from Tswalu. The Khamab population is classified as managed wild.

4. RECOMMENDATION

BSS hereby confirms that the lion population on Nuutbegin NR is managed as a wild population, with only population management to maintain numbers within the limits of the size of Nuutbegin NR.

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: David Griesel
   a. Years in business: 50+
   b. Name of company conducting hunt: Graceland Safaris
   2. Name of concession: Nuutbegin Size in km²: 250
   a. Land tenure: __ Government lease __ Community __ Private ranch _x_ Private conservancy
   b. Length of concession agreement: For the Period of the Hunt Can it be renewed? _x_ Yes __ No
   c. Length of renewal, if applicable: _____
   d. Estimated total amount received in trophy fees last year, if applicable: $ 300,000
   e. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain:
   It has not been obligatory, but due to the reserve opening for hunting, members of the local community have been employed by the reserve to facilitate in hunting, game management and more importantly anti-poaching. They have had problems in the past with Rhino Poaching.
   f. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city:
   S 25° 28.36' E 022°53.79' - Nearest town is Vorsterhoop and the Nearest City is Vryburg
   g. If the concession borders a national park, please provide the park name: _____
   h. Description of general and distinctive habitat features and any water features:
   As it is in the Kalahari, it is Semi Arid Desert. The Rainfall is low, but the reserve has a very good infrastructure of watering holes by means of a underground well and pumping facilities to keep water throughout the reserve

3. Are there any communities living in the concession? __ Yes __ No
   a. If so, estimated number of people or villages in the concession? _____
4. Are there communities bordering this concession? _x_ Yes __ No
   a. If so, estimated number of people or villages around the concession?
   approx 250 on RSA side, Botswana side Unknown, but likely more
5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Elephant	None			
Lion	Dense	45+	4 were introduced in 2012	Aerial and land Survey
Leopard	Sparse	3, but mainly nomadic	Down due to the lions	Sightings and tracks
Prey species	Dense	in the 1000's	Down due to the lions	Aerial and land Survey

6. Total employment number: 25

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	3	1
Trackers	3	2
Anti-poaching scouts/rangers	4	4
Other anti-poaching	4 - Rhino Anti Poaching	4
Cooks/housekeepers	5	
Community coordinators		
Managers	5	5
Biologists	1	
Others: _____		

7. Number of staff employed in the off-season: All those that remain Local

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	8	8	Year round
Managers	3	3	Year round
Maintenance	6	6	Year round
Road opening/ construction	10	10	Contract based
Community relations personnel	unknown		
Others: _____			

8. Anti-poaching efforts:[2]
   a. Number of anti-poaching staff: 8 but when there is evidence of Rhino Poaching, neighbors an extra community members are called upon for additional assistance
   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? both
   c. Months during which anti-poaching patrols are conducted: year round
   d. Number of anti-poaching patrols per month: Daily
   e. Description of anti-poaching equipment, vehicles, etc.: Vehicles, Flashlights and limited firearms
   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? The SAPS
   g. Do you offer rewards to poaching informants leading to arrest? x Yes __ No
   h. Do you offer rewards to poaching informants upon conviction? __ Yes __ No
   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? ZAR

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	32000	35200	38750	
Equipment	20000	20000	20000	uniforms and gear
Vehicles	300000	300000	300000	repayments on vehicles
Petrol	40000	47000	54000	
Rewards paid		15000	19000	Increase in Rhino Poaching
Other: _____				
Other: _____				
TOTALS				

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered		3	7	relating to Rhino

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Elephant carcasses observed				
Lion carcasses observed				
Leopard carcasses observed				
Ivory poachers arrested				
Meat poachers arrested				
Other poachers arrested				
Poachers convicted				
Snares/gin traps collected				
Firearms confiscated			2	
Vehicles confiscated				
Bicycles confiscated				
Boats/nets confiscated				
Tusks recovered			2	
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? X Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)?
Medical services and a mobile clinic is run by the reserve for the local community

c. Does the company provide game meat to nearby communities? X Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: R10000 meat was donated. There is not a program per say, it is based on how much meat is available as a result of trophy hunting

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe.
There is no wildlife outside of the reserve as they have all been poached and killed by snares.

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? _____

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

Elephant				
Lion				
Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? Graceland Safaris takes care of their staff families in the form of school fees, medical needs and is currently rebuilding homes of a staff member who's home was burnt down

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)				
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities				
Water infrastructure improvements				
Sports teams funded				
Construction materials donated				
Other: _____				
Other: _____				
TOTALS				

11. How many U.S. clients did the company have in the past three years, what percentage of the company's clients were from the U.S., and what fees did they pay?

	Hunting elephant	Hunting lion	Hunting leopard	Hunting all species
Number of U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:
Percentage of U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:

12. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients: 100%

13. Other information: Please provide a narrative of other enhancement information about the operation, such as any special hunting policies (e.g., aging, size, resting areas), concession improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

14. I declare that the foregoing is true and correct.

Signature: _____

Name: Rowan Zen Title: Owner

Graceland Safaris has a strict walk and stalk fair chase policy, and all hunting is done by methods of spot and stalk and track and stalk. We only harvest animals that are past their prime and our company ethos is driven by conservation. As we have several concessions throughout the republic, we do our outmost to not exhaust our natural wildlife heritage and rotate our concessions as often as possible and only take the allocated amount of species and numbers on the concessions as prescribed in the beginning of our seasons. We have our own offsite breeding facility of certain game species to ensure continuing increase in numbers of our wildlife. We have an array of trail cams scattered throughout our concessions for research and census purposes.

Good morning Mr. Williams,

The U.S. Fish and Wildlife Service International Affairs Program works to conserve our nation's wildlife and species of international concern. In order to provide our best customer service, we are currently focusing on processing permit applications and are not providing status updates on permit applications at this time. Once you receive your acknowledgement e-mail indicating your application number, please allow us time to evaluate your application. If we need additional information, we will contact you.

We appreciate your time and consideration.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same address as listed in page 1. Self-addressed, pre-paid envelope included herewith.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   D. Rob Burris, 520-289-7070, drb1026@gmail.com

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

N/A

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo; African Lion

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

Mozambique; Niassa province; Niassa Reserve Hunting Block R2; nearest city is Lichinga, Mozambique

b. Date wildlife is to be hunted:

October 26, 2018 - November 7, 2018

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

Niassa Hunter Safaris LDA; Jorge Carrico, Professional Hunter & Outfitter

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

N/A

b. Date wildlife was hunted:

N/A

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

N/A

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

N/A

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Hunt not yet completed; permits and/or licenses no currently in my possession

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Life Form Taxidermy CC
Address:	No. 7 Aluminium Road, P.O. Box 763
City:	White River
State/Province:	MPumalanga 1240
Country, Postal Code:	South Africa

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

No.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

Approximate fees are $40,000 USD; It is my understanding that some percentage of those fees goes to the local communities in the Niassa province. It is also my understanding that some portion of those fees goes to the Niassa Reserve for conservation and anti-poaching efforts.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

Niassa Hunter Safaris is actively engaged in wildlife conservation and anti-poaching efforts year-round in its hunting concession. Fees paid to NHS are used to pay for such efforts.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

    Applicant's signature: (b)(6) Date: 08/22/2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Re: [EXTERNAL] CITES Application ID No. PRT-05661D

Management Authority, FWHQ <ManagementAuthority@fws.gov>
Fri 7/31/2020 9:25 AM
To: (b)(6) [redacted]

Good morning Mr. Burris,

Thank you for your inquiry. Your applicaon, #05661D , that was received on August 31, 2018, is currently under review. Please be aware that we have a significant number of applicaons pending , and we process applicaons in the or der they are received in the office. If there is a need for addional informaon or clarific aon on in formaon pr ovided in your applicaon, the s taff member working on your applicaon will c ontact you directly.

As background, on March 1, 2018, in response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service informed the public that it was revising its procedure for assessing applicaons t o import certain sport-hunted species. We have withdrawn our countrywide enhancement findings for a range of species across several countries. In their place, we are making findings for trophy imports on an applicaon-b y-applicaon basis.

The Service is connuing t o monitor the status and management of these species in their range countries. We will review each applicaon r eceived for import of sport-hunted trophies and evaluate the informaon pr ovided in the applicaon as w ell as other informaon a vailable to us regarding the status and management of the species to ensure that the hunng pr ogram is promong the c onservaon of the species. Each applicaon mus t also meet all other applicable perming r equirements before it may be authorized. We process each permit that comes in, however somemes r eceipt and review of cric al informaon c an take me, parcularly with addional in formaon w e have received from range countries.

We appreciate your me and c onsideraon.

Good morning Mr. Burris,

The U.S. Fish and Wildlife Service International Affairs Program works to conserve our nation's wildlife and species of international concern. In order to provide our best customer service, we are currently focusing on processing permit applications and are not providing status updates on permit applications at this time. Once you receive your acknowledgement e-mail indicating your application number, please allow us time to evaluate your application. If we need additional information, we will contact you. If you need to add information to your file, send

information to managementauthority@fws.gov and include your PRT number in the subject line. For all other inquiries, please email managementauthority@fws.gov.

We appreciate your time and consideration.

Hi, I am writing to check on the status of my lion CITES application. I summitted the application in August 2018. Is my application still pending? Do I need to re-apply? I really don't have any information on where things stand or what I can do to assist. Any information that you can provide is much appreciated.

I look forward to your response. Thanks!

Sincerely,

D. Rob Burris

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Jayo	Douglas	(MMN)	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b)(6)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Boise	Idaho	83709	Ada	USA
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee—attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification. I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and [redacted] understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6) 8-27-18

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   N.A.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Doug Joyo
   208-322-3663 office
   doug@joyoconstruction.com

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera leo melanochaita

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:
   Zambia, Nyakolwe Game Management Area
   Petauke (nearest town)

   b. Date wildlife was hunted:
   23 June 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:
Sable Transport/Sydney Kundu

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:
Bangweulu Taxidermy Ltd. Plot 4442/K, Chifwemo Road, New Kasamo, Lusaka, Zambia

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name: see item d above
Business Name:
Address:
City:
State/Province:
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?
NO

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?
See #4,200 No I don't

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?
NO

OMB Control No. 1018-0093
Expires 08/31/2020

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

    Applicant's signature: [redacted] Date: 8-27-18

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Dear Mr. Doug Jayo,

Due to the Government being shutdown for 35 days we are assessing the processing of work within the office. We will contact you as soon as we can regarding your application status.

Also, please be aware that in response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service (Service) informed the public that it was revising its procedure for assessing applications to import certain sport-hunted species like the African elephant. We have withdrawn our countrywide enhancement findings for a range of species across several countries, including elephants and lions. In their place, we make findings for trophy imports on an application-by-application basis. This new procedure has increase the time-frame for finalizing these types of applications.

Sincerely,

Falls Church, VA 22041-3803

March 5, 2019

In Reply Refer To:
FWS/AIA/DMA/PRT-06121D

Enhancement Finding
Applicant: Douglas Jayo (PRT-06121D)

Douglas Jayo submitted an application on September 6, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Nyakolwe Game Management Area (GMA), near Petauke Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken June 23, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the

prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Jayo's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Nyakolwe GMA, near Petauke, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Nyakolwe GMA, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Jayo's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Jayo's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Jayo's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016).

In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an

individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their

obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Jayo's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Jayo will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Jayo, in managing the lion populations in GMAs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Jayo.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Douglas Jayo.**

Permittee:
DOUGLAS JAYO
(b)(6) [redacted]
BOISE, ID 83709
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of Zambia.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Fife	Brian	Keith	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Las Vegas	Nevada	89131	Clark	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification. I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

(b)(6) 08/17/2018

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting, please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

same as page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Brian K. Fife, (b)(6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Scientific name: Panthera leo melanochaita Common name: African Lion (South African Cape Lion)

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

NA

b. Date wildlife is to be hunted:

NA

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

NA

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

Kalahari Desert, Northwest Province, South Africa, GPS coordinates: 25 47' 23.57" S 22 48' 41.74" E
Farm Aurora, nearest city is Vorstershoop, South Africa Code: 8615

b. Date wildlife was hunted:

June 17, 2017 to June 19, 2017

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Professional Hunter: GG Van Schalkwyk with CMP Safaris

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Marakalalo Taxidermy (Trophies), 21 Storm Avenue, Bainsvelei; Bloemfontein; Free State, South Africa
PO Box 37268, Langenhovenpark, South Africa 9330

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).
Attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name: J. Kruger Human
Business Name: Marakalalo Trophies (Taxidermy)
Address: 21 Storm Avenue, Bainsvlei
City: Bloemfontein
State/Province: Freestate
Country, Postal Code: South Africa 9330

(POBox 37268
Langenhoven Park, Bloemfontein
South Africa, 9330)

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

According to IUCN Red list in South Africa the African Lion population has increased 29% since 1993 and hit capacity or over capacity by 2013. Please see attached for more information.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

$10,000 to CMP Safaris in addition to the production of marketing material and video, $1,000 to professional hunter, $600 to main tracker, $400 to assistant tracker, $80-$200 each to camp staff(cooks, driver, housekeeper, skinners). Portion of funds feeds young children. Please see attached.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

CMP Safaris helps the government track down poachers of wild lions. They also provide funds to aid lions that are starving in some areas of Africa. They have released captive bred lions into the wild with success. Please see attached.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than [redacted] one calendar year.

Applicant's signature: (b)(6) Date: 08/17/2018

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

According to the International Union for the Conservation of Nature (IUCN) Red List, in South Africa the African Lion population has increased 29% since 1993 and has reached the carrying capacity or over capacity by 2013.[16] Although listed as "vulnerable" in most areas, with regards to South Africa, the African lion will be listed as "least concern" on the national Red List.[16] This does not even count the nearly 7,000 captive bred lions in South Africa. As captive bred lions are not counted in population numbers for IUCN, CITES or the USFWS. According to *Baeur et al, 2015*, "South African populations do not indicate such a drastic and widespread decline… Fenced populations reveal a completely different pattern: none of them experienced a sharp decline, and many small fenced populations are increasing" [1]. Nearly all wild-lion hunting areas in South Africa are well managed and protected by fencing. *South Africa's Department of Environmental Affairs Biodiversity Management Plan for the African Lion (Panthera Leo) released in 2015* notes South Africa's lion populations have not only stabilized but are increasing – by 30 percent over the last three decades. "Because all lions in South Africa are within largely adequately fenced reserves with sufficient management budgets…" As a result, most of the threats faced by other African lions in other countries "are not relevant to lions here."[2] Other studies have shown the African Lion population in several management areas of South Africa to be at or over capacity. Because of this, South Africa's Department of Environmental Affairs recommends that lions in South Africa be downgraded on the IUCN's Red List of Threatened Species from the current classification of "Vulnerable" to a classification of "Least Concern".[2] Also according to *Riggio et al. 2013*, there are approximately 32,000-35,000 African lions on the African Continent with at least 10% being found in South Africa alone.[3]

According to the *South African's Department of Environmental Affairs Non-Detriment Findings assessment for Panthera leo (African Lion) dated 25 September 2017*, "the total national wild population (in South Africa) is estimated at approximately 2876 individuals in an estimated land area of 41,745 km2… 83% of the population is well protected... recent quantitative data suggests that lion populations are stable to increasing. This healthy wild lion population persists alongside a large captive population of approximately 7,000 lions…"[4] "The trophy hunting of captive bred lions poses no threat to the wild lion population within South Africa, and it is thought that captive lions in fact serve as a buffer to potential threats to wild lions by being the primary source of hunting trophies…"[4] "In South Africa very few wild lions are trophy hunted each year and hunting trophies are largely sourced from captive populations".[4] The report goes on and states "There is currently no major threat facing wild lions within South Africa". The report also mentions "the revenue generated through hunting contributes to the maintenance of areas where wild lion populations can continue to exist… The economic benefits to the private sector of keeping and trading in wild lion may provide some incentive for conserving the species and its habitat".[4] These factors alone undisputedly prove that the African Lion, Panthera leo, is

increasing in South Africa and have far surpassed the minimum numbers necessary to be listed as "least concern" in South Africa.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

My hunting party was filming, photographing and conducting research for ourselves and creating advertising media for the outfitter, and as part of our arrangement we were provided hunts at an unusually low amount. The hunts typically run $25,000-$45,000+. In addition to the services and media we provided I paid the Outfitter $10,000 to cover licenses and salaries of employees. food for local school and conservation projects. In addition to the services and fees I paid the outfitter, I tipped the Professional Hunter $1,000. There were two trackers and I tipped $600 and $400 each respectively. I also tipped $80-$200 to each staff (cook, maid, skinners, and driver) of the Outfitter depending on the service they provided to me. I interviewed the Professional hunter about what they do with the funds and he then showed us where a significant percentage of money paid to CMP Safaris is used to help provide a quality meal several times a week to the local school called Kgalaeo Primary School near Vorstershoop, South Africa. These meals are often the only quality meal that is provided to these children as the communities near CMP Safaris are clearly very poor and live in what I would call a one room shack. These children depend each week on lion hunters to provide wild game for their food. The money produced by lion hunting with the outfitter is used to fund this project. In addition to providing food for Kgalaeo Primary School, a portion of the trophy fee is given to the South African Predator's Association (SAPA) for conservation projects they oversee and direct in protecting and conserving the African Lion. SAPA over the past few years has proven that captive bred lions can be introduced into the wild and flourish. [5] Because I utilized CMP Safaris for my hunt a portion of the outfitter's fee is given to SAPA. SAPA uses those funds to purchase GPS collars to study wild lions to better aid conservation efforts. Money is also utilized to help other wildlife in drought stricken areas and to fight poachers of wild lions, managed wild lions and other animals. CMP Safaris and SAPA furnish food and supplies to poor income families.

It is well known in Africa that CMP Safaris, an accredited member of SAPA, provides regular meals to the children and staff at the Kgalalelo Primary School in Vorstershoop. This initiative forms part of SAPA's commitment to Social Enhancement. SAPA members all over South Africa are running similar projects to uplift local communities.[12] A percentage of the money paid to CMP Safaris is given to SAPA to help with other social enhancement projects across Africa. SAPA's Nietverdiend Social Enhancement Project utilizes time and money from other accredited outfitters to donate food, toys and stationery to Nietverdiend Primary School in the North West Province as part of SAPA's ongoing commitment to Social Enhancement.[13]

As a US Army Veteran, I unfortunately I cannot afford to pay $50,000-$100,000 to an outfitter to hunt a "wild" lion. However, I have dreamed of hunting a lion since I was a child and put in countless hours investigating the only type of hunt an average American Hunter could afford and with an outfitter that guaranteed a true African lion hunt. My extensive research lead me to SAPA accredited outfitters and ultimately CMP Safaris. I can certainly provide video of the hunt, photos, interviews, and proving this hunt was no different than hunting a "wild" lion. The lion I hunted was able to kill its own prey and had approximately 58 square miles to roam and

hunt. When I arrived at the hunting area, we spent a day tracking and watching the lion from a distance. I wanted to first observe the lions in their natural habitat and see the lion I was going to hunt. I had heard of unethical practices by non-SAPA outfitters and wanted to make sure this lion was in no way tainted, drugged or any other funny stuff. We tracked this lion for hours over several miles. I observed him through my binoculars and spotting scope. I observed him feeding on prey he had recently killed. This lion was as "wild" as any other lion I have ever watched or observed. I spoke to the owners of CMP Safaris numerous times in person at wildlife shows in the USA, on the phone and through email about my expectations, requirements and the fact if I observed any funny stuff or if the lion appeared anything but "wild" I would not be hunting. I can also tell you we covered a lot of miles on foot tracking and stalking this lion numerous times. At times it was not us hunting the lion it was the lion hunting us, as he circled around behind us and was stalking us. My hunting partner on this trip had hunted a "wild" lion several years ago and said this hunt was far more challenging and dangerous than his "wild" lion hunt.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted.

At the time of our hunt, CMP Safaris was a member of the South African Predators Association (SAPA). Through SAPA, CMP Safaris, coordinates and promotes establishing and maintaining a healthy and ethical predator breeding and hunting industry in congruence with national and international conservation principles and current national and provincial legislation. CMP Safaris limits lions exposure to humans. Their lions are initially born in an area of about 1-2 acres. As the lion matures it is moved into a 60 acre fenced in area to protect the lions from predators. Lions are raised in prides of 5-6 lions per 60 acre area and animals are introduced into the area for the lions to hunt/feed. Several weeks before a hunt lions are released into a larger area and then into an even larger area of approximately 15,000 hectares. The lion I hunted was nearly 7 years old and after he was released into the large area he hunted prey on his own. While tracking the lion we came across remains of carcasses the lion had killed, thus proving the lion I hunted was capable of surviving on his own.

As a member of SAPA, CMP Safaris also provides funding to support lions that were bred in captivity and released into the wild and are not only surviving but doing exceptionally well.[5] This research has proven that African Lions bred in captivity can be utilized to repopulate areas where lion populations have dropped in other countries. SAPA's research has clearly shown that lions bred in captivity and strategically released into the wild can and do survive. Without incentive for these breeders to breed lions, the captive bred population of lions will be euthanized because of the high costs of maintaining feeding and maintaining the lions. This will then turn the demand for hunting directly on wild lions which has already occurred in other countries of Africa.

The trackers and professional hunter from CMP safaris have been utilized by the government of South Africa to help track down poachers of wild lions and other animals as they are the absolute best lion trackers in the world. Without the money they receive from the outfitter and the tips from hunters these trackers would have to find other employment and poaching of wild lions would increase. CMP Safaris and SAPA aids in catching lion poachers and poachers of other wild animals by providing trackers and offering rewards for the capture of poachers. SAPA and

CMP Safaris also provides food and money to help starving and/or sick wild animals/lions in needed areas.

The *Government Gazette (2018)* studies show that "Hunting of wild lion on private property is limited, with less than 5% of lion hunts conducted over the 2008-2010 reporting period having targeted wild lions. The revenue generated through hunting (wild and captive-bred lions) contributes to the maintenance of areas where these (wild) lion populations can continue to exist. The economic benefits to the private sector of keeping and trading in wild lion may provide some incentive for conserving the species and its habitat".[4]

The South African Predators Association (SAPA) does not accept all lion breeders into their membership. To become a member of SAPA a ranch owner must complete an application for membership and undergo an intensive investigation and review of their facilities. There are several minimal standards that must be met in order to qualify. SAPA requires a minimum of 1,000 hectares, which is equivalent to 2,471 acres or 3.9 square miles, for hunting. I hunted with CMP Safaris and the area you hunt lions is between 4,500 acres to 37,000 acres or 58 square miles depending on the number of lions released into the area. We hiked for several hours tracking the lion I hunted. Although the lion had 58 square miles to roam and hunt it's prey, the GPS I utilized while hunting showed the lion I hunted covered an area just over 7 square miles. While observing and hunting the lion I saw numerous animals; zebra, eland, blue wildebeest, impala, gemsbok, kudu. We came on 2 animals killed recently by the lion. SAPA requires minimal human contact with lions, water sources, numerous non-domesticated prey, non-cultivated land and a lot more requirements.[8] The land I hunted in was just that.

Research on populations of lions in South Africa and other countries such as Tanzania has shown an increase in wild lion populations where captive bred lion hunting has increased. In Tanzania in 2008, there was 138 hunting lions exported, in 2010 there was 128 exported, in 2011 there was 55 exported, 2012 there was 62 exported and in 2013 only 11 were exported.[6] During this same time frame the number of captive bred lion hunts has increased. In 2015 there was only approximately 24 wild lions killed in Africa yet the number of captive bred lions increased to over 500.[6] This same Federal Register article from 2015 further states "...the captive-lion industry in South Africa may reduce the pressures of trophy hunting on the wild populations in South Africa, which is evidenced by the fact that 99 percent of lion trophies from South Africa are of Captive orgin".[6] This is irrefutable proof that the ethical hunting of captive bred lions has not only conserved the wild lion population but has also increased the population of lions in the wild. This coincides with studies referenced by the United States Fish & Wildlife Service (USFWS) that have indicated that captive bred hunting would lead to a decrease in the hunting of wild lions. Directly due to captive bred hunting, the IUCN and CITES research has shown over the last 21-24 years there has been a 29% increase in lion population in South Africa and South Africa is at or over the number of lions that can be sustained in their lands. The USFWS in 2016 reported that there is no endangerment of lions in South Africa and they are not currently endanger of extinction.[10]

Despite what some environmentalists would like many to believe, the fact is research has proven that hunting of captive bred lions has enhanced and benefited the wild lion population.

According to the *Federal Register (2015)*, Research on populations of lions in South Africa and other countries such as Tanzania has shown an increase in wild lion populations where and when captive bred lion hunting has increased.[6] Specifically in Tanzania in 2008, there was 138 hunting lions exported, in 2010 there was 128 exported, in 2011 there was 55 exported, 2012 there was 62 exported and in 2013 only 11 were exported. During this same time frame the number of captive bred lion hunts had increased. In 2015 there was only approximately 24 wild lions killed in Africa yet the number of captive bred lions increased to over 500. This is irrefutable proof that the ethical hunting of captive bred lions has not only conserved the wild lion population but has also increased the population of wild lions. Those countries who do not have captive bred lion hunting have seen a decrease in lion populations. Because of captive bred hunting, the IUCN and CITES research has shown over the last 21-24 years there has been a 29% increase in lion population and South Africa is at or over the number of lions that can be sustained in their lands. In addition the article mentioned above in the *Federal Register* also states "while the captive-lion industry may not be contributing to the conservation of the species in the wild via reintroduction, the captive lion industry in South Africa may reduce the pressures of trophy hunting on the wild populations in South Africa".[6] This has been evidenced by the fact that 99% of the lion trophies from South Africa are of captive bred origin.[6] And South Africa has seen the largest increase in wild lion populations to the point that in most areas the lions are over capacity. In the United States, the USFWS "culls" the bison herd in Yellowstone when the number of bison goes over the capacity of the park.

The purpose of the Endangered Species Act (ESA) is to protect and recover imperiled species and the ecosystems upon which they depend. In other words the ESA primary goal is the survival and recovery of a species within its native ecosystem. By the ESA's own admission the Act is not well suited to consideration of animals (specimens) bred, raised or held in captivity and unfortunately captive bred lions are not eligible for separate consideration for listing on the endangered list.[6, 9] In fact the approximately 7,000 captive bred lions in South Africa and thousands more in other areas of Africa and around the world are not counted in the total population number of African Lions. Thus the African lion population numbers quoted in studies and research and the IUCN Red list do not include the captive bred population. If the population of captive bred lions was included, the African lion Panthera leo melanochaita which is now classified as Vulnerable by the IUCN would not even be listed as least concern in South Africa as their wild lion populations are at or over capacity in most areas[9]. Furthermore, according to the best available data and the IUCN, the current population of African lions is between 23,000-39,000 lions (not counting captive bred which if included would bring the total to 31,000-47,000). No study includes the population of over 7,000 captive bred lions in their numbers. The authors of the research failure to include all lions is an obvious attempt to deceive the public, the IUCN, the USFWS and others in an attempt to have the lions protected by the Endangered Species Act when the facts are the African lion is at or over capacity in South Africa. Former Director of the USFWS, Dan Ashe and the USFWS has said "The subspecies of P. l. Melanochaita likely numbers between 17,000-19,000 and is found across southern and eastern Africa. The USFWS determined that this subspecies is less vulnerable and is not currently in danger of extinction".[10] In the same article the USFWS then says lions are decreasing in other areas of Africa and because of this are listed under the Endangered Species Act, despite the mountain of evidence that clearly shows this is far from the case in Southern Africa and Eastern Africa.[10] The USFWS further stated that "Many of the increasing southern African (lion) populations are in small, fenced and intensely managed areas that have already

reached carrying capacity".[11] It is well known that the roughly 5,000 American Bison in Yellowstone National Park are frequently at or over capacity for the park. To alleviate this, the USFWS has them rounded up and slaughtered. In 2017 the USFWS killed roughly 1,200 Bison. The reason given by the USFWS is to protect the species, the land from over grazing and other wildlife. Lions are much more dangerous than bison and kill or injure far more people and livestock. According to the USWFS lion population numbers in South Africa are at over carrying capacity. Thus hunting lions in South Africa both wild born and captive born should be hunted to protect the ecosystem, the lion, other wildlife, domestic animals and most importantly protect people.

Studies and the literature have proven that the African Lion's gestational period is approximately 106 days. Lions have 2-6 cubs per litter. And a lioness is polyestrous and will come into heat to be impregnated at least 4-5 times per year until she is pregnant. Research has absolutely proven that orphaned cubs will be adopted by other lions if the mother dies or abandons the cub. This fact alone is one of the biggest reasons that captive bred cubs should and could be introduced into wild lion prides. By allowing the importation of African lions bred in captivity from reputable breeders such as those certified by South African Predators Association, the USFWS ensures the continued growth of the captive bred population which may be utilized to enhance the wild lion prides and establish new healthy prides. Captive bred lion cubs are healthier than wild lions as they are vaccinated against disease, which is one of the main threats to lion cub's survival outside of predators. Without allowing import of captive bred lions, the USFWS will be directly causing the death of thousands of captive bred lions and hunters will return to hunting wild lions. This is already occurring in Africa since the lion import ban, as maintaining captive bred lions is extremely expensive. If there is no reason for breeders to raise lions than sadly the breeders will be forced to euthanize them simply because the cost to maintain them will be prohibitive. Breeders such as CMP Safaris are extremely cautious not to allow human imprint on their lions and to maintain a "wild" lion temperament. Currently, the USFWS says a lion is wild if it is born in the wild even if raised in captivity and called captive bred if born while in captivity even if raised in the wild the lion will still be called captive bred. *Abell et al (2013)* state that lion cubs born in captive bred prides should be utilized for reintroduction.[15] The only way this is going to happen is if the USFWS allows the import of captive bred trophies. Otherwise, there will be a drastic reduction of captive bred lions due to euthanization because the breeders will not be able to afford raising them. This is already happening in Africa. CMP Safaris informed me have thousands of lions that had been killed simply because of Former Director Ashe's decision not to allow import unless we can show a conservation effect.

It is well known that the primary reason for the African Lion to be listed as vulnerable in South Africa when science has proven they should be listed as "least concern" in South Africa is due to philosophical objections to hunting in general and not research. Many do not like the idea of lion hunting, yet have no problem with others slaughtering thousands of cattle or pigs each year that are raised in a pen or small fenced area. *According to Lindsey et al (2012)* "the primary benefit associated with captive-bred lion hunting is that it reduces hunting pressure on wild lion populations, and contributes to the South African economy…".[7] Even in the Federal Register, the USFWS stated "In South Africa, 99 percent of the lion trophies are captive bred, and, therefore, were not the result of removing lions from the wild".[6] This statement alone proves that the hunting of captive-bred lions is conserving the wild lion population. Allowing the import of lions

from SAPA accredited outfitters, such as CMP Safaris, definitely will conserve the wild lion population. Although extremely unlikely, if wild lions were to become extinct in areas, having a large captive bred lion population can be utilized to re-introduce lions into those areas.

The reintroduction of captive bred animals and captured animals has saved numerous species of animals. Just in the last 20 years wolves were reintroduced into the Yellowstone and surrounding ecosystem. The wolves released were of differing ages including pups as young as one year old and they have survived. Many other animals across the world have been restored by reintroducing their species from captive bred populations such as rhinos, cheetahs, lions and other wild species. Across the world it is the trophy hunters, primarily American Hunters, whose hunting and donations has saved numerous animals from extinction. Many environmentalists and conservationist want hunting stopped but the vast majority of them do not contribute time and money to restoring wildlife. The primary reason for the decrease in lion populations outside southern and eastern Africa is loss of available land due to global human population increases causing pressure on wildlife and habitat.[14] *Abell et al (2013)* in their research indicated "Captive bred animals are a logical source for reintroduction programs in instances where wild populations are precluded from translocation and reintroduction programs due to genetic incompatibility and disease prevalence. Captive populations can be secure and free from disease. Captive lions can be easily bred in sufficient numbers and in an environment where the species can easily acclimatize to release". [14] Joy and George Adamson released 17 hand reared lions (captive bred) into the wild using a soft-release strategy has been shown to be successful.[15] *Abell et al (2013)* indicated a benefit of using captive bred lions is reproduction rates, genetics and disease can be controlled. [15]

Ordinary Permit No: O 10633

Please familiarise yourself with this terms and conditions.
The permit is not transferable.
This permit shall be subject to the provisions of any law in force during the period of validity of the permit.
The Hunter or Landowner who contravenes or fails to comply with any one of the conditions or requirements, to which this permit is subject, shall be guilty of an offence.
This permit only authorises the hunting of the animal during the day.
The Hunter will ensure that this permit is immediately available during the hunt.
The lion must be released in the hunting area a minimum of 96 hours prior to hunt and after receiving a permit to do so.
Information requested on this permit shall be done in ink and in print. False and unreadable information will cause this permit to be invalid.
No person shall hunt the wild animal or may be allowed by a landowner to hunt if the hunter did not beforehand acquire the necessary hunting skills and firearm training to: i) Ensure the safety of him or herself, other people and non targeted species. ii) Ensure a hunt which consists of generally accepted sound hunting ethics, a fair chase, the minimum cruelty and damage to the ecology of the hunting area.
No person may hunt when under the influence of alcohol or any substance that may deter his/her vision, judgement or in any way negatively affect his or her conduct.
A Hunter will immediately report the wounding of any wild animal to the landowner or his representative and will be responsible for the tracking down and killing thereof. If there is reasonable chance that the animal pose any threat to property or human life, the hunter and the land owner will immediately notify both the nearest Police station and the Local Nature Conservation district officer.
The landowner may at any time stop the hunt and withdraw the permit.
A Hunter should be accompanied by a designated official from this Directorate.
Animals may not be hunted under the influence of drugs.
Only animals that have been declared as wild by this directorate may be hunted. (No tame animals may be hunted)

No hunting with dogs is allowed.
Hunting must be done on foot and from at least 200m from the vehicle (Except in the case of disabled hunters)
No animal may be artificially lured by sound, scent, visual stimuli, feeding bait, other animals of its own, another species or any other method.
Hunting may not take place nearby any other lions kept in captivity.
The Hunting party may not be more than 5 people.
Hunting of a lion in a pride situation is prohibited.
No Lion may be captured, kept in captivity and then released for the purpose of hunting.
If the captive bred lion/s will be darted / immobilised for the purpose of capturing , release and/ or transport, the following must be noted:- - Darting / immobilisation may only be done by a registered Veterinarian. - The responsible Veterinarian must be TOPS registered and have a valid permit to conduct restricted activities i.t.o the TOPS regulations. This permit is subject to the responsible Veterinarian whom will perform the darting / immobilisation, to the Vryburg Conservation Office. **A Nature Conservation Official must be present during the release and hunting of the lion.** **Please notify the Vryburg Conservation Office at least 3 working days prior to activity of the exact date and time of the planned activity.** Tell: 053 928 0656 or \071 889 7867\082 446 1816
This is an integrated permit issued in terms of the provisions of the TRANSVAAL NATURE CONSERVATION ORDINANCE 12/83, CAPE NATURE CONSERVATION ORDINACE 19/74, BOPHUTHATSWANA NATURE CONSERVATION ACT 3/1973 AND 90(1)(a)(i)(ii)(b)(c) of the Biodiversity Act, Act 10 of 2004 and Regulations 10, 18 and 44 of the TOPS Regulations.

The application processing fee is non-refundable once your application has been reviewed and the fee does not guarantee issuance of a permit.
>
> The African lion is listed in Appendix II of CITES. It is also listed as either threatened or endangered in the Endangered Species Act (ESA).

Due to the **CITES**, **appendix II listing** status of African lions, the CITES Management Authority of the exporting country must determine that the export of the lion will not be detrimental to the survival of the species in the wild before they issue a CITES permit for the export of the lion. CITES import permits are required for those species that are listed in Appendix I of CITES, but the United States does not require CITES import permits for species listed in Appendix II of CITES. Therefore, a CITES import permit would not be required to be obtained to import a lion into the United States. However, the lion would still have to be **inspected and declared to our U.S. Fish and Wildlife Service Office of Law Enforcement** before it is imported into the United States. Further more, due to the ESA listing status of African lions, it is important to be aware that although this office does not require a CITES import permit to bring an African lion into the U.S., we **do require an ESA import permit** to issued by this office before a lion trophy can legally be imported.

The ESA listing status of the lion depends on the subspecies of the lion:

- African lion (*Panthera leo leo*) is listed as endangered in the ESA. This includes West, Central, and North African populations.
- African lion (*Panthera leo melanochaita*) is listed as threatened in the ESA. This includes South and East African subspecies of lions.

It is also important to be aware of the fact that in order for this office to issue an ESA permit to import a lion trophy, upon review of an application request, we must be able to determine that the import meets the enhancement criteria in the ESA. Part of the ESA enhancement criteria requires the import of the lion to either be for scientific research related to the same subspecies of lion or that the import will enhance the survival of African lions in the wild. For detailed information, please review 50 CFR 17.22.

We encourage permit applicants to review our tips and reminders for completing applications.

We appreciate your time and consideration.

To Whom It May Concern:

How do I go about obtaining a CITES import permit for lion hunted in Africa? The FWS website is extremely confusing. Any help would be appreciated.

Best Regards,

Brian K. Fife(b)(6)

Good afternoon Mr. Fife,

The U.S. Fish and Wildlife Service International Affairs Program works to conserve our nation's wildlife and species of international concern. In order to provide our best customer service, we are currently focusing on processing permit applications and are not providing status updates on permit applications at this time. Once you receive your acknowledgement e-mail indicating your application number, please allow us time to evaluate your application. If we need additional information, we will contact you.

We appreciate your time and consideration.

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Zelff	Peter	Herbert	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address

(b)(6)

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, ock; U.S. hunters must provide their U.S. address)

(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Batavia	NY	14020	Genesee	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1.** If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Peter Zeliff (b)(6)

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera leo.

   b. Sex (if known).
   Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:
   Republic of South Africa (RSA)
   Kalahari oryx Private Game Reserve

   b. Date wildlife was hunted: 20/08/2018

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:
   Chapunga SAfaris

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:
   Kalahari oryx Private Game Reserve

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Natasha Lotter
Business Name: Swift Dip
Address: Po Box 1333
City: Thabazimbi
State/Province: Limpopo Province
Country, Postal Code: republic of South Africa, 0380

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted? yes -
   Free Range Extensive Certificate as per RSA Government - DEA Dated 16/02/2017.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?
   Could be obtained from the landowner.
   Kalahari Oryx Private Nature reserve
   Contact details
   Email - johan@kalahari-oryx.com.

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: (b)(6) _____ Date: 8/31/2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Dear Mr Jacobs

CONFIRMATION OF KALAHARI ORXY AS A FACILITY IN POSSESSION OF WILD *PANTHERA LEO* (LION) POPULATION

The South African Government has in the 2016 annual year submitted information on the enhancement of the hunting of the wild South African lion populations to conservation of the species and upon a thorough assessment, the United States Fish and Wildlife Service has approved the enhancement finding on the hunting of the South African populations of Wild lions allowing for the importation of trophies from wild sourced lions.

In order to ensure that integrity of the hunting farms that possesses wild lions, an assessment criteria was developed which looks at aspects including: the area is sufficient to sustain a single social unit, the populations have a viable social structure, they are breeding in area in which they are roaming, the animals are not fed or receive any supplementary feeding and that the populations are from the wild.

In light of the above, the South African Government would like to confirm that Kalahari Oryx Private Game Reserve situated in the Northern Cape has been recommended as a facility that is possession of wild lion populations that are viable for hunting purposes.

Hope you find the above in order.

Yours sincerely

Ms Nosipho Ngcaba

GENERAL PERMIT CONDITIONS APPLICABLE

1) This permit is not transferable to any individual person or any other legal identity.

2) Any alterations to this permit shall immediately render it invalid.

3) This permit is deemed valid only:
a) in the original format as issued by the Director.

b) for the period as specified on the permit.

c) once the signature of the holder thereof has been endorsed thereon in ink.

4) The Director reserves the right to amend, withhold, withdraw or cancel any permit at any time.

5) This permit shall lapse / be deemed invalid when it is lost or destroyed and no copy thereof shall be issued.

6) This permit, unless otherwise stated, is valid only within the boundaries of the Northern Cape Province and then specifically only for the property as specified on the permit.

7) This permit does not grant the permit holder automatic access to any Protected area, National Park, Provincial Nature Reserve or privately owned land. Any other / further conditions or restrictions that the manager / landowner may stipulate at his / her discretion must also be adhered to.

8) The permit holder must at all times while performing any restricted activity have the permit and all relevant documentation in his / her possession.

9) Permits must be made available upon request of any authorized person. This person must also be allowed access onto the property at any reasonable time for any inspection needed and can remain on such property as long as it is needed to do the inspection.

10) If applicable, the permit holder must within 21 days after performing the restricted activity furnish the Director with a written return as prescribed, with feedback on the results of the activity conducted.

11) If applicable, the permit holder shall apply for the renewal of the permit to the Director, on the appropriate application form, at least 3 months prior to the expiry date thereof.

12) The holder of this permit shall return the original to The Director: Permit Administratio

ADDENDUM 1

fourteen days from the date of expiry thereof.

13) No new permit applications will be processed prior to the return of the original permit, once it has been used or once it has expired.

14) This permit is subject to the provisions of any law in force, during the period of validity of the permit, in respect of the specific area to which the permit applies.

15) This permit is subject to any applicable norms and standards in existence at the time of issuance of this permit.

16) It is the permit holder's responsibility to obtain information on any other legislation or changes thereto and any specifications or permit requirement that may be needed or required from any other department / organization / institute, for any activity as authorized by this permit.

17) It should be noted that any transgression, failure to render the required reports and or the return of the original permit, can jeopardize any future applications by the permit holder.

18) If the holder of this permit contravenes or fails to comply with any permit condition or requirement to which this permit is subject, he or she shall be guilty of an offence.

STANDARD PERMIT CONDITIONS APPLICABLE

HUNTING

1) The permit holder may NOT use:

a) a fire-arm having a barrel of a caliber of 6.5 mm (.256 of an inch) or less, to hunt any eland, kudu, blue wildebeest, black wildebeest, gemsbok, red hartebeest, roan antelope, sable antelope, Burchell's zebra, Cape mountain zebra, Hartmann's mountain zebra, nyala, or water buck unless authorised in the restricted activities.

b) a fire-arm having a barrel caliber of less than 9.525 mm (.375 of an inch) to hunt any buffalo, elephant, lion, leopard, rhinoceros or hippopotamus unless authorised in the restricted activities.

2) When a hunter kills any wild animal, he / she shall, before leaving the above-mentioned property (or if he / she does not leave it, after each days hunt) record in the space provided on the hunting license and / or written permission the particulars regarding the date, species, sex and number of each wild animal, or if it is impossible to distinguish the sex, the total number of each species of such wild animals which has been killed.

3) This permit can only be used and consider being valid after:

a) the landowner has provided written permission to the hunter for the hunt.

b) the landowner has provided written permission to the hunter / client to remove the carcass.

4) Unless authorized by a valid Game Farm Permit, authorised in the restricted activities or authorised by another permit to this effect, no person may hunt, capture or catch any wild animal-
a) by means of fire;
b) by means of poison;
c) by means of aircraft;
d) during the night
e) with the aid of an artificial light, floodlight or spotlight;
f) by means of any trap
g) by means of any snare;
h) by means of a spear, kierie, stick or any similar device;
i) by means of a blowpipe or similar device;
j) by means of an air gun;
k)by means of a fire-arm which discharges a rim-fire cartridge of a 5.6mm (.22 inch) caliber or smaller caliber;
l)by means of a fire-arm which discharges more than two shots without being manually reloaded;
m) by means of a shotgun, except for the hunting of birds;
n)by means of a bow-and-arrow, cross-bow or similar device discharging an arrow or dart;
o) by means of a set gun or any similar device;
p)by means of darting or any device which injects an intoxicating or a narcotic agent or poison into such animal;
q)which is kept in captivity, confined to a cage, in an enclosure or trapped against a fence where the animal does not have a fair chance of evading the hunter;
r)which is under the influence of any tranquilizing or narcotic immobilizing or similar agent;
s)by the use of a dog, except for the hunting, flushing, pointing or retrieving of birds

animal which has been wounded;
t)in the case of birds in or upon any aquatic systems, by the use of a boat for the purpose of chasing or killing such birds;
u)by means of setting a set trap within 10 meters from a common boundary;
v)by luring by means of a simulation or recording of the natural sound made by an animal or by means of bait or scent or any other induced luring method;
w)in an area smaller than the set standard of 400 hectares, as determined by the Director from time to time;
x)any other device of which the use would result in injuring or killing an animal in a way which is not humane;
y) by means of any other animal or bird of prey for the sport of falconry; or
z) by means of a firearm fitted with a silencer or similar noise-reduction device;

provided that in respect of the hunting of : -

i)rodents, excluding porcupines and springhare, the provisions of paragraphs (b), (d), (e), (f), (g), (m), (q) or
ii) any wild animal by a registered veterinary surgeon in the practice of his or her profession, the provisions of paragraph (p) and (q), or
iii)damage-causing animals as specified in Schedule 4, the provisions of paragraphs (d), (e), (f), (g), (p) (q) (r) and (v) shall not apply.

SPECIAL PERMIT CONDITIONS APPLICABLE

DANGEROUS GAME HUNTING

The permit holder must ensure that:

1) a fire-arm having a barrel caliber of at least 9.525 mm (.375 of an inch) is used to hunt buffalo, elephant, lion, leopard, rhinoceros or hippopotamus.

2) the hunter is escorted by two Northern Cape Province registered professional hunters who are qualified to hunt the above mentioned dangerous wild animals.

3) no prohibited hunting method is used to hunt an animal, unless approved by this permit.

4) the animal which is hunted, is not a "put and take animal" and such animal must qualify as free ranging (wild) for at least a period of twenty four (24) months prior to the hunting thereof.

7) if the hunter belongs to any hunting organisation, the hunt is conducted in an approved hunting area according to the code of ethical conduct and good practice, as supported by such organised hunting fraternity.

8) no hunting of a lion takes place unless a representative of the relevant conservation department is present. (Note: arrangement can be made with Mr. Wessel Jacobs at 082 411 7179 or at 053 8077482 to be present during the hunt).

9) any offical who attends the hunt has the full right to defend himself / herself as well as anybody else, should an emergency situation arise and such official is not held liable for any damages / claims in this regard.

LION HUNTING

The permit holder must ensure that:

1) no tame or captive bred large predator is hunted.

2) no large predator is hunted which is under the influence of a tranquiliser, narcotic, immobilising or similar agent.

3) no baiting or any luring of a large predator take place.

4) no hunting of a large predator take place close to or when pressed against a fence or in any other a situation from which it has no escape.

ADDITIONAL PERMIT CONDITIONS APPLICABLE

1) Other people included on this permit -

a) JvW Hartzenberg - ID: 6901135055088 (PH)
b) MW Jacobs - ID: 6003045027081 (DENC)

GENERAL PERMIT CONDITIONS APPLICABLE

1) This permit is not transferable to any individual person or any other legal identity.

2) Any alterations to this permit shall immediately render it invalid.

3) This permit is deemed valid only:
a) in the original format as issued by the Director.

b) for the period as specified on the permit.

c) once the signature of the holder thereof has been endorsed thereon in ink.

4) The Director reserves the right to amend, withhold, withdraw or cancel any permit at any time.

5) This permit shall lapse / be deemed invalid when it is lost or destroyed and no copy thereof shall be issued.

6) This permit, unless otherwise stated, is valid only within the boundaries of the Northern Cape Province and then specifically only for the property as specified on the permit.

7) This permit does not grant the permit holder automatic access to any Protected area, National Park, Provincial Nature Reserve or privately owned land. Any other / further conditions or restrictions that the manager / landowner may stipulate at his / her discretion must also be adhered to.

8) The permit holder must at all times while performing any restricted activity have the permit and all relevant documentation in his / her possession.

9) Permits must be made available upon request of any authorized person. This person must also be allowed access onto the property at any reasonable time for any inspection needed and can remain on such property as long as it is needed to do the inspection.

10) If applicable, the permit holder must within 21 days after performing the restricted activity furnish the Director with a written return as prescribed, with feedback on the results of the activity conducted.

11) If applicable, the permit holder shall apply for the renewal of the permit to the Director, on the appropriate application form, at least 3 months prior to the expiry date thereof.

12) The holder of this permit shall return the original to The Director: Permit Administration, Private Bag X6102, Kimberley, 8300, within fourteen days from the date of expiry thereof.

13) No new permit applications will be processed prior to the return of the original permit, once it has been used or once it has expired.

14) This permit is subject to the provisions of any law in force, during the period of validity of the permit, in respect of the specific area to which the permit applies.

15) This permit is subject to any applicable norms and standards in existence at the time of issuance of this permit.

16) It is the permit holder's responsibility to obtain information on any other legislation or changes thereto and any specifications or permit requirement that may be needed or required from any other department / organization / institute, for any activity as authorized by this permit.

17) It should be noted that any transgression, failure to render the required reports and or the return of the original permit, can jeopardize any future applications by the permit holder.

STANDARD PERMIT CONDITIONS APPLICABLE

HUNTING

1.□The permit holder may not allow the use of:

a)□a fire-arm having a barrel of a caliber of 6.5 mm (.256 of an inch) or less to hunt any eland, kudu, blue wildebeest, black wildebeest, gemsbok, red hartebeest, roan antelope, sable antelope, Burchell's zebra, Cape mountain zebra, Hartmann's mountain zebra, nyala, or water buck.

b)□a fire-arm having a barrel caliber of less than 9.525 mm (.375 of an inch) to hunt any buffalo, elephant, lion, leopard, rhinoceros or hippopotamus.

2. When a hunter kills any wild animal, he / she shall, before leaving the above-mentioned property (or if he / she does not leave it, after each days hunt) record in the space provided on the hunting license and / or written permission the particulars regarding the date, species, sex and number of each wild animal, or if it is impossible to distinguish the sex, the total number of each species of such wild animals which has been killed.

3.□This permit can only be used and consider being valid after:

a)□The landowner has provided written permission to the hunter for the hunt.

b)□The landowner has provided written permission to the hunter / client to remove the carcass.

4.□Unless authorized in the game farm conditions hereunder or by a special permit to use prohibited hunting methods and / or instruments, the permit holder may not hunt, capture or catch any wild animal
a)□ by means of fire;
b)□ by means of poison;
c)□ by means of aircraft;
d)□ during the night
e)□ with the aid of an artificial light, floodlight or spotlight;
f)□ by means of any trap
g)□ by means of any snare;
h)□ by means of a spear, kierrie, stick or any similar device;
i)□ by means of a blowpipe or similar device;
j)□ by means of an air gun;
k)□by means of a fire-arm which discharges a rim-fire cartridge of a 5.6mm (.22 inch) caliber or smaller caliber;□
l)□by means of a fire-arm which discharges more than two shots without being manually reloaded;
m)□ by means of a shotgun, except for the hunting of birds;
n)□by means of a bow-and-arrow , cross-bow or similar device discharging an arrow or dart;
o)□ by means of a set gun or any similar device;
p)□by means of darting or any device which injects an intoxicating or a narcotic agent or poison into such animal;
q)□which is kept in captivity, confined to a cage, in an enclosure or trapped against a fence where the animal does not have a fair chance of evading the hunter;
r)□which is under the influence of any tranquilizing or narcotic immobilizing or similar agent;
s)□by the use of a dog, except for the hunting, flushing, pointing or retrieving of birds, or for the purpose of following or searching for any such animal which has been wounded;
t)□in the case of birds in or upon any aquatic systems, by the use of a boat for the purpose of chasing or killing such birds;
u)□by means of setting a set trap within 10 meters from a common boundary;
v)□by luring by means of a simulation or recording of the natural sound made by an animal or by means of bait or scent or any other induced luring method;
w)□in an area smaller than the set standard of 400 hectares, as determined by the Director from time to time;
x)□any other device of which the use would result in injuring or killing an animal in a way which is not humane;
y)□ by means of any other animal or bird of prey for the sport of falconry; or
z)□ by means of a firearm fitted with a silencer or similar noise-reduction device;

provided that in respect of the hunting of : -

i)□rodents, excluding porcupines and springhare, the provisions of paragraphs (b), (d), (e), (f), (g), (m), (q) or
ii) any wild animal by a registered veterinary surgeon in the practice of his or her profession, the provisions of paragraph (p) and (q), or
iii)□damage-causing animals as specified in Schedule 4, the provisions of paragraphs (d), (e), (f), (g), (p) (q) (r) and (v) shall not apply.

GAME FARM CONDITIONS

1)□Any restricted activity, instrument and methods as authorized by the "Game Farm Standing Permit" does not apply to any listed CITES 1 species and / or species listed as Endangered according to the Schedules of the Nature and Environmental Conservation Ordinance 19 of 1974.

2)□Ordinance 19/1974 Section 36(a) – Rights of the landowner is hereby specified as follows:

a)□In accordance with Section 33(1) en (2) of Ordinance 19/1974, a motor vehicle or aircraft may be used for the hunting or capturing of a wild animal for management purposes.
□
b)□In accordance with the stipulations of Sections 29 of Ordinance 19/1974, the following prohibited hunting methods may be used namely:
i.□Hunting, culling or capturing with the aid of artificial light.
ii.□Hunt or capture during day and night.
iii.□Hunt by means of fire-arm which discharges a rim-fire cartridge of a caliber less than five comma six millimeters (e.g. a .22 fire-arm) only with regard to steenbuck, duiker and protected game birds.
iv.□Hunting / darting by means of any device which injects an intoxicating or a narcotic agent into such animal. This is only in as far as necessary for management purposes, disease control and the treatment or applying of medical procedures done by a registered veterinary surgeon in the practice of his/her profession. (Please note that any of the so called "Green hunts" are not permitted by this "Game Farm Standing Permit" and ordinary hunting permits must be applied for on an ad-hoc basis.

SPECIAL PERMIT CONDITIONS APPLICABLE

INTEGRATED PERMIT, STANDING PERMIT & REGISTRATION CERTIFICATE

1) This permit is an "Integrated Permit", as defined of Chapter 1 and issued in terms of Chapter 2, Regulation 4 of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations, and;

2) This permit is a "Standing Permit", as defined of Chapter 1 and issued in terms of Chapter 2, Regulation 18 of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations, and;

3) This permit is also a "Registration Certificate", as defined in Chapter 1 and issued in terms of Chapter 3, Regulation 33(1) and (2) of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations.

GAME FARM STANDING PERMIT

1) The property mentioned on this "Game Farm Standing Permit", is considered to be adequately enclosed as defined in Chapter 1 Section 2 and issued in terms of Chapter 4 Section 25 of the Nature and Environmental Conservation Ordinance 19 of 1974.

2) The property mentioned on this "Game Farm Standing Permit", is considered to be a "Registered Game Farm", as defined of Chapter 1 and in compliance with Chapter 3 of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations.

3) The property mentioned on this "Game Farm Standing Permit", is considered to be a "Registered Wildlife Trader", as defined of Chapter 1 and in compliance with Chapter 3 of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations.

4) If any of the following species appear on the "Game Farm Standing Permit", then the lifting of restricted activities is not applicable and such species is only listed for record purposes namely; Scimitar-horned Oryx, Arabian Oryx, Addax, Cape Mountain Zebra, Black-and White Rhinoceros, Oribi, African wild dog, Cheetah, Lion and Hyaenas. Please note that according to the departments approved translocation policy exotic animals can only be hunted or exported back to its country of origin.

5) No exemption for any restricted activity is applicable for the species as mentioned in paragraph three (3).

6) The permit holder must with sufficient notice to the Director, before any activity commences, apply on the prescribed application form, for a normal "ORDINARY Permit" to use any prohibited instrument or method or conduct any restricted activity with the species as mentioned in paragraph three (3). Such permit applications will be handled on ad hoc basis in compliance with new national legislation and policy guidelines.

7) The "Game Farm Standing Permit" authorizes the permit holder:
7.1) to issue a "Game Farm Hunting Permit / Permission" to a hunter;
7.2) to allow the hunter to hunt the applicable species on such property;

7.3) to sell the applicable species to a hunter.

GAME FARM HUNTING PERMIT / PERMISSION

1) The document herein referred to as a "Game Farm Hunting Permit / Permission" will be considered to be a "Game Farm Hunting Permit" as defined in Chapter 1 and 3 of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations as well as a "Written Permission" and "Donation Document" as stipulated Section 39 and 41 of the Nature and Environmental Conservation Ordinance 19 of 1974.

2) The "Game Farm Hunting Permit / Permission" is only applicable for the particular species and specific property, as specified on the "Game Farm Standing Permit".

3) The permit holder is authorized to copy the "Game Farm Hunting Permit / Permission" document, as and when he / she my find need thereof.

4) The permit holder must allocate a series number for each "Game Farm Hunting Permit / Permission" issued by him / her, starting at number 0001 followed by the applicable year, e.g. 0001/2008.

5) The permit holder must keep record of all "Game Farm Hunting Permit / Permission" documents issued by him / her, in a file or register, according to the series numbers allocated per year.

6) The permit holder must BEFORE the hunt / selling / donation:
6.1) complete the hunter's or recipients particulars,
6.2) complete the species, sex and number of animals to be hunted / sold or donated;
6.3) sign and date each "Game Farm Hunting Permit / Permission" document that he / she issue;
6.4) hand over the original of such document to the hunter or recipient;
6.5) maintain a copy for record purposes.

7) The permit holder must AFTER the hunt / sale / donation:
7.1) indicate on the original document that was issued and all copies thereof, the species, sex and number of animals successfully hunted / wounded or lost / sold or donated;
7.2) sign and date the declaration as indicated on the "Game Farm Hunting Permit / Permission".

8) If the hunter is not a South African citizen (i.e. foreign client) then the permit holder must also complete the particulars of the Hunting Contractor and Professional Hunter involved.

9) The permit holder must on an annual basis, at the end of December of each year, submit to the Director, a copy of each "Game Farm Hunting Permit / Permission " issued by him / her.

10) If the permit holder fails to comply with any of these conditions the privilege to issue "Game Farm Hunting Permit / Permission" will be withdrawn immediately.

11) The "Game Farm Hunting Permit / Permission" authorizes the hunter or recipient:
11.1) to buy and or hunt the animal, and subsequent to the hunt / purchase or receipt;
11.2) to field dress, process, and transport the carcass;
11.3) to temporarily possess the dead specimen or derivative thereof, for a maximum period of 1 (one) year calculated from the day of the hunt / purchase / receipt.

12) The hunter or recipient must, at least 3 (three) months before the expiry of the 1 (one) year period, apply for a POSSESSION Permit, from the Director or applicable provincial department's issuing authority, in his / her province of residence, if still in possession of any carcass, derivative, part, specimen or trophy of the animal successfully hunted / purchased / received. The hunter or recipientr must return the original document together with his application for a possession permit.

13) The holder of such possession permit must on an ad hoc basis, apply for an ORDINARY Permit to carry out any additional / other restricted activity with any such specimen.

PERSONAL EFFECTS PERMIT / PERMISSION

1) The document herein referred to as a "Game Farm Hunting Permit / Permission" will be considered to be a "Personal Effects Permit / Permission" as defined in Chapter 1 and 3 of the National Environmental Management: Biodiversity Act, 2004 (Act 10 of 2004): Threatened or Protected Species Regulations as well as a "Written Permission" and "Donation Document" as stipulated Section 39 and 41 of the Nature and Environmental Conservation Ordinance 19 of 1974.

BYLAE 1 / ADDENDUM 1

2) The permit holder may only issue a "Personal Effects Permit / Permission" to a hunter or recipient for dead specimens originating from his / her property.

LION AND / OR RHINO HUNTS

ANIMAL INTRODUCTIONS:
1. A register must be kept in the prescribed format for all large predators and rhinoceros released onto and/or removed from the property.
2. Large predators originating from any intensive wildlife systems or controlled environments must not be brought or released onto the propert
3. In the case of lions & rhinoceros, every animal that are to be introduced, must be marked by a micro-chipping and photographed in an identifiable way, before such animal is released onto the property.
4. The origin of predators to be introduced must be such that there will be no threat to the genetic integrity of populations already occurring in the Northern Cape Province
5. In the case of lions, all future introductions will be limited to lions from the same geographical area.
6. Large predators that are to be introduced must only be released into the approved large predator camps when such electric fencing is fully functional.
7. Sufficient suitable prey species must be available to ensure survival of the large predators without such animals having to be fed in order to qualify as an extensive wildlife system.
8. Large predators must be declared free of disease by the State Vet before being introduced.

FENCING PATROLS
9. If a functional security alert system is in place fencing patrols must be done in such way that the whole outside perimeter is covered and an particular section of the fence is inspected at least once within a 72 hour period.
10. If no functional security alert system is in place fencing patrols must be done in such way that the whole perimeter is covered and any particular section of the fence is inspected at least once within a 24 hour period.
11. The fence must be maintained in such a manner that the large predators or rhinoceros remain adequately enclosed.

EMERGENCY PLAN / CONTINGENCIES
12. Any wild animal that has escaped from the property and has caused damage must be treated as a damage causing animal.
13. Standing written permission from the adjacent landowners must be obtained to cater for any emergency follow-up operations that might arise.
14. In case of any breach of the security fence by any large predator, at least the following emergency procedures must be followed and recorded:
- Intended plan of action;
- Immediate notification to surrounding landowners and adjacent communities;
- Contact the Department of Tourism, Environment and Conservation;
- Contact the South African Police Service;
- Procure a capture team and a qualified wildlife veterinarian;
- Procure two qualified Big 5 professional hunters to follow up and destroy the animal if necessary.

LIABILITY:
15. The permit holder and land owner accepts full responsibility for the introduction of the animal species to the property.
16. The permit holder and landowner is aware of the risks of releasing the animals species onto his/her property and the consequences which may result thereof.
17. The permit holder and landowner will not hold the Director or any official liable for any claims or costs which may incur as a direct result of the issue of a certificate of adequate enclosure permit pursuant to the above application.

HUNTING:
18. The permit holder and landowner must ensure that any large predator or rhinoceros which is hunted must not be a put and take animal an such animal must qualify to be free ranging (wild) for at least a period of 24 months prior to the hunting thereof.
19. No hunt may take place if not escorted by two Northern Cape Province registered professional hunters who are qualified to hunt Big 5 animals.
20. No hunting of a large predator or rhinoceros must be allowed if the official representative from the Director is not present.
21. Any official who attends the hunt has the full right to defend himself and anybody else should an emergency situation arise.
22. If the hunter belongs to any hunting organisation the hunt may only take place in an approved hunting area according to the code of ethica conduct and good practice as supported by such organised hunting fraternity.

PROHIBITED HUNTING METHODS:
23. No baiting or any luring of predator animals may take place.
24. No tame or captive bred large predator may be hunted.
25. No hunting of large predators or rhinoceros may take place from a vehicle or aircraft
26. No hunting of large predators or rhinoceros with bow-and- arrow may be allowed.
27. No hunting of predator animals may take place during the night or with the aid of an artificial light.
28. Close to or pressed against a fence or in any other a situation from which it has no escape.
29. No animal may be hunted which is under the influence of a tranquiliser, narcotic, immobilising or similar agent.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorney and legal representative for all matters concerning my application for a permit to import a lawfully hunted Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

In the case of a permit an ESA endangered listed species this is also a request for Ten Days Notice before the permit is issued so I and my attorney can know of approval as soon as those that may have opposed the issuance of the permit.

Enhancement Finding
Applicant: Peter Herbert Zeliff (PRT-06461D)

Peter Herbert Zeliff submitted an application on September 6, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Kalahai Oryx Private Nature Reserve, Northern Cape, South Africa for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the Government of South Africa, other information available to the U.S. Fish & Wildlife Service (Service), and comments received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken in August 20, 2018, from this wild-managed lion (*P. l. melanochaita*) population within South Africa **meets** the enhancement criteria under 50 CFR 17.32.

U.S. Governance of the Lion:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. 79 Fed. Reg. 64472. On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes South Africa, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from South Africa, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in South Africa.

In evaluating the available data on lion hunting in South Africa, the Service understands that South Africa has three classifications for lions: wild, wild-managed, and captive-bred and classifies wild and wild-managed lions separately from captive-bred lions raised for hunting purposes since the management and oversight of these specimens is different within South Africa. Therefore, information relevant to the Service's consideration on whether to permit the import of a sport-hunted trophy from Kalarai Oryx Private Nature Reserve, a reserve which maintains a population of wild-managed lions, must be evaluated based on information pertaining to the management of wild and wild-managed lions in South Africa.

<u>General considerations:</u>

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in South Africa contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Zeliff's application involving a *P. l. melanochaita* sport-hunted trophy taken in Kalarai Oryx Private Nature Reserve, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita*

from Kalarai Oryx Private Nature Reserve. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues

to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Zeliff's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how South Africa's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We consider whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examine if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examine if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also consider how a U.S. hunter's, in this case, Mr. Zeliff's, participation in the hunting program contributes to the overall management of lions within a country.

The management program in South Africa for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On January 12, 2016, the Service sent a letter to South Africa's Department of Environmental Affairs (DEA) with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in South Africa, and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our January 12, 2016, letter, the DEA provided four documents. In addition, the Service met with representatives of DEA during the 17th Meeting of the Parties to the Convention in Johannesburg in late September 2016. Further, since those meetings, there have been several written exchanges with DEA discussing the DEA's evaluation of reserves with lions and how these animals conform to DEA's lion management plan. The four document provided to the Service in January 2016, along with the Service's own final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DEA, comments received from interested parties, and Mr. Zeliff's application were the basis of this finding.

South Africa has defined three populations of lions that exist within the country through their Biodiversity Management Plan for the Lion (*Panthera leo*) in South Africa for 2015 to 2019 (BMP; December 2015): *Wild lions,* who completely fulfill their role in biodiversity processes and are largely unmanaged, and exist only in formally proclaimed national parks and game reserves. This population's vital rates and demographics are not actively manipulated; *Wild-managed lions,* which include all lions that have been re-introduced into smaller fenced reserves (<1000km^2), and are managed to limit population growth and maintain genetic diversity. Some of the vital rates and demographics of these lions are actively manipulated; and *Captive lions*, bred for financial gain, where all vital rates and demographics of these populations are actively manipulated.

Governance of Lions in South Africa: The lion is listed as vulnerable in the South African list of Threatened and Protected Species (ToPS) under Section 56(1) of the National Environmental Management Biodiversity Act, 2004 (Act no 10 of 2004; NEMBA; BMP pg. 1). NEMBA further regulates a permit system regarding restricted activities involving specimens of listed threatened or protected species (Act no 10 of 2004; Chapter 7). Regulated activities in need of registration include, among others, captive breeding facilities, sanctuaries, scientific institutions, game farms, wildlife traders, wildlife product traders, taxidermists, wildlife translocators, and freight agents (NEMBA pg. 25).

NEMBA gives effect to the Convention on Biological Diversity (CBD), of which South Africa is a party, and Section 24 in the Bill of Rights of the Constitution of the Republic of South Africa (1996). Under Section 24(b): "everyone has the right to have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that: (i) prevent pollution and ecological degradation; (ii) promote conservation; and (iii) secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development" (BMP pg. 15).

In addition to South Africa's domestic laws, it is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, South Africa provided a copy of their 2015 CITES non-detriment finding (NDF) for lions. Their finding, while focusing only on wild and wild-managed lions, applies to all lion exports from South Africa, including the captive lion population. This was clarified through personal communication with the South African Management Authority, where the Service was informed that the finding may be amended to better clarify that the finding applies to all lions within South Africa. A copy of the DEA's most recent lion NDF, dated January 23, 2018, which was included in a previous permit application, provides information on wild, wild-managed, and captive-bred lions and continues to find that the export of the species will not be detrimental to the survival of the species in the wild.

South Africa is also a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of transfrontier conservation areas, and facilitate community-based natural resources management practices. To implement the SADC Treaty, member states are required to establish management programs for the conservation and sustainable use of wildlife.

In 1991, South Africa legalized private ownership of wildlife, leading to a significant rise in game ranches and farms. In 2010, private lands with wildlife covered approximately 16.8% of South Africa, compared to national and provincial protected areas accounting for only 6% (Cousins *et al.* 2010). It has been stated that this expansion of private lands and the wildlife industry resulting from the private ownership of wildlife is responsible for significantly increasing South Africa's large mammal populations (Crowley and Mokhema 2014). According to Crowley and Mokhema

(2014), South Africa's game ranching industry is worth $1.1 billion a year and is growing at 10 percent annually. The lion is listed as vulnerable in the South African list of Threatened and Protected Species (ToPS) under Section 56(1) of the National Environmental Management Biodiversity Act, 2004 (Act no 10 of 2004; NEMBA; BMP pg. 1). NEMBA further regulates a permit system of restricted activities involving specimens of listed threatened or protected species (Act no 10 of 2004; Chapter 7). Regulated activities in need of registration include, among others, captive breeding facilities, sanctuaries, scientific institutions, game farms, wildlife traders, wildlife product traders, taxidermists, wildlife translocators, and freight agents (NEMBA pg. 25). Depending on the requesting entity, the issuing authority is either the Minister (DEA) or the appropriate Provincial government (MEC). Under ToPS, wild lions should not be introduced into captivity. This permitting regime generates funds for national conservation efforts, while allowing landowners to profit from maintaining wildlife on their property. The landowners can then reinvest in the property by funding conservation efforts, managing wildlife, and carrying out anti-poaching efforts (Cousins *et al.* 2010).

Current Lion Status in South Africa: The lion was almost extirpated in South Africa by the early 1900s, remaining only in small numbers in what is now Kruger National Park (NP) and the Kgalagadi Transfrontier Park (TP). With the formation of Kruger NP in the 1920s, wild lion numbers slowly recovered, growing to the current population of approximately 1,700 lions (BMP, pg. 40). Kgalagadi TP has a stable, albeit smaller, population of approximately 400 lions, but is considered a lion stronghold in southern Africa. Lions recolonized Hluhluwe-iMfolozi Park (HiP) in the 1950/1960s and that population is currently stable at approximately 120 lions. Along with small groups of lions in Addo Elephant National Park, Karoo National Park, Marakele National Park, there are approximately 2,200 wild lions in South Africa. In addition, there are approximately 800 wild-managed lions separated among 45 fenced reserves of less than 1,000 square kilometers each (BMP pg. 40). It should be noted, however, that DEA is evaluating each of these fenced reserves to confirm that the lions maintained on the reserve can be classified as wild-managed. As such, the Service evaluated this application, in part, based on DEA's evaluation of the reserve where the lion was taken.

When the Service listed the lion in southern and eastern Africa as threatened under the Act, three primary threats to the species throughout its range were identified: loss of habitat, loss of prey base, and human-lion conflict. These three threats led to the shrinking of lion populations and their range from pre-Colonial South Africa, to the current situation of lions being found predominantly on a limited number of national parks and fenced reserves. However, given the current focus of wildlife management practices in South Africa on fencing protected areas, additional habitat loss has been minimized. Further, due to more intensive management of the fenced reserves to maintain biodiversity, more stable prey bases and limited human-lion conflict are being observed.

According to South Africa's Scientific Authority's 2017 NDF published in January 2018, there are no specific official figures on the illegal trade in lions and lion products in South Africa, which is consistent with their 2015 NDF. There are currently no statistics relating to cases involving lions in the National Environmental Compliance and Enforcement Report, although there are cases currently under investigation. No recorded or known illegal trade in wild lion has occurred in Gauteng, KwaZulu-Natal or the Eastern Cape, and the illegal utilization of lions within South

Africa's national parks is negligible. However, according to the NDF, lions along the Kgalagadi Transfrontier Park boundaries have been persecuted for decades. Illegal trade in captive-bred lions within the North West Province is suspected to take place, as this industry is large and a challenge to regulate. The 2017 NDF does not discuss in further detail the reports referenced in the 2015 finding, regarding the illegal translocations of animals or trade in lions and their body parts for which offenders were not in possession of a permit to breed, keep, hunt, catch, sell, convey or export live animals or parts thereof. According to the 2015 and 2017 NDF, and supported by information in the Service's final listing rule, the illegal local and international trade in lions poses a moderate, but non-detrimental risk to the species in South Africa (BMP pg. 14; USFWS 2015, 80 Fed Reg. 79999).

To manage any population to maintain an appropriate population level and determine whether sport-hunting is having a positive effect, it is vital to have sufficient data on population numbers and population trends on which to base management decisions. According to Riggio et al. 2013 (pg.32), and Bjorklund in Riggio et al 2013 (p.32), the minimum number of lions estimated to constitute a viable population is 500 individuals. Kruger National Park, with approximately 1,200 lions, has a stable population of wild lion and is considered a stronghold for lions in South Africa. Kgalagadi Transfrontier Park, with a stable population of approximately 400 lions, is considered a potential stronghold and conserves the genetic diversity within the Kalahari ecosystem (Bauer et al. 2008, in Riggio et al. 2013 (pg. 32); Bjorkland 2003 (pg. 515, 518). Wild lions in HiP, Addo Elephant National Park, Karoo National Park, and Marakele National Park, albeit smaller in size, appear to be stable, but would need to grow to be considered potential strongholds for maintaining genetic diversity. All of these populations receive very little direct management and hunting is not allowed within the National Parks (BMP).

Lion Management in South Africa: In 2015, in response to the requirements under NEMBA and the SADC Treaty, and after stakeholder workshops in 2013 and 2014, South Africa published the Biodiversity Management Plan for the Lion (*Panthera leo*) in South Africa for 2015 to 2019 (BMP) and stated that the "BMP for African lion will be regarded as the national strategy for African lions in South Africa" (pg. 2). The BMP was created in response to the Regional Strategy for Lions in East and Southern Africa in 2005 (IUCN SSC Cat Specialist Group 2006), which encouraged the development of national strategies aligned with national strategies of neighboring countries. The BMP was developed jointly by South Africa's Department of Environmental Affairs, Council for Scientific and Industrial Research (CSIR), and Dr. Paul Funston (Panthera). The current BMP is the first in a series of five-year iterations, as required under NEMBA, where the success of the preceding five years will be measured, and adaptations made to ensure that the plan for the following five–year period is appropriate for the circumstances at the time.

The BMP has identified the vision that "…lions will provide key opportunities for biodiversity conservation, economic development, social benefits, and improved management capacity." The BMP lays out five specific objectives for the conservation of wild and wild-managed lions within South Africa:

- Improve the conservation status of lions within the broader conservation context.

- Develop and implement effective communication tools that are informed by scientific research (communication, education, and public awareness).
- Ensure that existing legal instruments are compatible and complementary at national and provincial levels, and improve the capacity to implement these laws.
- Establish a lion forum or working group.
- Collaborate the alignment of this BMP with lion conservation plans in neighboring countries and link with international working groups.

All five of these objectives are stepped down to specific action items with intended 5-year outcomes, indicators on how the action plan is succeeding, and the party responsible for implementation. The BMP will be re-evaluated in 2019 to assess the success of the plan and to modify the BMP for 2020 to 2025 accordingly.

While these five objectives appear to serve a valuable role in lion management in South Africa, two are most relevant in determining if the implementation of the BMP enhances the propagation or survival of the species, as required by the Act for the issuance of this import permit. The first objective, "Improve the conservation status of lions", has been broken down into three sub-objectives for wild and wild-managed lions: maintain current protection status of lions; reassess the conservation status of lions; and enhance the conservation status of wild lions. The intended 5-year outcomes of these sub-objectives are to have stable wild lion populations in all protected areas with no illegal trade in wild lions, have more than 80% of all reserves with wild-managed lions integrated into a managed meta-population approach for genetic management, publish norms and standards for the management of wild-managed lions, and a stronger understanding of wild-managed lion population size and trends. To achieve these sub-objectives, South Africa has already conducted population surveys of wild lions in 2015 and will census every 3 years. They have also started implementing the managed meta-population plan with the goal of over 80% of reserves included by 2019. The norms and standards for the management of wild-managed lions was to be completed by the end of 2016 and the first audits to obtain a stronger understanding of wild-managed lion population trends was completed in 2015 and is supposed to continue annually thereafter. One of the first outcomes of these evaluations has been the apparent tightening of how DEA assesses whether a reserve holds "wild-managed" lions or if the lions on a reserve are considered "captive-bred". As such, the Service consulted with the DEA on whether the reserve identified in this application where the trophy animal will be taken maintains wild-managed lions.

The second objective, "Ensure that existing legal instruments are compatible and complementary at national and provincial levels, and improve the capacity to implement these laws", identifies two actions: ensure alignment on permitting decisions between national and provincial legislation; and address and implement training needs for all aspects of legislation regarding lions. The intended 5-year outcome of these two actions is to have well-trained managers that make better management decisions, and effective legislation to support lion conservation and sustainable utilization of lions.

The BMP has two additional objectives focusing specifically on wild-managed lions. As with the objectives discussed above, these objectives are stepped down to specific action items with intended 5-year outcomes, indicators on how the action plan is succeeding, and the parties responsible for implementation. The first is to maintain the wild-managed lions as a key population that

contributes to socio-economic-ecological opportunities through mimicking "natural" ecological functions (e.g., wild lion survival rates, fecundity, litter sizes, and mortality rates). This objective is broken down to a number of action items ranging from mimicking survival changes through lethal and non-lethal removals, mimicking required immigration/emigration into an area, and measuring demographic responses by determining age- and sex-structure through ranger observations, and informing stakeholders on progress of management efforts. These action items predominately have target dates that are on-going, annual, or bi-annual, with outcomes that can be used- in adaptive management efforts.

The second wild-managed lion objective is "To maintain lion genetic integrity by inducing social limitations through management-assisted dispersal and changes in dominance hierarchies", which focuses primarily on ensuring that lions within smaller fenced areas (<1,000 sq. km.) mimic natural biological processes such as natural dominance hierarchies and female dispersal to ensure genetic diversity. The action items for this objective include modeling genetic diversity within reserves, mimicking male dispersal from and into a social unit through removal (e.g., culling/hunting or translocation) and introduction (translocation) of males at appropriate ages, and mimicking occasional female dispersal into social units through removal and introduction.

The BMP has information on the lion's biology, habitat requirements, threats, and relevant legislation, as well as an extensive chapter on wild-managed lions. This chapter explores the history of wild-managed lions, particularly how lions had been managed in the past and what actions are needed to move forward in establishing a meta-population through connecting the reserves and allowing for genetically viable populations that can contribute to the overall wild lion population. According to the BMP, the wild lion populations are complemented by a fragmented population of wild-managed lions in South Africa found on fenced areas or reserves typically less than 1,000 square kilometers in size. This largely results from private property as well as wildlife ownership rights enforced by fencing as required by South African law. According to the BMP, even though opinions vary on the pros (Packer et al. 2013) and cons (Creel et al. 2013) of fencing as an essential component of range-wide lion conservation in the future, the use of fences is likely to increase as human land use continues to expand into lion ranges. The expanded use of fencing, particularly in areas where fencing is currently not widely utilized, could lead to continued fragmentation of lion habitats (Riggio et al. 2012, Dolrenry et al. 2014). Therefore, wild-managed lions in South Africa provides a key example on how to achieve integrated lion conservation goals in a changing African context that would enhance the survival of the species.

In the 1990s, the number of public and private game reserves started to increase in South Africa and many of them reintroduced lions, mostly as a tourist draw. Lions from these populations were then used for yet more reintroductions leading to a current number of about 800 lions on over 45 fenced reserves (Miller et al 2013). Many of these reserves have only one or two prides of lions, with the largest (Pilanesberg National Park and Madikwe Game Reserve) having four or five prides. Historically, most managers of these reserves had the tendency to manage their lion populations in isolation, although there was some movement of 'excess' lions.

Because of fragmented, isolated management of these populations, the conservation value of these lions has been questioned in the past (Hunter et al 2007, Slotow & Hunter 2009). Because of this,

the BMP sets out management criteria within the reserves that maintains ecological processes and creates a meta-population (BMP pg. 41 and 42). Researchers noted indicators of inbreeding in two reserves (Trinkel et al. 2008, 2010), while several reserves experienced increased lion population growth rates with subsequent high lion densities (Miller & Funston 2014). The combination of high lion densities and restricted size of the reserves disrupts predator-prey relationships – often with prey dramatically declining (Tambling & du Toit 2005, Slotow & Hunter 2009). In addition, managers increasingly find it hard to locate new areas for 'excess' lions (Kettles & Slotow 2009). The Lion Management Forum (LiMF), founded in 2010, provides a platform for concerned managers to discuss the unique issues surrounding small, fenced lion populations. LiMF members recognize that many of the natural processes characteristic of large naturally functioning lion populations have been disrupted on these small reserves. Given the small sizes of these reserves, limited opportunities exist for restoration of these natural processes Therefore, LiMF, and the BMP, have put forward management interventions that would mimic the outcomes of natural processes that are showing great success (Miller et al. 2013; Ferreira & Hofmeyr 2014).

The BMP recognizes that the managed lion meta-population is slightly contradictory to the theory of meta-population dynamics, as meta-populations are those with spatio-temporally variable subpopulation dynamics, variable dispersal, and availability of empty habitats that are largely connected (Oliveier et al. 2009). That is not the case with most wild-managed lion populations on small reserves in South Africa. Thus, in essence, the managed meta-population is a unique product of the South African response to managing and conserving large carnivores on isolated small reserves. The approach essentially recognizes a single population with social groups spatially isolated over vast areas. Some of these challenges can be reconciled through identifying regional nodes.

The lions for reintroductions into South Africa's small reserves were initially sourced from Etosha National Park, as well as Sabi Sand Game Reserve, adjacent to the Kruger National Park. Recently, SANParks relocated some animals from the South African park of Kgalagadi Transfrontier Park (Slotow & Hunter 2009). Managers applied minimal genetic management throughout the history of lion reintroductions (Slotow & Hunter 2009, Trinkle et al. 2010). As a result, geographic genetic structure in the wild-managed lion meta-population reflects mixed origins with few reserves having lions of only one origin (Miller et al. in review). The South African wild-managed lions thus represent a novel lion genetic diversity not associated with a single origin. Maintaining the origin of the base genetic stock is thus, according to the BMP, a low priority (BMP pg. 45).

Hunting and Utilization:

Hunting: According to the 2017 NDF (the last assessment available to the Service), hunting of wild lions is not allowed within national parks and only limited hunting is allowed in some provincial reserves, effectively ensuring protection for the majority of wild lions. There is some harvest of wild lions for the control of problem animals (e.g., stock-raiding) and, in very limited cases, population management within the national parks. In addition, a small number of wild lions from Kruger NP have dispersed out of the park into some of the reserves surrounding the park and may be harvested. According to the BMP, fewer than 2 wild lions and only approximately 10 wild-managed lions are taken off of private reserves annually.

South Africa has not set a specific annual quota for wild-managed lions. Instead, according to information provided to the Service, authorizations for hunting wild-managed lions are addressed on a case-by-case basis. Reserves maintaining wild-managed lions must submit an application to the provincial authorities requesting a permit. Professional Hunters are obliged to record all completed hunts in a professional hunting register and this register is used to compile provincial reports on the number of lions taken annually. The level of off-take is also evaluated in the management of the meta-population to ensure that only those animals that no longer meet management goals are removed from the population. These animals are typically older lions that have successfully bred and raised several litters of kittens. Most experts consider the recommendation by Packer *et al.* (2011, p. 151) to limit offtake to no more than 1 lion per 2,000 km^2 to be a sustainable offtake of lions. The BMP (pg. 29) has established more restrictive limits for areas of less than 1000 km^2 to not exceed 0.5 lions/1000 km^2.

Utilization: An active lion bone trade from South Africa to several Asian countries for traditional medicinals is primarily supplied from captive-bred lions taken as hunting trophies, as well as captive-bred lionesses and juvenile lions (BMP pg. 30; 2017 NDF pg. 13). Lion bones are being used as a substitute for tiger bones, which is highly valued in Asia, primarily in China and Vietnam (Williams et al. 2015, pg. 1; Gratwicke et al. 2008, pg. 2–5; Graham-Rowe 2011, pg. s101–s102). In 2008, South Africa began issuing CITES permits for the export of skeletons of captive-bred lions to Asia. The number of lion skeletons for which South Africa issued permits for export to Asia (China, Viet Nam, Thailand and Lao PDR) increased tenfold from 2008 to 2011, from about 50 to about 573 skeletons, respectively, representing a total of 1,160 skeletons or about 10.8 metric tons (11.9 US tons) of lion bone in 4 years (Williams 2015, pp. ix–x, 46). With respect to meeting demand for lion bone, Lindsey et al. (2012, p. 20) states that there are likely to be large numbers of lion bones available for export from game farms, from lionesses and non-trophy males, and as byproducts from animals shot as trophies. In addition, Williams et al. (2015, p. 41) reports that there may be between 1,400 and 6,200 lion skeletons from past trophy hunts on South African game farms that could potentially be used to supply demand for lion bone. Further, at the 17th Meeting of the Conference of the Parties, the Appendix II listing for *P. leo* was amended to include an annotation establishing an export quota for lion bones. The annotation states that "[A] zero annual export quota is established for specimens of bones, bone pieces, bone products, claws, skeletons, skulls, and teeth removed from the wild and traded for commercial purposes. Annual export quotas for trade in bones, bone pieces, bone products, claws, skeletons, skulls and teeth for commercial purposes, derived from captive breeding operations in South Africa will be established and communicated annually to the CITES Secretariat." The Service is aware of a press release from the Endangered Wildlife Trust in which they state the DEA has established a quota of 800 skeletons (with or without skulls) of captive-bred lions for international trade, and as of this finding, the CITES website shows that South Africa has communicated a 800 skeleton export quota for 2017 and 2018 to the CITES Secretariat. Although the bone trade is supplemented from skeletons from trophies, with a reduction in scheduled trophy hunts from oversees due to increased regulations in certain countries, including the U.S., some South African farms are turning to culling for the bone trade to supplement income lost from a reduction from trophy hunting (Williams and Sas-Rolfes pg. 14-16 & 18-21). Additionally, Williams and Sas-Rolfes have identified that industry participants who are relying on income from the bone trade may not

distinguish between sourcing the legal or illegal bone trade if frustrations regarding the current quota were to reach a turning point (pg. 16).

While the BMP suggests that the value of bones, whether wild or captive, is not high enough to stimulate the illegal harvest of lions solely to sell the bones into the bone trade, there is the potential that if the value of bones increases due to increasing demand from Asian markets, that captive lions could be a legal source of bones that masks the illegal harvest of wild lions. Additionally, evidence suggests that there may be incentive to poach wild lions for the bone trade. According to Williams et al. (2015, p. x), the 2013 price paid to South African game farmers and landowners for lion bones was $1,260–2,100 USD per skeleton. In many lion range states, this exceeds per capita GDP (gross domestic product) (World Bank 2015, unpaginated). Further, Williams and Sas-Rolfes show from data gathered directly from facilities that prices have been consistently rising over the last five years, at a rate that is significantly higher than the official inflation rates in both the producer and consumer countries (pg. 23). Thus, the current price paid for lion bone may provide incentive in some countries to poach wild lions. While the lion bone trade appears to currently be based primarily in South Africa's captive lion hunting industry, the trade appears to be having little or no impact on wild lion populations in South Africa at this time—lion populations in South Africa are stable or increasing and there is little poaching of wild lions in the country (Funston and Levendal 2015, pp. 1, 26; Williams et al. 2015, pp. 79–80). However, the impact of the lion bone trade on lion populations outside South Africa is unknown. Based on the effect of the tiger bone trade on tiger populations, if current conditions—for example, rapidly increasing demand and involvement of an international crime syndicate in the lion bone trade (Final listing rule, pg. 80026) —continue unchanged, then there is considerable potential for extensive poaching of wild lions to occur in order to meet demand.

Evaluation:

As stated earlier, the Service has evaluated this application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and the issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild-managed lion trophy animal would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

While there is habitat available to lions on the national parks and within the smaller, fenced reserves, much of South Africa has been converted into agricultural uses, managed plantation forests, human developments, or extractive industries. With the legalization of private ownership of wildlife in the early 1990s, there has been a significant increase in private land set aside for wildlife. This has led to a boost in South Africa's wildlife, particularly large mammals. South

Africa laws, such as ToPS, were put into place to ensure that utilization of this wildlife is sustainable and provides for long-term incentives to maintain these areas for wildlife protection. The national parks and fenced reserves are natural areas surrounded by development. It is only through the on-going management of these remaining natural areas that lions survive in South Africa. South Africa's management of wild and wild-managed lion population as a meta-population, using human intervention (e.g., translocation) as a substitute for natural occurrences (e.g., dispersal), is ensuring that lion populations are genetically healthy and viable.

While it has been stated that South Africa's hunting industry generates $1.1 billion annually, not all of this is connected to lion hunting or to United States hunters. However, lions are a key component of the hunting industry since they are part of the "Big 5" trophies and a draw for United States hunters, such as Mr. Zeliff, to South Africa. Based on the information available to the Service, the presence of private reserves has increased the number and diversity of wildlife in South Africa, thus fueling the hunting industry, which funds the on-going success of private reserves. It appears that without the hunting industry, these reserves, which have become islands of wilderness surrounded by civilization in much of South Africa, would not be economically viable, and therefore would not exist. Both ToPS and the BMP have put into place mechanisms to adequately oversee the harvest of wild and wild-managed lions in South Africa. With an annual harvest of approximately 10 wild-managed lions, South Africa is not exceeding the limits identified in the BMP of 0.5 lions/1,000 sq. km. The objectives of the BMP and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that South Africa has established for managing lions.

Therefore, based on the information available to the Service and seeing that Kalarai Oryx Private Nature Reserve has been determined by the DEA to maintain a wild-managed lion population, the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:</u>

The national management plan, the BMP for lions is extensive and addresses many aspects of lion conservation and management. As reviewed above, the BMP provides a history of the relevant legislation with regards to lion conservation and puts the current efforts into context. The BMP also reviews the species' biology, population status, habitat requirements, and threats to lion populations. Objectives for conservation of the species, as well as a plan to develop a meta-population for wild-managed lions, are also included. Additionally, the monitoring plans have scientifically sound methodologies. Lastly, but equally importantly, are the monitoring and evaluation efforts laid out in the BMP.

In evaluating the information provided by the South African government and other sources, it appears that the hunting program in South Africa is addressing the three main threats identified by the Service when making the determination that the species is threatened with the possibility of extinction. The fenced reserves, including Kalarai Oryx Private Nature Reserve and national parks are maintaining habitat for lions and ensuring that there is no further habitat loss, provided that the reserves can remain economically viable. In order to maintain a viable population of wild and wild-managed lions, the parks and reserves must maintain biodiversity and a sustainable prey base. Finally, while there is still controversy over the extensive utilization of fencing in South Africa, it does reduce human-lion conflicts and the number of lions killed in retaliation for killing livestock. Therefore, the management of lions on these reserves and, the limited hunting of lions under this management program contributes to the on-going survival of the species in South Africa.

The off-take of this wild-managed lion provides an indirect benefit to wild populations by helping to support the reserve where lion populations participating in the meta-population management are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

As stated above, South Africa is closely monitoring and controlling the harvest of wild and wild-managed lions through permitting under ToPS and through the BMP. The issuance of an import permit for a wild-managed lion legally hunted in Kalarai Oryx Private Nature Reserve under these authorities would not conflict with any programs intended to enhance the survival probably of the species in South Africa.

Therefore, based on the information available to the Service, the issuance of an import permit for a legally hunted wild-managed lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

As previously stated, wild lions only occur in a limited number of national parks in South Africa and wild-managed lions are currently found on 45 reserves of less than 1,000 sq. km. While the wild lions on the national parks receive only limited direct management activities, the reserves require management that is more intensive in order to mimic natural biological and ecological roles of lions. All indications show, that given the threats identified by the Service when listing the species as threatened under the ESA, the presence of these reserves, including Kalarai Oryx Private

Nature Reserve, as well as the parks, is actively addressing the three causes of lion decline: loss of habitat, loss of prey base, and human-lion conflict. While the concept of lions behind fences has both benefits and drawbacks, it appears to be a major contributor to the on-going survival of lions in the wild in South Africa. While open and unmanaged habitat not impacted by human intervention would be the ideal conditions for lion populations in South Africa, as well as throughout its natural range, this is not currently a viable option within South Africa.

With limited, controlled off-take of lions in a manner that mimics natural processes, the hunt that Mr. Zeiff has undertaken in will contribute to reducing the threat of extinction of lions in South Africa. It appears that the permitting activities under ToPS and the implementation of the BMP will ensure the long-term survival of lions. The utilization of hunters such as Mr. Zeliff in managing the populations on these reserves is an important element of the success of lion management in South Africa.

Therefore, based on the information available to the Service, the purpose for which this import permit would be issued will likely reduced the threat of extinction facing lions in South Africa.

17.32(a)(2)(v): <u>The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:</u>

As with any discussion of hunting as a management tool, there are numerous opinions on the impact it would have on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and available literature, there is a general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for long periods by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see benefits that can be realized through a scientifically based hunting program for lions. There have been a large number of comments from some Non-Governmental Organizations (NGOs) and the public that oppose hunting any lions, but particularly captive-bred lions. However, this opposition, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process for this application.

Therefore, based on the information available to the Service, there is general support by scientists, individuals, and other organizations having expertise concerning lions, that the legal harvest and subsequent import of these lion trophies would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

Based on our understanding of the permitting process under ToPS, reserves that maintain wild-managed lions must establish biodiversity plans for managing the reserve that takes into consideration the long-term survival of all species on the reserve, including large predators. This oversight by DEA and the implementation of the BMP establishes a framework in which reserves manage their wildlife. The long-term survival of lions, at least in South Africa, is tied directly to the success, both ecologically and economically, of the reserves. The reserves that have been permitted to maintain wild-managed lions and, as part of the management program, carry out limited hunting, have the expertise and facilities to maintain lions successfully. This includes Kalarai Oryx Private Nature Reserve, a participant in the meta-population management of wild-managed lions.

Therefore, based on the information available to the Service, the applicant intends to hunt on a properly permitted reserve that carries out their management practices in accordance with national and provincial regulations, having the expertise, facilities, or other resources available to them to successfully accomplish the objective states in the application.

Conclusion

Given the current status of wild and wild-managed lions within South Africa and the level of management and oversight provided to them, it appear that the harvest and import of this lion as a sport-hunted trophy meets the purposes of the Act. The applicant intends to hunt on a properly licensed reserve that is actively managing lions in a manner that will maintain the species on the reserve, and through the national meta-population management plan, in a manner that mimics natural processes.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild-managed lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild-managed lion trophy taken in South Africa, to Peter Herbert Zeliff, Batavia, NY.**

Under provisions of section 7(a)(2) of the Endangered Species Act, a Federal agency that permits, licenses, funds, or otherwise authorizes activities must consult with the Fish and Wildlife Service as appropriate, **to ensure that its actions will not jeopardize the continued existence of any listed species.**

The Act states that each federal agency shall insure that any action authorized ... **"is not likely to jeopardize the continued existence of any endangered species or threatened species** *OR* result in the destruction or adverse modification of habitat of such species which is determined ...to be critical...."

Intra-Service Section 7 Biological Evaluation under ESA
Division of Management Authority

Originator: Emma Nelson
Date: August 13, 2019
Application Number: 06461D

I. Listed species and critical habitat (if any) potentially affected:

The applicant requests a permit to import one male sport hunted lion trophy (*Panthera leo melanochaita)* taken within Kalahai Oryx Private Nature Reserve, Northern Cape, South Africa during the 2018 hunting season for the purpose of enhancement of the species.

Scientific name:
Panthera leo melanochaita

Common name:
African lion

Date listed:
12/23/2015- T

Description of species, threats, and critical habitat:
The lion has a broad habitat tolerance, absent only from tropical rainforest and the interior of the Sahara desert. There are records of lions to elevations of more than 4,000 m in the Bale Mountains and on Kilimanjaro. Although lions drink regularly when water is available, they are capable of obtaining their moisture requirements from prey and even plants (such as the tsama melon in the Kalahari desert), and thus can survive in very arid environments. Medium- to large-sized ungulates (including antelopes, zebra and wildebeest) are the bulk of their prey, but lions will take almost any animal, from rodents to a rhino. They also scavenge, displacing other predators (such as the spotted hyaena) from their kills.

Lions are the most social of the cats, with related females remaining together in prides, and related and unrelated males forming coalitions competing for tenure over prides. Average pride size (including males and females) is four to six adults; prides generally break into smaller groups when hunting. Lions tend to live at higher densities than most other felids, but with a wide variation from 1.5 adults per 100 km² in southern African semi-desert to 55/100 km² in parts of the Serengeti. Pride ranges can vary widely even in the same region: e.g., from 266-4,532 km² in the Kgalagadi Transfrontier Park of South Africa.

The main threats to lions are indiscriminate killing (primarily as a result of retaliatory or pre-emptive killing to protect human life and livestock), prey base depletion, habitat loss, illegal trade in lion parts, trophy hunting (depending on management), and disease. Habitat loss and

conversion has led to a number of subpopulations becoming small and isolated. Furthermore, trophy hunting has a net positive impact in a some areas, but may have at times contributed to population declines in Botswana, Namibia, Tanzania, Zimbabwe, Cameroon and Zambia.

The economic impact of stock raiding can be significant and therefore lions are persecuted intensely in livestock areas across Africa; their scavenging behavior makes them particularly vulnerable to poisoned carcasses put out to eliminate predators. Little actual information exists on the number of lions killed as problem animals by local people, even though this is considered the primary threat to their survival outside protected areas.

Lion population density across the species' range is known to track the biomass of large wild herbivores, the lion's principle prey species. These species are increasingly under threat from an unsustainable and increasingly commercialized bushmeat trade, leading to collapses in prey populations across large parts of savanna Africa.

Illegal trade in lion body parts for medicinal purposes is considered a threat to African lion subpopulations (according to the regional lion conservation strategies, which call on countries to prohibit and control trade in lion bone and other parts and products) as well as to the small subpopulation in India's Gir Forest. In West and Central Africa, there are many reported uses for lion skins and bone in Benin (with fat and bones being most commonly utilized), and a survey carried out around Nigeria's Yankari National Park found more than 22 lion parts considered to be of medicinal value, with most of the over 200 interviewees saying they had used lion parts in the past, and half within the past three years. The widespread prevalence of fakes in the traditional medicinal market is indicative of a continued demand. While fakes may replace items in the market that otherwise would be illegally sourced from the wild, they could perpetuate demand and poaching when consumers aspire to the genuine wild item rather than making a conscious choice of an (often cheaper) alternative.

There appears to be increasing interest in the use of African lion bone in Asia. There is no history of lion bone being used in traditional medicine there, but China has permitted the use of bones from captive lions to make medicinal wines traditionally containing tiger bone. South Africa has reported the export of large quantities of lion bone sourced from captive animals to China, the Lao People's Democratic Republic and Viet Nam. Legal international trade in bone reported as from captive-bred lions could serve as a cover for illegally wild-sourced lion (and other big cat) parts. There is also concern that wild lion parts from eastern and Southern Africa could be drawn into the large illegal wildlife trade to Asia centered around elephant ivory.

Trophy hunting is carried out in a number of sub-Saharan African countries and is considered an important management tool for conserving wild land providing financial resource for lion conservation for both governments and local communities. However, there is concern that management regimes have not always been sufficient to deter unsustainable offtakes. A sustainable offtake level of one male lion per 2,000 km² has been recommended, but offtake has been higher in many areas, which suggests that it is potentially a threat. Trophy hunting can thus be a tool for conservation but also a threat, depending on how it is regulated and managed. Hunter et al. (2013) cautioned that regulatory measures which reduce the profitability of lion trophy hunting could have widespread negative impacts for wildlife-based land use, anti-poaching and tolerance of lion outside protected areas.

No critical habitat has been designated.

II. Geographic area where action will occur:

Kalahai Oryx Private Nature Reserve, Northern Cape, South Africa

III. Description of the proposed action:

The applicant requests a permit to import one male sport hunted lion trophy (*Panthera leo melanochaita)* taken within Kalahai Oryx Private Nature Reserve, Northern Cape, South Africa during the 2018 hunting season for the purpose of enhancement of the species.

IV. Determination of effects:

A. Explanation of effects of the action on species and critical habitat in item I:

The import of the sport-hunted trophy will have no effect.

B. Explanation of actions to be implemented to reduce adverse effects:

The action will have no effect.

V. Effect of determination and response requested:

A. Determination

No effect.
Species: African lion (*Panthera leo melanochaita*)

LION SOUTH AFRICAN ESA TROPHY

Permit Number: MA06461D-0

Effective: 08/28/2019 Expires: 08/27/2020

Issuing Office:

Department of the Interior
U.S. FISH AND WILDLIFE SERVICE
DIVISION OF MANAGEMENT AUTHORITY
BRANCH OF PERMITS, MS: IA
5275 LEESBURG PIKE
FALLS CHURCH VA 22041-3803

Mary Coffland

CHIEF, BRANCH OF PERMITS, DMA

Permittee:

PETER HERBERT ZELIFF
(b)(6) [redacted]
BATAVIA, NY 14020
U.S.A.

Authority: Statutes and Regulations: 16 USC 1539(a); 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in South Africa for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of South Africa for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Hettervig	Mark	J.	

(b)(6) [redacted]

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)

(b)(6) [redacted]

1.	d. Zip code/Postal code	1.e. County/Province	1.f. Country
Tenino	WA	98589-9800	Thurston	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)

(b)(6) [redacted]

	nty/Province	2.f.Country
Milwaukie	OR	97222	Clackamas	USA

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the ...ify that the information submitted in this application for a permit is complete and ...statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor)

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Marcie Helton (b)(6) [redacted]

(b)(6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera Leo

   b. Sex (if known). males (3)

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Mozambique
   Mosahmanzou Safaris
   Terminal de carga aeroporto Biera

   b. Date wildlife is to be hunted:

   Aug. 31st - Sept. 25th, 2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   mosahmbanzou Safaris
   Grant Taylor

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Please see attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
   Name:
   Business Name: Safari Cargo Systems
   Address: Holding 34, 5th Ave.
   City: P.O. Box 30093 Jetpark 1469
   State/Province: Bredell
   Country, Postal Code: 1623

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   NO

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

   Please see attached

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

   NO

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: N/A Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: (b)(6) Date: 8/20/18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

"Mashambanzou Safaris Ltd and J & P Associates Invoice

Date: 8/20/2018

Hunt Sold To:	Mark Hettervig, 16015 S Springwater Rd. Oregon City, OR 97045, Ph 503-806-1981 Email: mark@pmc-g.com
Professional Hunter Providing Hunt: Grant Taylor owner Mashambanzou Safaris, Mozambique address- Terminal de Carga aeroporto Beira - Mozambique, Tel no + 258825330796, email: grant@mashambanzousafaris.com	
Hunt Booked By:	Mashambanzou Safaris Ltd, Joe Demby, J & P Associates, 5550 Vargo Lane, Prince George, VA 23875 phone: 804-586-1698
Hunt Type:	18 day Leopard, crocodile, plains game hunt

Cancellation Policy & Legal: Cancellation of a Safari if done 6 months prior to the commencement date will allow the client a full refund of all payments made. However, if a cancellation is made within six months of the safari all payments may be transferred to the following year as a deposit on another future hunt based on the following years prices. If the client chooses not to forward his deposit he will be charged a 50% cancellation fee of funds paid. If a cancellation is done with in 2 months of the safari date all deposits will be lost completely. In the event full payment is not received within 30 days of the completion of the safari, interest will begin to be charged at 10 % per annum on the remaining funds owed. Any legal discrepancies will be handled according to the laws of the country the safari took place.

Indemnity Clause : Mashambanzou Safaris and Mashambanzou Safaris Ltd. will not be held responsible for any loss, damage, or accident incurred by a client while they are on Safari with the company providing the hunt. Mashambanzou Safaris will not be held responsible in the event of loss of hunting days due to lost luggage or flight delays.

Hunt Date: Hunter will be picked up at Tete Airport and transported to camp on 31 August 2018. The Hunt will start on 1 September and run for 18 days ending on 18 September 2018. Hunter will be transported back to Tete Airport on 19 September 2018 for flight out to USA.	Number of (Days) (Items)	Daily Rate	Total Cost
14 day hunt for Leopard, croc, hippo, and plains game	14	$1,200.00	$16,800.00
4 days crocodile, hyena, and plains game	4	$600.00	$2,400.00
Transportation Fee to hunting area and return to Airport		$700.00	$700.00
Gun Permit, for each gun is $250	2	n/a	$500.00
Hunting License Permit is $300	1	n/a	$300.00
Pre-baiting cost $250 per day	5	$250.00	$1,250.00

Crocodile, red duiker, l. suni, t hartebeest, with other plains game to be determined. All game fees for animals taken that are not included in package will be paid for at the end of the hunt based on trophy fee list provided below. Every attempt will be made to track and recover wounded game; however, if a wounded animal cannot be recovered, the hunter will be responsible for paying the full trophy fees for that animal at the normal rate. Wounded animals are determined by the professional hunter regardless of whether there is blood or not. Note due to nature of hippo and crocodile hunting any shot taken will be considered a hit unless video evidence proves otherwise. Any female animal shot will incur full price and will not be exportable.	Species Trophy Fee	Qty	Trophy Fee	Total
	Nile Crocodile	2	$3,250.00	$6,500.00
	Lichtenstein Hartebeest	1	$3,200.00	$3,200.00
	Hyena	3	$1,750.00	$5,250.00
	Leopard	1	$8,000.00	$8,000.00
	Chapmans Zebra	1	$3,000.00	$3,000.00
	bait costs estimated	TBD		$500.00
	Trophy fee total cost			$26,450.00

Cost of hunt- less trophy fees (Sub Total)	$21,950.00

Signatures	A deposit of ($9200) was received via check #15884 on 13 March 2018 to book the hunt. A 2nd payment to cover the remainder of the daily ($12750)which includes remaining amount of daily rates, transportation cost, gun permits, and hunting license, prebaiting daily costs rates, was received on 6 August 2018 (check # 17704). A check was received on 18 Aug for $26450 via check #17791 . These trophy fees will be placed in escrow until the hunt is completed. Any funds owed the hunter will be mailed back to him immediately at the end of the hunt via a Wells Fargo Business cashers check. Please make all checks as payment to J & P Associates and mail to 5550 Vargo Lane, Prince George, VA 23875	-$48,400.00
Date: Client:	Hunter has 26450 in escrow to be used for trophy fees	$26,450.00
Date: Outfitter:	Total Cost of Safari (TBD)	TBD

OTHER COSTS: Dipping Packing and Export Documentation is calculated at the end of the safari and will be paid to the agent handling the dipping and packing and export.

2018 Trophy Fees

Subject: GAME TROPHIES - DIP & PACK TAXIDERMY ORDER 50016 - MR. MARK J. HETTERVIG

Dear Mr. Hettervig,

We are pleased to have this opportunity to assist you with the forwarding of your trophies hunted with Shumba Safaris. We trust that you had a very enjoyable and memorable experience!

PLEASE NOTE: as you have Lion trophies included in your order, import permits will be required from US Fish & Wildlife to enable you to import the Lion trophies into your country. We will require that you obtain this import permits nearer to completion of your order.

Please check the attached order to ensure that all the trophy items required are reflected on your order. As the issuing of export permits can take up to 60 days, we would appreciate receiving your confirmation that your order is correct at your earliest convenience to enable us to make application for the export documentation soonest.

It has come to our attention that U.S. Fish & Wildlife advised that any trophy consignments entering the U.S. with documentation that is not in the client's full names, will now be sent back to the country of export for correction.

In lieu of the above, please confirm your full legal name and address as reported to the US Social Security Administration to prevent any difficulties during the clearance of your consignment on arrival in the U.S.A.

Important General Information on the USDA/APHIS perspective.

USDA Approved Taxidermist or Tannery (Fur Dressing Company)

It is important to note that most US Taxidermy Studios or businesses contract the tanning of animal hides to a professional fur-dressing company or tannery for the purpose of rendering a product acceptable for taxidermy mounting or the manufacture of a final product.

Subsequently, your appointed US Taxidermist may direct your shipment to be expedited directly to the fur-dressing company they work with. In some instances they may also direct your shipment to be expedited directly to their studio

or premises. Most importantly, it is always advisable to ensure that the US Taxidermy that you appoint to handle the final preparation of your trophies is USDA Approved.

The above is applicable to any, (dip and pack only), ruminant trophies (antlers/horns - of hoofed animals) and especially where swine trophies (Warthog and Bush pig), is contained in the shipment. Shipments containing Primates, Rodents or Civet Cats may possibly require additional filing with the CDC and U.S. Department of Public Health.

We would kindly like to request that you provide us with the Taxidermist's address to which your consignment should be delivered as well as your Clearing Agent information..

PLEASE NOTE: Life-Form Taxidermy does not accept responsibility for hair slip or damage to skins which are only dipped and shipped, as we have no control over field preparation or tanning processes used by other companies.

TAGGING OF TROPHIES: Please note that where more than one of the same species is received at our studio, they will be reflected on your order as "A" ; "B" etc. according to size, "A" being the largest.

We can advise that dip and pack consignments, are generally ready for handover to our freight agent within two to three months from full payment, provided the Outfitters supply us with all the relevant paperwork at time of delivery of the trophies to enable us to apply for the necessary export documentation timeously.

In order for us to begin preparing your trophies, we do request full payment, which can be made by wire transfer into our Bank account (details included on page 3 attached). **Please ensure that your order number (50016) is stated on the transfer.** Kindly note that payments may be made by a cashier's cheque mailed to our above P.O. Box address, however payments received by means of a cheque may take 10-12 weeks to be cleared. We kindly request that payments be made directly into our bank account.

INSURANCE: Please note: Life-Form Taxidermy DOES NOT arrange for the insurance of your consignment whilst in transit, as the insurance will be arranged by the freight agent. Attached please find IMPORTANT information with regard to the insurance cover taken for your consignment. Should you wish to insure your consignment for a different value to the attached schedule, please advise us in writing so that the freight agent may liaise with the Under Writers in this regard and advise you accordingly. The premium amounts to 1% of the total sum insured and is payable directly to the freight agent at time of exporting.

We look forward to hearing from you and can advise that we are available for any assistance you might require.

Wishing you a lovely day.

Kindest Regards.

Good morning Ms. Helton,

Thank you for your email. Because you are not indicated in Mr. Hettervig's application as a contact, I cannot divulge specific information regarding his application. However, if Mr. Hettervig would like to send me a note authorizing communication with you, I am happy to give you an update with the application.

Thank you,
Emma

Good morning Ms. Helton,

Thank you for your reply. The application we currently have pending for Mr. Hettervig, PRT-06713D, is for the import of three male lions from Mosahmanzou Safaris in Mozambique. If this is incorrect, please have Mr. Hettervig, or you as his representative, submit revised documentation to me via email so that the proper changes can be made. In regards to the timeline, we are currently reviewing Mozambique's conservation and management of lion populations and as such, it is difficult to provide an estimate for when these findings will be finalized.

Best,
Emma

Good Morning Emma-

I apologize for the delay in getting the corrected application to you. Please see updated application. I hoping you can use the documents that were originally provided as the only change is the location of where the lions here taken was not Mozambique but South Africa. I got Mr. Hettervig's hunts mixed up on the application. Please let me know what else you need to complete the import permit process!

Thank You-

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Marcie Helton (b)(6)

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera leo 3 male lions

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

Shumba Safaris established in 1993 and situated in the North Eastern part of South Africa, known as the Lowveld, home to the jewel of African Game Reserves – The Kruger National Park, and South Africa's prime Big 5 destination.

b. Date wildlife was hunted:

May 7, 2018 to May 20, 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Shumba Safaris outfitter is Jan Dumon

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Life Form South Africa 7 Aluminium Street, White River, South Africa, 1240

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Already submitted with original appliation

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: Life Form
Address: 7 Aluminium Street, White River, South Africa 1240
City:
State/Province:
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

$61,000 for 3 lions

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: (b)(6) Date: 12/7/18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Emma,

Marcie no longer works for us.

Please add me as your contact for Mark Hettervig.

He is copied here to provide the authority for you to speak with me.

Please provide the status of the Lion Import Permit that was filed last Fall.

See email chain below for reference.

Good morning Ms. Helton,

Thank you for your email. I will add this to the file and change it to South Africa instead of Mozambique. If I have any additional questions I will let you know.

Best,

Emma

Good morning Ms. Helton,

Thank you for your reply. The application we currently have pending for Mr. Hettervig, PRT-06713D, is for the import of three male lions from Mosahmanzou Safaris in Mozambique. If this is incorrect, please have Mr. Hettervig, or you as his representative, submit revised documentation to me via email so that the proper changes can be made. In regards to the timeline, we are currently reviewing Mozambique's conservation and management of lion populations and as such, it is difficult to provide an estimate for when these findings will be finalized.

Best,

Emma

Dear Mr. Hettervig,

We are pleased to have this opportunity to assist you with the forwarding of your trophies hunted with Shumba Safaris. We trust that you had a very enjoyable and memorable experience!

PLEASE NOTE: as you have Lion trophies included in your order, import permits will be required from US Fish & Wildlife to enable you to import the Lion trophies into your country. We will require that you obtain this import permits nearer to completion of your order.

Please check the attached order to ensure that all the trophy items required are reflected on your order. As the issuing of export permits can take up to 60 days, we would appreciate receiving your confirmation that your order is correct at your earliest convenience to enable us to make application for the export documentation soonest.

It has come to our attention that U.S. Fish & Wildlife advised that any trophy consignments entering the U.S. with documentation that is not in the client's full names, will now be sent back to the country of export for correction.

In lieu of the above, please confirm your full legal name and address as reported to the US Social Security Administration to prevent any difficulties during the clearance of your consignment on arrival in the U.S.A.

Important General Information on the USDA/APHIS perspective.

USDA Approved Taxidermist or Tannery (Fur Dressing Company)

It is important to note that most US Taxidermy Studios or businesses contract the tanning of animal hides to a professional fur-dressing company or tannery for the purpose of rendering a product acceptable for taxidermy mounting or the manufacture of a final product.

Subsequently, your appointed US Taxidermist may direct your shipment to be expedited directly to the fur-dressing company they work with. In some instances they may also direct your shipment to be expedited directly to their studio or premises. Most importantly, it is always advisable to ensure that the US Taxidermy that you appoint to handle the final preparation of your trophies is USDA Approved.

The above is applicable to any, (dip and pack only), ruminant trophies (antlers/horns - of hoofed animals) and especially where swine trophies (Warthog and Bush pig), is contained in the shipment. Shipments containing Primates, Rodents or Civet Cats may possibly require additional filing with the CDC and U.S. Department of Public Health.

We would kindly like to request that you provide us with the Taxidermist's address to which your consignment should be delivered as well as your Clearing Agent information..

PLEASE NOTE: Life-Form Taxidermy does not accept responsibility for hair slip or damage to skins which are only dipped and shipped, as we have no control over field preparation or tanning processes used by other companies.

TAGGING OF TROPHIES: Please note that where more than one of the same species is received at our studio, they will be reflected on your order as "A" ; "B" etc. according to size, "A" being the largest.

We can advise that dip and pack consignments, are generally ready for handover to our freight agent within two to three months from full payment, provided the Outfitters supply us with all the relevant paperwork at time of delivery of the trophies to enable us to apply for the necessary export documentation timeously.

In order for us to begin preparing your trophies, we do request full payment, which can be made by wire transfer into our Bank account (details included on page 3 attached). **Please ensure that your order number (50016) is stated on the transfer.** Kindly note that payments may be made by a cashier's cheque mailed to our above P.O. Box address, however payments received by means of a cheque may take 10-12 weeks to be cleared. We kindly request that payments be made directly into our bank account.

INSURANCE: Please note: Life-Form Taxidermy DOES NOT arrange for the insurance of your consignment whilst in transit, as the insurance will be arranged by the freight agent. Attached please find IMPORTANT information with regard to the insurance cover taken for your consignment. Should you wish to insure your consignment for a different value to the attached schedule, please advise us in writing so that the freight agent may liaise with the Under Writers in this regard and advise you accordingly. The premium amounts to 1% of the total sum insured and is payable directly to the freight agent at time of exporting.

We look forward to hearing from you and can advise that we are available for any assistance you might require.

Wishing you a lovely day.

Kindest Regards.

Thank you for your inquiry.

Can you please provide the application number for Mr. Hettervig and authorization that you have permission to ask for this information on his behalf?

Best regards,

Amy Brisendine

****

Please review the U.S. Fish and Wildlife Service's Office of Law Enforcement's webpage on importing and exporting commercial wildlife shipments. Contact the Office of Law Enforcement to see if your situation applies.

Wildlife (including parts and products) imported or exported from the U.S. must be declared to the U.S. Fish and Wildlife Service. Please contact the Wildlife Inspector at the appropriate designated port to learn the requirements for your shipment.

Contact USDA-APHIS to determine their quarantine and health certificate requirements for import and export. Visit their website or call the National Import Export Services (NIES) Call Center: 301-851-3300.

Please check with the CDC for their requirements.

Contact the State and foreign country to check on their requirements.

We encourage permit applicants to review our tips and reminders for completing applications.

We appreciate your time and consideration.

Good morning Mr. De La Cruz,

Yes, I have received confirmation from Mr. Hettervig and have added the new contact information to the file.

Thank you,
Emma

OMB Control No. 1018-0093
Expires 08/31/2020

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

PRO CARGO USA 16619 MORALES ROAD HOUSTON TEXAS 77032 — SELF ADDRESSED ENVELOPE ENCLOSED

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

CINDI RULON —— CINDI.RULON@PROCARGOUSA COM 281-220-3176

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   PANTHERA LEO LION

   b. Sex (if known). MALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

   RIETBOKLAAGTE 642, MAGUDA, PONGOLA , 3170
   DISTRICT PAULPIETERSBURG, PROVINCE KWAZULU NATAL

   b. Date wildlife was hunted:

   May 7, 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

PROFESIONAL HUNTER IS SEAN GARRETH KELLY
GARY KELLY SAFARIS 21 SPRINGSIDE ROAD HILLCREST KWASULU NATAL SOUTH AFRICA 3610

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

UNIVERSAL TROPHY SERVICES
PLOT 114 BASHEWA
PRETORIA 0056, SOUTH AFRICA

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). ------PERMITS ATTACHED---------

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	UNIVRSAL TROPHY SERVICES
Address:	PLOT 114 BASHEWA
City:	PRETORIAL 0056
State/Province:	SOUTH AFRICA
Country, Postal Code:	

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Additional information is attached------

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

Additional information is attached-------
