c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

Additional information is attached--------

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: (b)(6) _____ Date: 8/27/18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Madeline Demaske – Lion permit additional application information:

9a) Do you have any information regarding the population status or trend data on the species hunted?

This information was provided by our outfitter: The current property forms part of the Wild Managed population of Lions in South Africa, as defined in terms of the Biodiversity Management Plan for Lion in South Africa. Furthermore, the property is contributing to the meta-population for the province of KwaZulu-Natal and subscribes to the principles for meta-population management as defined by the provincial conservation authority (Ezemvelo KwaZulu-Natal Wildlife). There are currently 18 lions on the property, of which three are available for offtake. Such offtakes will mimic natural population changes wherein old males are forced out of the pride structure. The property has had lions for the preceding 10 years and have been managed to ensure the genetic integrity of the prides on the property.

There are 18 lions on the concession. 5 Males, the rest are females & cubs. We have been advised that there are too many Lions on the concession & have been allocated 3 to take off.

b) In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community or government?

This information was provided by our outfitter: Hunting permit and licenses fees are paid to the provincial conservation authority, Ezemvelo KwaZulu-Natal Wildlife, with such funds being utilized to manage sustainable resource use in the province. The funds assist in the processing of hunting permits wherein the sustainability of each application is assessed and approved when appropriate.

The funds are used in various ways, but mainly for paying scouts for anti-poaching initiatives, the re-establishment of the species, security, upliftment of the area including fencing & roads.
The permit costs are R1000 & the concession fee is $35 000

c) Do you have information on other funding activities that are being carried out, or were carried out by the safari outfitter, professional hunter, concession holder or land owner that provide a conservation benefit to the species being hunted/species hunted?

Over $60,000 USD was given to the conservancy. This money has been ear-tagged for ranger education, community education, improvements to the property, and lion research. Currently, there are rangers controlling and protecting the reserve 24 hours a day. Much of the funds from the lion hunt will be directed into educating such rangers with the hopes to add additional rangers to the full-time patrol of the property. The remainder of the $60,000 will be directed to local communities to build schools, facilitate clean water treatment, provide jobs, food and promote health.

The safari outfitter funds the landowners through the concession fees paid by clients. These funds are used for the protection of game. Should there be no fees, there will be no protection of the game initiatives (scouts).

7. The holder of the permit shall, at the request of a person authorised in terms of applicable legislation so to demand, forthwith produce such permit to such person.

8. This permit shall be invalid until such time that it is signed by the permit holder.

9. This permit shall be deemed invalid if it is lost or destroyed and no copy thereof shall be issued.

10. The prescribed fee payable for the issuing of this permit shall not be refunded.

11. If the holder of this permit contravenes or fails to comply with any condition or requirement to which this permit is subject, he or she shall be guilty of an offence.

12. This permit shall be subject to any applicable norms and standards in existence at the time of issuance of this permit.

13. The issuing authority shall determine the species and restricted activities for which this permit will apply.

14. If this permit applies to hunting, the holder of this permit must: a. Have a copy of this permit authorising the hunt, on his or her person during the hunt: b. Within 21 days after the hunt, furnish the issuing authority with a written return on the hunt stating: i) the permit number and date of issuiance of the permit ii) the species, sex and number of animals hunted, and iii) the location where the hunt took place.

15. Return the original permit to the issuing authority forthwith after expiry of the permit.

16. To be completed by the landowner after completion of the hunt: Name and signature of the landowner... Species, number and sex of the animals hunted

17. This permit/certificate is subject to the provisions of any applicable law in force during the period of validity of the permit/certificate.

18. The holder of this permit may also allow the holder of a Special Game Licence to hunt the game shown herein during the Closed Season. However if this permit applies to a specimen listed in the Threatened or Protected Regulations the person hunting the animal must also be in possession of a permit issued by Ezemvelo KZN Wildlife to enable the hunting to take place.

19. The holder of this permit may also allow the holder of a relevant Game Licence to hunt the game shown herein. However if this permit applies to a specimen listed in the Threatened or Protected Regulations the person hunting the animal must also be in possession of a permit issued by Ezemvelo KZN Wildlife to enable the hunting to take place.

20. The attached return of the hunting permit must be completed by the holder. The completed permit to be returned to the Chief Executive, E KZN Wildlife, P O Box 13053 Cascades, 3202 or emailed to permits@kznwildlife.com upon expiry. Failure to comply with this condition may jeopardise the issue of future permits.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
You may find instructions on how to make your application complete and help avoid unnecessary delays at the following link: .

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
DESTRUEL	MATHIEU	KEVIN	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
SANTA ROSA	CALIFORNIA	95401	SONOMA	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)
NA

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 2, nonrefundable processing fee.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions.* [50 CFR 13.11(d)]

X 2. Certification. I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

COPPERSMITH INC.
434 ROZZI PLACE
SOUTH SAN FRANCISCO, CA. 94080

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

MATHIEU KEVIN DESTRUEL
707-576-3333
KEVIN@MEADOWARK.COM

JEREMY DELACRUZ
650-872-1225 EXT. 109
JDELACRUZ@COPPERSMITH.CO.

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

(No) Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name. LION PANTHERA LEO

   b. Sex (if known). MALE.

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   NA

   b. Date wildlife is to be hunted:

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   TANZANIA.
   KIZIGO GAME RESERVE E2. [MANYONI – SINGIDA].
   S. 06.78329°
   E. 034.39873°.

   b. Date wildlife was hunted:

   12. AUGUST. 2018.

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

AFRICAN BUFFALO SAFARI TRACKERS.

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

DAR ES SALAAM - TANZANIA.
AFRICAN BUFFALO SAFARI TRACKERS.
P.O.BOX 22758.
DAR ES SALAAM - TANZANIA.

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). See attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: AFRICAN BUFFALO SAFARI TRACKERS.
Address: P.O. BOX 22758.
City: DAR'ES.SALAAM.
State/Province:
Country, Postal Code: TANZANIA.

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

NA

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

NA

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

NA

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

    Applicant's signature: (b)(6) Date: 9/6/2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

USFWS ESA Lion Trophy Permit Application #07512D

1 message

Harcum, Heather <heather_harcum@fws.gov> Tue, Sep 10, 2019 at 3:00 PM
To: (b)(6) jdelacruz@coppersmith.com

Good morning Mathieu,

I am reaching out in regards to your application to import an African lion trophy (*Panthera leo melanochaita*) with African Buffalo Safari Trackers from the Kizigo Game Reserve in Tanzania. This application was received on September 12, 2018.

We are in the process of reviewing applications for these imports and would like to receive the most updated information about the importer. As you may well be aware, the USFWS is now considering applications on a case-by-case basis, as opposed to making country-wide findings. As such could you please respond to the following:

1. Confirm your physical address (currently we have (b)(6) Santa Rosa, CA 95401).

2. An operator report from African Buffalo Safari Trackers which includes, but is not limited to-
- Population status or trend data on the lion population (countrywide and local to the game reserve/hunting block)
- Information on the fees paid (e.g., license or trophy fees), recipients of these fees, and the use of these fees
- Information about the safari outfitter, professional hunter, concession holder/land owner, and their activities to conserve the species (e.g., habitat management/improvement, anit-poaching activities and success in those efforts, efforts to address human-lion conflict, efforts to maintain prey populations, lion population monitoring, and community benefits). Copies of recent reports submitted to TAWA would be particularly helpful.

Thank you and please feel free to reach out if you have any questions or concerns.

Best regards,
Heather Harcum

KEVIN MATHIEU DESTRUEL

Report: LION (PANTHERA LEO MELANOCHAITA)
Prepared by:
Gamshad Gamdust
Professional Hunter.

The Lion harvested in Kizigo Game reserve-Tanzania with African Buffalo Safari Trackers. .:

1. Client: Kevin Mathieu Deustruel: (b)(6) , Santa Rosa, CA 95401.
2. All relevant fees are paid to Tanzania Government-Tanzania Wildlife Authority for the harvest of the said Lion. Receipt, Hunting Permit and Invoices are attached.

3. Company Report:

   Population of Lions: The Kizigo Game Reserve as a whole occupy a land of 4000 square kilometres of area, The Hunting Block, Kizigo Game Reserve E2 of which the Lion harvest took place is about 1200 square kilometre, on its southern part bordering with Rungwa Game Reserve. Adjacent on east-southern is bordering Ruaha National Park-There is a high dense of Lion population moving around in circle of these three areas. In Kizigo area by itself we have observing about 8 pride of about 6-10 Lion, Liones and cubs each pride, at least 5 pair of only males and about

6 single old mature lions moving around between 4 potential water springs.

Tanzania with land of total 1 million square kilometres has the largest number of lions compared to other African countries or world as a whole. 300.000 square kilometres is National parks and Game reserves hence accommodating between 14,000 to 15,000 Lions country wide.

4. African Buffalo Safari Trackers is committed doing intensive conservation on 24/7, 365 days basis in order to prevent wasteful of the resource mostly within its hunting blocks. The Moral is Conservation and Utilization. We value, protect and preserve the natural environment and of wildlife, Lions being among them. Attached to this is the value and volume of our commitment to conservation as well as local community Development.

5. Government of United Republic of Tanzania, a country of which our hunting blocks are, Beside the work, burget and plans of the Anti-poaching unit, The Government committed to utilize the fees comes from hunted trophy fees in this order:

   25 percent of the direct trophy fees goes to WWF of which is anti-poaching system to enhance and smoothen their operations whenever and wherever will be needful and other 25 percent of the remaining direct trophy fees goes to local community areas in order to help the local government to assist the need of its people within the surrounding of the specific hunting blocks so as country wide program. Attached to this see the below on the report of lion conservation in Tanzania.

Sustainability of Lion Trophy Hunting in Tanzania

Introduction

Successful conservation of large and dangerous animals, such as lions, depends primarily on the size of the available habitat. In this respect Tanzania is a model to others, with more than a quarter of their land set aside for wildlife conservation and hosting the world's largest lion population. Accordingly, Tanzania has an important contribution and responsibility for the conservation of this species.

Lions are an iconic species and this focuses public and political attention on their conservation (Macdonald et al. 2016). As a

consequence, conclusions about the best management practice are often influenced by moral and ethical considerations. On such a divisive issue, even the best available science seems to be unable to produce unambiguous results. Hence, sometimes it is necessary to make recommendations and decisions in a field of contradictions.

Objectives

This report aims to provide a comprehensive summary of the facts necessary for a SRG decision about the sustainability of lion trophy hunting in Tanzania. It takes into account the stricter rules for trade in hunting trophies adopted at CoP17 (Resolution Conf. 17.9).

With the reports of UNEP-WCMC (2016), TAWIRI (2016), and Macdonald (2016), three excellent summaries of the implications between lion trophy hunting and conservation became available and it was not the goal of this report to replicate their content. Instead, we focus on combining the data provided by these three studies with conclusions drawn on the basis of our firsthand experience during the field mission, the information gathered during long discussions with those who actually work on the ground for the conservation and management of the Tanzanian lion population, and selected literature which addresses recent concerns about the conservation of this species.

Information Base

Compared with most other threatened species, the available knowledge about lions is extensive and comprises several hundred peer reviewed publications and reports. However, in the knowledge that the range of this species extends over the major part of Africa, it is also important to take into account the regional differences in habitat, human-wildlife conflicts, conservation policy, wildlife management, and population structure that exist.

During the course of the SRG field mission an extensive amount of information has been gathered. Together with the published literature (especially TAWIRI Wildlife Division and TAWA 2016), this provides the basis for the following evaluation.

It has not been possible to personally verify all the unpublished data provided by Tanzanian authorities during the course of the SRG field mission. However, during detailed discussions with their national experts, the presented facts held up to scrutiny and did not reveal inconsistencies. This allowed greater confidence in the accuracy of the available information and the conclusions based on them.

Monitoring

Approaches to estimate the size of lion populations are usually based on spoor counts (Davidson and Ellitot n.d.) and call-up surveys (= lion collapse technique). Both methods require considerable extrapolation and are susceptible to bias due to properties of the landscape (Funston et al. 2010). Due to the usually high coefficient of variation (e.g. Kissui 2009) for data from distance-based spoor counts of lions, abrupt declines are probably not discernible below 20% and only above 50% it

is likely to detect them (Durant et al. 2011). Even less reliable are estimates of the lion population size based on the prey-biomass regression (Kiffner et al. 2009). For elusive species, such as lions, the effort of a survey often influences the assessment of the number of individuals inhabiting an area.

Only in very few cases, long term observations allow individual counts and more accurate assessments of the population size. Recognition of individuals is more difficult in lions than in large carnivores with a complex pattern and requires the utilization of less obvious individual differences, such as whisker-spot patterns (Pennycuick and Rudnai 1970; Anderson et al. 2010). Nevertheless, a combination of strategically placed camera traps and random encounter models (REMs) can provide reliable data (Cusack et al. 2015). Detailed knowledge about lion populations mainly originate from national parks (e.g. Serengeti NP) where no hunting is allowed. Inferences about lion presence and abundance outside of protected areas are deduced mainly from an analysis of human-wildlife conflicts (Ikanda and Packer 2006). Missing calibrations between different surveillances methods often make studies incomparable and prevent an accurate calculation of population trends (Brink et al. 2013).

In average, each year since 2005 one local lion population has been surveyed in Tanzania (TAWIRI Wildlife Division and TAWA 2016). This is probably sufficient to obtain an overview of the national lion population. By taking the huge number of wildlife protection areas and the occurrence of lion populations on unprotected land into consideration, it will never be possible to conduct frequent surveys of all lion populations and deduce detailed trend analyses. Currently, there are six long-term monitoring projects with individual recognition of the specimens and in Selous observations on 7 - 9 prides reach back 40 years. However, some important lion strongholds (e.g. Ruaha-Rungwa) are not included in this program. Updates about the overall population size and trends are not provided as frequently as it would be possible due to the availability of new data. Tanzania seems to be aware that solid population data are a prerequisite for sustainable use of lions and willing to further invest in surveys.

Distribution and Habitat Protection

According to the area dedicated to the protection of wildlife, Tanzania is one of the world's leading countries in nature conservation (Brockington 2008) and lion clearly benefits from this policy. Of 516.900 km2 of permanent lion presence range in Tanzania, 57.838 km2 (11,4 %) lie within National Parks and 304.400 km2 (61,0 %) are designated as hunting areas (Mésochina et al. 2010). Ikanda and Packer (2006) estimate 81 % (13.600) of the lion population live in areas protected by National Parks (17,4 %), hunting areas (46,0 %), and areas such as forest reserves (17,6 %).

Figure 1: Protected areas in Tanzania from TAWIRI (2016)

Figure 2: Distribution of the Tanzanian lion population from Mesochina et al. (2010)

5

Sustainability of Lion Trophy Hunting in Tanzania

Population Size

The estimate for the lion population of Tanzania presented by TAWIRI (2016) is based on Ikanda and Packer (2006) and Mésochina et al. (2010) and accounts for 17.564 (12.208 – 19.320) and 16.800 respectively. Both reports break down the population estimates to the level of regions,

ecosystems, or protected areas. Information obtained by surveys since 2010 (e.g. Laizer 2014; Crosmary et al. 2016) is summarized in Table 1 of TAWIRI Wildlife Division and TAWA (2016) but did not lead to an update the total population size. Macdonald (2016) cites Dickman (in prep.) with an estimate of 9.900. This study is currently unpublished

and no information about the methodology is available. These estimates differ considerably and indicate a decline but they also demonstrate the importance of Tanzania for the global conservation of this species.

In general, lion density is highest in national parks (e.g. 22/100 km2 in Ngorongoro) and declining with the protection status of the area. In comparison, the lion density is only 5,4/100 km2 in Selous (Crosmary et al. 2016), where elephant poaching might have enhanced the food supply a few years ago. However, it should be considered that for lions habitat preference and habitat capacity can vary considerably according to the abundance of prey and availability of water (Spong 2002; Hayward et al. 2007).

6

Figure 3: Range and population size for lions in Tanzania after Ikanda & Packer (2006) and Mesochina et al. (2010)

Population Trends

Poorly regulated hunting on lions presumably was a major cause of population decline in previous decades (IUCN 2014). The only attempt to actually calculate populations trends for Tanzanian lions predicts a high chance for a decline of the East African lion metapopulational (Bauer et al. 2015a). However, whilst this publication presents a valuable compilation of data several problems with the interpretation of the data exist which affects their assessment of trophy hunting in Tanzania:

- ·The use of unweighted means to summarize population trends emphasizes changes in small populations. This is best explained by an example: Population A declines from 10 to 5 specimens = -5 specimens and -50% Population B increases from 500 to 550 specimens = +50 Specimens and +10% Unweighted means would result in an average population decline of 20%, even though the total population has increased by 45 specimens. There are arguments pro and against such a statistics and if they are used it is important to beware biased conclusions.

- ·The extrapolation of trends beyond the information-content of the available data has led to an exaggeration of the threat for a decline. Depending on the applied method, every population survey will report a certain degree of uncertainty about the estimated number of specimens. Hence, even for a perfect stable population at the maximum of the habitat capacity, the survey will indicate that the population could be smaller or larger than the estimated mean. In figure 2, 3, and 4 of Bauer et al. (2015b), for populations with a $\lambda \approx 1$ the grey area represents the likelihood of a decline and the white area represents an equal likelihood for an increase. However, the calculation of the cumulative probabilities only focuses on the possible decline and extrapolates it for three generations. This can lead to predictions of considerable probabilities for population declines for most

likely stable populations and conclusions that are far away from reality. Furthermore, these considerations include no positive effects that a previous decline might have on the population growth by increasing availability of preferred habitats and food and reducing intraspecific conflicts.

7

Sustainability of Lion Trophy Hunting in Tanzania

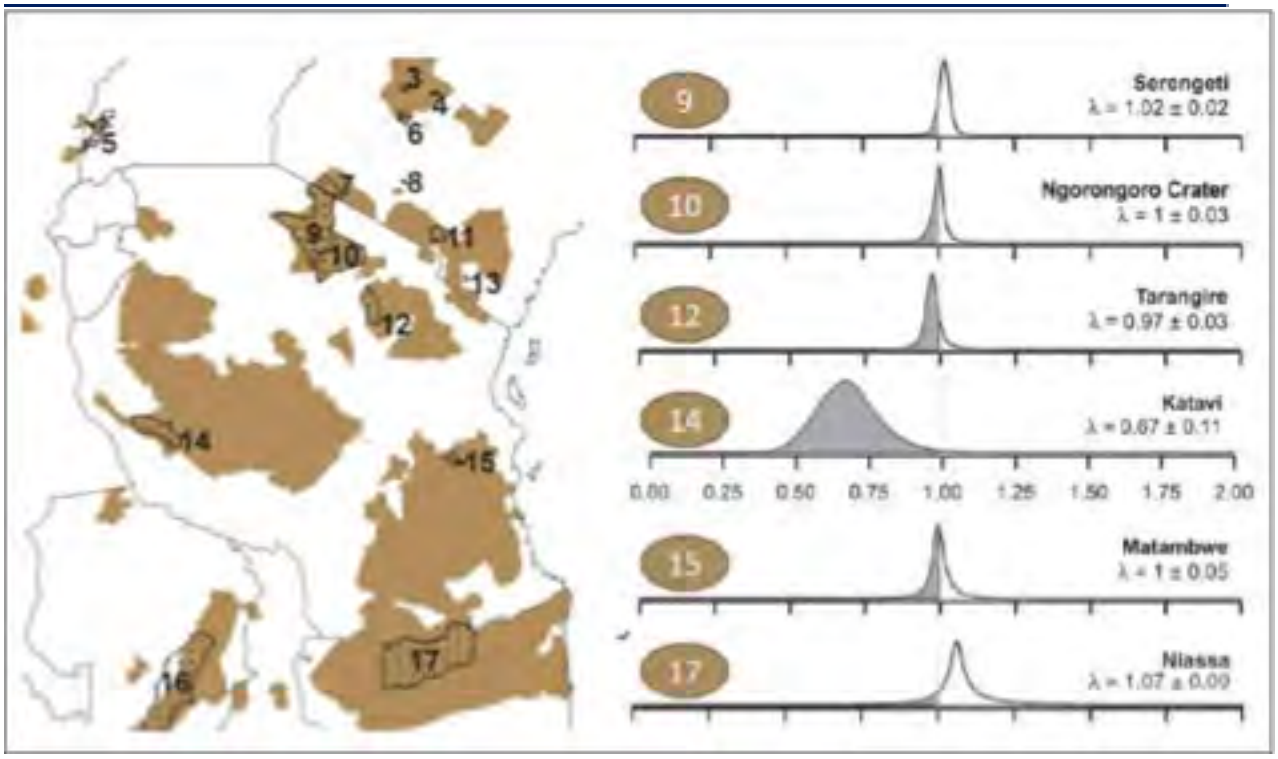

Figure 4: Trends for Tanzanian lion populations from Bauer et al. (2015) (modified)

Much attention has been focused on the decline of lions in Katavi. The local decline to the brink of extinction reported by Bauer et al. (2015a, 2016) after Caro (2011) even the imprecision of the times series and survey methodology was acknowledged (Bauer et al. 2015b) has been contradicted by Kiffner et al. (2009), Riggio et al. (2016), and Tim

Caro himself (DeMarco 2015). A possible cause might be a previous decline in large ungulates (Caro 2008) and consecutive lack of prey or unregulated hunting on lions. According to current knowledge, a

severe decline has happened but a recent case of predation on humans, tourist photographs of a reproducing pride and hunting success in adjacent areas provided evidence that the lion population of Katavi is not extinct. Such cases are a test for the quality of Tanzania's conservation management and this point has been thoroughly discussed during the SRG Field Mission. In recognition of the necessity to carefully survey the national populations, the Tanzanian Minister for Natural Resources and Tourism ordered to conduct a nationwide survey of lions and leopards and especially the situation in Katavi. Several steps have already taken place, including holding a planning workshop, successfully soliciting donor funding, and drafting a detailed project description (Ikanda et al. 2016). The start is planned for May-June 2017, after the rain season.

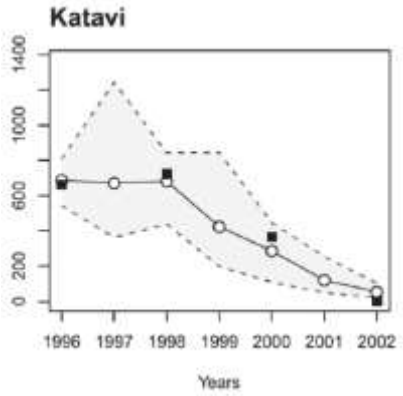

Figure 5: Population trend for lions in Katavi after Bauer et al. (2015a)

8

Sustainability of Lion Trophy Hunting in Tanzania

In summary, of the six lion populations of Tanzania included in the study of Bauer et al. (2015a) the available information does provide an indication for a decline in Katavi and Tarangire, a stable development in Ngorongoro and Matambwe and an increase in Serengeti and Niassa. These developments have not been evaluated in relationship to the habitat capacity and are therefore difficult to interpret. For the

Tarangire National Park, a thorough survey has recently demonstrated that the population is not in immediate danger more conservation efforts are needed to stabilize or revert the trend (Laizer 2014).

For the Selous Game Reserve, a recent survey revealed that lion densities have remained stable and even increased in some sectors since 2009 (Crosmary et al. 2016). This contradicts concerns about the sustainability of trophy hunting in the reserve, previously expressed by (Packer et al. 2011).

It has to be assumed that human wildlife conflicts will increasingly cause population declines, especially in small sanctuaries and unprotected areas with a high density of pastoral cattle. For example, the lion population within Selous Game Reserve remains stable at a level of 4000 specimens whereas it decreased from 3600 to 1000 in the surrounding area.

Political Commitment

The investment in scientific research about wildlife conservation, the establishment of TAWA, and the engagement of high ranking officials during the SRG field mission convincingly demonstrate that sustainable wildlife conservation management has a high priority in Tanzania. A number of recent reforms of the wildlife regulations substantiate the political commitment of Tanzania to adopt best practice models and contribute to their improvement. Nevertheless, past has shown that illegal hunting fluctuates in synchrony with governmental priorities and continuity of the efforts and investments in conservation will remain a crucial factor.

If the revenues generated by the wildlife sector drop significantly, other forms of land use (e.g. mining) might become more attractive and human-wildlife conflicts can lead to considerable political pressure. Under such circumstances, the current nature conservation friendly political course might become a major burden before elections.

Legislation

It is beyond the capabilities of this field mission to explore all details of the respective legislations. Having said this, it is still possible to report that every aspect of hunting and conservation seems to be sufficiently covered by a legislation which meets the requirements of a modern constitutional state and is in accordance with international best practice. Details about specific aspects of the legislation are provided in the respective sections about the hunting management and human-wildlife conflicts. In both respects Tanzania has made considerable progress over the past decade.

The major parts of the Tanzanian wildlife legislation are:

- ·Wildlife Conservation Act No.5 of 2009
- ·Wildlife Conservation (Tourist Hunting) Regulations of 2010 & 2015
- ·Tanzania National Parks Act (CAP 284 R.E. 2002)
- ·Ngorongoro Conservation Area Act (CAP 282 R.E. 2002)
- ·Wildlife Conservation (CITES Implementation) Regulations of 2005 (currently under review) For the scope of this report it might be noteworthy, that all game is owned by the state and currently no resident hunting on lions is allowed. From the point of conservation, the transfer of ownership rights for a lot of land after 12 years of irregular occupation has the potential to downsize sanctuaries piece by piece. Shooting a lion is only allowed during the hours of darkness to ease tracking of wounded specimens.

Conservation

In Tanzania, several factors are responsible for the (unnatural) death of lions and have the potential to contribute to the

decline of this species.

The coexistence of a large and dangerous predator with humans usually fails as soon as a marginal human population density is exceeded (Bauer et al. 2016). In Tanzania, traditional cattle faming culture and rapid population growth exacerbate this conflict and results in a high number of retaliation killings.

Transfer of diseases from

domestic animals is another cause of death for lions and pathogens such as anthrax or rabies can cause local declines. The

abundance of outbreaks increases with the proximity human land use and inbreeding (Kissui and Packer 2004).

Poaching lions for material gain occurs at least in western Tanzania (Borgerhoff Mulder et al. 2009) but is relatively rare nationwide. Currently, the international marketing of lion bones seems to be no serious problem in Tanzania.

Separating the living space of lions and humans as much as possible is the most effective way to reduce human-wildlife conflicts and this can only be accomplished is by extensive dedication of land to wildlife conservation or fences which are a conservation problem of their own (Creel et al. 2013; Packer et al. 2013a,b).

Similarly to the loss of habitat, lack of prey does not result in countable deaths and therefore its effects are difficult to assess. The reproductive success and survival of lions is positively and the number of attacks on humans negatively correlated with prey availability (Haas et al. 2005; Packer et al. 2005) and if hunting on ungulates for trophies or bush meet is poorly regulated the lion population will inexorably decrease.

Under these circumstances, the only form of sustainable land use which can conserve the lion habitats is tourism. Where the landscape and accompanying fauna is not attractive enough and

Figure 6: Potential reasons for an increased morality and a decline of the size or growth of the lion population in Tanzania

the necessary infrastructure for photo tourism is not available, the only remaining option to generate income from lion habitats is hunting. Essentially everyone we spoke to in Tanzania, which included representatives of all main stakeholders (even those that were critical of the governments past efforts to conserve the species), agreed that trophy hunting has a clear conservation benefit for lions.

Hunting is a selection factor and has the potential to influence the social and genetic structure of a lion population. Traces of previous decades of unsustainable hunting are probably still responsible for differences in the population density and age structure between national parks and less protected areas. In contrast, current offtake rates are most likely compatible with an increase of lion density and higher representation of older cohorts even this might be prevented by other source of mortality. In order to ensure sustainability, it is necessary to further reduce the

effective harvest for males under 6 years of age and we had the impression that Tanzania is working towards this goal.

12

Sustainability of Lion Trophy Hunting in Tanzania

Management

With a mandate from the president, the Director of Wildlife is the supreme authority for all matters concerning wildlife. Recently, a new government agency, TAWA, has been founded and entrusted with the management of wildlife outside national parks and Ngorongoro Conservation Area . This should ensure that all income generated from hunting is invested in the management and protection of wildlife. However, TAWA also has the agenda to develop tourism and under this mandate the income from sustainable wildlife management can still be diverted into projects that do not benefit conservation or even counteract this objective.

Figure 7: Fees and revenue sharing from trophy hunting in Tanzania after TAWIRI (2016) and information received during the field mission.

The Tanzania Wildlife Protection Fund (TWPF) is replenished solely by a share of the revenues from the hunting sector collected for the block fees, issuing of hunting permits (Wildlife Subsector Statistical Bulletin 2013) and observer fees for every person accompanying a hunter (Anonymus 2013). All expenses for the staff and infrastructure of the rangers

under the administration of TAWA have to be met from these incomes. Hence, the quality of the protection and all anti-poaching activities for a large part of the lion range directly depend on the income generated by hunting. This income dropped by about 30% following the import bans for lion and elephant trophies enacted by the EU and the USA.

During our field mission several officials of the wildlife management convincingly described how hunting on lion is managed in Tanzania.

This includes the implementation of all broadly accepted recommendations (Packer et al. 2011; Lindsey et al. 2013). The core element is the allocation of quotas to hunting lots according to the regional lion density, previous hunts, and the mortality from other causes (e.g. human-wildlife conflicts). More information on the work of the Tanzanian wildlife management authority is provided in the following sections wherein quota and sex and age restrictions are discussed.

13

Sustainability of Lion Trophy Hunting in Tanzania

Tanzania has also published a very elaborate “National Strategy to Combat Poaching and Illegal Wildlife Trade” (Ministry of Natural Resources and Tourism 2014).

Quota

Fertility and survivability of the cubs varies for lions according to availability of prey, habitat protection, demography, landscape and accessibility of water (Kissui et al. 2010). This causes regional differences in the reproductive output of populations. Therefore,

calculating harvesting quota according to the population size, reproductive output and other sources of mortality would be the ideal solution. Even if all available information about the local situation is used to adapt the quota, this requires a very precautionary approach and surveillance of the population development (Creel et al. 2016). However, the required data are usually not available on for lions and therefore hunting quotas are normally based on the size of the habitat and modified according to the available information.

Figure 8: Utilization of lion trophy hunting quota in Tanzania from TAWIRI (2016)

For Tanzania a quota of 0.5/1,000 km2 (with the exception of Selous where 1.0/1,000 km2 is deemed as sustainable) has been proposed (Packer et al. 2011). In 2010 the offtake of lions in Tanzania was reduced by 60% and is now following the above recommendations without indications of negative consequences for the population.

Hunting season	Harvest of lion hunting trophies		
	Number	% of lion population	% of adult male population*
2007	146	0.87	2.17
2008	165	0.98	2.46
2009	132	0.79	1.96
2010	101	0.6	1.5
2011	85	0.51	1.26
2012	50	0.3	0.74
2013	54	0.32	0.8
2014	44	0.26	0.65
2015	39	0.23	0.6

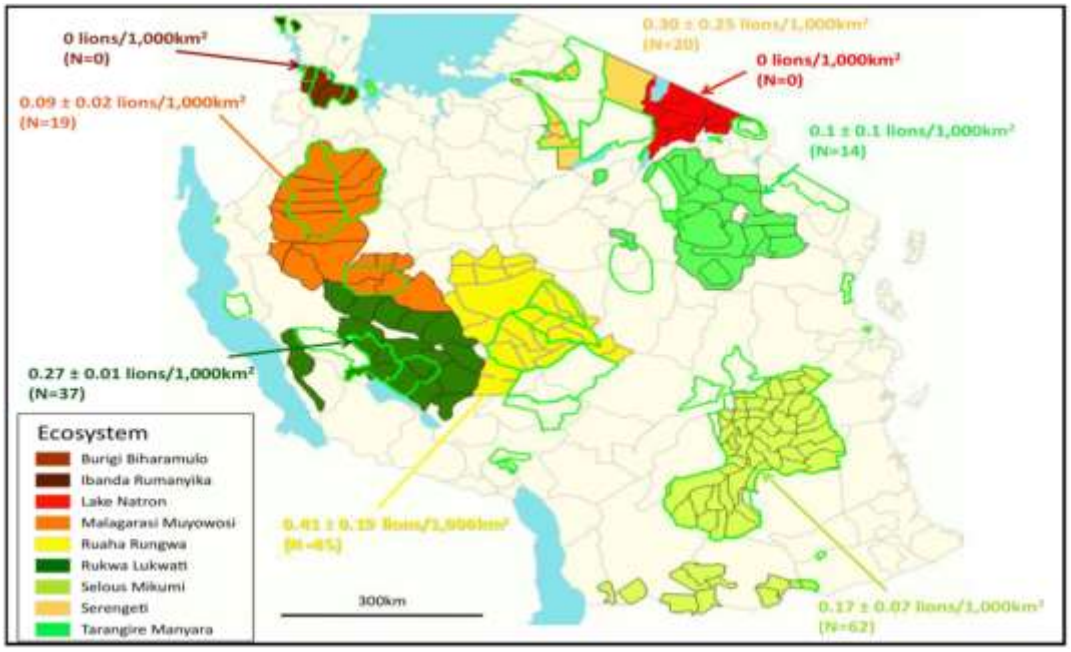

Figure 9: Regional harvest rates for lions since 2011 from TAWIRI (2016)

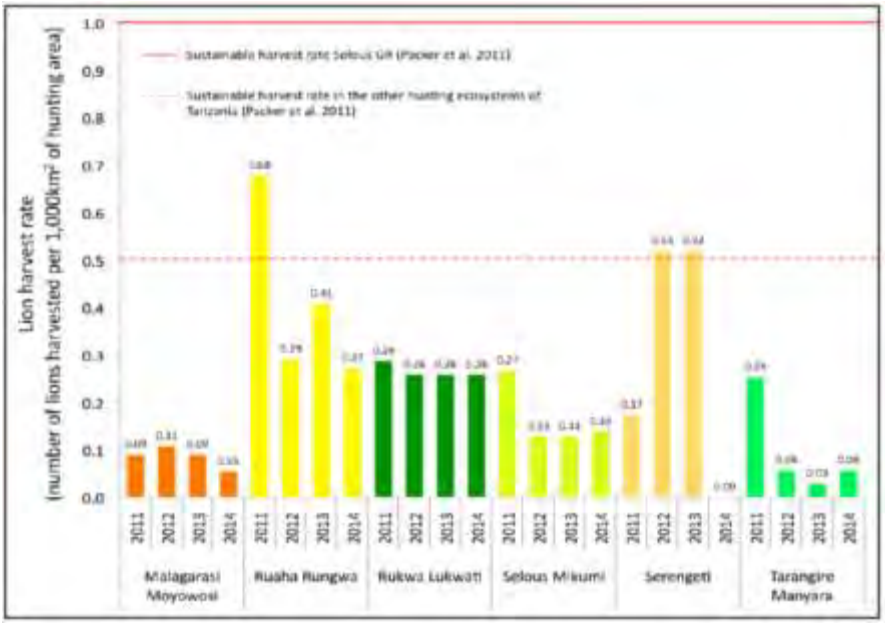
The small-scale allocation of hunting quotas, as it is practiced by Tanzania, provides for an equal distribution of the harvesting. However, the huge workload involved prevents a detailed assessment of every hunting block at short intervals.

Since 2012, the actual harvesting has fallen far below the allowed quota, either because of not locating an appropriate specimen in the presence of a tourist hunter or because of a failure to attract customers to a specific hunting block.

Figure 10: Average harvest rates in the main ecosystem of lion range in Tanzania between 2011 and 2014 from TAWIRI (2016)



15

Sustainability of Lion Trophy Hunting in Tanzania

Sex and Age Restrictions

Age and sex restrictions are strongly recommended for sustainable trophy hunting on lions (Packer et al. 2006, 2009) and were introduced by Tanzania in 2010 under the Tourist Hunting Regulations of 2010. In sections 24(5)(a) and 24(6) of these Regulations (now superseded by section 27 (1) of the Tourist Hunting Regulations of 2015) hunting of females is prohibited, as is the killing of males below 6 years of age. Any professional hunter who guides a client to hunt a lion in contravention of these regulations is considered to have committed an offence and liable for penalties. Trophies assessed to be under 4 years-old are not allowed to be exported and incur a penalty which may include revocation of the professional hunters' license; lions in the 4 - 5 year category are allowed to be exported but still incur financial penalties.

Whereas the sex restriction is broadly accepted, the age criteria probably are not uniformly advantageous in every population. Protection of males until they have completed at least one breeding cycle is essential to prevent a depletion of the gene pool but infanticide

might only be important in areas with high migration (e.g. Serengeti) and less relatedness among neighboring prides (Spong et al. 2002). Local selection and adaptation is poorly understood but probably rather pronounced according to the differences in the size of manes between the lions of Selous and Maasai Mara. Accordingly, the most easily recognizable age-classes might differ regionally and have to be adapted to ease compliance with hunting restrictions (Miller et al. 2016).

However, the frequent disruption of the social structure might have other consequences e.g. the practice and success of social hunting strategies which in turn influence the survival of offspring.

Another reason for an age restriction is to ensure a stable sex ratio. According to information we received during the field mission, hunting does shift the ratio from 1:2 to 1:3 and that should have no serious consequences on the reproduction of the population. A severe deviation could, however, reduce the formation of groups and survival of young males.

An important argument for the lower age restrictions in Tanzania is the assertion that lions usually do not reach an age above 7 years in Selous because they mainly hunt buffalos which entails a high risk for serious injury. No scientific data are available to test this theory besides the difficulty to track down a high number of really old lions for hunting. However, males expelled from their pride have a low life expectancy and it is probably difficult to locate them for hunting before they die a natural death.

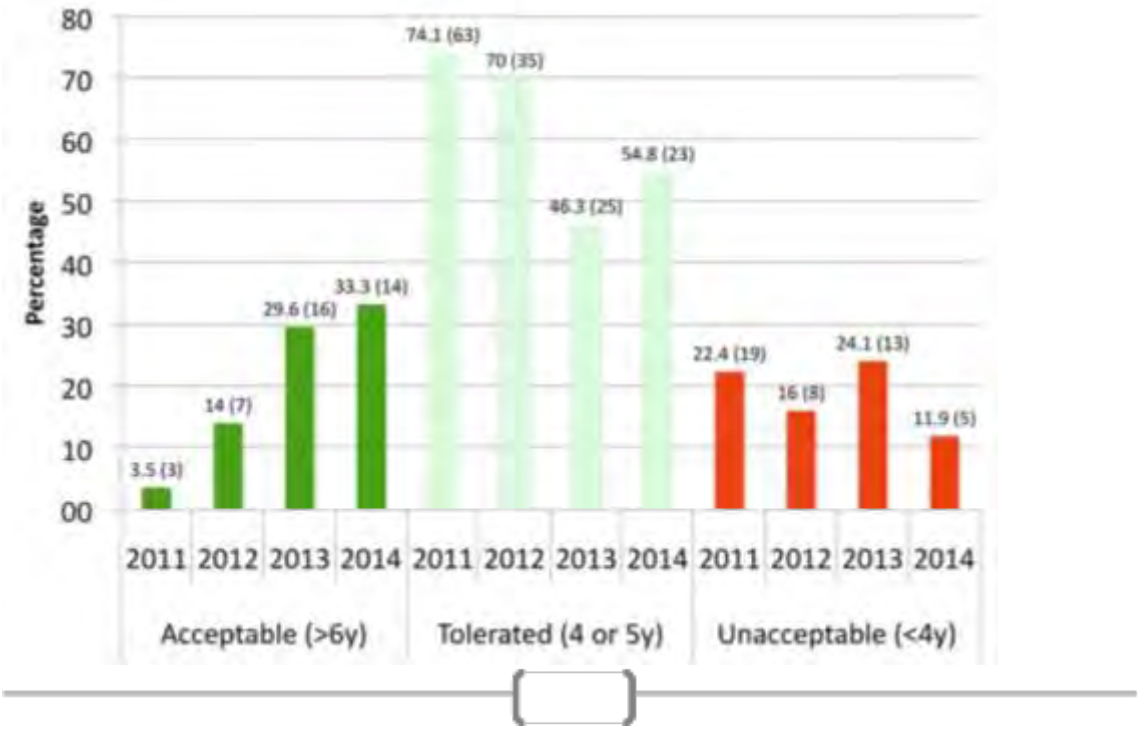
The age criterion, as it is currently practiced in Tanzania, provides an effective protection for young males but does not prevent the killing of reproductive active males. While this practice

does not seem to be detrimental for the population, when done in combination with the density restrictions, it might be possible to

improve the harvesting strategy with more insight into the local reproductive biology of lions.

The main characteristics used for the age assessment of male lions in Tanzania are mane development, pulp closure of premolars, abrasion of teeth, and nose coloration (White and Belant 2016; White et al. 2016). This combination provides very accurate results whereas guides developed for other areas (e.g. Whitman and Packer 2006) would lead to a strong underestimate of the age of lions from Selous.

Figure 11: Change in the age of lions killed in trophy hunting from TAWIRI (2016) (modified)



Compliance Measures

Without proper enforcement, legislation and management cannot take any effect. With respect to lion hunting in Tanzania, the following measures seem to be most important in terms of demonstrating a robust and transparent mechanism for controlling the age of trophies:

- ·Official Scouts appointed by TAWA are required to

accompany every hunt by law.

- ·A Safari return form (figure 13 and 14) has to be completed for each 21 or 28 days safari, whether successful or unsuccessful, which includes details about the circumstances and lion encounters.

- ·The hunting company has to take detailed measurements and pictures (e.g. nose color and extend of mane) as well as blood and skin samples for DNA analyses and deliver them with the skull to the management department.

- ·Since 2011, Tanzania has signed a Memorandum of Understanding with IGF Foundation which is a French based International organization for wildlife Conservation . IFG Foundation assists the Wildlife Division and now TAWA in organizing the collection and surveillance of lion trophies. Skulls are allocated a unique identification code and presented 'blind' to the Division for logging – i.e. without the client details. The lion skulls are measured and one upper pre-molar tooth is extracted and retained by the Wildlife Division for age assessment (by determining the width of the pulp cavity via X-ray radiography). According to all the collected data the age of the lion is assessed. These ageing sessions are conducted by Wildlife Division/TAWA staff in collaboration with experts from TAWIRI and IGF Foundation

- ·Blind controls of the age verification process have been carried out by independent researchers and species specialists

- ·All information is stored in a database. Tanzania's records of its implementation of the age restriction system are open to scrutiny to the international scientific community and returned forms and data outputs were examined during the field mission.

- ·A CITES export permit will not be issued unless all the above paperwork has been submitted and ageing verification checks completed.

- ·Beside a monetary fine, the denial of export permission and the reduction of the quota are used to encourage compliance.

Taken altogether, the current measurements seem to provide an effective mechanism for ensuring that hunting operators are complying with the age and sex restrictions.

Community Based Natural Resource Management (CBNRM)

Especially in a country with rapid population growth, humans and wild animals increasingly compete for resources. Involvement of rural communities in the decision making process and material incentives are essential to mitigate human-wildlife conflicts.

With the Wildlife Conservation Act enacted in 2009, Tanzania implements these principles into practice by grating the communities registered land ownership rights and allowing them to establish Wildlife Management Areas (WMAs) which are allowed to lease the hunting rights. The only restrictions to the sovereignty of the communities are a minimum hunting block fee, the allocation of quotas (the District Councils are represented in the competent committee), and the accounting of all monetary flows by the Director of Wildlife. None of these are necessarily a disadvantage for the communities. To reach the required minimum area for a hunting

block of 200 km2, several villages can make a joint venture. Rules and cash flow of the WMA system are transparent and well

documented (e.g. WWF 2014).

The success of this program was confirmed to us by all participants and the numbers reinforce this conclusion. Initially, 22 WMAs dedicated 36.000 km2 to the protection and sustainable use of wildlife, what equates 3% of the national territory and an increase to 50.000 km2 is in progress. These areas function as buffer zones between governmental sanctuaries and zones of

23

Figure 16: Summary of facts related to the CBNRM in Tanzania after information received during the field mission

intense human activities and ease the migration and recolonization within the lion metapopulational (Dolrenry et al. 2014).

Currently 54 out of 63 district councils profit from income accruing from the hunting industry. The WMAs contribute to the protection of wildlife by obligatory conducting anti-poaching patrols, supervision of trophy hunting and collecting data about the wildlife and reports violations.

Human-Wildlife Conflicts

According to Tanzanian law, killing lions in self-defence is allowed if they threaten human life or livestock. With a population growth from 13,6 million in 1970 to about 50 million today and a widespread tradition that considers cattle as the most important status symbol, Tanzania is in a difficult situation where retaliation killings are the prime cause for unnatural death of lions.

Less than 10 lions are annually killed officially through Problem Animal Control (PAC) but about 200 are killed in retaliation for livestock losses or human attacks or preventively. On average, 10 attacks occur each year on humans and over 150 on livestock but there are also reports of much higher levels, for example 35 people were reported to have been killed by one or a group of lions within 20 months (Baldus 2004). In general, lion attacks increased over the last decades and are motivated by predation attempts (Ikanda 2009).

A register about all reported lion attacks is kept and inspections revealed almost 90% accurate reporting. Considering these facts, it seems of little importance that Tanzania does not have any criteria to recognize a problem animal, besides a list of eligible species.

The presence of predators has the potential to cause sustained psychological stress (Clinchy et al. 2013) and even if casualties can be kept on a low level, the acceptance of a life-threatening predator in the vicinity of human settlements will be extremely low (Dickman et al. 2014). Lions usually attack adult cattle and donkeys and often do so at daylight what makes them very vulnerable to direct retaliation killings (Kissui 2008). Compared to other predators, incidences with lions in the vicinity of the Serengeti National Park occur only close to the protected area (Holmern et al. 2007). This could indicate that in this region a habitation of lions outside of the park borders became extremely unlikely. Similar observation are reported from Katavi (Kiffner et al. 2009). Considering a projected increase of the human population by 500 % or more until 2100 and a stock of about 27 million cattle (compared to 2,6 million in Botswana), it cannot be expected that Tanzania will be able to prevent a further increase of human-wildlife conflicts.

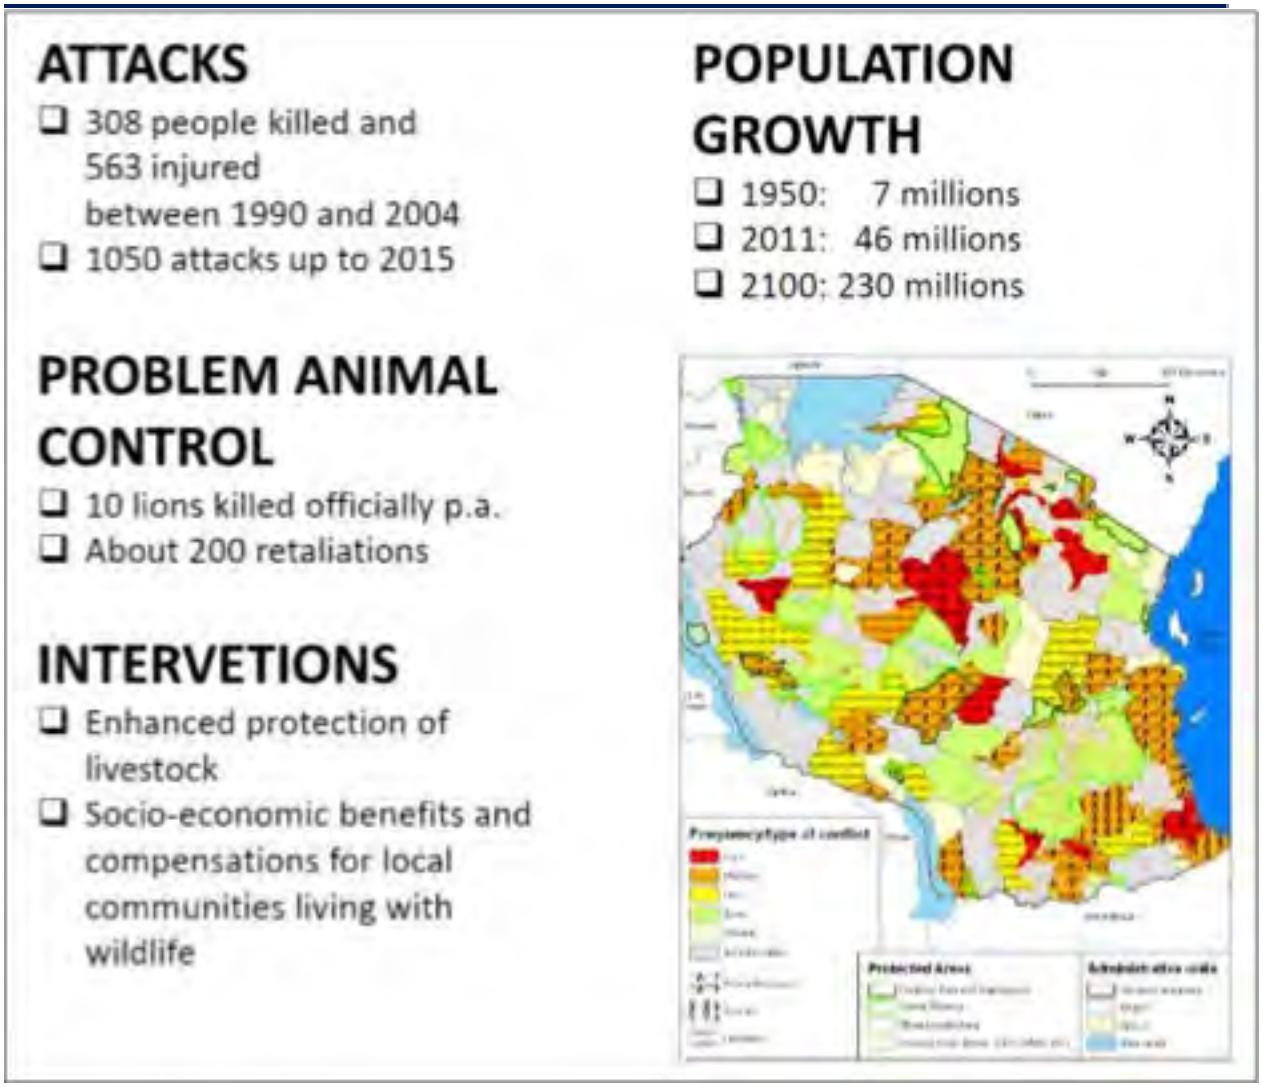

Figure 17: Summary of facts related to human-wildlife conflicts with lions based on TAWIRI (2016)

This threat to human lives puts a major responsibility on to the wildlife authorities and they employ various mitigation measures for human-lion conflict management, including securing bomas (corral) with wire mesh (Abade et al. 2014) and a consolation scheme for victims. Whilst prevention of conflict is the key to coexistence, ensuring that people perceive the lions more positively can also work to achieve greater tolerance, which includes the possibility of generating income through trophy hunting.

Hunting Industry

In Tanzania, hunting is a well-developed and organized business sector (represented by the Tanzania Hunting Operators Association TAHOA) with a considerable contribution to wildlife conservation and some contribution to the alleviation of poverty (Di Minin et al. 2016). During the field mission, even a representative of the photo tourism industry confirmed the necessity of hunting for the Tanzanian wildlife conservation management.

Figure 18: Basics about the organization of hunting in Tanzania after information received during the field mission

Figure 19: Summary about obligations and contributions of the hunting industry after TAWIRI (2016) and information received during the field mission.

Hunting blocks are auctioned, as proposed by Macdonald (2016), and contributions to anti- poaching and social development of neighbouring communities are a mandatory element

of the bid. During the field mission several wildlife officers emphasized that without the cars, field guides, and surveillance provided by the hunting companies it would be impossible to fight poaching activities and push back the unregulated conversion of wildlife protected areas to other form of land use. Equally important is the direct income TAWA generates by issuing hunting licenses (4650$ + 18%VAT per 21 day license).

26

Sustainability of Lion Trophy Hunting in Tanzania

Hunting enterprises are a commercial business model and sinking earnings in the course of import bans for iconic species reduced their willingness to invest. More than 50% of the customers are US citizens and 40% are Europeans. Hence, the hunting companies claim a 30% revenue loss following the import ban on lion and elephant trophies by these regions.

Especially for new and inexperienced companies it seems to be challenging to attract enough costumers and as a result the market is dominated by few large companies. The difficulty of the terrain and intensive rainy seasons (Selous is only accessible by car from July to December except by a few watershed roads on the hilltops) are among the many complications that the hunting industry of Tanzania faces.

Currently, 47 out of 157 hunting bock are vacant in Tanzania and therefore the auctions fetch suboptimal results and demands to lower the prices for hunting licenses arise. Even more detrimental for the conservation of lions could be the option to hunt unsustainably and move to another plot when the game population is depleted. An extension of the lease lengths could be a necessary countermeasure (Brink et al. 2016). Although, even responsible entrepreneurs tend to move out of hunting blocks if tribes constantly invade the area.

Compliance with the age restrictions requires considerable knowledge, and errors in the field cannot be excluded. However, the current penalties seem to provide sufficient incentives to comply and increasingly Hunting Block operators are investing in camera traps, to assist in identifying suitable lions. This has the potential to reduce the killing of too young specimens.

27

Sustainability of Lion Trophy Hunting in Tanzania

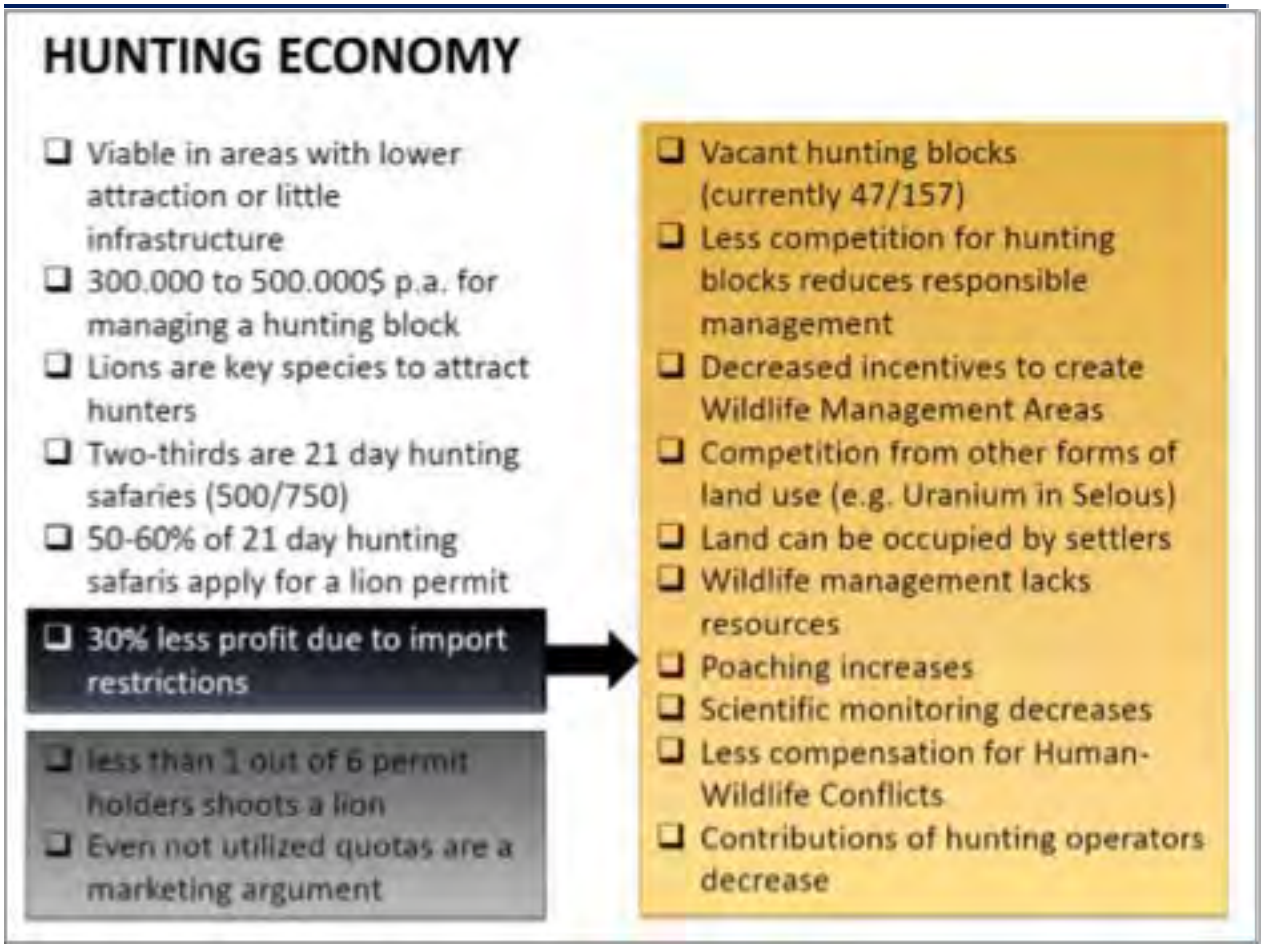

Figure 20: Summary about interdependencies between hunting and conservation of lions in Tanzania after information received during the field mission

28

Sustainability of Lion Trophy Hunting in Tanzania

Consequences of Hunting

It is unknown to what extent differences in local population densities have been caused by unsustainable hunting in previous decades and hard to predict how the populations will develop under the current management practice. Currently, lion density is highest in national parks and declining with the protection status of the area.

Conservation concerns related to lion trophy hunting are usually focused on population size and trends. In addition to these quantitative considerations, more attention should be payed to the impacts on the genepool, behaviour, and social structure.

During the field mission we learned, that in Selous lions are seen more frequently during the wet season when they are not hunted. This indicates that lions are able to recognize hunting as a threat and adapts its behaviour within short time. Furthermore, we received conflicting reports that sometimes lion are emigrating from areas where they are hunted and that in contrast hunting has no effects on the behaviour of lions. If hunting drives animals from the core to the periphery of protected areas this could increase human-wildlife conflicts and retaliation killings. The effects of humans as “super predators” (Clinchy et al. 2016) seem to be poorly understood and research could provide valuable information for the management of the species.

According to some unpublished data we received from Dennis Ikanda, the gender ratio of nine prides around Kingupira shifted from 1:2 to 1:3 as a result of the sex restrictions for trophy hunting but the size did not change from 1967 to 1975 and 2013. Similar shifts have been reported from photographic tourism sectors of Selous (Brink et al. 2013) and other parts of the African lion range (Bouché et al. 2016). Hence, other factors besides hunting might be involved. In addition the number of prides in the area remained within a constant range. This could indicate that in this area, hunting had no effect on the reproductive output of the population. The shift in the sex ratio might also reduce the aggressive conflicts between males and overturn of pride males with a reduction of the mortality resulting thereof. However, more research is needed to confirm these assumptions.

Recommendations to Tanzania

- Fast reactions to any kind of serious information about a rapid population decline and regular updates for the estimated size of the national lion population, including results from the latest surveys, would enhance the confidence that others have in Tanzania's commitment to conserve its lion populations.

- It should be considered to restrict trophy hunting on lions to areas where a population survey has been conducted within a reasonable period which is defined according to the local threat, national importance of the population, and annual offtake.

- The use of camera traps to identify suitable lions to hunt should be encouraged. This would further reduce the taking of animals less than 6 years of age and assist with quota allocation.

- Roads make the surveillance of an area easier. On the other hand, inaccessibility by roads provides the most effective protection for the wildlife of large reserves, such as Selous. Therefore, the advantages of upgrading and maintaining the road system (e.g. by a hunting block owner) needs to be balanced against the risks to the conservation of the wildlife and habitat it runs through.

Acknowledgements

We wish to express our gratitude to the government and Wildlife Division of Tanzania for providing the opportunity to visit Selous and comprehend the enormous size and management challenges of this area as well as the meetings with many outstanding experts who dedicated their valuable time to answer all our questions. Furthermore, we want to thank all who helped in organizing the field mission, especially

Hélène PERIER (EU Commission), the EU Delegation to Tanzania, and TAIEF.

Special appreciation for the success of this mission is extended to:

- ·Major General Gaudence S. Milanzi, Permanent Secretary, Ministry of Natural Resources and Tourism, United Republic of Tanzania
- ·Frederick A. Ligate, Senior Wildlife Officer – CITES desk, Ministry of Natural Resources and Tourism Wildlife Division
- ·Mr. Herman Keraryo, former Director of Wildlife, Ministry of Natural Resources and Tourism, Wildlife Division

30

Sustainability of Lion Trophy Hunting in Tanzania

- ·Prof. Alexander Songorwa, Acting Director of Wildlife, Ministry of Natural Resources and Tourism
- ·Mr. Martin Loibooki, Ag. Director General, Tanzania Wildlife Management Authority (TAWA)
- ·Dr. Simon Mduma - Director General, Tanzania Wildlife Research Institute (TAWIRI)
- ·Dr. Dennis Ikanda - Director, Kingupira Wildlife Research Centre, TAWIRI
- ·Mr. Robert Mande, Assistant Director of Anti-Poaching, Wildlife Division, MNRT
- ·Mr. Mabula Misungwi, outgoing Manager of the Selous Game Reserve, and his successor, Mr Henock H.Z. Msocha, who hosted the field trip

- ·Maria Chiara Femiano, Programme Officer-Climate Change and Environment, EU Delegation to Tanzania
- ·Benson Kibonde, former Manager , Selous Game Reserve in Tanzania
- ·The NALIKA and JUKUMU Wildlife Management Areas and Tunduru District Council We also wish to thank all the other the participants of our meetings in Tanzania who contributed in different ways to the success of the mission:

▪ Abdalah Sais Nasoro (NALIKA WMA) ▪ Abdukadir L. Mohamed (Tanzania Hunting Operators Association-TAHOA) ▪ Ally Issa Mkunvate (Rahaleo Village - Chairman) ▪ Ally Mdoso (Rahaleo-Village) ▪ Caroline M. Mchome (MNRT-Legal Unit) ▪ Cassian C. Mahundi (MNRT - Community Based Conservation Section) ▪ Donatus Gasive (Elephant Monitoring Ngorongoro Conservation Area) ▪ Eric Pasanisi (Tanzania Hunting Operators Association - Chairman) ▪ Ezekiel Dembe (TANAPA) ▪ Faustine Ntemi (Selous Game Reserve Matambwe Zone) ▪ Gabriel Banzo (Selous Game Reserve - Zonal Accommodation Logistics) ▪ George Wambura (WMAs - AA Consortium) ▪ Harry Charalambars (Tanzania Hunting Operators Association-TAHOA) ▪ Hassan Jomeke (Selous Game Reserve Matambwe Zone) ▪ Henock H.Z. - ·Shaabani H. Omar (Rahaleo-Village - Executive Officer)
- ·Shabani Kolahili (JUKUMU WMA - Chairman)
- ·Shenva Daniel (Selous Game Reserve - Zonal Game Scout)

Summary

Even if considering only lion trophy hunting, it is a considerable challenge to provide a consistent picture of the conservation status and management quality for a large and diverse country, such as Tanzania. Taking all the possibly detrimental factors into account (Kideghesho et al. 2013), it seems likely that the lion population of Tanzania will continue to decline outside of protected areas (Riggio et al. 2013). However, under the current circumstances controlled trophy hunting helps to mitigate the losses. In addition, incentives to dedicate additional areas to the conservation of wildlife depend to a large extend on the revenues from trophy hunting and these again are strongly correlated with the availability of iconic species, such as lions.

Tanzania has several large protected lion populations with a relatively stable population trend, the current management practice should be sufficient to prevent hunting from being detrimental and able to conserve the long-term survival of the national lion population. During the last years, Tanzania has increased its awareness for the need to survey and manage the national lion population and reached a conservation level which is in accordance with CoP17 Res. 17.9 and the self-imposed requirements of the European Union for allowing the import of hunting trophies. Based on the findings of the field mission and the available literature we are confident, that it is possible to recommend a positive SRG opinion for the import of lion trophies from Tanzania.

Nevertheless, it has to be acknowledged that the conservation of lions will provide a continuing or even increasing challenge for Tanzania. The current management practice and the dedication and enthusiasm of those who are in charge are promising. However, rapid reactions to rumours about a local crises and continued research are indispensable and without continuing efforts, questions about the sustainability of trophy hunting on this species will raise again.

Enhancement Finding
Applicant: Mathieu K. Destruel

I. Summary:

Mr. Destruel submitted an application on September 12, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Tanzania for the purpose of enhancing the propagation or survival of the species in the wild. This subspecies of African lion is listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and is listed as threatened under the U.S. Endangered Species Act (Act or ESA). As such, export of a hunted African lion from Tanzania requires prior issuance of a CITES export permit from the CITES Management Authority of Tanzania, and import into the United States requires prior issuance of an ESA import permit by the U.S. Fish and Wildlife Service (Service). The Service may authorize the import of a sport-hunted lion trophy from Tanzania, but only if it first makes a finding that permitting import of a trophy would enhance the propagation or survival of the species in the wild.

After evaluating the available information submitted with the application, information provided by the government of Tanzania, and other information available to the Service, the Service has determined that the sport-hunted trophy taken by Mr. Destruel on August 12, 2018, from the Kizigo Game Reserve E2, Manyoni-Singida, central Tanzania, **meets** the enhancement criteria under 50 CFR 17.32.

The Service recognizes that legal, well-regulated hunting as part of a sound management program can benefit the conservation of certain species by providing incentives to local communities to conserve the species and by putting much-needed revenue back into conservation. We consider whether the management program is actively addressing the current and longer term threats to the subspecies based on sound scientific principles. A management program for a species such as *P. l. melanochaita* is expected to address, at a minimum, an evaluation of population trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating whether the importation of Mr. Destruel's trophy of *P. l. melanochaita* would be authorized in accordance with our permit issuance criteria, we were particularly interested in examining how Tanzania's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. We evaluated how, and how well, the hunting component of the management program addresses these threats by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. We also considered how the participation of a U.S. hunter, in this case, Mr. Destruel, contributes to the overall management of lions within a country.

We work closely with the range countries and interested parties to obtain relevant information. The government of Tanzania has provided a series of documents, including Tanzania's

"enhancement"[1] and non-detriment finding for lions (TAWA, 2016). These documents, verbal updates/presentations at the 16th Annual African Wildlife Consultative Forum (Uganda, November 2018), information received in Mr. Destruel's application, the Tanzania Wildlife Research Institute (TAWIRI), open sources (e.g., IUCN, published literature), and a field mission in November, 2018, were the basis of this finding.

II. U.S. Governance of the Lion:

On December 23, 2015, the Service published in the Federal Register a final rule that, effective January 22, 2016, listed the lion subspecies *P. l. melanochaita* (southern and eastern Africa) as a threatened species under the Act (USFWS 2015; 80 Fed. Reg. 79999); this species is regulated under a species-specific 4(d) rule of the Act, which is set forth at 50 CFR17.40(r).

Where a rule is promulgated for a threatened species under Section 4(d) of the Act, the rule contains the applicable prohibitions and exceptions for the specific species (50 CFR 17.31(c)). Under the 4(d) rule for *P. l. melanochaita* (50 CFR 17.40(r)), all of the prohibitions of 50 CFR 17.31 and permit provisions of 50 CFR 17.32 apply. The prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (which includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of a commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the ESA. Permits may be issued to carry out these otherwise prohibited activities, including importation, under certain circumstances (e.g., scientific purposes or activities that enhance the propagation or survival of the species), in accordance with the Service's regulations at 50 CFR 17.32. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Tanzania, but only if it first makes a finding that permitting the import of a trophy would enhance the survival of the species in the wild (USFWS 2015; 80 Fed. Reg. 79999); 50 CFR 17.40(r)(2); 50 CFR 17.32(a)).

As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the issuance criteria under 50 CFR 17.32. However, in some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service has made the required enhancement finding based on this individual application to import a sport-hunted trophy of *P. l. melanochaita*; however as detailed below, relevant information obtained for the country as a whole has been considered, as it contains information pertinent to the Service's evaluation as required by the 4(d) rule for *P. l. melanochaita*.

[1] Note, although "enhancement finding," is referenced in the document's title, the document is not, nor does Tanzania produce, an enhancement finding under the U.S. Endangered Species Act.

A. General ESA permitting requirements

As we explained when finalizing the 4(d) rule, our threatened species permitting regulations provide issuance criteria for threatened species permits [50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita*, including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the population in the country where the specimen originated and whether that management of the population addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Tanzania contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of Tanzania's lion management plan provides a net benefit to the subspecies and its ecosystem. For example, several components of a management plan by which trophy imports could meet the issuance criteria might be government incentives in place that lead to increased habitat protection for lions by private landowners and communities, and incentives provided to local communities that lead to reductions in the incursion of livestock into protected areas for lions or lead to increases in active management of livestock to reduce conflicts with lions.

The Service evaluates an application involving a *P. l. melanochaita* sport-hunted trophy in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b), the following:

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

B. IUCN guiding principles

In addition to these factors, specifically in relation to sport-hunting, in the 4(d) rulemaking for *P.l. melanochaita*, the Service explained it considers the publication, *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives* (IUCN SSC, 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P.l. melanochaita*. The Service has, therefore, considered these principles in conjunction with our threatened species issuance criteria in making our determination of enhancement concerning import of the sport-hunted *P. l. melanochaita* trophy that is the subject of this permit application. The IUCN document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources". It recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and, more specifically, the conservation of the hunted species.(IUCN SSC, 2012)

The IUCN document lays out the following five guiding principles:

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.,* population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure

that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to developing enhancement findings for the importation of sport-hunted trophies of *P. l. melanochaita* is consistent with the purpose and intent of the ESA. Before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

III. Basis for Finding:

As explained above, any person wishing to conduct an otherwise prohibited activity, including import of *P. l. melanochaita* specimens, must first obtain a permit as required by 50 CFR 17.32; issuance of an import permit for a sport-hunted trophy of *P. l. melanochaita* requires an enhancement finding.

The Service has made the required enhancement finding for this import permit based on this individual application to import a sport-hunted trophy of *P. l. melanochaita* taken in Tanzania. Additionally, as detailed below, relevant information obtained for Tanzania as a whole, has been considered. The government of Tanzania has provided a series of documents, including Tanzania's "enhancement"[2] and non-detriment finding for lions (TAWA, 2016). These documents, verbal updates/presentations at the 16th Annual African Wildlife Consultative Forum (Uganda, November 2018), information received in Mr. Destruel's application, the TAWIRI, open sources (e.g., IUCN, published literature), and a field mission in November, 2018, were the basis of this finding.

On April 14, 2016, the Service sent a letter to Mr. Herman Keraryo, Acting Director of Wildlife for the Wildlife Division of the Ministry of Natural Resources and Tourism (MNRT), with a list

[2] Note, although "enhancement finding," is referenced in the document's title, the document is not, nor does Tanzania produce, an enhancement finding under the U.S. Endangered Species Act.

of questions that would aid the Service in evaluating the overall conservation and management of the lion population in Tanzania, and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives* (IUCN SSC, 2012), as it provides useful principles, which, when considered in conjunction with the Service's permit issuance criteria, would aid the Service in making the required enhancement findings for permitting importation of sport-hunted lion trophies. In response to our April 14, 2016 letter, the MNRT provided a series of documents, including Tanzania's "enhancement" and non-detriment finding for lions.

Upon invitation, a U.S. delegation of Service personnel visited Tanzania in November 2018 to observe the challenges and successes of conserving wildlife, including lions, in Tanzania. This trip allowed first-hand exposure to the on-the-ground implementation of policies and procedures the government has put into place to conserve lions. Detailed discussions with government officials, national experts, land managers, game officers, village leaders, and leaders in the hunting industry, as well as site visits to different models of hunting operations, served to both substantiate and elucidate information provided in documents. We determined that the status of lions and the management approach of Tanzania are substantially as presented, conferring confidence to the conclusions drawn from information provided.

IV. Governance of Wildlife in Tanzania:

In Tanzania, wildlife resources, such as lions, are protected under several Acts of Parliament, establishing the authority for all aspects of wildlife management, including law enforcement activities. The **Wildlife Conservation Act** (WCA) of 2009, which replaced the original WCA of 1974, provides the legal framework for operation of the Wildlife Division under the MNRT, including the appointment of the Director of Wildlife. The WCA provides for the establishment of a Wildlife Protection Unit granted paramilitary status to protect wildlife against unlawful utilization, and a Wildlife Authority to manage all Tanzania wildlife located outside the boundaries of the National Parks and the Ngorongoro Conservation Area. The Wildlife Authority is also responsible for meeting international obligations involving wildlife conservation. The WCA ensures the protection of natural habitat and wildlife through the establishment of a network of Protected Areas (PAs), e.g., Game Reserves, Game Controlled Areas, Wildlife Management Areas, and areas such as wildlife corridors. The **National Parks Act** (CAP 282 R.E. 2002) establishes the legal authority for the creation and management of national parks, granting powers to the Director to enable maintenance and security within national parks, as well as the responsibility for the protection of their wildlife resources. The **Ngorongoro Conservation Act** (CAP 284 R.E. 2002) provides the legal framework for the existence of the multiple land use in the Ngorongoro Conservation Area, its Management Authority under the direction of the Conservator, and the authority for its maintenance and security. The **TAWIRI Act** (CAP 260 R.E. 2002) grants powers to the Director who is responsible for research involving wildlife, and for providing this information to the Wildlife Authorities.

The responsibility for managing Tanzania's wildlife currently falls primarily under four institutions. The **Tanzania Wildlife Research Institute** (TAWIRI) is responsible for conducting and coordinating wildlife research in Tanzania. It functions as the scientific authority for wildlife conservation and management, and the CITES Scientific Authority for Tanzania. The **Tanzania National Parks Authority** (TANAPA) is responsible for managing 15 National Parks with a

total area of 50,872 sq.km. In the national parks, only non-consumptive utilization (tourism game viewing) of wildlife resources is allowed. **Ngorongoro Conservation Area Authority** (NCAA) is responsible for management of only one area, the Ngorongoro Conservation Area, a protected area of 8,300 km^2. It is the only multiple land use wildlife area in Tanzania in which the consumptive utilization of wildlife is not permitted. Both TANAPA and NCAA are parastatal – public organizations, but not directly run by the government; all revenue is kept by the organizations for use in management of these areas.

The Wildlife Division has historically been responsible for the country's wildlife resources located outside the jurisdiction of the Ngorongoro Conservation Area and Tanzania National Parks. However, in response to concerns over questionable management practices and lack of adequate funding for the Wildlife Division to successfully manage wildlife resources, the **Tanzania Wildlife Management Authority** (TAWA) was established in 2014[3]. Also a parastatal organization, TAWA operates with significant autonomy and retains all revenue generated from hunting[4]. TAWA became operational in July 2016, and has since established an aggressive, proactive approach to protecting wildlife. In addition to conducting routine anti-poaching patrols, TAWA is actively building capacity with technology (e.g., GIS), relationships with local communities (e.g., intelligence-led operations), and collaborative efforts on an international scale.

TAWA is responsible for the management of 28 Game Reserves with an area of 112,564 km^2, approximately 38 Game Controlled Areas covering about 161,521 km^2, and Ramsar sites covering 249,856 km^2. There are also District Councils, local government institutions that work in collaboration with the TAWA. These councils oversee wildlife conservation issues and facilitate the establishment and management of Wildlife Management Areas (WMAs) on village lands.

WMAs were established as a new category of wildlife conservation areas consisting of settled and unsettled lands outside PAs, with the goal of allowing for rural communities and private landholders to manage wildlife on their land for their own benefit, shifting wildlife such as lions from a liability to an asset. The framework for WMAs was outlined in Tanzania's Wildlife Policy of 1998 (revised in 2007), with legislation established under the Wildlife Management Areas Regulations of 2002, authorizing the formal establishment of WMAs. From 2010 to 2014, over 1.3 million USD from hunting fees were disbursed to WMAs (TAWA, 2016). In 2012, Tanzania amended its Wildlife Management Area Regulations to provide a new basis for strengthening the links between local communities and wildlife management by addressing the issues of benefit sharing and control over concession allocations. Under the new regulations, the WMAs receive approximately 60-65% of the total hunting revenue occurring within the block. Additionally, WMAs gained the power to sign utilization contracts with the private sector, enabling seven WMAs to sign contracts with hunting operations worth more than 4.3 million USD (TAWA, 2016). The establishment of these WMAs has resulted in an additional 23,700 km^2 of Tanzania's land area being added to its conservation network and increased capacity for protected area management through the training of village game scouts and WMA managers.

The tourism industry, largely wildlife-based, contributes to about 13% of Tanzania's annual Gross National Product and is predicted to increase (WTTC, 2017). The tourist industry generates

[3] Prior to the establishment of TAWA, funding to the Wildlife Division was paid by the central treasury; inadequate funding left the Wildlife Division unable to effectively manage and protect Tanzania's wildlife resources.
[4] The mandate to collect and retain revenue from trophy hunting is enshrined in "The Wildlife Conservation (The Tanzania Wildlife Management Authority) Establishment Order 2014.

almost 6 billion per year (WTTC, 2017) with about 80 million annually going to TANAPA, NCAA, and the Wildlife Division to fund their operations. The three parastatal organizations, TANAPA, NCAA and TAWA, retain 100% of their revenue share. Both TANAPA and NCAA are generally self-sustaining; consequently, National Parks and equivalent areas such as Ngorongoro Conservation Area, with an area covering approximately 38% of all PAs in Tanzania, are adequately funded. The sustainable utilization of resources (i.e., hunting) accounts for 70% of TAWA revenue; therefore, the viability of TAWA will depend, in part, on sufficient revenue from safari hunting. In 2012/2013, the Government of Tanzania re-established the Selous Game Reserve Revenue Retention Scheme, whereby 50% of the revenue generated from photographic tourism and tourist safari hunting is retained in order to meet management and enforcement costs in the Selous Game Reserve, one of the largest protected areas in Africa. Again, the viability of the Selous will depend, in part, on sufficient revenue from safari hunting.

Tanazania is a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Tanzania provided a copy of their CITES non-detriment finding (NDF) for lions, which finds that the export of the species will not be detrimental to the survival of the species in the wild.

Tanzania is also a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of transfrontier conservation areas, and facilitate community-based natural resources management practices. As required of a member state, Tanzania has established management programs for the conservation and sustainable use of wildlife.

V. Status of Lions in Tanzania:

Approximately 40% of all lions in Africa are found in Tanzania (Riggio et al., 2013). The lion range in Tanzania covers over 90% of land (Mesochina et al., 2010), with four main subpopulations:

1. the Maasailand Ecosystem, which encompasses the Mara, Arusha Kilimanjaro and Manyara Regions of northeastern Tanzania;
2. the Kagera and Kigoma Regions of northwestern Tanzania;
3. the Rukwa, Tabora and Mbeya Regions of central and western Tanzania;
4. Selous Ecosystem, which encompasses the Lindi, Morogoro and Ruvuma Regions of southern Tanzania.

TAWIRI presents Tanzania's latest lion population estimates as 16,800 individuals (Mesochina et al., 2010), and 17,564 (12,208-19,320) (Ikanda & Packer, 2006). They estimate that 13,600 (or 81%) of these lions occurred within PAs and approximately 3,200 (or 19%) individuals occurred outside PAs. According to Riggio et al. (2013) and Björklund (2003), the minimum number of lions estimated to categorize an area as a lion stronghold is 500 individuals. The estimated population size of the four main lion ecosystems was 3,700 in the Maasailand Ecosystem, 520 in Kagera and Kigoma Regions, 2,300 in Rukwa, Tabora and Mbeya Regions, and 7,200 in the Selous Ecosystem.

Trend analysis of the lion population in Tanzania is limited due to the sporadic nature and variable methodology of past surveys, as well as the difficulty of obtaining precise lion counts (Brink, Smith, & Skinner, 2013; Funston et al., 2010), but it is suggested that, nationally, far fewer lions exist today than did 50 years ago (Ikanda, 2008). Available information suggests that this may be spatially variable, e.g., declining populations in Katavi and Tarangire (Bauer et al., 2015) and stable populations in the Selous Game Reserve (Packer et al., 2011).

VI. Management of Tanzania's Lion Population

In recognition of the role that Tanzania plays in the conservation of this species, a workshop was held in 2006 to assess available information and to set priorities for conservation of the lion in Tanzania. The Tanzania Lion and Leopard Conservation Action Plan (TAWIRI, 2009) provided an overview of this workshop and outlined a national strategic plan for lion conservation. Habitat loss and increased conflict with humans had been identified as the major threat to the species. The Tanzania Lion and Leopard Conservation Action Plan (Plan) concluded that, for those lion populations existing outside National Parks, well-run trophy hunting programs could be leveraged to successfully manage and conserve lions against these threats. To that point, the majority of permanent lion range in Tanzania lies within protected areas, 61% of which are designated as hunting areas (Mesochina et al., 2010).

A. Hunting:

Hunting of lions is allowed across much of Tanzania. Safari hunting occurs in areas known as hunting blocks, designated in Game Reserves, Game Controlled Areas, Open Areas, Forest Reserves and WMAs. Until recently, blocks were allocated using an administrative process. The government would invite hunting companies to apply to operate a hunting block; interested hunting companies were evaluated by the Hunting Block Advisory Committee. Hunting companies were allocated blocks for a period of five years, with a reporting requirement on the third year to determine compliance under the terms outlined within the hunting block regulations (TAWA, 2016). However, in 2017, it was announced that the block allocation process would be amended to introduce an auction system.

Wildlife hunting in Tanzania is based on hunting regulations set forth in Tourist Hunting Regulations No. 306 (2002). The regulations specify the fees for hunting different species, and further specify a minimum number of hunting days. Hunters are required to purchase a minimum 21-day safari in order to request a permit for the harvest of lions, as well as other specified animals (e.g., elephant, leopard). Hunters must pay a number of different fees for permits and licenses to be granted harvest authorization. The game fee to hunt a lion is the second highest game fee in Tanzania, second only to elephants.

A quota system historically was the primary method of regulating trophy hunting in Tanzania. Annual harvest quotas have been lowered over the past decade, from 520 in 2008-2009 (Lindsey et al., 2013) to 315 in recent years (TAWA, 2016). In 2016, the annual quota was further reduced to 200 individuals (TAWA, 2016). An annual quota of 200 individuals is well within the suggested sustainable 1 lion/2000 km^2 harvest rate identified by Packer et al. (Packer et al., 2011), and 25% below the sustainable harvest level suggested by TAWIRI (TAWA, 2016). However, the Plan noted the lack of scientific justification underlying that system. Furthermore, a quota system is reliant on

accurate population estimates, a near impossibility with lions. A model that simulated the dynamics of populations as a function of both quota size and age at harvest showed that there is almost no negative affect on population size when hunting is restricted to males six years or older (Whitman, Starfield, Quadling, & Packer, 2007). Restricting lion hunting by age would reduce the reliance on population estimates – an intensive and expensive effort that does not reliably return accurate results – while minimizing the effect on a lion population. Tanzania was the first country in African lion range states to officially establish age restriction rules, prohibiting hunting lions of an age below six years (section 27(1) of the Tourist Hunting Regulations of 2015). Violations of this regulation can result in penalties for the professional hunter guiding the offending hunter, including fees and revoking of the professional hunter's license.

Although inspection of trophies are required prior to export, the fundamental difficulties of accurately estimating lion age, as well as a disregard for these regulations, can result in the take of lions younger than six years. Tanzania has consequently maintained a quota system, set by hunting block according to the lions harvested during the previous hunting season. If a trophy lion is estimated to be 4-6 years, the hunter/client may export that lion, but the quota for the hunting block where the trophy was taken is reduced for the following hunting season. If a trophy is taken below the age of 4, there is a reduction of the hunting block's quota of harvestable lions by 2 and potential cancellation of the hunter's license along with other penalties such as the trophy not being eligible for export. If the trophy meets the criteria of 6 years of age or older, the hunting block's quota remains unchanged for the following hunting season. According to MNRT, these regulations have been in place since the 2012/2013 hunting season. For each trophy harvested, a compulsory hunter evaluation form, photos along with presentation of lion skull to officials for inspection and measurements, including tooth x-rays, are necessary prior to the issuance of an export permit (MNRT, 2015; TAWA, 2016).

B. Human-Lion Conflict:

It is difficult to estimate how many lions are killed illegally each year; however, retaliatory killings may be as high as 200 individuals annually (TAWA, 2016). Lions are provided protection from illegal or retaliatory killing under the Fourth Schedule due in part to human/livestock-conflict under the Dangerous Animals Damage Consolation (Government Notice No. 146) of 2011; unauthorized personnel are not permitted to kill a conflict lion unless under exceptional circumstances. Tanzania established a mitigation scheme to protect lions from retaliatory killings. This scheme consoles people affected by the loss of relatives and property through payment in kind, and is intended to increase human tolerance for lions (TAWA, 2016).

VII. Evaluation:

In evaluating whether the importation of Mr. Destruel's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our permit issuance criteria, we examined how Tanzania's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. We considered whether the management program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We evaluated government incentives designed to increased habitat protection for lions by private

landowners and communities, and incentives provided to local communities designed to lead to reductions in the incursion of livestock into protected areas for lions or lead to increases in active management of livestock to reduce conflicts with lions. We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. As such, we examined if the trophy hunting provides financial/resource assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how a U.S. hunter's, in this case, Mr. Destruel's, participation in the hunting program contributes to the overall management of lions within the country.

As stated earlier, the Service has evaluated this application in accordance with our regulations at 50 CFR 17.32 and the issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. In evaluating each of these criteria based on information available to the Service, we have been able to determine for this application that the import of the wild lion trophy animal would enhance the propagation or survival of the species in the wild and qualifies for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the proposed activity in this permit application (import of a trophy hunted lion from Tanzania) has demonstrated the ability to contribute towards positive conservation outcomes that mitigate or improve the status of lions throughout their range while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion that collectively contribute towards continued population declines.

Tanzania faces a growing human population, and a subsequent development of land and increasing rates of human-wildlife interactions. Protection of suitable habitat for both the lion and its prey is essential for the survival of the lion, as well as developing and sustaining the local communities' support for such policies. Wildlife protected areas, in various forms, cover about 40% of Tanzania's land area, and safari hunting has created a financial incentive to maintain these protected areas as a land use. Both the consumptive and non-consumptive utilization of wildlife resources contributes to about 13% of Tanzania's annual Gross National Product and is predicted to increase (WTTC, 2017). The tourist industry generates almost 6 billion per year (WTTC, 2017) with about 80 million annually going to TANAPA, NCAA, and the Wildlife Division to fund their operations.

The companies awarded a hunting block are in a key position to conserve this land for wildlife, and are annually evaluated by the Tanzania government on several criteria, including the maintenance of prey populations, contributions/provision of benefits to the local villages, improvement to infrastructure, protection of the environment, and anti-poaching operations.

Mr. Destruel hunted with professional hunter Gamshad Gamdust of African Buffalo Safari Trackers. This company has developed several programs by which to address the main threats to lion populations.

- African Buffalo Safari Trackers maintains significant anti-poaching efforts throughout the year to protect against potential threats to habitat loss and the loss of game. The anti-poaching unit includes a head that has the authority to arrest, 10 local game scouts, 12 trackers, and 10 company anti-poaching scouts. The company has established a network of informants in the villages that are offered a reward for both poacher arrest leads and poacher conviction. The company invests a significant amount of resources into anti-poaching activities, including funding their own anti-poaching teams, contributing to government anti-poaching operations occurring in areas surrounding their holdings, and providing 3 tracking vehicles, 3 tractors, 6 tents, and a truck for patrols. The successes of these anti-poaching activities from 2015-2017 include 35 poachers arrested, 32 additional poaching incidents discovered, 16 poachers convicted, 21 firearms confiscated, and 75 bicycles confiscated.
- The concessions maintain a dense prey base for lion species that currently have a stable 3-year trend and are monitored by the anti-poaching unit.
- The company maintains the country's regulations that indicate that any taken lion must be a minimum of 6 years of age, identified by the 4 professional hunters that work for African Buffalo Safari Trackers

It has been stated that upwards of 200 lions are killed annually due to preemptive strikes or as retaliatory actions after some form of direct loss is experienced by an individual or community (TAWA, 2016). In the Ruaha communities surrounding hunting blocks and the Ruaha National Park, researchers reported 35 large carnivores were killed over an 18-month period. Similarly, Lichtenfeld et al. (2015) reported that in 12 communities of the Maasai Steppe region, more than 50 attacks by large carnivores on livestock resulted in retaliatory killing of 72-84 lions. Tanzania established a mitigation scheme to protect lions from retaliatory killings. This scheme consoles people affected by the loss of relatives and property through payment in kind, and is intended to increase human tolerance for lions (TAWA, 2016).

As described above, we have determined that the government of Tanzania and African Buffalo Safari Trackers contribute towards positive conservation outcomes by addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion, which contributes to improving the status of lions in Tanzania. Further, the fees garnered through Mr. Destruel's hunt will provide revenue to support these positive conservation outcomes.

Therefore, based on the information available to the Service, the purpose for which the permit is being requested, import of this trophy lion, is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:</u>

A myriad of issues and factors, largely related to an increasing human population, complicate and put at risk the management of Tanzania's wildlife (Kideghesho, Rija, Mwamende, & Selemani,

2013). It is likely that the lion populations that exist outside of protected areas will continue to decline (Riggio et al., 2013), making the existence of these protected areas all the more important. The trophy-hunting program in Tanzania provides a revenue source necessary to maintain and manage protected areas from encroachment or elimination.

It is a widely supported belief that increasing the benefits for those who live with and bear costs of wildlife damage or injury by wildlife can increase tolerance of wildlife, especially of large carnivores (e.g. lions) (Bencin, Kioko, & Kiffner, 2016; Lindsey et al., 2013; Winterbach, Winterbach, Somers, & Hayward, 2012). Mr. Destruel hunted with African Buffalo Safari Trackers, which, as outlined below, will provide an indirect benefit to the lion population by generating revenue to help support and maintain a hunting block where lions are found. African Buffalo Safari Trackers is required by Tanzanian law to pay directly a USD 5,000 community development fee to the villages in the hunting area. The company has contributed significantly more than the base requirement, aiming to develop and maintain a strong relationship with these villages. These contributions have paid school fees, health facilities, classroom buildings, water infrastructure improvements, and have contributed to other construction materials. In addition to direct financial assistance, the company also employs approximately 60 villagers in permanent positions and an additional 30 with short-term positions during the off-season. The Service is further encouraged by the recent action taken by the MNRT to amend the WMA regulations enabling these communities to receive a greater proportion of revenues returned on wildlife uses.

Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

The government of Tanzania has implemented a number of policies and regulations to monitor and control the harvest of lions in the country. Therefore, the issuance of an import permit for a lion legally hunted in Tanzania does not conflict with any programs intended to enhance the survival probably of the species in Tanzania.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

As previously stated, almost 40% of all remaining lions are found in Tanzania. The lions located within protected areas are under the legal authority of MNRT, as well as subjected to direct management activities by hunting companies. All indications show, that given the threats identified by the Service when listing the species as threatened under the ESA, the maintenance of these protected areas by hunting companies is actively addressing the three causes of lion decline: loss of habitat, loss of prey base, and human-lion conflict. The cost of operating a hunting block is considerable, and lion safaris are a large source of revenue for hunting companies. This revenue is, in part, what allows the company to first and foremost maintain a presence in this protected area, and subsequently maintain an anti-poaching program, and to aid in local community development, all factors which reduce the threats faced by lions.

With limited, controlled off-take of lions in a manner that mimics natural processes, the hunt associated with Mr. Destruel's application contributes to reducing the threat of extinction of lions in Tanzania. The utilization of hunters such as Mr. Destruel in supporting the safari hunting industry is an important element of the success of lion management in Tanzania.

Therefore, based on the information available to the Service, the purpose for which this import permit would be issued will likely reduce the threat of extinction facing lions in Tanzania.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting as a management tool, there are numerous opinions on the impact it would have on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and available literature, there is a general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for long periods by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see benefits that can be realized through a scientifically based hunting program for lions. There have been a large number of comments from some Non-Governmental Organizations (NGOs) and the public that oppose hunting any lions. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process for this application.

Therefore, based on the information available to the Service, there is general support by scientists, individuals, and other organizations having expertise concerning lions, that legal and sustainable harvest and subsequent import of these lion trophies would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

The long-term survival of lions in Tanzania is tied directly to the success, both ecologically and economically, of the protected areas. Based on our understanding of the hunting block allocation and management, companies must submit annual reports that address several criteria, including the maintenance of key prey populations, contributions to the local villages, improvement to infrastructure and protection of the environment, and anti-poaching operations.

Therefore, based on the information available to the Service, the applicant hunted on a hunting block with an operator that carries out their management practices in accordance with national regulations, having the expertise, facilities, or other resources available to them to successfully accomplish the objective stated in the application.

VIII. Conclusion

As stated earlier, this application received by the Service for the import of a sport-hunted trophy lion from Tanzania has been evaluated on an individual basis. The major threat facing lions today

is the loss of habitat to humans, and the subsequent consequences of living among humans (e.g., decrease of prey base due to bush-meat consumption, increase in human-lion conflict). The occupation and maintenance of hunting areas by hunting concessions -- an industry supported by U.S. hunters such as Mr. Destruel -- protects lion and prey habitat through legal hunting by preventing conversion of such land to other uses, thereby contributing to the enhancement of this species. In addition, the financial benefits to local communities generated from lion safari hunting creates incentives for protection of lions, resulting in fewer lions lost as a result of human-lion conflict, which further contributes to enhancement of this species. Given the status of lions in Tanzania and the level of management and oversight provided to them, it appears that the harvest and import of this lion as a sport-hunted trophy meets the purposes of the Act. The applicant hunted on a hunting block where lions are actively managed in a manner that mimics natural processes. The applicant attests in the application that the hunt occurred on a properly licensed hunting block, and this finding is contingent on the hunting block where the lion was taken, having been properly licensed and fully in compliance with national and local regulations.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of the sport-hunted trophy of this wild lion will enhance the propagation or survival of the species in the wild. Therefore, the Service **is able to authorize the import of one male trophy lion taken from the wild in Tanzania, to Mathieu K. Destruel, Santa Ana, California.**

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)
Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, **Mathieu K. Destruel** (PRT # 07512D) has requested a permit to import a trophy of one lion that he lawfully hunted in Tanzania. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Tanzania on the date specified in the permit application. The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Tanzania. The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Tanzania. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

	Determination
No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.**	**X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** _____

CHIEF, BRANCH OF PERMITS, DMA

Permittee:

RUEL
(b)(6)
SANTA RUSA, CA 95401
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12.

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Tanzania for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Tanzania for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit, source code "W", issued by the Management Authority of Tanzania.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Import Permit for Sport-hunted Lion from Tanzania

RE: Import Application of Zambia Lion Trophy for Derek Yancey

Dear Chief Cogliano:

Enclosed please find the permit application to import a lion trophy from Zambia for Derek Yancey. Also attached to the permit application is the 2018 Operator Enhancement repot from Lumimbia Mwanya-MVU Safaris. Please refer to the hundreds of pages of enhancement information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by Zambia authorities, outfitters, and others, in making an enhancement finding for lion trophy imports.

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted LION trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that the attorney, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Conservation Force

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
YANCEY	DEREK	LeRoy	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Windsor	Colorado	80550	Larimer	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

(b)(6) 08/22/2018

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   John J. Jackson III, Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo Lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

ZAMBIA, MWANYA GMA, MFUWE

   b. Date wildlife is to be hunted:

SEPTEMBER 1-22, 2019

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

MVU SAFARIS LTD
PLOT 2419
FREEDOMWAY,SOUTH END

PO BOX 35225
LUSAKA, ZAMBIA

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

N/A

   b. Date wildlife was hunted:

N/A

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

N/A

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

N/A

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Not yet issued.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	SANDO SINKALA SANDO.SINKALA@ZA.STEINWEG.COM
Business Name:	BRIDGE SHIPPING ZAMBIA LIMITED
Address:	VILLA PARK, PLOT 177/178 UNIT C3 LUANSHYA ROAD
City:	LUSAKA
State/Province:	
Country, Postal Code:	ZAMBIA

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

See data funded by Zambia Authorities.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

See operator report attached.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

See operator report attached.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: (b)(6) _____ Date: 8/2/18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: **LUMIMBA MWANYA-MVU SAFARIS**

   a. Years in business: **EIGHT YEARS YEARS**

   b. Name of company conducting hunt: **MVU SAFARIS**

   2. Name of concession: **LUMIMBA MWANYA GMA** Size in km²: **1603 KM2**

   a. Land tenure: __ Government lease _x_ Community __ Private ranch __ Private conservancy

   b. Length of concession agreement: **SEVEN YEARS** Can it be renewed? **X** Yes __ No

   c. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain: **YES WE ARE SUPPOSED TO PROVIDE A REPORT ON THE PLEDGES WE HAVE DONE TO THE COMMUNITY AND FUNDS THAT HAVE BEEN SPENT ON LAW ENFORCEMENT TO CURB POACHING IN THE AREA.THIS REPORT IS TAKEN INTO ACCOUNT AT THE TIME OF RENEWING THE CONCESSION IF WE WERE CONSISTENT DURING THE SEVEN YEARS TENURE**

   d. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city: **NEAREST TOWN IS MFUWE**

   e. If the concession borders a national park, please provide the park name: **SOUTH LUANGWA NATIONAL PARK**

   f. Description of general and distinctive habitat features and any water features: **HABITAT INCLUDES SAVANNA GRASSLANDS, MOPANE WOODLANDS AND LAGOONS THE LUANGWA RIVER FLOWS THROUGH THE GMA**

3. Are there any communities living in the concession? **X** Yes __ No

   a. If so, estimated number of people or villages in the concession? **ABOUT 400 PEOPLE ONLY IN ONE VILLAGE IN THE GMA**

4. Are there communities bordering this concession? **X** Yes __ No

   a. If so, estimated number of people or villages around the concession? **THE POPULATION IS SPARSE AROUND THE GMA**

5. Relevant game populations in the concession:[1]

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	**ABUNDANT**	**600 AND ABOVE**	**UPWARD**	**PATROL DATA AND OBSERVATIONS**
Lion	**FREQUENT**		**UPWARD**	**-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA**
Leopard	**FREQUENT**		**UPWARD**	**-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA**
Prey species	**ABUNDANT PREY BASE**	**ABUNDANT**	**UPWARD**	**-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA**

6. Total employment number: **__20 PERMANENT EMPLOYEES AND 50 CASUALS BEGINNING OF THE SEASON FOR CAMP BUILDING AND OPENING UP THE ROADS_____**

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	FOUR	NONE
Trackers	FOUR	FOUR
Anti-poaching scouts/rangers	EIGHTEEN	EIGHTEEN
Other anti-poaching	THREE	THREE
Cooks/housekeepers	TEN	TEN
Community coordinators	ONE	ONE
Managers	ONE	NONE
Biologists	NONE	NONE
Others: _____SKINNERS_____	THREE	THREE

7. Number of staff employed in the off-season: **FIVE (5)**

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	18	18	THROUGH OUT THE YEAR
Managers	1		
Maintenance	2		
Road opening/construction	30	20	**BEGINNING OF THE SEASON**
Community relations personnel	2	2	
Others: _____	NONE		

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: **TWELVE**

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? **BOTH**

   c. Months during which anti-poaching patrols are conducted: **THROUGH OUT THE YEAR**

   d. Number of anti-poaching patrols per month: **WE DO THREE PATROLS**

   e. Description of anti-poaching equipment, vehicles, etc.: **TWO 4X4 LANDCRUISERS, SATELLITE PHONES AND FIREARMS**

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? **WE DO TOGETHER WITH DEPARTMENT OF NATIONAL PARKS**

   g. Do you offer rewards to poaching informants leading to arrest? **X** Yes __ No

   h. Do you offer rewards to poaching informants upon conviction? **X** Yes __ No

   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? **ZAMBIAN KWACHA**

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	140 800	140,800	157,500	AMOUNT FOR 12 SCOUTS PER ANNUM
Equipment	50,000	43,000	50,000	UNIFORMS,BOOTS,TORCHES,RAINCOATS ETC
Vehicles	400,000			USED TO BUY A LANCRUISER IN THE FIRST YEAR DONATED TO DNPWS

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Petrol	57,600	55,100	63,000	200 LITRES IS USED EVERY MONTH.THE CHANGE IN AMOUNTS IS DUE TO PRICE FLACTUATIONS
Rewards paid	12,000	8,000	38,500	REWARDS ARE IN FORM OF BICYCLES ,TELEVISION SETS AND KITCHEN UTENSILS
Other: _____				
Other: _____				
TOTALS	**660,400**	**246,900**	**309,900**	

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered	201	115	103	THIS INCLUDED STATISTICS FROM DNPW AND GUN SHOTS HEARD
Ivory poachers arrested	8	2	3	THESE WERE TAKEN TO THE CHIEF
Meat poachers arrested	81	72	62	THESE WANTED MEAT FOR FOOD
Other poachers arrested	7	8	2	THESE POACHERS HAD NO SPECIFIC REASON FOR POACHING MAYBE FOR FUN
Poachers convicted	5	0	1	THESE GUYS THEIR CASES WERE TRIED AND DISPOSED OFF IN COURT
Snares/gin traps collected	558	402	289	THESE WERE FOUND DURING PATROLS ALL YEAR ROUND
Firearms confiscated	27	19	7	FIREARMS WERE GIVEN TO DNPWS
Vehicles confiscated	0	0	0	NO VEHICLES WERE CONFISTICATED
Bicycles confiscated	19	8	3	A NUMBER OF THEM USE THESE AS MODE OF TRANSPORT
Boats/nets confiscated				
Tusks recovered	0	0	0	ITS HARD TO RECOVER TUSKS BECAUSE THEY CUT THEM INTO SMALLER PIECES IMMEDIATELY THEY ARE REMOVED FROM THE ELEPHANT

Carcasses observed	22	15	9	THESE WERE DROPPED ON THE WAY AFTER THE POACHERS WERE PERSUED
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? X Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? **WE PAY 170,000 KWACHA AS COMMUNITY OBLIGATION AND 90,000 KWACHA FOR INFRASTRUCTURE DEVELOPMENT.THIS IS CONTAINED IN THE CONTRACT.BESIDES THE COMPANY MAKES ITS OWN VOLUTARY DONATIONS LIKE DONATING HAMMERMILLS,CLOTHES AND OFFERING HELP TO THE COMMUNITY WHEN NEED ARISES**

c. Does the company provide game meat to nearby communities? X Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe **The meat contribution program: 50% OF EADIBLE MEAT IS CONTRIBUTED TO THE COMMUNITY DURING THE HUNTING SEASON**

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. **OUR MANAGER GOES AROUND THE VILLAGES TO ASK IF THE WILD ANIMALS HAVE CAUSED ANY DAMAGE TO THE CROPS**

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? **ZAMBIAN KWACHA**

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant	VEGETABLE FIELDS WERE EATEN	13,000	33,700	41,000
Lion	NIL			
Leopard	NIL			
Other	NIL			

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? **_ZAMBIAN KWACHA__**

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)		90,000	135,000	Most of the schools in this Area are in a deplorable state. MVU safaris has embarked on a program

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

				to renovate these schools so that children have better learning environment.
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities				
Water infrastructure improvements				
Sports teams funded				
Construction materials donated				
Other: _____				
Other: _____				
TOTALS		**90,000**	**135,000**	

11. How many U.S. clients did the company have in the past three years, and what percentage of the company's clients were from the U.S.?

	2015 (number and percentage of U.S. clients)	2016 (number and percentage of U.S. clients)	2017 (number and percentage of U.S. clients)
U.S. clients (total)	2(40%)	8 (60%)	10(62%)
-- hunting lion	0	2	2
-- hunting elephant	0	2	2
-- hunting leopard	3	3	3

12. Dollar amount and percentage of the company's revenue from U.S. clients: **50%**

13. Other information: Please provide a narrative of other enhancement information about the company, such as any special hunting policies (e.g., aging, size, resting areas), concession

-WE ONLY SHOOT LIONS OF 5 YEARS AND OVER

-WE ONLY SHOOT ELEPHANT OF 15 KGS WEIGHT OF IVORY AND OVER

-WE KEEP PATROL DATA FORMS AND MONITOR GAME POPULATIONS EVERY 2YEARS

Improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

14. I declare that the foregoing is true and correct.

MVU SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: m1saeed@hotmail.coml

I. DESCRIPTION OF COMPANY AND CONCESSION

Mvu Safaris, Ltd. has been operating in Mwanya Concession since April 2015. The concession provides habitat for a range of species including Lion, Leopard, Buffalo, Elephant, Hippo, Crocodile, Cookson Wildebeest and Plains Game. The concession is in Eastern Province of Zambia and shares boundaries with three national parks on the west side, northern side and southern side. The area is classified as prime hunting area. Mvu Safaris has entered into a seven year lease agreement with the wildlife authority and communities and is renewable subject to conducting successful conservation records of the Ecological system. Lumimba Mwanya is about 1603Km Squared.

Our company is a Limited Company whose Directors are Mr. Mohammed Saeed Essa and Mr. Gulam Adam Patel. The Company has been operating in this country for 6 years although this concession was acquired in April 2015. In view of this Mvu Safaris maintains two Hunting Concessions which is Mufunta and Mwanya. Mvu Safaris has one resident Professional Hunter who also provides the duties of a Camp Manager. Other employees include four game trackers, twelve anti-poaching scouts, and eight camp staff (cooks, cleaning, miscellaneous). There are about Twenty two Families that are direct beneficiaries from Mvu Safaris employees. These beneficiaries come from the local community.

The Resident Professional Hunter comes from the nearest town called Chipata. We can approximate that more than 200 people benefit from our operations because most of these employees have more than one wife and have a number of dependents who depend on them for survival. We very much appreciate the donations that are made by some clients from the United States of America as these go a long way in improving the quality of life in these rural communities of Zambia. In most circumstances these communities do not have an economic activity which can assist them raise money for school fees and medication. The only activities which they engage themselves in is farming which is done at subsistence level to only provide for their families. This therefore follows that Safari Hunting provides some economic benefit to these communities as it enable the employees to raise some money to send their children to school, buy school necessities and meet some basic healthcare requirements.

Safari hunting therefore helps not only meet some financial needs of these communities but also prevents them from Illegal Hunting Activities which have adverse effects on the population of the animals. It therefore follows that most of the revenue for Safari Hunting is derived from hunting of Lion and Leopard. With this in mind Mvu Safaris, the Community and the Wildlife Authorities have an enormous task to prevent the Cats from going into extinction by providing a more robust anti –poaching system to prevent the extinction of cats in these concessions.

II. ANTI-POACHING COMPONENT

Mvu Safaris maintains six groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the Wildlife Scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

In 2017, Mvu Safaris spent almost $30900 in Mwanya on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 450 liters of diesel for patrol vehicles. We recorded 228 patrol days and well above 1600 patrol hours. We also paid over $3850 in payments of rewards to leads helping in the abduction of poachers. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	5,900	Directly paid and some subsidies to WA
Scout equipment	5,000	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	6,300	For scouts and WA
Rations for WA and community scouts	9,850	
Rewards	3,850	For information and arrests
TOTAL	$30,900	

The concession agreement has a clause which requires Mvu Safaris to submit Annual reports on the Anti-Poaching Activities and patrols done in each particular year to the Wildlife Authorities. This report will be taken into account in 2021 whether to renew the concession or not.

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the community Resource Boards of about $30900 annually as per agreement which was entered in 2015 by Mvu Safaris, the Community and the Wildlife Authorities. In addition to these direct contributions, we pledge to distribute at least 50% of game meat harvested to the villages. In 2017 we distributed more than 50% to the community.

In the picture above firearms and snares recovered from poachers and surrendered to the Department of National Parks

In the picture above. Elephant Tusks recovered by the Department of National Parks from Poachers in the Luangwa Valley where Mwanya GMA is situated together with surrounding blocks in the Luangwa Valley.

B. Conflict Control

We usually have reports of problem Animals mainly Elephants destroying crops for villagers. In 2017; 3,250 dollars was set aside for compensation purposes in case of such occurrences. We did not have many occurrences of problem animals and just part of the USD 3250 was used for compensation purposes.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans which costs approximately $500 to maintain in 2017 respectively. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the concession by finding water resource.

The concession is along the Luangwa River with its smaller streams flowing through the concession creating more water availability for animals. As a result we have a lot of Game in our concession which attracts Lion and Leopard.

V. OTHER INFORMATION

A. Prey Base

Mvu Safaris in Mwanya is still monitoring the population growth of the Lion and Leopard which will result from efforts done so far such as anti-poaching efforts, water provision, and fire management. Mvu Safaris will further engage the wildlife Authorities in monitoring the resources on the ground by positioning cameras in strategic areas so as to monitor the Activities of the Lion and Leopard. Even though our area is rated as a prime area we will work extra hard to grow the population of the Species by at least 15% per year. This will be done by introducing a deliberate approach where only old animals will be harvested for trophies and work on very careful allocated quota utilization per year in the block.

We will also engage the wildlife authorities to regulate resident Hunting by proposing that animals hunted for food purposes should be female so as to balance the Eco system. We further wish to propose that resident hunting should be closely monitored and supervised because we have had reports in the past where resident hunters would not conduct proper ethical hunting methods in the hunting concession where they get allocated hunting rights per year for their own personal hunting opportunities as residents of Zambia and we wish to bring this anomaly to an end.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lion in our area better. As at now we use Lion tracks and foot prints. Sightings by individuals and the cameras which we use annually to monitor the size and age for the Lion.

C. Elephant Hunting

Mvu Safaris does not only limit its Sustainable-Hunting based approach to cats only. We are aware that Elephant is also a high Value Hunting Safari. Recognizing this fact we at Mvu Safaris have a policy which is in line with the wildlife Authorities of not taking Elephant whose tusks is weighing below 15kilograms.

D. Lion Aging Approach

We have been following an age-based policy for African Lion trophies since 2015, after adopting a mutual aging agreement with our wildlife Authorities.

Our approach as a company from 2015 until 2021 when our concession will be due for renewal is to hunt lion which has reached an advanced and mature age only of minimum 5 years and above.

E. U.S. Hunters

Our Largest clientele is from the United States of America. We are happy to report that we have had very good relations with most of these clients who are willing to get out of their way and spend extra in terms of donations to communities and towards Anti-poaching programs. Their approach to Safari Hunting has been that of maintaining high ethics of sustainability so as to improve the numbers of species in these concessions.

CONCLUSION

Mvu Safaris regulated, sustainable-use based hunting program enhances the survival of the Lion/Leopard. Our program helps to preserve and improve available Lion/Leopard habitat. Our anti-poaching program serves to protect and grow the cats prey base and reduces incidental off take by meat poachers. And our community participation and assistance program demonstrates the potential value of wildlife (especially Lion) to local communities. Mvu Safaris does not limit is Sustainable use based hunting approach to Cats only but includes other species which are of high value including the African Elephant.Mvu Safaris has anti-poaching awareness campaign programs also which are done through funding sporting activities. This has helped improve the awareness on poaching in the community and how poaching robes them of the much needed finances generated from these natural resources. We can confirm that the communities in our concession are fully aware of the benefits that Safari Hunting comes along with and the dangers that are posed to this resource if poaching is left to escalate at higher levels. The community is now more than willing to bring to our attention any suspicious activities by some members of the communities.

To: heather_harcum@fws.gov

Good afternoon Heather - In connection with the referenced PRT number, would you be so kind as to check on the status of the application and let me know if it is simply pending, or is there some information needed by the FWS to complete the application? I have been contacted by our client and before sending an answer to him, Mr. Jackson has suggested that I check with your office. If there is another person at FWS that I should be directing this email to, please advise and I will re-route it to that person. Since this is day 1 of week 2, I still feel a little 'lost' regarding to whom I should send inquiries. Thank you for your assistant - it is greatly appreciated.

Tammy L. Piker

To: Tammy Piker <permits@conservationforce.org>

Good morning Tammy,

Thank you for your inquiry. Our records show that our office reached out on May 22, 2019 requesting the applicant's license(s)/permit(s) authorizing the lion hunt un Zambia (see attached e-mail). Please contact the biologist working on the review of this permit, Darcy Vargas (darcy_vargas@fws.gov), to provide this information from the applicant.

Thank you,
Heather Harcum

Application # 07865D / Import of Zambia Lion / Derek Yancey

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 3:15 PM
To: "John J. Jackson, III" <cf@conservationforce.org>

Dear Mr. Jackson,

Ref: 07865D; Import of Mr. Derek LeRoy Yancey's lion trophy import, from Mwanya GMA, Lusaka Zambia, to be taken from September 1-22, 2019.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. Please provide a copy of the Zambia licenses/permits authorizing Mr. Yancey's lion hunt.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by June 6, 2019 (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

(b)(6) [redacted]
Windsor, CO 80550

Dear Mr. Yancey:

On May 22, 2019, an email was sent to your application contact, John Jackson with Conservation Force, requesting additional information in regard to your application PRT- 07865D. In that email, he was informed that you needed to respond to the request by June 6, 2019 [45 calendar days after May 22, 2019], or your application would be abandoned. Since we have not received the requested information, we have abandoned your application, and your application has been administratively closed.

If, in the future, you wish to pursue the activity for which you originally applied, you will need to submit a new application, along with any appropriate fees, to this office. Please be aware that in most cases, we will not "transfer" information from your old application to a new application. All relevant information would need to be supplied at the time a new application is submitted.

If we can be of assistance, you may contact our office at 703-358-2104 or fax 703-358-2281.

Sincerely,

Permit Biologist

RE: Import Application of Zambia Lion Trophy for Joseph Dement

Dear Chief Cogliano:

Enclosed please find the permit application to import a lion trophy from Zambia for Joseph Dement. Also attached to the permit application is the 2018 Operator Enhancement repot from Lumimbia Mwanya-MVU Safaris. Please refer to the hundreds of pages of enhancement information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by Zambia authorities, outfitters, and others, in making an enhancement finding for lion trophy imports.

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
DEMENT	JOSEPH	DAVID	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title		6. Primary contact name	
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
OAKFIELD	TN	38362	MADISON	USA

(b) (6) erent than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
MEDINA	TN	38355	GIBSON	USA

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee—attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and ac derstand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Lion; Panthera leo

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

Country - Zambia; Area - Lumimba Mwanya GMA; Region - Eastern Province of Zambia;
Nearest Town - Mfuwe; Nearest City - Chipata

   b. Date wildlife is to be hunted:

Lion (Panthera leo) hunted in the 2018 hunting season on Lumimba Mwanya GMA in the Eastern Province of Zambia; Scheduled Hunt Dates are October 14 - November 4, 2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

Name of Hunting Outfitter/Safari Company - MVU Safaris, LTD.
Name of Professional Hunter - WH van Noordwyk

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). **Lion, Panthera leo, has not been hunted yet and do not currently hold any such permits or licenses, as of the date of this application being submitted.**
8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
   Name: Sando Sinkala; Telephone: +260 211 847 881 Email: sando.sinkala@za.steinweg.com
   Business Name: Bridge Shipping Zambia LTD
   Address: Villa Park; Plot 177/178; Unit C3; Luanchya Road
   City: Lusaka
   State/Province: Zambia
   Country, Postal Code: 10101
9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?
   The area consists of healthy volumes of pride and single males to the extent that the area has successfully harvested 2 mature lion males the past three seasons which made the age limit in Zambia easily, as per the Zambia's law. It is difficult to accumulate exact numbers on c due to their nocturnal lifestyle and and being all over the place covering a vast territory. The area is bordered and situated against the Sou Luangwa National Park, Luambe Park, and Lukusuzi Park which means the hunting block is covered on three sides by National Parks. Lic roam freely between the parks and hunting block making it extremely difficult. However, as an area that is able to successfully harvest two mature males per year, it has a very healthy mature population.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

   Hunting License $900
   Lion Trophy Fee $10,000
   21 Day Lion Safari Daily Rates Total $60,000
   Concession Fee $10,000

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

   Attached to application in the Conservation Force Operator Enhancement Questionaire and the MVU Safaris, Ltd. Description of Company and Concession, Anti-Poaching Component, Community Participation, Conflict Control, Habitat Protection and Conservation Development and Other Information.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two [redacted] dar year.

    Applicant's signature: [redacted] Date: 08-13-2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: **LUMIMBA MWANYA-MVU SAFARIS**

   a. Years in business: **EIGHT YEARS YEARS**

   b. Name of company conducting hunt: **MVU SAFARIS**

   2. Name of concession: **LUMIMBA MWANYA GMA** Size in km²: **1603 KM2**

   a. Land tenure: __ Government lease _x_ Community __ Private ranch __ Private conservancy

   b. Length of concession agreement: **SEVEN YEARS** Can it be renewed? **X** Yes __ No

   c. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain: **YES WE ARE SUPPOSED TO PROVIDE A REPORT ON THE PLEDGES WE HAVE DONE TO THE COMMUNITY AND FUNDS THAT HAVE BEEN SPENT ON LAW ENFORCEMENT TO CURB POACHING IN THE AREA.THIS REPORT IS TAKEN INTO ACCOUNT AT THE TIME OF RENEWING THE CONCESSION IF WE WERE CONSISTENT DURING THE SEVEN YEARS TENURE**

   d. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city: **NEAREST TOWN IS MFUWE**

   e. If the concession borders a national park, please provide the park name: **SOUTH LUANGWA NATIONAL PARK**

   f. Description of general and distinctive habitat features and any water features: **HABITAT INCLUDES SAVANNA GRASSLANDS, MOPANE WOODLANDS AND LAGOONS THE LUANGWA RIVER FLOWS THROUGH THE GMA**

3. Are there any communities living in the concession? **X** Yes __ No

   a. If so, estimated number of people or villages in the concession? **ABOUT 400 PEOPLE ONLY IN ONE VILLAGE IN THE GMA**

4. Are there communities bordering this concession? **X** Yes __ No

   a. If so, estimated number of people or villages around the concession? **THE POPULATION IS SPARSE AROUND THE GMA**

5. Relevant game populations in the concession:[1]

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	ABUNDANT	600 AND ABOVE	UPWARD	PATROL DATA AND OBSERVATIONS
Lion	FREQUENT		UPWARD	-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA
Leopard	FREQUENT		UPWARD	-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA
Prey species	ABUNDANT PREY BASE	ABUNDANT	UPWARD	-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA

6. Total employment number: __20 PERMANENT EMPLOYEES AND 50 CASUALS BEGINNING OF THE SEASON FOR CAMP BUILDING AND OPENING UP THE ROADS_____

a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	FOUR	NONE
Trackers	FOUR	FOUR
Anti-poaching scouts/rangers	EIGHTEEN	EIGHTEEN
Other anti-poaching	THREE	THREE
Cooks/housekeepers	TEN	TEN
Community coordinators	ONE	ONE
Managers	ONE	NONE
Biologists	NONE	NONE
Others: _____SKINNERS_____	THREE	THREE

7. Number of staff employed in the off-season: **FIVE (5)**

a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	18	18	THROUGH OUT THE YEAR
Managers	1		
Maintenance	2		
Road opening/construction	30	20	**BEGINNING OF THE SEASON**
Community relations personnel	2	2	
Others: _____	NONE		

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: **TWELVE**

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? **BOTH**

   c. Months during which anti-poaching patrols are conducted: **THROUGH OUT THE YEAR**

   d. Number of anti-poaching patrols per month: **WE DO THREE PATROLS**

   e. Description of anti-poaching equipment, vehicles, etc.: **TWO 4X4 LANDCRUISERS, SATELLITE PHONES AND FIREARMS**

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? **WE DO TOGETHER WITH DEPARTMENT OF NATIONAL PARKS**

   g. Do you offer rewards to poaching informants leading to arrest? **X** Yes __ No

   h. Do you offer rewards to poaching informants upon conviction? **X** Yes __ No

   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? **ZAMBIAN KWACHA**

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	140 800	140,800	157,500	AMOUNT FOR 12 SCOUTS PER ANNUM
Equipment	50,000	43,000	50,000	UNIFORMS,BOOTS,TORCHES,RAINCOATS ETC
Vehicles	400,000			USED TO BUY A LANCRUISER IN THE FIRST YEAR DONATED TO DNPWS

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Petrol	57,600	55,100	63,000	200 LITRES IS USED EVERY MONTH.THE CHANGE IN AMOUNTS IS DUE TO PRICE FLACTUATIONS
Rewards paid	12,000	8,000	38,500	REWARDS ARE IN FORM OF BICYCLES ,TELEVISION SETS AND KITCHEN UTENSILS
Other: _____				
Other: _____				
TOTALS	**660,400**	**246,900**	**309,900**	

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered	201	115	103	THIS INCLUDED STATISTICS FROM DNPW AND GUN SHOTS HEARD
Ivory poachers arrested	8	2	3	THESE WERE TAKEN TO THE CHIEF
Meat poachers arrested	81	72	62	THESE WANTED MEAT FOR FOOD
Other poachers arrested	7	8	2	THESE POACHERS HAD NO SPECIFIC REASON FOR POACHING MAYBE FOR FUN
Poachers convicted	5	0	1	THESE GUYS THEIR CASES WERE TRIED AND DISPOSED OFF IN COURT
Snares/gin traps collected	558	402	289	THESE WERE FOUND DURING PATROLS ALL YEAR ROUND
Firearms confiscated	27	19	7	FIREARMS WERE GIVEN TO DNPWS
Vehicles confiscated	0	0	0	NO VEHICLES WERE CONFISTICATED
Bicycles confiscated	19	8	3	A NUMBER OF THEM USE THESE AS MODE OF TRANSPORT
Boats/nets confiscated				
Tusks recovered	0	0	0	ITS HARD TO RECOVER TUSKS BECAUSE THEY CUT THEM INTO SMALLER PIECES IMMEDIATELY THEY ARE REMOVED FROM THE ELEPHANT

Carcasses observed	22	15	9	THESE WERE DROPPED ON THE WAY AFTER THE POACHERS WERE PERSUED
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? X Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? **WE PAY 170,000 KWACHA AS COMMUNITY OBLIGATION AND 90,000 KWACHA FOR INFRASTRUCTURE DEVELOPMENT.THIS IS CONTAINED IN THE CONTRACT.BESIDES THE COMPANY MAKES ITS OWN VOLUTARY DONATIONS LIKE DONATING HAMMERMILLS,CLOTHES AND OFFERING HELP TO THE COMMUNITY WHEN NEED ARISES**

c. Does the company provide game meat to nearby communities? X Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe **The meat contribution program: 50% OF EADIBLE MEAT IS CONTRIBUTED TO THE COMMUNITY DURING THE HUNTING SEASON**

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. **OUR MANAGER GOES AROUND THE VILLAGES TO ASK IF THE WILD ANIMALS HAVE CAUSED ANY DAMAGE TO THE CROPS**

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? **ZAMBIAN KWACHA**

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant	VEGETABLE FIELDS WERE EATEN	13,000	33,700	41,000
Lion	NIL			
Leopard	NIL			
Other	NIL			

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? _**ZAMBIAN KWACHA**__

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)		90,000	135,000	Most of the schools in this Area are in a deplorable state. MVU safaris has embarked on a program

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

				to renovate these schools so that children have better learning environment.
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching

MVU SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: m1saeed@hotmail.coml

I. DESCRIPTION OF COMPANY AND CONCESSION

Mvu Safaris, Ltd. has been operating in Mwanya Concession since April 2015. The concession provides habitat for a range of species including Lion, Leopard, Buffalo, Elephant, Hippo, Crocodile, Cookson Wildebeest and Plains Game. The concession is in Eastern Province of Zambia and shares boundaries with three national parks on the west side, northern side and southern side. The area is classified as prime hunting area. Mvu Safaris has entered into a seven year lease agreement with the wildlife authority and communities and is renewable subject to conducting successful conservation records of the Ecological system. Lumimba Mwanya is about 1603Km Squared.

Our company is a Limited Company whose Directors are Mr. Mohammed Saeed Essa and Mr. Gulam Adam Patel. The Company has been operating in this country for 6 years although this concession was acquired in April 2015. In view of this Mvu Safaris maintains two Hunting Concessions which is Mufunta and Mwanya. Mvu Safaris has one resident Professional Hunter who also provides the duties of a Camp Manager. Other employees include four game trackers, twelve anti-poaching scouts, and eight camp staff (cooks, cleaning, miscellaneous). There are about Twenty two Families that are direct beneficiaries from Mvu Safaris employees. These beneficiaries come from the local community.

The Resident Professional Hunter comes from the nearest town called Chipata. We can approximate that more than 200 people benefit from our operations because most of these employees have more than one wife and have a number of dependents who depend on them for survival. We very much appreciate the donations that are made by some clients from the United States of America as these go a long way in improving the quality of life in these rural communities of Zambia. In most circumstances these communities do not have an economic activity which can assist them raise money for school fees and medication. The only activities which they engage themselves in is farming which is done at subsistence level to only provide for their families. This therefore follows that Safari Hunting provides some economic benefit to these communities as it enable the employees to raise some money to send their children to school, buy school necessities and meet some basic healthcare requirements.

Safari hunting therefore helps not only meet some financial needs of these communities but also prevents them from Illegal Hunting Activities which have adverse effects on the population of the animals. It therefore follows that most of the revenue for Safari Hunting is derived from hunting of Lion and Leopard. With this in mind Mvu Safaris, the Community and the Wildlife Authorities have an enormous task to prevent the Cats from going into extinction by providing a more robust anti –poaching system to prevent the extinction of cats in these concessions.

II. ANTI-POACHING COMPONENT

Mvu Safaris maintains six groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the Wildlife Scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

In 2017, Mvu Safaris spent almost $30900 in Mwanya on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 450 liters of diesel for patrol vehicles. We recorded 228 patrol days and well above 1600 patrol hours. We also paid over $3850 in payments of rewards to leads helping in the abduction of poachers. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	5,900	Directly paid and some subsidies to WA
Scout equipment	5,000	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	6,300	For scouts and WA
Rations for WA and community scouts	9,850	
Rewards	3,850	For information and arrests
TOTAL	$30,900	

The concession agreement has a clause which requires Mvu Safaris to submit Annual reports on the Anti-Poaching Activities and patrols done in each particular year to the Wildlife Authorities. This report will be taken into account in 2021 whether to renew the concession or not.

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the community Resource Boards of about $30900 annually as per agreement which was entered in 2015 by Mvu Safaris, the Community and the Wildlife Authorities. In addition to these direct contributions, we pledge to distribute at least 50% of game meat harvested to the villages. In 2017 we distributed more than 50% to the community.

In the picture above firearms and snares recovered from poachers and surrendered to the Department of National Parks

In the picture above. Elephant Tusks recovered by the Department of National Parks from Poachers in the Luangwa Valley where Mwanya GMA is situated together with surrounding blocks in the Luangwa Valley.

B. Conflict Control

We usually have reports of problem Animals mainly Elephants destroying crops for villagers. In 2017; 3,250 dollars was set aside for compensation purposes in case of such occurrences. We did not have many occurrences of problem animals and just part of the USD 3250 was used for compensation purposes.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans which costs approximately $500 to maintain in 2017 respectively. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the concession by finding water resource.

The concession is along the Luangwa River with its smaller streams flowing through the concession creating more water availability for animals. As a result we have a lot of Game in our concession which attracts Lion and Leopard.

V. OTHER INFORMATION

A. Prey Base

Mvu Safaris in Mwanya is still monitoring the population growth of the Lion and Leopard which will result from efforts done so far such as anti-poaching efforts, water provision, and fire management. Mvu Safaris will further engage the wildlife Authorities in monitoring the resources on the ground by positioning cameras in strategic areas so as to monitor the Activities of the Lion and Leopard. Even though our area is rated as a prime area we will work extra hard to grow the population of the Species by at least 15% per year. This will be done by introducing a deliberate approach where only old animals will be harvested for trophies and work on very careful allocated quota utilization per year in the block.

We will also engage the wildlife authorities to regulate resident Hunting by proposing that animals hunted for food purposes should be female so as to balance the Eco system. We further wish to propose that resident hunting should be closely monitored and supervised because we have had reports in the past where resident hunters would not conduct proper ethical hunting methods in the hunting concession where they get allocated hunting rights per year for their own personal hunting opportunities as residents of Zambia and we wish to bring this anomaly to an end.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lion in our area better. As at now we use Lion tracks and foot prints. Sightings by individuals and the cameras which we use annually to monitor the size and age for the Lion.

C. Elephant Hunting

Mvu Safaris does not only limit its Sustainable-Hunting based approach to cats only. We are aware that Elephant is also a high Value Hunting Safari. Recognizing this fact we at Mvu Safaris have a policy which is in line with the wildlife Authorities of not taking Elephant whose tusks is weighing below 15kilograms.

D. Lion Aging Approach

We have been following an age-based policy for African Lion trophies since 2015, after adopting a mutual aging agreement with our wildlife Authorities.

Our approach as a company from 2015 until 2021 when our concession will be due for renewal is to hunt lion which has reached an advanced and mature age only of minimum 5 years and above.

E. U.S. Hunters

Our Largest clientele is from the United States of America. We are happy to report that we have had very good relations with most of these clients who are willing to get out of their way and spend extra in terms of donations to communities and towards Anti-poaching programs. Their approach to Safari Hunting has been that of maintaining high ethics of sustainability so as to improve the numbers of species in these concessions.

CONCLUSION

Mvu Safaris regulated, sustainable-use based hunting program enhances the survival of the Lion/Leopard. Our program helps to preserve and improve available Lion/Leopard habitat. Our anti-poaching program serves to protect and grow the cats prey base and reduces incidental off take by meat poachers. And our community participation and assistance program demonstrates the potential value of wildlife (especially Lion) to local communities. Mvu Safaris does not limit is Sustainable use based hunting approach to Cats only but includes other species which are of high value including the African Elephant.Mvu Safaris has anti-poaching awareness campaign programs also which are done through funding sporting activities. This has helped improve the awareness on poaching in the community and how poaching robes them of the much needed finances generated from these natural resources. We can confirm that the communities in our concession are fully aware of the benefits that Safari Hunting comes along with and the dangers that are posed to this resource if poaching is left to escalate at higher levels. The community is now more than willing to bring to our attention any suspicious activities by some members of the communities.

Application # 08062D

Vargas, Darcy <darcy_vargas@fws.gov> Thu, Nov 29, 2018 at 5:17 PM
To: "John J. Jackson, III" <cf@conservationforce.org>

Dear Conservation Force,

Ref: 08062D for the import of a lion trophy taken by Joseph David Dement in Zambia.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. According to the referenced application, the lion hunt should have occurred by November 4, 2018. Therefore, please submit a copy of Mr. Dement's hunting license and all related Zambian licenses.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by January 13, 2018 (45 calendar days of the date of this letter), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

DETAILS OF TROPHY MEASUREMENTS

Species	Length of Skin	Length of Tusk	Average length of horn	Length of Skull
Crocodile	4,26 m.			
Baboon				9 inch.
Wildebeest			26 inch.	
Grysbuck.			1,5 inch.	
Hyena				12 inch.

Certification by -

(a) Client

I certify that the animals listed on this return were hunted or wounded by me during the period stated and that the total amount of foreign currency stated and paid by me to the safari company is the full amount I was charged.

(b) Professional Hunter

I certify that the animals listed in this return were actually hunted by the client in accordance with the terms and conditions of the Safari Hunting Licence and tha (b)(6) above is the full amount paid by the client for the hunt.

Date 29/10/18 Signature of Client.....

Date 29/10/18 Signature of Professional Hunter.....

Date 29/10/18 Name of Wildlife Police Officer GEOFFREY SAKALA

Employment No. of W.P.O. D0245814

Signature of W.P.O.....

Notes: Original copy to Committee ** Duplicate to Safari Company ** Triplicate to Commercial ** Quadruplicate to be retained in the book

Hi Mr. Dement,

I apologize for the delay in processing your application to import a trophy of a lion that was hunted in Zambia (application no. 08062D, received in our office on 9/13/2018. Can you please provide me with the specific date the lion was hunted/taken?

Thank you and please contact me if have any questions.

Best regards,

Amy Brisendine

Intra-Service Section 7 Biological Evaluation Form

Originating Person: Amy Brisendine Date: April 7, 2020

Telephone Number: 703-358-2005

I. **Service Program and Geographic Area or Station Name**: Branch of Permits, Division of Management Authority, International Affairs

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)

Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, 08062d, Joseph David Dement, has requested a permit to import a trophy of one lion that he lawfully hunted in Zambia. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Zambia on the date specified in the permit application.

The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Zambia.

The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Zambia. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

Determination

No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.** **X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** _____

Enhancement Finding

Applicant: Joseph David Dement (PRT-08062D)

Summary

Joseph David Dement submitted an application to import one male African lion (*Panthera leo melanochaita*), which he hunted on October 18, 2018, from the Mwanya Game Management Area, Zambia, for the purpose of enhancing the propagation and survival of the species in the wild. This subspecies of African lion is listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and is listed as threatened under the U.S. Endangered Species Act (Act or ESA). As such, export of a hunted African lion out of Zambia requires the prior issuance of a CITES export permit from the CITES Management Authority of Zambia; and import into the United States requires the prior issuance of an ESA import permit by the U.S. Fish and Wildlife Service (Service). The Service, therefore, may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the propagation or survival of the species in the wild.

After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and information received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken October 18, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

U.S. Governance of the Lion:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion (79 Fed. Reg. 64472.). On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service

published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r) (80 Fed. Reg. 79999). The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application demonstrating that the activity meets the requirements for issuance under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in future findings for import of sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

Our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Dement 's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Mwanya Game Management Area (GMA), in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service in

making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.,* population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all

relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Dement's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we review a number of factors. Some of the factors we considered in making this finding include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country.

Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives for local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. In this finding, we examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the proposed import of this trophy in accordance with the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how Mr. Dement's participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range country and interested

parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for our finding:

In February 2020, the Service received an updated "Enhancement and Non-detriment Finding for African lion Sport Hunting in Zambia" from Zambia's Department of National Parks and Wildlife (DNPW). This updated finding notes, "since the re-introduction of trophy hunting for lion in 2016, the DNPW is implementing an adaptive management strategy that limits the off-take of lions. To support this approach, it has experimented in implementing a robust age-based monitoring programme that will become binding for the 2020 hunting season." Prior to this February 2020, update, in February 2016, the Service sent a letter to Zambia's Wildlife Authority with questions about the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether the management addresses the three main threats that were identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. In the letter, the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when considered in conjunction with the Service's permit issuance criteria, aids the Service in making the required enhancement findings for permitting importation of sport-hunted lion trophies. In response to this letter, Zambia's DNPW (DNPW 2016), provided documentation, dated May 5, 2017, describing Zambia's lion population and management plans.

Since 2016, the Service has met with officials from Zambia multiple times to receive updated information and clarify questions the Service has had on the status of and management of lions in Zambia with respect to imports of sport-hunted lion trophies. For example, more recently, Service representatives met with Zambian officials in February, 2020, at the annual Safari Club International Convention in Reno, Nevada; November, 2019, at the 17th African Wildlife Consultative Forum in Zimbabwe; and November 2018, at the 16th African Wildlife Consultative Forum in Uganda.

The documentation the Service received from DNPW in February, 2020, and May, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, information received from interested parties, and Mr. Dement's application are the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS), which was responsible for the protected area network. In 1999, the Government of

Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capacity, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with its law enforcement capabilities due to inadequate resources.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Zambia's vision as stated in the Strategy is to have a secure, viable, and well-managed wild population of lions that will support conservation of biodiversity in harmony with human development. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies and projects that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW 2016). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work-time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. Under DNPW, *the Wildlife Law Enforcement Unit* currently has a staff compliment of 1,525 Wildlife Police Officers covering an estimated 236,376 km^2 of wildlife estates (equivalent to approximately 155 km^2/Wildlife Police Officer) (DNPW 2020, p. 18). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under Zambia's Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition, Zambia is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including making findings by the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. Zambia has provided to us a copy of its May 5, 2016, non-detriment finding for lions, which it updated in January, 2020. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." The Scientific Authority further explained that its positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa. As of 2020, additional genetic analyses are also being conducted by Zambia Lion Project, including assessments that will help inform DNPW in future efforts to translocate lions among different

regions in Zambia in order to re-establish lion populations in historic lion range e.g., West Lunga complex.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosysteMr. Surveys were conducted in the later part of 2016 (DNPW 2016). In 2018 the Zambia Carnivore Programme (ZCP 2018) intensively monitored 15 prides and 15 coalitions totaling 173 lions across Northern and Central Kafue in 2018 extending the study area to the remote Kasonso-Busanga GMA. It is believed that the lion population in this ecosystem is stable or possibly increasing (DNPW 2020, p. 11). A report by the Democratic staff of the House Committee on Natural Resources concluded that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al*. 2016). As of 2016, Africa had the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by the year 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al*. 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts. Poverty and the necessity for rural people to obtain some income are the main drivers of bush meat poaching in Zambia. Since 2016, DNPW has continued to work with ZCP and Conservation South Luangwa (CSL) to mitigate snaring by-catch through intensive monitoring of collared wild dog and lion groups through ground, aerial and satellite/ GPS tracking, coupled with data-directed anti-snaring patrols, field-based veterinarians. In the Kafue ecosystem, DNPW worked with ZCP and Panthera through their newly-formed anti-poaching units, as well as, with hunting operators' anti-poaching units, which confirmed no reports of snared carnivores in 2018, with one lion treated for an old snare injury.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe had been imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions was a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding, breeding, and commercial use (i.e. walking and petting) of captive-bred lions is banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

NGOs are also a source of supplemental revenue sources. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Although the success of the moratorium cannot be fully assessed, there is some information available that indicates that lion populations are stable or increasing (DNPW 2020, pp. 10-11).

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosysteMr. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2020, 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting

blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelope system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes are only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2020, 2016). As of 2018, the quota was reduced to 31. The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW has transformed the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The guidelines were revised in 2019 from those developed in 2016 for lion and in 2018 for lion and leopard and are meant as an instrument to provide technical guidance on the scientific methodologies to be used on lion aging and on some methodologies for lion and leopard hunting and status monitoring. These guidelines also incorporate details pertaining to the monitoring of leopard hunting and status. The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Since the adoption of this practice in 2016, DNPW has introduced a legally binding regulation that will enter into force for the 2020 season (DNPW 2020, p. 42). The Guidelines shall be regularly

updated to reflect advances in scientific knowledge in order to guide technically the implementation of the regulations. The new management approach to Lion hunting in Zambia is based on three pillars: i) a conservative, precautionary quota, well below one of the recommended thresholds for sustainability, ii) an age–based harvest limit and strong monitoring of lion offtakes, and iii) significant and direct community benefits. This will ensure that lion hunting in Zambia is sustainable and does not negatively affect the population. In addition, in the hunting concession agreements signed in 2015, no hunting outfitter has been guaranteed a lion on quota. It is made clear that the quota for any species shall be based on scientific methods including the latest available survey and aging techniques.

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. DNPW also receives funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.

- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and permit issuance criteria (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated its desire to maintain the long-term conservation of its lion population with its 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that it has established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy-hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has identified how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2020, 2016). Monitoring, local community benefits, human lion-

conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Dement's hunting and subsequent import of this lion provides an indirect benefit to wild populations by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species is positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion trophy would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr.

Dement will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Dement, in managing the lion populations in GMAs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency, they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Dement.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion trophy will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Joseph David Dement.**

CHIEF, BRANCH OF PERMITS, DMA

Permittee:
JOSEPH DAVID DEMENT
(b)(6)
OAKFIELD, TN 38362
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1 a. Last name	1 b. First name	1 c. Middle name or initial	1 d. Suffix
Webster	Jason	C	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b)(6)			

6 a. Telephone number	6 b. Alternate telephone number	6 c. Fax number	6 d. E-mail address
(b)(6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1 a. Name of business, agency, Tribe, or institution	1 b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4 a. Principal officer Last name	4 b. Principal officer First name	4 c. Principal officer Middle name/ initial	4 d. Suffix

5. Principal officer title	6. Primary contact name

7 a. Business telephone number	7 b. Alternate telephone number	7 c. Business fax number	7 d. Business e-mail address

C. All applicants complete address information

1 a. Physical address (Street address, Apartment #, Suite #, or Room #, no P.O. Boxes)				
(b)(6)				
1 b. City	**1 c. State**	**1 d. Zip code/Postal code**	**1 e. County/Province**	**1 f. Country**
Houston	TX	77036	Harris	USA

2 a. Mailing Address (include if different than physical address, include name of contact person if applicable)				
2 b. City	**2 c. State**	**2 d. Zip code/Postal code**	**2 e. County/Province**	**2 f. Country**

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☐ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: _____ No ☑

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in Subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief, and that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Lion - Leo Melanochaita

   b. Sex (if known).

      Unknown

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild: Zambia; Nkala game Management area; Kaflie Valley Region; Nearest Town: Itezhi Tezhi; GPS Coordinates of area HQ - S15'54.520' E026'00.233'

   b. Date wildlife is to be hunted:

      July 21 - August 10 2018

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      Skin & Skull

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

   b. Date wildlife was hunted:

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name: Mike Borman
Business Name: Bangweulu Taxidermy Limited
Address: 4142/K Chifwema Road
Address:
City: New Kasama, Lusaka
State/Province: Zambia
Country, Postal Code:

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In ad[redacted]and that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: (b)(6) [redacted] Date: 3/14/18

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

   Jason C. Webster
   6200 Savoy Dr., Suite 150
   Houston TX 77036

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
    Jason Webster (b)(6) [redacted]

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
GALLMANN	KAREN		

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			MATT@GENUSLOGISTICS.C

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
ANGELICA	NY	14709		US

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Atty-in-fact 7/12/18

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   GENUS LOGISTICS / MATT MAYERS 161-15 ROCKAWAY BLVD STE 205 JAMAICA NY 11434 SASE FEDEX INCl

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   MATT MAYERS 718 790 0216 / MATT@GENUSLOGISTICS.COM

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

PANTHERA LEO MELANOCHAITA , LION

b. Sex (if known). FEMALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

FARM GROOTFONTEIN, LEPHALALE SOUTH AFRICA

b. Date wildlife was hunted:

October, 2016

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

MPC BAMBERGER
PO BOX 286
LEHALALE SOUTH AFRICA 0555

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

MPC BARNBERGER / WARTHOG SAFARIS
PO BOX 286
LEPHALALE SOUTH AFRICA 0555

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). PERMIT #014312

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	MPC BARNBERGER WARTHOG SAFARIS
Address:	PO BOX 286
City:	LEPHALALE
State/Province:	
Country, Postal Code:	SOUTH AFRICA 0555

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: 3/22/19

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: _____ Date: _____

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Customs Rules on Discharge of Importers Liability for Duties

The U.S. Customs Service has issued a final amendment of the regulations to provide an alternative procedure for an importer record to pay duties on imported merchandise through a licensed customhouse broker. Present rules provide for the payment of duties to Customs by a broker on behalf of the importer. Under the alternative procedure, the importer may elect to submit to the broker a separate check or bank draft for the duties payable to the "U.S. Customs Service". The broker would then deliver the importer's check or bank draft to Customs. The new rule also requires brokers to provide written notification to their clients, advising that if the client is an importer of record, payment to the broker will not relieve the client of liability for Customs charges in the event that the charges are not paid by the broker. Brokers will be required to provide this notification to all active clients annually during the month of February. Additionally, brokers will be required to provide such information on a power of attorney executed on or after the effective date of the new rule. These amendments are effective as of September 27, 1982.

BELOW IS A POWER OF ATTORNEY FORM WHICH IS REQUIRED BY U.S. CUSTOMS, TO ALLOW US TO TRANSACT U.S. CUSTOMS CLEARANCE ON YOUR BEHALF.

Department of the Treasury
U.S. Customs Service Individual

CUSTOMS POWER OF ATTORNEY

KNOW ALL MEN BY THESE PRESENTS: That, KAREN MARIE GALLMANN (Full Name)

Residing at, (b)(6) [redacted] BELFAST NY 14711

hereby constitutes and appoints each of the following persons Matthew Mayers dba Genus Logistics

may act through any of its offices or any employees with Power of Attorney on file with this licensed broker as required by the Regional Commission of Customs as a true and lawful agent and attorney of the grantor named above for and in the name, place, stead of said grantor from this date and in all Customs Districts, and in no other name, to make, endorse, sign, declare, or swear to any entry, withdrawal, declaration, certificate, bill of lading, or other document required by law or regulation in connection with the importation, transportation, or exportation of any merchandise shipped or assigned by or to said grantor; to perform any act or condition which may be required by law or regulation in connection with such merchandise; to receive any merchandise deliverable to said grantor;

To make endorsements on bills of lading conferring authority to transfer title, make entry or collect drawback, and to make, sign, declare, or swear to any statement, supplemental statement, schedule, supplemental schedule, certificate of delivery, certificate of manufacture, certificate, and delivery abstract of manufacturing records, declaration of proprietor on drawback entry, declaration of exporter on drawback entry, or any other affidavit or document which may be required by law or regulation for drawback purposes, regardless of whether such bill of lading, sworn statement, schedule, certificate, abstract, declaration, or other affidavit or document is intended for filing in any customs district.

To sign, seal, and deliver for and as the act of said grantor any bond required by law or regulation in connection with the entry or withdrawal of imported merchandise or merchandise exported with or without benefit of drawback, or in connection with the entry, clearance, lading, unlading or navigation of any vessel or other means of conveyance owned or operated by said grantor, and any and all bonds which may be voluntarily given and accepted under applicable laws and regulations, consignee's and owners declarations provided for in section 485, Tariff Act of 1930, as amended, or affidavits in connection with the entry of merchandise

To sign and swear to any document, and to perform any act that may be necessary or required by law or regulation in connection with the entering, clearing, lading, unlading, or operation of any vessel or other means of conveyance owned or operated said grantor.

To authorize other Customs brokers to act as grantor's agent; to receive, endorse and collect checks issued for Customs duty refunds in grantors name drawn on the Treasurer of the United States; if the grantor is a nonresident of the United States, to accept service of process on behalf of the grantor.

And generally to transact at the customhouses in said district any and all customs business, including making, signing, and filing of protests under section 514 of the Tariff Act of 1930, in which said grantor is or may or may be concerned or interested and which may properly be transacted or performed by an agent and attorney, giving to said agent attorney full power and authority to do anything whatever requisite and necessary to be done in the premises as fully as said grantor could do if present and acting, hereby ratifying and confirming all that the said agent and attorney shall lawfully do by virtue of these presents; the foregoing power of attorney to remain in full force and effect until notice of revocation in writing is duly given to and received by the District Director of customs of the district aforesaid. If the donor of this power of attorney is a partnership, the said the power shall in no case have any force or effect after the expiration of 2 years from the date of its execution.

Pursuant to 19 CFR 111.35(a), election is made waiving the right to receive invoices, supporting documents and correspondences from Matthew Mayers dba Genus Logistics, who is directed to forward all documents and inquiries concerning our imports to their customs brokerage services, to our freight forwarder, who will pay Matthew Mayers dba Genus Logistics, for duties, and services performed on our behalf. It is understood the right to revoke said waiver is continuing.

IN WITNESS WHERE OF, the said (Print Name): KAREN M. GALLMANN

has caused these presents to be sealed and signed: (Signature) (b)(6) [redacted] Date: 11/27/15

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:
(1) Is raw, processed, or manufactured;
(2) Was legally obtained by the hunter through hunting for his or her personal use;
(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
(iii)The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   James Lines(b) (6) [redacted]

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera, Panthera leo, P. l. melanochaita,Lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Lower Lupande Game Management Area, Mfuwe, Eastern Province, Luangwa Valley, Zambia

   b. Date wildlife is to be hunted: August 6 - August 13, 2018

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   WH van Noordwyk

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). This animal has not been hunted yet.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

   Name: Sando Sinkala
   Business Name: BRIDGE SHIPPING ZAMBIA LIMITED
   Address: VILLA PARK, PLOT 177/178 UNIT C3 LUANSHYA, ROAD
   City: LUSAKA
   State/Province: LUSAKA PROVINCE
   Country, Postal Code: ZAMBIA 10101

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: _____ (b)(6) _____ Date: April 2, 2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

KWALATA SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: kwalatapeter@yahoo.com

I. DESCRIPTION OF COMPANY AND CONCESSION

Kwalata Safari Company, Ltd. has been operating in Lower Lupande Concession since April 2002. The concession provides habitat for a range of species including buffalo, lion, hippo, kudu, leopard, elephant, impala, bushbuck, hyena, warthog, zebra, giraffe, and waterbuck. Our concession is about 1511 kilometer squared and is in the South Luangwa Safari Area. Lower Lupande is rated under Zambia Government Legislation as one of the Prime Hunting Blocks in Zambia due to the abundance of wild life and cats. We have a lease with the Wildlife Authority for seven years renewable which started in 2015 after the new allocations of hunting blocks in Zambia with the new Government.

The company is a partnership between Peter Chipman and Zaeed Patel and has been operational for more than fourteen years. We employ three professional hunters, four game trackers, ten anti-poaching scouts and eight camp staff (cooks, cleaning, miscellaneous). Altogether our operations support at least 100 dependents in local villages apart from the local employed camp staff and scouts.

We have a written concession plan with anti-poaching and community components.

II. ANTI-POACHING COMPONENT

Kwalata Safari Company maintains two five-man anti-poaching teams at an annual cost of over $ 25000. Each team is equipped with a four-by-four vehicle, a motorbike, uniforms and boots, tents, rations, and a satellite phone. Our teams closely cooperate with the Wildlife Authority to conduct almost daily patrols of the concession and the border of the South Luangwa National Park. We supply rations at least twice per month to the government game scouts to ensure they are sufficiently equipped for the patrols as well as transport support and more over and above the above mentioned amount per year.

Our contract with the local community requires that part of the revenues paid to the community be used to fund at least six community game scouts, and additionally we supply rations at least twice per month to these scouts.

We heavily patrol our area, conducting approximately one patrol per day by vehicle and foot. In the past year, our teams picked up about 1000 snares, 40 gin traps, and two poisoned licks. Removing snares protects the lion and wildlife population by reducing incidental snaring. Over the past year we arrested more than ten poachers, confiscated three bicycles and five muzzle loaders from them, as well as recovered 14 weapons total. We found two elephant carcasses each having tusks removed, the bones of one impala, some evidence of illegal logging, and a Leopard with a snare wound.

If needed, we subsidize the government game scouts. Every month we provide one week's rations to support a dozen Wildlife Authority scouts and contribute $ 500 in petrol to the Wildlife Authority.

We also send out road crews approximately every two weeks to check the condition of the roads in the concession, to ensure we are able to patrol effectively.

In the picture above wire snares recovered from poachers

In the picture above an elephant which was poached had its tusks removed

In the picture above a Leopard skin recovered from poachers by our vigilant game scouts.

In the picture above our Scouts being prepared to go on Patrols

In 2015 Kwalata Safari Company spent almost $ 57400 in our blocks on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 6000 liters of diesel for patrol vehicles. We recorded 363 patrol days and well above 2000 patrol hours. And made over $ 4200 in payments of rewards. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	18000	Directly paid and some subsidies to WA
Scout equipment	5000	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	7700	For scouts and WA
Rations for WA and community scouts	6500	
Micro light rental and fuel	16000	Including time donated to WA
Rewards	4200	For information and arrests
TOTAL	$ 57400	

Our concession agreement requires that we have an anti-poaching program/plan and report about it to the Wildlife Authority. The Wildlife Authority considers our contributions in determining whether to renew the concession.

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the two closest villages which are Malama and Kakumbi.

We pledge an annual contribution of at least $ 15000 in projects to each of two villages. And in return ask for a list of preferred projects of witch we develop a work-plan in consultation with village leaders and citizens to fund and supply projects and require a measure of community contribution to each project either through a council donation or more frequently, through donations of time by workers. In 2015 we funded and supplied the following projects at each village's choice:

Village	Projects	Amounts (USD)
Village 1	Renovations of schools	18100
Village 2	Designing and constructing village office	3100
	Funding youth sports league including transport	1900
	Providing new equipment for village game scouts	800
	Paying teacher salary and school fees for poor children	6100
	Digging new borehole and building pump station	3500
		15400
	TOTAL	$ 33500

In addition to these direct contributions, we pledge to distribute at least 50% of game meat harvested to the villages. The villages have the choice to eat the meat or sell it. In 2011 the value of this meat was $ 30000. 2012 the value was $ 33000. 2015 the value was $ 27500.

Our concession agreement requires we have a community assistance program/plan and report on the program to the Wildlife Authority. The Wildlife Authority considers these contributions in determining whether to renew our lease.

B. Conflict Control

We also take reports from villagers about problem animals and do our best to keep elephant out of community gardens during harvest. We also maintain an approximately $ 12000 fund of client donations which we use for community compensation. In 2015 we received 82 reports of problem animals and we made it through the entire season without a problem animal kill. We paid out $ 2650 in compensation for lost livestock and crops.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have enhanced water infrastructure for wildlife in our concession by maintaining four pans to increase water supply and carrying capacity of the concession which gives allot of Antelope Species for Lion/Leopard food chain and habitat for their sustainable and healthy survival.

V. OTHER INFORMATION

A. Prey Base

Kwalata Safari Company's anti-poaching efforts, water provision, and fire management have allowed the lion prey base in our concession to grow over the past five years. We estimate that our Buffalo and Plains Game populations have shown an increase of 15-20% per annum. In 2014 our Wildlife Authorities flew over the Game Management Areas in a large-mammal survey and counted more than 1000 buffalo on average.

B. Lion Population Tracking

Lion are notoriously difficult to survey or census. To track the lion population trend in our concession, Kwalata Safari Company maintains a lion sightings record in form of camera pictures taken as well as trail camera pictures, sightings, spoor and footprints on individual, groups and passing through cats. Because we keep tabs on the lion in our concession, we are assured that the regulated, limited off take is sustainable. Our wildlife Authorities have also provided us with a data recording sheet to use on all Lion/Leopard Safaris as off 2015 to take record of sightings and record the activities on the specific safari being done. We have a 100% success on all our hunts.

C. Lion Aging Approach

Kwalata Safari Company has been following an age-based policy for African lion trophies since 2015, when we adopted this Policy after a mutual agreement with our wildlife Authorities and to be conservative in estimating age.

As a result of this, Lions have been passed up by a number of potential Lion before allowing a client to harvest a specimen that we have any doubt is of on age. We also don't allow any client to shoot a lion of which there is any doubt on the age limit if the lion looks anything less than 5 years of age but rather try and shoot a lion that looks more the like of more than 6 years of age.

In 2016, we successfully harvested mature (aged six or older) male lion up to our quota (of two). We have been able to harvest our full quota this year because our selectivity has resulted in more lion reaching an advanced age.

D. ELEPHANT HUNTING

Our Wildlife Authorities have put up a policy not to Harvest any Elephant that has its tusks weighing less than 15 kilograms. In view of this our Professional Hunters are instructed to not harvest an Elephant with weight in tusks of less than 20 kilograms at a minimum and to be very selective when Hunting Elephant by ensuring that they comply with this agreement. The wildlife authorities have put up stringent measures to any Professional Hunter who goes against this rule which may even include withdrawing his Professional Hunting License.

E. U.S. Hunters

Most of our clients are from the United States. These hunters have a conservation ethic and usually contribute above their fees to anti-poaching or our community compensation fund or community assistance programs.

CONCLUSION

Kwalata Safari Company's regulated, confirm that our sustainable-use based hunting program enhances the survival of the Lion and Elephant and we recognize that the Cat and Elephant hunts bought and booked by our American Clients contribute a higher percentage of income in the Safari Hunting and it is our obligation to share these finances with the communities who have played an important role to conserve this resource. We also realize that these species are a renewable resource and as such we will endeavor to provide suitable conditions for the reproduction and sustainability of these species with the allowance of our American Clients to keep coming and hunting the different species in Africa

Enhancement Finding
Applicant: James Kevin Lines (PRT-85336C)

James Kevin Lines submitted an application on April 10, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken August 6, 2018, through August 13, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth

a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the

current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Lines' application involving a *P. l. melanochaita* sport-hunted trophy taken in the **Lower Lupande GMA**, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently

facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Lines' trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Lines', participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Lines' application were the basis of this finding.

Governance of Lions in Zambia:

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion

populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident

hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Lines' hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Lines will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Lines, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Lines.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to her to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Kevin (b) (6) Lines.**

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

RE: Application for Permit to Import Sport-Hunted Lion Trophy, Ken Grosslight

Dear Chief Cogliano:

Enclosed please find one application for a permit to import a sport-hunted lion trophy from the Niassa Reserve Mozambique. We have included additional enhancement information in the DMA's files submitted by Conservation Force and Mozambique's Parks and Wildlife Management Authority, in making a positive enhancement finding for the applicant.

Please do not hesitate to contact us if you have questions about this application or need further information

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted Panthera Leo (Lion) trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Grosslight	Kenneth	Russell	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b)(6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, must provide their U.S. address)

(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Blythewood	SC	29016	Richland	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)
N/A

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is [illegible]t of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:
(1) Is raw, processed, or manufactured;
(2) Was legally obtained by the hunter through hunting for his or her personal use;
(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
(iii)The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1.** If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No ✓ Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera Leo (Lion)

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   Mozambique Niassa Reserve Hunting Block R3

   b. Date wildlife is to be hunted: 9/5/18 – 9/27/18 using Traditional bow and arrow.

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   Safaris De Moçambique

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:
   N/A

   b. Date wildlife was hunted: N/A

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with: N/A

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]: N/A

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).
   I have not hunted yet.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Simon Cate
Business Name: Safaris de Mozambique
Address: 138 North Beach Road
City: Westbrook
State/Province: KZN, RSA
Country, Postal Code: 4422

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?
   Please see attatched Typed sheet for answers to #9.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

9 (a). The Niassa Game Reserve is estimated to hold 1,573 lions in 177,559 squared Kilometers (Riggio et al 2012). This is an increased number or lions from a previous study in 2006 that estimated 800-900 animals (IUCN SSC Cat Specialist Group). Also, an even earlier survey in 2002 estimated 500 lions in the reserve (Chardonnet). Chardonnet in 2008 reported that the lion offtake was very low nationally. He also speculates that there are more lions in Mozambique than previously thought. The BBC in an article from July 9, 2015, quoted Colleen Begg who is the head of the Niassa Carnivore Project as stating that the numbers of lions has increased secondary to increased food availability due to elephant poaching. Chardonet states that the "Niassa Game Reserve hosts the largest single population of lions in Africa" (Conservation Status of the lion in Mozambique, June 2012). He estimates 1-3 lions per 100 squared Kilometers.

Importantly, Mozambique has completed a "Conservation Strategy and Action Plan" for the African Lion (Beggs 2010). Lions are on a strict quota system in this country.

This National Reserve and Southern Tanzania, which borders the Reserve has the highest adverse lion-human encounters in all of Africa.

9 (b). The daily hunting fee includes license fees and some of these fees go to funding an anti-poaching unit. The trophy fee is $20,000, part goes to the government and 20-30% is returned to the community. The concession is classified as a community hunting area, the Outfitter has made an independent commitment to improve the lives of the local African people. The villages and communities on the concession receive the majority of the meat from the animals which are hunted on Safari. This not only provides these people with a vital source of protein but creates an incentive for the local communities to conserve the wildlife, ensuring that they continue to prosper from it in the future. The outfitter employs more than 50 people during the hunting season. The average Bread-winner to dependent ratio is 1-8, which means that on average the company supports more than 400 people directly through employment

To date, assistance to these communities has included the building and equipping of schools, and an administrative center, and the drilling of boreholes to provide villages with potable water. Motorbikes have been given to the local police by the company, to assist in their efforts with fighting crime and WILDLIFE crime.

9 (c). There is an active "Conservation Strategy and Action Plan" in the Niassa Game Reserve (http://www.niassalion.org/library_files/2010%20Mozambique%20Lion%20Conservation%20Strategy.pdf). This Outfitter goes to great length to try to make sure that any harvested lion is at least 6-7 years old judging by nose color, mane configuration etc. The Outfitter is increasing his full time, year-round anti-poaching unit from 12 to 20 scouts with funds from this hunt. Safaris de Mozambique (the outfitter) is 100% committed to the conservation of wildlife. They are well aware that the future of the community, the company and the Ecosystem of the concession is very much defendant on the management of the wildlife resource, and through investment and a sustainable land use model they plan to ensure this future is secure.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: N/A Date: _____

11. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: (b)(6) Date: 5/16/18

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

kgrosslight@aol.com (b)(6) Thu, Feb 7, 2019 at 8:14 PM
To: managementauthority@fws.gov

Hello, above you will find a PDF attachment that you may wish to add to my application 13247D for an African Lion.
This attachment is a PDF of the CITES permit from Mozambique where the lion was harvested.
Thank you for the attention to my application.

Best Regards
Ken Grosslight

2020 FIRST QUARTER NEWSLETTER

Director's Message

Dear friends,

Thank you for your unbelievable support. We are truly humbled. Although conservation areas across the African continent are facing a severe challenge, the hunting community and industry has shown its true colours over the last couple of months, during these times of unprecedented uncertainty for all hunters. In times like these, we must work towards finding solutions. Together we are important custodians of African wildlife.

As a company, SDM's priority is the protection of our area and the wildlife within it. During this time we have focused our efforts on anti-poaching and essential services in the Panyame Wildlife Conservancy such as our community projects. Further to the responsibility of protecting our wildlife, we also have an obligation to our loyal workforce. Safaris de Moçambique supports an average workforce of 60 individuals from the local community. With an average breadwinner to dependant ratio of 1:8, the company supports almost 500 people.

We are working hard to document all of the work that is being done on the concession and look forward to sharing both our successes and our failures with you!

Best regards,

Simon Rodger
Managing Director

Law Enforcement and Wildlife Protection

There a currently 20 game scouts in the company anti-poaching unit. With so much land to play with, there's no such thing as too many boots on the ground. We have to cover as much ground as possible to be effective. Due to the wet conditions of January, February and March, it has been difficult for the scouts to stay on poachers' spoor. From Jan through April, 21 extended patrols were completed both on land and water together with officials from the Tchuma Tchato program and local authorities leading to:

- 56 illegal nets confiscated
- 28 wire snares removed
- Active Control of all water points
- Two near arrests with Poachers in the Eastern section of the concession. Unfortunately, they escaped this time! Very difficult to stay on the tracks in the rainy season.

Each snare removed leads to dozens of animals saved because a poacher will keep reusing the same trap.

The Nzou Group after confiscating several illegal nets on a patrol in the Headwaters.

Water patrols

We have allocated 100 litres of petrol per week to two permanent teams tasked with patrolling the fisheries at both the Mbadzi and Main camp area. Comprised of both company members and scouts from the Tchuma Tchato Programme, these teams are in search of illegal, undersized and unlicensed nets in both prohibited and designated fishing zones.

Some of the culprits of illegal fishing are from Zambia or Zimbabwe and are not supposed to be fishing in Mozambique waters. Others are Mozambicans without licenses or who fish with illegally sized nets. The water patrols have been a massive success as you can see from the sheer number of confiscated nets.

The teams confiscated 56 nets in total during the first quarter of 2020. With an average length of 400m, translating to 22.4 km, each confiscation leads to tens of thousands of fish saved.

Indeed it is our full intention to keep this effort up. The teams are being rotated every 10 to 14 days, with members from the local authorities accompanying each group. As long as we can continue this effort, we can expect to see a dramatic change in the fishery.

This project will bring significant benefits to the local community, ensuring that licensed fisheries remain profitable and sustainable. In the past, we have found that bushmeat poachers use fishing as a scapegoat. Preventing fishing vessels from entering prohibited areas tackles this problem effectively.

Finally, recreational fishing will improve exponentially due to increased law enforcement.

Human-Wildlife Conflict

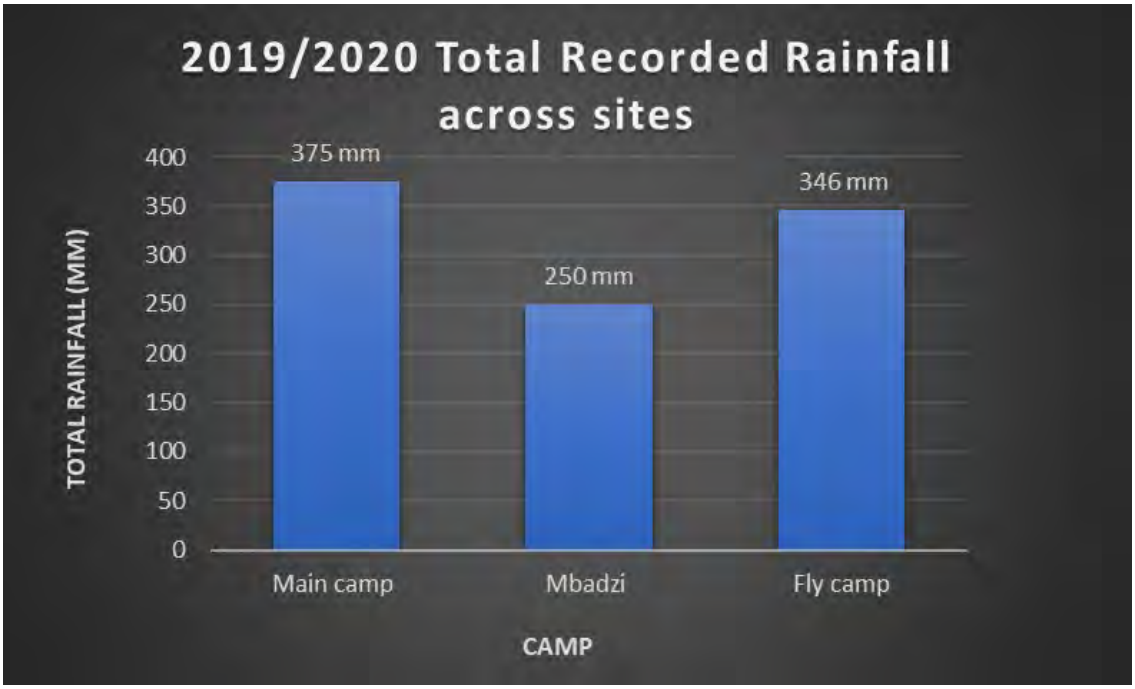
Human-Wildlife Conflict (HWC) was a severe problem in the area in 2019 with cases of conflict reported almost daily. In 2020 we are committed to developing

new ways and means of mitigating this ongoing problem.

The company was recently asked by the local authorities to intervene and destroy an aggressive crop-raiding Hippo near Tsingano village on the Panyame river. The skinners removed an old muzzleloader round from the Hippo carcass, shown in the below image—a reminder of the age-old conflict that occurs between megafauna and people.

This the second incidence of human-wildlife conflict we have dealt with so far this quarter.

A muzzleloader round pulled out of the Hippo.



The first rains were recorded on the 15th of November, and the last on the 17th of March.

A Void to fill: Meat Distribution Program

Annually, Safaris de Moçambique delivers roughly 20 tons of meat to the local community. This programme is an integral part of conservation in the area. The regular distribution of meat to the community removes the need for local people to poach.

The lack of hunts in 2020 will lead to a shortage of protein in the villages, and consequently poaching will increase. We are looking at allocating a portion of the budget for 2020 to buying cattle and goats from the local community, butchering and delivering the meat. Key positive takeaways of this project are the following:

1. Meat derived from the hunting quota will be replaced by livestock animals, thus allowing the company to fulfil its obligations to the local community

and distribute the same amount of protein to the villages.
2. The wildlife population shall rest this year as the company will not fully utilize the quota.
3. Livestock used for this project will be bought from farmers in the surrounding communities and paid for in cash, thus bringing economic benefits for the local community.

Borehole Maintenance

A considerable amount of work goes on behind the scenes in preparation for the end of the rainy season. Simon and Theuns have been getting all the solar pumping systems back up and running.

These water sources are essential for the wildlife and are leading to increased utilisation of grazing in various areas around the concession. We expect to see a dramatic increase in wildlife populations in certain areas because of solar water projects.

See a few pictures below of the pans in all their glory, full of water from the solar systems. We are proud of these systems, and the design is unique. They are theft-proof, waterproof. ...Pretty much bulletproof!

Community Assistance

A community assistance success story during the first quarter of 2020 is that of Chengetai Catapura, a woman from Kabundu village who had severe and life-threatening complications while giving birth to a child. We received a call from Richard Mukende, the chairman at Kabundu village requesting our assistance. We rushed to dispatch a vehicle in time, and she was sent to the clinic across

the river to receive urgent medical care. Without this transport, she would undoubtedly have died.

We continue to help the community with repairs and maintenance on an as and when basis. They have ongoing issues with bicycles, donkey carts etc. One repair that springs to mind so far this year is the maize grinding mill belonging to Coleni Adau, a conservation committee member at Chikodzero village. Without this maize grinding mill, the residents of Chikodzero village are unable to produce mealie meal for food.

The company recorded the following cases of Community assistance during the first quarter:

- Two instances of Emergency medical transport
- Two instances of PAC attended to (Problem Animal Control)
- Several community repairs at the workshop
- Eight footballs distributed to local schools (Pre-COVID-19)

Upcoming Projects

Law Enforcement

- We are currently seeking funding to train and employ an additional 30 game scouts, an increase to 50 in total from the current 20. The reason behind this being the lack of presence throughout the area due to no hunting activity. This presence is a major addition to the anti-poaching

framework through continual traversing of the area. Under normal circumstances, this would occur on a daily basis, throughout the concession from April to November.

- The water patrols have been successful thus far, and we will be continuing this project indefinitely. We have allocated over 100 litres of petrol per week to the patrol teams at Mbadzi and Mizunga base.
- We are currently looking into the use of two conservation tools to assist us in our law enforcement and ecological monitoring efforts. These are SMART Conservation Tool (Spatial Mapping and Reporting Tool) and EARTHRANGER software. A trained technician and mobile devices are needed to implement the project.

SPONSOR A GAME SCOUT

Ecological Monitoring

Simon has installed camera traps at all the waterholes. We are looking forward to seeing some of the videos and pictures and we will be sharing these on our social media channels as well as in our next newsletter!

Community Projects

The following community projects are planned for the next quarter:

- Renovations of the School in Capessa Village
- Renovations of the school in Nhanchenje Village
- Construction of the community centre in the Chintopo area.
- Repairs to the solar pump that we installed at the clinic in Chintopo, which has stopped working due to the theft of components.
- Repair of the solar system at the clinic in Chitete.
- The borehole we drilled for the community at Mamuira has run dry, we are planning on drilling a replacement.
- Launch of the Human-Wildlife Conflict Prevention Unit. We are currently in discussions with the authorities about solutions to these problems, with a specific emphasis on non-lethal solutions.
- Conservation Education courses for kids from the local community will resume as soon as the COVID-19 situation allows for it.

CLICK TO DONATE

Special Thanks

We would like to thank a few special people for their help over the last few months:

- Thank you to John Jackson from Conservation Force, for your contribution setting up channels to fund conservation areas across Africa.
- Thank you to Ivan Carter for supporting our work through his Ivan Carter Conservation Alliance which is a 501c3 in the US.
- A big thank you to the Dallas Safari Club for their anti-poaching initiative to help safari companies during the COVID-19 epidemic. We received a $5,000 USD donation from Dallas Safari Club.
- Last but not least a huge thank you to our clients and friends who have donated funds so generously and without which none of these conservation and community efforts would be possible.

SafarisdeMocambiquenewsletter.pdf;

Ms. Nelson,

Please include the attached document as a supplement to the enhancement findings for the import permit application# 13247D for Ken Grosslight. It is to import a sport-hunted lion from Mozambique.

If you have any questions regarding this matter, please feel free to contact me.

Aimee Korver

KENNETH R. GROSSLIGHT MD, JD

August 25, 2020

RCVD SEP 03 2020

Dear Emma:

I trust this communication finds you in good health. This is in regard to my Panthera Leo import application 13247D. I wanted to bring to your attention to 3 new articles and a book summary regarding conservation of this species. These articles are from IUCN, Ruaha Carnivore Project, and from a book by Keith Somerville titled "Humans and Lions, Conflict, Conservation and Coexistence." They all concede that trophy hunting is not a threat but instead provides protection of large tracts of land possible by hunter fees. This allows for more land than most African countries can afford, as they can barely take care of their citizens and wildlife protection takes a back burner. The private hunting concessions provide less human invasion and loss of habitat to agriculture and the likes. It also provides for significant anti-poaching efforts that the local government cannot afford. These blocks provide protection for all species of quadrupeds by strict quotas, reduction of snares and other poaching methods and prevention of cattle etc. from grazing on these lands. This leads to less lion-human conflict. I have taken the liberty to highlight very pertinent sections of these articles and book excerpts. I hope you find these informative and please add them to my application if possible.

It has been two years since I made my initial application and have been told it is complete but still pending. Could you explain exactly what "pending" means and what further steps are being taken to complete this lengthy process? I would be most appreciative.

Please let me know that you have received these publications and also feel free to call if you would like regarding what is suppose to happen to my application next and when that might occur.

Thank you for your time and support.

Sincerely,

Ken

attempt to summarise the arguments. I will not attempt to disentangle the more philosophical/ethical arguments about the rights and wrongs of hunting as an activity – it is worth noting that this ethical aspect is being studied in detail using the method known as argument analysis by Vucetich, Burnham, Macdonald and others under the auspices of WildCRU[243]. If you believe shooting animals for sport or other purposes beyond immediate defence of life, limb and livestock, is wrong, then you will not see trophy hunting as an acceptable form of conservation, even if it is capable of being regulated in a way that brings in income, incentivises the conservation of habitat and wildlife, and increases local tolerance of lions in the face of the damage they cause to livelihoods. Rather than trying to argue with the Kantian categorical imperative – an unconditional principle that we must always follow despite any natural desires or inclinations we may have to the contrary[244] – that trophy hunting is wrong in every case, I will opt for a Bentham/Mill-style utilitarianism based on the concept of "the greatest amount of good for the greatest number"[245]. If hunting in any way assists the conservation of lions, then it is necessary to consider it as a conservation method in the absence of other more effective and sustainable choices.

Following this line of argument, the question is whether trophy hunting and related forms of consumptive, sustainable-use contribute to lion conservation or are a threat to lions. The threat, as detailed above in the examples of where trophy hunting takes place, would be from excessive or unregulated hunting that has too high an off-take, fails to prevent the over-hunting of breeding-age males or which combines with illegal killing, shooting of problem animals or the effects of snaring to threaten the survival of lion populations, or destabilises pride structures and breeding to an extent that populations are weakened and become unviable. Linked to this is the argument by some – such as the film-maker Dereck Joubert[246] and in a rather poorly focused paper by Economists at Large, commissioned by an anti-hunting NGO, on the income level from hunting[247] – that hunting does not bring in sufficient income to justify the killing of wildlife and fails to provide income and incentives that would have a greater conservation effect than eco-tourism. But many who have studied the issue believe it can play a positive role in lion conservation or, like conservationist scientists including Macdonald, Dickman, Frank, Lindsey, Loveridge, Hunter and Packer, see it as a necessary measure (or a necessary evil) in the absence of any other sustainable income-generating method that contributes to the conservation of the lion estate and so of lion populations outside protected areas. Macdonald has described the approach that needs to be taken as the contrast between the consequences of embarking on a journey rather than a sudden jump, noting that "a precipitate jump to ending lion trophy hunting might risk grave unintended consequences for the species' conservation, consequences that could be avoided by a carefully planned journey to that end"[248] presuming of course it is clear that trophy hunting is not a contributor to conservation. What is likely, though, is that some areas, like those in West Africa with small and isolated lion populations, may need to make this journey and others, where hunting appears as of now to be a useful tool, will

not necessarily need such a journey. The hunting controversy, clearly, is one that will continue to rage, involving NGOs, conservationists, wildlife departments and, to no great constructive effect, celebrities of all kinds[249].

Lindsey et al., pointing out the massive underfunding of conservation and problems associated with trophy hunting (which they cogently argue alone cannot fund lion conservation), believe that it "helps fund the operating budgets of state wildlife authorities in some countries and creates economic incentives for the retention of vast state-owned hunting blocks for wildlife," adding that trophy hunting "increases the range of conditions under which wildlife is a viable land use because photo-tourism, the primary alternative form of wildlife, is limited to areas that combine good infrastructure and abundant wildlife or spectacular scenery"[250]. Trophy hunting has provided a stimulus, as shown by the examples from Namibia, South Africa and Zimbabwe, for the rewilding of land previously used for cattle and retention of wildlife habits amid pressure on land from growing populations[251].

A problem is that, in some areas, the income particularly for local communities from hunting is limited and may over time struggle to compete with other land uses, notably the production of cash crops (as the Cameroon example in Chapter 5 demonstrates). It is also the case that in many areas the income per square kilometre from hunting falls well below the conservation, management and anti-poaching costs – Lindsey et al. recorded that typical income is only \$138–1,091/km^{2}and funding needs are \$460 to \$2,048/km^2 [252]. The contribution of hunting income may also be reduced by utilisation of the income by wildlife departments for purposes other than conservation or lost through corruption (Tanzania being a prime example). And there is a clear danger that over time, and not purely as a result of the Cecil outrage, the demand for high-cost trophy hunting will decline, as Craig Packer told me in relation to the declining demand and uptake of hunting blocks in Tanzania. The post-Cecil bans by airlines on carrying trophies and the bans by countries like Australia and France on importing lion trophies could further reduce demand, income and therefore any contribution to conservation funding. These are all serious issues but if you take away hunting income when there is no alternative then you reduce funding available for conservation while impoverishing further and creating greater grievances among people who have to coexist with lions, as happened with the hunting ban in Botswana.

In their study for the Food and Agriculture Organisation of the UN, Cooney et al. note the growing public distaste for trophy hunting outside Africa and calls by politicians in Europe and the United States for restrictions on imports of trophies. But they point out that in the bitter arguments over hunting, it is clear that anti-hunting advocates often based their calls for an end to the hunting or trophy imports "on poor information and inaccurate assumptions"[253] They conclude that "trophy hunting, if well managed, can play a positive role in supporting conservation as well as local community rights and livelihoods"[254]. Booth effectively supports this argument, rejecting the position adopted by many (Joubert

being a prime example) opposed to hunting as a means of generating income for local people and conservation, that non-consumptive safari tourism will bring in more income. Those opposing hunting argue that shooting an animal brings in immediate income but the survival of that animal attracts tourists who will pay over and over again to see an animal, so making an animal more valuable over time[255]. This approach ignores the fact that tourists come to see large numbers of animals not one particular lion, buffalo or elephant and that killing one animal does not substantially reduce numbers available for hunting or non-hunting tourists in the future. Booth details that while Southern African countries earned about $3.2 billion a year in the early 2000s from non-hunting tourism compared with $190 million for hunting (this comparison is used by those opposed to hunting to show that non-hunting tourism is a better source of income than hunting), hunting income is more likely to accrue to people at the local level and be retained nationally than earnings from other forms of wildlife tourism[256]. He also points out that trophy hunting generally takes place on land with low densities of wildlife, poor transport and accommodation infrastructure and few attractions that would bring in non-hunting tourists but do not deter hunters[257]. This argument is borne out by the experience of Botswana, with few hunting blocks becoming viable tourist areas after the 2014 ban. In areas marginal for photographic tourism, hunting can be the only viable source of income if the land is to be retained for wildlife. Hunting tourism does not support large volumes of tourists but can be the highest value land use for arid and semi-arid areas[258].

Even in popular tourist areas such as Timbavati (adjacent to Kruger NP in South Africa), the higher prices paid by each hunting tourist in comparison with other tourists means that more income is generated for reserves and conservancies that mix hunting and non-hunting tourists. Timbavati in 2016 gained three times more income from 46 hunters than from 24,000 other tourists[259]. This demonstrates the higher income per hunter and increases the power of the argument that low numbers of hunters bring in more income and would also require far less infrastructure and result in far less environmental degradation to produce value in marginal areas than large numbers of non-hunting visitors[260]. These facts undercut the arguments of those who say that photographic tourism can replace trophy hunting as a source of income. Chief Timex Moalosi in Sankuyo, Botswana, reinforced this argument, telling me in May 2018 this his community earned far more from selling hunting quotas and providing land for hunting operators than it received from other tourism, as the latter involved the income from leases going to the government not the community, making hunting a better source of income which then persuaded people to tolerate wildlife, which was not the case always with other tourism.

Hunting can damage conservation of lions, too. Poor regulation, over-hunting and inadequate monitoring of the effects of hunting on populations are all dangers. Packer et al. have pointed this out but still don't come out for a ban. They argue instead that strict setting of quotas on a scientific basis for each area and age limits to ensure that only mature males are hunted would "help ensure safe

harvest levels despite uncertainties about local population sizes"[261]. Loveridge et al., no great lovers of trophy hunting, resign themselves to the current need to retain hunting areas around protected areas, like Hwange. While noting that hunting blocks can become "sinks" with lions sucked into the vacuum created by hunting of adult males, they conclude that "if sustainably managed (with sustainable hunting quotas and rigorous monitoring), these areas, which ensure the conservation of intact natural habitat important for wildlife, hold the potential to play an important role of buffer areas around protected areas"[262]. Hunting, if managed well, can sustain the lion estate, be a buffer between lions and farming communities and bring in income that helps sustain a minimum level of tolerance for them. This can be done through mixing regulated hunting with other tourism and land uses, so that multiple benefits are derived from the wildlife and habitat. As Naidoo et al. argue, "Diversifying benefit streams from wildlife conservation so that the variety of stakeholders within local communities are incentivized to promote or at minimum tolerate living with wildlife will provide the greatest likelihood that conservation as a land use will ultimately prove more attractive than wildlife-unfriendly alternatives"[263].

This is also the message from Macdonald's post-Cecil study. He argues, while clearly not being a supporter of hunting, that, "There is little evidence that trophy hunting has substantial negative effects at a national or regional level. Where trophy hunting is well-regulated, transparent and devolves sufficient authority to the land managers, it has the potential to contribute to lion conservation." The danger to lions from hunting comes in countries with "poor governance and weak regulation [which] can lead to unsustainable trophy hunting," adding that, "The most fundamental benefit of trophy hunting to lion conservation is that it provides a financial incentive to maintain lion habitat that might otherwise be converted to non-wildlife land uses"[264]. This approach is also taken by Luke Hunter of the big cat conservation group Panthera, who argues that while he thinks "sport hunting big cats is repellent and I would welcome its demise," he is reluctantly aware that, "my personal distaste for hunting won't help lions if shutting it down removes protection from African wilderness. Whatever one's personal feeling, hunting should be regarded as yet another tool in the arsenal of options we must consider if we are to conserve the lion"[265].

What is clear, and Macdonald's post-Cecil report emphasises this, is that until more effective and sustainable means of raising income and conserving habitat is found, trophy hunting is a viable option (albeit a necessary evil for some) in many parts of the lion range. This is emphasised by the study published in November 2018 that highlights the cost of lion conservation across range states, estimating it at $1 billion a year[266], showing the dire need for income generation to protect lions in the long term. Frank argues that the ban on hunting in Kenya has contributed heavily to the decimation of Kenya's wildlife in the 40 years since, with local communities often seeing wildlife as nothing but an expensive nuisance to them, and they rightly ask why they should tolerate its costs while getting nothing in return. He believes that "A large profit is not necessary – simply

seeing some sort of financial return for tolerating wildlife makes a big difference in attitudes. Outside of the few small parks, wildlife is worthless – small wonder that KWS has totally ignored the bushmeat trade (which barely existed before the ban), does its best to ignore poisoning, and takes only rhinos and elephants seriously – that's where the money is"[267].

Postscript

It is abundantly clear from my narrative that the threat to the survival of the lion comes from people – through population growth, expansion of cultivation and pastoralism, retaliatory killings, bushmeat poaching and, in some places, industry and urban growth. Unregulated trophy hunting can also reduce numbers and threaten populations, but, in some circumstances, it is a viable way of generating income that enables habitat protection and mitigation of local grievances or material losses.

Humans evolved from being the prey of predators to being scavengers of lion kills, competitive hunters and killers of lions to protect themselves and their livestock, and for sport. The fate of lions is now in the hands of people, chiefly those who live alongside them and come into conflict with them or suffer from their presence. Public opinion outside the range states (particularly in North America and Europe) has often seemed to carry more weight in decision-making over lion conservation than the view of local people and local realities in the range states. It is time that this changed with greater attention paid to conserving lions while promoting rural development and poverty alleviation for the communities directly affected. There is not a single, simple solution that will work for all areas, as the threats and therefore solutions vary, which again emphasises the importance of local interests and input being paramount.

The loss of habitat is the overarching threat to lions. Without suitable habitat and prey to hunt, lions will simply disappear, as is now possible across West Africa and parts of Central Africa. Bushmeat poaching, encroachment on protected areas, fragmentation of lion populations and the killing of lions in retaliation for stock loss ultimately stem from and may also contribute further to habitat loss. The threats will only be removed or reduced to a level that does not threaten lion populations through the development of locally based and supported solutions that combine conservation with rural development, aid to develop more effective livestock husbandry practices and incentives to conserve and sustainably utilise wildlife – and, yes, this may mean legal, regulated hunting. Solutions, however well meaning, imposed from outside that do not empower or include the participation of the communities directly affected in decisions on conservation and land use, and that create dependence on NGOs and the charity of outsiders, will not work in the long term, even though such funding can be helpful, especially in encouraging local solutions such as improved animal husbandry, compensation schemes and the development of local initiatives (Guardians, Defenders and Long Shields, for example). I am not arguing that NGO funding is useless or should be rejected, but it must contribute to and not replace locally based, sustainable

approaches, particularly as in most lion ranges income that is or potentially could be generated to support habitat and species conservation is insufficient[268] and some form of other revenue is necessary to ensure funding that aids conservation, local community tolerance and community income generation. Local empowerment, incentivisation and income are the keys if we are not to be the generation that sees the extermination of lions in West and Central Africa and the confinement of those in the Gir Forest, East and Southern Africa to ever more isolated national parks, fenced reserves or conservancies.

Trophy Hunting in the Spotlight: to ban or not to ban?

by SULi | Jul 9, 2020 | Uncategorised | 0 comments

This week marked 5 years since "Cecil the Lion" was hunted in Zimbabwe. As a result there has been increasing media attention to trophy hunting – largely calls from animal rights organisations for it to be banned (see for example https://www.bornfree.org.uk/ban-trophy-hunting).

SULi recognises that poorly regulated trophy hunting can be a threat to local populations of some species. And indeed the IUCN Red List points to this danger for lions and leopards in particular. However, the Red List also highlights that trophy hunting is not a major threat to any hunted species at the global level – the major threats are habitat loss, human wildlife conflict, prey base depletions and poaching. Trophy hunting has also demonstrated proven conservation value for many species, through protecting habitat and incentivising landowners to protect (or at least tolerate) hunted species. There is a danger that removing trophy hunting, without providing a viable alternative revenue stream, could actually exacerbate these far larger threats rather than improve the conservation status of hunted species.

SULi member Amy Dickman, director of the Ruaha Carnivore Project, discusses these issues in a recent Mongabay podcast, along with Maxi Louis from the Namibian Association of CBNRM Support Organisations (NACSO) and Iris Ho from Humane Society International: https://news.mongabay.com/2020/07/podcast-five-years-after-the-death-of-cecil-the-lion-trophy-hunting-debate-rages-on/

The UK Government is currently considering a ban on the imports of hunting trophies. Dilys Roe and Amy Dickman recently discussed the implications of this ban with the All Party Parliamentary Group on Shooting and Conservation. You can view the presentation here: https://www.slideshare.net/IIEDslides/informing-the-debate-on-trophy-hunting

Our recommendations to the UK Government remain the same as those set out in a briefing paper SULi produced on behalf of IUCN in 2016 when the banning of trophy hunting imports was first discussed. This recommended that any decisions that could restrict or end trophy hunting programmes are:

1. based on careful and sound analysis and understanding of the particular role that trophy hunting programmes are playing in relation to conservation efforts at all levels in source countries, including their contribution to livelihoods in specific affected communities;
2. based on meaningful and equitable consultation with affected range state governments and indigenous peoples and local communities and do not undermine local approaches to conservation;
3. taken only after exploration of other options for engaging with relevant countries to change poor practice and promote improved standards of governance and management of hunting;
4. taken only after identification and implementation of feasible, fully funded and sustainable alternatives to hunting that respect indigenous and local community rights and livelihoods and deliver equal or greater incentives for conservation over the long term.

What is IUCN's position on trophy hunting?

IUCN does not have a specific policy position on trophy hunting. However the following policy positions are directly relevant to trophy hunting.

1. IUCN's position is that "use of wild living resources, if sustainable, is an important conservation tool because the social and economic benefits derived from such use provide incentives for people to conserve them" as outlined in IUCN's Policy Statement on Sustainable Use of Wild Living Resources, adopted by IUCN Members at the 2nd World Conservation Congress in Amman in October 2000. It recognises that "trophy hunting can be a form of sustainable use, and if conducted according to the Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives developed by the Species Survival Commission (SSC), can provide positive benefits for conservation"
2. IUCN "supports the philosophy and practice that on state, communal and privately-owned land in southern Africa the sustainable and well-managed consumptive use of wildlife makes a contribution to biodiversity conservation", and "accepts that well-managed recreational hunting has a role in the managed sustainable consumptive use of wildlife populations," (Recommendation 3.093, adopted by IUCN Members at the 3rd World Conservation Congress in Bangkok in November 2004)
3. IUCN does not support moving species outside their native ranges for the primary purpose of trophy hunting – as set out in its Position Statement on Translocation of Living Organisms. Recommendation 3.093 above also condemns "the killing of animals in enclosures or where they do not exist as free-ranging."

Different Commissions and Specialist Groups within IUCN do, however, have very different opinions on hunting:

- The IUCN SSC considers that trophy hunting, is likely to contribute to conservation and to the equitable sharing of the benefits of use of natural resources when programmes incorporate the following five components: (1) Biological Sustainability, (2) Net Conservation Benefit; (3) Socio-Economic-Cultural Benefit; (4) Adaptive Management: Planning, Monitoring, and Reporting; and (5) Accountable and Effective Governance (https://portals.iucn.org/library/sites/library/files/documents/Rep-2012-007.pdf).
- The Caprinae Specialist Group of the Species Survival Commission adopted a formal position statement in December, 2000, recognizing that hunting, and in particular trophy hunting, can form a major component in conservation programmes for wild sheep and goats (http://marco.recherche.usherbrooke.ca/thunt.htm)
- The Ethics Specialist Group of the World Commission on Environmental Law (WCEL) published an opinion in 2017 (re-posted in 2019 and misconstrued as a new IUCN report by many). This was one of several contrasting positions presented to an IUCN Council meeting in 2017.

Ruaha Carnivore Project
July 2 ·

Yesterday was the 5th anniversary of the killing of 'Cecil' the lion, an event which caused massive international outrage and huge pressure to ban trophy hunting. It has also led to extensive incorrect reporting about the extent and causes of lion decline. As a project, we are extremely committed to lion conservation, and want to do all we can to minimise wildlife killings.

However, it is very important to note that while it can have negative impacts on some populations, trophy hunting is NOT a major threat to lion persistence - they key threats are loss of habitat & wild prey, and conflict with people. Unfortunately, there are simply no viable alternatives for trophy hunting in most of the areas they protect (which cover more lion range than National Parks). Removing hunting without better alternatives will make hunting areas financially less viable, hugely increasing the far greater major threats of land conversion, prey loss and conflict.

We completely understand that people feel sickened by trophy hunting. However, people should also feel sickened by the deaths through poisoning, snaring etc, which affect far more species than lions. Below, we show just a tiny sample of images, showing what happens in an area when wildlife has no tangible value to local stakeholders. None of these animals had names, but their deaths are just as real and horrible as the killing of Cecil. They are also far more damaging to conservation, as they involve females (often pregnant or lactating) and young animals, rather than the older males usually killed in trophy hunting. The images may be distressing, but please don't look away - this is the reality that we deal with on the ground, and involves real consequences that we all should consider.

Therefore, we urge people to take the time to understand and consider this issue more deeply. Removing a minor threat only to amplify far greater threats cannot be the way forwards. Instead, we need to accurately understand the causes of wildlife decline, develop viable solutions before hunting is removed, and work long-term with all stakeholders (prioritising the needs of local communities) to really deliver a better future for both people and wildlife.

Natural storytelling

Trophy Hunting – a complex picture

July 9, 2020 hughwebsterauthor

Like Professor David Macdonald with Cecil, I once had a study animal shot by hunters. The leopard – known to us as Wilbur – was a remarkably relaxed cat. The first time I encountered him, he materialised out of a wall of apple leaf scrub and walked right up to my open Land Rover without a care in the world, brushing along the side of my parked vehicle while I held my breath. Leopards can be like that – either so shy that they disappear long before you get close, or so bold that they appear fearless.

This was nearly ten years ago now, but I still remember the shock, pain and anger we all felt when word filtered through to us at our research camp that Wilbur – by then fitted with an orange VHF tracking collar – had been shot by a hunter. Losing a study animal can feel a bit like losing a much-loved pet. Scientists are supposed to remain dispassionate observers, but when you spend hundreds of hours alone in the company of a wild animal you get to know its individual character and inevitably a bond forms; you become invested in that animal's fate. While a respectful distance distinguishes this relationship from the sort one might enjoy with a domestic animal, the wild animal's death is still mourned – especially when its death has only served to furnish some sad individual with a pathetic trophy.

We soon learned that the hunter had been sitting in a hide with his professional guide, staking out a bait they were using to attract leopards. This is how leopards are shot, from a stable position, in cover, and at short range, with the big cat lured to its death. It is like shooting fish in a barrel. In the gloaming, the hunter and his guide claimed not to have seen the orange collar around Wilbur's neck. I have always found that hard to believe. Collars are very obvious on leopards, contrasting noticeably with the surrounding spotted fur and sitting proud of their short coats. I suspect that Wilbur was just too fine a specimen to pass up. Under time pressure, with a client having paid thousands of dollars for his trophy, I believe the professional guide chose not to see the collar and sanctioned the shot, but I can never know for sure.

Whatever the truth of Wilbur's death, the hunter and his professional guide left the country shortly after this incident, and not long after that hunting was suspended in Botswana. The hunter had been entitled to shoot a leopard in that area, but the established code of practice was and is for hunters to avoid shooting collared research animals, partly out of courtesy and partly because the good hunters genuinely value conservation and the insights these collars give everyone with an interest in managing and conserving wildlife.

Today, Botswana is slowly opening up its hunting industry again, attracting vocal criticism from animal rights campaigners and celebrities. Their campaign strikes a chord with many for whom the images of overweight and inanely grinning hunters posing proudly next to recently butchered wild animals in their physical prime are repugnant. The "sport" favoured by Donald Trump Junior and the King of Spain is seemingly indefensible, but should it be banned?

Perhaps surprisingly, there are few conservation scientists endorsing these popular calls for a ban. Instead, many are alarmed at what a ban might mean for the threatened species they have dedicated their lives to protecting. Why is this? When so many conservation biologists are disgusted by trophy hunting, and when some of us have lost well-loved study animals to hunters' bullets, why are we reluctant to support a ban?

The truth is that trophy hunting is not the main threat facing wild animals in Africa. For most species it is not a threat of any sort. In fact, the opposite is true – trophy hunting provides a means of funding and therefore protecting the habitats that sustain populations of wild animals across large swathes of the continent where, without hunters' dollars, wild bush country would soon be taken over by agriculture. Across many of Africa's prime safari destination countries, the area of land managed for hunting is equal to or larger than the area set aside for photo tourism in national parks. This is why lions are actually increasing in Southern Africa where they are legally hunted, while their population has crashed in countries like Kenya where trophy hunting is already banned. Ditto giraffes. Ditto Rhinos. Ditto elephants… But if we banned hunting, the area of land protected for wildlife could shrink drastically.

Abstract

Private land conservation areas (PLCAs) have become critical for achieving global conservation goals, but we lack understanding of how and when these areas respond to global pressures and opportunities. In southern Africa, where many PLCAs rely on trophy hunting as an income-generating strategy, a potential ban on trophy hunting locally or abroad holds unknown consequences for the future conservation of these lands. In this study, we investigate the consequences of a potential trophy hunting ban in PLCAs in two biodiversity hotspots in South Africa's Eastern and Western Cape provinces. We used semistructured interviews with PLCA managers and owners to elicit perceived impacts of an internationally imposed trophy hunting ban on conservation activities in PLCAs, and to probe alternative viable land uses. The majority of interviewees believed that both the economic viability of their PLCA and biodiversity would be lost following a hunting ban. Owners would primarily con-

constrained by the social ecological context of their PLCA (e.g., competition with other PLCAs, ecological viability of farming). Our results suggest that a trophy hunting ban may have many unintended consequences for biodiversity conservation, national economies, and the livelihoods of PLCA owners and employees. Along with similar social-ecological studies in other areas and contexts, our work can inform policy decisions around global trophy hunting regulation.

1 | INTRODUCTION

Protected areas (PAs) are considered a core strategy for protecting biodiversity (Chape, Harrison, Spalding, & Lysenko, 2005; Watson, Dudley, Segan, & Hockings, 2014). Recognizing that conservation goals cannot be reached by state-owned PAs alone, governments and conservation planners are increasingly looking to private land conservation areas (PLCAs) as a strategy to achieve national and global conservation targets (Mitchell et al., 2018; Stolton et al., 2014). In addition to offering cost-effective expansion of the conservation estate (De Vos & Cumming, 2019; Stolton et al., 2014), PLCAs also offer opportunities for protecting threatened and underrepresented habitats (Clements, Kerley, Cumming, De Vos, & Cook, 2019; De Vos & Cumming, 2019; Gallo, Pasquini, Reyers, & Cowling, 2009), curbing losses in natural land cover (Shumba et al., 2020), and increasing the connectivity of PA networks (De Vos & Cumming, 2019).

The capacity of both state-owned PAs and PLCAs to achieve their conservation objectives is dependent on their ability to continue funding their management activities (Di Minin & Toivonen, 2015; Watson et al., 2014). In many countries, government funding of state-owned PA management is either absent or insufficient (Di Minin & Toivonen, 2015), leaving PAs vulnerable to threats such as human encroachment, poaching, mining, and illegal resource use (Golden Kroner et al., 2019; Lindsey et al., 2014). PAs employ various financing strategies to

Williams, & Bradshaw, 2016; Lindsey, Balme, Funston, Henschel, & Hunter, 2016). Proponents of trophy hunting assert its importance as a conservation tool that, in addition to funding state PAs, offers incentives for conservation-based land uses to communities and private landholders, with positive outcomes for biodiversity and people (Cooney et al., 2017; Dickman, Packer, Johnson, & Macdonald, 2018; Frost & Bond, 2008; Lindsey et al., 2016; Naidoo et al., 2016). Trophy hunting of the big five species generates high revenues in a number of African countries (Di Minin et al., 2016; Frost & Bond, 2008). However, opponents object to the practice on moral grounds (Batavia et al., 2019), as well as often questioning the conservation and community benefits (Ripple, Newsome, & Kerley, 2016), and sustainability (Schulze et al., 2018) of the global trophy hunting industry. Renewed public interest after the infamous killing of a male lion in Zimbabwe, affectionately known as Cecil, by a wealthy American hunter in July 2015 has increased global pressure for the practice to be banned in Africa (Di Minin et al., 2016; Dickman et al., 2018; Lindsey et al., 2016). This is evidenced by the implementation of trophy import bans and several petitions being launched against the practice by the United States and other western nations (Di Minin et al., 2016; Lindsey et al., 2016), as well as bans and restrictions on transport of trophies by numerous airlines (Di Minin et al., 2016).

At present, global policy around trophy hunting is more informed by public pressure than by research and science (Bauer, Vasile, & Mondini, 2017; Dickman

wildlife trade, bush meat sales and trophy hunting (Emerton et al., 2006). In southern Africa, wildlife-based land uses (such as hunting and ecotourism) have emerged as a financially viable alternative to farming, particularly in more marginal areas, due largely to legislation that enables private landholders to own and benefit commercially from wildlife (Child, Musengezi, Parent, & Child, 2012). Thus, a large network of PLCAs has emerged. In South Africa, PLCAs cover over double the land area covered by state PAs (Taylor, Lindsey, Nicholson, Relton, & Davies-Mostert, 2020), and for the most part receive no government funding or legal protection (but see De Vos & Cumming, 2019). Many of these PLCAs rely strongly on revenues generated from trophy hunting (Taylor et al., 2020).

Trophy hunting, particularly of iconic species such as the "big five" (lion, *Panthera leo*, elephant, *Loxodonta africana*, rhino, *Ceratotherium simum* and *Diceros bicornis*, leopard, *Panthera pardus*, buffalo, *Syncerus caffer*), remains a particularly controversial and polarizing form of consumptive wildlife use (Di Minin, Leader-Williams, & Bradshaw, 2016). Some have argued for effectively ending trophy hunting in the not-too-distant-future regardless of the scientific evidence regarding its contribution to conservation objectives (Lindsey et al., 2016; Macdonald et al., 2017). The mechanisms through which an effective ending of trophy hunting could be achieved is through outright bans, or losing its financial viability due to trophy import bans or lack of international markets (Fears, 2017; Lindsey, Balme, Booth, & Midlane, 2012).

If trophy hunting is banned, there remain large knowledge gaps about the potential implications for conservation areas that rely on revenue generated through trophy hunting (Macdonald et al., 2017; Naidoo et al., 2016). Several studies have reported negative outcomes for both people and biodiversity from past hunting bans in African countries (Di Minin et al., 2016; Mabeta, Mweemba, & Mwitwa, 2018), while some have also investigated the impact of potential future bans, particularly for trophy hunting. Naidoo et al. (2016) demonstrated negative impacts for livelihoods and biodiversity in communal conservancies in Namibia in a simulated trophy hunting ban, and another recent Namibian-

focused study (Angula et al., 2018), identified widespread resistance to a hypothetical trophy hunting ban from rural communities, citing negative impacts on people's livelihoods. However, the implications of a potential trophy hunting ban on PLCAs, and how landowners would adapt to it, has not, to our knowledge, received any scholarly attention. One might expect that if, due to a trophy hunting ban, wildlife-based land uses are no longer a financially viable option, PLCA landholders may change land use (for example to livestock farming or cultivation), with consequences for biodiversity and livelihoods.

In this study, we investigate the perceived impacts of an internationally- or locally-imposed trophy hunting ban on the ability of PLCAs to retain conservation-based land uses in South Africa. We focus on South Africa because the country boasts one of the largest trophy hunting industries in sub-Saharan Africa (Lindsey, Alexander, Mills, Romañach, & Woodroffe, 2007; Taylor et al., 2020), with the majority of it being practiced on privately-owned land (Nelson et al., 2013). Trophy hunting generates an estimated at R1.96 billion per year (approximately USD130 million in February 2020), and a trophy hunting ban may thus have particularly widespread consequences for conservation-based land uses and livelihoods. We interviewed PLCA owners and managers in South Africa's Eastern and Western Cape provinces to assess the role that trophy hunting currently plays in the financial sustainability of PLCAs. We subsequently conducted further interviews with owners and managers of properties offering trophy hunting to understand their perceptions regarding

funding or management support from the state (Cadman, 2010; Taylor et al., 2020). In the last few decades, the PLCA network in South Africa, and the informally-protected network in particular, has seen substantial growth largely as a result of economic drivers such as reduction in agricultural subsidies and opening of tourism markets (Child et al., 2012; Taylor et al., 2020). The contribution of informally-PAs to conservation is under-studied and somewhat controversial, as some of these farms may not adhere to practices that align with good environmental management, through for example over-stocking large mammals and introducing extralimital species (Castley, Boshoff, & Kerley, 2001; Cousins, Sadler, & Evans, 2010; Spear & Chown, 2009). On the other hand, many informal-PAs generate substantial income for conservation (through, for example, hunting permits that subsidize conservation outside of their boundaries Taylor et al., 2020), are effective at protecting natural land cover (Shumba et al., 2020), and conserve threatened biodiversity that is underrepresented in state PAs (Gallo et al., 2009). PLCAs that have been formally gazetted (and better studied) have been shown to play a critical role in improving habitat connectivity (Clements et al., 2019; De Vos & Cumming, 2019), conserving under-protected and threatened habitats (De Vos & Cumming, 2019), and protecting complimentary biodiversity to that on state-owned PAs (Gallo et al., 2009). The PLCA network is also spatially expansive, with informally-PAs comprising at least 14% of South Africa's land area; more than double that covered by state-owned PAs (Taylor et al., 2020).

changes they would employ in the event of such a ban, and what they perceive the consequences would be for biodiversity conservation.

2 | METHODS

2.1 | Study area

Private land plays an important role in South African conservation (De Vos & Cumming, 2019; DEA & SANBI, 2009). South African PLCAs include private nature reserves, which are legally gazetted under the Protected Areas Act (Act 57, 2003); biodiversity agreements, which have legal status by virtue of a legally binding contract; and informally protected conservation areas, which are not legally recognized but receive some form of protection by the landholders and are managed at least partly for biodiversity conservation (Cadman, 2010). The majority of trophy hunting occurs on informally protected PLCAs, which receive no

(dried meat) hunting, game meat production, and game sales. Trophy hunting is a major contributor to the wildlife ranching economy, generating R1.96 billion (USD127 million, March 2020) compared to the R0.65 billion (USD42 million) generated by biltong hunting, 0.16 billion (USD10.5 million) from game meat production, but smaller than the R4.32 billion (USD281 million) generated through live game sales (Taylor et al., 2020). Of the revenue generated by trophy hunting, the biggest proportion (47.1% in the Taylor et al., 2020 assessment) is estimated to go to the landowner through species fees. Additionally, landowners often (but not always) generate income from accommodation, meat processing and trophy handling. Other revenue is generated from paying guides and trackers, permits (thus supporting broader conservation activities) or private operators (such as professional hunters, transport agencies or intermediaries).

This study focused on PLCAs within the Eastern and Western Cape provinces of South Africa. The Eastern Cape province spans 169,000 km^2 and although it is one of the poorest provinces in the country it is extremely rich in

biodiversity, encompassing all three of South Africa's global biodiversity hotspots (Myers, Mittermeier, Mittermeier, Da Fonseca, & Kent, 2000). The Western Cape province spans 130,000 km^2 and contains two internationally recognized biodiversity hotspots (Myers et al., 2000). We focused our study on these two provinces because they contain both biodiversity hotspots and a large number and variety of PLCAs. Wildlife-based conservation is expanding in this region (Clements, Baum, & Cumming, 2016; Gallo et al., 2009; Selinske, Coetzee, Purnell, & Knight, 2015) and over a quarter of the priority areas identified by South Africa's Biodiversity Economy Strategy are located in these provinces (DEA, 2015).

2.2 | Data collection

To assess the extent to which PLCAs depend on trophy hunting for revenue, data on the revenues derived from trophy hunting during the 2013/2014 financial year were collected via semistructured interviews with the owners and/or managers (hereafter "landholders") of 72 randomly selected PLCAs, as part of a larger research program between 2014 and 2015 (Clements, 2016). These properties varied in size from 0.1 to 543.8 km^2 (mean 53.9 km^2), and conserve seven of South Africa's nine biomes (forest, fynbos, grassland, Nama karoo, thicket, savanna, and succulent karoo) (Clements, 2016). Trophy hunting revenues reported in South African Rands were converted to United States Dollars using an average of interview lasted between 30 and 45 min on average, with most interviews being conducted face-to-face, or alternatively via Skype. The questions posed to the landholders were open-ended and related to why the landholder undertakes trophy hunting, and the perceived impacts of an international trophy hunting ban to their PLCA's economic viability and biodiversity conservation objectives (Supporting Information Appendix S1). Landholders were also asked about possible coping strategies that they would implement in response to losing economic viability in the face of a trophy hunting ban, and constraints on transitioning to commonly mentioned alternative land uses. All participants consented to being audio recorded during the interview sessions and these recordings were later transcribed.

2.3 | Data analysis

We used data from the first round of interviews ($n = 72$) to calculate the proportion of landholders that relied on trophy hunting, as a fraction of their total revenue, and in the context of other activities that contributed to their overall income.

Data from the second round of interviews ($n = 22$) were analyzed by way of thematic coding, using the RQDA package in R (R Development Core Team, 2016). Codes (words or phrases representing a single idea) were identified and, based on critical reading of the transcribed interviews, allocated into broader themes (Aronson, 1995).

gain insight into landowners' perceptions regarding the likely impact of a trophy hunting ban, we then undertook follow-up interviews in 2018 with the landholders of PLCAs that generate revenues from trophy hunting. As only 11 of the originally interviewed landholders were available for a follow-up interview, we augmented the sample by using snowball sampling (Newing, Eagle, Puri, & Watson, 2010). Interviews were undertaken with the landholders of 11 additional PLCAs that undertake trophy hunting. A total of 22 landholders were thus interviewed in 2018, 13 from the Eastern Cape and nine from the Western Cape province. The study adhered to Rhodes University's ethics policy (approval no.: ES18/11).

In the first round of interviews (2014/2015; $n = 72$), landholders were asked, in face-to-face interviews as part of a larger survey, what their total revenue was for the 2013/2014 financial year, and the proportion that was derived from trophy hunting, and other activities (e.g., ecotourism, live sales) (see Clements, 2016) for full description of methods and a copy of the questionnaire). In the second round of interviews (2018; $n = 22$), each phy hunting ban to PLCA economic viability, coping strategies and biodiversity conservation.

To investigate if there were particular groups among the landholders who were more or less inclined to retain wildlife-based activities and land uses in the face of a ban, a Principal Component Analysis was performed to identify trends in the coping strategy themes mentioned by landholders (R package: vegan; function: rda) (Oksanen et al., 2015). Thereafter, we performed a cluster analysis to identify distinct groups by employing Euclidean distance and Ward linkages (R packages: vegan and stats; functions: vegdist and hclust) (Oksanen et al., 2015; Ward, 1963). We used a Mantel-based comparison to determine the number of distinct clusters (R package: cluster; functions: daisy and silhouette) (Maechler et al., 2015).

3 | RESULTS

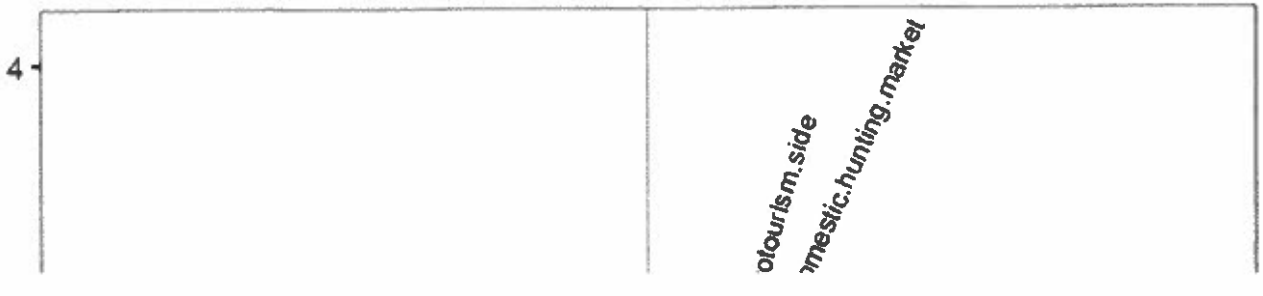
Of the random sample of 72 PLCA landholders interviewed from 2014 to 2015, slightly under a third (32%)

generated revenues from trophy hunting. Of those that undertook trophy hunting, revenues from this activity comprised, on average, 36% of their total annual revenue, though there was a considerable range (SD = 32%, minimum = 4%, maximum = 95%, n = 72). The non-trophy-hunting revenues were generated through ecotourism (32% of revenue on average), live game sales (15%), hunting for meat ("biltong" hunting) (12%), farming (2%) or events (1%), and other (2%) annual revenues from trophy hunting ranged from US$756 to US$600,000 (average = US$71,168, SD = US$136,179). Taken together, wildlife-based revenues thus comprised 95% of annual revenue, on average, while nonwildlife revenues (farming, events) comprised 5%.

More in-depth interviews with the landholders of 22 trophy hunting PLCAs in 2018 revealed that all landholders practiced trophy hunting for economic reasons, for example stating that "*Trophy hunting is definitely the aspect that brings in the most money.*" Two thirds of landholders also mentioned conservation reasons, for example "*I have actively been involved in the game breeding side, the game lodging side, the professional hunting side, the tourism and marketing side and I have never seen an environment that is so turnkey in articulating a gross conservation impact than hunting has.*" Half of landholders mentioned passion as a reason; "*I obviously have an interest and a passion in wildlife and for me it is a bit of a personal thing.*" For many landholders, these three main reasons were intertwined. For example, one landholder stated that they practice trophy hunting "*For conservation and obviously so it's viable for us financially. As a business we do it and because we enjoy it and we do what we love.*"

The majority of trophy hunting clientele were from the US, Canada and the European Union; 95% of landholders mentioned these three regions, while 45% mentioned other international countries. Just over half of landholders (55%) also received clientele from South Africa.

The majority (91%) of landholders believed that a trophy hunting ban would have a major negative impact on the economic viability of their properties. One landholder explained that "*It would be colossal... a trophy ban would take out 50% of our income which although only 50% of our market it is probably 70% of our turnover. It comes*



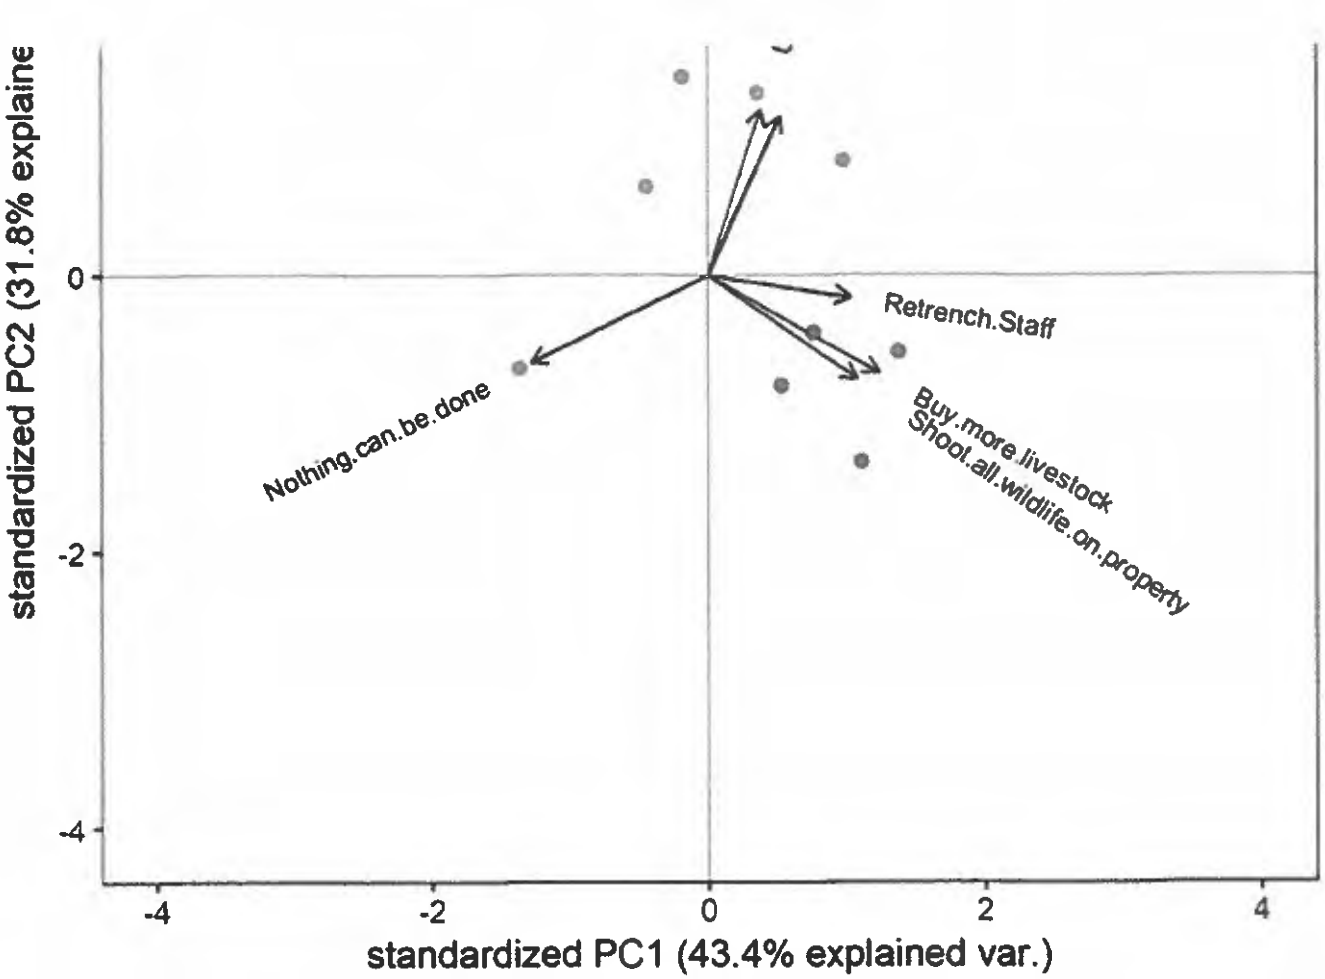


FIGURE 1 Biplot depicting the relative scores, on the first two principal components (PC), of possible coping strategies in response to a trophy hunting ban, as mentioned by the landholders of private land conservation areas (PLCAs). Data points indicate PLCA scores, with colors corresponding to three identified clusters

TABLE 1 Perceptions of 22 landholders regarding the constraints on transitioning to an alternative land use in the face of a trophy hunting ban

Alternative land use	Constraints on adopting the land use	Percent land-holders	Supporting quote
Ecotourism	Increased input costs associated with tourist infrastructure, employing more staff, marketing, water and electricity	55%	*"The cost involved from changing from trophy hunting to ecotourism is extremely high"* *"We would have to employ more managers and employ more staff. We would have to improve certain vehicles, we would have to spend more money on better lodges and that sort of thing"*
	Market is saturated, competition is too high	40%	*"It's a flooded market. There are so many places around us doing it"* *"The ecotourism market is oversaturated and are struggling at the moment to put bums in beds"*
	Ecotourists demand higher standards than hunters for food, accommodation and big five experience	32%	*"Your foreign ecotourists they all want to see the Big five and then most of them are looking for five-star accommodation"*
	Less profitable than trophy hunting	27%	*"There is more limited turnover in ecotourism"*
	Requires more customers than trophy hunting	18%	*"You would need 30 times the amount of people doing tourism than you would in hunting"*
	Too far from market	9%	*"Not here I can tell you the boat won't float. We are too far off the main tourist routes. There's little tourist attraction here"*
Livestock farming	Marginal land	45%	*"Our property was run as a livestock farm previously, but it was heavily impacted, you must understand the terrain, its cliff faces. So, it's huge valleys, there's no other real land-use that would survive in that area other than hunting"* *"Where we live is marginal land, it can't be used for much else"*

Increased input costs associated with infrastructure for livestock	27%	*"If I had to re-fence the farm it would cost me over 10 million so economically, I don't think it would be viable to go back into stock farming"* *"Alternatively start domestic farming with livestock, but the capital to start that would be massive. All the refencing everything, recamping the whole property, infrastructure to work the animals"*
Predators, pests and diseases	18%	*"You could do livestock, but it will be very difficult to keep stock with all the predators around here"* *"We have tick-borne diseases here and the game are just much more well-adapted than the stock"*
Stock theft	9%	*"Stock farming here was just not profitable because of things like stock theft"*
Property too small	9%	*"Too small to have as a single-standing stock farm so I could sell it to other farmers in the area and they would expand it and integrate into their bigger setup"*

back to the per capita return on animals." By contrast, the remaining 9% of landholders stated that a ban trophy hunting would not impact their viability; "*Hunting is just a part of what the farm does. It is about a tenth of what we bring in, so it wouldn't really impact our financial viability that much.*"

Based on their opinions and perceptions, three clusters of landholders emerged, with distinct coping strategies in the event of a trophy hunting ban impacting their economic viability (Figure 1; Mantel score = 0.78). The first group (pink cluster; 36% of landholders) was characterized by landholders who would transition to or scale-up other wildlife-based land uses such as wildlife utilization (live sale or hunting for meat) or ecotourism. For example, "*I would assume that we would migrate over to ecotourism and get the big 5 in. It would affect the farm a lot. It would impact particularly in winter months as we would have to sell more live game and have more visitors come.*"

The second group (green cluster; 36% of landholders) was characterized by landholders who would abandon a wildlife-based land use, and transition to livestock (Figure 1). These landholders also commonly mentioned that they would shoot all the wildlife on the property and retrench staff. One landholder stated that "*I think what we would probably have to do is first retrench our staff for the meantime and then look at the viability in terms of livestock farming. We can't do crop farming here because we don't have enough water and that sort of thing. The only other thing we could do is domestic livestock.*" included the property being too marginal and/or small, increased input costs, predators, pests, diseases and stock theft (Table 1).

The vast majority (95%) of landholders believed that a trophy hunting ban would have a negative impact on biodiversity conservation, mentioning likely declines in wildlife numbers, losses in wildlife value (related to live animal sales), damage to ecosystems, negative impacts on wildlife genetics and increased poaching (Table 2). One landholder, however, had a contradictory view, and believed that a ban would be good for conservation, stating that "*The animals would be able to live out their full lives, pass on genes properly, die when they are meant to die. Vultures and other scavengers would possibly emerge and live off carcasses.*"

4 | DISCUSSION

Trophy hunting is an important financial strategy for the viability of PLCAs in South Africa: a third of surveyed PLCAs generated at least a portion of their revenues from trophy hunting, and nearly all landholders who offered trophy hunting felt that it was important to their overall viability. This study is, to our knowledge, the first investigation of the possible impacts of a trophy-hunting ban that focuses specifically on single-landowner PLCAs. It shows that the impact of a trophy hunting ban on the financial viability of PLCAs in South Africa could be significant and lead to land use change on many PLCAs. Our results have important implications for the future of

that nothing could be done to remain economically viable following a ban or had no interest in pursuing another land use (Figure 1). These landholders stated that they would likely sell their property in the event of a ban. According to one landholder, "*Economically [trophy] hunting has changed the game for us and to go back to anything else would just not be feasible for us. We only have 3500 hectares which isn't a lot of land,*" while another stated that "*I would sell immediately. There is zero interest for me in doing anything other than this, it is my biggest love and passion. I think honestly if there was a trophy hunting ban, I would sell the farm there's just no doubt about it.*"

Perceived challenges to transitioning to or scaling up ecotourism in the face of a trophy hunting ban included increased input costs, a saturated market, ecotourists demanding higher standards than hunters, ecotourism being less profitable and requiring greater volumes of customers than trophy hunting, and some properties being too far off the main tourist routes (Table 1). Perceived challenges to transitioning to livestock farming

4.1 | Implications for land use

Our results showed that the majority of landholders with wildlife-based PLCAs (63%) would move away from a wildlife-based land use. This is somewhat in line with the findings of Angula et al. (2018), who showed that only 11% of surveyed Namibian conservancy residents would continue to support wildlife on communal land in the event of a trophy hunting ban, and that of Naidoo et al. (2016), who found that a simulated ban on trophy hunting significantly reduced the number of conservancies who could cover their operating costs.

In our study, only a third of landholders felt that they could scale up or adopt other wildlife-based land uses (i.e., ecotourism) to cover the financial deficit created by a trophy hunting ban. Biophysical constraints, such as being too far from the tourist routes, are commonly mentioned as the main constraint to upscaling ecotourism (Mgonja, Sirima, & Mkumbo, 2015; Pegas &

TABLE 2 Perceptions of 22 landholders regarding the impact of a trophy hunting ban on wildlife and ecosystems

Impact	Percent land-holders	Supporting quote
Decline in wildlife numbers	82%	*"I believe African wildlife wouldn't survive without trophy hunting because you have got to breed 4 or 5 animals to make a cent so that's conservation itself. And so, the trophy hunter is what drives this whole industry, without him at the top the whole industry collapses"* *"This is pretty much the precipice of the conservation front for wildlife at the moment and without it, everything would collapse. Animal numbers, I reckon, would drop below 25% throughout the country"* *"For a start, what we do now on our property is that based on the size of our property we can scientifically work out how many animals there should be on property. It is stocked on line on browsing/grazing capacity. So, we would have to cull game to make way for stock. The wild animals at the moment would be competition for stock farmers"*
Loss in wildlife value	68%	*"When you remove trophy hunting from the equation, if you remove that well it has no value. What are you breeding for? The underlying market value of a stud is the hunting exit strategy market value and if that falls to the wayside you lose the value of the stud"* *"The animals will lose value then and if the farmer sees no value for the wild animals on his property, he will either get rid of all of them or put less effort into them"*
Damage to ecosystems	68%	*"If you have a game farm or a game reserve your ecosystem is more in balance just on type of bushes and shrubs that you get here. You get many more 5-star grazing units on a game farm when it is stocked correctly"* *"If you look at Kruger or the Tuli Block for example they didn't do any hunting there and they decimated all the vegetation to such a degree that they all started saying of starvation and a break out of anthrax and killed all the animals indiscriminately. We are in the privileged positions as humans that if you do exercise control over animals you need to do so with some level of insight and if you don't have that long-term insight you cause long-term damage to ecosystems and variability to conservation efforts"*

		[trophy hunting] helps stimulate bringing about different genetic pools... and forces you to bring new genes into the system which further down the line enhances the gene pool"
Poaching	18%	*"Guys would lose out on jobs and meat. They would make other options they would poach or hunt meat themselves"; "If you take away legal hunting your illegal hunting will flourish. Without hunting there are no incentives to collect traps and snares"*

Castley, 2014; Powell, Edwards, Powell, & Nieland, 2018), but in our study, financial constraints related to entering and competing in the tourism market were more common. For example, respondents mentioned barriers to entry (more infrastructure and staff may be needed to move from hunting to ecotourism operations, also see Clements et al., 2016), in addition to increased running costs, lower profit margins, and the higher competition in this sector (Table 1). While high-end ecotourism can be highly profitable (Clements et al., 2016) and many landholders seemed willing to shift to ecotourism, in most cases this would require significant investment, possibly from an outside source.

A third of surveyed landholders said they would transition to livestock farming, but many also mentioned both financial and ecological constraints to making this transition (Table 1). This result is perhaps unsurprising: many PLCAs moved away from livestock farming when government subsidies for farming were reduced, and ecotourism and trophy hunting became a more financially viable strategy (Child et al., 2012). Thus, transition options could be biome-dependent: many of our surveyed PLCAs were in areas where rainfall is erratic and farming conditions are difficult.

An interesting result was that one third of participants felt that there was either no other viable land use, or that they would not want to do anything else, as their passion

is for hunting. Constraints to adaptation therefore were not just biophysical and financial, but also related to personal identity, lifestyles and values (Biggs, 2011).

4.2 | Impacts on biodiversity and livelihoods

If two thirds of PLCA owners transitioned away from a wildlife-based land use, there may be important consequences for biodiversity. Many landholders perceived likely impacts on mammals, and certainly transitioning to livestock farms would be incompatible with keeping carnivores and possibly megaherbivores on the land. While two thirds of landholders believed that a change in land use would negatively affect ecological function, actual impacts are uncertain. Livestock farming might not necessarily be bad for biodiversity (Biggs, Reyers, & Scholes, 2006; Broom, Galindo, & Murgueitio, 2013; Duru et al., 2015), and well-managed livestock farms may in fact be better for ecological function that badly-managed game farms (Castley et al., 2001; Cousins et al., 2010; Spear & Chown, 2009).

Impacts on biodiversity, are, however, not the only concern. Our finding that 27% of landholders feel that they could no longer remain financially viable following a trophy hunting ban could have a significant impact on the livelihoods and well-being of landholders, as well as that of their employees. Many landholders mentioned that they would have to retrench staff in the event of a ban (Table 2), which may also lead to displacement of stakeholder (landholders), they nevertheless emphasize that urgent attention is needed from conservation policy makers and international NGOs. If trophy hunting is banned, our work suggests that the identification, development and support of alternative livelihood strategies should be prioritized, and their implications for biodiversity investigated. Such research and discussions could include how to enhance the biodiversity value of alternative land uses (such as sustainable livestock ranches), how to enhance local tourism or hunting markets, and financing to lower barriers of entry into high-end ecotourism (Clements et al., 2016).

The ethical concerns around the livelihood and human well-being impacts resulting from trophy hunting bans also merit attention in policy debates and require further research, including understanding the perceptions of different stakeholders across diverse social-ecological contexts. Since this study only interviewed landholders, we can draw only limited conclusions about the broader impacts of a trophy-hunting ban. Indeed, the impact of PLCAs (informal areas in particular) on livelihoods has been controversial in South Africa. While some researchers argue that PLCAs provide jobs, food, housing and skills (Snyman, 2017; Taylor et al., 2020), others point out that the conversion to game farms from agriculture resulted in many job losses and displacements and criticize the lack of social transformation in PLCA ownership post-Apartheid (Spierenburg & Brooks, 2014). In our study, many landowners suggested that converting back to agrarian land uses or switching to ecotourism

a lion trophy hunting ban across tenure regimes (Lindsey et al., 2012), the limited research on the impacts of a (potential) trophy hunting ban on human livelihoods and well-being has thus far focused almost exclusively on communal conservancies (Angula et al., 2018; Naidoo et al., 2016). PLCAs owned by individual landholders most likely have different implications for livelihoods of both owners and employees to those of a communal conservancy, given the possibly greater financial agency of many private landholders, and the role they play in local socio-economic development in terms of employment creation, skills training and philanthropic development projects (Snyman, 2017). Thus, trophy hunting bans may have significant implications for livelihoods, development and social justice that stretch beyond the implications mentioned by landholders in this study.

4.3 | Implications for policy makers

Although our results were based on a small sample size, and only account for the perceptions of one type of

ing operations would be replaced by new ones in new sectors. However, agrarian conversion might be more plausible in more favorable social-ecological contexts, and there are many potential benefits and costs to other stakeholders that were not considered by landowners in this study.

If trophy hunting is terminated, mechanisms to address the human impacts should adhere to the international mechanisms and procedures established to safeguard human well-being and human rights in conservation (Makagon, Jonas, & Roe, 2014). Safeguarding the rights of indigenous peoples is particularly important, including their rights to participate in decision-making, use and management of their natural resources as indicated in the UN Declaration on the Rights of Indigenous Peoples in 2007, and the Convention on the rights of indigenous and tribal peoples of 1989 (Makagon et al., 2014). For example, an international trophy hunting ban or an import ban on trophies from a country like Namibia (see Naidoo et al., 2016) can have a substantial impact on individual and community livelihoods. In

addition, such bans impact on the rights of communities which have decided to allow managed trophy hunting as a source of revenue in their communal lands.

Ultimately, it is important to consider strategies that recognize that PLCAs (and other areas where trophy hunting is currently practiced) are complex social-ecological systems. PAs are created by people, for people, and are shaped by the social, political, economic and environmental landscape in which they exist (Cumming, 2016; Cumming et al., 2015; Palomo et al., 2014). They are able to respond to, and are affected by, the close interactions between social, economic, political and ecological factors, which occur across multiple scales (Cumming et al., 2015). Our results suggest that a hunting ban will have different consequences for landholders and stakeholders in different social-ecological contexts, and that cross-scale feedbacks from implementing such a policy change is likely to lead to a variety of unintended and potentially undesirable consequences in terms of biodiversity conservation and human livelihoods.

Taking a social-ecological approach to PLCAs, and PAs more generally, is important for exploring the impact of different policies on biodiversity conservation. In this case, it can help transcend the gridlocked debate around whether a ban would be good or bad. Rather, as we have demonstrated in this study, such a ban is likely to have differentiated effects. Given that an international ban is not in the control of the South African government, we suggest that a useful approach to complement this debate may be to pay more attention to building the capacity of

confirm that the authors have no conflict of interest in publishing this manuscript.

AUTHOR CONTRIBUTIONS

All authors contributed to the design and writing of the paper. K. P. and H. S. C. conducted data collection and analyses. A. D. V. and H. S. C. led the writing of the manuscript. A. D. V. was responsible for submitting the manuscript and leading revisions.

2020 FIRST QUARTER NEWSLETTER

Director's Message

Dear friends,

Thank you for your unbelievable support. We are truly humbled. Although conservation areas across the African continent are facing a severe challenge, the hunting community and industry has shown its true colours over the last couple of months, during these times of unprecedented uncertainty for all hunters. In times like these, we must work towards finding solutions. Together

we are important custodians of African wildlife.

As a company, SDM's priority is the protection of our area and the wildlife within it. During this time we have focused our efforts on anti-poaching and essential services in the Panyame Wildlife Conservancy such as our community projects. Further to the responsibility of protecting our wildlife, we also have an obligation to our loyal workforce. Safaris de Moçambique supports an average workforce of 60 individuals from the local community. With an average breadwinner to dependant ratio of 1:8, the company supports almost 500 people.

We are working hard to document all of the work that is being done on the concession and look forward to sharing both our successes and our failures with you!

Best regards,

Simon Rodger
Managing Director

Law Enforcement and Wildlife Protection

There a currently 20 game scouts in the company anti-poaching unit. With so much land to play with, there's no such thing as too many boots on the ground. We have to cover as much ground as possible to be effective. Due to the wet conditions of January, February and March, it has been difficult for the scouts to stay on poachers' spoor. From Jan through April, 21 extended patrols were

completed both on land and water together with officials from the Tchuma Tchato program and local authorities leading to:

- 56 illegal nets confiscated
- 28 wire snares removed
- Active Control of all water points
- Two near arrests with Poachers in the Eastern section of the concession. Unfortunately, they escaped this time! Very difficult to stay on the tracks in the rainy season.

Each snare removed leads to dozens of animals saved because a poacher will keep reusing the same trap.

The Nzou Group after confiscating several illegal nets on a patrol in the Headwaters.

Water patrols

We have allocated 100 litres of petrol per week to two permanent teams tasked with patrolling the fisheries at both the Mbadzi and Main camp area. Comprised of both company members and scouts from the Tchuma Tchato Programme, these teams are in search of illegal, undersized and unlicensed nets in both prohibited and designated fishing zones.

Some of the culprits of illegal fishing are from Zambia or Zimbabwe and are not supposed to be fishing in Mozambique waters. Others are Mozambicans without licenses or who fish with illegally sized nets. The water

patrols have been a massive success as you can see from the sheer number of confiscated nets.

The teams confiscated 56 nets in total during the first quarter of 2020. With an average length of 400m, translating to 22.4 km, each confiscation leads to tens of thousands of fish saved.

Indeed it is our full intention to keep this effort up. The teams are being rotated every 10 to 14 days, with members from the local authorities accompanying each group. As long as we can continue this effort, we can expect to see a dramatic change in the fishery.

This project will bring significant benefits to the local community, ensuring that licensed fisheries remain profitable and sustainable. In the past, we have found that bushmeat poachers use fishing as a scapegoat. Preventing fishing vessels from entering prohibited areas tackles this problem effectively.

Finally, recreational fishing will improve exponentially due to increased law enforcement.

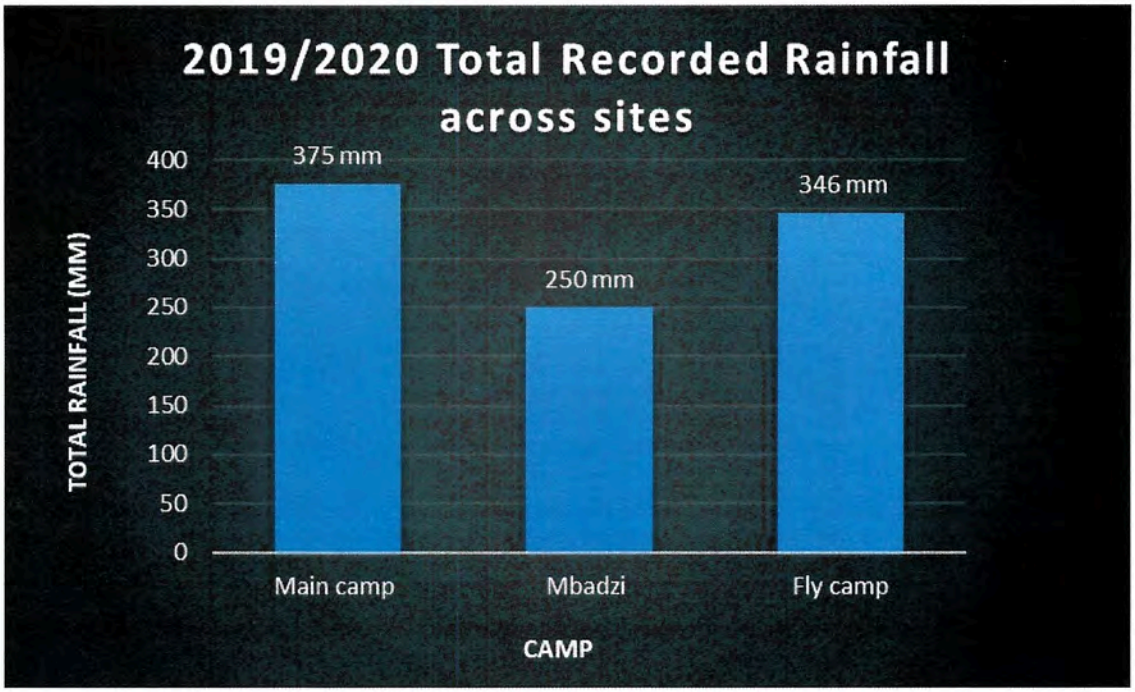
Human-Wildlife Conflict

Human-Wildlife Conflict (HWC) was a severe problem in the area in 2019 with cases of conflict reported almost daily. In 2020 we are committed to developing new ways and means of mitigating this ongoing problem.

The company was recently asked by the local authorities to intervene and destroy an aggressive crop-raiding Hippo near Tsingano village on the Panyame river. The skinners removed an old muzzleloader round from the Hippo carcass, shown in the below image—a reminder of the age-old conflict that occurs between megafauna and people.

This the second incidence of human-wildlife conflict we have dealt with so far this quarter.

A muzzleloader round pulled out of the Hippo.



The first rains were recorded on the 15th of November, and the last on the 17th of March.

A Void to fill: Meat Distribution Program

Annually, Safaris de Moçambique delivers roughly 20 tons of meat to the local community. This programme is an integral part of conservation in the area. The regular distribution of meat to the community removes the need for local people to poach.

The lack of hunts in 2020 will lead to a shortage of protein in the villages, and consequently poaching will increase. We are looking at allocating a portion of the budget for 2020 to buying cattle and goats from the local community, butchering and delivering the meat. Key positive takeaways of this project are the following:

1. Meat derived from the hunting quota will be replaced by livestock animals, thus allowing the company to fulfil its obligations to the local community

and distribute the same amount of protein to the villages.

2. The wildlife population shall rest this year as the company will not fully utilize the quota.
3. Livestock used for this project will be bought from farmers in the surrounding communities and paid for in cash, thus bringing economic benefits for the local community.

Borehole Maintenance

A considerable amount of work goes on behind the scenes in preparation for the end of the rainy season. Simon and Theuns have been getting all the solar pumping systems back up and running.

These water sources are essential for the wildlife and are leading to increased utilisation of grazing in various areas around the concession. We expect to see a dramatic increase in wildlife populations in certain areas because of solar water projects.

See a few pictures below of the pans in all their glory, full of water from the solar systems. We are proud of these systems, and the design is unique. They are theft-proof, waterproof. ...Pretty much bulletproof!

Community Assistance

A community assistance success story during the first quarter of 2020 is that of Chengetai Catapura, a woman from Kabundu village who had severe and life-threatening complications while giving birth to a child. We received a call from Richard Mukende, the chairman at Kabundu village requesting our assistance. We rushed to dispatch a vehicle in time, and she was sent to the clinic across

the river to receive urgent medical care. Without this transport, she would undoubtedly have died.

We continue to help the community with repairs and maintenance on an as and when basis. They have ongoing issues with bicycles, donkey carts etc. One repair that springs to mind so far this year is the maize grinding mill belonging to Coleni Adau, a conservation committee member at Chikodzero village. Without this maize grinding mill, the residents of Chikodzero village are unable to produce mealie meal for food.

The company recorded the following cases of Community assistance during the first quarter:

- Two instances of Emergency medical transport
- Two instances of PAC attended to (Problem Animal Control)
- Several community repairs at the workshop
- Eight footballs distributed to local schools (Pre-COVID-19)

Upcoming Projects

Law Enforcement

- We are currently seeking funding to train and employ an additional 30 game scouts, an increase to 50 in total from the current 20. The reason behind this being the lack of presence throughout the area due to no hunting activity. This presence is a major addition to the anti-poaching

framework through continual traversing of the area. Under normal circumstances, this would occur on a daily basis, throughout the concession from April to November.

- The water patrols have been successful thus far, and we will be continuing this project indefinitely. We have allocated over 100 litres of petrol per week to the patrol teams at Mbadzi and Mizunga base.
- We are currently looking into the use of two conservation tools to assist us in our law enforcement and ecological monitoring efforts. These are SMART Conservation Tool (Spatial Mapping and Reporting Tool) and EARTHRANGER software. A trained technician and mobile devices are needed to implement the project.

SPONSOR A GAME SCOUT

Ecological Monitoring

Simon has installed camera traps at all the waterholes. We are looking forward to seeing some of the videos and pictures and we will be sharing these on our social media channels as well as in our next newsletter!

Community Projects

The following community projects are planned for the next quarter:

- Renovations of the School in Capessa Village
- Renovations of the school in Nhanchenje Village
- Construction of the community centre in the Chintopo area.
- Repairs to the solar pump that we installed at the clinic in Chintopo, which has stopped working due to the theft of components.
- Repair of the solar system at the clinic in Chitete.
- The borehole we drilled for the community at Mamuira has run dry, we are planning on drilling a replacement.
- Launch of the Human-Wildlife Conflict Prevention Unit. We are currently in discussions with the authorities about solutions to these problems, with a specific emphasis on non-lethal solutions.
- Conservation Education courses for kids from the local community will resume as soon as the COVID-19 situation allows for it.

CLICK TO DONATE

Special Thanks

We would like to thank a few special people for their help over the last few months:

- Thank you to John Jackson from Conservation Force, for your contribution setting up channels to fund conservation areas across Africa.
- Thank you to Ivan Carter for supporting our work through his Ivan Carter Conservation Alliance which is a 501c3 in the US.
- A big thank you to the Dallas Safari Club for their anti-poaching initiative to help safari companies during the COVID-19 epidemic. We received a $5,000 USD donation from Dallas Safari Club.
- Last but not least a huge thank you to our clients and friends who have donated funds so generously and without which none of these conservation and community efforts would be possible.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name		1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
LONG		DANNY	P	
2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address	
(b)(6)				

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera Leo Melanochaita, Lion / Eqqus Quagga, Zebra

   b. Sex (if known). Male / Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:
   Farm Vorstershoop, 8615, Dr RSM, North West, South Africa

   b. Date wildlife was hunted: 08/21/2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Japie Horn
HORNS AFRICA SAFARIS
GG van SchalKwyK

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Trophy Solutions Afica
11 Sixth Ave
PoloKwane 0699 SOUTH AFRICA

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name:
Business Name: TROPHY SOLUTIONS AFRICA
Address: 11 Sixth Ave
City: PoloKwane 0699
State/Province: SOUTH AFRICA
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?
The farm is the only employer for locals in that region.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

    Applicant's signature: (b)(6) _____ Date: ١٥/١٦/٢٠١٧

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

STANDARD CONDITIONS

GENERAL CONDITIONS - ALL PERMITS

1) The Issuing Authority for this licence is : The Northwest Department of Rural,Environment and Agricultural Development (READ), Chief Directorate Environmental Services, Private Bag X 2039, Mmabatho, 2735, hereafter named "the Issuing Authority". 2) This permit, unless otherwise stated, is only valid within the boundaries of the North West Province (hereafter named "the Province") and then specifically as specified on the permit. 3) This permit is valid only : - a) for the specific species, sex and numbers as specified on this permit. b) for the specific activity / activities authorised. c) for the specified methods or instruments authorised. d) for the specific property / locality as specified. e) for the specific day, time or period stipulated. 4) This permit is only deemed valid : - a) in the original format and with the content as issued by the Issuing Authority. b) once it has been printed and the signature of the permit holder has been endorsed thereon in ink. 5) the Issuing Authority reserves the right to amend, withhold, withdraw or cancel any permit at any time. 6) This permit is not transferable to any individual, natural person, juristic person or any other legal identity. 7) Any alterations or attempt thereto, whether electronically or in any other way, shall immediately render it invalid. 8) This permit shall lapse and be deemed invalid when it is altered, lost or destroyed and no copy thereof shall be issued. 9) This permit shall also become invalid as soon as the permit holder loses possession of any animal, plant or derivative as the case may be, as specified on the permit. 10) This permit does not grant the permit holder automatic access to any Protected Area, National Park, Provincial Nature Reserve or privately owned land and : - a) the permit holder must beforehand obtain all other relevant written permissions, documents, rights and licences. b) the permit holder must comply with any other / further conditions or restrictions that the manager / landowner may stipulate at his / her discretion. 11) The permit holder must at all times while performing any restricted activity authorised by this permit, have the permit and all other relevant documentation in his / her possession and without delay make it available upon request by any authorized person. 12) An authorized person must also be allowed access onto the property at any reasonable time for any inspection needed and can remain on such property as long as it is needed to do the inspection. 13) The permit holder must immediately after completion of any activity authorised by this permit, record the required particulars in the space provided therefore or on the annexure or document attached hereto or in the prescribed register related to the permit. 14) The permit holder must return the original signed permit to the Issuing Authority within (14) fourteen days : - a) after performing or completing the authorised restricted activity, or b) after the date of expiry thereof whichever happens first, and c) if applicable furnish the Issuing Authority with a prescribed written feedback report on the results of every activity conducted. 15) The permit holder must retain a copy of the permit together with all other relevant written permissions, documents, rights and licenses for a period of at least (2) two years from date of issue or for as long as the permit holder is in possession of the animal, plant or derivative, whichever period is the longer. 16) If applicable, the permit holder shall apply for the renewal of the permit to the Issuing Authority, on the appropriate application form, at least (3) three months prior to the expiry date thereof. 17) Applications for renewal of this permit will only be processed after the original signed permit together with the prescribed written feedback report has been returned to the Issuing Authority. 18) This permit, during the period of validity thereof, is also subject to: - a) all applicable norms and standards in existence at the time of issuance. b) the provisions of any law in force, in respect of the specific species, activity, method or instrument to which this permit applies. 19) It is the permit holder's responsibility to obtain the correct information on any other legislation, specification, requirement or changes thereto that may be applicable or are required by any other Issuing Authority / Organization / Institute, relating to this permit. 20) By signing this permit, the permit holder declares that he / she is aware of the fact that : - a) any transgression or failure to return the original permit or failure to render the required reports can lead to criminal prosecution and also jeopardize any future applications by or in the name of the permit holder. b) if the permit holder contravenes or fails to comply with any permit condition or requirement, he / she shall be guilty of an offence. 21) The prescribed fees paid to the Issuing Authority for the issue of this permit shall not be refunded.

HUNT - DANGEROUS GAME

1) The permit holder must ensure that : - a) a fire-arm having a barrel caliber of at least 9.525 mm H&H (.375 of an inch H&H) is used to hunt buffalo, elephant, lion, leopard, rhinoceros or hippopotamus. b) the client is escorted by preferably two registered professional hunters who are qualified to hunt the above mentioned dangerous wild animals. c) unless approved and specified on this permit, no prohibited hunting method or instrument is used to

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Infante	Juan	C.	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/Initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Medina	Texas	78055		USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the amount of $100. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee– attach documentation of status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby (b)(6) ave read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable par ter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best o e and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   4610 Modern Ln, Laredo, TX 78041

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   LUIS PEREZ, (830) 7960229, twincityexports@aagarzacantu.com.mx

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

PANTHERA LEO / LION

b. Sex (if known).

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

SOUTHAFRICA

b. Date wildlife was hunted:

January, 2012

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

MEXICO, NUEVO LAREDO, TAMAULIPAS

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Juan C. Infante
Address:	Km. 48.5 Carretera Federal, México -Pachuca S/N
City:	Los Reyes Acozac
State/Province:	Tecamac
Country, Postal Code:	Estado de México

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import [redacted] elephant trophies in one calendar year.

Taxidermist/Broker's signature: (b)(6) [redacted] Date: 10/24/2018

11. If you are the hunter applying to import [redacted] please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elep[redacted]n one calendar year.

Applicant's signature: (b)(6) [redacted] Date: 10/24/2018

Be aware that there may be additional p[redacted]pproval requirements by your local or state governments, as well as required by other Federal agenc[redacted]governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

United States Department of the Interior

FISH AND WILDLIFE SERVICE
International Affairs
5275 Leesburg Pike, MS-IA
Falls Church, VA 22041-3803

April 9, 2019

Juan C. Infante
(b)(6)
Medina, TX 78055

Dear Mr. Infante:

We are in receipt of your application requesting a permit under the U.S. Endangered Species Act (Act) to import a sport-hunted lion (*Panthera leo melanochaita*) trophy taken in South Africa, from Nuevo Laredo, Tamaulipas, Mexico. We wish to inform you of the following:

After reviewing your application, we have determined that no permit is required from our office. The lion (*Panthera leo melaochaita*) was listed under the Act as threatened effective January 22, 2016. Since the specimen you wish to import was taken in 2012, prior to the listing of the lion under the Act, the specimen qualifies as pre-Act. As a pre-Act specimen, as long as the trophy animal was not taken contrary to the purposes of the Act and was not held in the course of commercial activity after the listing date, the prohibitions under the Act do not apply to your trophy. Since no permit is required from our office, your application, PRT-13856D, has been administratively closed.

Although you do not require a permit from this office, you will need to establish the pre-Act status of your trophy when entering into the U.S. through a designated wildlife port of entry. You will also need to declare the import of any and all wildlife and wildlife products using Federal Fish and Wildlife Declaration Form 3-177. Please see the attached U.S. regulations regarding pre-Act wildlife for a list of information and documents needed to establish the pre-Act status for your trophy.

If you have questions, contact Biologist Emma Nelson at the Division of Management Authority, Branch of Permits, MS:IA, 5275 Leesburg Pike, Falls Church, Virginia 22041 (1-800-358-2296) FAX: 703-358-2281.

ELECTRONIC CODE OF FEDERAL REGULATIONS

e-CFR data is current as of April 2, 2019

Title 50: Wildlife and Fisheries
PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS
Subpart A—Introduction and General Provisions

§17.4 Pre-Act wildlife.

(a) The prohibitions defined in subparts C and D of this part 17 shall not apply to any activity involving endangered or threatened wildlife which was held in captivity or in a controlled environment on December 28, 1973: *Provided,*

(1) That the purposes of such holding were not contrary to the purposes of the Act; and

(2) That the wildlife was not held in the course of a commercial activity.

Example 1. On January 25, 1974, a tourist buys a stuffed hawksbill turtle (an endangered species listed since June, 1970), in a foreign country. On December 28, 1973, the stuffed turtle had been on display for sale. The tourist imports the stuffed turtle into the United States on January 26, 1974. This is a violation of the Act since the stuffed turtle was held for commercial purposes on December 28, 1973.

Example 2. On December 27, 1973 (or earlier), a tourist buys a leopard skin coat (the leopard has been listed as endangered since March 1972) for his wife in a foreign country. On January 5, he imports it into the United States. He has not committed a violation since on December 28, 1973, he was the owner of the coat, for personal purposes, and the chain of commerce had ended with the sale on the 27th. Even if he did not finish paying for the coat for another year, as long as he had possession of it, and he was not going to resell it, but was using it for personal purposes, the Act does not apply to that coat.

Example 3. On or before December 28, 1973, a hunter kills a leopard legally in Africa. He has the leopard mounted and imports it into the United States in March 1974. The importation is not subject to the Act. The hunter has not engaged in a commercial activity, even though he bought the services of a guide, outfitters, and a taxidermist to help him take, preserve, and import the leopard. This applies even if the trophy was in the possession of the taxidermist on December 28, 1973.

Example 4. On January 15, 1974, a hunter kills a leopard legally in Africa. He has the leopard mounted and imports it into the United States in June 1974. This importation is a violation of the Act since the leopard was not in captivity or a controlled environment on December 28, 1973.

(b) Service officers or Customs officers may refuse to clear endangered or threatened wildlife for importation into or exportation from the United States, pursuant to §14.53 of this subchapter, until the importer or exporter can demonstrate that the exemption referred to in this section applies. Exempt status may be established by any sufficient evidence, including an affidavit containing the following:

(1) The affiant's name and address;

(2) Identification of the affiant;

(3) Identification of the endangered or threatened wildlife which is the subject of the affidavit;

(4) A statement by the affiant that to the best of his knowledge and belief, the endangered or threatened wildlife which is the subject of the affidavit was in captivity or in a controlled environment on December 28, 1973, and was not being held for purposes contrary to the Act or in the course of a commercial activity;

(5) A statement by the affiant in the following language:

The foregoing is principally based on the attached exhibits which, to the best of my knowledge and belief, are complete, true and correct. I understand that this affidavit is being submitted for the purpose of inducing the Federal Government to recognize an exempt status regarding (*insert description of wildlife*), under the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), and regulations promulgated thereunder, and that any false statements may subject me to the criminal penalties of 18 U.S.C. 1001.

(6) As an attachment, records or other available evidence to show:

(i) That the wildlife in question was being held in captivity or in a controlled environment on December 28, 1973;

(ii) The purpose for which the wildlife was being held; and

(iii) The nature of such holding (to establish that no commercial activity was involved).

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Behrns	Donald	Eugene	Mr.

(b)(6) [redacted]

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6) [redacted]

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Bruce	South Dakota	57220	Brookings	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)
(b)(6) [redacted]

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
Bruce	South Dakota	57220	Brkgs	USA

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

Donald E Behrns
(b)(6)
Bruce, SD 57220

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Donald Behrns (b)(6)

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

panthera leo

b. Sex (if known). female

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

South Africa Reitzdale Dr RGM MJ Erwee
Farm 239 Lenyesdeel, Tosca
Nora-West

b. Date wildlife was hunted:

23/04/2017 – 27/04/2017

Killed 26/04/2017

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Reitzdale Farm 239 PH JL Griesel
Leniesdeel, Tosca Outfitter MJ Erwee

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Karoo Taxidermy 15 Vander Biji Street, Industrial Ar
P.O. Box 231
Graaf-Reinet, 6280 South Africa

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: Karoo Taxidermy
Address: 15 Vander Biji street Industrial area
City: Graaff-Reinet
State/Province: South Africa
Country, Postal Code: 6280

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

NO - See attached pages (1) & (2)

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

$6000 don't know what funds will be used for see pages (1) & (2) attached

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

I do not - I have no information on th
use of the funds but I can tell you thi
hunt was exceptionally hard and 100%
total fair chase - Tracked for 41 Kilomet
over a 3 day period - If it helps someone el
have an experience like this it is the essenc

RE: Lionesss

Date: Tuesday, October 23, 2018, 3:43 AM CDT

Good day Mr Behrns.

Thank you for your patience in this regard.

- The lions that were hunted were not removed from the wild. They were captive bred animals from registered breeding, keeping and hunting facilities. (Copies of relevant government issued permits is available and attached.)

- African lion as a species is currently listed under the Endangered Species Act. The breeding of lions in captive environments in South Africa and the release of these animals for hunting purposes into registered hunting areas are all Government controlled legal activities. Strict legislation and regulations are in place in South Africa in order to monitor that lions bred in captive environments and released for hunting purposes adhere to legal requirements.

  - 9a) The Biodiversity Management plan for African Lion (Panthera leo) in South Africa (Dec,2015) indicates that the population of lions in captive environments in South Africa is about 8000 animals. The population growth of lions in captive environments is actively and adaptively managed.

  - 9b) The hunting of any lions, albeit captive or wild, in South Africa is a restricted activity under various National and Provincial Legislation. License and permit fees are paid to the various government departments - Biodiversity Management sections, for Standing permits, Keeping permits, breeding permits, transport permits, release permits, hunting permits, game farm registration licenses, professional hunter license, hunting outfitters license, Taxidermy permits, Export of Trophy permits and CITES permits. I cannot speculate on how the government appropriates the income they receive from permits and licences

    - § In order for a captive bred lion hunt to be authorized in South Africa, the landowner needs to comply with a list of criteria. One of the criteria is to obtain an Ecological Management plan for the specific area where the animals are to be released

for hunting purposes. Prey base numbers and species variation are part of the aspects that are addressed in these Management Plans. These Management plans are part of the permit conditions for lion release areas and these are monitored by the various Government authorities.

§ In addition, employment is provided to many members of rural communities that would otherwise not have these employment opportunities..

o 9c)The landowner in this specific case conserves, manages and maintains an area of about 3600 hectares (about 8900 acres) of prime lion habitat, as well as prey species. This landowner is a member of the South African Predator Association (SAPA), a member based organisation that represents the captive lion keeping, breeding and hunting industry. A Conservation fund was established by SAPA, with the object of contributing to the conservation of lions in the wild through direct funding of various lion conservation projects. This specific landowner contributes to the SAPA Conservation Fund on a regular basis, both financially and with data pertaining to his lions and lion enterprise.

I trust that this information will be of assistance to you application.

Please feel free to contact me, should you need any information.

Kind Regards / Vriendelike groete

Mrs./Mev. Carla (A.C.) van der Vyver

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Friesen	Kari	M	Ms.

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6) [redacted]			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/Initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b)(6) [redacted]				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f Country
Detroit Lakes	MN	56501	Becker	USA
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the amount of **$100. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].**

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same as Page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   (b)(6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Adult Lion

b. Sex (if known). Female

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

South Africa - Latitude -26.129304 Longitude 24.063442 - Reitzdale Concession - Tosco, South Africa (Nearest City)

b. Date wildlife was hunted:

5-20-2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

JP Big Game Safaries Pty Ltd -Juan Pace - Postnetsuite 291, Private bag x 37, Lynwoodridge, 0040

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

FIELD AND STREAM TAXIDERMY PO Box 1256 - 3 Industria Road - Louis Trichardt - 0920
South Africa Tel: +27 15 516 1081 - Fax: +27 15 516 4823 Email: info@fieldandstream.co.az

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Lion not removed from wild. Captive bred from registered breeding,keeping,hunting facility

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Field and Stream
Address:	PO Box 1256 - 3 Industria Road
City:	Louis Trichardt
State/Province:	South Africa 0920
Country, Postal Code:	

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

See Attached

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

See Attached

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

See Attached

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please return the unused original permit. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting, please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

Same as Page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

(b)(6) [redacted]

5. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name:

Adult Lion

b. Sex (if known): Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

South Africa - Latitude -26.149147 Longitude 24.081302 - Reitzdale Concession – Tosca, South Africa (Nearest City)

b. Date wildlife was hunted:

05/19/2016

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

JP Big Game Safaries Pty Ltd - Juan Pace - Postnetsuite 291, Private bag x 37, Lynwoodridge, 0040

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

FIELD AND STREAM TAXIDERMY P.O Box 1256 - 3 Industria Road - Louis Trichardt - 0920 South Africa Tel: +27 15 516 1081 - Fax: +27 15 516 4823 Email: info@fieldandstream.co.za

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Lion not removed from wild. Captive bred from registered breeding,keeping,hunting facility.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Field and Stream
Address:	PO Box 1256 - 3 Industria Road
City:	Louis Trichardt
State/Province:	South Africa 0920
Country, Postal Code:	

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

See Attached

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

See Attached

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

See Attached

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: Brett Friesen Digitally signed by Brett Friesen DN: cn=Brett Friesen, o=US email=bfriesen@fwsvisors.com, c=US Date: 2018.11.05 15:54:54 -05'00' Date: _____

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

- Question 9 - African lion as a species is currently listed under the Endangered Species Act. The breeding of lions in captive environments in South Africa and the release of these animals for hunting purposes into registered hunting areas are all Government controlled legal activities. Strict legislation and regulations are in place in South Africa in order to monitor that lions bred in captive environments and released for hunting purposes adhere to legal requirements.

- 9a) The Biodiversity Management plan for African Lion (Panthera leo) in South Africa (Dec,2015) indicates that the population of lions in captive environments in South Africa is about 8000 animals. The population growth of lions in captive environments is actively and adaptively managed.

- 9b) The hunting of any lions, albeit captive or wild, in South Africa is a restricted activity under various National and Provincial Legislation. License and permit fees are paid to the various government departments for Standing permits, Keeping permits, breeding permits, transport permits, release permits, hunting permits, game farm registration licenses, professional hunter license, hunting outfitters license, Taxidermy permits, Export of Trophy permits and CITES permits.

- In addition, employment is provided to many members of rural communities that would otherwise not have these employment opportunities. I cannot speculate on how the government appropriates the income they receive from permits and licenses.

- In order for a captive bred lion hunt to be authorized in South Africa, the landowner needs to comply with a list of criteria. One of the criteria is to obtain an Ecological Management plan for the specific area where the animals are to be released for hunting purposes. Prey base numbers and species variation are part of the aspects that are addressed in these Management Plans. These Management plans are part of the permit conditions for lion release areas and these are monitored by the various Government authorities.

- 9c) The landowner in this specific case conserves, manages and maintains an area of about 3600 hectares (about 8900 acres) of prime lion habitat, as well as prey species. This landowner is a member of the South African Predator Association (SAPA), a member based organization that represents the captive lion keeping, breeding and hunting industry. A Conservation fund was established by SAPA, with the object of contributing to the conservation of lions in the wild through direct funding of various lion conservation projects. This specific landowner contributes to the SAPA Conservation Fund on a regular basis, both financially and with data pertaining to his lions and lion enterprise.

NORTH WEST PROVINCE RELEASE & HUNTING PERMIT - MALE (P 2)

Hunting must be done on foot and from at least 200m from the vehicle (Except in the case of disabled hunters).
No animal may be artificially lured by sound, scent, visual stimuli, feeding bait, other animals of its own, another species or any other method.
Hunting may not take place nearby any other lions kept in captivity.
The Hunting party may not be more than 5 people.
Hunting of a lion in a pride situation is prohibited.
No Lion may be captured, kept in captivity and then released for the purpose of hunting.
If the captive bred lion/s will be darted / immobilised for the purpose of capturing, release and/ or transport, the following must be noted: - Darting / immobilisation may only be done by a registered Veterinarian. The responsible Veterinarian must be TOPS registered and have a valid permit to conduct restricted activities, i.t.o the TOPS regulations. This permit is subject to the responsible Veterinarian whom will perform the darting / immobilisation, to the Vryburg Conservation Office. Please notify the [illegible] activity of the [illegible] **Tell: 053 928 0056 or \071 869 7867\082 446 1616**
This is an integrated permit issued in terms of the provisions of the TRANSVAAL NATURE CONSERVATION ORDINANCE 12/83, CAPE NATURE CONSERVATION ORDINANCE 19/74, BOPHUTHATSWANA NATURE CONSERVATION Act 3 1973 AND 50(1)(a)(i)(ii)(iii)(c) of the Biodiversity Act, Act 10 of 2004 and Reg. 31 to 33 and 40 of the TOPS regulations.
This permit is subjected to the approved Management plan of the facility. **The permit holder of this permit is binded by the contents of the approved Management Plan of this facility.** **Any contravention to the contents of the approved Management Plan of this facility will be an offence.** **The permit holders and the owner of this facility must report the escape, injury or death (to animals and to any human being) to the Vryburg Conservation office, as well as the local SAPS office within 24 hours of the incident**

We want to give our clients a good hunting experience in a very large game reserve.

Feel free to ask more questions.

Sincerely
Hans de Klerk
DE KLERK SAFARIS
www.dksafaris.com

I will try and answer the questions under section 9 to the best of my ability.

Question 9 b. We paid R2 300 to the government for the lion hunting license. At the time and exchange rate it translates to about $200.
I do not know what the government is doing with the money. It must be a substantial amount because in 2015 before USA stopped the importation of lion trophies there were over 2000 lion hunting licenses issued just in that year in Northwest province alone. You will get more information as to what the government is doing with the money from SAPA (South African Predator Association). I know that SAPA does have a conservation fund that we all contribute to (R10 000 per lion hunted) and that PHASA wanted to donate the money to the government's conservation fund with the one provision that the money will only be used for lion research and conservation. The South African government did not want to (or could not) give us (SAPA) the guarantee so we did not transfer the money to the government. So we are sitting with more than R2 million in a conservation fund. The SAPA conservation fund has already successfully completed numerous lion conservation projects. They will be better suited to give you more information regarding that.
Regarding the trophy fee on lions - I am not sure what Mr Rogers paid for his lion trophy fee as he paid Bobby Hansen who was the middleman PH who brought Mr Arky Rogers to us.
I would assume Mr Rogers paid somewhere between $12 000 and $18 000 for his lion trophy fee. A big portion of that money is spent on running my own lion breeding project. I have 3 different lion breeding projects at three different locations. The reason for that is in case a disease break out at one place the other two will hopefully be not affected. In total I have about 130 lions. The upkeep of the breeding facilities. electrification of fences. feeding cost of the lions. veterinary expenses and salaries is very expensive.
Most of the trophy fees (80 %) of each lion is ploughed back into taking care of the lions. In the past I owned no lions but since I got involved with lion hunting in 2004 I started breeding with them and can say now that if it was not for hunting these 130 lions that I own would not have existed. The lion breeders all over South Africa own now more than 8 000 lions in captivity. If something must happen to the wild lion population like cat flu or TB and wipe out most of the wild lions the breeders will have a healthy reserve to restock the game reserves. So it is vital to keep these captive lions around not just to replenish the lion populations but also to provide a very wide spectrum of genetics in case there is inbreeding in some of the smaller game reserves. Also

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
You may find instructions on how to make your application complete and help avoid unnecessary delays at the following link: .

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
ROGERS	EVERETT	W.	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)		NONE	(b)(6)

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
LAKE CITY	FLORIDA	32025	COLUMBIA	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)
SAME AS ABOVE

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
—	—	—	—	—

Section D: All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 2, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** [50 CFR 13.11(d)]

2. Certification. I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   SAME AS PGE. 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Hans De Klerk — +27-82-828-4899
   dksafaris@gmail.com

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

(No) Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera Leo; AFRICAN LION
   b. Sex (if known).
   MALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information: N/A

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   N/A

   b. Date wildlife is to be hunted:
   N/A

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   N/A

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:
   WILZENAU RANCH, TITLE DEED NO. T/812/2004
   BRAY, DR. RUTH SEGOMOTSI, MOMPATI DISTRICT
   MUNICIPALITY, NORTH WEST PROVENCE, SOUTH AFRICA

   b. Date wildlife was hunted:
   16/03/2018 to 21/03/2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

BOBBY HANSEN SAFARIS

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

BULLSEYE TAXIDERMY, OPEN SEASON FARM
CORNER MELKRIVIER & STERKSTROOM ROAD
VAALWATER, 0530 SOUTH AFRICA

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). SEE ATTACHED

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: BRETT PIDDUCK
Business Name: AFRICAN LEGACY LOGISTICS
Address: 40 KOKKEWIET STREET RANDPARK RIDGE
City: JOHANNESBURG
State/Province: 2169
Country, Postal Code: SOUTH AFRICA

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?
SEE ATTACHED

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?
SEE ATTACHED

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted
SEE ATTACHED

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

N/A

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: (b)(6) Date: 11-7-18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

ORDINARY PERMIT: O 12410
(ORDINARY TROPHY OR PARTS TRANSPORT PERMIT CONDITIONS)

This permit authorises the transport of the **Trophy or parts** of the animal of the hunted animal from the venue of hunting to the approved venues of activity as specified on the permit.
This permit does not authorize the **selling**, **possession**, **exporting**, **importing** of the **Trophy** or part/s specified on the permit.
This permit is not transferrable.

PLEASE OBSERVE PERMIT CONDITIONS AT ALL TIMES

STANDARD PERMIT CONDITIONS

1. This permit is not transferable.
2. Any unauthorised alternation to this permit shall render it invalid.
3. This permit is subject to the provisions of any applicable law in force during the period of validity of the permit.
4. This permit is valid only within the province where it was issued
5. The holder of this permit shall, at the request of a person authorised in terms of applicable legislation so to demand forthwith produce such permit to such person
6. This permit shall be invalid until such time that it is signed by the permit holder.
7. This permit shall be deemed invalid when it is lost or destroyed and no copy thereof shall be issued.
8. This permit may be withdrawn by an authorised person if the execution of any activity may be detrimental to the welfare of any wild animal or the safety of any person, provided that the permit holder is given notice of such intention and be granted the opportunity to appeal to such withdrawal
9. The prescribed fees paid for the issuing of this permit shall not be refunded.
10. If the holder of this permit contravenes or fails to comply with any condition or requirement to which this permit is subject, he or she shall be guilty of an offence
11. This permit shall be subject to any applicable norms and standards in existence at the time of issuance of this permit.

SPECIAL CONDITIONS

1. The issuing authority shall determine the species and restricted activities for which this permit will apply
2. If this permit applies to hunting, the holder of this permit must:
   a. Have a copy of this permit authorising the hunt, on his or her person during the hunt;
   b. Within 21 days after the hunt, furnish the issuing authority with a written return on the hunt stating:
      (i) the permit number and date of issuance if the permit,
      (ii) the species, sex and number of animals hunted; and
      (iii) the location where the hunt took place.
   c. Return the original permit to the issuing authority forthwith after expiry of the permit.
   d. To be completed by landowner after completion of the hunt:

Name and signature of landowner: J.C. de Klerk

Species, number and sex of animal hunted: Eland X1 Male

Date / Period of hunt: 20 March 2018

Ordinary Permit No: O 12410

Please familiarise yourself with this terms and conditions.
The permit is not transferable.
This permit shall be subject to the provisions of any law in force during the period of validity of the permit.
The Hunter or Landowner who contravenes or fails to comply with any one of the conditions or requirements, to which this permit is subject, shall be guilty of an offence.
This permit only authorises **the hunting** of the animal during the day.
The Hunter will ensure that this permit is immediately available during the hunt.
The lion must be released in the hunting area a minimum of 96 hours prior to hunt and after receiving a permit to do so.
Information requested on this permit shall be done in ink and in print. False and unreadable information will cause this permit to be invalid.
No person shall hunt the wild animal or may be allowed by a landowner to hunt if the hunter did not beforehand acquire the necessary hunting skills and firearm training to: i) Ensure the safety of him or herself, other people and non targeted species. ii) Ensure a hunt which consists of generally accepted sound hunting ethics, a fair chase, the minimum cruelty and damage to the ecology of the hunting area.
No person may hunt when under the influence of alcohol or any substance that may deter his/her vision, judgement or in any way negatively affect his or her conduct.
A Hunter will immediately report the wounding of any wild animal to the landowner or his representative and will be responsible for the tracking down and killing thereof. If there is reasonable chance that the animal pose any threat to property or human life, the hunter and the land owner will immediately notify both the nearest Police station and the Local Nature Conservation district officer.
The landowner may at any time stop the hunt and withdraw the permit.
A Hunter should be accompanied by a designated official from this Directorate.
Animals may not be hunted under the influence of drugs.
Only animals that have been declared as wild by this directorate may be hunted. (No tame animals may be hunted)
No hunting with dogs is allowed.

Hunting must be done on foot and from at least 200m from the vehicle (Except in the case of disabled hunters)
No animal may be artificially lured by sound, scent, visual stimuli, feeding bait, other animals of its own, another species or any other method.
Hunting may not take place nearby any other lions kept in captivity.
The Hunting party may not be more than 5 people.
Hunting of a lion in a pride situation is prohibited.
No Lion may be captured, kept in captivity and then released for the purpose of hunting.
If the captive bred lion/s will be darted / immobilised for the purpose of capturing , release and/ or transport, the following must be noted:- - Darting / immobilisation may only be done by a registered Veterinarian. - The responsible Veterinarian must be TOPS registered and have a valid permit to conduct restricted activities i.t.o the TOPS regulations. This permit is subject to the responsible Veterinarian whom will perform the darting / immobilisation, to the Vryburg Conservation Office. **A Nature Conservation Official must be present during the release of the lion.** **Please notify the Vryburg Conservation Office at least 3 working days prior to activity of the exact date and time of the planned activity.** **Tell: 053 928 0656 or \071 889 7867\082 446 1816**
This is an integrated permit issued in terms of the provisions of the TRANSVAAL NATURE CONSERVATION ORDINANCE 12/83, CAPE NATURE CONSERVATION ORDINACE 19/74, BOPHUTHATSWANA NATURE CONSERVATION ACT 3/1973 AND 90(1)(a)(i)(ii)(b)(c) of the Biodiversity Act, Act 10 of 2004 and Regulations 10, 18 and 44 of the TOPS Regulations.
This permit is subjected to the approved Management plan of the facility. **The permit holder of this permit is binded by the contents of the approved Management Plan of this facility.** **Any contravention to the contents of the approved Management Plan of this facility will be an offence.** **The permit holders and the owner of this facility must report the escape, injury or death (to animals and to any human being) to the Vryburg Conservation office, as well as the local SAPS office within 24 hours of the incident**

Panthera leo – Lion

Regional Red List status (2016)	**Least Concern***
National Red List status (2004)	Vulnerable D1
Reasons for change	Genuine change: Increased population
Global Red List status (2016)	Vulnerable A2abcd
TOPS listing (NEMBA) (2007)	Vulnerable
CITES listing (1977)	Appendix II
Endemic	No

*Conservation Dependent

Although Lions formerly occurred widely over sub-Saharan Africa, today there are only 10 Lion strongholds remaining, of which six occur in southern Africa (Riggio et al. 2013).

Taxonomy

Panthera leo (Linnaeus 1758)

ANIMALIA - CHORDATA - MAMMALIA - CARNIVORA - FELIDAE - *Panthera - leo*

Synonyms: *Felis leo* (Linnaeus 1758)

Common names: Lion, African Lion (English), Leeu (Afrikaans), Isilwane (Ndebele), Tau (Sepedi, Sesotho, Setswana), Ndau (Tshivenda), isiGidi, iNgwenyama (Xhosa), iNgonyama (Xhosa, Zulu), Nghala (Xitsonga), iBhubesi (Zulu)

Taxonomic status: Species

Taxonomic notes: The latest published phylogeographical study of Lions shows that the traditional split between Asian and African Lions as distinct subspecies is untenable (Barnett et al. 2014). Based on these results, the Cat Classification Task Force of the IUCN SSC Cat Specialist Group has provisionally proposed a different split into two subspecies, *P. l. leo* of Asia and West, Central and North Africa; and *P. l. melanochaita* from South and East Africa, with several regional management units identified as well (Haas et al. 2005; Bertola et al. 2011, 2015; Bauer et al. 2015).

Assessment Rationale

The Lion populations in South Africa declined substantially in the 19th century but have been stable or increasing over the past 20–30 years. The number of free-roaming mature Lions in South African large protected areas has increased from an estimated 800 in 2002–2004 to an estimated 1,286 in 2015. Furthermore, by including the entire area of transfrontier parks as interconnected and functional landscapes (over which South African conservation authorities have shared management jurisdiction), the total number of mature, free-roaming Lions within the assessment region is estimated to be 1,550. The number of small reserves containing Lions has increased from one in 1990 to at least 45 in 2013, which corresponds to an increase in Lion numbers from about 10 in 1990 to 500 (225 mature individuals) in 2013. Including Lions on small reserves yields a total mature population size of 1,775 individuals. Thus, Lion numbers in the assessment region comfortably exceed the threshold for D1 and the species does not qualify as threatened using the A or C criteria because the two major free roaming subpopulations have not declined over the past 20 years (3 generations). In Kruger National Park (KNP) alone, the number of Lionesses is estimated to have increased by 45% between 2005 and 2015. Thus we list the species as Least Concern.

This species would technically qualify for Near Threatened D1 if we exclude the managed subpopulations in small reserves and assess only the South African portions of the transfrontier parks (1,286 mature individuals). However, because the overall population is stable or increasing with no severe threats that could cause rapid decline, and because the reintroduced subpopulations on small reserves qualify as wild and free roaming, a Least Concern listing is most appropriate. Similarly, the regional criterion could be applied as the two major Lion subpopulations are connected to conservation areas in Botswana, Zimbabwe and Mozambique through transfrontier conservation areas. Thus, there has been a genuine increase in Lion numbers due to the success of

Recommended citation: Miller S, Riggio J, Funston P, Power RJ, Williams V, Child MF. 2016. A conservation assessment of *Panthera leo*. Zimbabwe	Extant	Native

transfrontier conservation areas and private protected area expansion.

There are no major current threats to Lions in the assessment region. While the trade in Lion bones to East–Southeast Asia has been cited as a potential threat in South Africa, evidence suggests that the trade is not adversely impacting on wild Lion subpopulations in South Africa because the skeletons are almost all a by-product of the sizeable trophy hunting industry, and Lions that are hunted in South Africa are almost exclusively captive-bred (which are excluded from this assessment). However, this situation needs to be closely monitored (especially elsewhere in Africa where the scale of the bone trade is largely unknown) and the assessment re-evaluated if new data become available that indicates that the bone trade is a threat to wild Lions. Currently, key interventions include the formulation and adoption of a metapopulation plan (small, fenced subpopulations require greater management input and coordination) and protected area expansion (especially transfrontier conservation areas).

Regional population effects: Although the range is mostly fragmented within the assessment region, there is connectivity and dispersal between subpopulations within Kgalagadi Transfrontier Park and Great Limpopo Transfrontier Park. There is also dispersal across the Botswana and South African border at the Greater Mapungubwe Transfrontier Park. Thus, there is potential for immigration.

Distribution

Lions originally roamed freely across most of South Africa but hunting and changes in land use (particularly farming) devastated Lions between the late 1800s and early 1900s and restricted them to large national parks by the middle of the 20th century (Nowell & Jackson 1996). For example, Lion became regionally extinct in the Eastern Cape by 1879 (Skead 2007). The fate of Lions in the Northern Cape is typical of many parts of the country: based on the average pride size of 11 individuals recorded in the dune-savannah of Kgalagadi Transfrontier Park (KTP) (Funston 2011), at least 1,492 Lions may have resided in the Northern Cape before the species was hunted to near local extinction in the 1800s. Lion disappeared from regions such as Namaqualand, Bushmanland, Karoo, Tankwa-Karoo, the Kimberley region and north of the Orange River. At one point, Lions survived only in the national park that now forms part of the KTP (*viz* Kalahari Gemsbok National Park), where they have been protected since 1931. Since the 1990s, however, Lion prides have been established on three

private properties in the Kalahari region of the Northern Cape (north of the Orange River). Lions have also been reintroduced into Swaziland: Swaziland's last resident Lion was reputedly seen by King Sobhuza II in the late 1950s at Hunter's Rock in Hlane National Park (Monadjem 1998). Subsequently, a male and two females were introduced from KNP to Hlane National Park in 1994 (Monadjem 1998).

Generally, the expansion of private game reserves, especially since the early 1990s, has reclaimed lost ranges for Lions and they currently occur in isolated subpopulations in all provinces of South Africa, except for the Free State (Hayward et al. 2007; Hunter et al. 2007; Slotow & Hunter 2009; Miller et al. 2013; Williams et al. 2015a). However, these subpopulations are highly fragmented, with over 45 "small" (< 1,000 km²) reserves having reintroduced Lion (Miller et al. 2013). There is currently a push to develop a metapopulation management plan to reduce the effects of fragmentation (Miller et al. 2013). Although the subpopulations on private reserves occur in fenced areas, some of which are smaller than the average range that would be required under natural conditions (but see Hayward et al. 2009), these subpopulations are all considered free-roaming and have access to large and varied prey populations (for example, Power 2002, 2003; Slotow & Hunter 2009).

This species still occupies only a small part of its former range in South Africa and they now persist on *c.* 40,000 km² as compared to 1.22 million km² historically. Lions are almost exclusively found in fenced areas in South Africa (there is only a very small free-roaming subpopulation in northern Limpopo bordering Botswana and Zimbabwe – this probably accounts for fewer than 20 animals). The current area of occupancy (41,745 km²) has been determined by summing the areas of the fenced reserves where Lions occur. The largest proportion comprises a few large transnational or provincial protected areas (33,200 km², *c.* 80%), with the remainder made up of 45 small fenced private or state reserves with a combined area of *c.* 8,500 km². The transnational protected areas are all fenced on the South Africa side, but open to neighbouring countries which have varying levels of fencing. Some reserves may have dropped internal fences since the last data were collected and so have increased their individual size and there may be one or two new reserves that have not been included, but this number should be reasonably representative. The smaller reserves (< 1,000 km²) complement the conservation value of larger reserves and have greatly helped to expand the area of occupancy for Lions. However, the small, fenced populations (many of which support fewer than 20 individuals), require greater management input and coordination than those populations in transfrontier parks (Miller et al. 2013).

Population

Lion numbers have been dropping dramatically across the African continent (Bauer et al. 2015). However, in South Africa, the Lion population is stable or increasing in major reserves and increasing through the addition of small reserves or through the formation of conservancies (Table 2). There are an estimated 3,490 free-roaming Lions in South Africa, including transfrontier zones; and 2,876 in South African conservation areas alone. Of these, there are 1,775 mature Lions, using a 50% mature population structure evident in large reserves (Smuts 1976; Mills et al. 1978); and 1,511 in South African conservation areas alone. If we use the total formally protected mature population of Lions (1,775), it represents 5–9% of the global mature population of 23,000–39,000 Lions (Riggio et al. 2013; Bauer et al. 2015).

The conservation success of the formally protected population is due largely to the transfrontier parks (established in the early 2000s) that have created resilient and self-sustaining Lion subpopulations. The Great Limpopo Transfrontier Park subpopulation (estimated at *c.* 2,000 individuals in 2013; 2,311 individuals if the private conservancies open to KNP on the western boundary are included), which represents 50% of the free-roaming Lion population, has remained stable or has slightly increased over the past 30 years (Ferreira & Funston 2010), where the KNP numbers have reached *c.* 1,700 individuals. Recent surveys, using 240 call-up stations distributed randomly throughout KNP, indicate the subpopulation has increased over the past decade from 1,684 (95% confidence intervals 1,617–1,751) in 2005 to 1,803 (95% confidence intervals 1,715–1,891) individuals in 2015 and.

Table 2. Current subpopulation numbers of Lion (*Panthera leo*) in South Africa and surrounding transfrontier areas. All counts were made between 2008 and 2013.

Location (sub-location)	Total Lions (South Africa only)	Number mature Lions (South Africa only)	Reference
Great Limpopo Transfrontier Park (Kruger National Park)	2,000 (*c.* 1,700)	1,060 (*c.* 900)	Ferreira & Funston 2010; Smuts 1976
Associated Private Nature Reserves (Greater Kruger National Park)	300	160	Funston 2004; Smuts 1976
Kgalagadi Transfrontier Park Total (South Africa only)	520 (248)	255 (167)	Ferreira et al. 2013; Funston 2011; S. Ferreira unpubl. data
Greater Mapungubwe Transfrontier Conservation Area (South Africa only)	~50 (10)	25 (5)	Funston 2010
Hluhluwe–iMfolozi Park	120	54	D. Druce pers comm. Feb 2014; 45% from small reserve data for mature Lions
Total excluding small reserves	**2,990 (2,376)**	**1,550 (1,286)**	
Small reserves	500	225	Miller et al. 2013
Total including small reserves	**3,490 (2,876)**	**1,775 (1,511)**	

for adult females specifically, from 415 (95% confidence intervals 380–450) to 604 (95% confidence intervals 515–693) (S. Ferreira unpubl. data).

Similarly, the South African side of the KTP has been fairly stable since the first population estimate in 1976 of 140 Lion, ranging between 108 and 181 (Funston 2001, 2011), and KTP overall reached over 500 individuals in 2010 (Ferreira et al. 2013). Recent mark-recapture estimates for the South African side of KTP may indicate an increasing subpopulation, where the total number of individuals is estimated to be 246 (95% confidence intervals 238–256), and the number of mature individuals is estimated to be 167 (95% confidence intervals 160–177) (S. Ferreira unpubl. data). The subpopulation in the Greater Mapungubwe Transfrontier Conservation Area (GMTFCA) contains Lions on the De Beers Venetia Limpopo Nature Reserve, which does require active management as they are enclosed. However, the rest of the Lions in the GMTFCA are completely free-roaming (not contained by fences) and so are not managed, although they are constantly under threat from human–wildlife conflict. The subpopulation in Hluluwe-iMfolozi Park (HiP) has increased from two founders in 1956 and 60 mature individuals in 1986 to a stable population of approximately 120 in 2014 (D. Druce unpubl. data), with new individuals being reintroduced in the late 1990s to mitigate potential inbreeding (Trinkel et al. 2008).

Lions have also been extensively reintroduced onto small reserves (including national, provincial and privately protected areas), having increased from one in 1990 to 45 in 2013, with a corresponding increase in numbers from 10 to *c.* 500 (Miller et al. 2013; Miller & Funston 2014). Around 45% of these Lions are mature (225 individuals), as opposed to 50% of Lions in large national parks or transfrontier parks (1,400 individuals). All small reserve subpopulations are ecologically functional as, for example, they are large enough for social dynamics and hunting to continue unhindered, although some reserves may import prey stocks (Power 2002, 2003; Hayward et al. 2007). Thus, they may occasionally receive supplementary prey but are not fed and are not captive-bred Lions. Such subpopulations continue to grow and generally increase to the extent that management has become a necessity (Power 2003; Hayward et al. 2009; Slotow & Hunter 2009), although the addition of new reserves has slowed in the past five years (Miller & Funston 2014). The reasons for this are varying: for example, in Mpumalanga, development and infrastructure conflict with protecting more land for conservation, while in the Northern Cape high costs of land and predator-proof fencing inhibit further conservation efforts. This highlights the need to consolidate existing private reserves into conservancies and create larger, more ecologically-resilient populations (Di Minin et al. 2013). Secondly, the management of small reserve subpopulations requires a metapopulation plan to ensure they do not become a threat to genetic integrity through inbreeding (Miller et al. 2013; Miller et al. 2015). Genetic studies indicate that the southern African Lion would originally have constituted one large panmictic population (Barnett et al. 2006). However, there is very limited "free" movement of Lion between separate subpopulations today, which necessitates metapopulation management. This managed population may need to be occasionally supplemented with Lions from the larger protected areas (for example, KNP).

The total current (2013) mature population size ranges from 1,286 to 1,775 depending on the inclusion on the entire transfrontier conservation areas and small reserves (Table 2). Generation length is calculated as 6.5 years (Bauer et al. 2015), and the core population in the largest protected areas have remained stable or have increased over three generations. In southern Africa overall (Botswana, Namibia, South Africa and Zimbabwe), the population is inferred to have increased by 12% over three generations, whereas outside these countries the population has declined by 43% over the past 21 years (Bauer et al. 2015). The strongholds for Lions (Great Limpopo Transfrontier Park, KTP and HiP) provide enough mature individuals to exceed the D threshold alone.

In addition to wild Lions, there are many captive-bred Lions in most provinces, especially the Free State and North West provinces (Lindsey et al. 2012; Power 2014; Williams et al. 2015a). According to a study by Williams et al. (2015a), there are close to 6,000 Lions in captivity in approximately 70 breeding facilities. Although such Lions do not contribute to the wild and free-roaming population, they may serve as a significant buffer to threats facing the wild population by being the primary source of trophy hunting and derived products (SANBI 2012; Lindsey et al. 2012; Williams et al. 2015a).

Current population trend: Increasing

Continuing decline in mature individuals: No

Number of mature individuals in population: 1,511–1,775

Number of mature individuals in largest subpopulation: > 500

Number of subpopulations: 49

Severely fragmented: Yes. Most subpopulations are in small fenced reserves that require active metapopulation management.

Habitats and Ecology

Lions have a broad habitat tolerance and are only absent from tropical rainforest and the interior of the Sahara Desert (Nowell & Jackson 1996). They once lived across Eurasia, but now only a remnant population of a different subspecies (*Panthera leo persica*) survives in India. Lions are largely found in the savannah biome of Africa, which is broadly defined as those areas that receive between 300 and 1500 mm of rain annually, and encompass a wide variety of habitats including grasslands, wetlands, dry woodlands and mosaics of all of these (Riggio et al. 2013). They do locally exist in the Namib Desert in Namibia (Bauer & van Der Merwe 2004). Once extirpated from the

tropical thicket biome of the Eastern Cape in South Africa, Lions have recently been successfully reintroduced (Hayward et al. 2007).

Although Lions drink regularly when water is available, they are capable of obtaining their moisture requirements from their prey and even plants (such as the tsama melon in the Kalahari Desert), and thus can survive in very arid environments as they are water-independent (Green et al. 1984). Medium- to large-sized ungulates (190–550 kg, including antelopes, zebra and wildebeest) are the bulk of their prey (Hayward & Kerley 2005), but depending on circumstances, Lions will take almost any animal, from rodents to a rhinoceros. They also scavenge, displacing other predators (such as the Spotted Hyaena *Crocuta crocuta*) from their kills (Hayward 2006). Lions can only exist in areas with sufficient wild prey, and seldom co-exist closely with man. Within their home ranges, Lions require habitats or locations that are suitable for hunting, resting, and breeding. They readily adapt to hunting in varied habitats generally having greater success when hunting in areas with longer grass or cover (Funston et al. 2001). Although landscape features may vary from area to area, Lions tend to select areas where prey is easier to catch, rather than areas where prey densities are highest.

Lions are the most social of the cats, with related females remaining together in prides, and related and unrelated males forming coalitions competing for tenure over prides (West & Packer 2013). Average pride size (including males and females) is four to six adults; prides generally break into smaller groups when hunting (Smuts 1976). Lions tend to live at higher densities than most other felids, but with a wide variation from 1.5 adults / 100 km² in southern African semi-desert to 55 adults / 100 km² in parts of the Serengeti. Small fenced reserves in South Africa had average densities below 10 adults / 100 km² (Miller & Funston 2014). Pride home ranges can vary widely even in the same region: for example, from 266 to 4,532 km² in the South African part of the KTP (Funston 2001), and 45 km² in the Ngorongoro Crater, Tanzania (Hanby et al. 1995). Home ranges also vary widely within South Africa and do not appear to be linked to reserve size (Lehmann et al. 2008). For example, home ranges can vary hugely within a reserve, as evidenced on Makalali where Lions had home ranges from 25 km² to 107 km² (Druce et al. 2004).

Key habitat for Lions is directly driven by the presence or density of preferred prey species rather than any particular vegetation types – other than those associated with their preferred prey. As such, the vegetation communities that support the preferred prey of Lions range from semi-desert (Kalahari) through savannah (Kruger/Okavango) and subtropical thicket (Addo). In South Africa, however, the predominant subpopulations all occur within the savannah biome in the northern parts of the country.

Ecosystem and cultural services:

- This species is a keystone species and an apex predator. For example, Lions were reintroduced to Addo Elephant National Park in part to substitute the need to cull overabundant herbivores (Hayward et al. 2007), thus performing an ecosystem service of top-down population control.
- Lions are extensively used for ecotourism and are a prominent member of the "Big 5" (Di Minin et al. 2012; Maciejewski & Kerley 2014).
- Lions have huge commercial value in the trophy hunting industry, though there is controversy over such practices.

Use and Trade

South Africa's international trade in Lion products is sizeable. Besides trophies and live Lions, South Africa has issued CITES permits to export 19 categories of Lion products since 1977 ranging from hair to handbags, feet, leather items and tails (Williams et al. 2015a). Since 1992, South Africa has issued CITES permits to export at least 7,474 trophies, with an average of 351 ± 303 per year. However, from 2002 that average has increased to 565 ± 275 trophies per year. The trophies are primarily derived from legally hunted captive-bred Lions, and hunting predominantly occurs in the North West (77% of hunts from 2004 to 2010), Eastern Cape (10% of hunts) and Free State (6% of hunts) provinces (Williams et al. 2015a). Exports of trophies originating in South Africa increased markedly from *c.* 2006.

Despite the sizeable trade of Lions in South Africa, trophy hunting and trade is a negligible threat as utilization appears to be sustainable and wild populations are either stable or increasing. No hunting is allowed in national or provincial parks, which collectively represent > 75% of the total wild Lion population. Furthermore, less than 5% of trophy hunts are sourced from wild populations (CITES Scientific Authority South Africa 2013). For example, Lindsey et al. (2012) reported that the South African hunting operators estimated the proportion of wild Lions hunted annually to be only 0.9 and 1.1% of the totals for 2009 and 2010 respectively. The majority of trophy hunting is performed on private wildlife ranches (53%) or on properties with captive-breeding facilities (42%), where there are at least 6,000 Lions kept in captivity in at least 149 facilities across South Africa (Williams et al. 2015a). Although this population does not contribute to the wild population under assessment, it may act as a buffer to the wild population (Lindsey et al. 2012), as well as contributing to the South African economy. Besides trophies, CITES permits have been issued to export large numbers of live Lions across the world, as well as skeletons and bones to east-southeast Asia. From 1992 to 2012, CITES permits to export almost 1,400 live Lions (predominantly captive origin from the North West Province) were issued, 16% of these were destined for southeast Asia (mostly Thailand), and reached a peak of > 280 Lions in 2010 (Williams et al. 2015a).

In 2005, the process to develop stricter regulations relating to the hunting of captive-bred Lions was initiated and the provisions came into effect in 2007. These stricter regulations in terms of the National Environmental Management: Biodiversity Act (NEMBA), 2004 (Act No 10 of 2004) and, more specifically, the Threatened or Protected Species (ToPS) regulations, proposed that captive-bred Lions could only be hunted if they were released into an extensive self-sustaining (or 'free-roaming') system for a 2-year period. This regulation was challenged twice in court by the South African Predator Breeders Association (SAPBA) and, in 2010, SAPBA were successful in having the two-year period declared invalid for Lions (Williams et al. 2015a). Consequently, provinces apply regulations as per their provincial ordinances or guidelines, and this self-sustaining period varies across the provinces (for example, 96 hours in the North West, 30 days in the Eastern Cape, and 24 months in the Limpopo Province) (Williams et al. 2015a).

Table 3. Use and trade summary for the Lion (*Panthera leo*)

Category	Applicable?	Rationale	Proportion of total harvest	Trend
Subsistence use	Yes	Low-scale traditional medicine use.	Minority	Stable
Commercial use	Yes	Trophy hunting and export of skeletons.	Majority	Increasing
Harvest from wild population	Yes	Low incidences of poaching or illegal hunting.	< 5%	Stable
Harvest from ranched population	Yes	Occasional trophy hunting.	< 5%	Stable
Harvest from captive population	Yes	Extensive trophy hunting and exportation of parts for international markets.	95%	Increasing

In 2006 the IUCN SSC African Lion Working Group cautioned against allowing a legal trade in Lion bones based on a concern that a legal trade would be unable to meet the substantial demand for Lion bones in China. This demand was allegedly to replace tiger bones in Asian traditional medicines and tonics. According to Williams et al. (2015a), there is evidence that the legal trade in Lion bones had started by 2008. Before 2008, the only record of South Africa issuing CITES permits to export Lion skeletons was for three units to Denmark in 2001. However, Lion bone exports from South Africa have increased dramatically since 2008. From 2008 to 2011, the official number of skeletons legally exported with CITES permits totalled 1,160 skeletons (about 10.8 tonnes of bones), 573 of them in 2011 alone, with 91% of them destined for Lao People's Democratic Republic. The North West, Free State and Eastern Cape provinces, all home almost exclusively to captive-bred Lions, were the only provinces to issue export permits. Sixty-seven percent of the skeletons recorded on the export permits were from the North West and 25% from the Free State (Williams et al. 2015a). Lion bones are a sustainable by-product of the trophy industry and there was no evidence that any of these skeletons were obtained from wild Lions (Williams et al. 2015a). However, the longer-term sustainability of this practice is questionable, particularly if Asian consumers begin demanding wild rather than farmed or captive-bred products as consumer surveys indicate they prefer (Gratwicke et al. 2008).

Although there are no specific figures on illegal trade of Lions in South Africa, provincial conservation authorities indicate that illegal use or trade in Lion body parts and products is generally limited to negligible or non-existent. Furthermore, any illegal trade in Lions and their body parts usually involves restricted activities for which offenders are not in possession of a permit to breed, keep, hunt, catch, sell or export a live Lion or part thereof (Williams et al. 2015a). There is no known illegal trade in Lion in Gauteng, KwaZulu-Natal or the Eastern Cape and illegal utilisation of Lion within South Africa's national parks is negligible. Illegal trade in captive-bred Lions within North West Province is suspected to take place, as this province has the most facilities and is quite difficult to regulate. There are no reported records of illegal hunting of Lions in the Northern Cape. Any illegal hunting or trade in wild Lions is only likely to occur along the border between the Northern Cape and Botswana between Askham in the west and McCarthy's Rest in the east, a stretch of approximately 200 km, while Lions do also enter into the North West Province across the Molopo River (Power 2014).

Lions are used for traditional medicine and various trade studies conducted in Gauteng and KwaZulu-Natal urban traditional medicine markets have documented their body parts (usually bones and 'fat') for sale, but the quantities are small and the incidences sporadic (Whiting et al. 2011; Williams et al. 2015a). The expansion of human settlements on the western boundary of the KNP in Mpumalanga has been cited as a reason for the recent increase in Lion poaching for African traditional medicine (CITES Scientific Authority South Africa 2013), but these incidences too are sporadic. There have been anecdotal reports, however, that traditional healers living in areas adjacent to KNP acquire Lion body parts from healers working for SANParks – especially when dead animals become available (Williams et al. 2015a).

Overall, the private sector has been positive for the wild population. Some Lions have been removed from KTP to stock small reserves (for example, 6 in 2003 for Addo Elephant National Park), but this was not detrimental to the population. No Lions have been moved from KNP to small reserves. New reserves currently source their Lions from within the metapopulation. Some excess Lions from the metapopulation have ended up in captive facilities, but not vice versa. Thus, the system is self-contained and there is little leakage between the captive-bred, metapopulation and wild populations. The exception is the Mapungubwe area subpopulation where Lions get through the fences and onto managed properties (where legal hunting occurs) and are free-roaming on farmland (where they are occasionally killed by farmers) and cross international borders. There have not been extensive studies on whether this has any impact on the overall subpopulation in that area. The private sector too has greatly increased the commercial value of this species through trophy hunting. However, Lions are being increasingly reared in captivity for captive-bred hunting (*sensu* canned hunting), which negates the conservation value of these subpopulations. The majority of private wildlife ranches that contain subpopulations of conservation value are those large private nature reserves or conservancies who use Lions as an ecotourism drawcard.

Threats

There are no major threats to Lions in the assessment region. However, human-wildlife conflict and associated persecution may threaten local subpopulations, especially in the Mapungubwe region, and along protected area edges (*sensu* Wittemyer et al. 2008). Conflict on the borders of the KNP is relatively minor. For example, over the past 11 years, *c.* 135 complaints relating to wild animals killing livestock in the Nsikazi district adjacent to KNP have been received by Mpumalanga Tourism and Parks Agency (G. Camacho unpubl. data). Similarly, the conservation authority in North West Province reported two Lions shot for killing cattle in 2009 and one female

Lion shot in 2011, but it was never confirmed if these were wild or escapees from a captive facility, though these occurrences are rare in this province (Power 2014). In Gauteng, there is limited human–Lion conflict, which is closely managed by the authorities of the Dinokeng Game Reserve. As all Lions in the Eastern Cape are kept in areas that are protected with adequate fencing, there have been no human-Lion conflicts reported nor any livestock killed by Lion.

Lions are also accidentally killed in snares laid by bushmeat poachers. Poaching, snaring and poisoning of Lions remain a threat to free-roaming Lions in the Limpopo and Mpumalanga provinces. According to the IUCN SSC African Lion Working Group, Lions are lured from KNP into Mozambique and also across the Crocodile River by farmers for trophy hunting purposes. The illegal killing of problem animals and the illegal hunting of Lion for their skins are thought to be minor threats in KwaZulu-Natal Province.

Disease has also been a threat to free-roaming Lion population, especially Bovine Tuberculosis in KNP and HiP. This is especially prevalent for inbred subpopulations (Trinkel et al. 2011), which is exacerbated by the fragmented and isolated nature of most subpopulations within the region. Bovine Tuberculosis is not spread within Lion subpopulations through intraspecific interactions, it can only be sustained in the population through infected prey, particularly buffalo (Maruping-Mzileni 2015). The high numbers of domestic and feral dogs and cats associated with the expanding human population bordering the western side of KNP also enhances the possibility of transmission of diseases such as canine distemper and rabies. Within KNP, Bovine Tuberculosis has not had any detectable impacts on the Lion population and disease threats within this national park are minimal (Ferreira & Funston 2010) and research demonstrates that infections of Bovine Tuberculosis and Feline Immunodeficiency Virus do not co-vary (Maas et al. 2012). Future threats to Lions in KwaZulu-Natal Province are speculated to be disease, primarily Bovine Tuberculosis and Canine Distemper Virus.

Although prey-base depletion and habitat loss is listed as a major threat to the global Lion population (Bauer et al. 2015), the expansion of small, private protected areas with high prey numbers has counteracted this threat on a local scale in South Africa (Miller et al. 2013). Conversely, artificially high Lion numbers negatively impact the abundance of other predators and need to be managed so as not to affect overall diversity.

The popular media emphasises the threat of trophy hunting on Lions in South Africa, but the overwhelming majority of trophy hunts are taken from the captive-bred population, which leaves the wild and free-roaming population largely unscathed (SANBI 2012). Lindsey et al.

Table 4. Threats to the Lion (*Panthera leo*) ranked in order of severity with corresponding evidence (based on IUCN threat categories, with regional context)

Rank	Threat description	Evidence in the scientific literature	Data quality	Scale of study	Current trend
1	*5.1.3 Persecution/Control*: indiscriminate killing to protect livestock.	-	Anecdotal	-	Stable, but minimal impact on overall population.
2	*2.1 Annual & Perennial Non-Timber Crops*, *2.3 Livestock Farming & Ranching* and *1.1 Housing & Urban Areas*: loss of habitat from agricultural and residential expansion. Current stresses *2.3.5 Inbreeding* and *2.1 Species Mortality*: inbreeding due to fragmented subpopulations and increased persecution rates.	Trinkel et al. 2011	Empirical	Local	Fragmentation: increasing with new reserves, but minimal in last 5 years. Inbreeding: potential to increase with more small reserves, but metapopulation plans are addressing this.
3	*8.1 Invasive Non-Native/Alien Species/ Diseases*: Bovine Tuberculosis and Feline Immunodeficiency Virus outbreaks / epidemics.	Ferreira & Funston 2010	Empirical	Local	Stable in Kruger National Park; controlled on small reserves.
		Trinkel et al. 2010	Empirical	Local	
		Trinkel et al. 2011	Empirical	Local	
		Maas et al. 2012	Empirical	Local	
4	*5.1.2 Hunting & Collecting Terrestrial Animals*: incidental mortality from snaring during bushmeat hunting.	-	Anecdotal	-	Increasing, but minimal impact on overall population.
5	*5.1.1 Hunting & Collecting Terrestrial Animals*: trade in Lion bones which are sourced predominantly from captive-bred population.	Williams et al. 2015a	Empirical	National	Increasing, but no discernible impact on wild population yet.

(2012) warn that if the captive-bred Lion industry were to become increasingly regulated, in part due to pressure from animal welfare activists, the demand for wild Lion trophies would increase and thus the management of wild Lions would need increased regulation, stricter penalties and greater enforcement. Thus, the captive-bred population effectively buffers the wild population and reduces the associated conservation costs (Lindsey et al. 2012). Similarly, while the trade in Lion bones to east-southeast Asia has been cited as a potential threat in South Africa, evidence suggests that the trade is not adversely impacting wild Lion subpopulations in South Africa because the skeletons are almost all a by-product of the sizeable trophy hunting industry, and Lions that are hunted in South Africa are almost exclusively captive-bred (Williams et al. 2015a). In addition to wild-hunting, there are few records of Lion poaching – especially at a level that could supply the sizeable bone trade (Williams et al. 2015a). There are concerns, however, that the trade in Lion bones to China and southeast Asia could stimulate demand for wild Lion bones and other felids (Lindsey et al. 2012), and thus this situation needs to be closely monitored (especially elsewhere in Africa where too little is known of the bone trade) and the assessment re-evaluated if new data become available that indicates that the bone trade is a threat to wild Lions within the assessment region.

Current habitat trend: Stable/increasing. The savannah biome is well protected and the current area of occupancy is expanding through private protected areas.

Conservation

While there are no pressing interventions necessary for large, formally protected areas, developing a management plan for reintroduced Lions on small reserves (< 1,000 km²) is the primary conservation intervention (Miller et al. 2013). The Lion Management Forum (LiMF) was formed in 2010 to develop such management guidelines. LiMF bases its recommendations on the premise that managers should try to mimic natural processes that have broken down in reserves, using proactive rather than reactive methods. Specifically, managers should attempt to reduce Lion subpopulation growth and thus reduce the number of excess Lions in the metapopulation; disease threats should be reduced through vaccination whenever animals are translocated; and genetic integrity should be monitored throughout the metapopulation (Miller et al. 2013). As part of the metapopulation strategy, new sites for reintroduction should be identified. Founder groups to new areas should be as large and genetically diverse as possible (Trinkel et al. 2010). Research demonstrates that inbred Lions are more susceptible to Bovine Tuberculosis and that translocating outbred Lions into the area can mitigate losses (Trinkel et al. 2011). However, care must be taken not to introduce new diseases into subpopulations through translocation. An adaptive management framework is thus needed to implement the guidelines developed by LiMF on reserves across the country. Ongoing monitoring of subpopulation responses to the management actions should improve management of Lions on small reserves in South Africa. This approach will provide a template for evidence-based conservation management of other threatened carnivores.

The second most important conservation strategy for all Lions, both within small reserves and those within transfrontier parks or large national parks, is protected area expansion. Plans for expanding the protected area system are underway in a number of provinces. Through the development of privately owned nature reserves in Gauteng, it is hoped that available habitat will expand in the near future and the Lion population will increase. A process has been initiated in North West Province to identify critical biodiversity areas for the expansion of the protected area system, which will also possibly involve reintroductions of further free-roaming Lion subpopulations. Similarly, a Park Expansion Strategy is currently being implemented by the Mpumalanga Parks and Tourism Agency and as the area of available habitat

Table 5. Conservation interventions for the Lion (*Panthera leo*) ranked in order of effectiveness with corresponding evidence (based on IUCN action categories, with regional context)

Rank	Intervention description	Evidence in the scientific literature	Data quality	Scale of evidence	Demonstrated impact	Current conservation projects
1	*3.3.1 Reintroduction*: further translocation and reintroduction under a metapopulation plan to increase occupancy and reduce the effects of inbreeding.	Trinkel et al. 2011	Empirical	Local	> 30% of inbred Lions died from Bovine Tuberculosis or malnutrition compared with < 2% of the translocated Lions and their offspring.	Lion Management Forum
2	*1.1 Site/Area Protection*: protected area expansion, especially transfrontier areas, to increase subpopulation resilience.	Miller et al. 2013	Review	National	30% increase in Lion numbers over 10 years.	Lion Management Forum
3	*3.1.3 Limiting Population Growth*: sustaining Lion numbers at ecological densities.	Trinkel et al. 2010	Empirical	Local	Saturated subpopulations show lower growth rates.	Lion Management Forum
4	*3.2 Species Recovery*: pre-emptive vaccination prior to translocation/ reintroduction.	-	Anecdotal	-	-	Lion Management Forum
5	*2.1 Site/Area Management*: site-specific conflict mitigation measures, including the use of livestock guarding dogs.	Rust et al. 2013	Indirect	Local	Livestock depredation rates reduced.	-
		McManus et al. 2015	Indirect	Local		

for Lion is secured, reintroduction of Lion will be possible. There are currently four areas that could support healthy Lion populations in Mpumalanga, including the Loskop Dam Nature Reserve area, the Nkomazi Wilderness area, the Lydenburg/Burgersfort/Steelpoort area and the Andover area in the Lowveld. Although, in order to realize this, current development trends in these areas will need to be managed. While fencing has been shown to be effective in reducing conflict and increasing Lion subpopulation size (Packer et al. 2013), it also increases isolation, and thus, while small fenced reserves are necessary, continued transfrontier protected area expansion is necessary to create more resilient and self-sustaining subpopulations.

The use of livestock guarding dogs and improved livestock husbandry should be trialled in the Mapungubwe region to reduce conflict between the small free-roaming subpopulation and local communities (Marker et al. 2005). While various pilot projects have been established in Limpopo, North West, Northern and Western Cape provinces, little research has been done about their overall effectiveness within the assessment region, especially for Lions. Preliminary findings suggest that livestock guarding dogs can decrease depredation by 69% (McManus et al. 2015).

Recommendations for land managers and practitioners: The lack of a sound metapopulation management plan for these small reserves undermines the conservation value of the privately protected subpopulations and increases the risk of inbreeding (Björklund 2003). To redress this, the LiMF was established to draft a metapopulation management strategy for Lions (Miller et al. 2013). LiMF is run by independent individuals interested in Lion management on small reserves and has been very successful in providing a forum for managers, scientists and, more recently, government organisations, to discuss Lion management issues unique to small reserves. Landowners and interested stakeholders are encouraged to participate.

Similarly, the Department of Environmental Affairs has developed a Biodiversity Management Plan (BMP) for Lions in terms of the National Environmental Management: Biodiversity Act, 2004. The BMP is aimed at ensuring the long-term survival of the species in nature and will contribute towards the achievement of the recommendations of the Eastern and Southern African Lion Conservation Strategy (the regional conservation strategy compiled by the IUCN SSC Cat Specialist Group, 2006).

Research priorities:

- Comprehensive contraception study to test the efficacy and effects (physiological and behavioural) of chemical and surgical contraception of Lionesses to reduce growth rates on small reserves.
- Effects of Bovine Tuberculosis on tenure and male take over in Lions of KNP.
- Quantifying and monitoring the effects of Lion bone trade on the wild Lion population within the assessment region.
- Exploring interventions to reduce human-Lion conflict.

Encouraged citizen actions:

- Contribute to citizen science projects within protected areas (by reporting sightings locations and pride numbers), and report sighting data on virtual museum platforms (for example, iSpot and MammalMAP) outside of protected areas.
- Support protected areas and nature reserves over Lion parks or captive centres, as the latter institutions do not have conservation value for Lions (Hunter et al. 2013).

Details of the methods used to make this assessment can be found in *Mammal Red List 2016: Introduction and Methodology*.

the conservation value of the captive lions lay in the fact that for every captive lion hunted there is one less wild lion hunted. So the captive lion industry absorb a lot of the hunting pressure that the wild lions would have endured. So in short 80 % of the lion trophy fees are spent on taking care of my breeding projects and taking care of my lions. The other 20 % is spent on running my game preserve and taking care of other wild animals and paying very good salaries to my workers. All my workers live in brick houses with free electricity. They have hot and cold running water in their houses with showers and flush toilets. They earn much higher wages than the neigboring ranches and are far above the minimum wages. All of this is only possible if we can hunt lions. Without lion hunting we will get rid of all wild animals and go back to cattle ranching.

Question 9 c. Other funding activities is that we belong to SAPA and as a SAPA accredited ranch we have to donate R10 000 for every lion hunted to SAPA's conservation fund.
SAPA will be more qualified to expand on some of the conservation projects but what I know is that SAPA has released two prides of captive bred lions on different game reserves and on both these projects the captive bred lions have adapted to catching their own game without any problems or any lions dying. In fact both projects were so sucessful that the females started breeding and raised their own babies in the wild. With both these projects they proved the GREEN movements wrong who said captive lions cannot be released in the wild and therefore have no conservation value. Other projects that SAPA was involved in was that they bought and supplied collars for a lion research project on wild lions in the Zambesi valley in Zimbabwe. Another project was that SAPA bought a vehicle for anti poaching patrols in Tanzania. So all these projects that SAPA does. have a huge conservation benefit to wild lion populations. Through our donations (R10 000 per lion) we contibute with every lion hunted to SAPA's conservation fund. We also have a game auction once a year where every member have to donate a hunt or animals. etc. to be auctioned off for the benefit of the conservation fund. In addition we pay a membership fee to SAPA and that money also end up in the conservation fund.

That is about as much information as I have.
You are welcome to contact SAPA's CEO Mr Deon Swart on 083-616-8104 for more detailed information.
SAPA has done a lot for lion conservation and all with money that came from hunting captive bred lions.
SAPA has got a very strict list of norms and standards that each memebr must abide by.
So far only 8 ranches has been accredited by SAPA. That is how high the standard is.

Question 9B - In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

Trophy fee of $ (Please insert value) was paid to hunt Mr. Rogers lion. Of this, the funds were used as follows: (SEE ATTACHED)

- Government - a portion is paid to local government for the licences/permits for every lion hunted. This money is intended for use in the further conservation of the species and upliftment of rural communities.
- Landowner - 80 % of the funds received by the landowner are spent directly on lion conservation, through the upkeep and growth of lion breeding projects and taking care of lions in the landowners breeding programme. The remainder is spent on running costs and upkeep of the total reserve, including conservation of other wild animals inhabiting it and employment creation/payment of salaries to people employed from the local community.

Question 9C - Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

The landowner is a member of SAPA (South African Predator Association) and as a SAPA accredited ranch, they agree to donate R10 000 for every lion hunted to SAPA's conservation fund. Some of the conservation efforts initiated by SAPA:

- Released two prides of captive bred lions on different game reserves and on both these projects the captive bred lions have adapted to catching their own game without any problems or any lions dying. In fact both projects were so sucessful that the females started breeding and raised their own babies in the wild. With both these projects they proved skeptics wrong who said captive lions cannot be released in the wild and therefore have no conservation value.
- Bought and supplied collars for a lion research project on wild lions in the Zambesi valley.
- SAPA bought a vehicle for anti poaching patrols in Tanzania.

Members also have a game auction once a year where every member have to donate a hunt or animals, etc. to be auctioned off for the benefit of the conservation fund. In addition a membership fee is paid to SAPA and that money also end up in the conservation fund.

So in short, all these projects that SAPA does, have a huge conservation benefit to wild lion populations and lion conservation.
For further information, please contact SAPA's CEO Mr Deon Swart on 083-616-8104 for more detailed information.
SAPA has got a very strict list of norms and standards that each member must abide by.
So far only 8 ranches has been accredited by SAPA. Below is a summary of major achievements since 2012:

SAPA Achievements (Since 2012)

- Establishment of South Africa Predator Association.
- SAPA Norms and Standards for Hunting Ranch Lions.
- Assessment of lion hunting destinations for accreditation.
- Accreditation of a number of hunting destinations.
- Establishment and implementation of the marking system "tags" for hunting of ranch lions.
- Establishment of DNA profiling databases for ranch lions - 1000 Lion samples in Databases.

- Establishing "traceability" of Ranch lions.
- Liaison with National Department of Environmental Affairs on the trade of lion and lion derivatives.
- Liaison with Provincial Biodiversity Management Authorities through Wildlife forum meetings.
- Comments and inputs in Provincial and National legislation managing the lion industry.
- Draft Norms and Standards: Lion rearing and management. – In process with DAFF.
- Involvement in Wild lion conservation project in Zimbabwe.
- Bursary to University of North West: Lion Research.

Subject: Fwd: USFW Info Request for Arky Rogers Lion Import

Howdy Jessica,

Please see below and attached information from Hans de Klerk, Mr. Roger's outfitter for his lion hunt. I believe that this, along with the information already provided to USFW should be more than enough for them to make a decision. Ultimately it comes down to the fact that the lion is already dead, what benefit is derived by not allowing it into the US.

Let me know if you need anything else.

Best,

Wyatt Fetner

Hello Mr Fetner

I received your e-mail and have forwarded it to my office.

I am currently hunting mule deer and elk in Colorado and we do not have good telephone signal in the mountains.

Also very busy every day hunting leaving at 5 every morning and returning late at night.

I will try and answer most of your questions to the best of my ability but because I am not in my office I do not have all the info with me and my secretary back in South Africa will also not know the answers.

I know you are trying to get as much information as possible to show to your government that lion hunting does have a conservation value but some of the questions is not applicable to us.

For example we have zero poaching in our area and no communities or villages on my ranches so those questions does not apply to us.

We employ the same people in the off season as the hunting season but there is no place to write about it.

We just use the staff in different positions.

Other questions that I feel need to be in your form is not there.

For example you need to ask how does lion hunting benefit wildlife.

What percentage of money generated by lion hunting goes back into conservation.

The lions we hunt are all lions that have been released on the ranch.

The money generated by the lion hunts goes straight back into breeding, feeding, veterinary expenses, fences, maintenance of my other lions.

Activities that provide a conservation benefit not just to the lions but to other species is the following: pumping and distibuting fresh water over many miles of desert terrain, feeding animals in times of drought to get them through the worst, maintaining fences, buying in new genetics, selling off or hunting excess animals, manage populations, reinvesting money made from lion hunting into buying more land for conservation. And there is much more examples.

Regarding question 10 : I do not have the numbers with me but I can tell you the trend.

We used to have 80 % of our clients from USA and at the peak before USA stopped importation of lion trophies we hunted about 60 lions every year.

After USA closed the importation the number of lions hunted dropped to 4 then slowly picked up to the present number of about 10 a year as we switched our marketing to other countries. Now we are only having about 50 % USA clients. Our income dropped by more than 50 % since USA stopped importation of lions.

I am a SAPA member and my ranch is one of only 8 accredited ranches.

I will ask the office to send you the proof of membership.

If you need proof that captive bred lions does have a conservation value you need to get in contact with SAPA.

SAPA has accomplished twice now with two seperate projects what the greenies said was impossible.

The greenies said captive lions does not have a conservation value as they cannot be released into the wild as they will not survive.

Well SAPA has proven them wrong. On two seperate projects captive bred lions were released into the wild where they not only survived but they thrived and had babies and multiplied.

Any other questions feel free to ask.

My USA cell number is 214-707-0740 if you need to call.

This number is only active while I am in USA and that will be till November 25, 2019 and again next year in January and February.

Attached below is the form filled out to the best of my ability.

I do not have a printer and scanner out here in the mountains of Colorado so cannot sign the form.

Also attached is a map of where our ranch is. We are about 35 km west of Bray and 240 km northwest of Vryburg.

The coordinates are as follow :

S 25’31”02,74

E023’26”56,94

Sincerely

Hans de Klerk

Directions to DE KLERK SAFARIS
Owner Hans de Klerk Tel. No. 082-828-4899
Farm name Wilzenau.

From Vryburg go to Tosca (155 km). In Tosca go left at T - junction and drive 78 km.
Do not turn off on any road. Keep straight for 78 km till you see a brown sign on right hand side that say DE KLERK SAFARIS. Turn right and go about 6 or 7 km to entrance and then turn left.
First entrance 6 km (Thatched) goes to lodge.
Second entrance 7 km (at steel shed) goes to houses.

OPERATOR ENHANCEMENT QUESTIONNAIRE

1. OPERATOR INFORMATION

Name of Area Operator: DE KLERK SAFARIS

Years in business: 1990 till present (29 years)

Name of Company conducting hunt: DE KLERK SAFARIS

City where hunt will take place: No city - closest town is Vryburg 240 km away

Country where hunt will take place: South Africa

2. CONCESSION

Name of Concession: 8 private ranches owned by DE KLERK SAFARIS

Area in Km^2: 296,9785 (29 697 Hectares or 73 385 acres)

Land tenure: Privately owned (private ranch)

Government Lease Community Private Ranch Private Conservancy

Length of Concession Agreement: Not applicable

Can it be renewed? Yes No

Length of Renewal, if applicable:

Estimated total amount received in trophy fees last year, if applicable:

Are there any special obligations under the Concession Agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain below:

Please provide the Concession location and nearest City: 35 km west of Bray Northwest province

Please attach a map or maps with the boundaries marked and showing the nearest City

If the Concession borders a National Park, please provide Park name:

Description of general and distinctive habitat features and any water features:

Kalahari desert - open flat savannah with acacia thorn trees and bushes scattered. Soil is Kalahari red sand. Average rainfall is about 400 mm (16 inches)

3. COMMUNITIES IN THE CONCESSION

Are there any communities living in the Concession? Yes No No

If so, estimated number of people or villages in the Concession? Not applicable

Are there communities bordering this Concession? Yes No No

If so, estimated number of people or Villages around the Concession?

4. **Relevant Game Populations in the Concession:**[1]

Species name	Relative Abundance			Estimated Population	3-Year trend			How is it monitored?
	Dense	Avg.	Sparse		Up	Down	Stable	
Elephant								
Lion		x		10 to 20			x	We know how many we release
Leopard			x	3 to 6			x	tracks
Prey species	x			3000 to 5 000			x	Helicopter count

5. **Local Community Participation**

Total employment number: 26

Please identify the number and type of all employees:

Employee Type	Total number of this type	Number of this type who are local/ from nearby Communities
Professional Hunters	3	3
Trackers	4	4
Anti-Poaching Scouts/ Rangers		
Other Anti-Poaching		
Cooks/Housekeepers	6	6
Community Coordinators		
Managers	3	3
Biologists		
Others: ___Skinners / drivers, camp, fence workers, etc_____	10	10

6. Number of staff employed in the off-season: 26

a. Please identify the number and type of staff that are engaged when the season is not open:

Employee Type	Total number of this type	Number of locals / from nearby Communities	When employed?
Anti-Poaching staff	0	0	

[1] The new Fish and Wildlife Services (FWS) Import Permit Application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

MANAGERS	3	3	All year
MAINTENANCE			
ROAD OPENING /CONSTRUCTION			
COMMUNITY RELATIONS PERSONNEL			
OTHERS:	23	23	All year

7. **ANTI-POACHING EFFORTS:**[2]

Number of Anti-Poaching staff: None needed as there is no poaching

Are Anti-Poaching Patrols conducted during the hunting season, off-season, or both? N/A

Hunting season: Off-season: Both seasons:

Months during which Anti-Poaching Patrols are conducted:

Number of Anti-Poaching Patrols per month:

Description of Anti-Poaching equipment, vehicles, etc.:

f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution?

7. **ANTI-POACHING EFFORTS *[CONTINUATION]***

Do you offer rewards to poaching informants leading to arrest? Yes No

Do you offer rewards to poaching informants upon conviction? Yes No

Please describe the company's anti-poaching expenditures below:

TYPE OF EXPENSE	SPENDING 2016	SPENDING 2017	SPENDING 2018	REMARKS
SALARIES FOR ANTI-POACHING SCOUTS				
EQUIPMENT				
VEHICLES				
PETROL				
REWARDS PAID				
OTHER: _____				
OTHER: _____				
TOTALS				

[2] The new FWS Import Permit Application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

What currency are the expenditures given in? .....

8. **ANTI-POACHING RESULTS:**

CATEGORY	2016	2017	2018	REMARKS
POACHING INCIDENTS DISCOVERED				
ELEPHANT CARCASSES OBSERVED				
LION CARCASSES OBSERVED				
LEOPARD CARCASSES OBSERVED				
IVORY POACHERS ARRESTED				
MEAT POACHERS ARRESTED				
OTHER POACHERS ARRESTED				
POACHERS CONVICTED				
SNARES/GIN TRAPS COLLECTED				
FIREARMS CONFISCATED				
VEHICLES CONFISCATED				
BICYCLES CONFISCATED				
BOATS/NETS CONFISCATED				
TUSKS RECOVERED				
OTHER: _____				

9. **COMMUNITY INVESTMENT:**[3]

Does the Company contribute money or goods/services to local communities?

x Yes No

If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)?

Voluntary contributions to schools and local villages.

Does the Company provide game meat to nearby communities? x Yes No

If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program:

$5 000 throughout the year. Voluntary whenever we have too much meat available

If the Company performs problem animal activities for surrounding communities (e.g.: patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe.

Not applicable

Please describe any consolation payments made to local residents damaged by game species

N/A

What currency are the expenditures reported in?

SPECIES	DAMAGE CAUSED	CONSOLATION PAID 2016	CONSOLATION PAID 2017	CONSOLATION PAID 2018
ELEPHANT

RE: Import Application of Zambia Lion and Leopard Trophies for Theodore Fowler

Dear Chief Cogliano:

Enclosed please find the permit applications to import a lion and leopard trophy from Zambia for Theodore Fowler. Also attached to the permit applications is an operator enhancement questionnaire provided by Lumimba Mwanya- MVU Safaris. Please refer to the hundreds of pages of enhancement information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by Zambia authorities, outfitters, and others, in making an enhancement finding for lion and leopard trophy imports.

Unfortunately, this application was misplaced in our office by a trainee months ago so we would appreciate any courtesy in expediting the processing.

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual			
1.a. Last name: Fowler	1.b. First name: Theodore	1.c. Middle name or initial: Meredith	1.d. Suffix: Jr
2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b)(6) [redacted]			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution			
1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information				
1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address)				
(b)(6) [redacted]				
1.b. City: Raleigh	1.c. State: North Carolina	1.d. Zip code/Postal code: 27614	1.e. County/Province: Wake	1.f. Country: USA
2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete	
1.	Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))
2.	Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is [redacted] statement herein may subject me to the criminal penalties
(b)(6) [redacted]	7/18/18 Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

N/A

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      LION

   b. Sex (if known).

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

      N/A

   b. Date wildlife is to be hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

      Zambia, Mwanya GMA

   b. Date wildlife was hunted: 29 June 2018

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

      MVU Safaris Zambia Limited

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

      MVU Safaris 6980 Katanga Road Lusaka, Zambia

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

   Name: MVU Safaris Zambia Limited
   Business Name: MVU Safaris
   Address: 6980 Katanga Road Lusaka
   City: Lusaka
   State/Province: Zambia
   Country, Postal Code: 10101

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   Please see attached documentation.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understar[redacted]not be re-exported.

    Applicant's signature[redacted]ate: 7/18/18

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

6. Total employment number: **__20 PERMANENT EMPLOYEES AND 50 CASUALS BEGINNING OF THE SEASON FOR CAMP BUILDING AND OPENING UP THE ROADS**_____

a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	FOUR	NONE
Trackers	FOUR	FOUR
Anti-poaching scouts/rangers	TWELVE	TWELVE
Other anti-poaching	THREE	THREE
Cooks/housekeepers	TEN	TEN
Community coordinators	ONE	ONE
Managers	ONE	NONE
Biologists	NONE	NONE
Others: _____SKINNERS_____	THREE	THREE

7. Number of staff employed in the off-season: **_FIVE (5)**_____

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	12	12	THROUGH OUT THE YEAR
Managers	1		
Maintenance	2		
Road opening/construction	30	20	**BEGINNING OF THE SEASON**
Community relations personnel	2	2	
Others: _____	NONE		

8. Anti-poaching efforts:[2]

a. Number of anti-poaching staff: _____**TWELVE**_____

b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? __**BOTH**_____

c. Months during which anti-poaching patrols are conducted: __**THROUGH OUT THE YEAR**_____

d. Number of anti-poaching patrols per month: ___**WE DO THREE PATROLS**_____

e. Description of anti-poaching equipment, vehicles, etc.: _____**TWO 4X4 LANDCRUISERS, SATELLITE PHONES AND FIREARMS**_____

f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? ___**WE DO TOGETHER WITH DEPARTMENT OF NATIONAL PARKS**_____

g. Do you offer rewards to poaching informants leading to arrest? **X**__ Yes __ No

h. Do you offer rewards to poaching informants upon conviction? _**X**_ Yes __ No

i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? ____**ZAMBIAN KWACHA**_____

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	140 800	140,800	140,800	AMOUNT FOR 12 SCOUTS PER ANNUM

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Equipment	50,000	43,000	30,800	UNIFORMS,BOOTS,TORCHES,RAINCOATS ETC
Vehicles	400,000			USED TO BUY A LANCRUISER IN THE FIRST YEAR DONATED TO DNPWS
Petrol	57,600	55,100	56,200	200 LITRES IS USED EVERY MONTH.THE CHANGE IN AMOUNTS IS DUE TO PRICE FLACTUATIONS
Rewards paid	12,000	8,000	10,000	REWARDS ARE IN FORM OF BICYCLES ,TELEVISION SETS AND KITCHEN UTENSILS
Other: _____				
Other: _____				
TOTALS	**660,400**	**246,900**	**237 800**	

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered	201	115	103	THIS INCLUDED STATISTICS FROM DNPW AND GUN SHOTS HEARD
Ivory poachers arrested	8	2	3	THESE WERE TAKEN TO THE CHIEF
Meat poachers arrested	81	72	62	THESE WANTED MEAT FOR FOOD
Other poachers arrested	7	8	2	THESE POACHERS HAD NO SPECIFIC REASON FOR POACHING MAYBE FOR FUN
Poachers convicted	5	0	1	THESE GUYS THEIR CASES WERE TRIED AND DISPOSED OFF IN COURT
Snares/gin traps collected	558	402	289	THESE WERE FOUND DURING PATROLS ALL YEAR ROUND
Firearms confiscated	27	19	7	FIREARMS WERE GIVEN TO DNPWS
Vehicles confiscated	0	0	0	NO VEHICLES WERE CONFISTICATED
Bicycles confiscated	19	8	3	A NUMBER OF THEM USE THESE AS MODE OF TRANSPORT
Boats/nets confiscated				
Tusks recovered	0	0	0	ITS HARD TO RECOVER TUSKS BECAUSE THEY CUT THEM INTO SMALLER PIECES IMMEDIATELY THEY

				ARE REMOVED FROM THE ELEPHANT
Carcasses observed	22	15	9	THESE WERE DROPPED ON THE WAY AFTER THE POACHERS WERE PERSUED
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? _X_ Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? __**WE PAY 170,000 KWACHA AS COMMUNITY OBLIGATION AND 90,000 KWACHA FOR INFRASTRUCTURE DEVELOPMENT.THIS IS CONTAINED IN THE CONTRACT.BESIDES THE COMPANY MAKES ITS OWN VOLUTARY DONATIONS LIKE DONATING HAMMERMILLS,CLOTHES AND OFFERING HELP TO THE COMMUNITY WHEN NEED ARISES**_____

c. Does the company provide game meat to nearby communities? X__ Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe **the meat contribution program: 50% OF EADIBLE MEAT IS CONTRIBUTED TO THE COMMUNITY DURING THE HUNTING SEASON**_____

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. __**OUR MANAGER GOES AROUND THE VILLAGES TO ASK IF THE WILD ANIMALS HAVE CAUSED ANY DAMAGE TO THE CROPS**_____

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? ____**ZAMBIAN KWACHA**_____

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant	VEGETABLE FIELDS WERE EATEN	13,000	33,700	41,000
Lion	NIL			
Leopard	NIL			
Other	NIL			

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? _**ZAMBIAN KWACHA**__

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)		90,000	135,000	Most of the schools in this Area are in a deplorable state.MVU safaris has embarked on a program to renovate these schools so that children have better learning environment.
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities				
Water infrastructure improvements				
Sports teams funded				
Construction materials donated				
Other: _____				
Other: _____				
TOTALS		**90,000**	**135,000**	

11. How many U.S. clients did the company have in the past three years, and what percentage of the company's clients were from the U.S.?

RE: PRT No. 15967D/ Lion Trophy, Zambia, Theodore Fowler

Dear Ms. Vargas,

This supplement is in response to your email May 22 and July 19, 2019 in regards to Theodore Fowler's application for a Lion Trophy Import from Zambia.

In regards to your May 22 email, here is the information you requested:

1. The sex of the Lion in Male (This can be confirmed on the *Zambian Record of Game and/ or protected animals killed form* no. 0000155)
2. Mr. Fowler has 2 hunting licenses for this trip. One license (No.0000568) valid for 11/6/18 to 24/6/18 and license (No. 0000569) valid from 6/25/18 to 01/7/2018. Please see attached copies of licenses for reference.

In regards to your July 19th email, here is the information you requested:

3. The Lion in question was harvested on June 29, 2018. The attached Zambian Hunting Permit No. 0000569 mentioned above is valid from June 25 to July 1, 2018 – so the lion would be covered under this hunting permit.

PRT No. 15967D

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

Vargas, Darcy <darcy_vargas@fws.gov>

Application # 15967D / Lion import from Zambia

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 2:54 PM
To: "John J. Jackson, III" <cf@conservationforce.org>

Dear Mr. Jackson,

Ref: 15967D; Import of Mr. Theodore Meredith Fowler's lion trophy from Mwanya GMA, Lusaka Zambia, on June 29, 2018.

The referenced application has been reviewed. However, additional information is being requested. Therefore, please reply to the following:

1. Please provide the sex of the lion that was taken (male/female). Question 4.b. of the application was not responded to.

2. Please clarify the different hunt dates listed on 2 different licenses enclosed in the application package for Mr. Fowler. One license, # 0000568, authorizes Mr. Fowler to hunt within Mwanya GMA, from November 6, 2018, through June 24, 2018. Those dates are prior to the date the lion was taken. However, license # 0000155, documents the hunt of 1 male lion, taken on June 29, 2019, by Mr. Fowler's through professional hunter, Saeed Abdul Karim. The date of June 29, 2018, correlates with the hunt date listed in the application question # 6.b.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by June 6, 2019 (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

Application # 15967D / Lion import from Zambia

Vargas, Darcy <darcy_vargas@fws.gov> Fri, Jul 19, 2019 at 9:55 AM
To: "John J. Jackson, III" <cf@conservationforce.org>, permits@conservationforce.org

Good morning,

Ref: 15967D

I just called and spoke with your receptionist whom very kindly provided a new email address for permitting related questions.

I was calling in reference to Mr. Theodore Fowler's application # 15967D. On May 22, 2019, additional information was requested to be provided within 45 calendar days. The 45 calendar days are past due. However, we would like to offer a 1 time courtesy extension of time to submit a complete application. In that regard, I would also like to try and clarify the missing documentation.

The referenced application package contains a *Record of Game and/or Protected Animals Killed or Wounded* that lists the hunt of one male lion on June 29, 2018. However, the provided *Permit to Hunt in a Game Management Area* does not authorize the June 29, 2018, hunt. The Zambian permit enclosed in the referenced application package only approves the hunt of a lion taken between June 11, 2018, and June 24, 2018, which is prior to Mr. Fowler's hunt date of June 29, 2019. Therefore, in order to have a complete application package, you must provide a copy of Mr. Fowler's Zambian permit authorizing the hunt of a male lion from Mwanya GMA on June 29, 2019.

Due to the fact that the 45 days to submit a complete application has been past due since June 6, 2019, please provide the requested documentation within 1 calendar week, by July 26, 2019. If the requested permit is not received **by July 26, 2019**, your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Dear Ms. Vargas,

Hello. I wanted to follow up with you on your email from 7/19/2019 in reference to Mr. Theodore Fowler's application No. 15967D to import a lion trophy from Zambia.

Attached is our response and copies of both Zambian Hunting permits. I will also mail a hardcopy via FED-EX to you.

Please feel free to contact me if you have any questions or concerns.

Best, Rachel

RE: PRT No. 15967D/ Lion Trophy, Zambia, Theodore Fowler

Dear Ms. Vargas,

This supplement is in response to your email May 22 and July 19, 2019 in regards to Theodore Fowler's application for a Lion Trophy Import from Zambia.

In regards to your May 22 email, here is the information you requested:

1. The sex of the Lion in Male (This can be confirmed on the *Zambian Record of Game and/ or protected animals killed form* no. 0000155)
2. Mr. Fowler has 2 hunting licenses for this trip. One license (No.0000568) valid for 11/6/18 to 24/6/18 and license (No. 0000569) valid from 6/25/18 to 01/7/2018. Please see attached copies of licenses for reference.

In regards to your July 19th email, here is the information you requested:

3. The Lion in question was harvested on June 29, 2018. The attached Zambian Hunting Permit No. 0000569 mentioned above is valid from June 25 to July 1, 2018 – so the lion would be covered under this hunting permit.

PRT No. 15967D

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

I'm looping in Anna as well because I think you may be Acting in another position, Mary.

Anna - We had an inquiry from Sen. Burr's office about Mr. Fowler's permit application. Lisa had let them know that we had requested additional information from Mr. Fowler.

Sen. Burr's office would like to know what additional information we requested.

Thanks,

Angela

[EXTERNAL] FW: Import application / TZ lion / Withdrawn

Allison Morris <amorris@investorsmanagement.com> Tue, Nov 5, 2019 at 2:43 PM
To: "darcy_vargas@fws.gov" <darcy_vargas@fws.gov>

Good afternoon Ms. Vargas,

On behalf of Ted Fowler, I'm emailing to inquire about the status of his permit application number 15967D for a Zambian lion.

Any info you can provide on the progress of the application would be most appreciated.

Thank you,

Allison Morris

Intra-Service Section 7 Biological Evaluation Form

Originating Person: Amy Brisendine Date: April 7, 2020

Telephone Number: 703-358-2005

I. **Service Program and Geographic Area or Station Name**: Branch of Permits, Division of Management Authority, International Affairs

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)

Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, 15967d, Theodore Meredith Fowler, has requested a permit to import a trophy of one lion that he lawfully hunted in Zambia. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Zambia on the date specified in the permit application.

The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Zambia.

The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Zambia. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

Determination

No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.** — **X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** — _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** — _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** — _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** — _____

Enhancement Finding

Applicant: Theodore M. Fowler (PRT-15967D)

Summary

Theodore M. Fowler submitted an application to import one male African lion (*Panthera leo melanochaita*), which he hunted on June 29, 2018, from Mwanya, Zambia, for the purpose of enhancing the propagation and survival of the species in the wild. This subspecies of African lion is listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and is listed as threatened under the U.S. Endangered Species Act (Act or ESA). As such, export of a hunted African lion out of Zambia requires the prior issuance of a CITES export permit from the CITES Management Authority of Zambia; and import into the United States requires the prior issuance of an ESA import permit by the U.S. Fish and Wildlife Service (Service). The Service, therefore, may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the propagation or survival of the species in the wild.

After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and information received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken June 29, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

U.S. Governance of the Lion:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion (79 Fed. Reg. 64472.). On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service

published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r) (80 Fed. Reg. 79999). The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application demonstrating that the activity meets the requirements for issuance under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in future findings for import of sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

Our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Fowler's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Mwanya- Lumimba Game Management Area (GMA), in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

(i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;

(ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;

(iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;

(iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;

(v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and

(vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of

trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.,* population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Fowler's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we review a number of factors. Some of the factors we considered in making this finding include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country.

Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives for local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. In this finding, we examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the proposed import of this trophy in accordance with the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how Mr. Fowler's participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range country and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the

sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for our finding:

In February 2020, the Service received an updated "Enhancement and Non-detriment Finding for African lion Sport Hunting in Zambia" from Zambia's Department of National Parks and Wildlife (DNPW). This updated finding notes, "since the re-introduction of trophy hunting for lion in 2016, the DNPW is implementing an adaptive management strategy that limits the off-take of lions. To support this approach, it has experimented in implementing a robust age-based monitoring programme that will become binding for the 2020 hunting season." Prior to this February 2020, update, in February 2016, the Service sent a letter to Zambia's Wildlife Authority with questions about the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether the management addresses the three main threats that were identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. In the letter, the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when considered in conjunction with the Service's permit issuance criteria, aids the Service in making the required enhancement findings for permitting importation of sport-hunted lion trophies. In response to this letter, Zambia's DNPW (DNPW 2016), provided documentation, dated May 5, 2017, describing Zambia's lion population and management plans.

Since 2016, the Service has met with officials from Zambia multiple times to receive updated information and clarify questions the Service has had on the status of and management of lions in Zambia with respect to imports of sport-hunted lion trophies. For example, more recently, Service representatives met with Zambian officials in February, 2020, at the annual Safari Club International Convention in Reno, Nevada; November, 2019, at the 17th African Wildlife Consultative Forum in Zimbabwe; and November 2018, at the 16th African Wildlife Consultative Forum in Uganda.

The documentation the Service received from DNPW in February, 2020, and May, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, information received from interested parties, and Mr. Fowler's application are the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS), which was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly

to its semi-autonomy, had a low funding capacity, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with its law enforcement capabilities due to inadequate resources.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Zambia's vision as stated in the Strategy is to have a secure, viable, and well-managed wild population of lions that will support conservation of biodiversity in harmony with human development. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies and projects that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW 2016). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work-time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. Under DNPW, *the Wildlife Law Enforcement Unit* currently has a staff compliment of 1,525 Wildlife Police Officers covering an estimated 236,376 km^2 of wildlife estates (equivalent to approximately 155 km^2/Wildlife Police Officer) (DNPW 2020, p. 18). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under Zambia's Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were

reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition, Zambia is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including making findings by the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. Zambia has provided to us a copy of its May 5, 2016, non-detriment finding for lions, which it updated in January, 2020. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." The Scientific Authority further explained that its positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa. As of 2020, additional genetic analyses are also being conducted by Zambia Lion Project, including assessments that will help inform DNPW in future efforts to translocate lions among different regions in Zambia in order to re-establish lion populations in historic lion range e.g., West Lunga complex.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). In 2018 the Zambia Carnivore Programme (ZCP 2018) intensively monitored 15 prides and 15 coalitions totaling 173 lions across Northern and Central Kafue in 2018 extending the study area to the remote Kasonso-Busanga GMA. It is believed that the lion population in this ecosystem is stable or possibly increasing (DNPW 2020, p. 11). A report by the Democratic staff of the House Committee on Natural Resources concluded that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al*. 2016). As of 2016, Africa had the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by the year 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al*. 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts. Poverty and the necessity for rural people to obtain some income are the main drivers of bush meat poaching in Zambia. Since 2016, DNPW has continued to work with ZCP and Conservation South Luangwa (CSL) to mitigate snaring by-catch through intensive monitoring of collared wild dog and lion groups through ground, aerial and satellite/ GPS tracking, coupled with data-directed anti-snaring patrols, field-based veterinarians. In the Kafue ecosystem, DNPW worked with ZCP and Panthera through their newly-formed anti-poaching units, as well as, with hunting operators' anti-poaching units, which confirmed no reports of snared carnivores in 2018, with one lion treated for an old snare injury.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting

(Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe had been imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions was a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding, breeding, and commercial use (i.e. walking and petting) of captive-bred lions is banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

NGOs are also a source of supplemental revenue sources. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Although the success of the moratorium cannot be fully assessed, there is some information available that indicates that lion populations are stable or increasing (DNPW 2020, pp. 10-11).

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2020, 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelope system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes are only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2020, 2016). As of 2018, the quota was reduced to 31. The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding

scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW has transformed the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The guidelines were revised in 2019 from those developed in 2016 for lion and in 2018 for lion and leopard and are meant as an instrument to provide technical guidance on the scientific methodologies to be used on lion aging and on some methodologies for lion and leopard hunting and status monitoring. These guidelines also incorporate details pertaining to the monitoring of leopard hunting and status. The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Since the adoption of this practice in 2016, DNPW has introduced a legally binding regulation that will enter into force for the 2020 season (DNPW 2020, p. 42). The Guidelines shall be regularly updated to reflect advances in scientific knowledge in order to guide technically the implementation of the regulations. The new management approach to Lion hunting in Zambia is based on three pillars: i) a conservative, precautionary quota, well below one of the recommended thresholds for sustainability, ii) an age–based harvest limit and strong monitoring of lion offtakes, and iii) significant and direct community benefits. This will ensure that lion hunting in Zambia is

sustainable and does not negatively affect the population. In addition, in the hunting concession agreements signed in 2015, no hunting outfitter has been guaranteed a lion on quota. It is made clear that the quota for any species shall be based on scientific methods including the latest available survey and aging techniques.

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. DNPW also receives funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and permit issuance criteria (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated its desire to maintain the long-term conservation of its lion population with its 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that it has established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy-hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long

enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has identified how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit</u>:

As described under <u>Current Lion Status in Zambia</u> above, Zambia has taken strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2020, 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An

investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Fowler's hunting and subsequent import of this lion provides an indirect benefit to wild populations by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species is positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion trophy would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Fowler will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Fowler, in managing the lion populations in GMAs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency, they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Fowler.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the

purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion trophy will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Theodore M. Fowler.**

U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Re: Application for Import of a Sport-Hunted Lion Trophy

Dear Chief Van Norman:

Enclosed please find one application to import a sport-hunted lion trophy taken in Zambia in 2017. This lion was hunted with Andrew Baldry of Royal Kafue Safaris. Conservation Force provided specific enhancement information regarding Royal Kafue and we respectfully request that this permit be approved upon consideration of the information previously submitted by Conservation Force and the Department of National Parks and Wildlife in Zambia.

Please do not hesitate to contact us if you have questions.

Sincerely,

Regina Lennox

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a leopard and a threatened-listed lion trophy from Africa.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my lion trophy at the following address:

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual			
1.a. Last name: Park	1.b. First name: Mance	1.c. Middle name or initial: Michael	1.d. Suffix:
2. Date of birth (mm/dd/yyyy): (b) (6)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions): N/A
6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address: (b) (6)

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution			
1.a. Name of business, agency, Tribe, or institution: N/A	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information				
1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes): (b) (6)				
1.b. City: Huntsville	1.c. State: TX	1.d. Zip code/Postal code: 77340	1.e. County/Province: Walker	1.f. Country: USA
2.a. Mailing Address (include if different than physical address; include name of contact person if applicable): (b) (6)				
2.b. City: Huntsville	2.c. State: TX	2.d. Zip code/Postal code: 77340	2.e. County/Province: Walker	2.f. Country: USA

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))
2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
   Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: _____ No ☐

(b) (6)

art 13 of the Code of Federal Regulations and the other
his application for a permit is complete and accurate to the
nal penalties of 18 U.S.C. 1001.

Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Panthera Leo
      African Lion

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

3. **IF THE ANIMAL IS DEAD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      Lundu, Musalangu, Zambia
      See coordinates on attached permit

   b. Date wildlife was hunted:

      06/26/2017

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

Skin, floating bones, skull, claws, any parts needed for life-size mount

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4142K Chifwema Road
New Kasama, Lusaka, Zambia

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to *import a trophy directly from Namibia, you must provide the name and address of the professional hunter* listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	Mike Borman
Business Name:	Bangweulu Taxidermy
Address:	4142K Chifwema Road
Address:	
City:	New Kasama, Lusaka, Zambia
State/Province:	
Country, Postal Code:	

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once *imported into the United States, cannot be re-exported.*

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised that raw ivory, once imported into the United States, cannot be re-expor

Applicant's signatu (b) (6) 02/06/2018

Be aware that ther state government, as well as required by ctivity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that *you will contact me for my credit card information once the application has been processed.*

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

John J. Jackson III 504/837-1233
jjj@conservationforce.org

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Royal Kafue and the Kaindu Natural Resources Trust

By Jim Wojciehowski

The year was 2007. The noise echoing across the water carried a disturbing message.

The mixture of human voices and cattle, coupled with rising smoke from campfires and drying racks, explained the complete lack of wildlife.

PH Andrew Baldry witnessed the spectacle from across the river in the Lunga Luswishi Game Management Area (GMA). He watched a piece of wild Africa rapidly being depleted of its resources with no plan for the future.

The land was owned by the Kaindu community and the title held by a trust – the Kaindu Natural Resources Trust, initially formed by the Danish International Development Agency; but the project floundered when the donors pulled out. The squatters that Baldry observed were not from the community.

Baldry, a fully licensed professional hunter for over 15 years, was very aware of the African adage: "If it pays, it stays." If the local game did not produce a sustained income for the local community, little could be done to stem the poaching and the rapid depletion of the area's wildlife resources.

Andrew made a plan to revive the once flourishing Eden. With the backing of the local community and chief, the concept eventually evolved into Royal Kafue, which would host its first-ever safari in June 2012.

With adequate financial backing, at least for the start-up, Andrew entered into a lease agreement with the community Trust, and instituted anti-poaching patrols by hiring local scouts who would be led by an infamous ex-commercial bush poacher, Green. Who is better suited to outwit a poacher than someone who knows all the tricks of the trade? Green's amazing tracking skills and knowledge of the local habitat also qualified him as head tracker once the safari camp opened for operation.

I first contacted Andrew about hunting together in the Luangwa Valley in 2010. The topic of what would become Royal Kafue came up via e-mail.

Royal Kafue was already in the works, but Andrew felt it would take at least four years for the area to begin to rebound; initially, he didn't want to inject any hunting pressure into the mix. But he was delighted with the rapid returning of game. He knew cats wouldn't return unless ample prey and cover existed.

After allowing the game in the "Kafue Royal" area several years to recover, in 2012 PH Andrew Baldry (L) successfully hunted lion with Jim Wojciehowski (R), generating income from hunting for the Kaindu Natural Resources Trust.

He'd secured a lion and a leopard on quota, plus a limited number of plains game. His assessment of the conditions was totally honest: "Expect game to be difficult to see in June and July. I plan on leaving the majority of the tall grass to give the cats cover."

I sent my money, including a sizable amount to cover trophy fees. It was obvious this start-up was financially taxing with no large financial backers. The many Skype conversations with Andrew gave me a feeling of trust in this man, as well as a drive to be part of this project, myself.

A partnership of need brought together PH Andrew Baldry, my wife Joyce, and me; but the true benefactor of this alliance is the wildlife of Royal Kafue and the community of Kaindu.

By the time we arrived in camp in June 2012, the game had returned in numbers far exceeding the hopes of Andrew and Green. They had prepared the area perfectly by selective burning, interspacing these areas with lush grass cover. Even the once transient buffalo population remained resident for our entire 21-day safari. And with the buffalo came the lion.

We heard lion regularly calling at night, and on the 15th morning in camp, while enjoying coffee in the predawn coolness, we heard them as they moved toward camp. As the light increased, the sound became louder.

We quickly grabbed our rifles and headed down the road on foot to try and intercept the moving chorus. The calls came from a hunting coalition of four mature lions – three males and a female. The group had decimated one of our baits; on their way to water, they were now approaching camp.

The lions hid as we passed on foot. The sound of brush moving behind our group made us turn in time to see two large, heavy-maned mature males and a lioness emerge from cover. The cats deemed us to be insignificant and crossed an open area into the tall grass. A fourth lion revealed himself to be a brute of a male and, with Andrew's challenging grunt, he stopped to evaluate the source of the call.

My frontal shot buckled the cat, and he spun to retreat noisily into cover. We found him dead 100 yards on, in deep cover, after a tense side-by-side follow-up on foot.

Luckily, the chairman and treasurer of the Kaindu Trust, Boniface and Joshua, were in camp and able to join the celebration. Later, they privately thanked me for helping to finance the start-up and contributing to its success. I assured them PH Andrew Baldry alone had earned their gratitude for the implementation of his vision.

Two months after the hunt, Andrew told me of his plans to sink boreholes to provide permanent water for the game. He is looking to attract like-minded investors to further the cause of Royal Kafue for the benefit of the game and the people of Kaindu.

Jim Wojciehowski is a physician assistant living in Alaska. An avid hunter-conservationist, he discovered the magic of Africa on his first trip in 2010. This was his third safari.

2012 SAFARI HUNTING REPORT

KAINDU NATURAL RESOURCES TRUST

Natural Resources Manager Green Kabinda

In the first year of safari operation Kaindu Natural Resources Trust in conjunction with the private sector and ZAWA realizes profits from Zambia's first community owned game ranch.

The results from the first year of operation have been unsurpassed in Zambia's game ranching history.

Not only has the Kaindu Game Ranch utilized over 90% of their allocated quota the trophy quality has only been matched by Zambia's prime hunting concessions. The continual support from ZAWA Research Department has to be commended as to the community scouts and Kaindu representatives who have diligently managed their natural resources.

It was recorded in the 2009 survey that only a handful of wild animals survived on the titled KNRT farm 10145 and that most indigenous species were absent. Illegal fishing and poaching was commonplace in the region.

In 2010 the KNRT entertained a partnership with the private sector in wildlife management and the company Royal Kafue Ltd was formed. The Kaindu community retains a significant shareholding in the development company and receives dividends from private sector investments in tourism.

Royal Kafue loaned the community equipment and the human resources in order to conduct safari hunting at an international standard and have attracted clientele from across the globe. The quality of hunting and the abundant wildlife has resulted in advanced bookings for both 2013 and 2014 with and estimated turnover ZK800,000,000 per annum.

From the first hunt alone the community realized a sum of ZK25,000,000, which was dedicated to social services. In addition safari licenses in excess of ZK15,000,000 were purchased and donated to the community for ceremonial purposes.

These communal lands have now become a valuable asset of which sustainable incomes can now be earned from the protection of the wildlife resource.

Green Kabinda.

KNRT NATURAL RESOURCES MANAGER.

The community game ranch saw 100% utilization of quota on trophy Lion, Buffalo, Sable, Roan, Hartebeest, Sitatunga and a host of other lesser species.

Hunting clients stated that it was without doubt one of Zambia's finest hunting destinations. Subsequent favorable reports have been posted on Internet hunting sites and YouTube. Without exception every client harvested their desired species and all of the animals were of record book class.

Two Sable measured in excess of 45 inches and the Lion was the biggest taken in the region in recent years. Two Roan in excess of 26 inches, and Buffalo of 40 inches were commonplace. The renowned professional hunter Andrew Baldry remarked that the hunting was beyond expectations and has managed to fully book his clients into the game ranch for 2013 and 2014.

The increase in wildlife and especially the more sought after species will warrant an increase in quotas across the board. Some species such a Zebra that were previously in low numbers and can be included on the quota. Species such as Elephant and Hippopotamus are now resident and often seen within the vicinity of camp. Important grasslands and woodland have been preserved from fire and logging. Whilst illegal fishing persists it is envisaged that the community will control and profit from this activity as a separate project for 2013.

Sitatunga, Black Lechwe and Tsessebe were also taken in Bangweulu swamps.

The increase in wildlife has reduced the annual livestock conflicts with Lion.

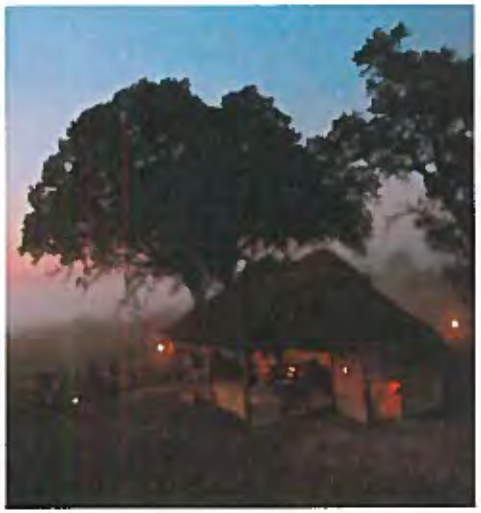
The sale of one successful Lion safari earned sufficient funds to establish the safari camp and infrastructure required for 2012 hunting season. It provided funds that enabled scouts to implement systems that reduced human and wildlife conflicts. Important species such as Lion and other fragile predator populations have increased dramatically under an intensive management program.

A special thank you must be extended to the Natural Resources Scouts who have worked tirelessly in the training in the protective management of their communal lands.

It is the community themselves with the full support of His Royal Highness Chief Kaindu who is to be commended for their desire to realize incomes from both their land sand natural resources.

The cattle killing Lion (see photo bottom right) taken by client first client Jim Wojohowski from Alaska was one of the largest taken in recent years and proves that the community game ranch retains a healthy population of the specie.

It is envisaged that what with the increase in game populations and that research would conclude that the Lion numbers will follow suit. However as a conservation measure the KNRT feels the game ranch can sustain the off take of one mature male if proven problematic to the community.



KNRT

The Kaindu Natural Resources Trust has pursued this project since 2005. The model was initially supported by DANIDA and GRZ as Kaindu was identified as a Kafue community that did not derive benefit from safari hunting.

In 2010 the opportunity to partner the community was tendered and the successful applicants formed the development company Royal Kafue Ltd of which the community are shareholders. Safari hunting is but the first of a number of tourism activities earmarked for our lands. Profits from managed land use, tourism, game ranching and agriculture are already making a favorable impact on our society.

Our thanks to ZAWA and especially Mr. Siamakonda who has worked tirelessly to see this project launched

ROYAL KAFUE

A permanent 4 bed camp of international standards was constructed and equipped for the 2012 safari season. All staff were employed from the Kaindu community and trained in wildlife management and safari procedures by Mr. Green Kabinda and resident professional hunter Mr. Andrew Baldry.

The development company Royal Kafue Ltd loaned vehicles and auxiliary equipment.

Roads were cut and boundaries cleared. Natural resource management was implemented and staffed. Community scouts were equipped and communications installed courtesy of Mushingashi Conservancy.

The camp and the facilities are to be extended for the 2013 season

Enhancement Finding
Applicant: Mance Michael Park (PRT-76149C)

Mance Michael Park submitted an application on February 12, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken June 26, 2017, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Park's application involving a *P. l. melanochaita* sport-hunted trophy taken in Musalangu GMA, Lundu, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Park's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Park's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Park's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016).

In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an

individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their

obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Park's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Park will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Park, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Park.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Mance** (b) (6) **Park.**

Permittee:

MANCE MICHAEL PARK
(b) (6)
HUNTSVILLE, TX 77340
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2017 hunting season and in accordance with government of Zambia hunting laws and regulations.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2017 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA) RCVD FEB 12 2018

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
McGovern	Jason	R.	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Tifton	GA	31794	Tift	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)
(b) (6)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
Tifton	GA	31793	Tift	USA

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☐ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: _____ No ☒

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my k[redacted]tand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
      Panthera Leo, Lion
      Panthera Leo, Lioness
   b. Sex (if known).
      1- male
      1- Female

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

3. **IF THE ANIMAL IS DEAD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):
      South Africa, Reitzdale Game Reserve, Reitzdale Farm 239,
      Leriesdeel, Northwest, Tosca
   b. Date wildlife was hunted:
      7/28/2016

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

Lion → Life size mount, skin, skull
Lioness → Life size mount, skin, skull

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

Republic of South Africa
Moredou Taxidermy, Po Box 323, Schweizer Reneke 2780

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:
Business Name: Logwin Air and Ocean SA (PTY) LTD
Address: 1619 Spartan
Address: Johann Bizkhrat Road
City: Kempton Park
State/Province: Gauteng
Country, Postal Code: South Africa

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: (b)(6) Date: 01-28-18

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, **if** different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
Jason McGovern, (b) (6)

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lace Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

US Fish & Wildlife Service

5) To answer the question on how hunting will enhance or benefit the wild populations of the species. Its been documented that well regulated and monitored hunting is beneficial to the species and not related to population decline. The species is not in trouble because of sport hunting but threatened by habitat loss, loss of prey, and retribution killings during human-wildlife conflicts. If it wasn't for hunting and the money to support the reserves then the habitat would not exist for the species. It also makes the species have value so all the locals do not kill off the species and hunt them to extinction.

Thank you.

IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
You may find instructions on how to make your application complete and help avoid unnecessary delays at the following link: .

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
McAllister	Mark	A	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			(b) (6)

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Medford	Oregon	97501	Jackson	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the amount identified on page 2, nonrefundable processing fee. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions.* [50 CFR 13.11(d)]

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

Mark McAllister
(b) (6) [redacted]
Medford, Oregon 97501

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

Mark McAllister
(b) (6) [redacted]

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

(No) Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
      Panthera leo Melanochaita
   b. Sex (if known).

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
      South Africa, Free State Province, Vredefort is the town.

   b. Date wildlife is to be hunted:
      August 2018

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
      Brave Heart Safaris
      PH Joe Viljoen

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Brac Team Safaris
PH Joe Viljoen

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Haven't hunted yet but permit is attached.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Joe Regal
Business Name: Joe Regal Taxidermy
Address: Farm Thelma
City: Odendaalsrus
State/Province: 9480
Country, Postal Code: Free State, South Africa

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

No

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

$27,000 ea No other data

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

No

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: (b)(6) _____ Date: 3-20-18

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

6 November 2018

To Whom It May Concern:

This letter is to confirm that Brave Heart Safaris does encourage local community participation and support of hunting and conservation. Primarily Brave Heart Safaris does employee local community members to work in our lodge and on tracking, skinning, and other efforts. In addition to this, Brave Heart Safaris teams up with ChaZen Private Nature Reserve to educate local community members about conservation efforts and how hunting is a part of preserving species and improving genetics.

ChaZen Private Nature Reserve also employees their own poaching patrol to protect the rhinos and species on the reserve. This patrol is built of local community members. Because of the relationship between ChaZen Private Nature Reserve and Brave Heart Safaris there is effort to donate meat from the hunted species to disadvantaged organizations like orphanages, old age home and shelters for the homeless. We also believe in enriching individuals through sport, music, and related activities.

Efforts with Brave Heart Safaris and ChaZen Private Nature Reserve provide a comprehensive effort to get the local community involved in hunting efforts and conservation programs. We are constantly seeking to expand our involvement in the community and develop new educational opportunities to consistently promote the conservation of species for generations to come. Hunting and conservation do go hand in hand, and we do strive to educate every one of the relationship between the two. We look forward to more years of success with these efforts.
.

Good morning Emma,
I'm forwarding to you a conservation letter from the outfitter along with pictures of the community outreach program the outfitter uses. They are very involved in wildlife conservation and preservation of many wildlife species in Africa.
Please enclose this data with my permit PRT. MA 87852C-0.
If you could confirm receipt of this data I would be thankful.
Sincerely,
Mark McAlister

Type of Activity:
IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
House	Jason	A.S.	

3. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #, no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Reno	NV	89523	Washoe	U.S.A.

2.a. Mailing Address (include if different than physical address, include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☐ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: _____ No ☒

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other
ormation submitted in this application for a permit is complete and accurate to the
subject me to the criminal penalties of 18 U.S.C. 1001.

IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-32, http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      African Lion (Panthera Leo) Southern

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

3. **IF THE ANIMAL IS DEAD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      Riverside Ranch, Victoria Falls, Zimbabwe

   b. Date wildlife was hunted:

      Oct. 2016

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

Skin (life size), Skull

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

T.C.I
4 Josiah Chinamano Road
Belmont, Bulawayo, Zimbabwe

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name: Marina Burgess
Business Name: Maple Freight
Address: 4 Josiah Chinamano Rd.
Address:
City: Belmont, Bulawayo
State/Province:
Country, Postal Code: Zimbabwe

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: (b)(6) Date: 02/08/2018

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Houston Texas

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

Jason House
(b) (6) [redacted]
Reno NV 89523

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

Jason House
(b) (6) [redacted]
(b) (6) [redacted]

Lynette Lilley
(281) 606 2400
llilley@well-usa.com

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Enhancement Finding
Applicant: Jason A.S. House (PRT – 78584CC)

Jason A.S. House submitted an application on February 28, 2018, for the importation of one male lion (*Panthera leo melanochaita*) taken from Riverside Ranch, Victoria Falls, Zimbabwe, for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the Government of Zimbabwe, other information available to the U.S. Fish & Wildlife Service (Service), and comments received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken during October 2016, from this population meets the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472). On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r) (USFWS 2015; 80 Fed. Reg. 79999). The effective date of this listing is January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zimbabwe, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt

any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 50 CFR 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zimbabwe, but only if it first makes a finding that permitting the import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P.l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinient to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P.l. melanochaita* taken in Zinmbabwe.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [50 CFR 17.32(a)(2)] , but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provides a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. House's application involving a *P. l. melanochaita* sport-hunted trophy taken in Zimbabwe, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P. l. melanochaita.* This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service when making an enhancement finding for importation of sport-hunted trophies of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of sport-hunted trophies of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentives*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities and encourage community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. House's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zimbabwe's management program for lions addresses the three main threats

that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether trophies taken as part of that program meet the issuance criteria, we study a number of factors. Some of the factors we consider include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We consider whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. A component of a management plan from which trophy imports would meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities and incentives to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examine if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria of 50 CFR 17.32 (a)(2), we will examine if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We will also consider how a U.S. hunter, in this case Mr. House's participation in the hunting program contributes to the overall management of lions within a country.

The management program in Zimbabwe for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 1, 2016, the Service sent a letter to the Parks and Wildlife Management Authority in Zimbabwe (ZPWMA) with a list of questions related to management plans, population status, conservation, management, hunting policies, and regulations of Zimbabwe's lion populations. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), as it provides useful principles which, when considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement finding for permitting importation of sport-hunted lion trophies.

On February 16, 2016, the Service sent a second request to ZPWMA for specific documents related to the conservation status of lions in Zimbabwe. ZPWMA responded to the Service's request on

February 17, 2016, with a copy of *Conservation Status of African Lion in Zimbabwe*, and subsequently, on November 29, 2016, provided a copy of *Enhancement and Non-detriment Finding for Lion (Panthera leo) in Zimbabwe*. The Service has also been corresponding with ZPWMA regarding African elephant management for several years. In this correspondence, ZPWMA, as well as other sources, have provided the Service with documents and information that are relevant to our evaluation of lions in Zimbabwe. These documents, along with the Service's own final rule on the lion listing under the Act, as well as other relevant information from reliable sources and contained in comments received from interested parties, were the basis of this finding.

Governance of Lions in Zimbabwe: The legal framework for Zimbabwe's regulatory mechanism is informed by the Wildlife Policy (1992), which is intended to maintain a protected area network for the conservation of the nation's wild resources and biological diversity. The Wildlife Policy (1992) provides for the Government of Zimbabwe to maintain a network of protected areas known as the Parks and Wild Life Estate, comprised of the country's National Parks, safari areas, botanical gardens, and sanctuary and recreational areas, for the conservation of the nation's wild resources and biological diversity (CITES 2016; ZPWMA 2016). It is intended to create economic activity to enhance rural development and encourages the conservation of wild animals and their habitats outside the protected areas.

ZPWMA was established by the Parks and Wildlife Act of 1996 (Chapter 20:14) [as amended by Act Number 19 of 2001] which came into operation on June 1, 2002, through Statutory Instrument 144C of 2002. The Act provides for the establishment of a Parks and Wildlife Board; establishment of national parks, botanical reserves, botanical gardens, sanctuaries, safari areas and recreational parks; and the preservation, conservation, propagation or control of wildlife, fish, and plants of Zimbabwe and the protection of her natural landscape and scenery. The Parks and Wild Life Act includes sections on virtually every aspect of ZPWMA, including requirements for annual financial audits and reporting to the central government. The Parks and Wild Life Act also provides for substantial penalties for the unlawful possession of or trading in protected wildlife species. In addition, the General Laws Amendment Act (No. 5) of 2010 provides for mandatory imprisonment for poaching.

The Parks and Wildlife Act, Chapter 20:14, devolved authority to manage and benefit from wildlife on communal and private lands to the landholders. In 1982, the legal provisions of this Act were extended to Rural District Councils (RDCs), on behalf of rural communities in communal lands whose areas contain viable populations of wildlife. Communal areas in Zimbabwe are administered by RDCs, which have become a mechanism for implementation of the government's policy of conservation by utilization of natural resources. It enables local communities to manage and benefit from wildlife resources through the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE) established in 1989. CAMPFIRE was developed to encourage reduction in human-wildlife conflicts through conservation-based community development and to provide an economic incentive to improve community tolerance of wildlife, including lions. At the time, the CAMPFIRE program was the model for community-based conservation efforts in several other African countries and was identified as an innovative program. Under a community-based conservation program, like CAMPFIRE, rural communities should benefit from revenue generated by sport-hunting.

As Zimbabwe's premiere wildlife agency, the main functions of the ZPWMA are to control, manage and maintain Zimbabwe's wildlife resources and perform the service function with the

primary role of protecting and conserving Zimbabwe's natural heritage for present and future generations on behalf of the State. It also provides the cornerstone of Zimbabwe's tourism industry (ZPWMA 2015). The rationale behind the establishment of the ZPWMA was to allow for a self-funding mechanism, and thereby reduce its dependence on the national treasury. In January 1996, the Government of Zimbabwe approved the establishment of the Parks and Wild Life Conservation Fund that provides for financing wildlife operations directly from revenues generated through wildlife-related activities. The funding for ZPWMA is therefore coming from revenue generated through sport hunting conducted on state and private lands, concession leases, National Park visitor fees, and other wildlife-related fees. While there have been requests by ZPWMA for funding from the central treasury in the past, to our knowledge, no other significant government funding has been provided, and only limited outside funding from NGOs or other governments appears to be available.

A major component of ZPWMA mandate is law enforcement. ZPWMA had 2,146 rangers at its establishment in 2002 (ZPWMA 2016); however, by the end 2015, there were 1,448 rangers in post (67% of 2002 level). Of the 1,448 rangers in post, 1,004 are deployable for anti-poaching operations (ZPWMA 2016). Hunting operators are obligated through their concession lease agreements to assist with anti-poaching efforts (ZPWMA 2016). Reportedly, USD590,000 was spent on anti-poaching efforts by Bubye Valley Conservancy (BVC) alone during 2015 (K. Leathem, pers. comm., as cited in Du Preez et al. 2016), and USD546,000 is spent annually on anti-poaching by Save Valley Conservancy (SVC) (Lindsey et al. 2012); these expenses are mainly covered by sport-hunting revenue (Du Preez et al. 2016). If anyone is found in possession of poached specimens, they must pay a fine of USD5,000 or face a mandatory jail sentence. If convicted of lion poaching, courts could require the payment of a compensation fee of USD20,000 (ZPWMA 2014). Poaching mainly occurs along the boundaries of the protected areas where lions are incidentally snared as non-target prey. Between 2013 and 2015, 21 lions were killed illegally, with six animals killed through snaring in the area adjacent to Hwange National Park in 2015; poverty stands as the major driver of illegal hunting (ZPWMA 2016).

Zimbabwe is a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of trans-frontier conservation areas (TFCA), and facilitate community-based natural resources management practices. To implement the SADC Treaty, member states are required to establish management programs for the conservation and sustainable use of wildlife. According to the ZPWMA *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe*, Zimbabwe has two established TFCAs, the Great Limpopo Trans-frontier Park (GLTP), which includes Gonarezhou National Park, and the Limpopo/Shashe TFCA. Additionally, there are other TFCAs that are in various stages of development, including Lower Zambezi-Mana Pools, Zimbabwe-Mozambique-Zambia (ZiMoZa), Chimanimani, and the Kavango-Zambezi (KAZA) trans-frontier conservation area (TFCA) initiative, which links 52 million hectares of conservation areas between itself, Botswana, Zambia, Namibia, and Angola (ZPMWA 2016; Masterson 2016). Through TFCAs, wildlife management entities are linking many of the major protected areas by removing boundary fences along national borders that separate many reserves in addition to creating or improving corridors to link good-quality habitat for wildlife (Newmark 2008). The principle of ecological and migratory connectivity lies at the heart of the TFCA initiative linking large protected areas across international boundaries and providing space for wildlife populations.

In addition to Zimbabwe's domestic laws, it is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zimbabwe provided a copy of their CITES non-detriment finding for lions. Their finding applied to all lion exports from Zimbabwe.

Current Lion Status in Zimbabwe: When the Service listed the lion in southern and eastern Africa as threatened under the Act, three primary threats to the species throughout its range were identified: loss of habitat, loss of prey base, and human-lion conflict. While human population growth clearly has an impact due to lose of available habitat for lions, increasing human population has a direct impact on prey base. Prey availability affects the reproduction, recruitment, and foraging behavior of lions and, as a result, strongly influences lion movements, abundance, and population viability (Winterbach *et al.* 2012, as cited in USFWS 2015). Lion densities are directly dependent on prey biomass (Hayward *et al.* 2007). Outside of protected areas, the lion's prey base is much reduced (Du Preez et al. 2016); inadequate management and law enforcement has led to poaching of the lion's prey base in Africa for bushmeat, which has been critically depleted (USFWS 2015). Population trends across eastern and southern Africa show that most prey species have declined in recent years, and for Zimbabwe, droughts have been a critical factor (ZPWMA 2016). A reduced prey base results in a relatively greater chance of lions encountering livestock (Du Preez et al. 2016). While actual losses of livestock to predators may be relatively low, the perceived financial cost to farmers can be high, and lions are persecuted intensely in livestock areas as a consequence. Their scavenging behavior makes them particularly vulnerable to the practice of lacing prey carcasses with poison to eliminate predators (CITES 2016). Co-existence of lions and people is promoted through giving value to lions, through tourism and hunting in CAMPFIRE areas (ZPWMA 2014). The threat to lions from habitat loss is especially present in Sebungwe and the South East Low Veld where the fragmented nature of the protected areas is compounded by increasing human and livestock populations surrounding these areas (ZPWMA 2016).

According to the Service's CoP17 *Consideration of Proposals for Amendment of Appendices I and II*, international trade in lion products is emerging as an additional threat; however, the relative extent to which this threat has contributed to lion population declines is difficult to evaluate accurately (CITES 2016). According to ZPWMA (2016), the illegal local and international trade in lions and their products poses an insignificant risk to the species in Zimbabwe, as there are no records of people found in possession of illegally acquired lion specimens in Zimbabwe. It is not clear what the level of legal trade, if any, occurs within Zimbabwe.

The bulk of Zimbabwe's wildlife occurs within the Parks Estate which includes 11 national parks, 16 safari areas, 16 recreational parks, 6 sanctuaries, 12 botanical reserves and 3 botanical gardens, all spread across the country (Parks and Wildlife Act 2001 Chapter 20:14). Wildlife populations also occur on the state Forest Areas, Communal CAMPFIRE areas and private conservancies dedicated to wildlife-based land use. According to ZPWMA (ZPWMA 2016), there are approximately 319,317 km^2 of land where some form of wildlife based land use is practiced in Zimbabwe. Lions occur permanently in 45% of this available range (c. 145,00km^2), with the majority occurring in national parks (96%) and safari areas (92%). Lions also occur permanently in 47% of the State forest areas and 66% of privately owned conservancies. The CAMPFIRE areas comprise approximately 247,000km^2 and lions occur in 36% of these areas. Lions are transient in

CAMPFIRE, conservancy and resettled areas adjacent to the major protected areas, and move across the border into Zambia, Mozambique, South Africa, and Botswana.

Zimbabwe's main lion range includes the Hwange-Matetsi Ecosystem, Mid Zambezi Valley, Sebungwe, and South East Lowveld. The lion population estimates in Zimbabwe are determined primarily through carnivore spoor surveys, systematic lion collaring, and call-up surveys. According to ZPWMA's *Conservation Status of the African lion (Panthera leo) in Zimbabwe* July 2014 report, starting in 2015, lion spoor surveys will be done at two-year intervals in all wildlife areas, and lion call-up surveys will be done every three years in all major lion areas (ZPWMA 2014). The Service has not received confirmation that these surveys have been conducted since 2015.

ZPWMA (ZPWMA 2016) has estimated that the minimum number of lions that occur on approximately 51,642km^2 of land where reliable survey data are available is approximately 1,900 (range 1,800 – 2,000). The western portion of the country, consisting primarily of Hwange National Park and the surrounding safari areas, forest areas, communal areas and private conservancies, supports approximately 737 lions (or 38% of the overall population). The southern portion of the country, dominated by the two major conservancies (Save and Bubye) and Gonarezhou National Park supports approximately 896 lions (48%). These numbers are supported by several studies. Groom et al. 2014, used call-up surveys to obtain direct estimates of the lion population within Gonarezhou National Park and compared actual lion densities with potential density estimates. In this study, while lions were only seen at five percent of calling stations, this equated to a population estimate of 33 lions, which is consistent with spoor survey results conducted in June 2010 (Groom et al. 2014). A 2015 spoor count survey of Gonarezhou National Park revealed an estimated 125 lions within the park (ZPWMA 2016). From 2007 to present, annual track index surveys at the SVC have been conducted using a standardized methodology (Groom and Watermeyer 2015, as cited in Du Preez et al. 2016). Prey availability models suggest that the carrying capacity for this lion population is approximately 271 lions (Hayward et al. 2007). In 2015, the estimated population was 284 lions (Du Preez et al. 2016). The Rifa Safari Area was surveyed using camera trapping and spoor counts in 2015, which supported an estimated population of 68 lions. The central and northern portions of the country reportedly support an estimated population of 284 lions (15%). The 12-year (2000-2011) average lion density per 100km^2 is 2.8 in Hwange National Park, 6.0 for South Eastern Lowveld in the SVC, 9.0 in Malilangwe, and 0.8 in Gonarezhou National Park (ZPWMA Annual Report 2013, as cited in ZPWMA 2014).

To manage any population to ensure an appropriate population level and determine whether sport hunting is having a positive effect, it is vital to have sufficient data on population numbers and population trends on which to base management decisions. According to Riggio et al. 2013 (p.32), and Bjorklund in Riggio et al 2013 (p.32), the minimum number estimated to constitute a viable population is 500 individuals. Hwange National Park, with an estimated population of 559, is the only area within Zimbabwe that has a viable population as laid out by Riggio et al. 2013. However, the two regions that make up the largest percentage of the country's lion population (Western 38% and Southern 48%) have regional populations of 737 and 896, respectively. The areas within the Central and Northern regions of Zimbabwe, albeit smaller, encompass parks that are part of Transfrontier Conservation Areas, such as the Mana Pools region.

Lion Management in Zimbabwe: In response to discussions surrounding a possible up-listing of lion to Appendix I under CITES at the 13th Meeting of the Conference of the Parties (CoP13), and

subsequent workshops involving lion range states, IUCN, ZPWMA, and other key stakeholders held a workshop to develop the *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* which was published by ZPWMA in 2006. The plan responds to regional and international standards set by Treaties such as CITES and the Convention on Biological Diversity (CBD), among others. The plan states, "it will guide the conservation and management of this top predator" which "addresses the needs of th[e] country." The Service is not aware of any additional or updated iterations of the plan since 2006; however, in their 2016 response, *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe*, ZPWMA provides updates on each of the outputs and respective targets established under the 2006 *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* (ZPWMA 2016).

The 2006 plan identifies a vision that "...lions should be conserved and managed sustainably for their aesthetic, cultural, and ecological values, and the socio-economic development of Zimbabwe." The plan lays out three broad targets to achieve this objective:

- Ensure the persistence of key lion populations and other important populations including those of doubtful viability.
- Human and livestock loss reduced.
- Optimize wildlife conservation-related net benefits to local communities.

All three targets are stepped down to seven specific outputs with their own targets and activities to meet such targets. Although the plan does not identify a time period, some activities do, of which a period of 5 years is the most common. In response to inquiries from the Service, ZPWMA provided a summary of the progress made to implement the 2006 strategy.

While all three of the broad targets appear to serve a valuable role in lion management in Zimbabwe, three of the specific outputs are most relevant to determining if the implementation of the strategy enhances the propagation or survival of the species, as required by the Act for the issuance of import permits. The first output, "lion populations, their habitats and wild prey effectively conserved and managed in collaboration with local stakeholders" has been broken down into a number of targets: establish a baseline survey and monitoring program; maintain and strengthen capacity for lion conservation, management, monitoring and research; identify and implement best management standards and practices for the hunting program; develop and implement co-management frameworks; and expand the geographic distribution range of lions. According to ZPWMA (2016), baseline surveys have been completed for the Parks Estate using monitoring protocols for key variables (populations, habitats, prey), and selected surveys have been undertaken in areas outside National Parks. Active carnivore research programs conducted by NGOs and research institutions, such as WildCRU, are taking place in various parts of the country; in addition, personnel have been trained in data collection and capture, management, lion aging and analysis. Adaptive age-based criteria for male trophy animals are in place and functioning. The quota for a certain year is determined by a point system based off the hunts from the previous season. Therefore, ZPWMA is actively working toward meeting the target areas for this output.

The second output, "human-lion related conflicts minimized and, where possible, eliminated" has also been broken down into a number of targets: develop and establish databases on lion-human conflicts; Identify and implement methods to reduce and mitigate livestock losses and lion attacks on humans; and train and properly staff problem animal control (PAC) units to conduct rapid

response and precisely target problem animals. According to information from ZPWMA (2016), approaches to mitigate livestock losses and lion attacks on humans are in the process of being tested and implemented in Hwange, and methods to mitigate lion attacks on livestock are being implemented as appropriate at selected sites (e.g. Tsholotshe). Data on PAC reports for lion-related problems have been collated, and PAC units at ZPWMA field station and/or RDC levels have been partially established. In Matusadona, Hwange, and Gonarezhou regions, specific awareness and education packages on lion conservation and management have been developed and implemented. The information submitted in the ZPWMA update suggests that they have met one target, and are in the process of implementing the remaining two.

The third output, "the costs and benefits of long-term lion management equitably distributed," is a socio-economic output to establish agreement and implementation of area-specific lion management plans with identified stakeholders in each wildlife region, and implementing a transparent mechanism to equitably distribute lion-related income to identified stakeholders." The specific targets for this output are: complete an inventory of stakeholders directly affected by lion conservation, deliver appropriate training and capacity building to prioritized stakeholders, agree to and implement collaboratively developed area-specific lion management plans with identified stakeholder groups in each wildlife region within 5 years, and implement transparent mechanisms to equitably distribute lion-related/generated income to identified stakeholders (groups and/or communities). Current information from ZPWMA shows that they have identified key stakeholders and assessed the financial impacts of lion conservation and the magnitude of socio-economic impacts on each stakeholder group. Limited training has been undertaken for representative stakeholders in Hwange, Matusadona, and Gonarezhou. ZPWMA has also implemented an adaptive management program across four wildlife regions and are in the progress of developing and implementing area-specific lion management plans with identified stakeholder groups. According to ZPWMA, a Management Plan for Hwange has been approved. However, the Service does not have a copy of this plan. With these updates, ZPWMA has made progress toward this output's targets.

The strategy also identifies roles and responsibilities for a number of players in Zimbabwe's lion conservation efforts. According to the strategy, there is a national lion coordinator that is to coordinate all national activities on lion conservation, research, and management, including census surveys, setting up monitoring needs and coordinating data on human-lion conflicts. The strategy goes on to identify roles for the field stations, wardens, ecologists and utilization units, which are responsible for ensuring compliance with hunting regulations and maintaining safari hunting databases. In addition, the strategy identifies roles for CAMPFIRE, safari operators, and professional hunters to facilitate training and ensure compliance with hunting regulations.

The Conservation Strategy and Action Plan for the Lion in Zimbabwe (ZPWMA 2006) borrows language from the *IUCN SSC Conservation Strategy* (2006). It iterates areas in need of improvement regarding lion conservation in Zimbabwe, including standardized lion census methods and surveys, further mitigating human-lion conflicts, and maximizing benefits for rural communities that live with lions. ZPWMA (2006) notes their intention to review and put in place criteria for age-based identification of male trophy animals, but do not mention if they will be reviewing possible combination strategies. As part of the 2006 lion conservation strategy for eastern and southern Africa, six objectives were established to secure and restore sustainable lion populations, which were housed under the following categories: management, mitigation, socio-economics, policy and land-use, politics, and trade. The strategy was intended to be implemented

within 10 years (Macdonald 2016), and Zimbabwe gave an update on progress regarding these objectives in their *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016) that also addressed outputs and targets laid out in their 2006 action plan.

Additionally, to mitigate human-lion conflict, the "Long Shields Guardian Programme" was initiated whereby communities are notified of movements of collared lions into their areas via cell phone, and then have the opportunity to take appropriate action, such as moving cattle. In 2013 alone, 1,850 warnings were passed to the "Long Shields." These actions may reduce the incidents of lions marauding livestock; however, retaliatory killing of lions still occur. Further, as is policy under The Parks and Wildlife Act of 2001, any lions that attack humans or livestock will be lethally eliminated (ZPWMA 2016). Between 2007 and 2013 a total of 1,113 conflict incidents were recorded in the Hwange area in which 915 head of stock were lost to lions.

Hunting and Utilization: Lions are infamously infanticidal (Schaller 1972, as cited in Du Preez et al. 2016), which is often used as an argument against sport-hunting of the species (e.g. Packer et al. 2011), where it is feared that the removal of dominant males causes cub mortality that eventually results in lowered population recruitment and survival (Packer et al. 2009). Infanticide, however, may be less of an issue in terms of sport-hunting if age-appropriate males, past their prime and no longer territorial or with dependent cubs, are harvested (Whitman et al. 2004).

The minimum number of lions that occur in approximately 51,642km^2 of land in Zimbabwe, where reliable survey data are available, is estimated to be 1,917 (range 1,800 – 2,000), the majority of which occur in western and southern Zimbabwe. When taking this population estimate into consideration, trophy hunting harvests a yearly mean of 2.7% of adult male lions. This figure has decreased since the establishment of age restrictions on lion hunting (ZPWMA 2016).

Trophy hunting of wildlife is legally permitted in safari areas, of which there are 16 in Zimbabwe (ZPWMA 2014). According to the Forest Act, Chapter 19:05, there are 24 gazetted indigenous forest areas in Zimbabwe; within these forest areas, lions may be hunted in the following forests: Fuller, Kazuma, Pandamasuwe, Ngamo, Sikumi, Gwayi, Sijarira, and Gwampa (ZPWMA 2014). In 2013, an adaptive quota management system for lion hunting based on the ages of lions hunted was agreed to in Harare, Zimbabwe, during a meeting hosted by ZPWMA and an independent non-governmental conservation organization (Du Preez et al. 2016). After reviewing aging techniques, attendees at the July 2013 meeting in Harare, Zimbabwe were confident that hunters could be expected to categorize lions as being below or above five years of age. In determining quotas for the following years, operators would be rewarded with increased quotas if they hunted animals of six years or older, would not be penalized if they hunted animals five years of age, but would have quotas cut if they hunted animals younger than five years old or if they failed to complete hunt returns (ZPWMA and Panthera 2014). In 2013, only 28% of lions hunted were five years old or older. In 2015, that figure rose to 77.3% (ZPWMA 2016). According to Hunter et al. (2013), an adaptive quota management system utilizing age-based criteria would not only aid in the prevention of over-harvesting lions, but would also prevent excessively conservative quotas. Further, according to Miller et al. (2016), results indicate that age-based hunting is feasible for sustainably managing threatened and economically significant species such as the lion, but must be guided by rigorous training, strict monitoring of compliance and error, and conservative quotas. No single trait can be relied upon exclusively to precisely age lions. Rather, multiple traits must be examined in combination to cross-validate an individual's age and, according to Whitman et al. (2004), restricting hunting to individuals that are at least six years old is desirable from a biological

perspective due to the reduced risk of the loss of pride males and infanticide of cubs associated with the harvest of such individuals (Whitman et al. 2004).

During 2013, operators were requested to submit hunt returns and photos as a trial run to get the adaptive quota system up and running. In 2014, operators were requested to do the same but were informed that the age of the lions hunted in 2014 would determine their lion quotas in 2015 (Du Preez et al. 2016). In 2015, there was a marked increase in the age of lions hunted in Zimbabwe as a whole. The majority of lions hunted were on the cusp of 5-6 years of age but were not older than six years. National hunting offtakes for lions in Zimbabwe from 2013 to 2015 were 29, 42, and 47 respectively (Masterson 2016). It appears these do not include illegal forms of hunting offtake.

Previously, Zimbabwe set quotas for the hunting of female lions. Between 1998 and 2004, Zimbabwe maintained a mean quota of $0.3 \pm 0.1/100$ km^2 for female lions; during the same period, actual offtake was lower at $0.08 \pm 0.1/100$ km^2, or a mean of 30.6 percent of the quota actually harvested (Loveridge *et al*. 2007). However, females are the most productive portion of a population; if they are removed from a pride, there is inherent risk that dependent cubs will die and the overall breeding success of the pride will be reduced. Zimbabwe discontinued issuing quotas for female lions in 2011 (USFWS 2015). In 2011, Zimbabwe's quota was set at 101 lions; in 2014, it was reduced to 50 male lions following the implementation of age restrictions (Henschel 2015, pers. comm., as cited in USFWS 2015).

In setting adaptive lion quotas, Zimbabwe uses scientific information including spoor surveys, camera traps, and ranger-based sighting. In CAMPFIRE areas, incidences of human-lion conflict are also taken into consideration where survey information is not readily available, when determining quotas for those areas (ZPWMA 2014). The quota setting process involves all stakeholders, including the ZPWMA, landowners, safari operators, and CAMPFIRE managers and their representatives. During the annual quota-setting workshop, presentations are made by the proponents who then make proposals for quotas. Where it is felt that not enough information has been presented, however, a precautionary quota will still be issued (ZPWMA 2014). The Service is not aware of how precautionary quotas are treated after they are issued, or if there is a protocol for obtaining necessary information when a precautionary quota is put in place.

ZPWMA (2016) mentions seven concessions that are leased on five year terms, and how these concessionaires pay a 5 year "right to lease" fee, annual rental, fixed quota fee (payable if animals are shot or not) and a supplementary quota fee that allows additional animals to be bought as needed. It is unclear to what extent Zimbabwe still utilizes fixed quotas, as Du Preez et al. claims fixed quotas are no longer being used by Zimbabwe, but a fixed quota fee is mentioned in ZPWMA (2016). It is also unclear how many animals concessionaires are able to "buy as needed," and how such requests may be accommodated without going over the national quota (ZPWMA 2016).

Between 1999 and 2004, data were collected in and around Hwange National Park that suggested that hunting surrounding the park was having a negative impact on the lion population. Therefore, sport hunting of lions was suspended in the area surrounding the park between 2005 and 2009. Following the lifting of the moratorium, and by implementing stricter monitoring and hunting guidelines through the Hwange Lion Research Project, the overall Hwange lion population has continued to show a positive trend, and is now estimated at over 550 animals (ZPWMA 2015).

CAMPFIRE is the program through which the Zimbabwean Government has developed the management of wildlife resources to communal farmers. As of July 2014, there are at least 58 Rural Districts that have been granted the Appropriate Authority status to manage wildlife resources in their areas; however, according to *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* ZPWMA 2016, only 16 are actively engaged in some form of wildlife based land use (ZPWMA 2016). Lions are found in communal areas that are adjacent to major protected areas, and lion hunting is allowed in CAMPFIRE districts (ZPWMA 2014). According to EcoWeb (2015), all income generated by trophy hunting in CAMPFIRE areas was distributed to communities (52%, when they are typically prescribed 55%), rural district councils (RDCs) (44%, when they are typically prescribed 41%), and the CAMPFIRE association (4%). Communities, rather than dividing income by households, typically invest in projects that benefit the communities as a whole, such as schools, clinics, and grinding mills. Councils use funding for patrols, monitoring of hunts, problem animal control, water, and fire management, while the CAMPFIRE association uses their funding to cover administrative costs and representation of the program (EcoWeb 2015). As was agreed upon at the 2013 lion management meeting in Harare, the CAMPFIRE areas in which lions occur are currently exempted from the age restrictions. This approach was adopted as a means of ensuring that impoverished communities obtain the opportunity to benefit from the presence of lions, recognizing the potential negative impacts the species has on the livelihoods of livestock farmers (ZPWMA 2016). According ZWPMA's 2016 response, between 2010 – 2015, lions accounted for 2% of the total income generated from hunts conducted on CAMPFIRE lands and trophy fees accounted for 74% of the total funds generated for CAMPFIRE. Further, U.S. hunters account for 51% of the funds generated from hunting in CAMPFIRE areas during the same period. While hunting is allowed in CAMPFIRE areas, it is unclear if American sport-hunters conduct lion hunts in these areas; if so, the Service is not aware if sport-hunters are exempted by the age restriction in this case, and how this exemption in CAMPFIRE areas is taken into consideration when setting quotas for other portions of the country.

According to the Revised CAMPFIRE Revenue Sharing Guidelines, which were incorporated into the Constitution of the CAMPFIRE Association in 2007, at least 55% of generated revenue from hunting should be devolved to producer communities, no more than 26%, and 15% for management and overhead at the RDC level, respectively, and 4% as a levy to the CAMPFIRE Association. According to an undated document (but presumably produced in late 2014, since it references data from 2014 but does not include any references to 2015 data) produced by CAMPFIRE (CAMPFIRE report undated) at least 10 RDCs comply with the Revenue Guidelines.

According to *The Role of Trophy Hunting of Elephant in Support of the Zimbabwe CAMPFIRE Program – December 2016*, a report the Service received on December 17, 2016, the Reserve Bank of Zimbabwe, in collaboration with relevant stakeholders, has established the Tourism Receipts Accounting System that required all outfitters to submit returns listing the revenue generated for hunting activities. This system has been in place for several years, but required manual analysis of the data to extract information on hunting revenue. In January 2015, to account fully for earnings in the hunting sector, the Reserve Bank of Zimbabwe, in collaboration with relevant stakeholders, introduced the Tourism Receipts Accounting System (TRAS2) a web-based system (TRAS2) that links Safari Operators, ZPWMA Authority, Taxidermists, Shipping Agents, International Marketing Agents, and Reserve Bank. Under this system, all authorized hunts are registered, allowing for the capture of hunting data, such as the origin of clients, value of trophies and hunts, and area hunted, to monitor hunting quota utilization and track hunted trophies. According to the December 2016

report, the Exchange Control Division of the Reserve Bank of Zimbabwe and the ZPWMA are now able to:

1. Assess regional price differentials of similar hunts and the reasons thereof;
2. Present TRAS2 system updates and reports to the users, including international marketing agents;
3. Engage with international marketing agents of sport hunting;
4. Obtain relevant insights on governing of the hunting sector; and
5. Come up with an effective mechanism to fully account for export proceeds from the hunting sector.

The TRAS2 information was utilized in *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (ZPWMA 2016) to provide a breakdown of the source of hunting income, and the amount of funds generated by trophy fees by land category, among other insights, and has proven the TRAS2 system's ability to obtain relevant insights on governing of the hunting sector.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. In evaluating each of these criteria based on information available to the Service, we have been able to determine that this impact of a sport-hunted lion trophy animal would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

Zimbabwe's lion hunting industry generated 9% of all sport hunting revenue in 2015; 51% was contributed by U.S. hunters during 2010-2015 country-wide, and 90% of the sport hunting market in BVC and SVC from 2005-2015. Even though 9% may not seem like much, lions are a key component of the sport hunting industry, as they are part of the "Big 5" trophies and draw U.S. hunters to Zimbabwe. Based on the information available to the Service, the participation of communities in CAMPFIRE has heralded a reversal in wildlife declines on private land. When the benefits of CAMPFIRE were extended to RDCs, it further aided in the equitable distribution of benefits from trophy hunting to locals, which incentivizes them to conserve the African lion. As mentioned in the case of SVC, without the hunting industry, these wildlife areas, which have become conservation havens in the threat of human encroachment across much of Zimbabwe, would not be economically viable, and therefore would not exist.

There was conflicting information presented to the Service on how many lions were included in the quota in 2015. Du Preez et al. (2016) reports a national lion hunting quota of 85 with 39 hunted; ZPWMA (2016) reports the national lion hunting quota in 2015 was 82 lions, with 49 hunted. When evaluating the lower quota with higher utilization reported by ZPWMA (2016), and taking into consideration the land area of the Parks Estate alone, Zimbabwe did not exceed the best management practice of 0.5 lions/1,000 km^2; the 2015 offtake would have accounted for 0.125 lions/1,000 km^2.

Zimbabwe also has taken into consideration other best management practices, including age-based criteria for an adaptive management strategy, and takes past performance of hunting organizations into consideration when determining future quotas.

Further, sport hunting was essential for the successful transition of the SVC from cattle to wildlife (Du Preez et al. 2016), in that it provided monetary benefits for the conservation of lions and local communities. The BVC donates over 45 tons of meat from sport hunting to the local communities each year. This meat donation is worth over USD100,000 per year. BVC also supports several schools, clinics, and community projects in the three surrounding districts of Mwenezi, Maranda, and Jopempe. The local community sees a direct benefit from the wildlife in BVC, but is also empowered by job opportunities created both with these community projects, as well as on BVC (Du Preez et al. 2016).

While Zimbabwe's hunting industry generated approximately 8 million in 2015, not all of this is connected to lion hunting or to U.S. hunters. However, lions are a key component of the hunting industry since they are part of the "Big 5" trophies and draw U.S. hunters to Zimbabwe. Based on the information available to the Service, the funds generated by hunting trophies contribute to the ZPWMA's ability to manage the country's lion populations as well as the success of CAMPFIRE. It appears that without the hunting industry, it would not be economically viable to maintain lions. U.S. hunter participation in lion hunts, in and of itself, is not enough to make or break the industry. However, U.S. hunters have played a significant role in the industry in Zimbabwe, previously making up 51% of all hunting in Zimbabwe and 72% of lion hunts within the country. As such, the removal of their participation could have a long-term impact.

Further, the *Strategy and Action Plan* have put into place mechanisms to adequately oversee the harvest of lions in Zimbabwe. With an annual harvest of approximately 85 lions, Zimbabwe is not exceeding the limits identified of 0.5 lions/1,000 sq. km. The objectives of the *Strategy and Action Plan* and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that Zimbabwe has established for managing lions. The Service will continue to monitor the effectiveness of the Strategy and Action Plan, for consideration in future findings.

Therefore, based on the information available to the Service and provided that the reserve where the lion was taken was properly permitted and in compliance with national and local regulations, the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing their status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit</u>:

The total area under wildlife-based land use and conservation in Zimbabwe amounts to 10.7 million hectares, and represents 27% of the total surface area of the country. Of this, 7.9 million hectares, or 75% of all conservation land in the country, falls under safari hunting as the primary or only source of revenue. With the CAMPFIRE program, private landholders and RDCs are given the opportunity to benefit from the wildlife on their land, including lion, and incentivize them to conserve the species. Sport hunting of lions by U.S. hunters supports the programs in Zimbabwe that provide the opportunity for locals to see value in lions, which in turn conserves the species in the long-term.

A scientifically based quota is the number of a given species that can be removed from a specific population without damaging the biological integrity and sustainability of that population (WWF 1997). However, full implementation and enforcement of the age-based strategy could potentially cause the need for quotas to become irrelevant or eliminated (USFWS 2015). Age restrictions will naturally restrict offtake to a limited number of individuals that meet the age criteria (Loveridge *et al.* 2007, Whitman *et al.* 2004).

Throughout the information provided to the Service, it is clear that Zimbabwe has made strides in their management of their lion populations. Although prior to 2011, Zimbabwe allowed the hunting of lionesses and males under 5 years old, they made significant changes to ensure their hunting program is sustainable. In 2011, Zimbabwe restricted the hunting of female lions. In 2013, they proposed an adaptive age-based setting for hunting quotas. In 2015, the development TRAS2 allowed the country to assess regional price differentials of similar hunts and the reasons thereof; present TRAS2 system updates and reports to the users, including international marketing agents; engage with international marketing agents of sport hunting; obtain relevant insights on governing of the hunting sector; and come up with an effective mechanism to fully account for export proceeds from the hunting sector. Further, Zimbabwe appears to be transparent in their management processes, including their quota setting.

According to CITES trade data and Service records, from 2011 to 2016, there were 223 lion trophies imported to the U.S. from Zimbabwe. Best practice would be to import only male lions, as pointed out by Macdonald (2016), but Zimbabwe has already taken the initiative by placing a moratorium on lioness hunting. The fixed-quota concept, in which hunting quotas had to be paid for upfront before the hunting season begins, and results in poor quality trophies and young animals being hunted, has also been abandoned (Du Preez et al. 2016). Zimbabwe appears to be transparent in their implementation of the age-based adaptive management strategy (USFWS 2015). The adaptive quota management system for lion hunting based on the ages of lions hunted has been accepted and embraced by all stakeholders. This adaptive quota management system has not only led to a reduced national lion hunting quota, but has also resulted in a significant increase in the age of harvested lions to a level that is considered to have a reduced ecological impact (Du Preez et al. 2016).

Between 2005 and 2015, the U.S. market has represented over 90% for the sport-hunting market in both the BVC and SVC. If this market was effectively lost due to an inability of prospective clients to import their trophies, it would become unviable to continue managing BVC as a wildlife area in its current form (Du Preez et al. 2016). Across all CAMPFIRE districts, from 2010 to 2015, there was a total quota of 140 lions, with actual offtake equaling 45 animals. During this same period, U.S. sport hunters apparently accounted for 51% of Zimbabwe's sport hunting clients; trophy fees represented 74% of CAMPFIRE income, of which lions play a small role. In 2015, lion sport hunting generated USD753,000 in revenue, which accounts for about 9% of all sport hunting revenue in Zimbabwe that year (ZPWMA 2016).

Evaluating the information provided by the Zimbabwe government and other sources, it appears that the hunting program in Zimbabwe is addressing the three main threats that were identified by the Service when making the determination that the species was threatened with the possibility of extinction. The hunting areas are maintaining habitat for lions and ensuring that there is no further loss, provided that the hunting areas can remain economically viable. In order to maintain a viable

population of lions, the parks, safari, and CAMPFIRE areas must maintain biodiversity and a sustainable prey base. Finally, Zimbabwe is actively working to reduce human-lion conflicts and the number of lions killed in retaliation for killing livestock. Therefore, the management of lions within Zimbabwe and the limited hunting of lions contributes to the on-going survival of the species in Zimbabwe.

Provided that the off-take of lions continues to be monitored and the actions identified in the Strategy and Action Plan continues to be implemented, the participation of U.S. hunters in lion hunts would provide an indirect benefit to wild populations by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for a legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

As stated above, Zimbabwe is monitoring and controlling the harvest of lions through permitting under their regulations and through the Strategy and Action Plan. The issuance of import permits for lions legally hunted under these authorities would not conflict with any programs intended to enhance the survival probability of the species in Zimbabwe. If import permits for sport hunted lion trophies from Zimbabwe were to be issued, it would work in favor of, not against, the principal acts governing lion conservation in Zimbabwe. Furthermore, sport hunting opportunities for hunters in CAMPFIRE districts would help local communities realize the value in conserving the African lion.

Therefore, based on the information available to the Service, the issuance of an import permit for a legally hunted lion does not conflict with known conservation programs and rules.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

With limited, controlled off-take of lions in a manner that would maintain sustainability, the legal hunting activities that U.S. hunters would be involved in would contribute to reducing the threat of extinction of lions. This off-take must be monitored to ensure that it is sustainable and that, to the extent possible, normal lion behavior and ecology are not negatively impacted. It appears that the permitting activities under Zimbabwe's laws and CITES, as well as the implementation of the adaptive age-based lion quota, and a continuation of implementation of the outputs in the *Strategy and Action Plan* will ensure the long-term survival of lions. The utilization of hunters to manage the populations on the reserves is an important element of the success of lion management in Zimbabwe.

Therefore, based on the information available to the Service, the issuance of an import permit for a legally hunted lion will likely reduced the threat of extinction facing lions in Zimbabwe.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be received through a scientifically based hunting program for lions.

Based on the information available to the Service, there is general support by scientists and other persons or organizations having expertise concerning lions that the legal harvest of lions, and the subsequent import of this trophy, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

While, over the years, ZPWMA has failed to generate adequate revenue for its operations, U.S. sport hunters play a large role in the hunting industry of Zimbabwe. The Service anticipates that by granting the importation of sport-hunted lion trophies, there would be an increase in funds provided to Zimbabwe's conservation initiatives through this program by U.S. sport hunters. ZPWMA has also been forthcoming in involving relevant stakeholders as well as independent researchers and non-governmental organizations in determining best management practices.

Therefore, based on the information available to the Service, Zimbabwe has the proper expertise, facilities, and other resources to accomplish the objectives laid out in their *Strategy and Action Plan* to enhance the propagation and survival of the species, partly through the utilization of funds generated by U.S. hunters' participation in lion hunts throughout the country.

Conclusion

Given the status of lions within Zimbabwe at the time Mr. House conducted his hunt, and the level of management and oversight provided to lions at that time, the Service is able to find that the harvest and import of Mr. House's sport-hunted trophy taken in Zimbabwe during October 2016, meets the purposes of the Act. As stated earlier, each application received by the Service for the import of a sport-hunted trophy lion from Zimbabwe will be evaluated on a case-by-case basis. The applicant must have hunted on a properly licensed hunting area within Zimbabwe. The Government of Zimbabwe must continue to implement the *Strategy and Action Plan* in the manner identified in the documents. The on-going adaptive management and limited off-take of lions is important to the survival of lions in Zimbabwe. Although the Service is able to make a finding that the import of this lion meets the enhancement criteria under the Act, the Service will continue to monitor the status and management of the lion in Zimbabwe. Noting that Zimbabwe's last management plan for lion was in 2006, the Service would like to see a current and updated plan that has been established as the national plan and disseminated across the country. The *Enhancement and Non-Detrimental Findings for Panthera leo in Zimbabwe* (2016), mentions a Management Plan for Hwange National Park; a copy of that and any other developed management plans will be considered in the future. Although Zimbabwe has made progress on their 2006 *Strategy and Action Plan*, the Service will

need to be continually updated on further progress of the outputs or targets. Lastly, the Service will also need to review any updates to the quota setting process.

Therefore, with the information available to the Service at the time Mr. House conducted his hunt, and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male lion trophy taken in Zimbabwe, to Mr. Jason A.S. House of Reno, Nevada.**

LION ZIMBABWE ESA TROPHY

Permit Number: MA78584C-0

Effective: 06/08/2018 Expires: 06/07/2019

Issuing Office:

Department of the Interior
U.S. FISH AND WILDLIFE SERVICE
DIVISION OF MANAGEMENT AUTHORITY
BRANCH OF PERMITS, MS: IA
5275 LEESBURG PIKE
FALLS CHURCH VA 22041-3803

Mary Coglianese

CHIEF, BRANCH OF PERMITS, DMA

Permittee:

JASON A.S. HOUSE
(b) (6) [redacted]
RENO, NV 89523
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zimbabwe for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2016 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zimbabwe for the 2016 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit, source code "W", issued by the Management Authority of Zimbabwe.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

RCVD FEB 23 2018

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III, Regina Lennox, and other attorneys of the non-profit law firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a threatened-listed African lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that Conservation Force be copied with all correspondence, acknowledgements, notices, and decisions concerning my application to import my trophy at the following address:

LB

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Dupuis	Steven	Joseph	Jr

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a (b) (6)

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Lafayette	La.	70507	Lafayette	U.S.A.

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)
Same

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☒ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: Unavailable No ☐

3. Certification: I hereby ce[illegible] ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subch[illegible]*** submitted in this application for a permit is complete and accurate to the best of my knowledge an[illegible] to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      P.L. Melanochaita (African Lion)

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild: South Luangwa, Zambia in Nyamvu and West Petauke game management area's, Nyimba Being The closest Town Operator and Lease holders Nyamvu and Mopane Safaris
   b. Date wildlife is to be hunted:

      May 7th 2018 Thru May 28th 2018

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      All Parts including Skin, skull, Teeth and Claws

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      N/A

   b. Date wildlife was hunted:

      N/A

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

N/A

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

N/A

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name: Bridge Shipping Zambia Limited
Business Name: Villa Park, Plot 177/178 Unit C3
Address:
Address: Luanshya, Road,
City:
State/Province: Lusaka, Zambia.
Country, Postal Code: Zambia, 10101

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: _____ Date: 02/21/18

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

Same as page 1

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☒ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
John Jackson III, Conservation Force, 504-837-1233 jj-No2@att.net or Regina Lennox of Conservation Force Regina.Lennox@conservationfo

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Enhancement Finding
Applicant: Steven Joseph Dupuis (PRT- 78597C)

Steven Josheph Dupuis submitted an application on February 28, 2018, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken May 7, 2018 through May 28, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Dupuis' application involving a *P. l. melanochaita* sport-hunted trophy taken in Zambia's West Petauk GMA, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Dupuis' trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Dupuis', participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Dupuis' application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016).

In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an

individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their

obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Dupuis' hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Dupuis will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Dupuis, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): <u>The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application</u>:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): <u>Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application</u>:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Dupuis.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Steven (b) (6) Dupuis.**

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season and in accordance with government of Zambia hunting laws and regulations.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

REISSUANCE, RENEWAL, OR AMENDMENT OF A PERMIT
(For this application, all permits, registrations, and certificates are referred to as a permit.)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details. **Instructions on how to make your application complete and help avoid unnecessary delays are attached.**

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Dupuis	Steven	Joseph	Jr
2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b)(6)			lisaj@dlchb.com

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

(b) (6)

1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
La.	70507	Lafayette	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)
same

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 6 and 7**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions* [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Laura Dupuis 08/13/2019

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

E. REISSUANCE, RENEWAL, OR AMENDMENT OF A PERMIT (For this application, all permits, registrations, and certificates are referred to as a permit.)

NOTE 1: If you are renewing your Designated Port Exemption permit, use form 3-200-2 and submit to appropriate Office of Law Enforcement address. If you are renewing your Import/Export license (required for commercial activities), use form 3-200-3 and submit to appropriate Office of Law Enforcement address.

NOTE 2: This form **cannot** be used for a lost or damaged permit. If you need to replace a lost or damaged permit, please use form 3-200-66. The application **must** be submitted to the office that issued the initial permit. Lost or damaged permit

NOTE 3: Some activities, such as all master files for multiple shipments, Certificate of Scientific Exchange (COSE), circus/traveling exhibits, and artificially propagated plants, can only be re-issued, renewed, or amended by submitting a new application for permits for those activities. Please refer to these application types to determine if another application form would be more appropriate or contact the Division of Management Authority for more information.

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

   D&L CHB
   2015 S. Arlington Heights Rd. Ste. 123
   Arlington Heights IL 60005

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Lisa Jamnik
   847-690-0690
   lisa@dlchb.com

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

   ☒ No ☐ Yes

   If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. **Permit number.** Enter the permit number to be reissued/renewed/amended. Prt#: MA785970-0

5. Submit the original permit with this application.

   See attached

6. **Past activities.**

   a. Provide copies of all cleared documents and form 3-177 (FWS declaration of wildlife) associated with this permit. N/A

   b. Provide a summary detailing activities conducted under this permit, as well as a brief statement of why you are seeking reissuance/renewal. N/A

7. **Annual Report**. If required by your permit, provide an annual report as conditioned (Please disregard if you have already submitted your annual report.) N/A

8. **Sport-hunted trophies:** If you did not hunt during the hunting season stated in your original application, you are not eligible for a renewal. Please submit a new application form. N/A

9. **Certification -** Complete one of the statements below and supply any additional documentation requested: (original signature is required)

   a. For **NO CHANGES** to original application:

   I certify that the information submitted in support of my original application for the permit indicated above has not changed and is still currently correct. I hereby request reissuance or renewal of this permit.

   Permittee's signature: Laura Durgin Date: 08/13/2019

   b. For **CHANGES** to original application:

   On an attached page(s), provide a complete description of any changes (e.g., change in principal officer, personnel, address, location of activities, types of activities). Please sign each attached page. Also note that we may need to request additional information regarding the changes after reviewing your initial request.

   I certify that the information submitted in support of my original application for the permit indicated above is still currently correct EXCEPT for the changes noted on the attached, signed page(s). I hereby request re-issuance or renewal of this permit with the indicated changes.

   Permittee's signature: _____ Date: _____

All international shipment(s) must be through a designated port, unless otherwise authorized. A list of designated ports (where an inspector is posted) is available. If you wish to use a port not listed, please contact either the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2) or the Division of Management Authority.

C. **Trophy must have been taken during the 2018 hunting season and in accordance with government of Zambia hunting laws and regulations.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

KNOW ALL MEN BY THESE PRESENTS: That, ✓ Steven J Dupuis (Full name of individual, partnership, corporation, sole proprietorship, or limited liability company) (Identify) doing business as a ✓ INDIVIDUAL (Individual, partnership, corporation, sole proprietorship, or limited liability company) under the laws of the State of ✓ Louisiana residing or having a principal place of business at (b)(6) Lafayette, La 70507, hereby constitutes and appoints ✓ D & L CHB (Grantee's Name), its officers, employees, and/or specifically authorized agents, to act for and on its behalf as a true and lawful agent and attorney of the grantor for and in the name, place and stead of said grantor, from this date, in the United States (the "territory") either in writing, electronically, or by other authorized means, to:

Make, endorse, sign, declare, or swear to any customs entry, withdrawal, declaration, certificate, bill of lading, carnet or any other documents required by law or regulation in connection with the importation, exportation, transportation, of any merchandise in or through the customs territory, shipped or consigned by or to said grantor;

Perform any act or condition which may be required by law or regulation in connection with such merchandise deliverable to said grantor; to receive any merchandise;

Make endorsements on bills of lading conferring authority to transfer title; make entry or collect drawback; and to make, sign, declare, or swear to any statement or certificate required by law or regulation for drawback purposes, regardless of whether such document is intended for filing with U.S. Customs and Border Protection;

Sign, seal, and deliver for and as the act of said grantor any bond required by law or regulation in connection with the entry or withdrawal of imported merchandise or merchandise exported with or without benefit of drawback, or in connection with the entry, clearance, lading, unlading or navigation of any vessel or other means of conveyance owned or operated by said grantor, and any and all bonds which may be voluntarily given and accepted under applicable laws and regulations, consignee's and owner's declarations provided for in section 485, Tariff Act of 1930, as amended, or affidavits or statements in connection with the entry of merchandise;

Sign and swear to any document and to perform any act that may be necessary or required by law or regulation in connection with the entering, clearing, lading, unlading, or operation of any vessel or other means of conveyance owned or operated by said grantor;

Authorize other Customs Brokers duly licensed within the territory to act as grantor's agent; to receive, endorse and collect checks issued for CBP duty refunds in grantor's name drawn on the Treasurer of the United States; if the grantor is a nonresident of the United States, to accept service of process on behalf of the grantor;

And generally to transact Customs business, including filing of claims or protests under section 514 of the Tariff Act of 1930, or pursuant to other laws of the territories, in which said grantor is or may be concerned or interested and which may properly be transacted or performed by an agent and attorney;

Giving to said agent and attorney full power and authority to do anything whatever requisite necessary to be done in the premises as fully as said grantor could do if present and acting, hereby ratifying and confirming all that the said agent and attorney shall lawfully do by virtue of these presents;

This power of attorney to remain full force and effect until revocation in writing is duly given to and received by grantee (if the donor of this power of attorney is a partnership, the said power shall in no case have any force or effect in the United States after the expiration 2 years from the dates of its execution);

Grantor acknowledges receipt of ✓ D & L CHB (Grantee's Name) Terms and Conditions of Service governing all transactions between the Parties.

If the Grantor is a Limited Liability Company, the signatory certifies that he/she has full authority to execute this power on behalf of the Grantor.

IN WITNESS WHEREOF, the said ✓ Steven J Dupuis

caused these presents to be sealed and signed: (Signature) ✓ (b)(6)

(Capacity) ✓ N/A Date: 04/16/18

Witness: (if required) N/A

If you are the importer of record, payment to the broker will not relieve you of liability for CBP charges (duties, taxes or other debts owed CBP) in the event the charges are not paid by the broker. Therefore, if you pay by check, CBP charges may be paid with a separate check payable to "U.S. Customs and Border Protection" which shall be delivered to CBP by the broker. Importers who wish to utilize this procedure must contact our office in advance to arrange timely receipt of duty checks.

APPERSON PRINT MANAGEMENT SERVICES • NCBFAA-3 • WHSE. NO. 03540

Intra-Service Section 7 Biological Evaluation Form

Originating Person: Amy Brisendine Date: April 7, 2020

Telephone Number: 703-358-2005

I. **Service Program and Geographic Area or Station Name**: Branch of Permits, Division of Management Authority, International Affairs

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)

Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, 78597c, Steven Joseph Dupuis, has requested a permit to import a trophy of one lion that he lawfully hunted in Zambia. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Zambia on the date specified in the permit application.

The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Zambia.

The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Zambia. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

Determination

No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.** **X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** _____

Subject: Re: [EXTERNAL] RE: Lion Permit

Dear Darcy,

This is regarding Permit No. 78597C. I just spoke with Lisa Jamnik and the bo om line is, they would not have had you send the permit to them via Federal Express. They always use Regular Mail. She has not received the permit. Dl&CHB is no longer handling Mr. Dupis account.

Please send the permit to Mr. Dupuis at his home address listed in SPITS.

Thanks,

RCVD MAR 30 2018

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

Conservation Force
3240 S. I-10 Service Road W., Suite 200
Metairie, Louisiana 70001 USA
T: (504) 837-1233
F: (504) 837-1145
E: cf@conservationforce.org

Signed (b) (6)

Name: Tubulus John Kerr. III

Date: 19 MARCH 2018.

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual			
1.a. Last name: KERR	1.b. First name: Eubulus	1.c Middle name or initial: John	1.d. Suffix: III
2. Date of birth (mm/dd/yyyy)	3. Telephone numb(b) (6)	nate telephone number	4. E-mail address

(b) (6)

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution			
1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information				
1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address) (b) (6)				
1.b. City: Shreveport	1.c. State: LA	1.d. Zip code/Postal code: 71106	1.e. County/Province: CADDO	1.f. Country: USA
2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete	
1.	Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentatio*** 13.11(d))
2.	Certification: I ons contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other d I certify that the information submitted in this application for a permit is complete and that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii)The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?
myself - (b) (6) [redacted]

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No ✓ Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   PANTHERA LEO, AFRICAN LION

   b. Sex (if known). MALE.

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   MATETSI Unit 1, Matabeland North, Victoria Falls, Zimbabwe.

   b. Date wildlife is to be hunted: MAY 1 - 21st, 2018

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   MARTIN Pieters

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:
   /

   b. Date wildlife was hunted: /

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:
   /

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:
   /

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). NOT hunted Yet.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Trophy Consultants International
Business Name:
Address: 4 Josiah Chinamano Road
City: Belmont
State/Province: Bulawayo, Zimbabwe.
Country, Postal Code:

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   PLEASE SEE ENCLOSED + INFO SUBMITTED BY CONSERVATION FORCE + ZPWMA

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   " "

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

   " "

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand [redacted] d States, cannot be re-exported.

    Applicant's signature: [redacted] Date: MARCH 19th, 2018

    Be aware that there [redacted] quirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Big game hunting in Zimbabwe.....making a difference to communities

Hunting in Zimbabwe

When you think of Africa, what comes to your mind.....lush plains,flowing rivers,animal migrations.....big cats, safari lodges and kitted game drive vehicles, visions conjured up by numerous wildlife documentaries, dvd's showing exclusive photographic safaris with discerning clientele being pampered by attentive staff.....yes the scenes shown to us make us believe that all is well in Africa. Thats all very well, but realistically, Africa is not all about the above, there are many, many areas that have limited land use options, this is based on rainfall, wildlife numbers, accessibility and terrain. Most of these ' forgotten areas ' are not good enough for the photographic companies, no one wants to invest in the unknown, return on investment would be negative....., so what happens.....

Enter the safari operator,professional hunter and dedicated wildlife enthusiast.....the client. Countless millions of dollars are poured into these areas annually throughout Africa by true conservationists, people who care about the preservation of our species for future generations. One such area (and there are many) is the Omay, Nyaminyami RDC, operated by Martin Pieters Safaris, www.martinpieterssafaris.com

For many years we have poured hunters dollars into this remote area, educating communities, conducting anti poaching actives, reintroduction and relocation of wildlife , construction of clinics and schools..... 9 years down the road, what do we have.....an area renowned for big game, a community that is happy and a generation that focuses on wildlife conservation and not poaching activities.

In 2014, African conservancies was born and plans for the Ume River Conservancy were laid on the table, further cementing the relationship between dedicated safari operators and the community, allowing them to be directly involved in wildlife based decisions. Plans are currently underway with approval from local government to create a large remote conservancy where sustainable off take of certain species will form the back bone of wildlife conservation. 2 years down the road, we are already seeing the results as populations of several species are increasing whilst poaching activities are decreasing.

There is a lot to be done, but by taking these positive steps, by involving the local residents, by making use of these ' remote and forgotten areas ', areas that are unsuitable for the typical pampered photo safari enthusiast.....we will continue to turn them into areas teeming with wildlife, an area to be proud of.....thank you to our hunters.

Sustainable off take benefiting communities

Sustainable off take

Since 2007 we have been involved in dedicated wildlife conservation through sustainable off take, quota control, anti poaching and community based wildlife education in the Omay campfire concession.

The Omay (NyamiNyami RDC) is a vast (2 million acres) populated communal land which one of the first areas to be given the CAMPFIRE status, whereby local communities benefit from wildlife off take, it is not rocket science that this program works as we continue to see an increase in wildlife numbers in our area. Communities receive direct benefit both financially and through various projects implemented by Martin Pieters safaris such as clinics, schools, vehicles for anti poaching and the employment of scouts. It must be noted that the Nyaminyami RDC is a remote inhospitable concession that has no other land use model due to very erratic and low rainfalls, an abundance of mosquitos, tsetse flies and poor soils. The only benefit local people have, is to receive financial remuneration from hunting safari off take and employment.

We at Martin Pieters safaris, www.martinpieterssafaris.com employ locals in all our camps as well as a dedicated anti poaching team that works alongside the RDC (council), national parks, the police and the MAPP (Matusadonna anti poaching project), we continue to collect snares, arrest poachers and follow up on convictions and more importantly, educate people on the long term sustainable use of our national heritage. This method has been proven and several past poachers have turned tables and are now our most trusted wildlife officers, using their past notorious skills to help us protect our wildlife.

Every year several local villagers are killed or maimed by elephant, lion, buffalo, hippo and crocodile, they live in close proximity to these animals and only tolerate them because we as a hunting

Archives

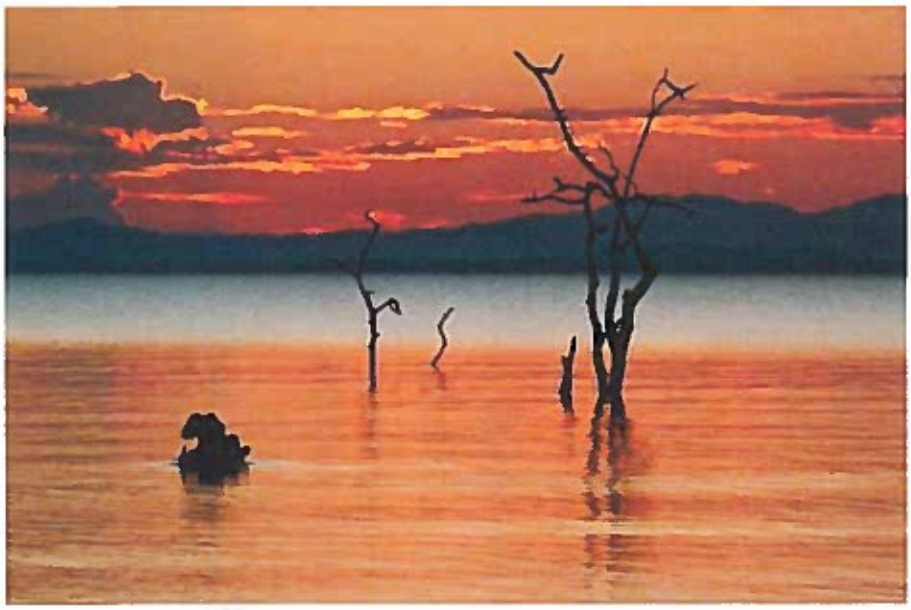
› May 2015

company give back to the community. It is very important for the protection of our wildlife in these remote areas that we continue to assist the RDC with anti poaching, continue to pay for the sustainable off take of a select quota, because if we do not, the locals will kill every animal, they will not tolerate wildlife disruptions to their families, be it through the destruction of their crops on an annual basis, or the loss of one of their family members.

Our wildlife populations are on the rise, we border the Matusadonna national park, there are no fences to stop animals movements, we are very much needed, even more so now with current rainfall patterns at their lowest, poaching will increase as people find it difficult to grow crops, we will not let the last 10 years of effort to protect our wildlife be a waste, we will not leave these villagers high and dry with no form of income or food.

We thank our hunters for their continued support. It is because of you that our conservation methods are successful.



We spend in excess of $ 40 000 / annum on anti poaching

We have collected over 15 000 wire snares since 2007 saving thousands of animals.

We assist in arrests of subsistence poachers and heavily armed

elephant poachers, we follow up with convictions so that these men and women can be put away and our animals will be safe.

We monitor game movements and patterns and adjust our quotas accordingly so that we continually have an increase for future generations

We have assisted in the construction of clinics, schools and information centers.

We employ over 30 locals in our camps and in the field thus as siting hundreds of locus through indirect benefits.

Last but not else, we pay over $ 200 000 in direct benefits annually to the RDC and the local wards for wildlife off take.

Anti poaching …fighting back

AFRICAN CONSERVANCIES ANTI-POACHING 2015

AFRICAN CONSERVANCIES

African Conservancies was established in 2014, it's first project was in Nyaminyami Rural District Council in the Omay Communal Land hunting area. A.C comprises Carbon Green International, the relevant Rural District Council and the relevant community in which the conservation plan falls. A trust has been formed that will include these parties as beneficieries.The primary goal of A.C was to locate a suitable area to form, build and manage a sustainable community conservation area. The Omay 1 hunting area between the Ume and Sengwa Rivers was selected as a perfect phase one. The criteria of selection includes; being communal land hunting area, fall within the C.G.I REDD+ project area.

OBJECTIVES OF AFRICAN CONSERVANCIES

The primary objective of A.C was to select an area within the REDD+

project, (stretching from Binga to Kanyemba in the communal areas) and partner the community and council. The belief in building sustainable conservation areas and in particular enabling communities to truly and directly benefit from from this sustainable utilization is at the core of this project.

The immediate goals with the Ume River Community Conservation Area were to reduce hunting offtake and reduce poaching. The hunting offtake was reduced in 2014 and in 2015. For example, 2014 saw twelve buffalo being hunted from the quota of thirty five. 2015 we will have a buffalo offtake of ten from the possible thirty five. Having done our own numbers on the ground, our offtakes are very conservative and the population increase through relocation due no pressure is clearly visible with far better trophy quality.

Anti poaching began in 2014, the six C.G.I scouts based out of Manyuli camp close to the Gokwe boundary and six scouts based out the Ume hunting camp. We decided at the close of 2014 that the anti poaching was not having enough effect on the structured elephant poaching, so in March 2015 Steve Wentzel and I decided that it needed direction and management. So beginning March, I personally came into the Omay to oversee and manage the anti poaching teams.

I immediately amalgamated the two teams and brought in Mr. Charles Khumalo to head up this new team. Charles is ex Zimbabwean National Army, a brave, dedicated leader who has commanded not only the respect of this unit, but myself and the community at large.

We started in house training incorporating weapons training, tactical house clearances, offensive tracking and building a more intense unit that could cope with a far more aggressive natured outlook to the poaching problems. This immediately began to produce results.

Our focus has been on hardened armed poachers with the theory that the snare and dog meat poachers would be dealt with in the process of eliminating the more "serious" elements.

AREA OF OPERATIONS

Though we in theory are based in the Omay communal land, our operations stretch into Gokwe, around Chizarira and Charisa and Binga. due to our operations being outside of the National Parks we predominantly operate with Police details and R.D.C scouts. Our entire unit has now been accepted as Police reservists and are awaiting their Police force numbers. It has been agreed that our unit

having been accepted as reservists, will establish a dedicated reaction team within the police force that I shall train and manage.

OPERATIONS

Begining 2014 we funded the basing of James Mcallwain from MAPP out our hunting camp in Chipfudze on the Southern boundary of the Matusadona National Park. The reasoning for this was obviously to maintain the Parks presence on this boundary, which was non existent due to lack of capacity. Secondarily, James was to establish an informant network that would offer up targets for our unit to react to. This was very effective and results were immediate.

With James leaving MAPP in August 2015, the MAPP trustees unfortunately decided to move their operations back into the Park. This led to a huge information breakdown and vacuum.

August 2015 Charles Khumalo was tasked in resurrecting and bettering the information networks as reacting to shots fired is almost a pointless affair. The poaching teams shoot toward last light, fifteen minutes from shots fired, the elephants face is chopped off and they are moving.There is no way to track them fast enough to catch them up at this stage. The needle in haystack affair is almost pointless for arresting poachers. There are over one hundred and fifty square kilometers of bush to patrol, it would require an army to do this. Our first goal was to bring into operations a full time intelligence operative whome we had been grooming for this position.

The informant/intelligence network has had significant effect, we have over one hundred and twenty people on our books. Over ninety percent of our arrests have occurred and been made possible through the capturing or paying for intel. We have put in place "watchers" who monitor targets and wait for opportunity to ensure arrests have hard tangible evidence for prosecution. "Mapani" whom he was second on our priority list and pulled the trigger on the three elephant days after the Sebungwe Action Plan Meeting; was monitored for four months prior to his arrest late October. Literally we actioned the arrest when his "watcher" informed us that he had begun drinking beer with tusks and firearms still being present. After four long months, he eventually made a mistake!

ARRESTS

Below are a list of arrests of hardened elephant poachers, I have omitted all of our lessor arrests of meat poachers.

February 7th 2015

Reaction to shots fired Matusadona southern boundary resulted in a joint op with Parks rangers with our tracker team. Poaching team ambushed and two armed poachers killed. One "John Raymond" being a casualty of this contact was fourth on our priority list. Firearm 303 recovered.

February 12th 2015

Sting operation on the Gokwe boundary resulted in the arrest of three "dealers" supplying arms and ammo to the poaching syndicates. One tusk, thirty rounds 303 and forty five 7.62 intermediate (AK 47) rounds recovered.

March 12th 2015

Contact and exchange of fire in Manyuli, no casualties but a 303 rifle recovered.

April 22nd 2015

Raid carried out on "Magura" syndicate whilst infiltrating. Arrests effected on entire team of four with recovery of 303 rifle.

April 23rd 2015

Intel from "Magura" arrests led to the arrest of "Mark Neberi" who was third on our priority list.

June 23rd 2015

"Jabu" syndicate shot and killed an elephant in the park on the late afternoon of the 22nd June. Sting operation produced 20kg tusks and an arrest. Further information led to the arrest of team members.

July 23rd 2015

Escapees from the February contact arrested and two 303 rifles recovered.

October 22nd 2015

"Mapani" second on our priority list finally cornered with seven tusks one 303 rifle and one 450 watts. His accomplice and partner "Malalanzi" could not be implicated in this arrest, remains monitored and in second place on our priority list. 375 rifle they were using has been "located" and is being monitored for uplift.

FUTURE OPERATIONS

Future operations will continue in the Omay communal land, the hard hitting unit has had a serious effect on poaching syndicates. The informant network has reduced the "safety" factor for the syndicates. We are able to reach right into their homes and they have no secure areas to operate in.

The community outreach via the chiefs seems to be having an effect. Chief Negande has issued an order that anyone assisting poaching syndicates will be banished from the Omay. The subsequent banishing of two of his subjects over the last month has sent a very strong message about how serious he has become!

The upsurge in armed Zambian incursions in the lower Zambezi has us concerned with intel coming in of Zambian teams planning to operate here. The Cyanide is our major concern. Having only picked up poisoned fruit in July with no further cyanide incidents we were fairly relaxed about it. Subsequent to the MAPP arrest of the "Kariba" cyanide team, one of their members who escaped prosecution has been into our area. I am currently running a campaign in the community educating them of this problem. It is finally dawning on people that these elephant poachers will poison water sources that will not only kill elephant, but their livestock and families are at risk to.

As always, funding these operations and supplies of material are a constant battle. Carbon Green and Ume River Conservancy face the brunt of this funding with perpetual short falls. We rely on cell phones for communications, which is erratic at best! Firearms and ammunition have been supplied by me personally, again we are short if all members are in field. The idea of us tackling these teams with catapults and axes sounds ludicrous but is whats happening! So we are perpetually looking for help keeping the ball rolling.

Chris Moore

Ume River Conservancy

NYAMINYAMI RURAL DISTRICT COUNCIL

The Communal Areas Management Programme for Indigenous Resources (CAMPFIRE)

The background of the Community Based Natural Resources Management approach in Zimbabwe

In Zimbabwe the Community Based Natural Resources Management is practiced under the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE). The programme started in 1988 and Nyaminyami Rural District Council and the then Mbire Rural District Council were the pioneers in starting to implement it. Nyaminyami has 12 wards and 11 of them partake in the CAMPFIRE programme. The concept is to ensure that the local communities are benefiting from the sustainable utilization of their natural resources. The major source of the revenue for the community under this programme is the sport hunting. The district has three hunting concessions namely Omay Area1 under Bulembi Safaris t/a Martin Pieters safari, Omay area 2 under Safrique safaris and Gache Gache Area 3 under Track-A-Hunt safaris. The funds derived from this source are channeled straight to the producer communities for community developmental projects. The district has got a department of wildlife which together with other stakeholders combats illegal exploitation of natural resources as realized as of economic and social importance. Below is revenue accrued from 2013 to 2014, projects implemented by respective wards and law enforcement efforts.

Re: Supporting information for applications PRT 84787C and PRT 78392C

Dear Ms. Barry:

Enclosed please find information to further support the enhancement generated by regulated hunting for two import permit applications that we believe have been assigned to you.

- The first, PRT 84787C, is hunting with Martin Pieters Safaris in Zimbabwe. Mr. Pieters responded to some questions about the anti-poaching and community benefits generated by hunting in the Matetsi Safari Area. Please consider this information in making a positive enhancement finding for this applicant, and please consider the Non-Detriment Finding submitted by the Zimbabwe Parks and Wildlife Management Authority (October 2016), which provides information about the benefits of regulated lion hunting in Zimbabwe's Safari Areas.
- The second, PRT 78392C, is hunting with Gary Duckworth in Save Valley Conservancy in Zimbabwe. We have previously submitted extensive information about SVC, but the operator has provided more. Among other things, this information demonstrates the operator's commitment to habitat conservation and anti-poaching, and the scientific process employed in ensuring healthy wildlife populations and sustainable use. Please note, the operator has also provided more specific information about the location of this hunt (e.g., GPS coordinates and the closest city). He has also provided the PH name. This was not initially provided because this applicant submitted the application prior to release of the new forms. Finally, the operator has corrected the "shipper" for what was question 4 and is now question 8 (the name and address of the person or business shipping the trophy). Would you please substitute this corrected information in place of Mr. Duckworth's name when the final permit is issued. Please let me know if you have questions, and please consider the enclosed information in making a positive enhancement finding for this applicant.

Please do not hesitate to contact us if you have questions about these applicants or need further information.

Sincerely,

Regina Lennox

Martin Pieters (b) (6) Wed, Apr 11, 2018 at 9:45 AM
To: regina.lennox@conservationforce.org
Cc: aaron Baker (b) (6), Aaron Baker (b) (6), "Eubulus Kerr, (b) (6)

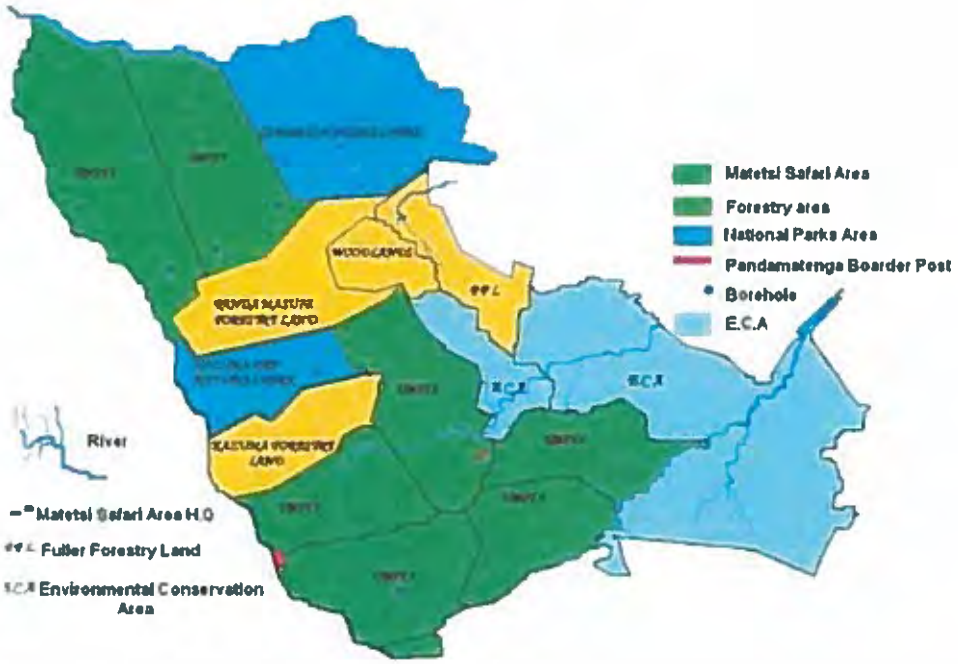
Dear Regina

Sorry for the delay.
I actually have two USA clients hunting lion, Aaron baker (b) (6) actually he has hunt shot his lion with me and will be in touch) and Eubulus Kerr (b) (6)

Both lions will be hunted in the MATETSI region which is a controlled hunting area governed by the Zimbabwe National Parks and Wildlife Authority.

1.

MAP II: MATETSI SAFARI AREA SHOWING THE SIX HUNTING UNITS, KAZUMA, PANDAMASUIE AND ICA.



2. The wildlife authority has all its own reports as they are in contra of the Matetsi safari areas.

3. The ZNPWA have been in control of the Matetsi safari areas for over 40 years and does all its own armed anti poaching as well as community assistance on its boundaries

4. For periodic reports, the ZNPWA would have all those documents.

5. Arial surveys and 48 hour game counts are conducted annually in the Hwange national park which lies

adjacent to Matetsi safari area and forestry hunting blocks.

6. Armed rangers are paid by the department of national parks and they get rewarded for successful apprehension of poachers.

7. It is a safari area hence no villages actually live in the area, the villages surround the hunting area and they benefit fro meat and off take from hunting clients which benefits them through the successful CAMPFIRE program.

8. Zimbabwe has a minimum age of 5 years with penalties to safari operators and professional hunters if an underage animal is shot.

9. Hwange National park which adjoins the matetsi block has a dedicated research team and many collared lion for research purposes. The lion population has increased dramatically over the last 5 years due to minimal quotas, successful ageing and community involvement.

10. Matetsi safari area is home to the one of the largest free ranging herds of elephant and buffalo in Zimbabwe. There are no fences and it adjoins hwange national park and Botswana where unrestrained movement of wildlife occurs.

Regards

Martin

Good morning Eric,

I hope this finds you well and being successful with your application. I see a recent ruling by USFW is favourable. I thought to send you some information that may help with your application. Sorry I didn't send before but forgot I had these. I have attached some notes that I had written up before. Also attached are our leopard data from Mokore just to show our healthy predator population and also the data we use to try and ensure we judge the lion's age correctly from our trail camera pictures. Also a copy of our PH rules sent to any PHs operating in our areas showing the seriousness we have to ensuring the right animals are harvested. Don, do you have any more recent counts on the SVC lions. I think he last year's count was 225. Still 75 lions above what our ecologists say is

sustainable. I have also copied in a document Neil did on Conservation Through Hunting which shows our companies dedication to these areas even though this is for Mozambique it is our company MO.

Answers that you may need from the permit application if not already done:

> Good afternoon Eric,
>
> I hope this finds you well. Rob had asked me to assure you that should you not get the import permit for the lion into the USA that we would either return your deposit to you or allow you to roll it over to another year or safari. All deposits are held in an account in Mississippi with our agents at African Horizons. Should your application be turned down for the import of the lion then they (African Horizons) can easily return your deposit should that be your wish. Looking at the fish and game website I am fairly confident that your application should have a positive outcome especially since the Save has not only enough lions, but possibly too many! Please do not hesitate to contact me should you have any further queries.

Mokore Safaris (Pvt), Ltd.
7 Stable Close, Borrowdale, Harare, Zimbabwe.
Operator: Duckworth Family.
garyduckworth@mokore.com
Operating in: Save Valley Conservancy and Sengwa Research Management Area

I. DESCRIPTION OF COMPANY AND CONCESSION

Mokore Safaris has been operating in Save Valley since it's conception in late 1992. It also has been operating the the Sengwa Research Management Area since January 2013. (This is a 5 year lease with first option to roll over for a further 5 years). The Mokore Safaris section in the Save Valley is 35500 acres and provides habitat for a range of species including black and white rhino, buffalo, lion, leopard, cheetah, crocodile, wild dogs, hippo, kudu, eland, elephant, impala, bushbuck, bushpig, hyena, warthog, zebra, giraffe, waterbuck and sable (lion and leopard prey). It is also home to numerous smaller creatures like grysbok, klipspringer, etc. Sengwa Research is 94000 acres and is home to elephant, buffalo, lion, leopard, crocodile, kudu, eland, impala, bushbuck, bushpig, hyena, warthog, zebra, reedbuck and waterbuck (lion and leopard prey). It is also home to numerous smaller creatures like grysbok, klipspringer, etc.

Our company is family-owned and has been operating in this country since 1979. We employ three full time professional hunters, 3 part time Professional Hunters and also 48 men, 5 ladies and 2 casual labour. Altogether our operations support at least 600 dependents in local villages through our continual work on the schools, roads and dams in the neighbouring village areas. Also supplies of meat and school equipment benefits the surrounding communities.

We have a written concession plan with anti-poaching and community components....

II. ANTI-POACHING COMPONENT

Mokore Safaris maintains a 8 man anti-poaching team at an annual cost of over $60,000 in the Save Valley Conservancy and supplement Zimbabwe Parks and Wildlife Authority anti-poaching team with a vehicle driver and four rangers in the Sengwa Research Area.... Each team is equipped with a four-by-four vehicle, uniforms and boots, tents, rations, and radios. Our teams closely cooperate with the Wildlife Authority to conduct daily patrols of the concession and the neighboring properties that were taken during the land reform programme. We supply rations once a week to our scouts and assist the government game scouts in acquiring rations to ensure they are sufficiently equipped for the patrols.

We heavily patrol our areas, conducting approximately 3 patrols per day by vehicle and foot in the Save and the same again in Sengwa Research. In the past year, our teams picked up numerous snares and arrested numerous poachers hunting with dogs. Also in the Sengwa Research Area our teams with Zim Parks Rangers have arrested and also killed a number of ivory poachers. Removing snares protects the lion population by reducing incidental snaring.

We also send out road crews annually to redo the roads in the concessions, to ensure we are able to patrol effectively. These are maintained throughout the year.

In 2015, Mokore Safaris (Zimbabwe) spent approximately $100,000 in our blocks on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 4000 liters of diesel for patrol vehicles. We also spent $ 5500 on diesel for pumping water for wildlife in areas where there is not enough natural water for wildlife to survive. This does not include the costs of water pump and engine maintenance. And we made over $ 4000 in payments of rewards.

COMMUNITY PARTICIPATION

A. Community Assistance Component

Although there are no villages in the concession itself, we share four borders (three in Sengwa and one in Save Valley) with a heavily populated communal district. We make contributions to the two closest villages and the district council. We lease an adjacent area to the concession from the council, and pay a lease fee as well as 85% of trophy fees to the Bikita Rural District Council.

We pledge an annual contribution of at least $10,000 + in projects to the villages. We ask for a list of preferred projects at each local school and clinic. We also do the main roads annually in the Village 26, Bikita and Muchiringi Districts. We annually dredge the local dams. We supply all meat taken from any elephants harvested on our concessions to the local communities as well as supplying meat for any State Functions.

B. Conflict Control

We also take reports from villagers about problem animals and do our best to keep elephant out of community gardens during harvest. This applies to livestock losses through predation too. We obviously try and use all means to discourage problem animals before having to take more drastic control measures.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession including over 30km of piping and 12 waterholes. We drilled, operate, and maintain two boreholes and numerous pans. Pumping costs (diesel usage only) is +-$ 5500/annum. The increased water supply increases the carrying capacity of the concession and the lion's prey base.

V. OTHER INFORMATION

A. Prey Base

Mokore Safaris along with our other partners in the Save Valley Conservancy's anti-poaching efforts, water provision, and fire management have allowed the lion prey base in our concession to grow over the past twenty five years. Please see attached report on the game numbers increases and lion surveys report. In Sengwa research Area we estimate that our plains game (buffalo, kudu, sable, etc.) have increased by 15-20% in the last 3 years. Also, much of our anti-poaching and community assistance efforts are aimed to reduce livestock encroachment into the concession.

B. Lion Population Tracking

Lion are notoriously difficult to survey or census. To track the lion population trend in our concession, Save Valley Conservancy does an annual spoor survey for predators as well and an aerial survey for other species. Due to the fact that we keep tabs on the lion in our concession, we are

assured that the regulated, limited offtake is sustainable. In Sengwa Research we use trophy and age monitoring of all species hunted and manager estimates to regulate our offtakes.

C. Lion Aging Approach

Mokore Safaris has been following an age-based policy for African lion trophies since 2012, when we adopted a company rule not to harvest lion below five years of age, and to be conservative in estimating age.

As a result, on lion hunts we often pass by a number of potential lion before allowing a client to harvest a specimen. Sometimes we do not shoot a lion at all because we are so selective.

D. Lion Hunting Revenue

Lion are our highest-value species. We require 21-day safaris for lion. Our daily rate is $2,500 per day, plus a trophy fee of $15000 (lion). Without this revenue plus the revenue we have already lost due the ivory import bans, our anti-poaching and habitat enhancement efforts will be seriously reduced.

E. U.S. Hunters

Most of our clients (95%) are from the United States. These hunters have a conservation ethic and usually contribute above their fees to anti-poaching or our community compensation fund or community assistance programs.

CONCLUSION

Mokore Safaris' regulated, sustainable-use based hunting program enhances the survival of the lion. Our program helps to preserve and improve available lion habitat. Our anti-poaching program serves to protect and grow the lion's prey base and reduces incidental take of lion by meat poachers. And our community participation and assistance program demonstrates the potential value of wildlife (especially lion) to local communities. Recognizing this value causes the communities to want to protect their wildlife and reduces human-wildlife conflicts.

Signed: _____

Leopard Data 2015/2016

Mokore and Umkondo Ranch

Savé Valley Conservancy

Introduction

Leopards (*Panthera pardus*) are found throughout Mokore and Umkondo Ranches with in Savé Valley Conservancy (SVC). Mokore Safaris has been hunting leopard for numerous years as a form of trophy hunting or sustainable utilization. Trophy hunting consists of targeting mature male individuals, and as of more recent, individuals aging older than approximately four (4) years in age. The purpose of this document is to identify randomly selected bait sites and the leopards identified at these specific bait sites.

Method

The Professional Hunter or individual tasked with pre-baiting or baiting for leopard chose a randomly selected bait site in attempt to lure a male leopard into feeding. Due to the fact that females also utilize bait sites, records on any females feeding are also monitored. The selected bait sites are randomly chosen throughout Mokore and Umkondo Ranches. Camera traps or trail cameras are then placed at all bait sites. For identification purposes, it is attempted that all leopards captured feeding with the camera placed in such a manner that the right side of the leopard is photographed. This is however not always possible due to preferred bait site selection. It is thus recorded which side of the leopard pictures are taken of.

Male leopards are given names that aid in either easily identification of the cats or are named as per the bait site that they initially feed on. Females were named simply by property and in numerical order. For example, a female leopard feeding at the Gwezi River bait site on Mokore would be named MF001. If this female had a cub feeding alongside her, the cub would be named MJ001 and would have a recording that the cub belongs to MF001. Where MF is Mokore Female and MJ is Mokore Juvenile. The sex of each leopard was also recorded. For all juveniles the sex is recorded as unknown due to difficulties in identifying sex at a young age.

Photos are saved of all cats recorded either a right side, left side or both sides where possible. If a cat was found feeding on a different bait site, this was also recorded. An estimated age was also assigned to each male that was found feeding. The age was estimated using the Panthera ageing guidelines as well as PH age estimations.

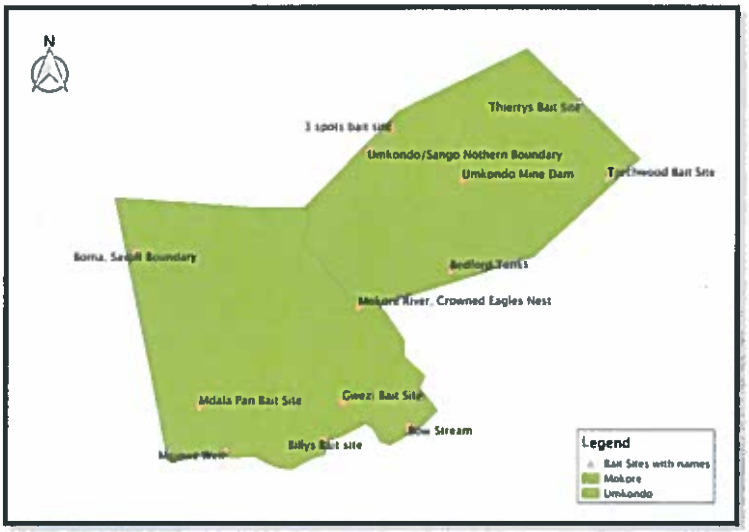

Image 1: Randomly selected bait sites throughout Mokore and Umkondo Ranches.

Results

Due to the fact that Mokore Safaris utilize two (2) properties, the data is classed into two groups, namely Mokore Leopard and Umkondo Leopard. A total leopard population is also determined due to the fact that holistically the same company treats these blocks as one management unit. It is to be mentioned that the data is based on some of 2015 and all of 2016 hunting season. Majority of the data for 2015 produced errors upon processing. However some data is made available on leopards being taken and locations thereof.

Mokore Leopard

The data gathered for Mokore is based on information gathered by randomly selected bait sites as mentioned above. It can be noted that a large portion of Mokore went without being baited, close on 2 000 ha. For the purpose of this document, this 2 000 ha was not excluded from the total area. It is hypothesized that this will have an effect on the total leopard numbers as well as leopard densities found on Mokore Ranch.

All data is separated into two classes, namely pre and post hunting. It is deemed that other males who in turn will occupy the available territory replace males removed from Mokore.

A. Pre-hunting leopard numbers and densities

Mokore Ranch is approximately 7 841 ha in size. A total number of fourteen (n=14) leopard were identified on seven (7) bait sites throughout Mokore. It can be noted that a total number of five (5) bait sites fell in close proximity to the Turgwe River. As previously mentioned, the centre and north-eastern area of Mokore was found free of baits. This does however not mean that no leopard utilize this area. A total number of five (5) males, six (6) females and three (3) juveniles were identified on Mokore.

Densities of Mokore resulted in 560 ha/leopard. Males had an average density of one (1) male per approximately 1 568 ha. Females and Juveniles having an approximate density of one (1) individual per 871 ha.

B. Post hunting leopard numbers and densities

For the purpose of the document, it is concluded that a total number of two (2) male leopards were removed from the population in 2016. This in turn results in a lower density of male leopard for Mokore. This density being approximately 1 000 ha larger per male in post hunting than what it was in pre-hunting conditions. It can however again be mentioned that these available territories will become occupied by other males moving into the area.

Umkondo Leopard

The data collection for Umkondo is done in the same manner as on Mokore. It can also be noted that on Umkondo, no bait sites were place within an area of approximately 1 300 ha in size, namely around the Mokore River west of the main road. This area is adjacent to that of the area that was not baited on Mokore Ranch.

A. Pre-hunting leopard numbers and densities

Umkondo Ranch is approximately 6 736 ha in size. A total number of eleven (11) leopards were identified on six (6) baits throughout Umkondo. A total of number of four (4) males were recorded, five (5) females and two (2) juveniles. A total density of approximately one (1) leopard per 612 ha presented itself on Umkondo. Males had an average density of 1684 ha per individuals. Females and Juveniles had an approximate density of 962 ha per individual.

B. Post hunting numbers and densities

A single (1) individual was removed from the population on Umkondo Ranch for 2016. As a result of this the male density differs approximately 560 ha greater per individual post hunting.

Combined Data

Combined a total of twenty five (25) leopard were identified, with an approximate density of 583 ha per leopard. Males having an approximate density of 2 429 ha per individual and females and juveniles 911 ha per individual. This data is based on the post hunting data. Numbers and densities will change pre-hunting season 2017 depending on whether or not available territories become occupied. A large area of approximately 3 300 ha has also gone un-baited. This will also affect leopard numbers and densities especially when considering females and possibly juveniles.

Discussion

When considering data pertaining to this document it is important to note that some leopards both on Mokore and Umkondo would have been missed due to numerous reasons. Main reasons are areas being devoid of baits and the possibility of males not feeding on baits is not to be ignored. It is hypothesized that the 2017 pre-hunting season will yield higher numbers and densities of leopards, especially males.

A total number of three (3) leopards were removed from the population in 2016, two (2) on Mokore and one (1) on Umkondo.

Aging the African Lion

A Training on Aging Lions

Version 1 (May 2016)

Background and Applications

Lions in Africa

As the dominant predator in Africa, the African lion (*Panthera leo*) is highly valued for its ecological role and importance for the tourism industry. However, lions have declined by an estimated 42% over the past 21 years (3 generations) to approximately 20,000 individuals (Bauer et al. 2015). Robust tools for assessing and managing lion population dynamics are critical for survival of the species.

Why Age Lions?

Age is a common metric used throughout the world to guide the management, research and sustainable harvest of many types of wildlife, including large carnivores, ungulates and fish. Knowing an animal's age is critical for accurately estimating key elements of wildlife behavior and life history, such as reproduction, survival, movement and population size. Our ability to successfully conserve and manage wildlife depends on how well we understand each animal's social and biological role, which is closely tied to age.

Implications for Management and Research

Managers use population models based on the age structure of a population to help predict how different management scenarios or environmental stressors might affect the future of a species. Population models project a species' population size based on information about a species' life history, including conception rate, birth rate, survival of young, age at puberty, territoriality and other behavioural characteristics. The age or life stage of an animal is closely tied to its reproduction, survival, behavior, and other aspects of its ecology that can affect population stability. Thus, an animal's age in the context of its population can provide valuable information about the future of a single population and, for threatened species like the African lion, even the species as a whole.

For this reason, age is an important metrics collected by lion researchers. For example, researchers that collar individual lions must be able to accurately age the lions they study in order to understand lion behaviour in a broader context. Ensuring that lions have the natural resources and the protection that they require at different phases of their lives is critical for ensuring their conservation.

Importance for Sustainable Hunting

Lions are the only social big cats in the world. Each pride consists of 4-5 adult lionesses, their dependent cubs, and a temporary coalition of pride males. Pride males play a key role in defending their pride against invading males by forming coalitions of 2-3 males to defend the pride territory through roaring, patrolling, scent marking and aggressively approaching invading males. When new males enter a pride, they often kill cubs (a behavior termed "infanticide") in order to bring lionesses into estrus more quickly so they can produce offspring. Infanticide

Resources

Resources for Learning to Age Lions

The ability to accurately age lions takes time and practice to develop, but is the sign of a dedicated and accomplished expert who understands lion biology. We encourage you to take advantage of the other resources that were developed alongside this training by visiting http://AgingTheAfricanLion.org, including:

- Test – Measure your lion aging accuracy
- Photo gallery – Images of known-age lions
- Pocket guides – Quick tips for aging

Before You Begin: Test Yourself!

To see your improvement after taking this training, we encourage you to test your lion aging score online at http://AgingTheAfricanLion/TestYourself.org. When you finish the training, test yourself again!

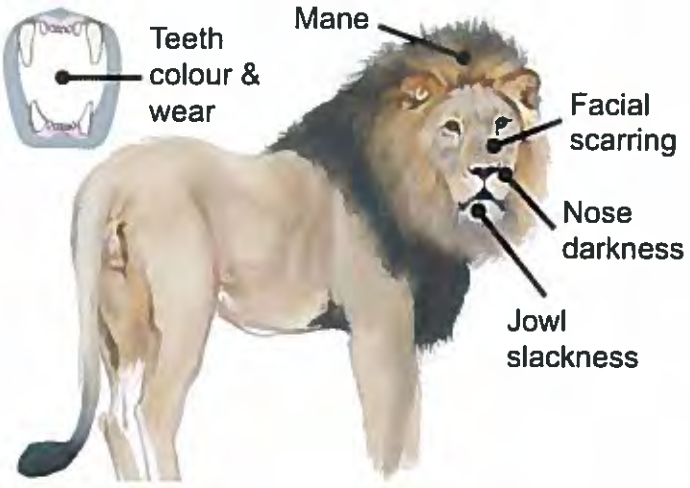
Training

How to Age a Lion

Scientific research on lions across Africa shows that a male lion's appearance changes with five main physical characteristics that can be distinguished into four age classes (Miller et al. 2016):

Aging Characteristics
- Teeth color and wear
- Facial scarring
- Nose darkness
- Mane
- Slack jowl

Age classes
1-2 years
3-4 years
5-6 years
≥7 years



Minor variation in each physical characteristic between lions of the same age means that a single trait should never be used alone to determine age: always reference 3-4 characteristics to reliably narrow down a lion's age. This will ensure the greatest accuracy possible.

Aging Characteristics

1. Teeth Color and Wear

Teeth become more yellow and worn with age.

1-2 years
White, sharp

3-4 years
Light yellow,
sharp or lightly worn

5-6 years
Light yellow,
lightly or heavily worn

≥7 years
Dark yellow, lightly
or heavily worn

2. Facial Scarring

Lions acquire scarring and pocketing on their faces due to fighting.

1-2 years
No scarring

3-4 years
No or light scarring

5-6 years
Light scarring

≥7 years
Heavy scarring

3. Nose Darkness

Lion noses darken from pink to black with age.

1-2 years
Mostly pink
0-30% black

3-4 years
Slightly black
20-60% black

5-6 years
Mostly black
40-70% black

≥7 years
Nearly all black
40-100% black

Next Steps

Photo Galleries & Pocket Guides

After finishing this training, check out the other resources available at http://AgingTheAfricanLion.org:

- Test – Measure your lion aging accuracy
- Photo gallery – Images of known-age lions
- Pocket guides – Quick tips for aging

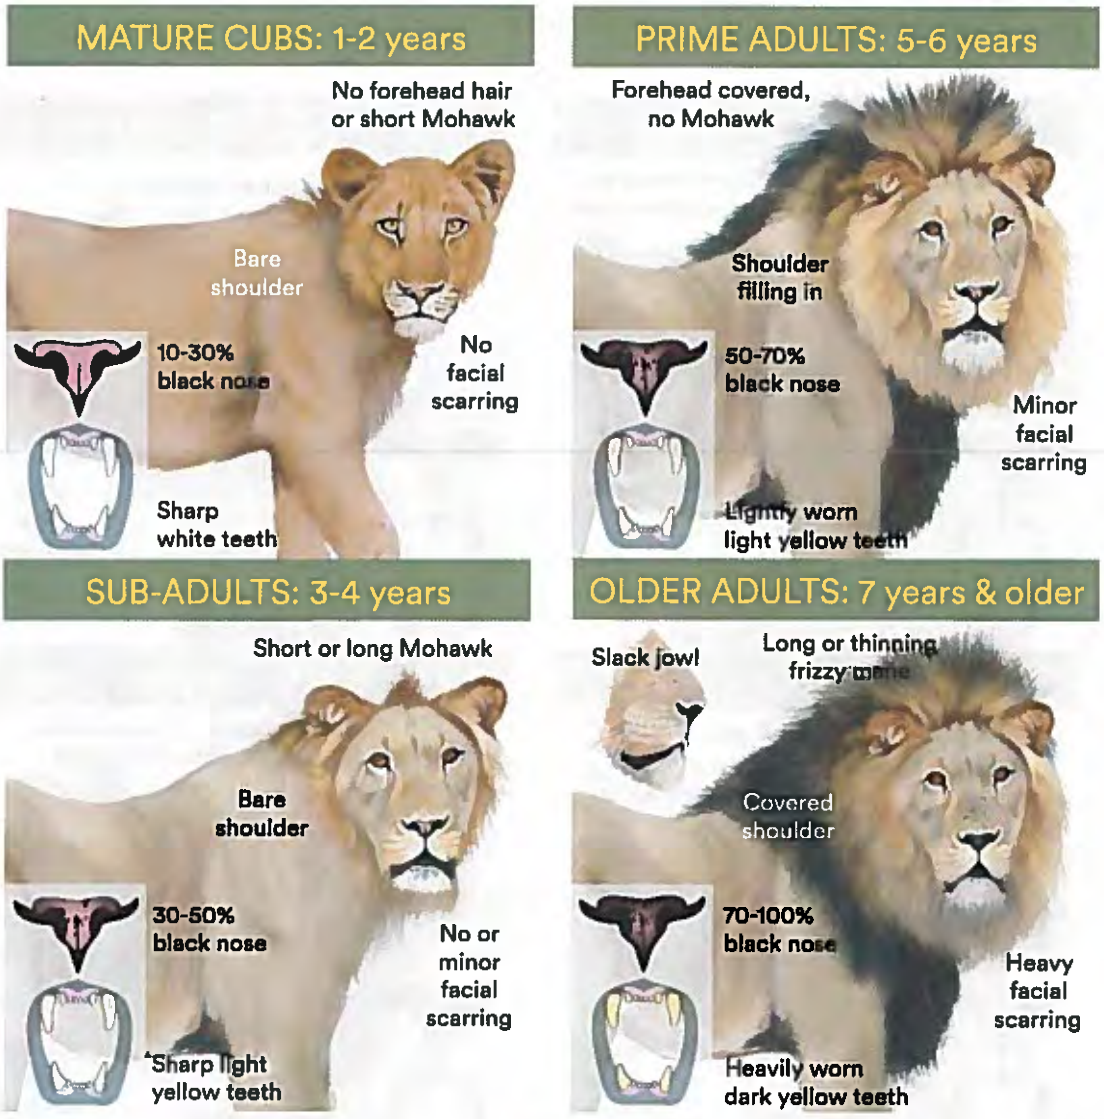
After You Finish: Re-Test Yourself

To see your improvement after reviewing this training and the online photos and pocket guides, re-test your lion aging accuracy online at http://AgingTheAfricanLion/TestYourself.org.

Pocket Guides

Pocket guides to use for quick reference in the field are available on the last pages of this course packet and online at http://AgingTheAfricanLion.org/Resources.html

Quick Guide to Southern and High-Lying Africa
(e.g. Hwange in Zimbabwe, Serengeti in Tanzania)



Available as complete pocket guide at http://AgingTheAfricanLion/Resources.org.

Mokore Safaris PH Rules

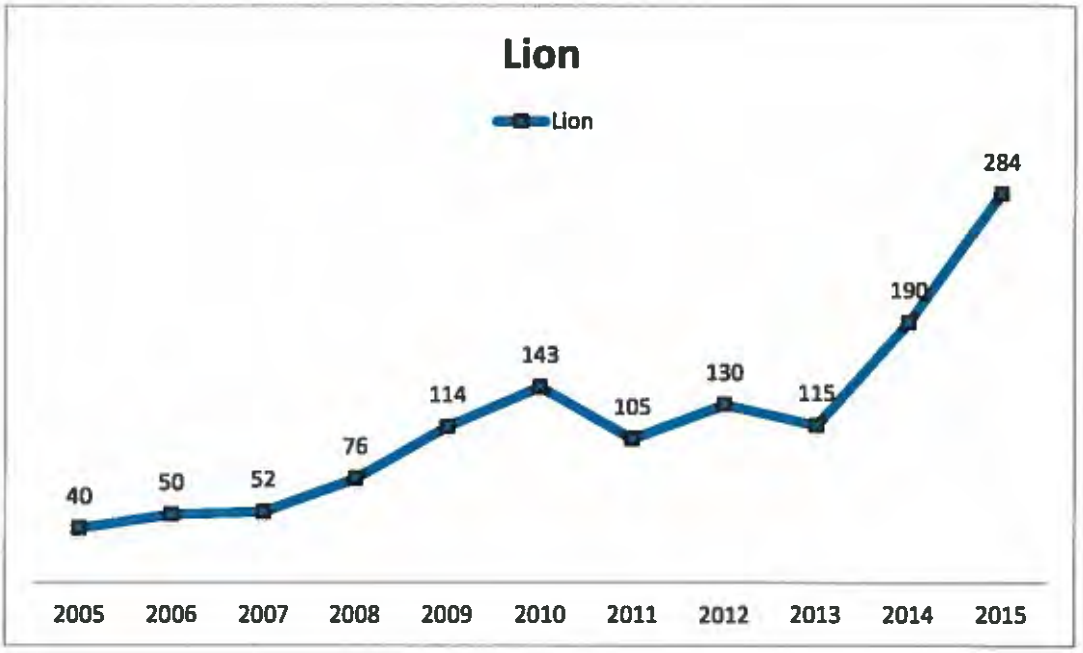
1. Fuel – All incoming PHs must refuel in the last available garage on the way in and then again on the way out. The receipt from the way out is to be handed in at Mokore Safaris offices for a refund. Please do not arrive in camp with empty tanks and then expect to be refuelled before leaving. For Save Valley hunts please refuel at Nyika on the way in. For Sengwa Hunts please refuel at Gokwe.
2. Paperwork – Please can all PHs fill in the skinners books complete with all measurements and details. Also those hunting in Sengwa please make sure that the measurements of all trophies is completed on the ZPWMA kill returns supplied in the file.
3. Mokore Safaris is attempting to maintain the quality of our herds for the future and so the following will apply (no excuses tolerated):
   a. Any soft – top buffalo will attract a fine as follows:
      i. Over 43" spread - $1000
      ii. 40 – 43" spread - $500
      iii. 35 – 40" spread - $ 200
      iv. Below 35" – fire at will!

b. Any lion under the age of 5 years - $ 10 000
c. Any sable without at least 2" secondary thickening - $200
d. Any elephant under 40 lbs in the Save - $500

SVC Predators 2015

When considering species such as Lion, Leopard and Spotted Hyena, all which are Trophy hunted within the SVC, it is clear that hunting has aided the conservation of these species (Groom 2012). Population trends below show slight fluctuation and a steady increase of Lion and Leopard within the SVC. *The recent decrease in Spotted Hyena numbers can be contributed to a rapid increase in lion numbers and species competition.* Further details can be seen in *Lion Hunting in Zimbabwe's Savé Valley Conservancy, A Conservation Success Story, Dr Rosemary Groom, African Wildlife Conservation Fund.*

Populations of Lion (*Panthera leo*) , Leopard (*Panthera pardus*) and Spotted Hyena (*Crocuta crocuta*) can be depicted as follows:



ıge 1: Population trends for Lion of the SVC from 2005 to 2015.

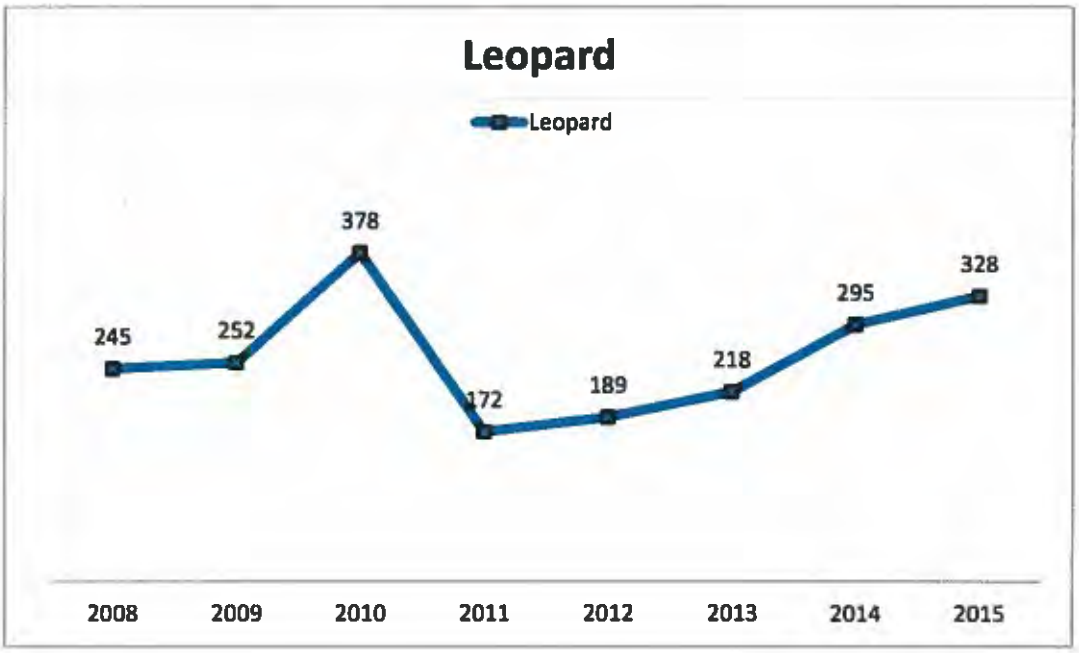


Image 2: Population trends of Leopard for the SVc from 2008 to 2015.

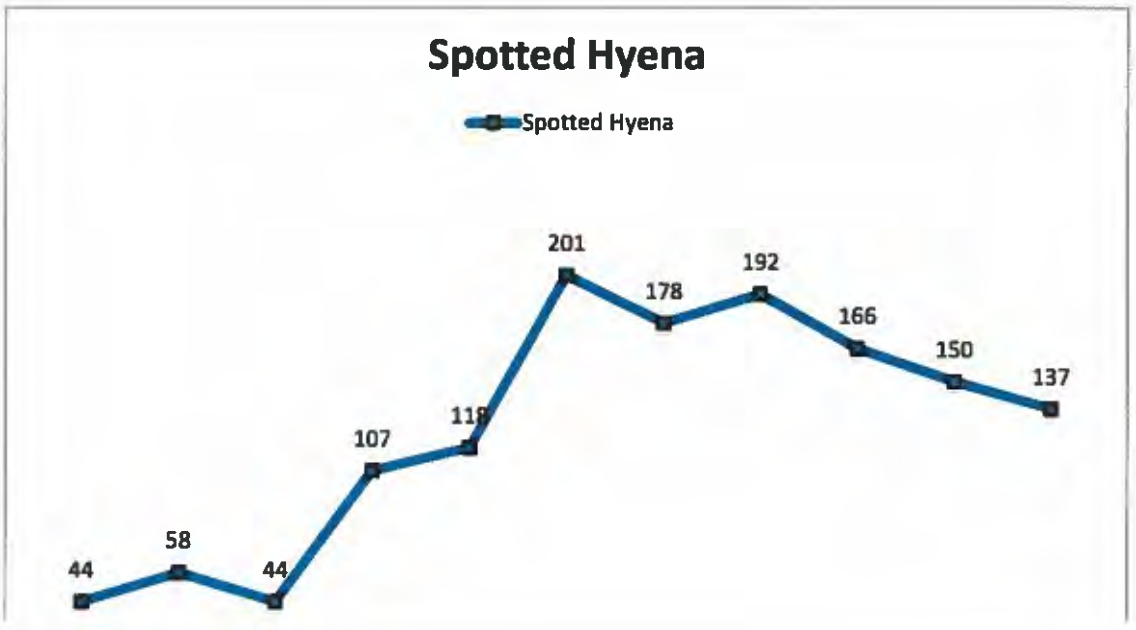

Image 3: Population trends for Spotted Hyena of the SVC from 2005 to 2015.

Mokore Safaris - African Horizons Inc. Price Guideline for 2018

ZIMBABWE

No. of Days	Description of Safari	US$
5 day	Non-trophy Buffalo Package (Below 34" and Non-exportable)	$8,500 Package
5 day	Non-trophy Buffalo Package (Below 34" and Exportable)	$9,500 Package
7 day	Plains game Mokore	1x1 - $550/Day
7 day	Plains game Mokore(2 Clients per 1 Pro-Hunter)	2x1 - 500 each/Day
7 day	Plains game Mokore Bowhunt	1x1 - $500/Day
7 day	Plains game Mokore Bowhunt (2 Clients per 1 Pro-Hunter)	2x1 - $450 each/Day
7 day	Plains game Mokore Bowhunt (3 Clients per Pro-hunter)	3x1 - $400 each/Day
7 day	Plains game Sengwa	1x1 - $750/Day
7 day	Plains game Sengwa (2 Clients per 1 Pro-Hunter)	2x1 - 700 each/Day
7 day	Non-trophy Elephant (Cow, Non-exportable)	$12,000 Package
7 day	Hippo/Crocodile	1x1 - $1,300/Day
10 day	Sable/Plains game	1x1 - $1,000/Day
10 day	Tuskless Elephant/Plains game	1x1 - $1,000/Day
12 day	Tuskless Elephant/Buffalo/Plains game	1x1 - $1,300/Day
10 day	Buffalo/Plains game	1x1 - $1,300/Day
10 day	Buffalo/Plains game (2 clients per Pro-Hunter)	2x1 - $1,250 each/Day
15 day	Leopard/Plains game	1x1 - $1,500/Day
15 day	Buffalo/Sable/Plains game	1x1 - $1,300/Day
15 day	Buffalo/Leopard/Plains game	1x1 - $1,750/Day
18 day	Buffalo/Leopard/Sable/Plains game	1x1 - $1,750/Day
12 day	Elephant/Plains game Mokore	1x1 - $ 1,500/Day
12 day	Elephant/Plains game Sengwa	1x1 - $1,000/Day
15 day	Elephant/Buffalo/Plains game	1x1 - $1,500/Day
21 day	Lion/Buffalo/Tuskless Ele/Sable/Plains game	1x1 - $2,500/Day
28 day	Lion/Elephant/Buffalo/Tuskless Ele/Sable/Plains game	1x1 - $2,500/Day

Observer Fees - US$250 per person per day

CITES permits for elephant, leopard and crocodile: $150 each

Pre-baiting for cat or crocodile hunts: $300 per day + bait trophy fees

Vehicle Transfers - $500 one way/vehicle

Conservation Levy - $20/person/day

4% Gov levy on total daily rates and trophy fees

All Cat or Elephant hunts on Private Land now need a Parks Ranger - $100/day that he is needed

TROPHY FEES

	US$		US$
Elephant Bull - Mokore	15,000.00	Zebra Bait (Mokore only)	500.00
Lion	15,000.00	Bushpig	500.00
Elephant Bull - Sengwa	12,500.00	Warthog	500.00
Leopard	7,500.00	Caracal	500.00
Sable	5,000.00	Antbear	450.00
Hippo	5,000.00	Honey Badger	450.00
Buffalo	5,000.00	Grysbok	375.00
Crocodile	4,500.00	Serval	350.00
Tuskless Elephant	4,000.00	Civet	300.00
Nyala	4,000.00	Duiker	290.00
***Waterbuck	2,400.00	Jackal	275.00
Buffalo Cow	2,000.00	Impala males	250.00
Eland	1,950.00	Genet	225.00

ANOTHER FINE EXAMPLE OF CONSERVATION THROUGH SUSTAINABLE AND ETHICAL HUNTING.

Prior to 2002, Coutada 9, like all other wilderness areas in Mozambique, had been through over 25 years of civil war and rampant poaching. This massive area (4333 square kilometres) was left virtually devoid of wildlife. Furthermore, the area suffered serious habitat destruction, being subjected to annual late season bushfires and the indiscriminate cutting of trees through "slash and burn" agricultural practices. In 2002, Rio Save Safaris, took over the concession and set out to re-habilitate the area to its former glory. Firstly, they needed to take control of the massive poaching epidemic and provide surface water for the very limited remaining wildlife.

Over the past 13 years RSS has drilled 22 boreholes and constructed 12 large dams, these provide permanent surface water for the wildlife in Coutada 9. This water is essential for life and all species benefit, including birds, smaller mammals as well as insects. The construction of these dams has been a lengthy and expensive exercise.

Some of the completed dams on Coutada 9 creating permanent surface water for the wildlife.

Since 2003 RSS anti-poaching teams have consistently removed over 1000 gin traps per year, caught on average 150 poacher per year and confiscated numerous homemade muzzle loader rifles as well as a few modern assault weapons like AK 47's from poachers. For EVERY weapon confiscated, poacher apprehended or trap removed RSS have paid an incentive bonus to the anti-poaching units. Due to these continuous efforts, the wildlife has thrived and flourished, to the stage where most populations have reached sustainable population densities.

A year's haul of traps and guns with some of RSS anti-poaching game scouts.

An elephant bull poisoned by villagers where nothing from the animal was utilised and one of the 150 poachers arrested annually by RSS anti-poaching units with his traps. Most poaching is done for commercial use and totally unsustainable.

Some species populations, however were so low that RSS set out to re-introduce these species. Not a small feat in itself considering no importation of wildlife or inter-area game transfers had ever taken place in Mozambique.

After 18 months of tireless negotiations, RSS imported 10 lions in September 2009 from Phinda Game Reserve in South Africa. They were transported and successfully released them into Coutada 9 over 1600 km away. They have settled and are breeding well in the coutada.

Waterbuck numbers, a species that once thrived in Coutada 9, were down to a mere handful after the civil war. RSS made a deal with Gorongosa National Park to swop 20 Zebra and 40 eland for 146 waterbuck. GNP got to increase their eland and zebra populations and C9 received 146 waterbuck in September 2013. Waterbuck are now seen daily and breeding well.

Eland from Coutada 9 being released into Gorongosa National Park and the replacement Waterbuck into C9.

Waterbuck and eland successfully released .

A key priority from the outset, was to boost the local remnant buffalo population and after more than 10 years of trying to source buffalo from surrounding countries as well as within Mozambique. RSS was FINALLY granted permission from the Mozambique government to capture 50 buffalo as a trial from the Zambesi Delta reserve. This was finally achieved in 2015. The 50 buffalo are safe and sound in Coutada 9 with plans now to capture a further 250 next year.

The first 50 buffalo in their quarantine bomas, November 2015.

These projects and all other developments such as building of road networks, Safari Camps and staff accommodation to date have been funded through trophy hunting. RSS operates on a strict sustainable offtake quota where a small percentage, normally 2-5% of a population, is harvested. These animals are usually males past their prime and their removal has little impact on the overall species population.

All funds raised through trophy hunting to date, have gone back into the conservation and development of this magnificent area as well as to support the local communities. Unfortunately due to the remoteness of the concession and thick bush, photographic tourism is very limited and not a feasible option for this area.

RSS employ 50 game scouts for anti-poaching alone as well as another 60 plus people for all other development work required. This in turn provides over 100 families with a reliable source of income and food annually.

Of the animals harvested 25 % of the trophy fee received from foreign hunters goes directly to the local communities. RSS also supplies most meat to the community either directly through delivering it to the local villages or indirectly through issuing it to the staff working within the Coutada. The meat from ALL animals harvested is FULLY utilised, including lions, baboons and especially elephant.

RSS has also built a school, clinic and drilled boreholes for the surrounding communities. Many of our hunting clients have made donations to the school personally or in the form of delivering SCI Blue Bags.

Poaching, as opposed to legal trophy hunting, is indiscriminate, without regard to age, sex or species of animals killed. There is no respect for boundaries or numbers of animals harvested and if not constantly policed there WILL be no wildlife left. The general modus operandi of the poachers in this region is hunting with homemade gin traps or snares which is very cruel. When RSS initially arrived in Coutada 9 almost every animal harvested by hunters was missing a foot from these traps.

Basically, the animal once trapped will drag the trap around for 3 -4 days until the poachers catch up to it and kill it with an axe or spear. Some species such as lion, buffalo, leopard and elephant that they cannot kill due to the danger aspect with their axes are left to drag these traps around for weeks until the animal dies either from starvation or from infection. Sometimes the animal's foot rots, breaks or is bitten off. These survivors are then crippled for life, or slowly lose condition and die.

One male lion had three of its four limbs injured from traps. Thanks to hunter supported anti-poaching efforts there are far fewer cases of injured animals but still a massive and continual problem.

An eland with a trap on that escaped the poachers with two axes embedded in it and a baby elephant that had to be put down after dragging this trap for over a week.

A buffalo cow that was caught in a trap that was put down after a week and one of several elephant poached annually for their ivory.

A mature lioness and a sub adult lioness that both died from these traps.

A young male lion that was caught with a trap, after a week it's foot rotted off and is now walking around with only 3 feet.

The illegal cutting of hardwoods for planking is another massive problem and the RSS anti-poaching team is heavily involved in trying to protect all the beautiful hardwoods on Coutada 9.

The only donations received to date have been from the hunting organisations, Dallas Safari Club and Safari Club International. RSS would like to thank them both for helping us save the animals and habitat on Coutada 9.

A massive THANK YOU to all the hunters who in following their passion for adventure in wild Africa. Have saved thousands of animals in Coutada 9, provided employment and income for many families as well as fed thousands of local villagers over the past 13 years. None of the animals pictured here have names but hunters are the ONLY ones fighting to save these remote and wonderful areas and their wildlife. Your continued support of sustainable hunting is greatly appreciated.

Pictured above is 1306 gin traps, 68 cable snares, 9 can rat traps and 25 homemade muzzle loaders that were collected by our RSS anti-poaching team in 2015 alone. This anti-poaching effort alone costs RSS over US$100 000 annually, all of this comes from sustainable hunting.

Re: [EXTERNAL] Kerr Permits - Status Request

Management Authority, FWHQ <managementauthority@fws.gov> Mon, Aug 20, 2018 at 3:16 PM
To: Conroe Taxidermy <info@conroetaxidermy.com>
Bcc: anna_barry@fws.gov

Thank you for your inquiry.

Permit applications 84787C, 95176C, and 60944C are all under review. Please keep in mind that:

In response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service has revised its procedure for assessing applications to import certain hunted species. We have withdrawn our countrywide enhancement findings for a range of species across several countries. In their place, the Service is making findings for trophy imports on an application-by-application basis. Click here for the memo.

Permit 60943C was issued on 1/26/2018

Ms. Brisendine:

The document attached is to be included as supplement to all original import permit applications filed with the U.S. Fish and Wildlife Service listed above.

Since filing these applications we have received additional documentation of conservation efforts for lions in Zimbabwe that further detail the populations as stable and growing. The CAMPFIRE document strongly argues the importance of trophy imports and the value that they provide to communities in Zimbabwe through income flows from tourism and hunting which serve to support sustainable community livelihoods in a way that promotes conservation of wild species and habitat.

The Campfire document details the drastic effects that COVID-19 has had and is having on Zimbabwe's tourism and hunting market, which is in a state of collapse. It is leaving the country uncertain of how wild-life and anti-poaching programs will be supported on the ground in the coming months. This information can be used to predict what might transpire if trophy hunting and imports were to cease to exist and the tragic outcome it could have on the conservation efforts of wildlife in the area.

We ask that you please consider these documents when making your decision on enhancement in each import permit application.

Please feel free to contact me if you have any questions regarding this mater.

Cordially,

Aimee Korver
Permits Paralegal

1. CAMPFIRE communities Concern on Import Bans

Open Letter to the United States Fish and Wildlife Service

Dear Dr Mary Cogliano

CAMPFIRE Communities Concern on Import Bans

CA/MPFIRE Association, otherwise known as the Community Areas Management Program for Indigenous Resources in Zimbabwe wishes to register its opposition to continuing campigns for the banning of trophy imports. We are fully aware that the general outrage in both print and social media against sport hunting, which many distant voices refer to as unethical, is aimed at influencing policy action by importing countires.. These arguments, none of which are supported by science, are based on a perfected art of global misinformation and do not represent the views of rural communities who live side by side with wildlife. To us as a people with substantial wildlife populations, trophy hunting is indispensable for conservation and rural livelihoods.

Zimbabwe has one of the most resilient and successful conservation programs in Africa. Its conservation efforts have historically enabled local communities to thrive on sustainable livelihoods in biodiversity-rich landscapes. At least 800 000 households or 2.5 million people (out of a national population of 16 million) benefit directly and indirectly from the sustainable use of wildlife and tourism related investments in their areas. However, our ever growing elephant population has increased the levels of conflict between humans and wildlife in recent years, which, together with recurrent droughts that threaten food security, have made traditional livelihoods more difficult, especially for subsistence farming communities that live in the wildlife rich areas of the country.

Communities in CAMPFIRE areas reside in an environment where conflict between humans and wildlife is common, as both compete for the limited available land and water resources. But this comes at a high price: people in Zimbabwe are paying with their lives for tolerating wild animals in their areas. As recently as 23rd March 2020, Barnabas Mwinga, a 50 year old man, was killed by an elephant in his field in front of his wife and young daughter in Gonono Ward, Mbire District. He is one of seven other people that have needlessly lost their lives to wildlife attacks throughout the country since the beginning of 2020, in addition to the 41 killed in 2019. Yet despite this high cost, wildlife is still highly valued by rural communities who continue to tolerate massive crop destruction and livestock losses from wildlife without compensation. For example, elephant poaching in Mbire District where Barnabas Mwinga was recently killed has gone down from a peak of 40 in 2010 to only 3 elephants poached in 2019 (Figure 1). The decline in poaching incidents is a result of collaborative efforts between the Safari Operator and the hunting clients who invest nearly $100,000 annually into an anti-poaching unit.

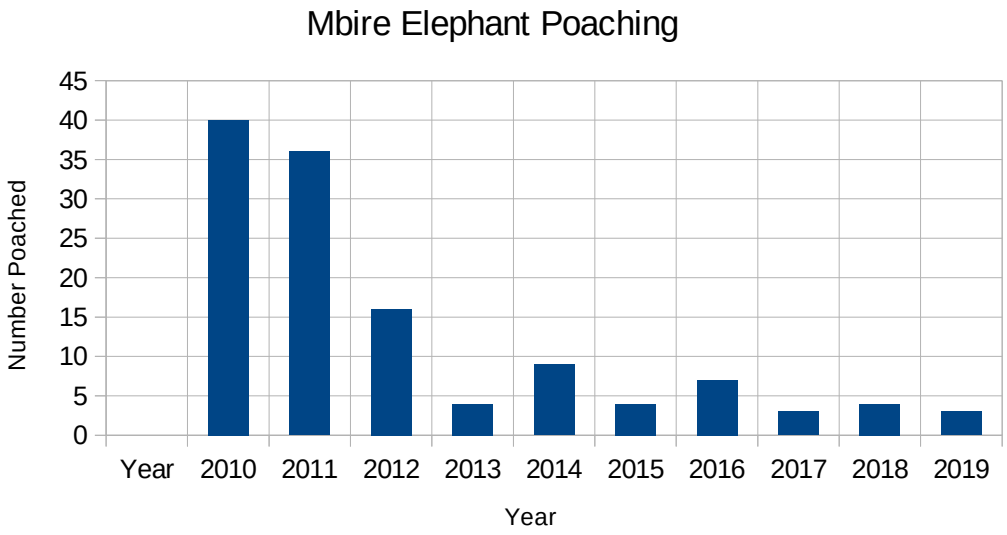

Figure 1: Mbire Elephant Poaching Trends (Source – Mbire Rural District Council)

The aim of the CAMPFIRE programme is to support sustainable community livelihoods in a way that promotes conservation of wild species and habitat. For nearly 30 years, trophy hunting, which relies heavily on the American market, has been cautiously implemented in the absence of other tourism opportunities to achieve this goal. Not only has it resulted in increasing food and livelihood security of rural people, it has also played a role in undermining the drivers of poaching and mitigating human and wildlife conflict. The net impact is seen in securing wildlife habitat and assisting in the regeneration of degraded landscapes.

The financial resources to succeed with this programme in CAMPFIRE areas are heavily dependent on the sustainable hunting of big game, especially elephants. The monies generated from these activities finance the local economies, social services as well as anti-poaching efforts and wildlife management at the District and Ward levels. For example, as can be seen from Table 1 below, the total number of elephants hunted as trophies over nine years is 807 out of a cumulative quota of 1381, from an estimated national population of 83,000 elephants. Hunting quotas are set at no more than 0.5% of the population estimate compared to an elephant population growth of 5% to 6% annually. The levels of off-take (58%) also demonstrate that while hunting is based on controlled numbers for each species annually, it is not uncommon for a client to pay for a full hunt and enjoy the wild experience, but not take a trophy. It is also important to note that communities do not view international hunting clients just as tourists, but as vital conservation partners.

Table 1: Trophy Hunting Quota Summary and Income: 2010-2018

All Districts:	**Elephant**	**Lion**	**Leopard**	**Buffalo**	**Hippo**	**Crocodile**	**Total**

Source: *The Role of Trophy Hunting of Elephant in Support of the Zimbabwe CAMPFIRE Program: Vernon Booth* (in progress).

District and Ward-level institutions in the CAMPFIRE areas rely on income from hunting to provide significant local livelihood benefits (income, jobs, skills) and social services (schools, clinics, irrigation schemes, boreholes) in remote regions where agriculture is marginal and there are very few jobs or other sources of cash income. Table 2 and Table 3 below summarise the impact of pre- and post-elephant trophy import suspension expenditure on the CAMPFIRE programme at the District and Ward level. The District administration costs absorb 89% of the budget with 30% devoted to law enforcement. With the suspension of elephant trophy imports to the USA and Europe in 2016, expenditure on law enforcement dropped from 33% to 9% as a result of District administration having to offset the human and wildlife costs which increased from 1% to 33%. At the Ward level, 46% of the budget is allocated to administration and 54% to community benefits (45% devoted to social services, Table 3).

Table 2: District level expenditure on administration and community benefits: 2010-2018

	Administration			**Community Benefits**			
All District Expenditure	**Administration**	**Law Enforcement**	**Management**	**Assistance to Wildlife Victims**	**Social Services**	**Total**	**Average/ year**

With growing awareness from several years of CAMPFIRE implementation, communities have been demanding their rightful place in the management of wildlife resources for their own benefit. To accommodate this, CAMPFIRE has undergone a review of its policy framework to enable communities to reap greater and more tangible benefits from living in harmony with nature. A key aspect of this review is to establish Community Conservancies that redefine ways in which communities can benefit more from wildlife and other income generation opportunities, as well as the mitigation of human and wildlife conflict. This initiative is being directed under the Global Environment Facility (GEF) 5 and 6 cycles covering five districts with the aim of developing innovative ways to improve the management of wildlife for the benefit or rural people. If trophy hunting and trade here was stopped, the impact on local livelihood would be severe, and both poaching and changes to alternative land use would increase. Non-consumptive tourism currently plays virtually no positive conservation role in the CAMPFIRE areas (<4% of overall income is generated through tourism). Instead of banning the import of trophies, more international oversight and support is needed from importing states, and of in-country CITES controls, to ensure sound sustainable management e.g. quota-setting, permit allocation, independent population surveys; building robust, equitable and transparent benefit allocation mechanisms at local level, particularly where communities have elected to invest their land and time in Community Conservancies.

STOP PRESS: The pressure for imports bans comes at the worst possible time as the Covid-19 pandemic has severely disrupted income flows from tourism and hunting. The collapse of both markets leaves rural people and safari operators with virtually no income, and it is uncertain how wildlife protection and anti-poaching programs will be supported on the ground in the coming months. What remains clear is that trophy import bans will seriously undermine conservation in Zimbabwe, and indeed open floodgates for rural people to destroy wildlife and wildlife habitat through conversion of land for other subsistence uses, even if unviable.

Re: Proof of Enhancement for trophy import permitting

Dear Operator:

The FWS has added a requirement that enhancement and non-detriment findings be proven case by case. Conservation Force has always helped with import permits to open areas or add new game species. Now we have enlarged our program to assist you and your clients in successfully applying for USFWS trophy import permits for select species. To prove enhancement, we need your help.

As announced in March 2018, the USFWS has withdrawn and is no longer making countrywide enhancement (ESA) and non-detriment (CITES) findings. It must now make findings on an application-by-application basis. This means the USFWS must find that the particular hunt and operator benefits the species hunted.

The USFWS has previously found that habitat protection and restoration, control of poaching (to protect the hunted species or its prey), and community participation to reduce conflict and increase stewardship are important indicators of enhancement upon which to base issuance of permits.

The attached questionnaire, which is in Word table format, asks about this kind of enhancement generated by hunting in your area. We request that you complete this Operator Enhancement Questionnaire as best you can to enable your client to obtain an import permit. It is useful to attach supporting documents (e.g., it can be very effective to attach your annual report to the wildlife authority or an anti-poaching log if available). The more information that demonstrates benefits and active management the better. We will not share this specific information with anyone but the USFWS. However, we request your permission to use this information aggregated with other operators to describe the real benefits of safari hunting.

We also ask that you forward any applicable hunting licenses or permits for your client to us when returning this completed questionnaire.

Please let us know if you have questions.

Kindest regards,

John J. Jackson III
Conservation Force
Chairman

Operator Enhancement Questionnaire

1. Operator Information

a.	Name of Area Operator:	
b.	Years in business:	10
c.	Name of Company conducting hunt:	MARTIN PIETERSE SAFARIS
d.	Closest town to hunt location:	VICTORIA FALLS
e.	Country where hunt will take place:	ZIMBABWE

2. Concession MATETSI UNIT 1

e.	Can it be renewed?	(Yes)	No
f.	Length of Renewal, if applicable:	10 YEARS	
g.	Estimated total amount received in trophy fees last year, if applicable:	± $100 000	
h.	Are there any special obligations under the Concession Agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain below:		
	ANTI-POACHING, FIRE PREVENTION, WATER SUPPLY, COMMUNITY EDUCATION		
i.	Please provide the Concession location and nearest City:	MATLAND NORTH, VICTORIA FALLS	
j.	Please attach a map or maps with the boundaries marked and showing the nearest City		
k.	If the Concession borders a National Park, please provide Park name:	HWANGE NAT PARK	
l.	Description of general and distinctive habitat features and any water features:		
	ROLLING HILLS, LIVELINE, THICK MOPANE, SPRINGS,		
	TEAK WOODLAND, OPEN GRASSLAND		

3. COMMUNITIES IN THE CONCESSION

a.	Are there any communities living in the Concession?	Yes	No
b.	If so, estimated number of people or villages in the Concession?		
c.	Are there communities bordering this Concession?	Yes	No
d.	If so, estimated number of people or Villages around the Concession?		

4. RELEVANT GAME POPULATIONS IN THE CONCESSION:

ELEPHANT	✓		✓	
LION	✓	✓	✓	✓
LEOPARD	✓		✓	
PREY SPECIES	✓		✓	

5. LOCAL COMMUNITY PARTICIPATION

a.	Total employment number:	18
b.	Please identify the number and type of all employees:	18, CHEF, WAITER, GENERAL, SKINNER, TRACKER, ANTI-POACHING STAFF.

PROFESSIONAL HUNTERS	2	1
TRACKERS	4 5	3
ANTI-POACHING SCOUTS/RANGERS		4
OTHER ANTI-POACHING	RANGERS FROM PARKS (ARMED)	
COOKS/HOUSEKEEPERS	2	2
COMMUNITY COORDINATORS	1	—
MANAGERS	1	—
BIOLOGISTS	1	1
OTHERS:	ECOLOGIST THROUGH NATIONAL PARKS.	

c. Number of staff employed in the off-season:

a. Please identify the number and type of staff that are engaged when the season is not open:

[redacted]

OTHERS: N/A.

7. ANTI-POACHING EFFORTS:

a. Number of Anti-Poaching staff: 5
b. Are Anti-Poaching Patrols conducted during the hunting season, off-season, or both? BOTH
Hunting season: ✓ Off-season: Both seasons:
c. Months during which Anti-Poaching Patrols are conducted: ALL YEAR
d. Number of Anti-Poaching Patrols per month: ALWAYS OUT ON PATROL
e. Description of Anti-Poaching equipment, vehicles, etc.: LAND CRUISER X2, RADIOS, TENTS, WEAPONS,

7. ANTI-POACHING EFFORTS: [CONTINUATION]

f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? NATIONAL PARKS.

g. Do you offer rewards to poaching informants leading to arrest? Yes ~~No~~
h. Do you offer rewards to poaching informants upon conviction? Yes ~~No~~
i. Please describe the company's anti-poaching expenditures below:

[illegible]	[illegible] 2017	[illegible] 2018	[illegible] 2019
SALARIES FOR ANTI-POACHING SCOUTS	12K	12K	
EQUIPMENT	2K		
VEHICLES	10K	10K	
PETROL	2K		
REWARDS PAID	1K		
OTHER:			
OTHER:			
TOTALS	$27 000 (2017).		

j. What currency are the expenditures given in? USD $

8. ANTI-POACHING RESULTS:

[illegible]	[illegible] 2017	[illegible] 2018	[illegible] 2019
POACHING INCIDENTS DISCOVERED	2	2	—
ELEPHANT CARCASSES OBSERVED	1	—	—
LION CARCASSES OBSERVED	—	—	—
LEOPARD CARCASSES OBSERVED	—	—	—
IVORY POACHERS ARRESTED	—	—	—
MEAT POACHERS ARRESTED	4	—	—
OTHER POACHERS ARRESTED	—	—	—
POACHERS CONVICTED	—	—	—
SNARES/GIN TRAPS COLLECTED	—	—	—
FIREARMS CONFISCATED	—	—	—
VEHICLES CONFISCATED	—	—	—
BICYCLES CONFISCATED	—	—	—
BOATS/NETS CONFISCATED	—	—	—
TUSKS RECOVERED	—	—	—
OTHER:	N/A		

b. If so, what percentage or amount is shared, how often, and why (e.g.: required by law, required by contract, voluntary contribution)? VOLUNTARY – 50% OF MEAT, EMPLOYMENT OPPS.

c. Does the Company provide game meat to nearby communities? YES ~~YES~~

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: 50% OF ANNUAL OFFTAKE - DISTRIBUTED TO LOCAL COMMUNITIES THROUGH A SYSTEM.

e. If the Company performs problem animal activities for surrounding communities (e.g.: patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe.

f. Please describe any consolation payments made to local residents damaged by game species N/A AS WE DO NOT HAVE COMMUNITIES CLOSE TO THE AREA.

g. What currency are the expenditures reported in? N/A

Species	Consolation Paid 2017	Consolation Paid 2018	Consolation Paid 2019
Elephant			
Lion			
Leopard			
Other			

N/A.

a. Please describe any community projects paid for by the Company: [Use separate sheet]

b. What currency are the expenditures reported in?

Type of Project	Spending 2017	Spending 2018	Spending 2019	Remarks
Education (e.g.: Classrooms, Offices)				
Education (e.g.: School Fees, School Supplies)				
Health (e.g.: Clinics, Offices)				
Health (e.g.: Medical Salaries, Equipment)				
Community Scout Salaries				
Other Community Anti-Poaching				

N/A AS WE DO NOT HAVE COMMUNITIES IN OR CLOSE TO THE HUNTING AREA AND NATIONAL PARK.

9. Community Investment: [Continuation]

Type of Project	Spending 2017	Spending 2018	Spending 2019	Remarks
Local Government Activities				
Water Infrastructure Improvements				
Sports Teams Funded				
Construction Materials Donated				
Other:				
Other:				
TOTALS				

N/A AS WE DO NOT HAVE COMMUNITIES IN OR NEAR THE HUNTING AREA AN NATIONAL PARK.

10. How many U.S. Clients did the Company have in the past three years, what percentage of the Company's clients were from the U.S., and what fees did they pay?

	2015: /	2015:	2015:	—	2015:		—
	2019: /	2019:	2019:	3	2019:		14
PERCENTAGE OF U.S. CLIENTS	2017: /	2017:	2017:	2	2017:		12
	2018:	2018:	2018:		2018:		
	2019:	2019:	2019:		2019:		
TROPHY FEES PAID BY U.S. CLIENTS	2017:	2017:	2017:		2017:		
	2018:	2018:	2018:		2018:		
	2019:	2019:	2019:		2019:		

± $75 000 ANNUALLY IN TROPHY FEES

11. Approximate Dollar amount and/or percentage of Company's revenue from U.S. Clients: 60%

12. OTHER INFORMATION: Please provide a narrative of other enhancement information about the operation, such as any special Hunting Policies (e.g.: aging, size, resting areas), Concession Improvements (e.g.: digging and maintaining boreholes, restocking), Management Activities, Research, etc.
[USE SEPARATE SHEET]

- BOREHOLES DRILLING
- FIRE PREVENTION
- GAME COUNTS
- SOLAR INSTALLATION
- AGING OF ALL SPECIES.
- ONLY MATURE MALES OF ANY SPECIES ARE HUNTED.

13. I declare that the foregoing is true and correct:

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III, of the non-profit firm CONSERVATION FORCE as my attorney and legal representative for all matters concerning my application for a Permit to Import a threatened-listed Lion Trophy from Zimbabwe.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that this attorney be copied with all correspondence, acknowledgements, notices and decisions concerning my application at the following address:

CONSERVATION FORCE

VIA E-MAIL: Amy_Brisendine@fws.gov

RE: PRT # 84787C, Applicant Dr. Euby Kerr, Lion from Zimbabwe
Supplement to the Import Permit Application

Ms. Brisendine:

This is a supplement to the existing application, PRT # 84787C for Dr. Euby Kerr for his lion from Zimbabwe.

Answers to Questions of the import permit application-originally left unanswered or information changed:

6a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or huntingblock, AND nearest city) where wildlife was removed from the wild:

Hunting concession: Matetsi Unit 1; Region: Matabeleland north; Closest City: Victoria Falls
GPS: 983245

6b. Date wildlife was hunted:

May 10, 2018

6c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Martin Pieters- P.H. and with Martin Pieters Safari

6d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Trophy Consultants International (Formerly Taxidermy Enterprises (Pvt) Ltd.)– 4 Josiah Chinamano Road, Belmont, Bulawayo, Zimbabwe
clientliaison@tci.co.za

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

Permits and licenses are not issued in Matetsi, they have an annual quota and they adhere to that.

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

9a. Do you have any information regarding the population status or trend data on the species hunted?

Please reference the Republic of Zimbabwe Enhancement and Non-Detrimental findings for Panthera Leo in Zimbabwe that we have included. In that document you will find on page 412 a description of the Matetsi Safari area and lion trends and population statistics for that area. It states in this document that areas like these in Zimbabwe have seen elephant populations increase.

9b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

Trophy fees for a lion in the Matetsi area are $30,000.00 U.S. dollars, much of this goes towards Concession improvements like drilling boreholes, fire prevention, solar installation, and keeping game counts.

9c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

Please reference the operator enhancement report provided for the Matetsi Unit 1 area, where this hunt took place.

Please refer to these documents and the hundreds of pages of information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by the government authorities in Zimbabwe, outfitters, and others, in making a positive enhancement finding and issuing an import permit for this lion trophy.

If you have any questions about this import application, please do not hesitate to contact us.

Sincerely,

Aimee Korver

1 INTRODUCTION

The United States Fish and Wildlife Service (USFWLS) made a ruling in terms of its Endangered Species Act of 1973 (ESA) that the status of the southern and eastern African lion subspecies (*Panthera leo melanochaita*) is threatened (see http://www.regulations.gov). This ruling, which came into effect on January 22, 2016, now requires that the importation of all trophy lion from Zimbabwe will require an import permit. The decision whether to issue an import permit will in future be based on a Non-Detrimental Finding (NDF) that takes into consideration four main factors outlined under 50 CFR 17.22 and 17.32. These are:

- What direct and indirect impacts would occur on the wild population?
- Would issuing a permit conflict with any known programs intended to conserve the species?
- Would the purposes of the permit reduce the threat of extinction facing the species?
- What are the opinions of experts?

In addition to these factors USFWLS will also take into consideration the IUCN Species Survival Commission (SSC) *Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN/SSC 2012). This document identifies five guiding principles of a hunting program that creates "*incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources*" and recognizes that trophy hunting can contribute to biodiversity conservation and the conservation of the hunted species.

These are:

- **Biological sustainability** i.e. the hunting program:
  - Cannot contribute to the long-term decline of the hunted species
  - It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat
  - It should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities
  - It should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

- **Net Conservation Benefit** i.e. the biologically sustainable hunting program should be:
  - Based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed
  - It should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species
  - It should create benefits for local residents to co-exist with the target species and other species

- **Socio-Economic-Cultural Benefit** i.e. a well-managed hunting program can serve as a conservation tool when:
  - It respects the local cultural values and practices
  - It involves and benefits residents in an equitable manner
  - It adopts business practices that promote long-term economic sustainability

- **Adaptive Management: Planning, Monitoring, and Reporting** i.e. can the hunting programme enhance the species when it is based on appropriate resource assessments and monitoring (e.g., population counts, trend data), upon which specific science-based quotas can be established. Resource assessments should be objective, well documented, and use

the best science available. Adaptive management of quotas, based on the results of resource assessments and monitoring, is essential

- **Accountable and Effective Governance** i.e. a biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries, and take steps when needed to eliminate corruption and ensure compliance with national and international requirements and regulations.

To address the points raised above, a systematic review of the status of lion in Zimbabwe has been undertaken with the full cooperation of stakeholders from the Government, Private Hunting Sector, Community NGOs and research organisations to demonstrate that the lion populations in Zimbabwe are being managed sustainably for benefit of both the conservation of the species and that the management programme is also providing economic incentives for local communities to protect and expand lion habitats. In doing so this assessment addresses the following issues:

- That the Zimbabwe hunting industry is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (where feasible) and ensuring adequate protection from human encroachment.
- Demonstrate that there are government incentives in place to encourage habitat protection by private landowners and communities and incentives to local communities to reduce human-wildlife conflicts.
- Demonstrate that hunting concessions are managed to ensure the long-term survival of the listed species and its habitat.
- That trophy hunting provides financial assistance to the Zimbabwe Parks and Wildlife Management Authority, including the communal CAMPFIRE programme and private sector, to carry out various wildlife management programmes. It will also highlight how local communities directly and indirectly benefit from the presence of lion in their areas.
- Finally, this document will demonstrate how the participation of U.S. hunters in the Zimbabwe hunting industry contribute to the overall management of lion within the country.

2 Status and Distribution of Lion in Zimbabwe

Bauer et al (2015) summarise time series data for 47 lion populations across West, Central, East and Southern Africa where regular survey data are available. Using a Bayesian state space model to estimate growth rate-λ for each population, this study concludes that lion populations are declining everywhere across Africa, except in four southern countries (Botswana, Namibia, South Africa, and Zimbabwe). The population models indicate a 67% chance that lions in West and Central Africa will decline by one half, while estimating a 37% chance that lions in East Africa will also decline by one-half over two decades. It is concluded that almost all lion populations that historically exceeded ~500 individuals are declining, *but lion conservation is successful in southern Africa, in part because of the proliferation of reintroduced lions in small, fenced, intensively managed, and funded reserves.* This statement reflects the situation in Zimbabwe where lion populations in the conservancies have flourished under sound management regimes. They have also recovered rapidly in instances where appropriate actions have been taken to arrest unsustainable practices (i.e. Hwange) and where protected areas are receiving adequate funding (i.e. Gonarezhou).

2.1 The extent of lion distribution in Zimbabwe

The Zimbabwe Parks and Wildlife Management Authority (ZPWMA) is responsible for managing one of the largest estates in the country which constitutes approximately 5 million hectares of land or 13%

of the Zimbabwe's total land area (see Table 1 below). The bulk of Zimbabwe's wildlife occurs within the Parks Estate which includes 11 national parks, 16 safari areas, 16 recreational parks, 6 sanctuaries, 12 botanical reserves and 3 botanical gardens, all spread across the country, among other wildlife tourism related activities (Parks and Wildlife Act 2001 Chapter 20:14).

Wildlife populations also occur on the state Forest Areas, Communal CAMPFIRE areas and private conservancies dedicated to wildlife-based land use (Figure 1). Table 1 below provides a summary of these different categories, and whether they support lion populations (see Annex 1 for the details of each area).

Table 1. Summary of the National Parks Estate, CAMPFIRE, Forestry and Conservancies where lion populations are resident

Land Category		Presence of Lion				Total (ha)	Total (km^2)
		Yes (ha)	%	No (Ha)	Migratory (Ha)		
Parks Estate	National Parks	2,608,710	96	61,850	47,150	2,717,710	27,177
	Safari Area	1,745,300	92	146,600	-	1,891,900	18,919
	Botanical gardens	-	-	2,069	-	2,069	21
	Sanctuary	-	-	18,980	-	18,980	190
	Recreational	-	-	357,161	-	357,161	3,572
Forestry		436,165	47	491,701	-	927,866	9,279
CAMPFIRE		8,953,700	36	5,435,100	10,319,000	24,707,800	247,078
Private Conservancies		758,200	66	243,500	150,897	1,152,597	11,526
Matetsi Farms		-	-	-	155,627	155,627	1,556
Total Ha		**14,502,075**		**6,756,961**	**10,672,674**	**31,931,710**	**319,317**
Total km^2		**145,021**		**67,570**	**106,727**	**319,317**	
Percentage		**45%**		**21%**	**33%**		

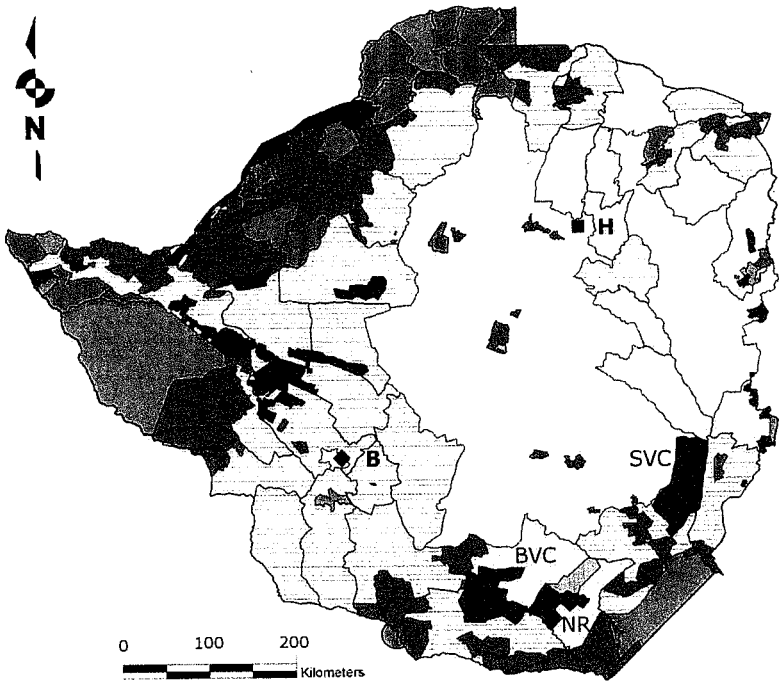

Figure 1: Map of Zimbabwe's main wildlife areas: [i] National Parks are represented in light blue; [ii] Safari areas are represented in orange; [iii] Forestry areas are represented in dark green; [iv] Community and Private wildlife areas are represented in light green; [v] Communal Land (CAMPFIRE Areas) in which sport-hunting may occur is represented by light green horizontal stripes; [vi] Communal Land in which sport-hunting does not occur is represented by grey vertical stripes. [vii] The Bubye Valley [BVC] and Savé Valley [SVC] Conservancies are represented in red. [viii] The Nuanetsi Ranch [NR] on which sport-hunting takes place is represented in dark purple (light purple represents the Nuanetsi Ranch cattle area); [ix] Lake Kariba is represented in dark blue. Harare (the capital city) is represented by a black square and letter '**H**'. Bulawayo is represented by a black diamond and letter '**B**'. Sport-hunting may occur in areas: ii, iii, iv, v, vii & viii (from du Preez, B. Groom, R., Mufute, O., Mandisodza-Chikerema, R. and Booth, V. (2016).

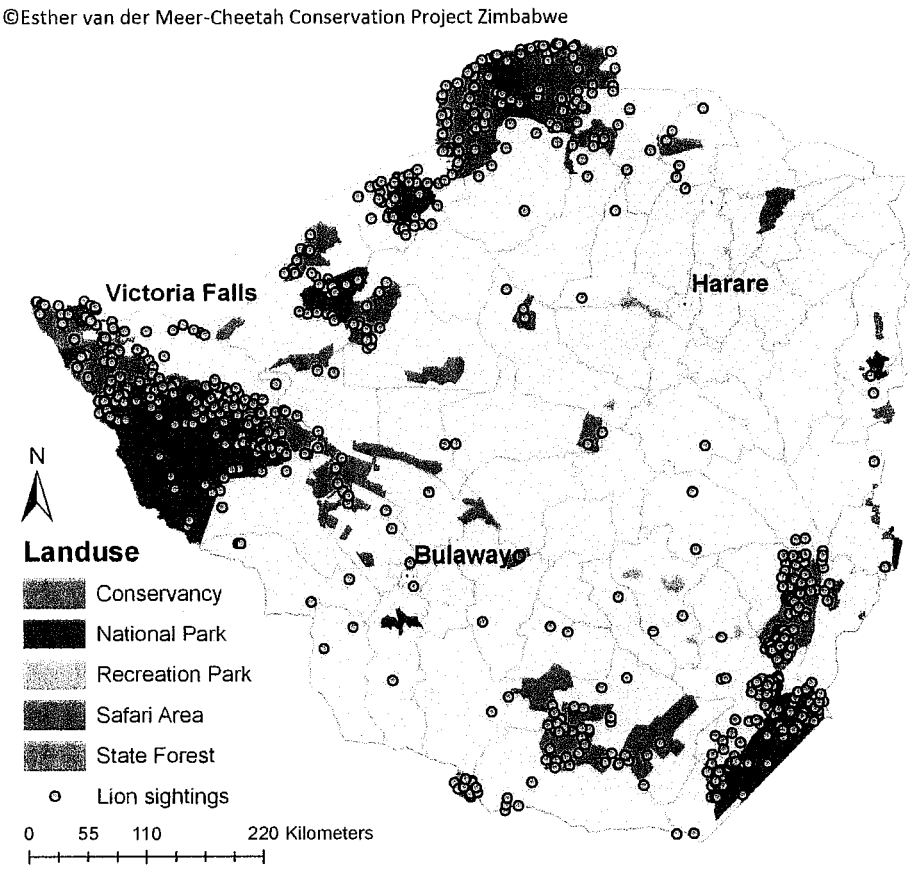

Figure 2: Range of African Lion Distribution in Zimbabwe

There are approximately 319,317 km^2 of land where some form of wildlife based land use is practiced in Zimbabwe. Lion occur permanently in 45% of this available range (c. 145,00km^2), with the majority occurring in State protected national parks (96%) and safari areas (92%). Lion also occur permanently in 47% of the State forest areas and 66% of privately owned Conservancies. The CAMPFIRE areas comprise approximately 247,000km^2 and lion occur in 36% of these areas. Lion are transient in CAMPFIRE, Conservancy and resettled areas adjacent to the major protected areas, and move across the border into Zambia, Mozambique, South Africa and Botswana (Figure 2).

There are two established Transfrontier Conservation Areas (TFCAs), the Great Limpopo Transfrontier Park (GLTP) which includes Gonarezhou National Park, and the Limpopo/Shashe TFCA. Other TFCAs that are at various stages of development are the Kavango-Zambezi (KAZA), Lower Zambezi-Mana Pools, Zimbabwe-Mozambique-Zambia (ZiMoZa) and Chimanimani.

2.2 Minimum population of lion in Zimbabwe

The minimum number lion that occur in approximately 51,642km^2 of land where reliable survey data are available is estimated to be c.1,917 (range 1,800 – 2,000) and is summarised in Table 2. The Western sector of the country dominated by Hwange National Park and the surrounding safari areas, forest areas, communal areas and private conservancies supports c.737 lion (or 38% of the overall population). The Southern sector dominated by the two major conservancies (Save and Bubye) and

Gonarezhou National Park supports c. 896 lions (48%) while the Central and Northern sectors of the country support c.284 lions (15%).

Table 2: Estimated minimum population of Wild Lion populations in Zimbabwe – September 2016 (Data compiled from a variety of reports)

REGION	AREA	AREA (km^2)	Estimated Number of Lions	Percentage
Western	Hwange NP	14,900	559	38%
	Matetsi Units 1-5	1,934	59	
	Matetsi Units 6-7 and Zambezi NP	1,585	67	
	Kazuma Pan NP	313	20

Overall Total		**51,642**	**1,917**	

2.2.1 Captive Breeding Facilities

Currently there are only two properties registered as captive lion breeders (Lion and Cheetah Park, and Antelope Park) and < 10 non-registered captive lion breeding operations (Table 3). Most of these centres keep lions for non-consumptive tourism and environmental education purposes with only a few keeping lions as pets. Altogether there are 345 lions held in captivity.

Table 3: Record of lions held in captivity – September 2016

Property	TOTAL

Inyathi Ecogame Park	10
Total	**345**

3 Conservation and Management

3.1 Policy And Legislation

The Ministry of Environment, Water and Climate has a comprehensive suite of policies and legislation that provides the Zimbabwe Parks and Wildlife Management Authority (ZPWMA) with a mandate to conserve and protect all fauna and flora in the country.

The legal framework is enshrined in the National Legislation and associated Regulations that are informed by the Wildlife Policy (1992) that seeks to maintain a protected area network for the conservation of the nation's wild resources and biological diversity. Amongst others it seeks to create

economic activity to enhance rural development and encourages the conservation of wild animals and their habitats outside the protected areas.

The ZPWMA is established by the Parks and Wildlife Act of 1996 (Chapter 20:14) as amended by Act Number 19 of 2001 which came into operation on the 1st of June 2002 through a Statutory Instrument 144C of 2002. The Act provides for the:

- Establishment of a Parks and Wildlife Board;
- Confers functions and imposes duties on the Board;
- Establishment of national parks, botanical reserves, botanical gardens, sanctuaries, safari areas and recreational parks;
- The preservation, conservation, propagation or control of wildlife, fish, and plants of Zimbabwe and the protection of her natural landscape and scenery;
- Conferment of privileges on owners and occupiers of alienated land as custodians of wildlife, fish and plants;
- Giving of certain powers to environment committees (formerly intensive conservation area committees); and matters incidental to or connected with the foregoing.

The Act that was originally passed by Parliament in 1975 was unique in that it provided a legal basis for the devolution of Authority to private landowners over all wildlife on their land which resulted in in the rapid development of the country's wild life industry. It also paved the way for the partial extension of this principle to the Communal Lands through the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE) in the 1980s that granted Appropriate Authority Status to the communal areas to manage the wildlife resources for their own benefit.

The Act was subsequently revised in 1996 and 2001 with the latest revision paving the way for the establishment of the current Parks and Wild Life Management Authority to replace the former Department of National Parks and Wild Life Management.

The legal and regulation framework applicable to the conservation and protection of lion and all other species includes:

- Parks and Wildlife Act; Chapter 20:14 (1996) as amended in 2001.
- Environmental Management Act; Chapter 20:27.
- Forest Act; Chapter 19:05.
- Statutory Instrument 362 of 1990: Parks and Wildlife (General) Regulations, 1990.
- Statutory Instrument 76 of 1998: Import and Export of Wildlife Products.
- Statutory Instrument 40 of 1994: Parks and Wildlife Act (General) Amendments.
- Statutory Instrument 26 of 1998: Parks & Wildlife Act (General) Amendment.
- Statutory Instrument 92 of 2009: Compensation Values for Wildlife.
- Statutory Instrument 93 of 2009: Compensation Values for Trapping of Animals.
- Trapping of Animals Control Act 20.16.

A summary overview of these instruments is provided in Annex II.

3.2 The Zimbabwe Parks and Wildlife Management Authority

The Parks and Wildlife Management Authority is mandated by the Parks and Wildlife Act [Chapter 20:14] with the responsibility of conserving Zimbabwe's wildlife heritage through effective, efficient and sustainable protection and utilisation of natural resources for the benefit of present and future generations. The Authority was established to allow it to retain the revenue that it generates for

funding its operations and thereby reducing its dependence on Treasury. This entailed introducing a commercial dispensation and putting in place effective revenue generation and financial management systems.

The ZPWMA has the mandate to manage the entire wildlife population of Zimbabwe, whether on state, private and communal land. Vision, mission and core values of ZPWMA are as follows:

Vision: *To be the world leader in sustainable conservation.*

Mission: *To conserve Zimbabwe's wildlife heritage through effective, efficient and sustainable utilisation of natural resources for the benefit of present and future generations and stakeholders*

Core Values: Teamwork, Commitment, Transparency, Professionalism, Integrity, Accountability, Fairness, in harmony with nature.

While private landowners may utilise the wildlife on their land, they are still accountable to the ZPWMA for the welfare of the wildlife in terms of Statutory Instrument 26 of 1998, which, among other things, states that *"No person shall permit any person who is not ordinarily resident in Zimbabwe to hunt on any land for which he is the appropriate authority any animals other than those entered on the authority to hunt...'*

3.3 Conservation Strategy and Action Plan for Lion

A *Conservation Strategy and Action Plan for the Lion (Panthera leo) in Zimbabwe* was prepared in 2006 by the ZPWMA, local and international NGOs. This was in response to the proposal submitted by Kenya at the 13th Conference of the Parties to the Convention on International Trade in Endangered Species of Flora and Fauna (CITES) calling for the transfer of the lion population from Appendix II to Appendix I. The Parties recommended a detailed examination of the issues surrounding the conservation of the African lion, through a series of regional workshops.

IUCN responded to this and together with other key stakeholders, organised the first workshop in 2005 which involved the 14 West and Central African lion range states. The second workshop brought together 15 lion range states from Eastern and Southern African in January 2006 (Bauer, Chardonnet and Nowell, 2005). Each workshop included the Directors of Wildlife Conservation Departments and their technical advisors, safari operators, community leaders, non-governmental organisations involved in conservation, as well as researchers on the African lion.

The workshops came up with several recommendations which included:

- The need for African lion range States to follow up the workshops by developing and implementing national lion management plans.
- The need for a Pan African Conservation strategy to form the basis of a region wide collaboration in the conservation of the lion and which would also form the basis for the management of other wildlife species on regional scale.

Responding to the first recommendation, the ZPWMA, together with IUCN, convened a workshop in November 2006 to develop a national lion conservation strategy and action plan for Zimbabwe attended by conservation NGOs, the private sector, and Rural District Councils (RDCs), as well as ZPWMA and IUCN (Conservation Strategy and Action plan for the Lion (*Panthera leo*) In Zimbabwe, 2006).

The deliberations of this workshop identified the following issues related to lion conservation in Zimbabwe:

- Management and research including technical advice, policy formulation and management interventions
- Capacity needs as reflected by adequate human, financial and material resources
- Mitigation of human-wildlife conflict
- Socio-economic costs and benefits of long-term lion conservation
- Communication and information dissemination for key decision makers at different levels
- Framework for captive breeding of lions
- Trade and regulations to ensure non-detriment findings related to trade in all lion related products
- Regional collaboration to strengthen bilateral and regional lion conservation strategies

The analysis of these issues led to the formulation of the conservation strategy whose vision is that *Lions (*are*) conserved and managed sustainably for their aesthetic, cultural and ecological values, and the socio-economic development of Zimbabwe*. The immediate objective of this strategy is *to secure and where possible, restore as many viable lion populations as possible in Zimbabwe whilst mitigating their negative impacts and enhancing their value for the benefit of people through sustainable use*.

Three broad targets were identified to achieve this objective:

1. Ensure the persistence of key lion populations and other important populations including those of doubtful viability;
2. Human and livestock loss reduced, and
3. Optimize wildlife conservation-related net benefits to local communities

Table 4 summaries the progress with achieving the results identified in the strategy:

Table 4: Summary of implementation progress of the 2006 lion conservation strategy.

Output 1. Lion Management - Lion populations, their habitats and wild prey effectively conserved and managed in collaboration with local stakeholders	
Target 1.1 Establish a baseline survey and monitoring programme for identified lion populations and their range inside and outside the Parks & Wildlife Estate	Baseline surveys have been completed for the Parks Estate using monitoring protocols for key variables (populations, habitats, prey). Selected surveys undertaken of areas outside National Parks in conservancies and some communal land and forest areas.
Target 1.2 Maintain and strengthen capacity for lion conservation, management, monitoring and research within PWMA and amongst other key stakeholders	Carnivore research programmes undertaken by NGOs (Mana, Matusadona, Gonarezhou, Zambezi and Hwange NPs, Matetsi, Chirisa SA) and research institutions (Bubye and Save Conservancies) in various parts of the country. Personnel trained in data collection and capture, management, lion aging and analysis.
Target 1.3 Identify and implement best management standards and practice for all trophy hunted lion populations, ensuring their viability and sustainable, equitable and adaptively managed trophy quotas	Quota setting methodology reviewed and annual quotas and offtakes analysed considering population changes, trophy quality and levels of PAC over time. Trophy hunting database in place and in process of being refined to provide cost-effective system for collation, entry, analysis, reporting and feedback to key stakeholders in the wildlife industry (ZPWMA, RDCs, SOAZ, ZPHGA, conservation NGOs, Researchers etc.). System of fixed and optional quotas reviewed and age-based criteria for male trophy animals in place and functioning.
Target 1.4 Develop and implement a national lion captive breeding management policy	Policy in place (see discussion below).
Target 1.5 Develop and implement co-management frameworks for wildlife management	Collaborative national lion action plans to co-management lion populations in place for NW Matabeleland and SE Lowveld, including three conservancies (Bubye Valley, Save and Malilangwe).
Target 1.6 The geographic distribution range of the lion population expanded	Conservancies and neighbouring communities are working together to maintain existing geographic distribution of lion populations. Zimbabwe proactive in the KAZA and GLTFCA programmes.
Output 2. Lion Research - Information for effective and adaptive lion conservation management generated	
Target 2.1 Initiate targeted research on lion ecology, management and mitigation of conflict	Extensive research programmes focussing on lion ecology and biology undertaken in Hwange, Bubye, Save, Malilangwe, Matusadona, Chizarira and Chirisa. ZPWMA have cooperated with NGOs, such as Panthera, to develop cost-effective age determination methods for lions. Key threats to lion populations, with focus on human-lion conflict, snaring and poisoning, undertaken and continually monitored.
Output 3. Mitigation - Human-lion related conflicts minimized and, where possible, eliminated	

Target 3.1 Develop and establish databases on lion/human conflict	Data on Problem Animal Control (PAC) reports on lion related problems collated.
Target 3.2 Identify and implement methods to reduce and mitigate livestock losses and lion attacks on humans	Approaches to mitigate livestock losses and lion attacks on humans being tested and implemented in Hwange. Methods to mitigate lion attacks on livestock being implemented as appropriate at selected sites (e.g. Tsholotsho).
Target 3.3 Trained and properly staffed PAC Units established to conduct rapid response, restrained and precisely targeted problem animal control	PAC Units at ZPWMA field station and/or RDC levels partially established.
Target 3.4 Incidents of human-lion conflict reduced by at least 30% in 5 years while also reducing retaliatory killing	Specific awareness and education package on lion conservation and management developed and implemented in Matusadona, Hwange and Gonarezhou regions.
Output 4. Socio- Economic - The costs and benefits of long-term lion management equitably distributed	
Target 4.1 Complete an inventory of stakeholders directly affected by lion conservation	Stakeholder groups (e.g. local communities, CAMPFIRE RDC representatives, commercial safari hunting operators (SOAZ, ZPHGA), tourism operators (ZATSO) identified. Financial impacts of lion conservation and extent and magnitude of socio-economic impacts on each stakeholder group completed.
Target 4.2 Deliver appropriate training and capacity building to prioritised stakeholders	Representative stakeholder groups in some regions identified (Hwange, Matusadona, Gonarezhou). Limited training undertaken. Implement adaptive programme across four wildlife regions
Target 4.3 Agree and implement collaboratively developed area-specific lion management plans with identified stakeholder groups in each wildlife region within 5 years	In progress. Hwange NP Management Plan approved.
Target 4.4 Implement transparent mechanisms to equitably distribute lion-related/generated income to identified stakeholders (groups and/or communities)	Scale of income generated from lion conservation reviewed and use of funds to encourage protection of lion populations reach local stakeholders undertaken (see CAMPFIRE generated revenues)
Output 5. Regulations - Effective regulation of consumptive lion utilisation ensured	
Target 5.1 Implement approved policy and practice at national and local levels regarding problem animal control (PAC) of lions within 2 years	Current policy and practice regarding problem animal control of lion reviewed, at national and local levels. PAC offtakes reconciled with trophy hunting quota offtake to ensure that the overall offtake (i.e. total quota) is sustainable.
Output 6. Communication, Awareness and Information Dissemination	

Target 6.1 To carry out awareness programmes in 50% of the districts in Zimbabwe within the next three 3 years	Awareness programmes initiated at a national level, with professional hunters, communities and NGO community. Awareness campaigns being carried out by the Extension and Interpretation Unit in all the regions.
Target 6.2 Create lion conservation and management information units within one year	Databases established at some key research centres using dedicated external research programmes (e.g. WILDCRU).
Output 7. Regional and Trans-Boundary Collaboration	
Target 7.1 Undertake an inventory of national strategies for lion management	Done.
Target 7.2 Encourage the development of national lion conservation strategies where these are missing &/ or incomplete	National lion conservation strategies discussed at AWCF (meeting held under auspices of KAZA).
Target 7.3 Develop an integrated and harmonised lion management strategy for Transfrontier Conservation Areas (TFCAs)	Lion conservation strategies for SADC discussed at AWCF meeting held under auspices of KAZA.
Target 7.4 Implement lion conservation strategy and management plan	Strategy under review.

3.3.1 National Lion Captive Breeding Policy

A target of the Conservation Strategy and Action Plan for the Lion in Zimbabwe was to develop and implement a National Lion Captive Breeding Management Policy. This was achieved in 2011 when the ZPWMA met with lion breeders, keepers and animal welfare organizations to define the purpose of breeding and keeping lions; identify and discuss issues related to breeding and keeping of lions in captivity and to chart the way forward on the breeding and keeping of lions in captivity.

The objectives of the policy are to provide a national approach and minimum standards to all aspects relating to the management of captive bred lions including the role of captive bred lions upon reaching maturity and regulate the import and export of captive bred lions. The policy also defines the measures to protect the genetic integrity of indigenous lion populations. The use and welfare of captive bred lions is monitored by a captive lion inspection team.

In terms of this policy, lions that are kept in captivity for species conservation and commercial purposes are subject to the following conditions:

1. No permit for the keeping of lions in captivity will be issued before the facility has been inspected and approved by ZPWMA as a Captive Lion Holding Facility.
2. Lions may not be allowed to breed in captivity unless the holding facility is registered as a Captive Lion Breeding Centre. If a breeding permit is not issued, it is the responsibility of the owner to ensure that the animals do not breed. If breeding occurs without a permit the owner will be fined and the animals are subject to confiscation and possible destruction by ZPWMA.
3. Lions may not be captured from the wild population and kept in captivity unless the animal is orphaned or injured and is captured with the purpose of rehabilitating the animal and returning it to the wild within as short a time as possible.
4. Captive bred lions may not be released into the wild or transferred from the facility without prior permission from ZPWMA, and are subject to an approved release plan.

No lion can be transported without the necessary internal and national permits and without being micro-chipped, and all transportation of live animals must comply with CITES Resolution Conf. 10.21(Rev. CoP 14). To safeguard the integrity of the indigenous gene pool, no import permits will be issued for non-indigenous lions. Any lion that are to be transported must be issued a certificate of health by a competent veterinarian confirming that the premises of origin has been free from anthrax, panleukopenia and canine distemper for six months, and that each predator is free from diseases such as FIV, BTB or any other disease which may threaten local populations. The animal should also have been vaccinated for rabies and treated with a broad spectrum de-wormer and acaricide.

It is an offence to export lions from Zimbabwe without a ZPWMA export permit, and all export permit will only be considered if the exporting facility holds a current permit to keep captive lions. Moreover, an export permit will only be issued if the importing facility, in the country of import, conforms to regulations laid out in this policy document.

4 Population Trend Data For Key Lion Populations In Zimbabwe

Zimbabwe has in recent years taken proactive actions to enhance the conservation of lion populations both inside and outside the protected areas. These have included implementing moratoriums on hunting, reducing quotas, implementing an age-based hunting regulation and undertaking independent monitoring programmes conducted by international research institutions. Emerging from this is evidence that by implementing appropriate regulatory, management and monitoring actions, coupled with raising awareness, the lion populations respond rapidly and recover to near

former levels. The section below summarises the data from key range areas both inside and outside the National Parks Estate to substantiate this.

4.1 LION SURVEY TECHNIQUES

The population estimates of lions in Zimbabwe are determined through carnivore spoor surveys, systematic lion collaring and call-up surveys. With the strategy to maintain the wilderness values of most protected areas, there is low road penetration in the parks estates, however all suitable roads are used as transects, and in areas of suitable substrate, spoor surveys have shown to be an effective and efficient means to assess wildlife densities (Stander 1998, Fuston et al. 2001, Davidson and Romanach 2007). Patrol reports, field observations by ZPWMA rangers and other sightings by tour operators and tourists also contribute to the knowledge of the status of lions in Zimbabwe's protected areas. Similarly, the occurrence of lion in Safari Areas is recorded by resident safari operators, including those operating in CAMPFIRE areas.

4.2 RESULTS OF REGIONAL LION SURVEYS

Lion population surveys provide indices of abundance that can be used to determine spatial distribution, as well as temporal trends in population numbers. The results of the different survey methods are used to generate information for setting sustainable lion trophy hunting quotas and for population management.

4.2.1 Gonarezhou National Park

Spoor count surveys of the Gonarezhou National Park have been conducted since 2009 using the same methodology to obtain direct estimates of lion populations to compared actual lion densities with potential density estimates (Groom, 2009, Groom et. al. 2014). Table 5 below illustrates the growth of the lion population in the Park (Groom and Watermeyer, 2015).

Table 5: Population estimates of lion in the whole of Gonarezhou National Park (extrapolated from survey area) from 2009 – 2015 (Groom and Watermeyer, 2015).

2009	2010	2011	2012	2013	2014	2015
31	45	72	64	77	116	125

As with many lion populations anthropogenic factors can be key drivers of lion population dynamics, and in areas with high human impact lion numbers may be significantly lower than those predicted by prey biomass models. This was found to be the case in the Gonarezhou National Park. Groom et. al. (2014) concluded that high hunting quotas either within or around the protected area were the most likely cause of the low lion numbers, with quotas in some areas being as high as seven lions per 1,000km^2 in some years. Other factors included persecution, poisoning and problem animal control, as well as disease and competition with spotted hyaenas (*Crocuta crocuta*).

Following decisions to halt lion hunting, and reducing human-lion conflict, the lion population responded and steadily increased, reaching a density of 2.5 lions / 100km^2 in 2014 (as compared with 0.6 / 100km^2 in 2009). Relative to other populations (average over Kruger NP, Hwange NP, Selous GR and Serengeti NP = 9.6 lions / 100km^2) this is still low, suggesting the population could continue to increase further. Groom et. al. (2015) conclude that the lack of artificial water in Gonarezhou means that natural carrying capacity will be lower but based on prey biomass availability predictions of lion carrying capacity could support between 200 and 300 lions (Groom 2010). It is therefore still possible that the lion population in the park could at least double before reaching carrying capacity (especially because prey biomass is now greater than it was in 2010 – see Section 8.5 below).

4.2.2 Save Valley Conservancy

The African Wildlife Conservation Fund carries out an annual large carnivore spoor survey to assess population trends of the carnivores in the Savé Valley Conservancy (SVC) to aid management decisions. A standardised methodology is used to ensure consistency through time and comparability with other studies. Since 2008, the spoor surveys have been done using the same roads and the same observer. The results of these surveys are provided in Table 6 showing that the lion population has increased from 40 in 2005 to 284 in 2015 (Groom and Watermeyer, 2015, du Preez et al, 2016).

Table 6: Population estimates of lion in the whole of Savé Valley Conservancy from 2005 – 2015

2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
40	50	52	76	114	143	105	130	115	182	284

The lion population has increased substantially in the last two years, and there are now an estimated 284 lions in the whole of the conservancy. This is a notable increase since the 2013 estimate of 115 lions and 2014 estimate of 182, and is perhaps a latent effect of no hunting for over several years. Of the 149 lion tracks encountered, 28% were big adult males with 53% identified as females/juveniles and 15% as young cubs (3% of tracks were unidentified). The number of lions in SVC equates to a density of 11.7 lions/100km^2. This is slightly higher than other population estimates of 9.6 lions/100km^2 (average over Kruger, Hwange, Selous and Serengeti).

4.2.3 Bubiana Valley Conservancy

After originally being eradicated by cattle ranchers in the area, 13 lions were reintroduced to the Bubye Valley Conservancy in 1999, and four young males broke into the Conservancy that same year. From the original 17 animals present in 1999, the Bubye Valley Conservancy lion population was estimated at approximately 280 individuals in 2009 when robust population surveys were initiated by a team from the University of Oxford Wildlife Conservation Research Unit (WildCRU), and this population has continued to grow. Today it is estimated that there are over 500 lions on the Bubye Valley Conservancy (Figure 3, du Preez et. al., 2016).

The exponentially increasing Bubye Valley Conservancy lion population currently exists at one of the highest densities in Africa (~0.190 lions/km^2: du Preez et al. 2015, du Preez et al. 2016), greater than that of the Serengeti, Tanzania (0.10 lions/km^2), Selous, Tanzania (0.080 – 0.130 lions/km^2: Creel and Creel 1997), Kruger National Park, South Africa (0.096 – 0.112 lions/km^2: Mills et. al. 1995), and Hwange National Park, Zimbabwe (0.027 lions/km^2: Loveridge et. al. 2007). This equates to the largest contiguous lion population in Zimbabwe.

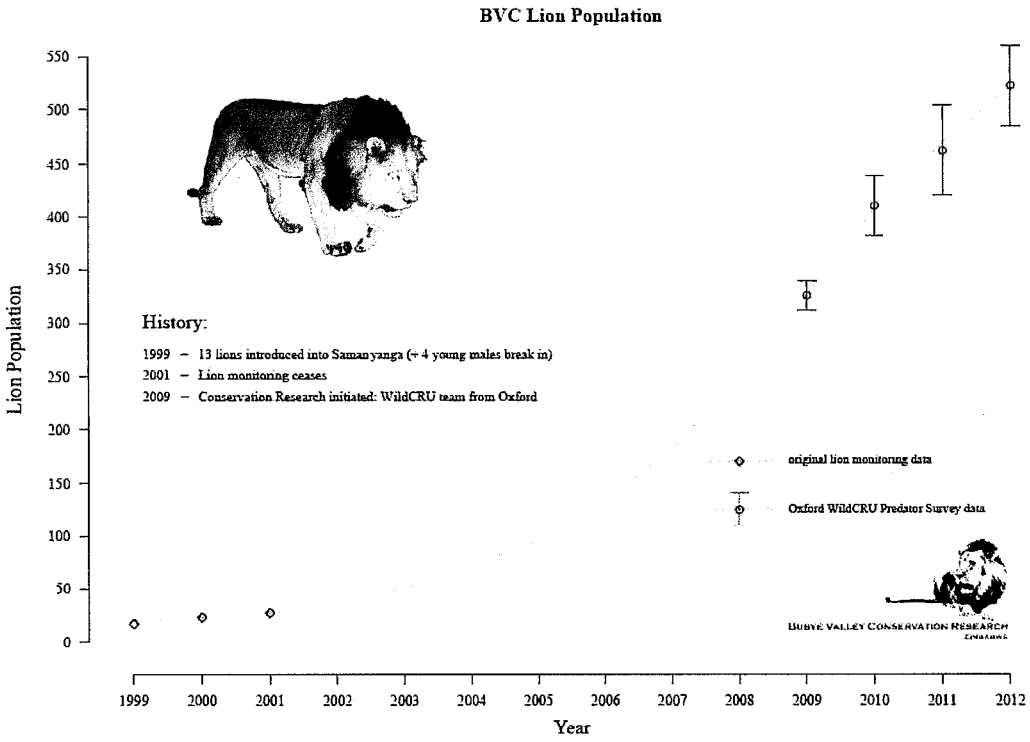

Figure 3: The Bubye Valley Conservancy lion population has increased exponentially since the original reintroduction of the species to the conservancy in 1999.

4.2.4 Mana Pools National Park

In conjunction with ZPWMA, Zambezi Society and the Cheetah Conservation Project, the Wildlife Conservation Research Unit (WILDCRU) based in Oxford (U.K.) conducted a camera trap and spoor count survey of Mana Pools National Park with the objective of:

- To undertake park wide surveys to estimate population density, distribution and habitat occupancy of common predator species in Mana Pools National Park.
- To contribute to Cheetah Conservation Project Zimbabwe's (CCPZ) cheetah monitoring protocol.
- To provide presence/absence data on all the larger mammal species.

A Facebook page was also created for the survey that was regularly updated on the progress of the survey (Facebook.com/Mana Pools Survey 2015).

The preliminary results of this survey identified 67 individual lions from the 267 images captured. When combined with the spoor count surveys, the population was estimated at 94 lions at a density of 4.5 lion/km^2 (Seymour-Smith and Loveridge, 2015),

4.2.5 Hwange National Park

The Hwange Lion Research Project undertaken by the Wildlife Conservation Research Unit (WILDCRU, Oxford University) works in association with the Zimbabwe Parks and Wildlife Management Authority. Since 1999 this project has identified over 600 lions and currently monitors approximately 15 prides and 12 male coalitions in a 5,000km^2 study area. This is one of the most intensive and long-term lion

projects in Africa. A key finding of this research programme has been to demonstrate that the way lion trophy hunting is managed can rapidly improve the status of lion populations by implementing a biologically sustainable system of allocating quotas. This project has also increase the understanding of human related impacts on lion populations (and vice-versa) along the park boundary. More recent research is focussed on understanding connectivity between Hwange NP and other areas such as parks in Botswana and in Zimbabwe.

This project was initiated because there was a perception that levels of sport hunting of male lions' in the hunting concessions surrounding the Hwange National Park were having a negative impact on the conservation of the population (Loveridge, et. al. 2007). Data collected between 1999 and 2004 suggest that this was indeed the case and this contributed to a suspension of sport hunting of lions in the area surrounding the Park between 2005 and 2009. This was a crucial shift in management policy for this species and an important step towards sustainable management and conservation of lions. Following the imposition of the hunting moratorium, lion densities increased (Figure 4).

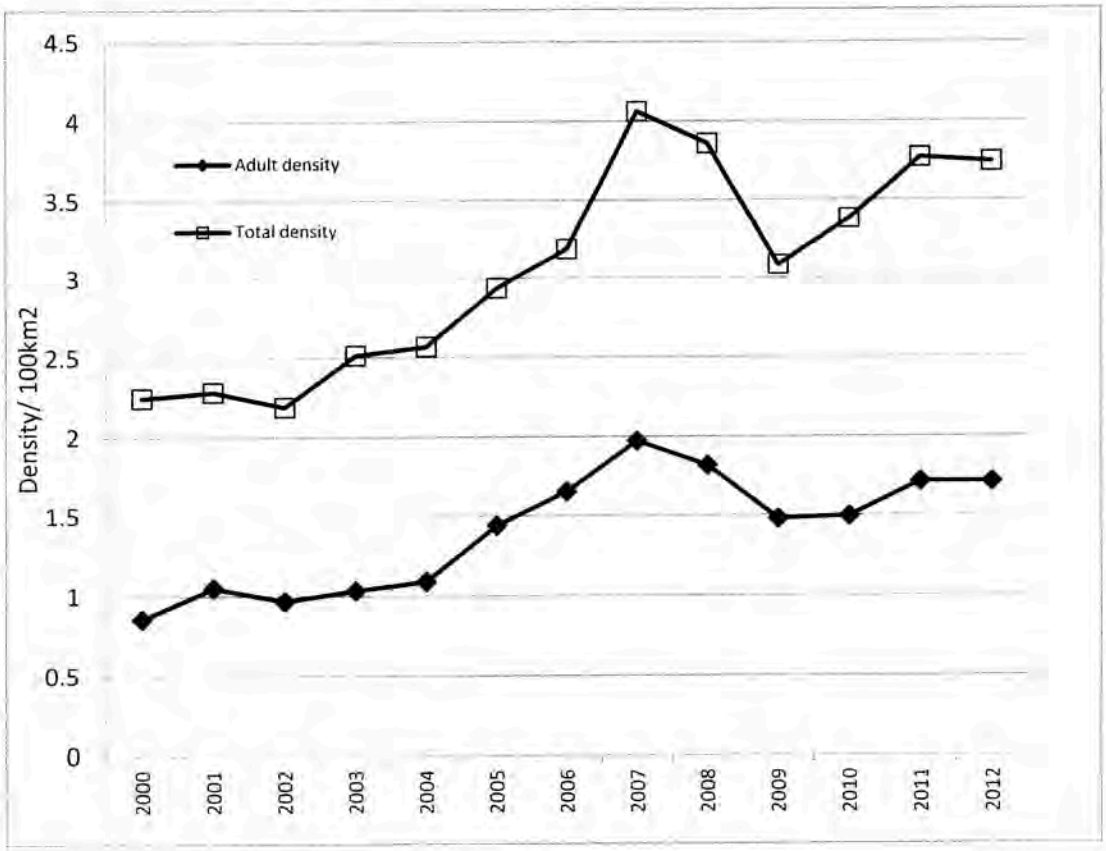

Figure 4: Lion densities in the Hwange area between 2000 and 2012

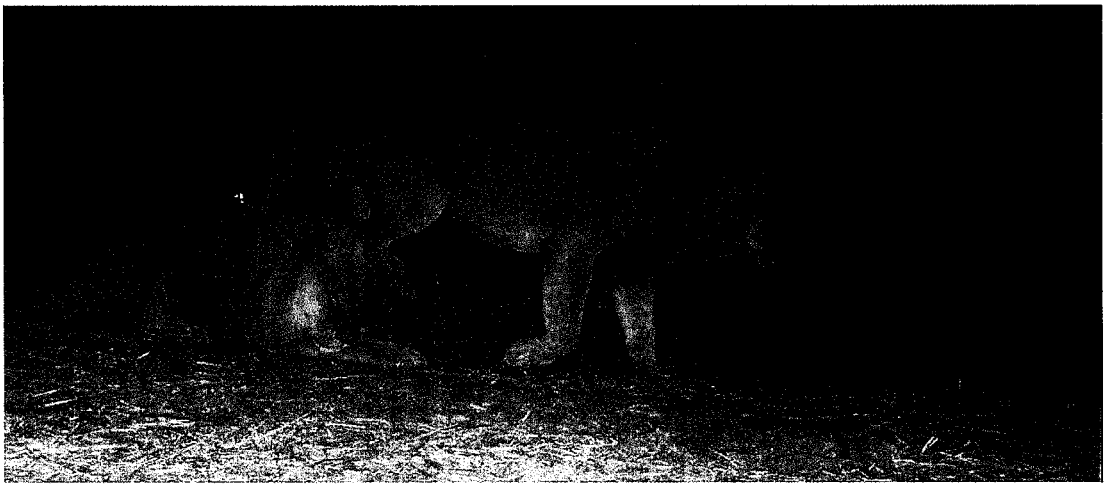
Following the lifting of the moratorium, and by implementing strict monitoring and hunting guidelines, the overall Hwange lion population has continued to show a positive trend, and is now estimated at over 550 animals.

4.2.6 Zambezi National Park and Units 6 and 7

Victoria Falls Wildlife Trust (VFWT) in collaboration with ZPWMA and the Hwange Lion Research Project has recently completed both spoor count transects and a camera trap surveys in Zambezi National Park, and Units 6 and 7 of the Matetsi Safari Area. The preliminary results of these surveys show that the lion population has increased since 2013 to approximately 67 (Rodger Parry, pers comm.).



Coalition males, Zambezi National Park, June 2016 (*Photo credit: Jessica Dawson, Victoria Falls Wildlife Trust)*

4.2.7 Chizarira National Park and Chirisa/Sengwa Safari Area

A survey was undertaken jointly by the Zimbabwe Parks and Wildlife Management Authority and the African Lion and Environmental Research Trust in September 2015 (Dr Norman Monks pers comm.). The survey area consisted of the 1,910 km^2 Chizarira National Park (a non-hunting area) and the adjoining 1,713 km^2 Chirisa/Sengwa Safari Area (a hunting area). No large carnivore counts using the call-up method had previously been conducted in these contiguous protected areas.

The survey method used the standardized protocol of audio broadcasts of a buffalo calf in distress. Spoor counts were not used for these surveys since previous research had shown that the call-up method was more precise, took less time, and was less costly to complete to achieve accurate results. Up to three stations were sampled nightly commencing just after sunset.

Twelve call-up sites were sampled. Response to the call-up stations by lions was low with only 2 of the 12 stations visited. The population abundance was estimated to be 31.6 (0.872 lion 100/km^2), suggesting a decline of 68.4% since 2004 when estimates of lion numbers were provided to Bauer and van der Merwe, (2004).

5 Conservation in Zimbabwe

Zimbabwe Parks and Wildlife Management Authority (ZPWMA) falls under the Ministry of Environment, Water and Climate and it was established under the Parks and Wildlife Act of 1996 (Chapter 20:14) as amended by Act Number 19 of 2001. The rationale behind the establishment of the Authority was to allow it to retain all the revenue it generates to be ploughed back into conservation. The functions of the Authority are provided for in detail in section 4 of the Parks and Wildlife Amendment Act Number 19 of 2001. The Act gives the Authority power to control, manage and maintain Zimbabwe's wildlife resources.

Its **vision** is *"To be a World Leader in sustainable conservation"* and its **mission** is *"To conserve Zimbabwe's wildlife heritage through protection and sustainable utilisation of natural resources for the benefit of present and future generations."*

5.1 STAFF ESTABLISHMENT

The staff strength at the beginning of January 2015 was 2,043 and ended at 2,044 on 31, December 2015 (2015 Annual Report (unpublished). Fifty (50) rangers were recruited in 2015. The following is the staff status report as at 31st December, 2015 (Table 7).

Table 7: Summary Staff Establishment by Region

Position	Grade	HQ	VMU	Northern	Western	Southern	Central	Total
Executive	F & E	3	0	0	0	0	0	**3**
Department Managers/Sectional Heads	D3-D5	19	0	3	4	3	3	**32**
Ecologists/ Area Managers/Officers	D1-D2	11	1	19	19	13	4	**67**
Snr Rangers /Officers	C1-C5	29	6	64	89	49	34	**271**
Rangers/Clerical	B2-B5	33	12	507	461	310	197	**1,520**
Gen. Hands / Lodge Attendants	B1	2	2	30	66	33	17	**150**
TOTAL		**97**	**21**	**623**	**639**	**408**	**255**	**2,043**

The current remuneration levels have remained low with the lowest paid worker receiving a gross salary of $375 per month. The last salary increase of 23% was in January, 2014. A comparison with other Parastatals within the same parent ministry, shows that the Authority has the lowest salary scales.

5.2 TRANSPORT OPERATIONS

As indicated in Table 8, the total cost of operating the Parks transport fleet was is $1,547,172.82 (excluding insurance and licensing) in 2015. The existence of old and obsolete vehicles in the fleet increases costs as most of them require major component replacements thereby increasing vehicle downtime.

Table 8: Overall travel and fuel consumed by Region

Station	Km travelled	Fuel Consumed		Repairs & Maintenance Cost ($)	Total Cost ($)
		Litres	Cost ($)		
Head Office	1,489,294	190,644	272,620	136,419	409,039
Northern	1,429,260	149,577	213,895	147,113	361,007
Southern	1,075,077	110,111	157,458	59,548	217,006
Western	1,313,263	142,012	203,077	161,120	364,196
Central	392,885	47,995	68,632	127,288	195,920
TOTAL	**5,699,779**	**640,339**	**$915,684**	**$631,486**	**$1,547,172.**

Table 9 below summarises the status of the Authority's vehicle fleet as of 2015. Out of the fleet complement of 316 (including tractors and motor cycles), only 70% are in sound condition.

Table 9: Number of vehicles per region

Region	Runners	Non-Runner	Total	% of Non-Runner
Head Office	41	6	47	13
Northern	53	19	72	26
Southern	30	21	51	41
Western	80	39	119	33
Central	17	10	27	37
Total	**221**	**95**	**316**	**30**

The Authority also owns three aircraft: Bell Jet Ranger and Robinson R22 Beta 11 helicopters, and a Cessna 185. The Jet Ranger is based at Hwange National Park and is used for game capture and law enforcement. The remaining aircrafts are non-operational.

5.3 LAW ENFORCEMENT

A major component of the Authority's mandate is law enforcement. This has become increasingly more important with the escalation in illegal wildlife trade, particularly involving elephant and rhino. The Authority has an establishment of 2,146 rangers however by the end 2015, there were 1,448 rangers in post (67%). Of the 1,448 rangers in post, 1,004 are deployable for anti-poaching operations.

The level of effort of law enforcement over the last 3 year is summarised in Table 10. In 2015 there were 2,139 incursions detected, and arrest of 1,354 local and 129 foreign poachers. The number of armed contacts declined from 26 in 2014 to 23 in 2015, and number of poachers killed declined from 13 in 2014 to 11 in 2015. Recoveries made in the field included 25 rifles, 276 rounds of ammunition, 496 pieces of elephant ivory, 4 rhino horns and 5,133 wire snares.

Table 10: Detections, Arrests and Recoveries for 2013, 2014 and 2015

Year	No of Incursions	No of contacts		Number of poachers				Recoveries					Other recoveries and arrests		
				Killed		Arrested									
		Armed	Visual	Local	Foreign	Local	Foreign	Rifles	Ammunition	Ivory	Rhino horn	Snares	Gold	Poachers Camp	Dogs
2013	1842	27	344	9	0	1421	131	20	945	436	5	4415	93	264	180
2014	1571	26	362	10	3	4161	94	20	163	202	19	4864	221	186	272
2015	2139	23	356	6	5	1354	129	25	276	496	4	5133	134	339	167

5.3.1 Illegal Harvesting of Wildlife

Commercial wildlife poaching involving both local and foreign nationals continues to plague Zimbabwe, especially with respect to elephant and rhino located in the Zambezi Valley, Sebungwe, North-West Matabeleland, South-East Lowveld. The species targeted are shown in Table 11 and 12. Note that 21 lions were killed illegal between 2013 – 2015, with 6 animals killed through snaring in the area adjacent to Hwange National Park in 2015.

Table 11: Trends in wildlife poaching in the parks estate

Year	Illegally killed wildlife										
	Elephant	Buffalo	**Lion**	Kudu	Zebra	Impala	Warthog	Nyala	Eland	Crocodile	Waterbuc k
2013	293	65	**12**	65	21	67	22	5	6	2	15
2014	176	44	**2**	34	8	65	26	2	5	3	15

5.3.2 Illegal trophy hunting – the "Cecil" effect

Professional hunter Theodor Bronkhorst was arrested for allegedly illegally hunting of a lion popularly known as 'Cecil' with a foreign client on Antoinette and Antoinette farm in Gwayi River Conservancy (which is adjacent to Hwange National Park). The same case involved Umguza Rural District Council in alleged illegal quota transfer[1]. At the time of writing, this case has not been brought before the court, and is still under judicial review[2].

The Authority immediately implemented the following measures in response to this incident:

- Hunting of lions, leopards and elephant in areas outside of Hwange National Parks required confirmation and authorization in writing by the Director-General of the Zimbabwe Parks and Wildlife Management Authority, and all hunts are to be accompanied by the Authority's staff whose costs will be met by the landowner.
- Bow hunting was suspended except with confirmation and authorization in writing by the Director-General of the Zimbabwe Parks and Wildlife Management Authority.
- Members of the hunting fraternity were reminded that it was illegal for quotas to be transferred from one hunting area to another. Any case of quota transfer would be regarded as poaching, and the Authority will not hesitate to arrest, prosecute, and ban for life any persons including professional hunters, clients and land owners who were caught on the wrong side of the law.

[1] This system facilitated the transfer of a quota from one property to another has since been suspended by the Authority.

[2] Note: This case has been dismissed by the court on 12th November 2016.

- 2015 hunting quotas and permits for Antoinette and Antoinette farm, Railway farm 33, Umguza Rural District Council and Kusile Rural District Council were suspended.
- Professional hunters' license for Theodor Bronkhorst was suspended.

5.4 Human Wildlife Conflict

The Authority is called upon to deal with human-wildlife conflict (HWC) issues across the country, and this continues to be a challenge. A total of 863 reports of problem wild animals causing threat to human life and property were received in 2015 compared to 1,637 reports in 2014 (Table 13). From these incidents, a total of 39 human fatalities by crocodiles, elephants, lions and buffaloes were recorded in 2015 compared to the 27 fatalities in 2014.

Table 13: Trends of Human and Wildlife Conflict Incidents

Year	Total Reports Received	People killed	People Injured	Cattle killed	Goats killed
2013	1 088	21	16	67	65
2014	1 637	27	24	217	129
2015	863	39	23	232	213
Total	**3 588**	**87**	**63**	**516**	**407**

The scale and species involved in HWC is summarised in Table 14. The authority received 200 problem lion reports and responded to 177. One person was killed by lion, and 206 livestock. The Authority elected to capture problem lion (6) rather than destroy the animals.

Table 14: Scale of countrywide human wildlife conflict in 2015.

Species	Nature of problem	No of reports received	Reports attended	Number of animals eliminated		People		Livestock killed		
				Killed	Captured	Killed	Injured	Cattle	Donkeys	Goats
Baboons	Damage to infrastructure, crop raiding, threat to humans	109	105	51	48	0	0		0	0
Buffalo	Threat to human life and crop raiding	46	40	0	15	2	1		0	0
Elephant	Threat to human life, crop raising, destroying property	216	177	0	38	4	5	0	0	0
Hippo	Threat to human life and crop raiding	131	87	0	34	0	0	0	0	0
Crocodile	Threat to human life and killing livestock	106	85	39	9	27	14	16	1	47
Hyenas	Killing livestock	36	18	0	7	0	0	68	2	54

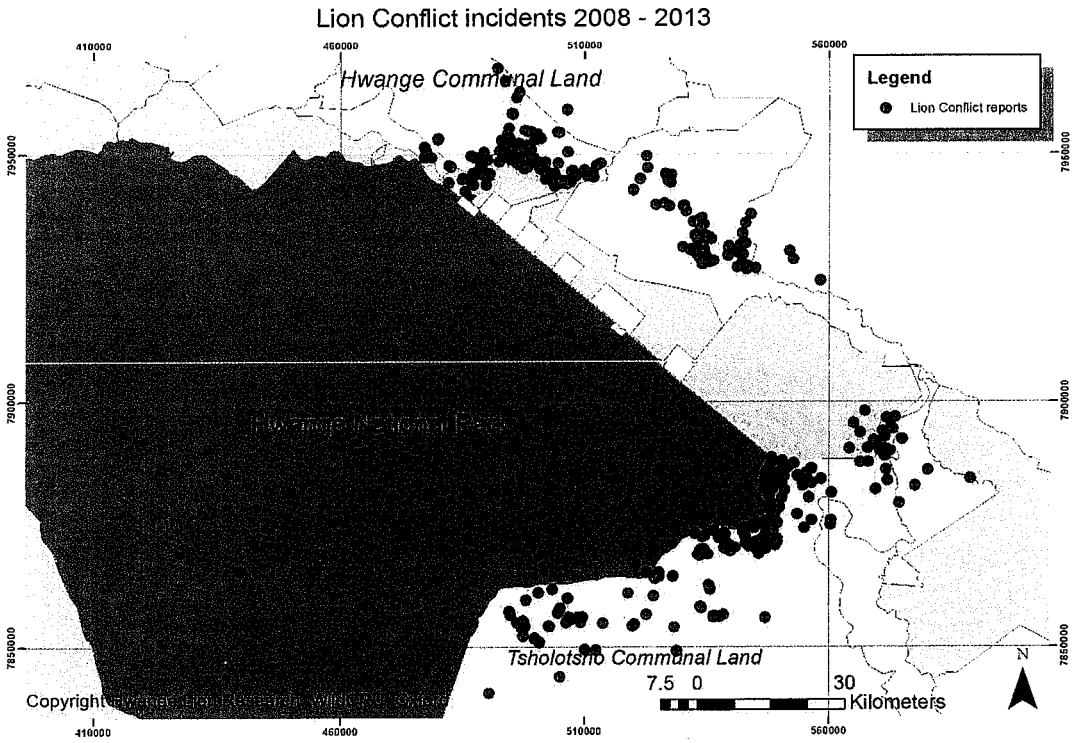
Lion	**Threat to human life and livestock killing**	**200**	**177**	**0**	**6**	**1**	**0**	**115**	**12**	**79**
Total		863	700	90	158	34	20	231	15	213

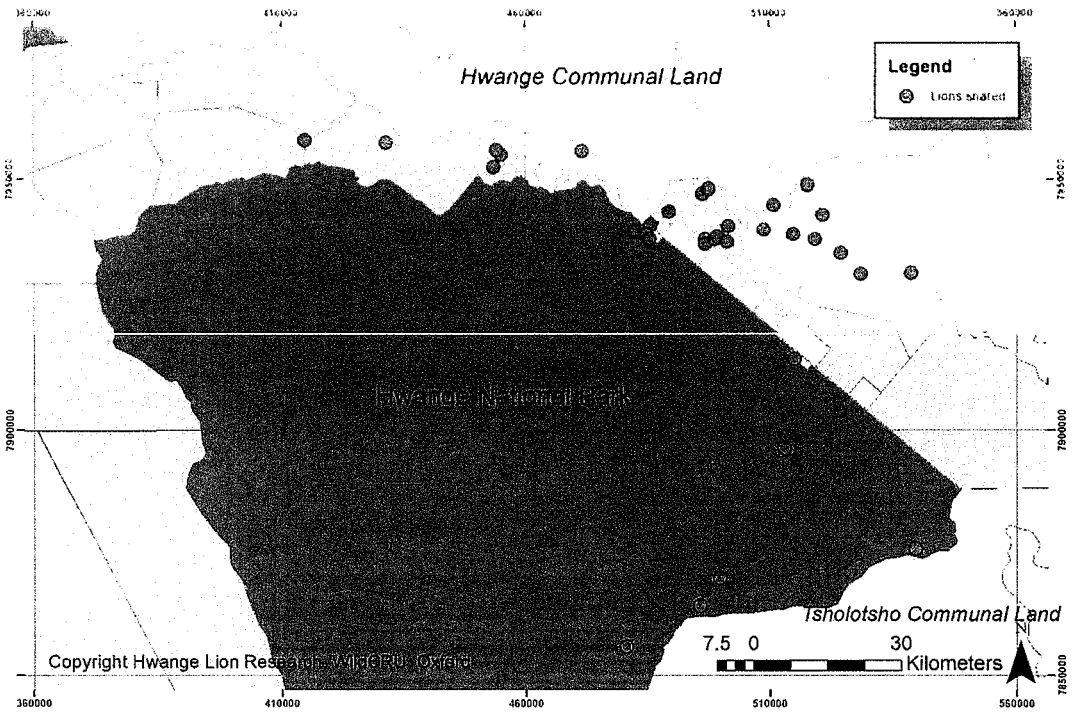
5.4.1 Case Study of Human- Lion Conflict from Hwange National Park

The following information has been extracted from the Hwange National Park Management Plan (ZPWMA, 2016) and is provided here to illustrate the challenges facing the management of lion populations residing adjacent to communal and commercial properties. Variations of the scenario described here apply to other areas of the country where hyaenas and lions are the most problematic carnivores in the communal areas adjacent to protected areas. Hyaenas are perceived to be more of a problem than lions as they account for large numbers of livestock (cattle, goats and sheep). The data presented here has been extracted from the WildCru Lion Research project in Hwange and considers only lions.

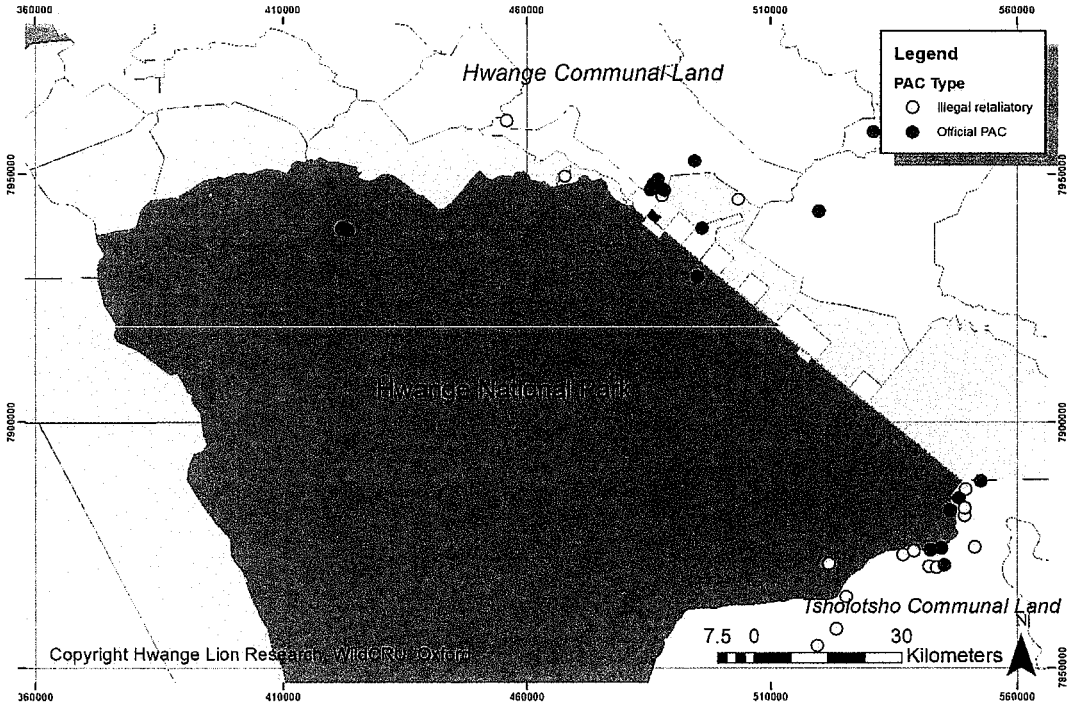
Since its inception in 2007 a significant component of the WildCru Lion Research project has focused on understanding the ecological and human socio-economic factors of conflict between the local agro-pastoralist people residing in Tsholotsho and Hwange Communal Land and lions. The project developed an intensive reporting system to record conflicts and has undertaken a detailed survey to record the baseline data on human wildlife conflict at the household level. Between 2007 and 2013 a total of 1,113 conflict incidents were recorded in the Hwange area in which 915 head of stock was lost to lions.



Lion deaths in wire snares 1998 - 2014



Problem Animal Control (PAC) 1998 - 2014



To mitigate this conflict, the project has initiated the "Long Shields Guardian Programme" whereby communities are notified of movements of collared into their areas via cell phone who then motivate the community to take appropriate action (i.e. moving the cattle, chase the lions etc.). In 2013 alone,

1,850 warnings were passed to the "Long Shields". In addition, the project is working on improving bomas and husbandry techniques as another way to lessen the conflict between lions and people, and although these actions may reduce the incidents of livestock marauding lions, cattle deaths still occur resulting in retaliatory killings or action on the part of National Parks to destroy the animals.

5.5 Trend in Financial Performance of the Authority

The average Income and Expenditure for the period 2010 – 2015 is shown in Table 15 that highlights the inability of the Authority to generate adequate revenue to cover both the capital and operating requirements. The average total income over this period is US$22.4 million (range US$16.5 – US$29.3 million). For the period ending December 2015, the Authority generated total revenue of $24,1million, which is 32% below the anticipated budget of $35.5 million. This includes a government grant of $716 000 and a donation of vehicles and equipment worth $2,1 million from the Government of China.

The average total expenditure for the period 2010 – 2015 is US$25.3 million (range US$18.1 – US$30.7 million). The Authority has thus incurred a loss of approximately US$2.8million/year. For the year ended December 2015, the Authority incurred a loss of US$5,4 million including depreciation.

The Authority is dependent on income from Conservation Fees (i.e. entry fees to Parks etc.) that accounted for 39% in 2015 (average 34%/year), hunting (13% in 2015) and leases (10% in 2015, Table 15).

Although individual salaries remained low, staff costs in 2015 were $20,7 million which is 71% of total revenue raised (average 64%). This is unsustainably high and leaves very limited resources for operation (16%), marketing (1%) and administrative expenses (7%, Table 15).

The major reasons for the budget deficits in the past six years can be attributed to:

- Declining income from hunting – this has been exacerbated by the recent bans imposed on elephant trophy imports into the United States by US Fish Wildlife Service (USFWS) and the much-publicised death of *Cecil the lion* that had a negative effect on revenue generated from hunting.
- Government Grant – The Authority has not received meaningful funding from the fiscus despite requests made by management that non-revenue generating activities which are of national nature be funded by Government.
- The Authority failed to dispose of its ivory stock pile due to the continued ban on ivory trade by CITES. The ivory stock which the Authority is currently holding exceeds 80 tons.

Table 15: Statement of Comprehensive Income for period 2010 – 2015 and the year ended 31 December 2015 (extracted from 2015 ZPWMA Annual Report).

Revenue	US$ 2015	%	Average 2010 - 2015	%
Conservation Fees Land	$7,879,987	33%	$6,506,508	29%
Conservation Fees River	$1,409,160	6%	$1,136,041	5%

The Authority receives considerable support from many local and international NGOs who undertake a variety of routine management activities e.g. supply and maintain artificial game water supplies, provide logistic support to law enforcement operations. This is in addition to the support provided by hunting operators that hold concessions in the Safari Areas.

6 Stakeholder involvement in lion management and conservation

There are several private sector initiatives that are directly or indirectly involved with lion management and conservation both inside and outside the Parks estate. These stakeholders are represented by companies from the consumptive and non-consumptive sectors of the industry.

6.1 Beneficiaries of Wildlife Based Land Use

Various forms of wildlife based land use occur in Zimbabwe that benefit different segments of the community depending on the authority for the land. Table 16 summarises these broad categories. The Authority is the direct beneficiary from the use of wildlife in National Parks and Safari Areas while the Forestry Commission is the beneficiary in Forestry Areas. In terms of the Act, Communal CAMPFIRE areas are the primary beneficiaries where the income generated from hunting is shared between the Rural District Council and Community Wards (see below). Similarly, private conservancies and land owners are the primary beneficiaries.

Collectively, these different management regimes contribute to the overall conservation of the wildlife both inside and outside the Parks Estate, and is supported through the existing policy and legal framework that facilitates incentives to promote wildlife based land use.

Table 16: Direct beneficiaries from Wildlife Based Land Use

Land category	Direct Beneficiary
National Parks and Safari Areas	Zimbabwe National Parks and Wildlife Management Authority
Forestry Areas	Forestry Commission
Communal Campfire Areas	Rural District Council and Wards
Private Conservancies	Private Landowners

6.2 CONTRIBUTION OF THE PRIVATE SECTOR

A questionnaire was circulated to all safari hunting operations to gather data on:

- Area and land category where hunting takes place
- Payments in terms of concession fees
- Number of people employed
- Approximate value of investment in assets
- Approximate costs of the hunting operations
- Hunter days generated through various packages
- Indication of the prey base

Data from 18 companies that have been allocated lion on quota and offer these trophies as part of their hunting packages is summarised below (Table 17). These data indicate that

- The average hunting concession covers 1,590km^2 and generates $178,488 in concession fees annually.
- Each company on average employs 109 people of which 24 are seasonal staff (22%). Law enforcement staff make up 26% of the staff complement.
- On average, each company has invested approximately $1.3 million in fixed and moveable assets (buildings, tents, vehicles, equipment etc.).
- On average, each company incurs approximately $1 million in expenses annually, with staff wages (24%) and operating expenses (27%) forming the bulk of these costs.
- Lion safaris contribute approximately 9% (126 hunter days) to the 3-year average number of hunter days generated (1,405) with the bulk of hunter days generated from buffalo safaris (see below for more details on the financial significance of this contribution).
- On average, each hunting area supports 2,000 large mammals, 3,000 medium sized mammals and 6,000 small sized mammals. However, there are large differences between state, forestry, CAMPFIRE and conservancies areas. State areas tend to support more large animals (buffalo, giraffe) while conservancies support greater numbers of medium and small animals.
- Observations on the status of lion populations indicates that each area supports on average 5 prides of 7 animals (i.e. 35 lions) although there is a wide variation in these numbers with more prides occurring in the conservancies than on Forest and CAMPFIRE areas. In these areas, the operators report that lion are transient/migratory rather than permanent.
- All areas report incidents of human-lion conflict, including incidents of snared animals.

Table 17: Summary of 18 hunting company statistics where lion hunting occurs

Companies (N=18)	Total	Average	
Total Hunting Area (ha)	2,872,932	159,607	
Concession fee	$2,141,860	$178,488

Natural deaths	4	1	
Reports of Human-Lion Conflict	33	5	
Incidents of infanticide recorded	6	2	

6.3 CAMPFIRE COMMUNITY PROGRAMMES

The right to exploit and benefit from wildlife was extended to communal areas through granting of Appropriate Authority Status over their wildlife resources to Rural District Councils in 1982. The intention was to return rights of access to natural resources through legislative change, devolve responsibility and economic empowerment. The CAMPFIRE model focuses on three main criteria:

- Voluntary interest in participation by communities and their Rural District Councils (RDCs),
- Presence of wildlife populations capable of producing sustainable and economically significant revenues.
- Benefit sharing for local communities based on:
    - The number of animals harvested within a local community's area each hunting season.
    - The extent of wildlife habitat present within a local community's area annually.

Currently 58 Rural Districts have been granted the Appropriate Authority status to manage wildlife resources in their areas, however only 16 are actively engaged in some form of wildlife based land use (see Figure 5).

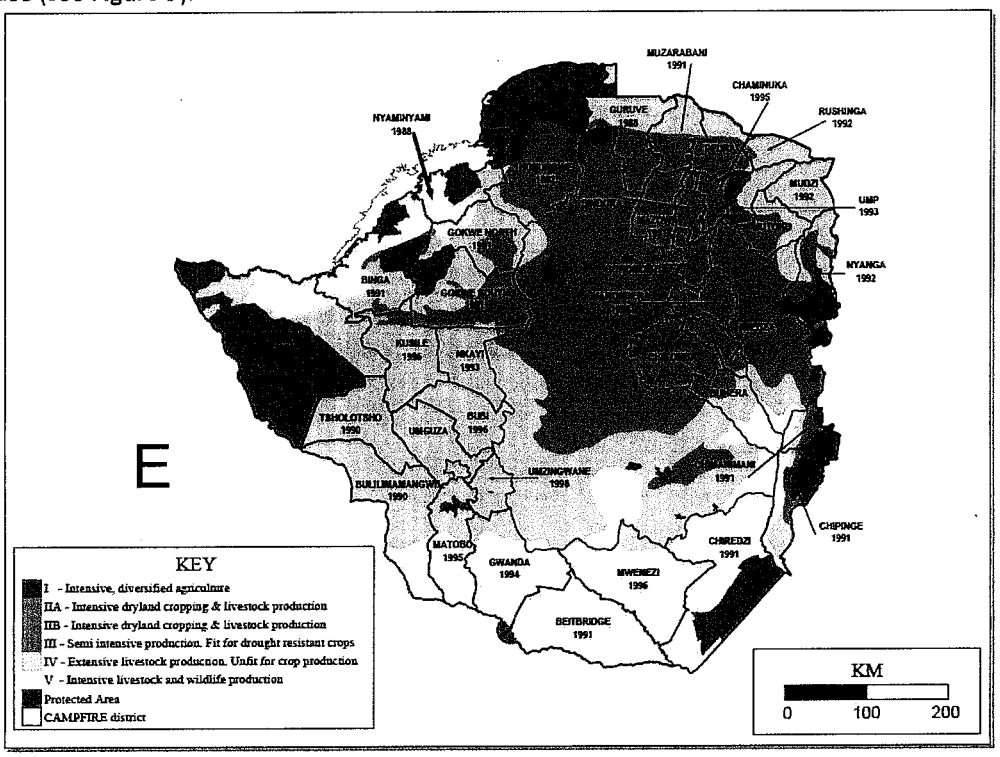

Figure 5: Map of Zimbabwe showing CAMPFIRE districts and year of establishment

The performance of ten key CAMPFIRE Districts is summarised below to illustrate the level of benefits that flow to RDCs, Wards and households, and the role that income from lion play in this process.

1. **OVERALL QUOTA ALLOCATION, UTILISATION AND INCOME GENERATION FROM KEY SPECIES: All Districts: 2010 - 2015**

	Elephant	Lion	Leopard	Buffalo	Hippo	Crocodile	Total
Quota	1,079	140	487	2050	602	471	
Offtake	655	45	193	908	270	305	
% Utilisation	61%	32%	40%	44%	45%	65%	
Total income N=6 years)	**$7,129,658**	**$240,000**	**$532,675**	**$2,263,150**	**$464,000**	**$441,903**	**$11,071,386**
Average/year	**$1,188,276**	**$40,000**	**$88,779**	**$377,192**	**$77,333**	**$73,651**	**$1,845,231**
Percentage	64%	2%	5%	20%	4%	4%	

The overall income generated over a 6-year period was US$11 million. An overall quota of 140 lions (average 23/year) were allocated to the CAMPFIRE programme over which 45 (32%) were utilised (8 per year). This generated US$240,000 or 2% of the overall income.

2. **SOURCE OF CLIENTS AND GROSS INCOME TO SAFARI OPERATIONS:2010 - 2015**

Origin of Clients	USA	Canada	South America	Europe	Asia	Middle East	Oceania	Africa	Total (N=6 years)
Total	**880**	**16**	**54**	**456**	**82**	**9**	**51**	**131**	**1679**
Percentage	51%	1%	3%	27%	5%	1%	3%	8%	
Total	**$8,624,059**	**$150,987**	**$543,003**	**$5,201,168**	**$550,062**	**$781,076**	**$394,208**	**$567,897**	**$16,812,459**
Average/year	**$1,462,508**	**$25,165**	**$90,500**	**$866,861**	**$91,677**	**$130,179**	**$65,701**	**$94,650**	**$2,802,077**
Percentage contribution	**51%**	**1%**	**3%**	**31%**	**3%**	**5%**	**2%**	**3%**	

Hunting clients from the USA are by far the most numerous (880 over 6 years) contributing 51% (or US$8.6 million) of the estimated US$16 million generated from hunting in CAMPFIRE areas from 2010 - 2015.

3. **INCOME TO DISTRICTS: 2010 - 2015**

	Hides (US$)	Trophy fees (US$)	Percentage of daily rate	Hunting concession fees	Photographic (lease fees/bed night levy)	Other (vehicle hire, grinding mill etc.)	Total	Average (N=6)
Total	$131,741	$10,618,127	$1,277,525	$862,721	$737,613	$731,218	$14,358,945	$2,393,158
Percentage	1%	74%	9%	6%	5%	5%		

The CAMPFIRE districts that benefit from hunting rely heavily on trophy fees (74%) as their primary source of income.

4. INCOME TO WARDS, VILLAGES AND HOUSEHOLDS: 2010 – 2015

Overall Income to CAMPFIRE Wards: 2010 - 2015						
	No Concessions	Area (ha)	Number Wards	Number Villages	Number Households	Gross Income
Total	26	2,288,284	62	603	56,297	$5,946,370
Income (n=6 YEARS)	$228,706.55	$3	$95,909.20	$9,861.31	$105.6	

Income generated at the District level is then disbursed to Wards. Since 2010, this is estimated to be approximately US$5.9 million. The available data shows that 62 wards representing 603 villages (or 56,297 households) received the equivalent of US$95,909/ward (or US$105/household).

These levels of income are not sufficient to make a significant impact at the individual level, and require that the Districts and Wards channel these revenues into activities that benefit the overall community. This is achieved through supporting several communal projects such as schools, clinics, water provisions etc.

5. DISTRICT EXPENDITURE AND COMMUNITY BENEFITS: 2010 - 2015

	Administration	Law Enforcement	Compensation	Management	Social Services	Other	Total
Total	$2,486,268	$1,778,100	$67,600	$682,740	$1,084,779	$779,030	$6,878,517
Average	$414,378	$296,350	$11,267	$113,790	$180,796	$129,838	$1,146,420
Overall costs	$5,014,708				$1,084,77	$779,039	
Percentage	73%				16%	11%	

At the District level, 73% of the revenues from hunting are channelled towards administration, law enforcement, compensation and general management while limited funds are used to support social services (16%).

6. WARD EXPENDITURE AND COMMUNITY BENEFITS

	Administration costs					Community Benefits				
	Meetings & Admin	Wages/salaries	Compensation schemes	Management activities	Project Management Costs	Social services	Food security	Direct cash benefits	Other	Total
Total	**$553,260**	**$815,639**	**$56,432**	**$312,178**	**$345,762**	**$2,468,216**	**$223,659**	**$216,077**	**$139,565**	**$5,302,709**
Overall costs	**$2,083,271**					**$2,907,952**			**$139,565**	
Percentage	**39%**					**55%**				

At the Ward level, where communities are directly involved, the tendency is to channel most the income towards community benefits (55%) rather than administration which is seen to be the responsibility of the local government. This means that the bulk of the income from hunting is used to support social services such as schools, clinics, irrigation schemes etc. where the impact at the community level (village, household) is far greater (Figure 6).

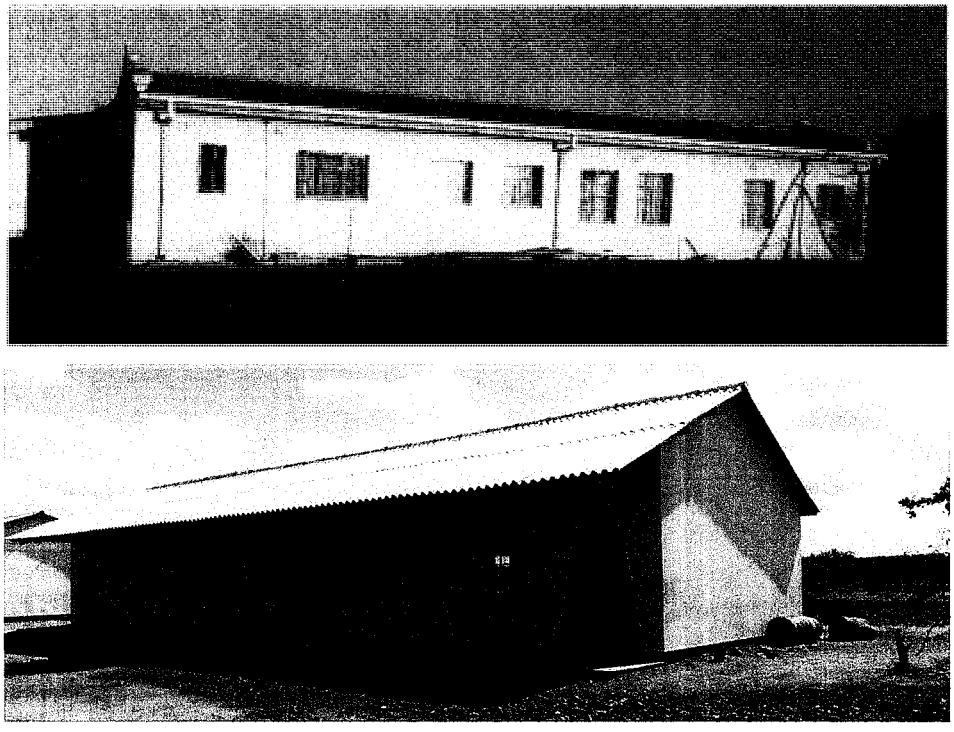

Figure 6: Bhemba Clinic in Ward 2 of the Tsholotsho Communal Area (top) and Masera Secondary School (Beitbridge, bottom) that are supported by funds generated through the CAMPFIRE programme

Species	2014	2015	Total	2015 Quota	Utilised	% Utilised
Lion	**$630,950**	**$753,000**	**$1,383,950**	**82**	**49**	**59%**
Leopard	$714,100	$668,490	$1,382,590	530	151	28%
Zebra	$594,239	$555,744	$1,149,983	2,480	600	24%
Sable	$456,615	$309,260	$765,875	718	78	11%
Kudu	$341,092	$357,963	$699,055	2,503	289	12%
Waterbuck	$293,903	$256,133	$550,036	988	156	16%
Hippo	$310,321	$217,470	$527,791	303	83	27%
Impala	$277,198	$242,624	$519,822	8,594	1,261	15%
Other Species	$1,465,560	$1,287,845	$2,753,405			
Grand Total	**$11,099,187**	**$8,288,049**	**$19,387,236**			

7.1.3 Total trophy fees generated by land category

The ZPWMA allocated quotes to all owners and occupiers of land in terms of SI 26. Any person utilising wildlife on these properties is required to submit a TRAS2 form to process any export of trophies and other animal products. Approximately 262 companies/properties submitted returns in 2014 and 2015. From these data, it is possible to determine the income generated from trophy fees and daily rates per company. To protect the privacy of the individual companies, these data have been arranged to show the level of income generated by different land categories from trophy fees (Figure 8),

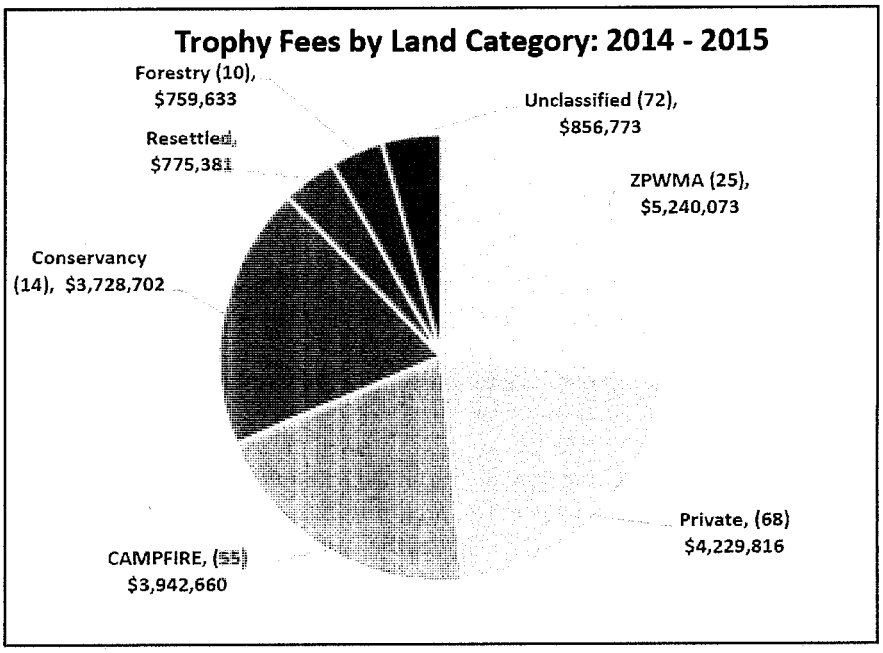

Figure 8: Hunting Trophy Fee Earnings by Land Categories (2014 - 2015). Note that from the description provided in the database, it was not possible to allocate some individual properties to a specific category. These have been recorded as unclassified (adapted from Computerised Exports Payments Exchange Control System, CEPECS - TRAS2).

Overall, approximately US$10.7 million was generated in 2014 and US$8.7 million in 2015 from the 62 species on offer. The ZPWMA represented by 25 properties that it either offers on tender to the private sector or operates as hunting areas itself generated the largest income from trophy fee sales

(US$5.2 million). The 14 Conservancies accounted for US$3.7 million while the 68 private properties are recorded as generating US$4.2 million. The CAMPFIRE areas (N=55) generated US$3.9 million.

Together with the income from daily rates (US$13,190,372 in 2014 and US$9,684,396 in 2015 (gross US$22,874,768), extracted from Computerised Exports Payments Exchange Control System, CEPECS - TRAS2), these funds are used to pay for several operational expenses including employment, law enforcement, administration and management.

7.5 Quota Setting Process

The process for quota setting follows procedures agreed to by all stakeholders (ZPWMA, 2014).

- Step 1: Allocate existing quota to each block/hunting area

The starting point for implementation of age-restrictions and adaptive quota management was to allocate existing lion quotas. This quota would then be managed adaptively in line with the age of lions hunted. In future, it is envisaged that fixed quotas for lions would fall away as quotas would be based on the age of lions hunted in the previous year.

- Step 2: Hunters complete and submit return forms and photos after each lion hunt

The data would be compiled into a database by a ZPWMA representative (currently Ms Roseline Mandisodza-Chikerema, Senior Ecologist, ZPWMA). Export permits for trophies will not be issued unless completed hunt return forms (all the required photographs and the first upper premolar) is provided to ZPWMA for aging and monitoring purposes. Furthermore, because the following year's quotas will be based on the ages of the lions hunted in the current year, operators must submit their lion hunt returns and photographs soon after the hunt. At the end of the season, all the teeth would be taken to a dentist to have x-rays conducted to allow for measurement of the size of the pulp cavity.

- Step 3: ZPWMA and Panel of experts assign an age value to each lion trophy

Lion trophies will be aged by ZPWMA, with input from lion scientists and representatives from the hunting industry at a trophy aging session. This is conducted at the end of each hunting season.

- Step 4: Calculate the next years' quotas based on a points system for the ages of lions hunted

A quota setting meeting is held where lion quotas are established for each area based on the age of lions hunted in those areas the year before. This programme commenced in 2014, and so the ages of lions hunted in 2014 will affect the lion quotas in 2015. Table 19 summaries the trend in lion quota allocations since 2002 while Table 12 provides a detailed overview of the lion trophies taken in 2015.

Table 19: Summary of lion quota allocations and offtake since 2002 (Data provided by ZPWMA)

Year	Lion Allocated Quotas	Female Offtake	Male Offtake	% Utilisation
2002	126	22	49	56%
2003	138	5	11	6%
2004	155	4	9	8%
2005	108	3	20	21%
2006	124	1	17	14%

Year	Lion Allocated Quotas	Female Offtake	Male Offtake	% Utilisation
2007	117	0	9	7%
2008	90	0	17	18%
2009	111	0	9	8%
2010	98	12	30	43%

7.6 POINTS SYSTEM FOR ADAPTIVELY MANAGING LION QUOTAS IN ZIMBABWE

The points system used to adaptively manage lion quotas has been developed following similar systems that have been implemented in Tanzania and northern Mozambique. The systems that are in place in Tanzania and Niassa differ slightly, but both lion quotas are set per the age of the lions harvested during the previous hunting season (Begg and Begg, 2008; Tanzania Wildlife Division 2013). The Tanzanian system is more punitive with significant quota reductions, trophy confiscation and fines for non-compliance, whereas the Niassa system is more accommodating but nevertheless can result in quota reductions if five-year-old lions are hunted. The latter was aimed at a means of accommodating the difficulty of telling five-year-old lions apart from four year olds.

After reviewing the Tanzanian and Mozambican age restriction systems and debating possible models for application in Zimbabwe, an adaptive quota management system for lion hunting based on the ages of lions hunted was agreed on in July 2013 in Harare, Zimbabwe, during a meeting hosted

by the Zimbabwe Parks and Wildlife Management Authority (ZPWMA) and an independent non-governmental conservation organisation. The approach adopted by Zimbabwe recognises four as opposed to three key age categories (Table 21).

Table 21. Proposed points system for lion age restrictions and quota setting in Zimbabwe

	≥6 years	No trophy	5 years' old	4 years' old	<4 years	Failure to submit hunt return/incomplete hunt returns
For quotas of 3/more	4	3	3	2	-3	0
For quotas of 2	4	3	3	2	0	0
For quotas of 1	6	3	3	2	0	0
Quota setting process	These points are added up and divided by 3 to yield the quota for next year					

During 2013, operators were requested to submit hunt returns and photos as a trial run to get the system up and running. In 2014 operators were requested to do the same but were informed that the age of the lions hunted in 2014 would determine their lion quotas in 2015. The 2015 lion hunt results would thus also determine the 2016 quota. The key distinction of the Zimbabwean system is that the quota will not be affected if they hunt animals that are five years old. This position was adopted after considering various the population models that suggested that the hunting animals of five years of age or older is predicted to be comparatively safe from a population perspective (Whitman et al. 2007). Moreover, after reviewing aging techniques, the consensus was that professional hunters could be distinguish between lions that are five or above. The system therefore rewards operators with increased quotas if they hunt animals of six years and older, but it does not penalize them if they hunt animals of five years. Neither are they penalised if they do not shoot a lion that they have on quota, however, the quotas will be reduced if they hunt animals younger than five years or if they failed to complete hunt returns.

Lions are aged by triangulating multiple different aging characteristics, including:

- The degree of facial scarring;
- The teeth colour and degree of wear;
- The mane development (particularly regarding the shape around the ear and the mohawk);
- Through post mortem analysis of the width of the pulp cavity of the second premolar (which becomes narrower with age).

7.6.1 Results of the Adaptive Lion Quota Management System: 2013 to 2016

In 2013, only 28% of the lions hunted were 5 years or older, in 2014 that figure had risen to 49% and in 2015 to 77.3% (Figure 5). The proportion of lions hunted that were less than 5 years of age dropped overall between 2013 and 2015 (Figure 9).

In 2015 the Zimbabwe national lion hunting quota was set at 82 lions. Of this 82, only 49 were hunted in 2015, and based on the resultant score from aging the trophies, and the fact that operators chose not to hunt lions of inadequate age (see Figures 9, 10 and 11), the recommended quota for 2016 was set at 81. In 2015 there was a marked increase in the age of lions hunted. Notably, only one lion of <4 years of age was hunted and the large majority of lions were 5 years or older (Figure 9).

As was agreed upon at the 2013 lion management meeting in Harare, the CAMPFIRE areas in which lions occur are currently exempted from the age restrictions. This approach was adopted as a means of ensuring that impoverished communities obtain the opportunity to benefit from the presence of lions, recognising the potential negative impacts the species has on the livelihoods of livestock farmers.

Using these figures and estimating the average value of a lion safari at approximately US$ 80,000 then a 50% offtake would generate approximately US$ 2,800,000 annually. If management costs are approximately $150 km^2, then the lion safaris alone can support 18,600 km^2 of wildlife habitat in Zimbabwe.

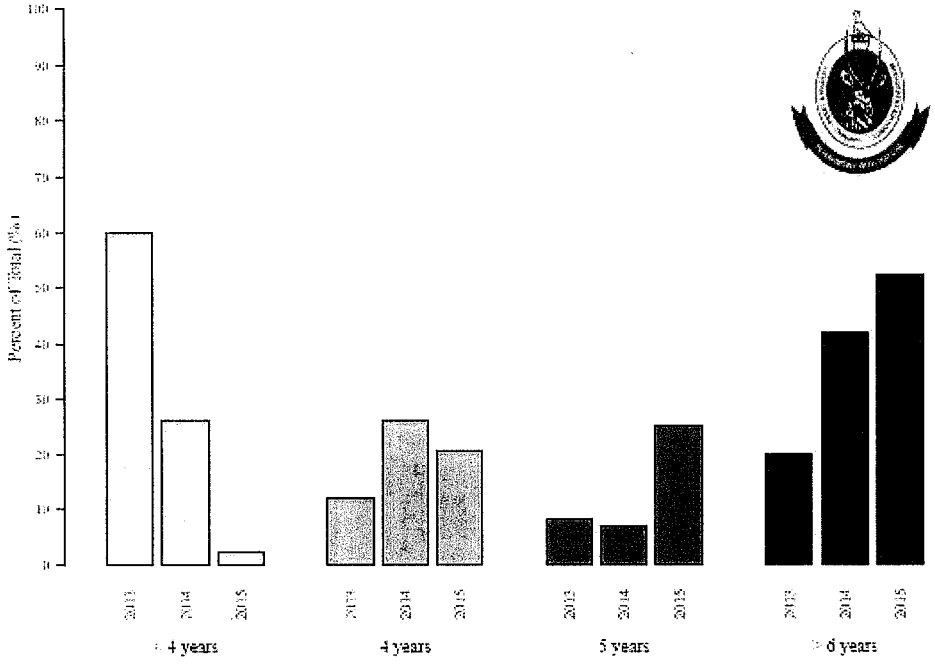

Figure 9: The percentage of lions hunted in each age class in 2013, 2014 and 2015 in Zimbabwe.

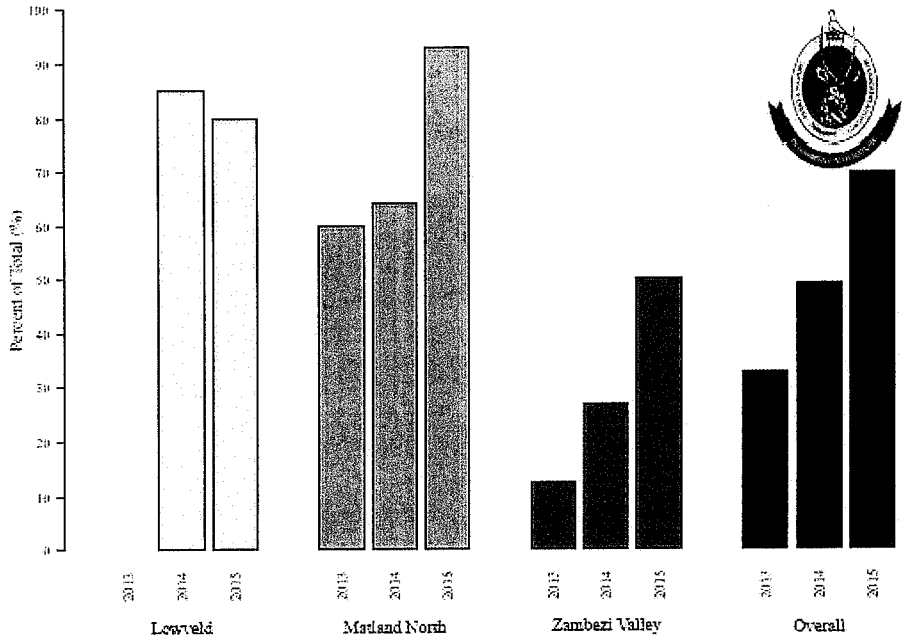

Figure 10: The proportion of lions hunted that were 5 years or older in the three main lion-hunting areas of Zimbabwe.

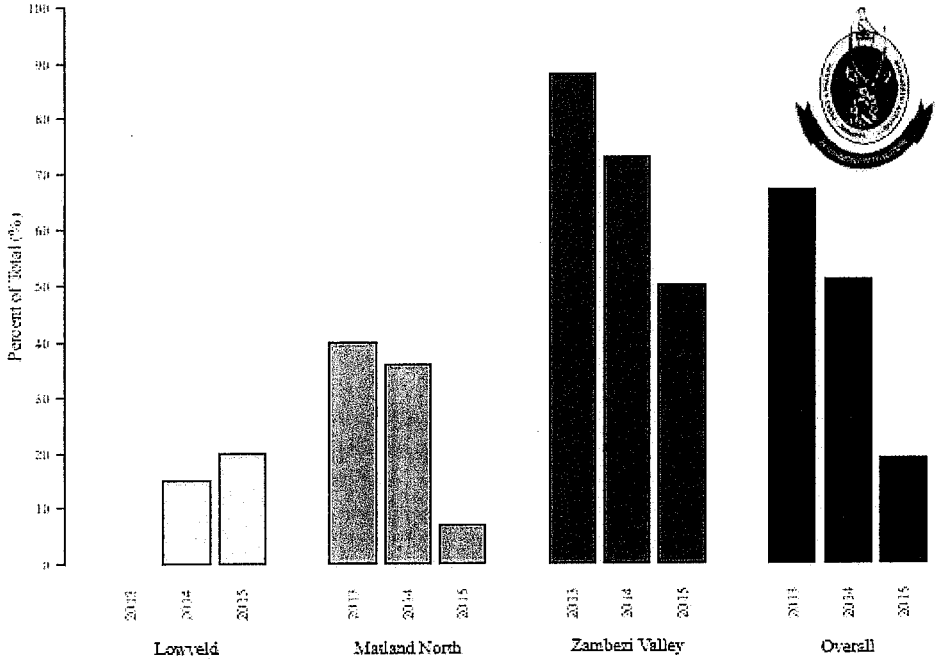

Figure 11: The proportion of lions hunted that were less than 5 years of age in the three main lion-hunting areas of Zimbabwe.

7.6.2 Case study: Safari Hunting surrounding Hwange National Park

The Hwange National Park is surrounded by hunting areas that fall under the Authority, Forestry Land, Private Land and Communal Land. The ZPWMA is responsible for setting and administrating quotas in conjunction with stakeholders for the safari areas, forestry areas, communal lands and private properties.

The Matetsi Safari Area to the north of Hwange National Park was established in the 1970s when several unsuccessful private sector mixed faming properties were expropriated, compensated and the resultant block of land turned over to safari hunting – a largely untried venture at that time on a large scale. An intensive monitoring system was set in place to gauge the effectiveness of the scheme and this continues to this day (Crossmary et al. 2013, Figure 12). The seven concessions (six given over to safari hunting) are leased on five year terms and concessionaires pay a 5 year "right to lease" fee, an annual rental, a fixed quota fee (payable if animals are shot or not) and a supplementary quota fee which allows additional animals to be bought as per need.

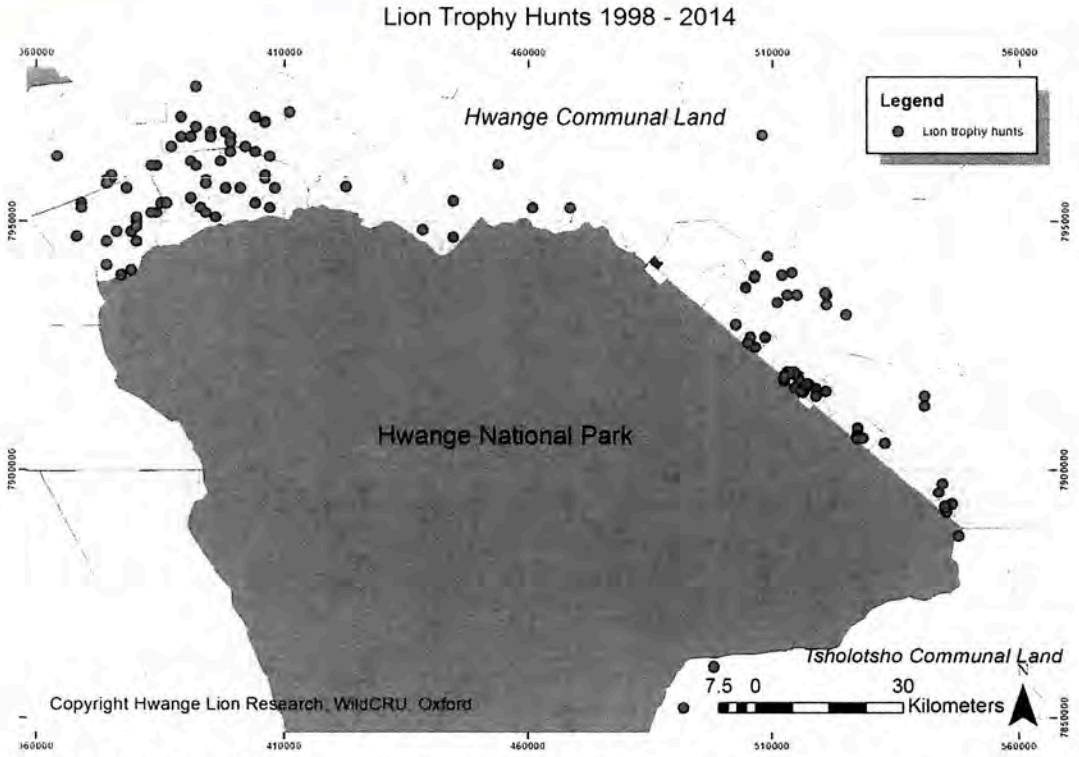

Figure 12: Record of where lion have been hunted on the land surrounding the Hwange National Park since 1998 (data extracted from the Hwange National Park Management Plan).

8 Threats and Mitigation

The consensus of the scientific and animal welfare community is that the populations of lion in Africa has declined by 43% in the last two decades, with the greatest declines having occurred in west Africa. The exception to this are the populations of southern Africa, notably South Africa, Namibia, Botswana and Zimbabwe that are home to 24- 33% of the overall population has increased (Funston et. al. 2016).

Nonetheless, as is the case in other range states, the greatest threats to lion in Zimbabwe are from habitat loss, snaring and retaliatory killings where livestock are involved.

8.1 Human-Lion Conflict

The main source of illegal killing of lions is a result of Human-Lion conflict. The human population of Zimbabwe has increased since 1960 (estimated at 13 million). There is considerable pressure to convert land to agro-pastoral production, and the pressure is expected to increase. It is not unexpected therefore that the incidence of Human-Lion conflict will increase. ZPWMA records show that 200 attacks occurred on humans and 150+ on livestock (cattle, goats, sheep, dogs etc.) were killed in 2015 (see Table 13 above).

Retaliation for these livestock losses is usually done poisoning or hunting. The exact number of lions killed in this way is difficult to assess, but may number over 50/year. These indiscriminate killings pose the most significant threat to the species, and is of major concern to the management authorities. For example, the Area Manager for Hwange National Parks reported that 6 lions were killed on the Hwange National Parks boundary in 2016, and the Authority responded to several problem animal attacks on livestock.

In accordance with the Parks and Wildlife Act of 2001 when a lion attacks a human or kills livestock, it shall be eliminated. However, despite the numerous incidents reported across the country, less than 10 lions are killed through official "problem animal control" (PAC).

8.2 Habitat Loss

Zimbabwe supports substantial populations of lions outside of its protected areas and extensive conservancies. Moreover, despite its expanding human population, many of the protected areas are still intact however, the threat to lions from habitat loss exists in the Sebungwe and the South East Low Veld where the fragmented nature of the protected areas is compounded by an increasing human and livestock populations surrounding these areas. In these areas, habitat loss, reduction in prey populations and killing of problem lions are the major threats to long term lion survival.

Due to the large size of the protected area system in the Zambezi Valley and North West Matabeleland, threats are limited to lion range which extends into adjacent settled areas. The huge natural prey base in these protected areas, reduced killing of problem animals associated with lions preying on livestock in adjacent settled areas.

The potential and real loss of habitat and the fragmentation of range and conflicts with people in the absence of effective incentive mechanisms to maintain such habitat is probably the second greatest threat to lions after retaliatory killings. Increasing livestock numbers is reducing the available habitat in buffer areas adjacent to the protected areas, and increasing the incidents of human-lion conflicts. Lions are being more and more regarded as a liability and economic cost to rural communities. Reversing this trend is difficult under normal circumstances, and this has been made that much more difficult with the cessation of lion hunting. Integrating income from lions into rural economies, and demonstrating that lions contribute to the welfare and development of people is regarded as one strategy to mitigate against this. The involvement and empowerment of rural people in natural resource management through the CAMPFIRE programme that strives to provide economic and financial incentives through sustainable use, is one of the main driving forces behind changes in attitudes towards wildlife in communities where lion-livestock conflicts occur.

8.3 Illegal Trade in Lion Products

Very few lions are poached in Zimbabwe (not to be confused with retaliatory killings). Records, mainly from anti-poaching reports, are for impoundment of body derivatives such as skins, teeth/claws, body

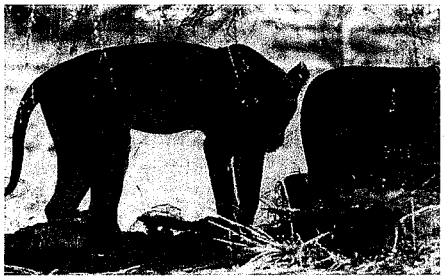
fats and bones. These may be sought after for local traditional medicinal use. Poaching mainly occurs along the boundaries of the protected areas where lions are incidentally snared as non-target prey.

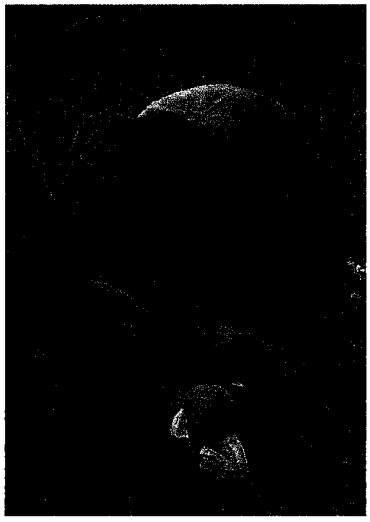
The illegal trade in lions and their products (i.e. bone trade) is very insignificant. There are no records of people found in possession of illegally acquired lion specimens in Zimbabwe, and anyone found in possession of illegally acquired lion specimens is required to pay a fine US$5000 or faces a mandatory jail sentence. On conviction for lion poaching, courts may ask the accused to pay a compensation fee of US$20 000.

8.4 Bushmeat Poaching

Poaching for bushmeat is an important livelihood component of rural communities in Zimbabwe and a vast literature exists on this subject (see Lindsey et. al. 2015a and 2015b). Poverty stands as the major driver of illegal hunting, and the livelihoods of illegal hunters have been augmented considerably through revenue generated from bushmeat sales. Illegal hunters use bushmeat both for supplementing household protein and for economic gain.

Poaching for bushmeat does not seem to have impacted directly the overall lion's status in Zimbabwe, but more research is needed to fully understand its impact on lion. However, lions are often inadvertently caught in snares set for animals targeted by bushmeat poachers. Where possible, lions caught in snares are captured and treated (Figure 13).





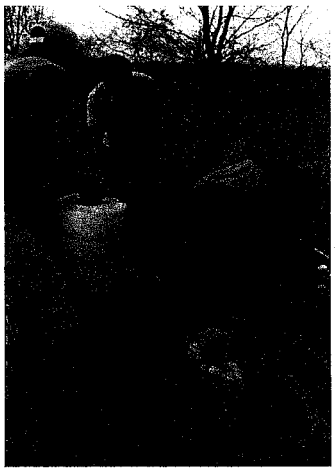


Figure 13: Young lioness being treated by the Victoria Falls Conservation Trust after a snare was removed from around the chest (Source: S. Edwards)

8.5 PREY ABUNDANCE

The extent to which bushmeat poaching outside of the Parks Estate is depleting lion's prey is not known. Prey abundance is still high in all protected areas where lions occur, and as abundance of prey species is highly correlated with lion density (Hayward et al 2007), data on the main prey species for lion, extracted from the 2014 aerial surveys of elephants and other large herbivores (Dunham et. al., 2015, 2015a, b, c, d) are shown in below (ZV = Zambezi Valley, NW Mat = North West Matabeleland).

The overall long term trends show that most population status of most prey species has declined in recent years. There are many possible explanations for these declines, but probably the most critical factor has been droughts, especially that experienced in 2005.

9 Assessment of the Enhancement and Non-Detriment Findings

The assessment of the enhancement and non-detrimental findings for lion in Zimbabwe is presented here using the "IUCN SSC GUIDING PRINCIPLES ON TROPHY HUNTING AS A TOOL FOR CREATING CONSERVATION INCENTIVES. VER. 1.0. IUCN SSC (2012)" as a guide. Zimbabwe recognises the importance of these principles to guide and manage trophy hunting as a legal, regulated conservation activity which provides a critical tool to secure a sound social, economic and ecological conservation scenario.

Biological Sustainability: Trophy hunting can serve as a conservation tool when it:

	Principle	Remarks
1	***Does not contribute to long-term population declines of the hunted species or of other species sharing its habitat, noting that a sustainably harvested population may be smaller than an unharvested one***	Considering the latest available estimate of lion population size in Zimbabwe (1,800 – 2,000), trophy hunting harvests a yearly mean of 2.7% of adult male lions. This figure has decreased since the establishment of age restriction rules on lion hunting. This low offtake is sustainable and generates significant financial and other benefits to ZPWMA, Communities and Private Sector.
2	***Does not substantially alter processes of natural selection and ecosystem function; that is, it maintains "wild populations of indigenous species with adaptive gene pools." This generally requires that hunting offtake produces only minor alterations to naturally occurring demographic structure. It also requires avoidance of breeding or culling to deliberately enhance population-genetic characteristics of species subject to hunting that are inconsistent with natural selection***	Safari hunting in does not substantially alter natural selection or ecosystem processes. The limited quota, as further limited by age restrictions, ensures that hunting offtakes do not negatively affect natural processes. This age-based policy was adopted in part to mitigate any social or population impacts from limited safari hunting. (Whitman et al. 2004).
3	***Does not inadvertently facilitate poaching or illegal trade of wildlife***	Safari hunting in Zimbabwe does not facilitate poaching or illegal trade. Poaching and illegal trade in lion products is currently very low suggesting that the existence of licensed, regulated hunting is helping control poaching and not facilitating it. Hunting operators are in the frontlines against poaching, and are obligated through their concession lease agreements to assistance with anti-poaching. Operators spend significant resources on this, and work in close cooperation with the ZPWMA to combat all forms of illegal wildlife trade. Even where anti-poaching is not a legal prerequisite, operators fund their own anti-poaching teams and support government rangers and community scouts e.g. in Sengwa and Dande Safari Area

	Principle	Remarks
4	***Does not artificially and/or substantially manipulate ecosystems or their component elements in ways that are incompatible with the objective of supporting the full range of native biodiversity***	Hunting in Zimbabwe has created financial incentives for the development and retention of wildlife across Safari Areas, Forestry Areas, Communal CAMPFIRE Areas and private Conservancies thereby supporting biodiversity over 145,000km^2 where hunting is a primary land use. Hunting areas on private and communal land outside of the protected areas also serve as buffer zones for many national parks and safari areas which would be converted to other land uses if these were abandoned.

Net Conservation Benefit: Trophy hunting can serve as a conservation tool when it

	Principle	Remarks
1	***Is linked to identifiable and specific parcels of land where habitat for wildlife is a priority (albeit not necessarily the sole priority or only legitimate use); and on which the "costs of management and conservation of biological diversity [are] internalized within the area of management and reflected in the distribution of the benefits from the use"***	Zimbabwe has identified Safari Areas within the Parks Estates where maintaining habitats and wildlife populations is the priority. These gazetted protected areas cover approximately 17,000km^2 where, without safari hunting, it would be difficult to secure and maintain natural ecosystems and prey bases for lions. In addition to these areas, lion occur on 66% (approximately 11,000km^2) of the land set aside as Conservancies. The operational and law enforcement costs incurred by hunting companies on a yearly basis ranges from US$300,000 to US$500,000 per hunting concession, which includes the expense of camps, salaries, anti-poaching, fuel, community assistance, etc. Many of the government's costs of maintaining Safari Areas are transferred to the private sector through the obligations of their concession agreements. Revenues from hunting in communal CAMPFIRE areas are used to support a range of social services (e.g. schools, clinics, irrigation schemes etc.) while operators cover the costs of anti-poaching, maintenance and development, and contributions to communities living nearby (e.g. through boreholes, grinding mills etc.).

		In private hunting areas and conservancies, the costs and benefits of wildlife in the area are internalized and distributed within the area of management. Critically, most of the Conservancies have elected to manage and conserve endangered species, such as black rhino, and offset the costs of this by conducting sustainable hunting of lion and other key trophy species.
2	***Produces income, employment, and/or ather benefits that generate incentives for reduction in pressures on populations of target species, and/or help justify retention, enhancement, or rehabilitation of habitats in which native biodiversity is prioritized. Benefits may create incentives for residents to co-exist with such problematic species as large carnivores, herbivores competing for grazing, or animals considered to be dangerous or a threat to the welfare of humans and their personal property***	Hunting produces direct and indirect income, employment, and other benefits that generate incentives that reduce the threats to wildlife populations. Approximately US$44 million accrued to the country from the revenues of trophy hunting over the last two years. This could have been 5% higher if it were not for restrictions on the export of elephant and lion trophies. This revenue pays for the daily wildlife conservation work in all sectors of the wildlife industry, including research projects, surveys, anti-poaching, and other services. Of this amount, approximately 20% is paid directly to the ZPWMA which is then used to support its management activities, including anti-poaching budgets. Local communities benefit from hunting income through leasing the right to hunt and the sale of trophy fees in CAMPFIRE areas as well as from voluntary contributions and meat. Over the last 6 years, payments from hunting operations generated approximately US$16 million. The nature of the hunting industry does not require large numbers of people to be employed. Nonetheless, the average hunting company employs approximately 80 people on a permanent basis and 20 on a seasonal basis. This equates to approximately 3,000 people who would not otherwise secure any form of employment because of the lack of opportunities in the remote areas where hunting takes place.
3	***Is part of a legally recognized governance system that supports conservation adequately and of a system of implementation and enforcement capable of achieving these governance objectives***	All wildlife species in Zimbabwe, including the African lion, are protected under the Parks and Wildlife Act of 1996 (Chapter 20:14) as amended by Act Number 19 of 2001 which came into operation on the 1st of June 2002 through a Statutory Instrument 144C of 2002. The Act that was originally passed by Parliament in 1975 was a unique move in Africa, if not globally, that promoted the rapid development of the country's wild life industry and lead to the partial

		extension of the principle to the Communal Lands through the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE) in the 1980s. The Act provided a legal basis for the devolution of Authority through granting Appropriate Authority Status to the communal areas to manage the wildlife resources for their own benefit. The Act was subsequently revised in 1996 and 2001 with the latest revision paving the way for the establishment of the current Parks and Wildlife Management Authority to replace the former Department of National Parks and Wild Life Management. Following the introduction of the Parks and Wild Life (General) (Amendment) Regulations, 1998 (No.2), i.e. Statutory Instrument 26 of 1998, the administration of the wildlife industry experienced increasing centralisation of controls on wildlife management and utilisation on alienated and communal land. The Parks and Wildlife Management Authority is mandated by the Parks and Wildlife Act [Chapter 20:14], with the responsibility of conserving Zimbabwe's wildlife heritage through effective, efficient and sustainable protection and utilisation of natural resources for the benefit of present and future generations. The Authority was established to allow it to retain the revenue that it generates to fund its operations and thereby reducing its dependence on Treasury. This entailed introducing a commercial dispensation and putting in place effective revenue generation and financial management systems. The ZPWMA has the mandate to manage the entire wildlife population of Zimbabwe, whether on state, private and communal land.

Socio-Economic-Cultural Benefit

	Principle	10 Remarks
1 1	***Respects local cultural values and practices (where "local" is defined as sharing living space with the focal wildlife species), and is accepted by (and preferably, co-managed and actively supported by) most members of the local community on whose land it occurs***	Zimbabwe has promoted the CAMPFIRE programme that requires safari operators to work closely with the Wards and villages in the concession areas how to use the contributions from hunting to implement community and infrastructure development and projects. There are currently 33 CAMPFIRE programmes in Zimbabwe but only 13 of these are dependent on income from hunting that is used to invest in conservation work and community development services.
2	**Involves and benefits local residents in an equitable manner, and in ways that meet their priorities**	The CAMPFIRE programme is the foundation upon which the community based conservation system in Zimbabwe is based, and is seen as one of the key components of rural development. The CAMPFIRE programme is critical in areas that are adjacent to the national parks and safari areas since they provide a means to support wildlife and critical habitats outside of the protected areas.
3	***Adopts business practices that promote long-term economic sustainability***	All Rural District Councils and Wards that support CAMPFIRE Programmes have established committees that have the authority to negotiate and enter into contracts with the private sector for both consumptive and non-consumptive agreements. Over the last 6 years, the six key CAMPFIRE districts have generated approximately $2,802,077/year. Hunters from USA contribute 51% and Europe 31% of this income. Income to Districts from a variety of wildlife related revenue streams is approximately $2,510,783/year, and 74% of this income is used to support general administrative and management costs, including law enforcement. At the Ward level,55% the income received (approximately $2.9 million/year) is used to support a variety of social services that benefit a large proportion of the local community.

Adaptive Management: Planning, Monitoring, and Reporting

	Principle	Remarks
1	***Is premised on appropriate resource assessments and/or monitoring of hunting indices, upon which specific quotas and hunting plans can be established through a collaborative process. Optimally, such a process should (where relevant) include local communities and draw on local/indigenous knowledge. Such resource assessments***	Zimbabwe implements an adaptive quota setting quota system that uses inputs from monitoring data and input from a variety of stakeholders including ZPWMA field and research staff, local communities, hunting operators, and independent biologists. Quotas are set based on population estimates or trend

	(examples might include counts or indices of population performance such as sighting frequencies, spoor counts) or hunting indices (examples might include trophy size, animal age, hunting success rates and catch per hunting effort) are objective, well documented, and use the best science and technology feasible and appropriate given the circumstances and available resources	analyses, monitoring data, hunt return data, research work and indices as may be reflected in various reports by field personnel. For lions, specifically, the ZPWMA together with the Safari Operators Association (SOAZ), the Zimbabwe Professional Hunters Association (ZPHGA) and invited independent scientists (such as Panthera) review the returns from the current hunting season and assign points as per the lion aging criteria. The overall quotas allocated and actual offtake have been reduced in recent years as a precautionary measure, including implementing moratoriums in some regions where lion densities have declined. These measures, i.e., age, population trends, maximum overall numbers and levels of utilisation has resulted in lower quotas thus underlining Zimbabwe's commitment to sustainable hunting.
2	***Involves adaptive management of hunting quotas and plans in line with results of resource assessments and/or monitoring of indices, ensuring quotas are adjusted in line with changes in the resource base (caused by ecological changes, weather patterns, or anthropogenic impacts, including hunting offtake)***	Quotas are set adaptively in line with the results of monitoring trends and on regulatory compliance. If an underage lion is harvested, the quota for that area is removed in the next season to allow the population to age and to penalize the non-compliance. In this way, Zimbabwe ensures responsible and sustainable offtakes that have limited impact on the lion population.
3	***Is based on laws, regulations, and quotas (preferably established with local input) that are transparent and clear, and are periodically reviewed and updated***	Safari hunting in Zimbabwe is regulated through the National Parks and Wildlife Act and supporting Regulations that specify when, where and how animals are hunted. Both the professional hunters and the hunting client are licensed in terms of these regulations, and all returns are lodged electronically and tracked through the Reserve Bank TRAS-2 system. As described above, quotas are established in a transparent and participatory way.
4	***Monitors hunting activities to verify that quotas and sex/age restrictions of harvested animals are being met***	The monitoring of the lion hunting is carried out through the implementation of a specific database and a specific safari return form. All hunting permits issued by (and compulsorily returned to) the ZPWMA are registered on a specific database that has been developed under the auspices of the Exchange Control Division of the Reserve Bank that records all parameters related to hunting safaris, including records of lion hunting. The database is accessible to the ZPWMA who can extract reports on all lion hunting activities for all areas in the country.

		Since 2013, all professional hunters conducting lion hunting safaris are required to fill in the return form for both successful and unsuccessful safaris that captures a broad range of general information on the safari (client name, duration, date, payments etc. For the successful lion hunting safaris, additional information related to hunting effort and success, trophy skull measures (total length and width) and specified photographs are taken of the physical features (mane etc.) and upper and lower jaws. These return forms and trophy photographs are compulsory. No CITES export permit can be issued without compliance. All data forms are reviewed by the ZPWMA together with a committee appointed by the SOAZ and ZPHGA to ensure the offtakes and subsequent exports are not detrimental to the survival of the species. Zimbabwe also requires that a ZPWMA ranger accompany all lion safaris both on state land and private land.
5	***Produces reliable and periodic documentation of its biological sustainability and conservation benefits (if this is not already produced by existing reporting mechanisms).***	The Exchange Control Division of the Reserve Bank publishes a detailed report that summarises all data related to sport hunting. This includes country of origin of clients, gross income from daily rates and trophy fees (by company), average trophy and safari values, and the contribution of key species to the overall income generated through hunting. The ZPWMA also produces annual reports that highlight the performance of the hunting industry, listing the challenges that it faces. It also submits periodic reports to CITES.

Accountable and Effective Governance

	Principle	Remarks
1	***Is subject to a governance structure that clearly allocates management responsibilities***	The governance structure is described in the Parks and Wildlife Act and its subsidiary regulations that clearly provides for institutional arrangements and administration defining the management responsibilities within the relevant Government Authority.
2	***Accounts for revenues in a transparent manner and distributes net revenues to conservation and community beneficiaries according to properly agreed decisions;***	The equitable distribution of costs and benefits take into consideration the role of stakeholders in relation to the land category. Benefit sharing to communities under the CAMPFIRE programme is determined through an approved ratio that

		channels 55% of all income from hunting to the Ward level. This institution is monitored at the local level by the Rural District Councils that guide Ward Wildlife Committees with respect to community projects and services. At national level this is monitored by Ministry of Rural Development, Preservation and Promotion of Culture and Heritage Safari operators contribute substantially and voluntarily, over and above the prescribed fixed contribution, especially where this involves anti-poaching efforts and community developments. They provide funding, equipment and the technical expertise for repairs, transportation, and other social services (schools, boreholes). In addition, hunting companies collaborate with both ZPWMA and District anti-poaching teams to remove snares, participate in serious wildlife crime investigations and arrest poachers.
3	***Takes all necessary steps to eliminate corruption;***	Anti-corruption efforts in Zimbabwe are governed by the following legislation: • The Prevention of Corruption Act (1983); • Public Service Act (1995); • The Ombudsperson Amendment Act (1997); • Anti-Corruption Commission Bill (2004); • The Criminal law (Codification and Reform) Act (2004); • Bank Use Promotion and Suppression of Money Laundering Act (2004); • Criminal Procedure and Evidence Amendment Act (2004); and • Criminal Law (Codification and Reform) Act of 2006 The Zimbabwean Anti-Corruption Commission (ACC) was established after the passing of the Anti-Corruption Commission Bill in June 2004. The Commission is a signatory to the Southern Africa Development Community (SADC) Protocol as well as the African Union (AU) and United Nations Convention on Anti-Corruption.
4	***Ensures compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.***	The CITES Management Authority of Zimbabwe, the ZPWMA, ensures compliance of safari hunting to CITES guidelines and provisions.

12 Appendices

12.1 Annex I: Summary of National Parks Estate, Forestry, Communal and Private Land where lion are known to occur

1. National Parks Estate

Type of Land	Name of Park	District	Area (hectares)	Presence of lion
NP	Chizarira	Binga	191,000	Yes
NP	Gonarezhou	Chiredzi	505,000	Yes
NP	Matusadonha	Nyaminyami	140,700	Yes
NP	Chimanimani	Chimanimani	17,110	No
NP	Mana Pools	Hurungwe	219,600	Yes
NP	Kazuma Pan	Hwange	31,300	Yes
NP	Hwange	Hwange	1,465,100	Yes
NP	Victoria Falls "A"	Hwange	1,904	No
NP	Victoria Falls "B"	Hwange	436	No
NP	Zambezi	Hwange	56,010	Yes
NP	Rhodes Nyanga	Nyanga	47,150	Migratory
NP	Rhodes Matopos	Matobo	42,400	No
Total Area National Parks (ha)			**2,717,710**	
Botanical Gardens	Pioneer Reserve	Beitbridge	38	No
Botanical Gardens	Tolo River Reserve	Beitbridge	44	No
Botanical Gardens	South Camp Reserve	Beitbridge	26	No
Botanical Gardens	Chisekera Hot Springs	Chiredzi	95	No
Botanical Gardens	Mawari Raphia Palm	Mt. Darwin	34	No
Botanical Gardens	Tingwa Raphia Pan	Mt. Darwin	290	No
Botanical Gardens	Haroni Forest	Chimanimani	20	No
Botanical Gardens	Rusitu Forest	Chimanimani	150	No
Botanical Gardens	Sebakwe Acacia Karoo	Kwekwe	60	No
Botanical Gardens	Sebakwe Great Dyke	Kwekwe	165	No
Botanical Gardens	Sebakwe Mountain Acacia	Kwekwe	53	No
Botanical Gardens	Mazowe "A"	Harare	43	No
Botanical Gardens	Mazowe "B"	Harare	3	No
Botanical Gardens	Bunga Forest	Mutare	495	No
Botanical Gardens	National Botanic Garden	Harare	67	No

Type of Land	Name of Park	District	Area (hectares)	Presence of lion
Botanical Gardens	Vumba Botanic Garden	Mutare	200	No
Botanical Gardens	Ewanrigg Botanic Garden	Goromonzi	286	No
Total Area of Botanical Gardens and Botanical Reserves:			**2,069**	
Sanctuary	Maninii Pan	Chiredzi	300	No
Sanctuary	Melsetter Eland	Chimanimani	1,800	No
Sanctuary	Mbaze Pan	Nkayi	40	No
Sanctuary	Nyamanyetsi (Nyamanechi)	Guruve	2,840	No
Sanctuary	Mushandike	Masvingo	12,900	No
Sanctuary	Rhodes - Bulawayo	Matobo	1,100	No
Total Area Sanctuaries			**18,980**	
Safari Area	Tuli	Beitbridge and Gwanda	41,600	Yes
Safari Area	Chete	Binga	108,100	Yes
Safari Area	Chipinga (Chipinge)	Chipinge	26,100	No
Safari Area	Malapati (Malipati)	Chiredzi	15,400	Yes
Safari Area	Chinsa	Gokwe	171,300	Yes
Safari Area	Hartley (Chegutu)	Chegutu	44,500	No
Safari Area	Charara	Kariba and Hurungwe	169,200	Yes
Safari Area	Hurungwe	Hurungwe	289,400	Yes
Safari Area	Doma	Makonde	94,500	Yes
Safari Area	Umfurudzi	Shamva	76,000	No
Safari Area	Dande	Guruve	52,300	Yes
Safari Area	Chelvore (Chewore)	Hurungwe	339,000	Yes
Safari Area	Sapi	Hurungwe	118,000	Yes
Safari Area	Deka	Hwange	51,000	Yes
Safari Area	Matetsi	Hwange	295,500	Yes
Total Area of Safari Areas:			**1,891,900**	
Recreational	Chibwatata	Binga	6	No
Recreational	Kavira	Binga	50	No
Recreational	Lake Kariba	Binga, Nyaminyami and Hwange	287,200	Yes

Type of Land	Name of Park	District	Area (hectares)	Presence of lion
Recreational	Ngezi	Kadoma	5,800	No
Recreational	Umfuli (Mfurudzi	Chegutu	12,700	No
Recreational	Lake Robertson (Manyame Lake)	Chegutu, Makonde and Harare	11,200	No
Recreational	Lake Cunningham	Insiza	4,172	No
Recreational	Chinhoyi Caves	Makonde	120	No
Recreational	Manjirenji	Zaka	3,400	No
Recreational	Bangala	Zaka and Masvingo	2,700	No
Recreational	Sebakwe	Kwekwe	2,600	No
Recreational	Robert McIlwaine (Chivero)	Harare	6,180	No
Recreational	Umzingwane	Umzingwane	1,233	No
Recreational	Kyle (Mutirikwi)	Masvingo	16,900	No
Recreational	Lake Matopos	Matobo	2,900	No
Total Area of Recreational Parks, Lakes and Dams			**357,161**	

Total Area National Parks (ha)	2,717,710
Total Area of Botanical Gardens and Botanical Reserves:	2,069
Total Area Sanctuaries	18,980
Total Area of Safari Areas:	1,891,900
Total Area of Recreational Parks, Lakes and Dams	357,161
Total Ha	**4,987,820**

2. Forestry Land

Land	Name	District	Area (ha)	Presence of lion
Forestry Areas	Fuller	Hwange	23,300	Yes
Forestry Areas	Panda Masuie	Hwange	33,500	Yes
Forestry Areas	Kazuma	Hwange	24,000	Yes
Forestry Areas	Mvutu	Hwange	2,100	No
Forestry Areas	Sikumi	Hwange	54,400	Yes
Forestry Areas	Gwayi	Lupane	144,265	Yes
Forestry Areas	Lake Alice	Lupane	39,000	No
Forestry Areas	Ngamo	Lupane	102,900	Yes

Land	Name	District	Area (ha)	Presence of lion
Forestry Areas	Chisengu	Lupane	4,006	No
Forestry Areas	Glencoe	Lupane	2,050	No
Forestry Areas	Lionhills	Lupane	2,747	No
Forestry Areas	Martin (i)		400	No
Forestry Areas	Martin (ii)		4,400	No
Forestry Areas	Mudima		6,355	No
Forestry Areas	Nyambewa		5,484	No
Forestry Areas	Tandai		5,450	No
Forestry Areas	Tarka		4,343	No
Forestry Areas	Gwampa	Nkayi	47,000	No
Forestry Areas	Chesa	Nkayi	14,250	No
Forestry Areas	Inseze	Nkayi	35,200	No
Forestry Areas	Inseze Extension	Nkayi	8,400	No
Forestry Areas	Umgusa	Nkayi	32,200	No
Forestry Areas	Umzibani	Nkayi	2,471	No
Forestry Areas	Kavira	Binga	28,200	Yes
Forestry Areas	Mzolo	Binga	67,200	No
Forestry Areas	Sijarira	Binga	25,600	Yes
Forestry Areas	Bembesi	Binga	55,100	No
Forestry Areas	Molo	Binga	2,900	No
Forestry Areas	Mtao	Chirumanzu	8,170	No
Forestry Areas	Chirindu	Chirumanzu	950	No
Forestry Areas	Gungunyana	Chirumanzu	1,650	No
Forestry Areas	Mafungabusi	Chirumanzu	82,100	No
Forestry Areas	Mudzongwe	Chirumanzu	1,420	No
Forestry Areas	Ungwe	Chirumanzu	567	No
Forestry Areas	Nyangu	Chirumanzu	16,600	No
Forestry Areas	York	Chirumanzu	1,455	No
Forestry Areas	Banti	Mutare	2,219	No
Forestry Areas	Stapleford	Mutare	24,600	No
Rhodes Estate	Erin	Nyanga	10,700	No
Rhodes Estate	Sauerdale North	Nyanga	214	No

Land	Name	District	Area (ha)	Presence of lion
Total Forest Areas (ha)			927,866	

3. CAMPFIRE Districts

District	Natural Region	Total Area (km^2)	Area of CF Wards (km^2)	Number of Wards	CF Wards	District Pop (persons)	Presence of lion
Beitbridge	5	12,935	4,595	21	6	80,946	Migratory

4. Conservancies

	Name of Conservancy	District	Area (hectares)	Presence of lion
Conservancies	Malilangwe	Chiredzi	40,000	Yes
Conservancies	Save	Chiredzi	344,200	Yes
Conservancies	Chiredzi River	Chiredzi	28,500	No
Conservancies	Bubye Valley	Matabeland South	374,000	Yes
Conservancies	Bubiana	Matabeland South	130,000	No
Conservancies	Gwayi	Hwange	150,897	Migratory
Conservancies	Midlands Black Rhino	Midlands	85,000	No
Other	Matetsi Farms	Hwange	155,627	Migratory
Total Area of Conservancies			**1,308,224**	

12.2 ANNEX II: SUMMARY OF PRIMARY LEGISLATION AND REGULATIONS

12.2.1 The Policy for Wild Life of 1992

This policy provides for Government to maintain a protected area network known as the Parks and Wild Life Estate for the conservation of the nation's wild resources and biological diversity. According to the policy, government will use the Estate to promote a rurally based wild life industry and will harmonise the management of the Estate with the efforts of neighbouring communities that are developing wild life as a sustainable form of land use. The policy vests executive responsibility for the Parks and Wildlife Estate in the Department of National Parks and Wild Life Management (DNPWLM). It provides for the following categories of protected area: National Park; Safari Area; Sanctuary; Recreational Park, Botanic Reserve and Botanic Garden.

- The objectives of the Parks and Wild Life estate will be to:
- Preserve representative samples of Zimbabwe's aquatic and terrestrial flora and fauna and their physical environments;
- Protect areas of scenic beauty and special interest;
- Preserve rare, endangered and endemic species;
- Conserve water catchments;
- Provide opportunities for public education and the advancement of scientific knowledge;

and, without prejudice to any of the above:

- Encourage public use related to the enjoyment and appreciation of these areas; and
- Generate economic activity within the Estate and surrounding areas to enhance rural development.

The policy commits the DNPWLM to an adaptive management strategy in which research and monitoring are incorporated as integral components of management. It states that where sport

hunting is an objective in a protected area, quotas will be set to the maximum sustainable level at which trophy quality can be maintained and the hunting can be marketed. In terms of the policy the emphasis of tourism in parks should be low density and high quality tourism. An EIA must be carried out for major developments such as construction of roads, powerlines, buildings or dams.

With respect to Wildlife Conservation, the Policy states that the Government of Zimbabwe aims to encourage the conservation of wild animals and their habitats outside the Parks and Wild Life Estate recognising that this is only likely to be successful if wild life can be used profitably and the primary benefits accrue to people with wild life on their land. *"Recognising that much of Zimbabwe does not consist of good arable land, Government regards wild life management in all its diverse forms as a legitimate land use which may be the most appropriate or highest-valued form of development in many areas"*. The policy also states that Government will take the necessary legal and enforcement measures to prevent the illegal use of wildlife.

Addressing community rights to natural resources the Policy states that government intends to *"transform land use in remote communal areas through its Communal Areas Management Programme for Indigenous Resources (CAMPFIRE), under which rural peoples have the authority to manage their wild life and other natural resources and benefit directly from so doing"*. Further government will *"ensure that wildlife is not undervalued to the people living with it by permitting them to use it sustainably for their own gain as they are able to do with other natural resources and agricultural products"*.

The policy states that the mechanism for communities to gain rights over wild life will be through the granting of Appropriate Authority to Rural District Councils (under the Parks and Wildlife Management Act of 1975). For this authority to be granted, the Minister will require:

1. An acceptable management plan from councils in which objectives for wild life are stated and preliminary intentions for achieving these objectives are outlined;
2. An acceptable institutional plan which outlines clearly the methods by which councils intend a) to involve wild life producer communities in district level management and b) to devolve the decision-taking process in local wild life management and the distribution of wild life benefits to producer communities;
3. The department to assist councils in managing their wild life and to coordinate the activities of NGOs who are assisting councils;
4. The approval by the department of all annual quotas of wild life killed or sold in communal lands during the interim period while councils develop their management capacity;
5. The presentation of annual reports from Councils to the Director and to their constituents detailing the year's performance in wild life management in their district.

The policy provides for the Minister to withdraw Appropriate Authority from a council not conforming to conditions and objectives under which it was granted.

12.2.2 Wildlife Based Land Reform Policy

In 2004 there was a move to revise the Policy for Wildlife to cater for the Land Reform programme. The revised policy, known as the Wildlife-Based Land Reform Policy, has not however been formally accepted by Government. Nonetheless, it is important to summarise what was envisioned at that time since this has influenced the way the management of wildlife outside of the Parks Estate has unfolded.

The vision of this reformed policy is to ensure profitable, equitable and sustainable use of wildlife resources, particularly in areas where agricultural potential is limited. It states that *"the policy has*

been developed in the context of Zimbabwe's Land Reform Programme and is underpinned by recognition that wildlife is a viable land-use option, that it can facilitate attainment of equity objectives and that it is feasible. This policy is complemented by existing natural resources legislation and the state protected area system."

The policy also states that the key issues that were taken into consideration were:

- The State will continue to make provision for wildlife management outside the protected area system, including setting aside certain core zones for wildlife production. Wildlife should be the only permitted primary land use option in these areas.
- Outside core zones, wildlife production, amongst other land use options, will be encouraged. The most profitable and ecologically sustainable land use option must be allowed to evolve in response to changing economic influences, notwithstanding the need to ensure food security in these areas.
- The scale of wildlife operations must be allowed to vary from intensive to extensive, depending on agro-ecological settings.
- All beneficiaries of wildlife operations, whether individually or jointly, must equitably share the costs of production.
- Wildlife management responsibility and authority must be devolved to the most appropriate level for efficient resource management and production incentives must be maximized for landholders.
- Security of tenure over resources is key to successful wildlife-based land reform. These core areas should be identified.

The aims of the Wildlife-Based Land Reform Policy are listed as:

1. To facilitate the indigenisation of the wildlife sector and to ensure more equitable access by most Zimbabweans to land and wildlife resources and to the business opportunities that stem from these resources.
2. To maintain a proportion of land outside state protected areas under wildlife production.
3. To enhance diversity of land uses through wildlife production.
4. To promote secure and equitable tenure.
5. To develop and implement appropriate institutional arrangements for wildlife-based land reform.

The policy recognized that wildlife production can be at different scales, which are dependent on several factors that include the type of wildlife, management regime and ecological conditions. Three categories are highlighted in the policy:

1. Intensive production systems with captive or semi-captive species such as crocodiles and ostriches (1 – 100 hectares).
2. Semi-intensive to semi-extensive production systems with free-ranging "plains game" populations (1,000 to 10,000 hectares).
3. Extensive production systems incorporating "big game" populations (over 10,000 hectares).

The Wildlife Based Land Reform Policy promotes two land redistribution models:

1. A state leasehold approach which is based on the reallocation of leasehold leases.
    a. This approach entails the acquisition of the entire land-holding with compensation for infrastructure, wildlife, etc.,

b. The land will be reallocated to lessees under terms and conditions that will ensure sustainable wildlife management, on-going investment and capacity-building in that area.

2. A corporate equity model that involves transfer of shares within a land-owning company.
    a. The transfer of shares will be in accordance with the Indigenisation goals and sound business principles;
    b. Proposals from stakeholders must outline realistic ways in which new entrants can increase their shareholdings well beyond an initial level, over a reasonable time scale.
    c. The proposals must make provision for immediate allocation of shareholdings to new participants.

The Policy document also acknowledges that the two approaches can be applied in combination and shall be considered on a case by case basis, and that the State may from time to time consider other approaches that meet the objectives of the Wildlife Based Land Reform Policy.

12.2.3 Parks and Wild Life Act Chapter 20:14 of 1996 as amended in 2001:

This is the pivotal Act with respect to wildlife management in Zimbabwe. The Act includes the following sections:

1. Parks and Wildlife Board
2. Parks and Wildlife Estate and Parks and Wildlife Land
3. National Parks
4. Botanical Reserves and Botanical Gardens
5. Sanctuaries
6. Safari Areas
7. Recreational Parks
8. Specially Protected Animals
9. Specially Protected Indigenous Plants
10. Indigenous plants
11. Hunting, removal, viewing and sale of animal products
12. Protection of animals and Indigenous plants on alienated land
13. Fish Conservation
14. Evidence, prevention and detection of offences and additional penalties and forfeitures
15. Inspectors, Officers, employees and advisory committees
16. General

The Act also defines the different types of land (Alienated land):

a. "Private Land" means land the ownership of which is vested in any person other than the President.
b. "State Land" means land vested in the President other than Communal Land or trust land vested in the President.
c. "Trust land" means any land, other than Communal land held in trust by the President or a statutory body or by a person, whether solely or jointly with others, by virtue of his being the holder of some office in a statutory body.

The Parks and Wildlife Act of 1975 (as amended) states that the purposes of National Parks are:

1. To preserve and protect the natural landscape and scenery.
2. To preserve and protect wild life and plants and the natural ecological stability of wild life and plant communities for the enjoyment, education and inspiration of the public.

Establishment of Protected Areas: The Act enables the President to declare National Parks on State land or Trust Land if the trustees give their consent (Section 22). The Act enables the Minister acting on the authorisation of the President to acquire land for the Parks and Wild Life Estate either compulsorily or by agreement in terms of the procedures contained in the Communal Land Act and the Land Acquisition Act. The Act gives the Minister the power to manage National Parks, control entry and authorise or restrict certain activities and carry out various conservation measures. The Act provides for the provision of facilities and services for tourists in National Parks or to lease out such facilities or services. The Act allows the Minister to issue a permit for hunting in National Parks.

The Act makes provision for the establishment of Botanical Reserves and Botanical Gardens (Section 26) on State Land or Trust Land for the preservation and protection of rare or endangered indigenous plants or representative plant communities for the enjoyment, education and benefit of the public.

A third category of protected area is a Sanctuary which may be established by the President on State Land or Trust Land (Section 31) to afford special protection to all animals or a particular species of animal in the sanctuary for the enjoyment and benefit of the public. The Minister may provide tourism facilities and services in a Sanctuary or lease facilities or services. The Minister may also issue permits for hunting or the removal of game from a sanctuary for certain purposes.

In terms of the Act the President may establish Safari Areas on State Land or Trust Land as part of the Parks and Wild Life Estate (Section 36) for the preservation and protection of the natural habitat and the wild life in these areas in order that facilities and opportunities may be afforded to the public for camping, hunting, fishing, photography, viewing of animals, bird watching and similar activities. The Minister may lease sites in safari areas for various purposes and may grant hunting or other rights. Hunting or removal of wildlife in a safari area may only take place with a permit.

The fifth category of protected area provided for by the Act is a Recreational Park (Section 41), which may be established by the President for the purpose of preserving and protecting the natural features for the enjoyment, benefit and recreation of the public. The Minister may designate areas within Recreational Parks which can be alienated or leased for the provision of tourism facilities and services.

Prospecting and mining are prohibited in National Parks, Botanical Reserves, Botanical Gardens, Sanctuaries or Recreational Parks without a permit issued by the Minister and with the consent of the Minister of Mines (Section 119). The Environmental Management Act of 2002 also makes provision for land to be acquired by the State for conservation purposes. According to Section 109 the President may acquire land or set land aside for the improvement or proper management of the environment. In the absence of an agreement with the land owner the President may acquire the land in accordance with the procedures under the Land Acquisition Act. The President may set aside any area of Communal Land for the conservation or improvement of natural resources or for the protection of irrigation works or sources of water supplies provided that no such area shall be set aside until the Minister responsible for the administration of the Communal Land Act is satisfied that suitable provision has been made elsewhere for the inhabitants who will be affected by the setting aside of the area (Section 110).

Specially Protected Animals and Plants: The Act makes provision for the Minister to declare certain animals as specially protected (Section 44). In terms of the Act, no-one may hunt, have in their possession, or sell a live specially protected animal or the meat or trophy from such an animal without a permit. The trophy of any specially protected animal must be surrendered to the state if not obtained by a permit. The Act specifies the purposes for which the Minister may issue a permit for use of

specially protected animals (Section 46), but provides the Minister with some flexibility as he/she may issue a permit for any purpose which in the opinion of the Minister is in the interests of the conservation of animals.

The Act also makes provision for the declaration of specially protected indigenous plants (Section 49). No person may pick a specially protected plant without a permit, although the owners or occupiers of land or a person acting under their authority may pick a specially protected plant for cultivation, forestry, building construction or the construction of roads and other infrastructure. No person may sell a specially protected plant without a permit unless the person is a recognised dealer in specially protected indigenous plants or a member of a recognised horticultural society and the purchase is from a member of the same or other recognised society. The Act specifies the purposes for which the Minister may issues permits for the picking or sale of specially protected indigenous plants. The Act also stipulates that no person may pick or sell indigenous plants without a permit (Section 55) provided that the appropriate authority for any land may pick or sell or authorise others to pick or sell indigenous plants (Section 56). If the Minister deems it necessary for the conservation of an indigenous plant, the Minister may prohibit the picking or selling of that plant (Section 57).

Hunting and removal of animals: The Act prohibits hunting, removal of an animal or any part of an animal or the sale of an animal without a permit unless by an appropriate authority for the land (Section 59), which is the owner of freehold land, a Rural District Council on communal land, the Forestry Commission on state forests and the DNPWLM on the parks and Wildlife Estate. The appropriate authority for the land may issue permits to others to use the wild life (except for specially protected species). If the Minister deems it necessary for the conservation of a animal, he/she may prohibit the hunting or removal of such animals in a specific area (Section 60) and may serve a notice to prohibit a specific person from hunting, conducting photographic tourism, or being in the possession of a weapon used for hunting save for self-defence. The Minister does not have to give reasons for such prohibitions. The Act enables the killing of an animal without a permit for self-defence (Section 61).

The Act prohibits anyone from conducting of hunting or photographic safaris within the parks and wild life estate or on forest land without holding a professional hunter's licence or a professional guide's licence (Section 65). No person may manufacture an article from a trophy, process a trophy or sell or otherwise dispose of a trophy or an article manufactured from a trophy from an animal that has been hunted in contravention of the Act (Section 73).

If the Minister believes it in the interests of conservation, he/she may declare any animal that is not a specially protected animal as a protected animal and any indigenous plant that is not a specially protected plant as a protected plant (Section 77) on alienated land within the area of an environment committee established in terms of the Environmental Management Act of 2002 and the Rural District Councils Act of 1988. No person may, without a permit, hunt an animal or pick an indigenous plant that has been declared protected. The Minister may also restrict the extent of hunting animals or picking of indigenous plants on alienated (private freehold) land in the area of an environment committee if the Minister believes that the hunting of animals or picking of plants is unsustainable. The Minister may authorise an environment committee to reduce the numbers of problems animals on any alienated land within its area if the number of such animals is sufficient to cause excessive damage or nuisance. Section 79 gives environment committees the power to restrict hunting on alienated land if it believes that hunting is unsustainable.

The Minister may declare any person to be the appropriate authority for any waters (Section 83) and may declare controlled fishing waters (Section 84) for which the Minister may make regulations for

the control, regulation, restriction of prohibition of fishing. Unless the Minister designates areas of water where a permit is not required, no-one except the appropriate authority for that water may fish in any water without a permit. Section 87 regulates the means of fishing by prohibiting the use of explosives, firearms and poisons. Section 88 controls the introduction into any water of fish and plants that are not native to that water. No-one except the appropriate authority for a water may fish commercially and sell the fish without a permit (Section 90). The minister may ban fishing by specific persons in any area in the interests of conservation (Section 96).

Enforcement: The Act provides for the powers of conservation officials, and police officers in relation to enforcing the Act. It provides for penalties for various offences and for the Minister to make regulations on a wide range of issues and activities. The Act provides for the highest penalties to be awarded for the unlawful killing of a rhinoceros or other specially protected game specified by the Minister in an
official notice and for the unlawful possession or trade in rhino horn, ivory or the trophy of any other specially protected animal specified by the Minister in an official notice (Section 128).

The Environmental Management Act of 2002 provides the Minister responsible for the Environment to regulate the use of wetlands. In terms of Section 113 of the Act the Minister may declare any wetland to be an ecologically sensitive area and may impose limitations on development in or around such area. Further, no person may without authorisation in terms of the Act:

a. reclaim or drain any wetland;
b. disturb any wetland by drilling or tunnelling in a manner that has or is likely to have an adverse impact on any wetland or adversely affect any animal or plant life therein;
c. introduce any exotic animal or plant species into the wetland. Section 114 enables the Minister to serve an order on the owner, occupier or user of land under which they must take measures, construct such works or refrain from specific activities in order to protect the environment.

Biological Diversity: Further the Act enables the Minister to take such measures as may be necessary for the conservation of biological diversity and the implementation of Zimbabwe's obligations under the United Nations Convention on Biological Diversity adopted in 1992 and may, in so doing (Section 116):

a. identify the components of the biological diversity of Zimbabwe;
b. determine the components of biological diversity which are threatened with extinction;
c. prepare and maintain an inventory of the biological diversity of Zimbabwe;
d. determine actual and potential threats to the biological diversity and devise such measures as are necessary for preventing, removing or mitigating the effect of those threats;
e. devise measures for better protection and conservation of rare and endemic species of wild fauna and flora;
f. develop national strategies, plans and programmes for the conservation of the biological diversity of Zimbabwe;
g. promote the integration of conservation and sustainable use of biological diversity into relevant sectoral policies, plans and programmes;
h. require in writing any developer, including the government, to integrate the conservation and sustainable utilisation of the biological diversity in any project the implementation of which has or is likely to have detrimental effects to the biological diversity of Zimbabwe;
i. protect indigenous property rights of local communities in respect of biological diversity with scientific knowledge;

j. support the integration of traditional knowledge on conservation of biological diversity with scientific knowledge;
k. prohibit or restrict access by any person to or the exportation of any component of the biological diversity of Zimbabwe.

The Minister may also take such action or measures as may be necessary for the conservation of the biological diversity of a specific locality and may:

a. promote such land use methods as are compatible with the conservation of the biological diversity of that locality;
b. select and manage environmental protection areas for the conservation of the various terrestrial and aquatic ecological systems;
c. establish and manage buffer zones near environmental protection areas;
d. prohibit or control the importation of and introduction into the wild of exotic animal and plant species;
e. identify, promote and integrate traditional knowledge into the conservation and sustainable utilisation of the biological diversity of that locality; and
f. determine special measures for the protection of species, ecosystems and habitats faced with extinction.

Community rights to natural resources: The Act provides for land holders to acquire rights over wildlife through the granting of "appropriate authority" status. Thus, the owners of private freehold land are deemed to be the appropriate authority over wildlife on their land (Section 2). Communities acquire rights over wildlife through Rural District Councils (RDCs). A 1982 amendment to the Act provides for the Minister to appoint an RDC as the appropriate authority for wild life on the communal land within the jurisdiction of the RDC (Section 108). The Act states that no person may hunt any animal on any land or remove any animal or part of an animal except in term of a permit issued by the appropriate authority for that land [Section 59(2)]. The appropriate authority may hunt any animal on the land, remove any animal or part of an animal from the land and may issue permits to others to hunt or remove animals from the land. RDCs are then expected to apply the guidelines contained in the 1992 Wildlife Policy to devolve the decision-taking process in local wild life management and the distribution of wild life benefits to producer communities (i.e. smaller and more localised groups of people with wildlife on their land). Further policy guidelines state that RDCs
are expected to distribute a percentage of income derived from wildlife use to producer communities and to allow these communities to be responsible for several wildlife management activities. Because of the existing administrative system of local government, producer communities had to be represented by Ward Development Committees (WADCOs) and Village Development Committees (VIDCOs) which are advisory bodies to Councils.

In this way, various legal entities are granted authority over wildlife outside the Parks Estate. These authorities include private land-owners (where the land is held under an agreement of purchase or lease), forest land (such as Forestry Commission estates). For Communal Land, the Rural District Councils (RDC) may be appointed the Appropriate Authority. The Minister of Environment grants this authority, with input from the Zimbabwe Parks and Wildlife Management Authority. If appropriate authority is not granted, the authority remains vested in Central Government. This Appropriate Authority clause in the Act, paved the way for the implementation of the Communal Areas Management Programme for Indigenous Resources (CAMPFIRE)[3].

Statutory Instruments: There are several statutory instruments (SI) that regulate the wildlife sector:

[3] Note that the CAMPFIRE programme is about to undergo a comprehensive review that will impact on future policies.

- SI 362 of 1990: This legislation provides in sections 66-75 for the Regulation of Manufacture, Processing and Dealing in trophies.
- SI 76 of 1998: Parks and Wild Life (Import and Export) (Wild Life) Regulations specifically deals with Import and Export of wildlife products. This legislation was enacted to ensure compliance with CITES requirements for export and import of wild flora and fauna. These provide for the following:
    - Section 3 deals with the Control of Import and Export of wild life and trophies and lays down a general prohibition on the import into or export from Zimbabwe of any "wild life" or trophy of "wild life" except in accordance with either a certificate issued in terms of section 5 by the Director or Director of Customs, or an open general permit:
    - Section 5 deals with Permits and Certificates and is consistent with CITES legislation.
    - Section 15 deals with Offences and Penalties. Any person who contravenes any of the provisions of subsection 1 shall be guilty of an offence, and liable to a fine or imprisonment. To effectively ensure compliance, the Zimbabwe Parks and Wildlife Management Authority deployed a permanent team of officers based at all ports of exit and entry to assist border control officials in monitoring and inspection of all wildlife exports.
- SI 26 of 1998: The regulation provides for the monitoring of all hunting activities in the country to ensure compliance by all Safari Operators and international clients and to ensure that the TR2 Form. (Tourism Hunting Return Form) is duly completed.
- Trapping of Animals (Control) Act Chapter 20:21: The Act provides for the control, restriction and regulation of the construction, possession and use of certain traps for the purpose of trapping animals; to control the sale and disposal of certain animals, to include lions and to provide for matters incidental to or connected with the foregoing.
- SI 92 of 1992: Parks and Wild Life (Payment for Hunting of Animals and Fish) Notice, 2009: This instrument provides for compensation values of various wildlife forms to include animals and fish. It acts as an additional deterrent measure in matters where poaching cases are being dealt with in accordance with the law. The compensation value for illegal hunting of lion is USD 5 000, 00.
- SI 93 of 2009: Parks and Wild Life (Payment for Trapping of Wild Animals) Notice, 2009. This instrument provides for the payment of compensation to the state or game owners in the event that one is convicted for illegally trapping wild animals on various land categories. The compensation value for illegal hunting of lion is USD 5 000, 00.
- SI 40 Of 1994: Parks and Wildlife (Appropriate Authorities for Communal Land) Notice, 1994. This SI facilitates the granting of Appropriate Authority status to various Rural District Councils. This legislation devolved authority to Rural District Councils and gave rights to local communities to sustainable utilize wildlife and other natural resources in their areas of jurisdiction.

12.2.4 The Rural District Councils Act Chapter [29:13] 2002

The Rural District Councils Act is important in the wildlife sector as it provides for a legal entity (in Communal Lands) responsible for wildlife resources. Since the land in Communal areas is not privately owned by the communities and given that most of the communities do not constitute a legal entity, the Appropriate Authority status is conferred to the Rural District Councils (RDCs). Thus the RDCs act as custodians of the wildlife resources on behalf of the communities.

Efforts are now underway in some areas to form Community Development Trusts. There is scope for these Community Development Trusts to be used as vehicles to further devolve authority from the District level to the sub-district level, which will provide more income at a community level and therefore increase conservation support from the community as they will have a true vested interest.

The feasibility of granting Appropriate Authority to these Trusts in Zimbabwe needs to be assessed and piloted. The major challenge with these Trusts is that of financial sustainability as they do not have adequate funds to cater for their activities. Capacity-building of all Trust members is also a key requirement to ensure institutional sustainability.

In the Rural District Councils Act, there are three key terms that will be described further: Ward, Ward Development Committee and Communal Land. According to the Act, a "Ward" (an administrative unit) means a ward into which a council area is divided or re-divided. Several villages make up a ward. In the Act, a "Ward Development Committee" means a village development committee established in terms of Section 58 of the Act. A Ward Committee is made up of members who are elected from the community to represent the community in discussions/meetings with the Rural District Council. The Act further defines three different types of Wards. These are, Commercial Ward, Communal Ward and Resettlement Ward. The Commercial Ward is a large-scale commercial ward or a small-scale commercial ward. A Communal Ward is a ward consisting wholly or mainly of Communal Land. A Resettlement Ward is a ward consisting wholly or mainly of Communal Land (as in the case of the Communal Ward). It is important to establish whether in practice, the RDCs make this distinction of the wards or whether they are all considered simply just as wards.

The "Communal Land" is defined as any land that is Communal Land in terms of the Communal Land Act [Chapter 20:04]; and any other land that was within the area of a district council on the 19th August 1988.

12.2.5 The Forest Act of 1948

This Act establishes the Forestry Commission and places demarcated forests under its control. The commission is responsible for the control, management and exploitation of state forests including the leasing of timber harvesting rights. The Act also gives the Minister the power to regulate the commercial use of timber from indigenous trees on other land.

As the appropriate authority for the Forest Areas, the Commission is also responsible for the management and conservation

12.3 Annex III: Analysis of Total Revenue by Country of Destination

Destination	2014	2015	Total
United States	$14,485,835	$11,942,785	$26,428,620

Type of Activity:
Import of Sport-hunted Trophies of Southern African Leopard, African Elephant, and Namibian Southern White Rhinoceros

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Rupersburg	Irvin	Stephen	Jr

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Shelby Township	MI	48315	Macomb	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☐ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: _____ No ☑

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of m[illegible] that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES OF SOUTHERN AFRICAN LEOPARD, AFRICAN ELEPHANT, AND NAMIBIAN SOUTHERN WHITE RHINOCEROS

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: The U.S. FWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during a sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 3: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If applying for more than one trophy, be sure to answer questions 2 and 3 for each trophy. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. ENTER the quantity next to the name of the species you are applying to import (you may apply to import specimens of more than one species provided they have been/are being hunted in the same country):

Leopard (*Panthera pardus*) Quantity: _____ (Limited to the import of two per calendar year)

African elephant (*Loxodonta africana*) Quantity: 1 (Import permit is not required for trophies harvested in Botswana, Namibia, South Africa, or Zimbabwe). **Note: once imported, ivory cannot be re-exported.**

Southern white rhinoceros (*Ceratotherium simum simum*) from Namibia Quantity: _____ (An import permit is not required for trophies harvested in South Africa or Swaziland. If you are looking to import from a different country, please use form 3-200-37).

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and place (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horns, tusks).

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and place (area, region, GIS coordinates, ranch, and/or AND nearest city) where trophy was removed from the wild: Chewore Safari Area - North Mashonaland West

   b. Date wildlife was hunted:

   October 14, 2018

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks):

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Dee Gilmour
Business Name:	Trophy Consultants International (T.C.I.)
Address:	4 Josiah Chinamano Road
Address:	Belmont
City:	Bulawayo
State/Province:	Zimbabwe
Country, Postal Code:	

5. Please be aware that the U.S. Fish and Wildlife Service may need to make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., how the funds from license/trophy fees will be spent, what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, ca

Applicant's signature: _____ Date: 2-22-19

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish the permit to be mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

5. Principal officer title		6. Primary contact name	
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #, or P.O. Boxes)
(b) (6) [redacted]

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
MARCO ISLAND	FLORIDA	34145	COLLIER	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

(b)(6) [redacted] 2/1/2019

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

N/A

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

DAN HENDERSON

(b) (6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   PANTERO LEO (LION)

   b. Sex (if known). MALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:
   NAMWALA GAME MANAGEMENT AREA
   NAMWALA, ZAMBIA
   (NEAREST VILLAGE IS ITEZHI TEZHI)

   b. Date wildlife is to be hunted:
   1 AUGUST 2019 THROUGH 21 AUGUST 2019

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   GM ZAMBIA SAFARIS
   GREG MICHELSON PROFESSIONAL HUNTER

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:
   N/A

   b. Date wildlife was hunted:
   N/A

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

N/A

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

N/A

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). NOT HUNTED YET DO NOT CURRENTLY HOLD ANY SUCH PERMITS

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: BANGWEULU TAXIDERMY
Address: 4142 IK CHIFWEMA ROAD, NEW KASAMA
City: LUSAKA
State/Province: LUSAKA
Country, Postal Code: ZAMBIA 10101

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?
THE 3 YEAR TREND FOR LION IS UP BASED ON MONTHLY OBSERVATIONS AND TRAIL CAMERA SURVEYS.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?
$ 15000 USED FOR 10 ANTI POACHING RANGERS, 21 COMMUNITY SCOUTS, COMMUNITY RESOURCE BOARD AND ZAMBIA GOVERNMENT FEES.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?
BUILT 3 SCHOOLS FOR 270 CHILDREN
GAME MEAT FOR NEARBY COMMUNITIES
CONTRIBUTE FUEL AND RATIONS FOR DEPARTMENT OF NATIONAL PARKS AND WILDLIFE.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: (b)(6) [redacted] Date: 2/1/2019

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from the list of designated ports. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

To: DON HENDERSON (b)(6)

Good morning Donald,

Thank you for your inquiry. Your application, #25685D that was received on February 4, 2019, is currently under review. Please be aware that we have a significant number of applications pending, and we process applications in the order they are received in the office. The staff member working on your application has been notified of your inquiry. If there is a need for additional information or clarification on information provided in your application, the staff member will contact you directly.

Thank you,
U.S. Management Authority, Branch of Permits.

****

Please review the U.S. Fish and Wildlife Service's Office of Law Enforcement's webpage on importing and exporting commercial wildlife shipments. Contact the Office of Law Enforcement to see if your situation applies.

Wildlife (including parts and products) imported or exported from the U.S. must be declared to the U.S. Fish and Wildlife Service. Please contact the Wildlife Inspector at the appropriate designated port to learn the requirements for your shipment.

Contact USDA-APHIS to determine their quarantine and health certificate requirements for import and export. Visit their website or call the National Import Export Services (NIES) Call Center: 301-851-3300.

Please check with the CDC for their requirements.

Contact the State and foreign country to check on their requirements.

We encourage permit applicants to review our tips and reminders for completing applications.

We appreciate your time and consideration.

Application # 25685D / Lion Trophy Import

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 3:23 PM
To: (b)(6) [redacted]

Dear Mr. Henderson,

Ref: 25685D; Import of a lion trophy, from Mwanya GMA, Lusaka Zambia, to be taken between August 1-21, 2019.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. Please respond to question 7 of the application and provide a copy of the Zambia licenses/permits authorizing your lion hunt. Also, please be aware that your application will not be considered complete without this required information.

2. If available, please provide documentation to support your answers to application questions 9.a. through 9.c.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by June 6, 2019 (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

RE: DONALD M. HUBER
(b) (6) [redacted]
LION PERMIT

To Whom it May Concern:

I purchased a $60,000 Lion Hunt for Zambia in February of 2015 for a September 2016 hunt.

I understand U.S. Fish and Wildlife now requires a Cities Permit for Lions. Enclosed is a completed Cities Permit Application and my check in the amount of $100. Please let me know if there is anything further I need to do as I am scheduled to fly out September 10, 2016 for my hunt September 12, 2016.

Thank you,

Don Huber

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   LION

   b. Sex (if known).
   MALE

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild: Lower Lupande hunting Block, in The Luanga Valley Eastern Zambia. GPS-S13.14775 E031 38 880
   Nearest City Chipata Area-MFuwe
   b. Date wildlife is to be hunted: September-12,30 2016

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks). Skull, Life Size mount

3. **IF THE ANIMAL IS DEAD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

   b. Date wildlife was hunted:

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name: Mary-Anne Fernandes
Business Name: Highveld Taxidermists
Address: P.O. Box 34242
Address: Farm 354, Vlakplatts, Hennopsriver 0023, South AFRICA
City: Erasmia
State/Province:
Country, Postal Code: South AFRICA 0023

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: (b)(6) Date: 6/20/16

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

DONALD M. HUBER (b) (6) [redacted]

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2016 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zambia for the 2016 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country
Windermere	FL	34786	Orange	USA

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount identified on page 6 and 7**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – *attach documentation of fee exempt status as outlined in instructions* [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the [illegible]rtify that the information submitted in this application for a permit is complete and [illegible]e statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b) (6) [redacted]

2/4/19

[illegible]ed signatures) Date of signature (mm/dd/yyyy)

Please continue to next page

E. REISSUANCE, RENEWAL, OR AMENDMENT OF A PERMIT (For this application, all permits, registrations, and certificates are referred to as a permit.)

NOTE 1: If you are renewing your Designated Port Exemption permit, use form 3-200-2 and submit to appropriate Office of Law Enforcement address. If you are renewing your Import/Export license (required for commercial activities), use form 3-200-3 and submit to appropriate Office of Law Enforcement address.

NOTE 2: This form **cannot** be used for a lost or damaged permit. If you need to replace a lost or damaged permit, please use form 3-200-66. The application **must** be submitted to the office that issued the initial permit. Lost or damaged permit

NOTE 3: Some activities, such as all master files for multiple shipments, Certificate of Scientific Exchange (COSE), circus/traveling exhibits, and artificially propagated plants, can only be re-issued, renewed, or amended by submitting a new application for permits for those activities. Please refer to these application types to determine if another application form would be more appropriate or contact the Division of Management Authority for more information.

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Allan Bradley, (b) (6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

   ☒ No ☐ Yes

   If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. **Permit number.** Enter the permit number to be reissued/renewed/amended. Prt#: MA00478C-0

5. Submit the original permit with this application.

6. **Past activities.**

   a. Provide copies of all cleared documents and form 3-177 (FWS declaration of wildlife) associated with this permit.
   b. Provide a summary detailing activities conducted under this permit, as well as a brief statement of why you are seeking reissuance/renewal.

7. **Annual Report**. If required by your permit, provide an annual report as conditioned (Please disregard if you have already submitted your annual report.)

8. **Sport-hunted trophies:** If you did not hunt during the hunting season stated in your original application, you are not eligible for a renewal. Please submit a new application form.

9. **Certification -** Complete one of the statements below and supply any additional documentation requested: (original signature is required)

   a. For **NO CHANGES** to original application:

   I certify that the information submitted in support of my original application for the permit indicated above has not changed and is still currently correct. I hereby request reissuance or renewal of this permit.

   Permittee's signatu[redacted] Date: 2/4/19

   X b. For **CHANGES** to original application:

   On an attached page(s), provide a complete description of any changes (e.g., change in principal officer, personnel, address, location of activities, types of activities). Please sign each attached page. Also note that we may need to request additional information regarding the changes after reviewing your initial request.

   I certify that the information submitted in support of my original application for the permit indicated above is still currently correct EXCEPT for the changes noted on the attached, signed page(s). I he[redacted]f this permit with the indicated changes.

   Permittee's signat[redacted] Date: _____

All international shipment(s) must be through a designated port, unless otherwise authorized. A list of designated ports (where an inspector is posted) is available. If you wish to use a port not listed, please contact either the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2) or the Division of Management Authority.

PERMIT CONDITIONS FOR THE NATIONAL/ INTERNATIONAL IMPORT, EXPORT OR RE-EXPORT OF CITES AND NON-CITES SPECIES AND ANY PRODUCTS THEREOF; NON-CITES LIVE WILD ANIMALS, LIVE EXOTIC ANIMALS, HUNTING TROPHIES, WILD ANIMAL PRODUCTS, PROTECTED PLANTS AND LIVE FISH

These conditions will be applicable to all National/ International Imports, Exports and Re-Exports of CITES and Non-CITES species and any products thereof; live wild animals, live exotic animals, hunting trophies, wild animal products, protected plants and live fish by air, mail, rail and road within the Gauteng Province of which the first port of entry into and/ or the last port of exit out of the Province of Gauteng/ South Africa will be OR Tambo International Airport.

Import permits are not valid unless the imported consignment is accompanied by a valid ***(original)*** export permit from the country/ province of origin ***(if required)***, which must be handed to the authorized Environmental Management Inspector on inspection.

THE FOLLOWING CONDITIONS ARE APPLICABLE TO:

(A) ALL NATIONAL/ INTERNATIONAL IMPORTS, EXPORTS AND RE-EXPORTS OF CITES AND NON-CITES SPECIES AND ANY PRODUCTS THEREOF; LIVE WILD ANIMALS, LIVE EXOTIC ANIMALS, HUNTING TROPHIES, WILD ANIMAL PRODUCTS, PROTECTED PLANTS AND LIVE FISH (INCLUDING AIR, MAIL, RAIL, ROAD)

THIS PERMIT:

1. a) Shall not be transferable;
   b) Shall be invalid until the signature of the holder/ Recipient thereof been appended thereto;
   c) This permit is not valid unless it has been endorsed and released by an authorized Environmental Management Inspector/ official prior to the import, export or re-export taking place. In cases of importation of live animals, which are to be quarantined at OR Tambo International Airport's Quarantine Station, the permit must be released prior to the animals leaving quarantine. Original import permits to be inserted into a sealed envelope and placed in the Environmental Management Inspector box that's provided at the quarantine station, no more than 14 working days after import;
   d) Shall be subject to the provisions of any other law and or regulation;
   e) Shall be valid for one consignment only;
   f) This permit is subject to the compliance of Veterinary and Agricultural requirements; and to the compliance of IATA Live Animal Regulations.

2. The permit holder or his delegated agent must contact one of the authorized Environmental Management Inspector/ officials, per telephone ***and*** confirm per fax a minimum of ***48 hours*** prior to the import, export or re-export taking place to book an inspection (the inspection booking must be requested a minimum of 48 hours prior to the intended inspection), applicable for shipments done over weekends and public holidays, with the following information:
   a) Name / Company Name of Importer / Exporter;
   b) Name of Airline and Warehouse where intended inspection will take place;
   c) Date and Time of Import / Export / Re-Export;
   d) Date and Time of intended inspection (subject to approval);
   e) Agents particulars (if applicable), Carrier Name, Flight Number, Flight Time and Waybill Number;
   f) The applicable permit number/s and relevant expiry dates; and
   g) Detailed packing list as per condition 6.

3. Inspections are by appointment only and early booking is necessary. An authorized Environmental Management Inspector/ official may be contacted at the following telephone numbers during office hours ***(07:00 – 15:30):***
   Office: +27 (11) 390-3687/ 2311
   Fax: +27 (11) 390-1720

4. All relevant documentation, including ***original*** permit/s ***(CITES permits must include original and coloured copy)***, Packing List/s, A photo copy of all these documents must also be handed to the Environmental Management Inspector/ official on inspection. The original permit/s, these conditions and packing list/s must accompany the consignment/s.

5. All transport containers must be numbered and the numbers must coincide with the numbers on the packing list/s. The country/ province of destination as shown on the containers must coincide with the country/ province of destination as on the permit. The details on the packing list/s must coincide with the details on the permit/s.

6. Detailed packing list/s, that are signed and dated must accompany the consignment/s, with the following information:
   a) Details of Importer and Exporter (Names, addresses and contact numbers);
   b) Waybill number/s and name of carrier, flight number, date and time;
   c) Transport container number/s;
   d) Scientific name of species (in full) with relevant transponder / tag / ring numbers; a detailed description of specimen / product and the origin thereof;
   e) Common name of species (in full);
   f) Number per species per container (actual number exported / imported); and
   g) Applicable permit number/s

7. If this permit is not used, the ***original permit (CITES permits must include coloured copy)*** must be returned to the issuing authority within ***14 working*** days after expiry thereof. Import permits must be returned to the issuing authority within ***14 working days*** after use. Export permits must be handed to a Management Authority of the importing country/ province within ***14 working days*** after use.

8. The permit holder must make and retain photo copies of permit/s for audit inspections. Copies of import permits must be made and retained ***after endorsement,*** for Re-export permit applications. When applying for a Re-export permit, a copy of the ***endorsed import permit*** must be submitted to the Permit office with the application.

9. A person authorized thereto by the Premier may only make any alteration on the permit.

10. Failure to comply with any of the permit conditions renders the permit invalid and may result in criminal proceedings, cancellation of the permit/s and seizure of the consignment/s.

11. The holder of the permit and / or his/ her delegated agent will be held responsible for any legal costs; costs incurred for delays and / or storage fees due to irregularities and / or due to the consignment being withheld due to incorrect documentation, and / or incorrect consignment/s and / or failure to comply with permit conditions.

12. Permit holders or their delegated agents must inform the Environmental Management Inspector/ official if an inspection is cancelled, or if they are to be late for an inspection within a reasonable time before the inspection is due to take place.

RE: Import Application of Mozambique Lion Trophy for Ryan Herring

Dear Chief Cogliano:

Enclosed please find the permit application to import a lion trophy from Mozambique for Ryan Herring. Also attached to the permit application is the 2018 Operator Enhancement repot from Safrique - Mozambique Hunting Safaris. Please refer to the hundreds of pages of enhancement information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by Mozambique authorities, outfitters, and others, in making an enhancement finding for lion trophy imports.

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorney and legal representative for all matters concerning my application for a permit to import a lawfully hunted Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that the attorney, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

   Same as above: Ryan Herring, (b) (6) [redacted]

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Ryan Herring (b) (6) [redacted]

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   (Panthera, P. Leo) African Lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Block L1 Niassa Reserve, Niassa Province, Mozambique

   b. Date wildlife is to be hunted: October 2020

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Safrique, Lda and Professional Hunter is Paul Davies

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name:
Address: 53 Maple St Pomona, Kempton Park, 1619, South Africa
City:
State/Province:
Country, Postal Code:

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted? See attached operator report.

   Please see the attached Operator Enhancement Report.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   Please see the attached Operator Enhancement Report.

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

   Please see the attached Operator Enhancement Report.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand [redacted]d into the United States, cannot be re-exported.

    Applicant's signature: (b) (6) _____ Date: 1/21/19

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: _Block L1 Safrique_____

   a. Years in business: _11 years_____

   b. Name of company conducting hunt: __Safrique Safaris_____

   2. Name of concession: __Block L1___ Size in km^2: __4,000 _____

   a. Land tenure: __ Government lease X Community __ Private ranch __ Private conservancy

   b. Length of concession agreement: 15 years_____ Can it be renewed? X Yes __ No

   c. Length of renewal, if applicable: Further 15 years_

   d. Estimated total amount received in trophy fees last year, if applicable: $_____

   e. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain: _____All the above_____

   f. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city: Mavago District, Lichinga City__

   g. If the concession borders a national park, please provide the park name: Niassa

   h. Description of general and distinctive habitat features and any water features: Miombo Woodland / Lussa_____

3. Are there any communities living in the concession? X Yes __ No

   a. If so, estimated number of people or villages in the concession? 18,000_____

4. Are there communities bordering this concession? x Yes __ No

   a. If so, estimated number of people or villages around the concession? 5,000_____

5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant				
Lion	2 small prides	Many single males	stable	Sight
Leopard	Many, many.	Very difficult to count	stable	sight
Prey species	Sable, hartebeest, buffalo, zebra, eland, warthog, bushpig, and many plains game	Large numbers	stable	sight

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

6. Total employment number: 25_____

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	1	0
Trackers	2	2
Anti-poaching scouts/rangers	14	14
Other anti-poaching	2	2
Cooks/housekeepers	3	3
Community coordinators	1	1
Managers		
Biologists		
Others: _____	2	2

7. Number of staff employed in the off-season: __15_____

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	14	14	
Managers	1	1	
Maintenance			
Road opening/construction			
Community relations personnel			
Others: _____			

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: __14_____

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? _Both

   c. Months during which anti-poaching patrols are conducted: _January thru December___

   d. Number of anti-poaching patrols per month: Off Season 2 per month / In season – all _____

   e. Description of anti-poaching equipment, vehicles, etc.: Landcruisers, radio, shotgun, uniforms__

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? _Manager / HR Manager

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

g. Do you offer rewards to poaching informants leading to arrest? X Yes __ No

h. Do you offer rewards to poaching informants upon conviction? X Yes __ No

i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? Metical_____

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	840,000			
Equipment	200,000			
Vehicles	600,000			
Petrol	300,000			
Rewards paid	20,000			
Other: _____				
Other: _____				
TOTALS	2,040,000			

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered	30			
Elephant carcasses observed	7			
Lion carcasses observed	0			
Leopard carcasses observed	0			
Ivory poachers arrested	0			
Meat poachers arrested	15			
Other poachers arrested	0			
Poachers convicted	2			
Snares/gin traps collected	900			
Firearms confiscated	0			
Vehicles confiscated	0			
Bicycles confiscated	25			
Boats/nets confiscated	5			
Tusks recovered	0			
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? X Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? 20% of Concession fees_____

c. Does the company provide game meat to nearby communities? X Yes __ No

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: 3 plus Buffalo, community centers._____

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. We do not_____

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? do not_____

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant				
Lion				
Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? Metical___

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)				
Education (e.g., school fees, supplies)				
Health (e.g., clinics, offices)				
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching				
Local government activities				
Water infrastructure improvements	Bore Hole for water.			450,000 Meticals
Sports teams funded				
Construction materials donated				
Other: _____	Tractor and vehicles			50,000 meticals
Other: _____				
TOTALS				500,000 meticals

11. How many U.S. clients did the company have in the past three years, what percentage of the company's clients were from the U.S., and what fees did they pay? 5, 80%, $150,000 US dollars

	Hunting elephant	Hunting lion	Hunting leopard	Hunting all species
Number of U.S. clients	2015:0 2016:0 2017:0	2015:1 2016:1 2017:0	2015:3 2016:2 2017:1	2015:many 2016:many 2017:many
Percentage of U.S. clients	2015: 2016: 2017:	2015:100 2016:0 2017:0	2015:0 2016:100 2017:0	2015: 2016: 2017:
Trophy fees paid by U.S. clients	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:	2015: 2016: 2017:

12. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients: _$150,000_____

13. Other information: Please provide a narrative of other enhancement information about the operation, such as any special hunting policies (e.g., aging, size, resting areas), concession improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

    No females of any species are hunted or harvested

    Only lions of 6 years or older are hunted or harvested

    No pride males are hunted or harvested.

    Dams built for watering of wildlife

14. I declare that the foregoing is true and correct.

Dear Mr. Herring,

Thank you for your inquiry. Your application, #27005D, that was received on 02/08/2019, is currently under review. Please be aware that we have a significant number of applications pending, and we process applications in the order they are received in the office. The staff member working on your application has been notified of your inquiry. If there is a need for additional information or clarification on information provided in your application, the staff member will contact you directly.

We appreciate your time and consideration.

To: John Jackson <jjjiii@att.net>
Cc: Aimee Korver <permits@conservationforce.org>

HI John,

I really appreciate you getting back to me on this!!! It would need to be withdrawn and a new application submitted since our findings are based, in part, on the year and location of the hunt, the operator, etc.. If you can start by **emailing me a new application form**, I'll get the new application in the queue. Since we have not yet started reviewing Mr. Herring's current application (27005D), I will rollover the application fee that Mr. Herring has already submitted (no need to submit additional payment).

In addition to the application form itself, I'll need updated information from the Government of Mozambique. For example, the most current non-detriment finding, etc.. If you're available, perhaps we can discuss this next week to make sure we're clear on the needs from Mozambique.

I hope you're all doing well.

Best regards,

Mary

RE: Import Application of Zambia Lion Trophy for Frankie Limmer

Dear Chief Cogliano:

Enclosed please find the permit application to import of a lion trophy from Zambia for Frankie Limmer. Also attached to the permit application is the 2018 Operator Enhancement repot from Sitatunga Ranching and Safaris. Please refer to the hundreds of pages of enhancement information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by Zambia authorities, outfitters, and others, in making an enhancement finding for lion trophy imports.

Please do not hesitate to contact us if you have questions about this permit application.

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorney and legal representative for all matters concerning my application for a permit to import a lawfully hunted lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

In the case of a permit an ESA endangered listed species this is also a request for Ten Days Notice before the permit is issued so I and my attorney can know of approval as soon as those that may have opposed the issuance of the permit.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;
(2) Was legally obtained by the hunter through hunting for his or her personal use;
(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  (i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  (ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  (iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.
   JOHN JACKSON, CONSERVATION FORCE, 504-837-1233
2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?
3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   PANTHERA LEO

   b. Sex (if known). MALE.

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:
   ZAMBIA, LUAWATA GMA, CHIPATA

   b. Date wildlife was hunted: JULY 06, 2018

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:
   SITATUNGA RANCHING AND SAFARIS

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:
   PLOT 7301 KAMBALA ROAD
   LIGHT INDUSTRIAL AREA LUSAKA ZAMBIA

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: VAL HEATH
Business Name: TROPHY TRACKERS CONSULT
Address: 12A OMELO MUMBA ROAD RHODES PARK
City: LUSAKA
State/Province:
Country, Postal Code: ZAMBIA

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   A VERY HEALTHY POPULATION AS THE AREA BORDERS A NATIONAL PARK. ONLY 1 OR 2 MALE LION ARE HARVESTED IN A YEAR. ONLY MALE LIONS OVER THE AGE OF 6 ARE HARVESTED IN ENSURED BY THE COMPANY, THE GOVERNMENT AND WILDLIFE DEPARTMENT.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   LICENSE FEE. $1000
   TROPHY FEE $15000

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

   IT IS A CONTRACTUAL OBLIGATION FOR SITATUNGA RANCHING AND SAFARIS TO FUND PART OF THE ANTI POACHING CARRIE OUT IN THE HUNTING AREA, WHICH IS OVERLOOKED BY THE WILDLIFE DEPARTMENT TOGETHER WITH THE COMMUNITY WHO ALSO CARRY OUT ANTI-POACHING FROM ADDITIONAL FEES PROVIDED BY SITATUNGA RANCHING AND SAFARIS SITATUNGA RANCHING AND SAFARIS HAS GONE ABOVE AND BEYOND THE CONTRACTUAL OBLIGATION BY EMPLOYING ADDITIONAL GAME SCOUTS AND PROVIDING VEHICLES TO PATROL THE HUNTING BLOCK.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: (b)(6) [redacted] Date: 1/20/19

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: SITATUNGA RANCHING AND SAFARIS
   a. Years in business: 4 YEARS
   b. Name of company conducting hunt: SITATUNGA RANCHING AND SAFARIS
2. Name of concession: LUAWATA GMA Size in km²: 2200
   a. Land tenure: ✓ Government lease __ Community __ Private ranch __ Private conservancy
   b. Length of concession agreement: 7 YEARS Can it be renewed? ✓ Yes __ No
   c. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain: COMMUNITY INVESTMENT, ANTI POACHING AND COMMUNITY EMPLOYMENT
   d. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city: LUAWATA GMA - LUANGWA VALLEY - CHIPATA NEAREST CITY
   e. If the concession borders a national park, please provide the park name: NORTH LUANGWA
   f. Description of general and distinctive habitat features and any water features: MOPANI WOODLAND, HILLS, HOT SPRINGS
3. Are there any communities living in the concession? __ Yes ✓ No
   a. If so, estimated number of people or villages in the concession? _____
4. Are there communities bordering this concession? ✓ Yes __ No
   a. If so, estimated number of people or villages around the concession? 3000 FAMILIES
5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	AVERAGE	2632	UP	GOVERNMENT
Lion				
Leopard				
Prey species				

6. Total employment number: 40
   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	2	-

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Trackers	6	
Anti-poaching scouts/rangers	8	
Other anti-poaching		
Cooks/housekeepers	6	
Community coordinators	1	
Managers	1	
Biologists		
Others: CAMP STAFF	16	

7. Number of staff employed in the off-season: 40

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	8	8	FULL TIME
Managers	1	1	FULL TIME
Maintenance	12	12	FULL TIME
Road opening/construction	40	40	PART TIME
Community relations personnel	1	1	FULL TIME
Others:			

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: COMMUNITY SCOUTS - 60

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? BOTH

   c. Months during which anti-poaching patrols are conducted: EVERY MONTH

   d. Number of anti-poaching patrols per month: EVERY 10 DAYS

   e. Description of anti-poaching equipment, vehicles, etc.: FOOT PATROLS WITH STANDBY VEHI, RADIOS, GPS'S AND FIRE ARMS

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? NATIONAL PARKS, MAGISTRATES, COMPANY & COMMUNITY

   g. Do you offer rewards to poaching informants leading to arrest? ✓ Yes __ No

   h. Do you offer rewards to poaching informants upon conviction? ✓ Yes __ No

   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? US $

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
	$15000	$17000	$20000	

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Salaries for anti-poaching scouts				
Equipment				
Vehicles				
Petrol				
Rewards paid				
Other: _____				
Other: _____				
TOTALS				

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered				
Ivory poachers arrested				
Meat poachers arrested				
Other poachers arrested				
Poachers convicted				
Snares/gin traps collected				
Firearms confiscated				
Vehicles confiscated				
Bicycles confiscated				
Boats/nets confiscated				
Tusks recovered				
Carcasses observed				
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? ✓ Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? BY CONTRACT AND JOLANTARY CONTRIBUTION

c. Does the company provide game meat to nearby communities? ✓ Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: 16 000 KG OF MEAT TO 1500 FAMILIES. OTHER 1500 RECEIVES FROM NEIGHBORING CONCESSION

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. NATIONAL PARKS AND WILDLIFE DEP.

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? WILDLIFE DEP.

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant				
Lion				
Leopard

Enhancement Finding
Applicant: Frankie Gene Limmer (PRT-27008D)

Frankie Gene Limmer submitted an application on February 8, 2019, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken on July 6, 2018, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Limmer's application involving a *P. l. melanochaita* sport-hunted trophy taken in Luawata GMA, Chipata, Zambia, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Limmer's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Limmer's participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Limmer's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016).

In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an

individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their

obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Limmer's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Limmer will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Limmer, in managing the lion populations in GMAs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Limmer.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Frankie Gene Limmer.**

LION ZAMBIA ESA TROPHY

Permit Number: MA27008D-0
Effective: 05/07/2019 Expires: 05/06/2020

Issuing Office:

Department of the Interior
U.S. FISH AND WILDLIFE SERVICE
DIVISION OF MANAGEMENT AUTHORITY
BRANCH OF PERMITS, MS: IA
5275 LEESBURG PIKE
FALLS CHURCH VA 22041-3803

CHIEF, BRANCH OF PERMITS, DMA

Permittee:
FRANKIE GENE LIMMER
(b)(6) [redacted]
TAYLOR, TX 76574
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zambia for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Jurgens	Travis	James	Mr

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.c. City	1.d. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Prineville	Oregon	97754	Crook	United States

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)
Same as above

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee—attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b) (6)

(No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Travis Jurgens, (b) (6) Prineville, Oregon 97754

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Travis Jurgens (b) (6)

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthero Leo, Lion

b. Sex (if known). 1 Male, 1 Female

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

South Africa, Northwest Province, Farm: Sandhurst Portion 1, R137 Tosca/ Bray Road, Tosca Town 8618, Vryburg District

b. Date wildlife was hunted:

July 5, 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Lew Harris Safaris, Morgan Harris

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Moredow Taxidermy, R34 Vryburg Road, Schweizer-Reneke, 2780, Vryburg District, Northwest

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Please see attached

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name:
Business Name: ~~Unknown at this time~~ Moredow Taxidermy
Address: Farm Moredow
City: Schweizer-Reneke
State/Province: Northwest 2780
Country, Postal Code: South Africa 2780

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Estimated 25,000 in the country to include in captivity and in the wild

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

Permit fee $170.00 to office in Nortwest. Trophy fees to outfitter and landowner $27,500. These funds were used to provide jobs for people in the local community such as trakers, skinners, cooks, maids, maintenance people and so on. The funds were also used to enhance habitat by providing/ creating addtional watering holes. Funds were also used to assist with anti-poaching patrols.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

The funds were also used to enhance habitat by providing/ creating addtional watering holes. Funds were also used to assist with anti-poaching patrols.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: (b)(6) _____ Date: 1/29/19

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

RE: Import Application of Zambia Lion Trophy for Chris Elder

Dear Chief Cogliano:

Enclosed please find the permit application to import a lion trophy from Zambia for Chris Elder. Also attached to the permit application are Operator Enhancement Reports for Nyamvu Safaris and Mopane Safaris. Please refer to the hundreds of pages of enhancement information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by Zambia authorities, outfitters, and others in making an enhancement finding for lion imports.

Sincerely,

John J. Jackson III

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorney and legal representative for all matters concerning my application for a permit to import a lawfully hunted Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

In the case of a permit an ESA endangered listed species this is also a request for Ten Days Notice before the permit is issued so I and my attorney can know of approval as soon as those that may have opposed the issuance of the permit.

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A.	**Complete if applying as an individual**		
1.a. Last name: Elder	1.b. First name: Chris	1.c. Middle name or initial: L.	1.d. Suffix
2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address: (b) (6) [redacted]

B.	**Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution**		
1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C.	**All applicants complete address information**			
1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address): (b) (6) [redacted]				
1.b. City: Springdale	1.c. State: AR	1.d. Zip code/Postal code: 72764	1.e. County/Province: Washington	1.f. Country: USA
2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D.	**All applicants MUST complete**
1.	Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))
2.	Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1 (b)(6) [redacted]
	Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) — Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   John J. Jackson III, Conservation Force, CF@conservationforce.org, 504-837-1233

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   P.I. melanochaita (African Lion)

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   S. Luangwa, Zambia in Nyamvu, Operator Nyamvu and Mopane Safari

   b. Date wildlife was hunted: 7/27/2018-8/17/2018

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   Ivory Safaris, Jeff Rann

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

   Michael Borman, Bangweulu Taxidermy, 4412 K Chifwema, New Kasama, Lusaka Southern Zambia, 50100

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	Michael Borman,
Business Name:	Bangweulu Taxidermy,
Address:	4412 K Chifwema,
City:	New Kasama,
State/Province:	Lusaka Southern Zambia, 50100
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: _____ (b)(6) _____ Date: _____

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

NYAMVU SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: ZAID137@HOTMAIL.COM

I. DESCRIPTION OF COMPANY AND CONCESSION

Nyamvu Safaris, Ltd. has been operating Nyamvu Game Reserve since April 2005. The Game Reserve provides habitat for a range of species including lion, kudu, leopard, buffalo, and elephant and is also a None Fenced Game Reserve but open and wild like all other hunting blocks in Zambia. The Game Reserve is in Nyimba District in Eastern Province of Zambia. The Area is along the Luangwa River. Nyamvu Safaris has entered into a Long term project with the Wildlife Authorities to try and develop a Game Reserve for Animals for a period of Ninety Nine years.

The Director of Nyamvu Safaris is Mr. Zaeed Patel. Nyamvu has permanent employees who work throughout the year and are on two year contracts that are renewable. The camp has a resident Professional Hunter and a camp Manager. Other employees include four game trackers, nine anti-poaching scouts, and six camp staff (cooks, cleaning, miscellaneous). We estimate a total of about 113 people to be direct beneficiaries from Nyamvu Safaris employees. These beneficiaries come from the local community.

When Nyamvu Game Reserve was acquired in 2005 the Area was completely depleted such that even seeing an Impala was almost impossible. It had to take frantic efforts by Mr. Zaeed Patel to begin the Anti-Poaching Patrols and then creating water points for animals to access water easily. Slowly the animals started coming back to Nyamvu Game Reserve and as we speak today after 10 years of progressive anti-poaching and creation of suitable conditions for Animals Nyamvu is now home to most of the wild species of Southern Africa including Elephant, Lion and Leopard. The director of Nyamvu has even carried out a restocking exercise of Sable Antelope which originally was not there. We can confirm that Nyamvu now has enough sable that can even be included on Safari Quota to be hunted. The restocking exercise is not only limited to sable only but other species as well.

Among the many efforts done to improve the number of animals in Nyamvu include provision of salt Leaks, provision of Maize Bran, creation of Dams for easy accessibility of water are among the many efforts done to create suitable conditions for Animals to stay in Nyamvu.

We further wish to put it on record that Nyamvu Game reserve is an Area where the director has invested heavily to make it what it is today. The Area was not hunted for about three years from 2005 when it was acquired to about 2008. In all these years the director was merely investing in Anti-poaching patrols, creation of water points among other things to attract game. This is the kind of effort that was invested in this None Fenced Game Reserve to ensure that we have enough stocks of animals.

Safari Hunting was therefore introduced to help with the conservation and income generation for the area and for the help of re-building. In order to make the community benefit from such animals it was agreed that some revenue can be derived from selling these animals on Safari and the revenue can be used to improve the welfare of the surrounding communities.

We can confirm that Schools, Clinics, Bridges, Grave Roads have been built in the surrounding communities of Nyamvu Game Reserve through the revenues raised from Safari Hunting. The chief has equally had a fair share of some benefits through the construction and periodical renovations of the chief's palace and grading of the road which leads to the palace. Nyamvu further purchased Banana Boats that are used by villagers in the community to cross the Luangwa River when trying to access the other side of the River. School Children, Community health workers are among the beneficiaries who use the Banana boat to cross the Luangwa River.

II. ANTI-POACHING COMPONENT

Nyamvu Safaris maintains three groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the Wildlife Scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

Nyamvu Safaris spends about $ 26000 on average per annum to carry out Anti-poaching patrols in the Game Reserve. A total of between 300 and 350 days is recorded per annum. 3000 liters of diesel are used on average per annum which is consumed by 2400 hours of patrol hours. The amount spent on payments for rewards after abducting poachers has been steadily decreasing from 2005 although an average of about 2800 dollars is spent per annum in rewards. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	5650	Directly paid and some subsidies to WA
Scout equipment	9450	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	3900	For scouts and WA
Rations for WA and community scouts	3800	
Rewards	2800	For information and arrests
TOTAL	$ 25600	

In the Picture Below two poachers that were apprehended by our Vigilant Scouts.

COMMUNITY PARTICIPATION

A. Community Assistance Component

The agreement that Nyamvu Game Reserve has with the community does not specify what amounts need to be contributed to the community. However on Average, Nyamvu contributes about $ 20000 per annum.

In addition to these direct contributions, we pledge to distribute at least 60% of game meat harvested to the villages.

A hammer mill donated to the community by Nyamvu Safaris

B. Conflict Control

Our problematic animals are mainly the Lions and Elephant. Attached are extracts from the media which confirm Lions attacking Human Beings in Nyimba District of Eastern province where Nyamvu Game Reserve is situated. Management of Nyamvu Safaris has set aside a fund which is used to compensate victims of such unfortunate circumstances. The fund is usually 5000 dollars but can be adjusted depending on the number of such occurrences in a particular year.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans which costs approximately $5000 to maintain per annum. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the Game Reserve by finding water resource. This usually attracts Lion and Leopard to come and hunt in the game Reserve.

V. OTHER INFORMATION

A. Prey Base

Nyamvu Safaris has been monitoring the population growth of the Lion and Leopard which is a result from efforts done so far such as anti-poaching efforts, water provision, and fire management.Nyamvu Safaris will further engage the wildlife Authorities in Monitoring the resources on the ground by position cameras in strategic Areas so as to monitor the Activities of the Lion and Leopard.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lon in our Area. As at now we use Lion tracks and foot prints. Sightings by individuals and just the a few cameras which we use to monitor the size and age for Lion and Leopard when Hunting.

C. Elephant Hunting

Our area is endowed with some very good Elephant hunting and due to the long term conservation plan produces good quality tusks now of between 50 and 60 pounds. Our well-coordinated anti-poaching system has made poaching of Elephant in Nyamvu very difficult. The community has also assisted management at Nyamvu by bringing reports of members of the community that have links with suspected poachers and stringent measures have been taking which include imprisonment for those that were found guilty of poaching. Through our various anti–poaching awareness programs with the community we have managed to make the community assist to guard this natural resource jealously. Nyamvu Safaris maintains a policy of not taking any Elephant whose tusks are weighing 20 kilograms and below.

E. Lion Aging Approach

We use the Lion aging approach when conducting Safari Hunting for Lion. Earlier on we mentioned of Human Animal conflicts mainly with Lions. This can be managed by removing the older Lions in the system through Safari Hunting. It has always been a Policy for Nyamvu Safaris not to harvests any Lions or Leopard which are not old enough to have outlived their useful life. In view of this approach not more than five Lions have been taken in Nyamvu game Reserve from the time Safari Hunting was introduced.

F. U.S. Hunters

It is of no doubt that this is the most sought after market with regards to Safari Hunting in Zambia. Nyamvu Safaris has had a number of clients donating equipment and in some instances funds for Anti –poaching programs. This can confirm to you that these hunters are not only after fulfilling their interests but to also allow the community to benefit through a conservative based approach to Safari Hunting.

CONCLUSION

Nyamvu Safaris can proudly confirm that the project which it started in 2005 has been a success looking at the way the numbers of wildlife has increased in our game reserve. We recognize that the Cat and Elephant hunts bought and booked by our American Clients contribute a higher percentage of income in the Safari Hunting and it is our obligation to share these finances with the communities who have played an important role to conserve this resource. We also realize that these species are a renewable resource and as such we will endeavor to provide suitable conditions for the reproduction and sustainability of these species with the allowance of our American Clients to keep coming and hunting the different species in Africa.

MOPANE SAFARIS, LTD.
Address, 515 FRANCISTOWN ROAD LIVINGSTONE
Operator email: karimtd@yahoo.com

I. DESCRIPTION OF COMPANY AND CONCESSION

Mopane Safaris, Ltd. has been operating in Luembe-West Petauke Concession since April 2015. The concession provides habitat for a range of species including lion, kudu, leopard, buffalo, and elephant. The concession is in Eastern Province of Zambia. The Area is along the Luangwa River and is about 3227 square kilo meters in connection and conjunction with Nyamu Game Reserve our other area. The Area is classified as Secondary Hunting Area. Mopane Safaris has entered into a Ten Year Lease agreement with the wildlife Authority and is renewable subject to conducting successful conservation records of the Ecological system.

Our company is a Limited Company whose Directors are Mr. Saeed Omar Abdul Karim and Mr. Chishimba Mumba. This concession was acquired in April 2015. In view of this Mopane Safaris has one resident Professional Hunter who also provides the functions and duties of a Camp Manager. Other employees include, four game trackers, twelve anti-poaching scouts, and six camp staff (cooks, cleaning, miscellaneous). We estimate a total of about 215 people to be direct beneficiaries from Mopane Safaris employees. These beneficiaries come from the local community.

We very much welcome the donations that are made by some clients from the United States of America as these go a long way in improving the quality of life in these rural communities of Zambia. In most circumstances these communities do not have an economic activity which can assist them raise money for school fees and medication. The only activities which they engage themselves in is farming which is done at subsistence level to only provide for their families. This therefore follows that Safari Hunting provides some economic benefit to these communities as it enable the employees to raise some money to send their children to school, buy School necessities and meet some basic healthcare requirements.

Safari hunting therefore helps not only meet some financial needs of these communities but also prevents them from Illegal Hunting Activities which have adverse effects on the population of the animals. It therefore follows that most of the revenue for Safari Hunting is derived from Hunting of Cats and Elephant. With this in mind Mopane Safaris, the Community and the Wildlife Authorities have an enormous task to prevent the Cats from going into extinction by providing a more robust anti–poaching system to prevent the extinction of cats in these concessions.

II. ANTI-POACHING COMPONENT

Mopane Safaris maintains four groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the Wildlife Scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

Fig I. Director and Resident Professional Hunter of Mopane Safaris Mr.Karim (Center) planning the Anti-Poaching Patrols with a wildlife officer and a member from the community.

Fig ii. In the Picture below some Ivory Tusks recovered from Poachers and weapons used for poaching.

In 2015, Mopane Safaris spent almost $ 30900 in Luembe-West Petauke Consession on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 1450 liters of diesel for patrol vehicles. We recorded 328 patrol days and well above 1968 patrol hours. We also made over $ 2005 in payments of rewards to leads helping in the abduction of poachers. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	11900	Directly paid and some subsidies to WA
Scout equipment	12450	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	1885	For scouts and WA
Rations for WA and community scouts	7800	
Rewards	2005	For information and arrests
TOTAL	$ 36040	

The concession agreement has a clause which requires Mopane Safaris to submit Annual reports on the Anti-Poaching Activities and patrols done in each particular year to the Wildlife Authorities. This report will be taken into account in 2025 whether to renew the concession or not.

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the community Resource Boards of about $ 25900 annually as per agreement which was entered into 2015 by Mopane Safaris, the Community and the Wildlife Authorities.

In addition to these direct contributions, we pledge to distribute at least 60% of game meat harvested to the villages. In 2015 the value was $ 24371.

Fig iii. Resident Professional Hunter and Director attending a community Meeting.

B. Conflict Control

We usually have reports of problem Animals mainly Elephants destroying crops for villagers and Human Animal conflict from Lions. $ 12000 has been set aside for compensation purposes when we have such occurrences. In 2015 we paid $ 1000 in compensation to maize fields that were damaged by Elephants to grain fields for Villagers. We further compensated a family whose member was attacked and killed by an Elephant and was one of our Village Scouts who had gone out of camp and on returning to camp the incident occurred. The total cost for compensation and funeral arrangements was $ 2500

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans which costs approximately $5000 to maintain in 2015 and 2016 respectively. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the concession by finding water resource. The concession is along the Luangwa River and this makes it have smaller streams flowing in the concession creating more water points for animals. As a result we have a lot of Game in our concession which attracts Lion, Elephant and Leopard.

V. OTHER INFORMATION

A. Prey Base

Mopane Safaris in Luembe-West Petauke is still monitoring the population growth of the Lion, Leopard, Elephant and other species which will result from efforts done so far such as anti-poaching efforts, water provision, and fire management. Mopane Safaris will further engage the wildlife Authorities in monitoring the resources on the ground by position cameras in strategic Areas so as to monitor the Activities of the Game and Cats. Luembe is a secondary Area and as such we have applied more concerted efforts aimed at mitigating the impact of poaching that had characterized the Area for the years when we were not operating in the Area.

We also engaged the wildlife authorities to regulate resident Hunting by proposing that resident Hunting be temporarily stopped for five years so as to give room for animals to breed so as to improve the numbers in the Eco system in Luembe Game Management Area.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lon in our Area. As at now we use Lion tracks and foot prints. Sightings by individuals and just the a few cameras which we used this year to monitor the size and age for Lion and Leopard.

C. Lion Aging Approach

Like other Safari Companies we have been following an age-based policy for African lion trophies since 2015, after adopting a mutual aging agreement with our wildlife Authorities, and to be conservative in estimating age.

A number of potential Lion Trophy were not hunted this year because of our company policy and selectiveness.

Our approach as a company from 2015 until 2025 when our concession will be due for renewal is to hunt Lion which has reached an advanced and mature age only of 6 years and above.

D. Elephant

Elephant Hunting in Luembe is also one of the High Income earners. Mopane Safaris is alive to the fact that Ivory is of high value on the world market and is on high demand in particular the Far East. Mopane Safaris therefore has put up a robust Anti-Poaching program to protect this rare species. In view of this we have a policy as company not to harvest any Elephant with Tusks weighing below 20 kilograms. We recognize the fact that it may be difficult to judge but we expect the Professional Hunters to exercise caution and use their judgment before allowing a client to hunt one. Professional Hunters have been given an allowable allowance of 1 kg so as not to go below the recommended threshold by the wildlife authorities of 15 Kilograms as a minimum shoot able size Elephant.

E. U.S. Hunters

Most of our clients are from the United States. These hunters have a conservation ethic and usually contribute above their fees to anti-poaching of our community compensation fund or community assistance programs.

CONCLUSION

Mopane Safaris regulated, sustainable-use based hunting program enhances the survival of the Lion, Leopard and Elephant and we recognize that the Cat and Elephant hunts bought and booked by our American Clients contribute a higher percentage of income in the Safari Hunting and it is our obligation to share these finances with the communities who have played an important role to conserve this resource. We also realize that these species are a renewable resource and as such we will endeavor to provide suitable conditions for the reproduction and sustainability of these species with the allowance of our American Clients to keep coming and hunting the different species in Africa.

Dear Mr. Jackson,
Ref: 30117D; Import of Mr. Chris Elder's lion trophy import, from Nyamvu GMA, S. Luangwa, Zambia, taken between July 27, 2018 and August 17, 2018.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. Please provide a copy of the Zambia licenses/permits authorizing Mr.Elder's lion hunt.

2. Since the hunt already occurred, please provide the exact date that the lion was taken/hunted.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by _June 6, 2019_ (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

Dear Mr. Jackson,

Ref: Zambia lion trophy import application / Chris Elder

I am in receipt of a voicemail from someone named Rachel asking for the status of Mr. Elder's application. However, Rachel's name was not included on the application as an approved contact so I am emailing you the status update.

The status of the referenced application is that we are still pending a response to our May 22, 2019, email request for additional information. The additional information was due by June 6, 2019 (within 45 calendar days). Therefore, if a copy of the Mr. Elder's Zambia hunting licenses/permits and hunt date are not provided by Monday, June 17, 2019 (1 week from today), the application will administratively closed.

Dear Mr. Elder:

On May 22, 2019, an email was sent to your application contact, Mr. John Jackson with Conservation Force, requesting additional information in regard to your application PRT-30117D. In that email, Mr. Jackson was informed that you needed to respond to the request within 45 calendar days, which was by July 6, 2019. However, on June 11, 2019, we send a courtesy reminder email and added an extension of time to submit a complete application through June 17, 2019, or your application would be abandoned. Since we have not received the requested information, we have abandoned your application, and your application has been administratively closed.

If, in the future, you wish to pursue the activity for which you originally applied, you will need to submit a new application, along with any appropriate fees, to this office. Please be aware that in most cases, we will not "transfer" information from your old application to a new application. All relevant information would need to be supplied at the time a new application is submitted.

If we can be of assistance, you may contact our office at 703-358-2104 or fax 703-358-2281.

Sincerely,

Permit Biologist

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Gardner	Richard	M	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b) (6) [redacted]			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address)
(b) (6) [redacted]

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Reno	NV	89511	WASHOE	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and ac[illegible]derstand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 100[illegible]

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

(1) Is raw, processed, or manufactured;

(2) Was legally obtained by the hunter through hunting for his or her personal use;

(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and

(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:

(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;

(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and

(iii) The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   John J. Jackson III, CF@conservationforce.org, Conservation Force

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panther Leo

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   Kwazulu Private Game Reserve, Republic of South Africa. -27.59213 Latitude
   31.68324 Longitude

   b. Date wildlife was hunted: 9/26/2018

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   Professional Hunter - Eugene Alberts

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

   Life-Form Taxidermy, 7 Aluminium Street, White River, South Africa, 1240

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Life-Form Taxidermy
Address:	7 Aluminium Street
City:	
State/Province:	White River, South Africa, 1240
Country, Postal Code:	

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   Please see the attached Kwazulu Private Game Reserve Management Plan on Lions.

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   Please see the attached Kwazulu Private Game Reserve Management Plan on Lions.

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

   Please see the attached Kwazulu Private Game Reserve Management Plan on Lions.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw [redacted] States, cannot be re-exported.

    Applicant's signature: [redacted] Date: 2/12/2019

    Be aware that there may be a[redacted]equirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III of the non-profit firm Conservation Force as my attorney and legal representative for all matters concerning my application for a permit to import a lawfully hunted African Lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

In the case of a permit an ESA endangered listed species this is also a request for Ten Days Notice before the permit is issued so I and my attorney can know of approval as soon as those that may have opposed the issuance of the permit.

Date: 2/12/2019

04 June 2018

To whom it may concern,

Application for an import permit for a lion trophy to the United States of America

Included herein are the details relating to the origin of the trophy, game reserve where the animal will be hunted and their management policy.

Kwazulu Private Game Reserve is an 18 000 ha property and is located in the north-east of KwaZulu-Natal Province in South Africa, which was established in 2001. The reserve comprises of Zululand Thornveld, Lowveld as well as Grassveld and accommodates all indigenous game species including the Big 5, with a current lion population of 20 lions, consisting of 12 males and 8 females.

The surrounding communities comprises of low-skilled individuals whose unemployment rate is currently very high. The running cost of the reserve is extremely high and the proceeds of hunting are utilised to maintain the reserve and machinery, employment (supporting local families) and species population management.

Kwazulu Private Game Reserve has two main income streams; one is a 5 Star Lodge, sleeping 12 guests, accommodating our hunters and the other is the hunting of different species, including the Big 5. The reserve does not receive any financial support from government and therefor have to generate its' own income to cover the running cost associated with managing the reserve. Hunting contributes to Kwazulu Private Game Reserve's operational costs and 60% of the proceeds are used for wildlife management and security. The income does not only support the predator management but also other species such as rhino which are currently under serious threat from poaching.

All the animals roam free on the 18 000 ha reserve, the lions hunt for themselves and there is no feeding of predators involved. All hunting takes place on the basis of fair chase, walk & stalk. The first lions were introduced in 2004 from Mkuze Falls Game Reserve, wild populations, to enhance the sustainable utilisation through hunting of selected species. Genetic management of small populations is critical to maintain genetic heterozygosity and therefor removals and introduction of new genetics form part of Kwazulu Private Game Reserve's Predator Management Plan. All species introduced originate from wild populations.

KWAZULU PRIVATE GAME RESERVE (PTY) LTD. – P.O. BOX 591 PONGOLA 3170
VAT NO: 4030205217 / COMPANY REGISTRATION NO: 2001/018212/07
TEL: 034 414 1085 / CELL: 083 845 5537 / FAX: 034 414 1389 / EMAIL: kwazulugame@gmail.com
DIRECTOR: JM QUELLHORST

The reserve has an anti-poaching team responsible for the protection of all wildlife which comes at a high cost to the company. Dr Mike Toft is the attending wildlife veterinarian and is responsible for all the testing, translocating, and veterinary procedures required. Miss Karen Holmes is the wildlife ecologist contracted to advise on all aspects relating to wildlife and habitat management.

Kwazulu Private Game Reserve possesses a Certificate of Adequate Enclosure as well as a Predators Management Plan approved by Ezemvelo KZN Wildlife, the Provincial Conservation Authority. All permit requirements, provincial, national and international are complied with.

Please find attached US Fish & Wildlife permit application as well as the hunting permit issued by Ezemvelo KZN Wildlife. The Department of Environmental Affairs will only issue the export permit once the recipient country has issued the import permit.

Please feel free to contact me should you require any further information or Ezemvelo KZN Wildlife for verification.

Dear Mr. Gardner,

Your application, # 30120D, that was received on February 28, 2019, is currently under review. Please be aware that we have a significant number of applications pending, and we process applications in the order they are received in the office. The staff member working on your application has been notified of your inquiry. If there is a need for additional information or clarification on information provided in your application, the staff member will contact you directly.

We appreciate your time and consideration.

RE: PRT # 30120D, Applicant Richard Gardner- Lion from R.S.A.
Supplement to Existing Application

Ms. Brisendine:

This is a supplement to the existing application, Prt # 30120D for applicant Richard Gardner for his sport-hunted lion trophy from the Republic of South Africa.

Attached are the hunting permits/ licenses for Mr. Gardner's safari.

Also included is a letter regarding the Kwazulu Natal Lion meta-population and the recognition of them falling in the Managed Wild category.

If you have any questions about this import application, please do not hesitate to contact us.

Sincerely,

Aimee Korver

ORIGINAL

7. This permit shall be invalid until such time that it is signed by the permit holder.

8. This permit shall be deemed invalid if it is lost or destroyed and no copy thereof shall be issued.

9. This permit may be withdrawn by an authorised person if the execution of any activity may be detrimental to the welfare of any wild animal or the safety of any person, provided that the permit holder is given notice of such intention and be granted the opportunity to appeal to such withdrawal.

10. The prescribed fee payable for the issuing of this permit shall not be refunded.

11. If the holder of this permit contravenes or fails to comply with any condition or requirement to which this permit is subject, he or she shall be guilty of an offence.

12. This permit shall be subject to any applicable norms and standards in existence at the time of issuance of this permit.

13. The issuing authority shall determine the species and restricted activities for which this permit will apply.

14. If this permit applies to hunting, the holder of this permit must: a. Have a copy of this permit authorising the hunt, on his or her person during the hunt: b. Within 21 days after the hunt, furnish the issuing authority with a written return on the hunt stating: i) the permit number and date of issuiance of the permit ii) the species, sex and number of animals hunted; and iii) the location where the hunt took place.

15. Return the original permit to the issuing authority forthwith after expiry of the permit.

16. This permit/certificate is subject to the provisions of any applicable law in force during the period of validity of the permit/certificate.

17. The holder of this permit may also allow the holder of a Special Game Licence to hunt the game shown herein during the Closed Season. However if this permit applies to a specimen listed in the Threatened or Protected Regulations the person hunting the animal must also be in possession of a permit issued by Ezemvelo KZN Wildlife to enable the hunting to take place.

18. The holder of this permit may also allow the holder of a relevant Game Licence to hunt the game shown herein. However if this permit applies to a specimen listed in the Threatened or Protected Regulations the person hunting the animal must also be in possession of a permit issued by Ezemvelo KZN Wildlife to enable the hunting to take place.

19. The attached return of the hunting permit must be completed by the holder. The completed permit to be returned to the Chief Executive, E KZN Wildlife, P O Box 13053 Cascades, 3202 or emailed to permits@kznwildlife.com upon expiry. Failure to comply with this condition may jeopardise the issue of future permits.

for CHIEF EXECUTIVE

Permit Holder

EZEMVELO KZN WILDLIFE

20. This permit is issued to the client named above and does not entitle the Professional Hunter and/or the Hunting Outfitter to hunt the species listed herein with another client, either on the property stipulated on the permit, or any other, should the hunt not be successful.

21. The area in which the lions are to be contained may not be less than 5 000 (five thousand) ha.

22. This permit/licence/certificate is issued subject to compliance with all other relevant legislation and does not preclude the permit holder from adherence thereto.

Please read the Terms and Conditions under which this Permit is Issued

ISSUED at PIETERMARITZBURG, KwaZulu-Natal, on 12 September 2018

To whom it may concern,

Application for an import permit for a lion trophy to the United States of America

Included herein are the details relating to the origin of the trophy, game reserve where the animal will be hunted and their management policy.

Kwazulu Private Game Reserve is an 18 000 ha property and is located in the north-east of KwaZulu-Natal Province in South Africa, which was established in 2001. The reserve comprises of Zululand Thornveld, Lowveld as well as Grassveld and accommodates all indigenous game species including the Big 5, with a current lion population of 20 lions, consisting of 12 males and 8 females.

The surrounding communities comprises of low-skilled individuals whose unemployment rate is currently very high. The running cost of the reserve is extremely high and the proceeds of hunting are utilised to maintain the reserve and machinery, employment (supporting local families) and species population management.

Kwazulu Private Game Reserve has two main income streams; one is a 5 Star Lodge, sleeping 12 guests, accommodating our hunters and the other is the hunting of different species, including the Big 5. The reserve does not receive any financial support from government and therefor have to generate its' own income to cover the running cost associated with managing the reserve. Hunting contributes to Kwazulu Private Game Reserve's operational costs and 60% of the proceeds are used for wildlife management and security. The income does not only support the predator management but also other species such as rhino which are currently under serious threat from poaching.

All the animals roam free on the 18 000 ha reserve, the lions hunt for themselves and there is no feeding of predators involved. All hunting takes place on the basis of fair chase, walk & stalk. The first lions were introduced in 2004 from Mkuze Falls Game Reserve, wild populations, to enhance the sustainable utilisation through hunting of selected species. Genetic management of small populations is critical to maintain genetic heterozygosity and therefor removals and introduction of new genetics form part of Kwazulu Private Game Reserve's Predator Management Plan. All species introduced originate from wild populations.

KWAZULU PRIVATE GAME RESERVE (PTY) LTD. – P.O. BOX 591 PONGOLA 3170
VAT NO: 4030205217 / COMPANY REGISTRATION NO: 2001/018212/07
TEL: 034 414 1085 / CELL: 083 845 5537 / FAX: 034 414 1389 / EMAIL: kwazulugame@gmail.com
DIRECTOR: JM QUELLHORST

The reserve has an anti-poaching team responsible for the protection of all wildlife which comes at a high cost to the company. Dr Mike Toft is the attending wildlife veterinarian and is responsible for all the testing, translocating, and veterinary procedures required. Miss Karen Holmes is the wildlife ecologist contracted to advise on all aspects relating to wildlife and habitat management.

Kwazulu Private Game Reserve possesses a Certificate of Adequate Enclosure as well as a Predators Management Plan approved by Ezemvelo KZN Wildlife, the Provincial Conservation Authority. All permit requirements, provincial, national and international are complied with.

Please find attached US Fish & Wildlife permit application as well as the hunting permit issued by Ezemvelo KZN Wildlife. The Department of Environmental Affairs will only issue the export permit once the recipient country has issued the import permit.

Please feel free to contact me should you require any further information or Ezemvelo KZN Wildlife for verification.

EZEMVELO KZN WILDLIFE

Animal Scientist: Mammals and Birds

15 October 2019

Dear Stakeholder,

RE: KZN LION METAPOPULATION MANAGEMENT – RECOGNISED PROPERTY.

The management of lion populations within KwaZulu-Natal is guided by the nationally approved Biodiversity Management Plan (BMP) for the species. This BMP defines three types of lion populations, *viz:* Wild, Managed Wild and Captive, with populations within KwaZulu-Natal falling within the Managed Wild category (fenced reserves <1 000km^2/100 000ha).

In ensuring that the management of these populations is sustainable and contributes to the conservation efforts of the species, Ezemvelo KwaZulu-Natal Wildlife has implemented a metapopulation management approach for the province. KwaZulu Private Game Reserve (KPGR) is one of the properties whose population is considered to be Managed Wild. They have submitted a management return for the individuals on their property dating back to 2010, in which the *inter alia* births, deaths, offtakes and introductions are supplied. This data is utilised to ensure that populations are managed in accordance with the metapopulation principles adopted for KwaZulu-Natal. In ensuring that the metapopulation principles are maintained within the province, all permit applications for introductions are thoroughly scrutinised to ensure that no captive animals are brought into the province. This includes background checks into the properties from which any intended animals are applied for.

As a result of such, Ezemvelo KwaZulu-Natal Wildlife permitted the hunting of two adult male lions on KPGR during 2019. Based on the age of the individuals, these offtakes simulate the natural deaths of older males.

Please do not hesitate to contact me should you wish to discuss this matter further.

Yours faithfully,

Brent Coverdale

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Facchina	Robert	Aloysius	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6) [redacted]			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6) [redacted]

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
New Hope	PA	18938	Bucks	USA

2.a. Mailing address (include if different than physical address, include name of contact person if applicable)
Same as Above

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the ***... of Title 50***, and I certify that the information submitted in this application for a permit is complete and ... understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same as Page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Robert A. Facchina, (b) (6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

N/A

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Panthera Leo - Lion

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

N/A

b. Date wildlife is to be hunted:

N/A

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

N/A

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

Unit One, Matetsi Safari Area, Matetsi, Zimbabwe. Nearest "city" Victoria Falls. GPS coordinates 263.039

b. Date wildlife was hunted:

Hunt dates were October 26, 2018 thru November 12, 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Outfitter MABALENGWE SAFARIS, Safari Company COLLECT AFRICA LTD, Professional Hunter CLIFTON WALKER LICENCE NO: 402

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Trophy Consultants International, 4 Josiah Chinamano Road, Belmont, Bulawayo, Zimbabwe

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). See attached Hunting Permit issued by Zimbabwe National Parks and Wildlife Authority

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Trophy Consultants International
Address:	4 Josiah Chinamano Road
City:	Belmont
State/Province:	Bulawayo
Country, Postal Code:	

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Information not available to me.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

Information not available to me

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

Information not available to me.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than [redacted] alendar year.

    Applicant's signature: (b)(6) Date: 12-14-2018

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Dear Mr. Robert Facchina,

The following is in response to your phone call regarding the status of your application.

As background, on March 1, 2018, in response to a recent D.C. Circuit Court opinion, the U.S. Fish and Wildlife Service (Service) informed the public that it is revising its procedure for assessing applications to import certain sport-hunted species like the African lion. We have withdrawn our countrywide enhancement findings for a range of species across several countries, including elephants and lions. In their place, we intend to make findings for trophy imports on an application-by application basis.

The Service is continuing to monitor the status and management of these species in their range countries. We review each application received for the import of sport-hunted African lion and evaluate the information provided in the application as well as other information available to us regarding the status and management of the species to ensure that the hunting program is promoting the conservation of the species. Each application must also meet all other applicable permitting requirements before it may be authorized. Therefore, your application is pending at this time. The application was assigned to Amy Brisendine of our office, if any additional information is needed for the application she will contact you directly.

Sincerely,

Anna Barry
Supervisory Policy Specialist

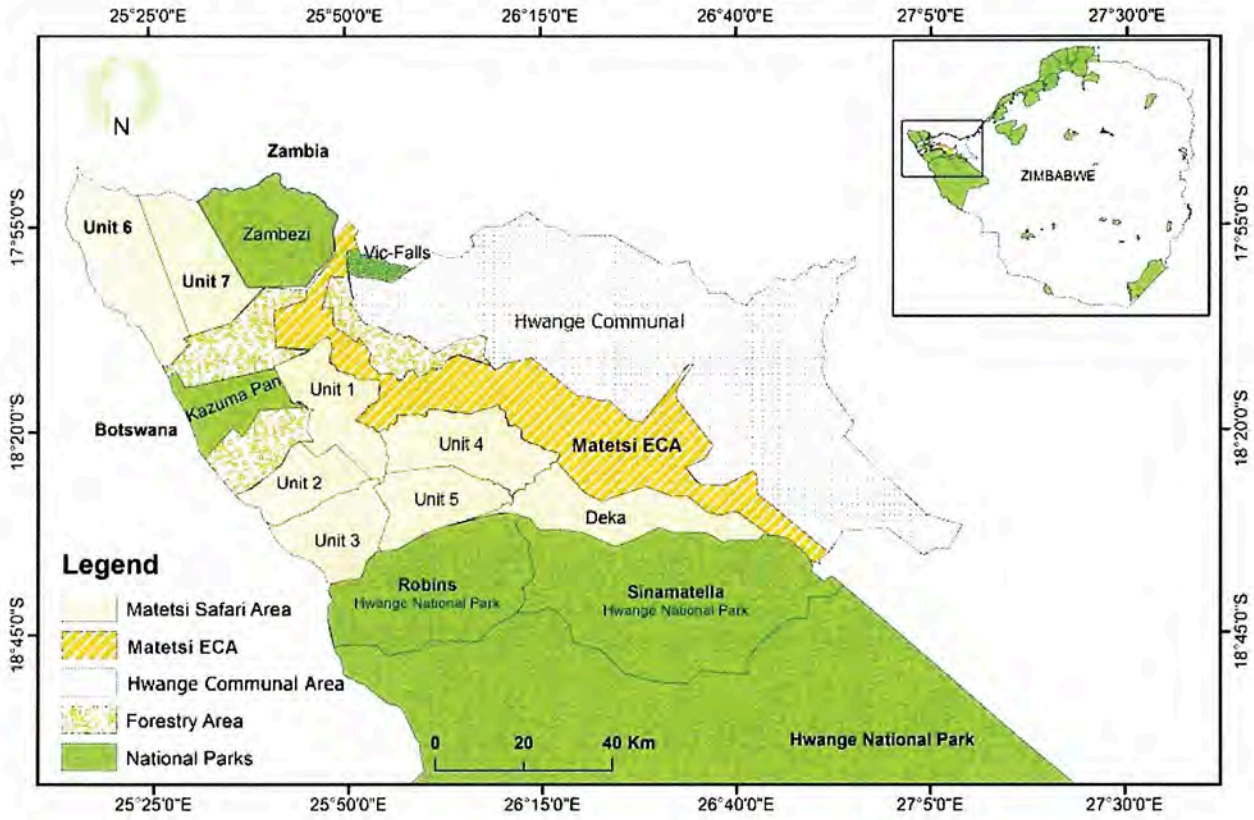
2.6.2. Matetsi Safari Area, Unit One boundaries in relation to Hwange National Park, Kazuma Pan National Park and Matetsi ECA



2.6.3. *MATETSI UNIT ONE*

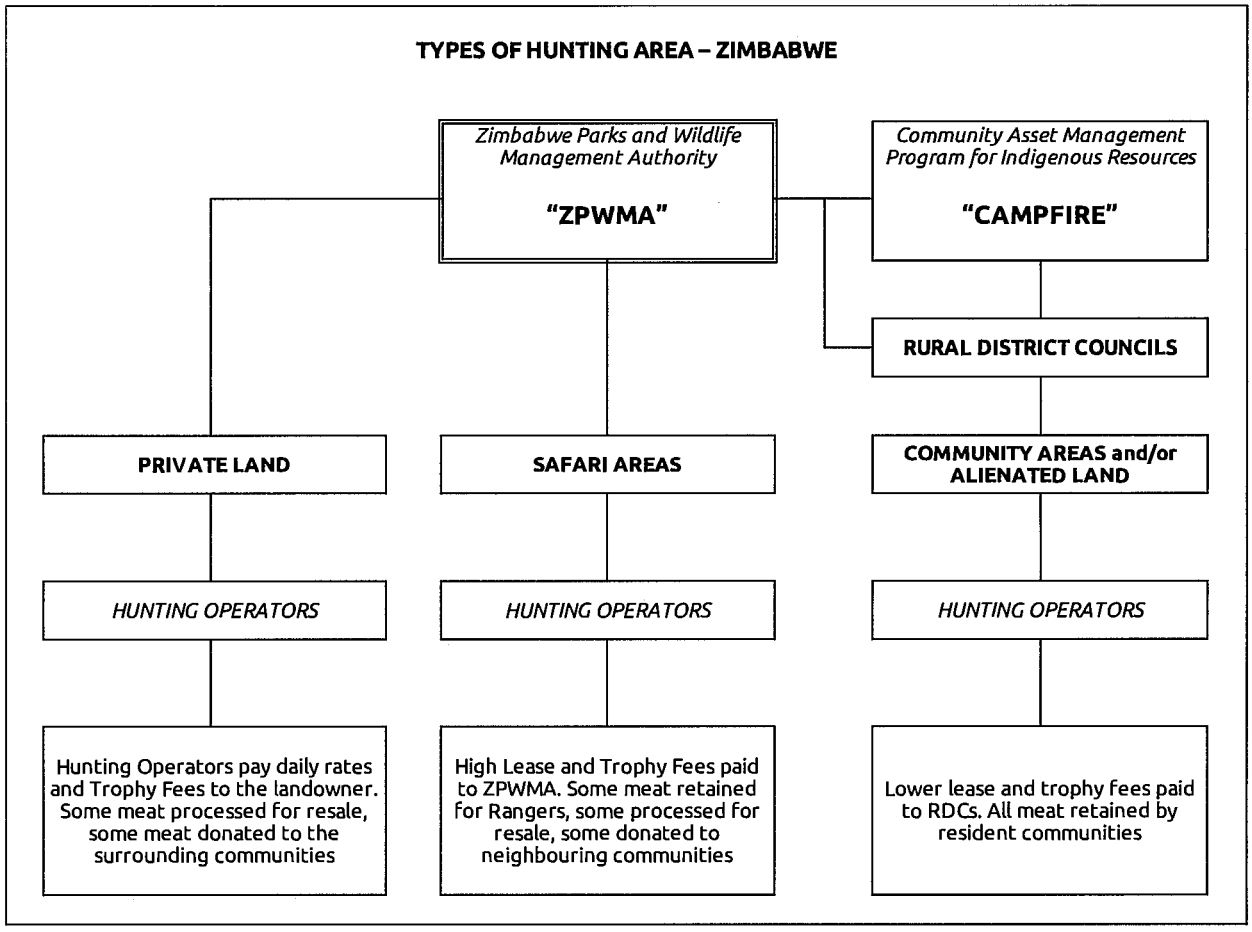
Unit One is a SAFARI AREA and located in the center of all the Units. The vegetation is dominated by mopane (Colophospermum mopane) woodland in association with vast stands of Lebombo ironwood (Androstachys johnsonii) and Combretum woodlands.

The geology is made up of mainly kalahari sands and basalt which form the base structure for the perennial rivers namely MATETSI, KACHACHETE, MANYATI and TSHABALISA RIVERS. Unit One also contains a number of fresh water springs that provide good groundwater all year round which makes it unique in the region.

The topography is varied from wide open savannah, dense riverine and teak forests and heavily grassed vleis.

2.6.1. *MATETSI SAFARI AREA IS DEFINED AS A "SAFARI AREA" IN TERMS OF SEC 35 OF THE ZIMBABWE PARKS AND WILDLIFE ACT (Chapter 20.14 (1996) as amended in 2001.*

Matetsi Safari Area is made up of seven Hunting Units bordering Hwange National park in the South, Kazuma Pan National Park in the West and Zambezi National Park in the North. It is also bordered by three Protected Forest Areas. The Matetsi "Environmental Conservation Area" makes up the most of the North Eastern boundary.



3. COMMUNITIES

As previously stated Matetsi Safari Area is classified as a Safari Area in terms of Sec 35 of the Parks and Wildlife Act, and human habitation and movement has been restricted since the promulgation of the Safari Area in the early 1970's. There are no communities living in the concession.

3.1. Community Areas - Environmental Conservation Areas ("ECA")

In early 2000 a number of privately owned game farms were sequestered by the State to form the Matetsi ECA. This area was resettled by small groups of villagers who took on the responsibility of managing the wildlife in these areas through the CAMPFIRE program (www.campfirezimbabwe.org). The ECA is administered through the District Council who have engaged a hunting operator who provides hunting services to the ECA. 55% of all proceeds from the hunting go to the communities living in the ECA as well as the meat from the animals hunted. Mabalengwe Safaris also provide these villagers with excess meat from time to time. At present there are 263 households. ALL hunting in the neighboring Community Areas is regulated by ZPWMA Matetsi Headquarters which is wholly funded by Safari Area Hunting Operators.

4. RELEVANT GAME POPULATIONS – MATETSI UNIT ONE

SPECIES	RELATIVE ABUNDANCE			ESTIMATED POPULATION	3-YEAR TREND			HOW MONITORED
	dense	average	sparse		up	down	stable	
Elephant	X			326	X			*Arial counts, camera trap survey, spoor counts, road strip counts, ranger sightings*
Lion		X		35	X			
Leopard		X		20			X	
Prey Species:								
- Impala	X			297	X			
- Buffalo	X			680	X			
- Zebra		X		183		X		
- Kudu	X			241	X			
- Chacma Baboon	X			315	X			
- Waterbuck		X		224		X		

5. LOCAL COMMUNITY PARTICIPATION

As mentioned previously Matetsi Unit One is a designated Safari Area and falls within the definitions of the Parks and Wildlife Act.

5.1. Employment

A total of fifteen seasonal contract workers are employed from the local surrounding areas with two admin staff employed year round. The hunting season normally extends from April through to November.

5.2. In May every year a further eight casual workers are employed from the surrounding areas to assist in the burning of protective fire-breaks within the area.

5.3. A total of six professional hunters are employed throughout the season on a contract hunt by hunt basis.

EMPLOYEE TYPE (MABALENGWE)	TOTAL #	Employed from local communities
Professional Hunters	6	
Trackers	2	2
Anti-Poaching Scouts/Rangers	6	6
Cooks/Houskeepers	3	3
Community Coordinator	1	
Manager	1	
Biologist	0	
Others	1	

5.4. During the off-season six full-time staff are employed except in April/May when a crew of nine casual workers are employed to implement our fire management plan with early burning of firebreaks

6. ANTI POACHING

6.1. As mentioned above Mabalengwe Safaris contributes **US$ 220,000.00 per annum** to Zimbabwe National Parks and Wildlife Authority who employ all of the anti-poaching staff as well as provide the ecology and biology services to each Matetsi Safari Area Unit and the surrounding Community Areas. A total of 32 wildlife rangers are employed on a full-time basis

EMPLOYEE TYPE (PARKS HQ)	TOTAL #	Employed from local communities
Professional Hunters	0	
Trackers	0	
Anti-Poaching Scouts/Rangers	32	32
Cooks/Houskeepers	0	
Community Coordinator	1	
Manager	1	
Biologist	1	
Others	0	

6.2. Anti-poaching is conducted year round

6.3. At any point in time at least two anti-poaching details comprising two armed Parks rangers and one armed policeman are in the field on deployment. This relates to 270 Extended Patrols and 30 local patrols with ad hoc strategic patrols per month

6.4. Mabalengwe have one dedicated anti-poaching vehicle which is utilised for anti-poaching patrols over and above the one vehicle employed by Parks for the same purpose.

6.5. The coordination of the anti-poaching patrols and any reactions are coordinated between the Senior Ranger at Parks HQ and the Mabalengwe General Manager.

6.6. Upon any arrests being made the Police personnel within each anti-poaching unit prepare all the necessary statements, complaint forms, crime reports, etc and the accused is then handed over to the Police in Victoria Falls for prosecution. We then engage an independent organisation namely SPEAK OUT FOR ANIMALS ("SOFA") www.speakoutforanimals.org to monitor any court proceedings and are engaged in the training and awareness of public prosecutors and the judiciary in wildlife crime prosecution.

6.7. Informal Anti-poaching units

Mabalengwe partly fund the employment of three youth volunteer anti-poaching units on our eastern boundary in the ECA. These units operate under the local District Council and are trained by Parks and Forestry Commission personnel. A total of 18 community scouts are employed under this program. We reward any of the community scouts for poaching related information and upon obtaining any arrests. In 2019 they were responsible for a total of six poacher arrests in the surrounding areas.

6.8. Anti-poaching results

TYPE	2017	2018	2019	REMARKS
Poaching incidents discovered	*7*	*8*	*9*	*Commercial Bushmeat*
Bushmeat recovered	*116kg*	*NIL*	*12kg*	*Dried biltong/jerky*

Vehicles/Bicycles/boats confiscated				
Tusks recovered			*3*	*From carcasses natural causes*
Dogs exterminated	*NIL*	*3*	*6*	*Poacher hunting dogs*

7. COMMUNITY INVESTMENT

As previously stated, a number of unproductive farming and ranching areas were designated as "Safari Areas" as per the Parks and Wildlife Act more than 50 years ago creating wildlife areas used exclusively for hunting. The areas were also unsuitable for photographic safaris due to their rugged terrain and poor infrastructure. The purpose of these Safari Areas was to generate income for ZPWMA to make up the lack of funding from the non-hunting National Parks and to contribute to the administration and management costs of these vast areas. The areas are uninhabited and access is tightly controlled and the wildlife management is done as a joint effort between Parks and the Operator.

In our case the burden of social responsibility rests with ZPWMA who created the Environmental Conservation Areas which were developed so that Communities receive direct benefits from hunting.

Over and above this, Mabalengwe Safaris do however invest in other community based self-help projects through which we assist in the establishment of Income Generating projects. Examples of these are;

Hwange Baobab Processing Center

Matetsi Rural Tannery

Mabalengwe Meat Processing Project

This model is used successfully around most of Zimbabwe's main National Parks ie Hwange, Gonarezhou, Matusadona, etc.

Mabalengwe Safaris has contributed a total of US$654,892 to ZPWMA over the last three years in Right to Hunt Fees, Concession Fees and Trophy Fees.

8. COMPANY CLIENTELE

	Elephant			Lion			All Species		
	2017	2018	2019	2017	2018	2019	2017	2018	2019
Number of US clients	2	2	NIL	1	1	NIL	6	16	10
Percentage of US clients	50%	50%	NIL	50%	50%	NIL	33%	70%	43%
Income derived from US clients	$53,284	$48,176	NIL	$94,250	$85,123	NIL	$243,534	$422,777	$192,424
% of Total Income	22%	11%	NIL	29%	20%	NIL	67%	76%	45%

8.1. The company had 36 US clients over the last 3 years

8.2. Pertinent facts;

- The total income of the company is decreasing due to the lack of Lion and Elephant hunt sales

- The Number of US clients hunting Lion and Elephant is decreasing

- The US contribution to total income has dropped as a percentage

HUNTING PERMIT AND QUOTA

CITES Form 10

This permit is not valid (in the case of issue by the Head Office of the Zimbabwe Parks & Wildlife Management Authority) unless payment is reflected in cash register figures in this box. (See paragraph 18 on reverse)

PCA: .....
PCA 200

ZIMBABWE PARKS AND WILDLIFE MANAGEMENT AUTHORITY

HUNTING PERMIT

PARKS AND WILDLIFE ACT [*CHAPTER 20:14*]

Permission is hereby granted on the authority of the Minister of Environment and Natural Resources Management in terms of the Parks and Wildlife Act [*Chapter 20:14*].

to ..... Mabalengwe Safaris .....

of ..... Matetsi Unit 1 .....

and co-hunter .....

.....

Firstly to hunt in Hunt Number or Section ..... Matetsi Unit 1 ..... of the ..... Mat North .....

..... Area, such number of animals as is indicated in column "A" below against the name of the animals specified. Such hunting shall be conducted during the period extending between ..... 01-01-19 .....

and ..... 30-11-19 .....

Animal	A	B	Animal	A	B	Animal	A	B
Baboon		20	Francolin		150	Leopard (m)		3
Buffalo (m)		21	Genet		5	Pegeons / Doves		150
Bushbuck (m)		5	Giraffe (m)		3	Porcupine		5
Bushpig		2	Grysbok (m)		4	Reedbuck (m)		10
Civet		5	Guinea Fowl		150	S. Hyena		30
Crocodile		2	Impala (m)		40	Sable (m)		8
Duiker (m)		6	Jackal		4	Sandgrouse		50
Eland (m)		5	Klipspringer (m)		3	Serval		1
Elephant (m)		5	Kudu (m)		20	Warthog (m)		10
Elephant T/L		2	Lion (m)		2	Waterbuck (m)		7
Wildcat		2	Zebra		15	XXXXXXXXXXXXXXXXXXXX		

Secondly to remove from the Hunting Area such number of animals as indicated in column "B" above against the name of the animal specified. An animal specified may be removed in whole or in part unless there is a condition on this permit prohibiting such removal.

Thirdly to sell, within a period of six months from the second date which appears above, the trophies of such number of animals as may be indicated in column "B" above against the name of the animal and subject to any other regulations which may be in force governing movement, sale or export of wildlife trophies.

The holder of this permit shall not permit any other person to hunt the animals specified in addition to such holder and his co-hunter appointed at the time of issue of this permit.

This permit is issued strictly subject to the terms and conditions which appear on the reverse.

Date stamp of authority which issue the permit

(*Designation* .....)

9. HUNTING POLICIES

9.1. All Professional Hunters employed by the company must be licensed with Zimbabwe Parks and Wildlife Management Authority (ZPWMA) having undergone a four-year apprenticeship under a licenced PH and then having passed written, oral and practical examinations. All of the PHs employed by the company have at least 10 years post apprenticeship experience.

9.2. Hunting may only take place in the presence of a licenced PH

9.3. Each hunt is issued a specific quota and must be pre-registered with ZPWMA and a ZPWMA ranger accompanies each hunt and records all trophies taken and their location

9.4. Hunting only takes place within daylight hours

9.5. No animals may be shot from a vehicle and must be hunted on foot

9.6. Sex and trophy requirements for hunted animals

- Old non-breeding male individuals are taken off as trophy animals
- No female lions are hunted or taken as trophy animals

9.7. ***Methodology for Lions and leopards age/sex requirements***

9.7.1. Photographs of a hunted trophy animal are taken from different angles of the animal body for later age and trophy quality determination (See attached Leopard and Lion Hunt Return Form)

POINTS SYSTEM FOR ADAPTIVELY MANAGING LION QUOTAS IN ZIMBABWE

9.7.2. The points system used to adaptively manage lion quotas has been developed following similar systems that have been implemented in countries such as Tanzania and northern Mozambique. The lion quotas are set per the age of the lions harvested during the previous hunting season. This adaptive quota management system for lion hunting based on the ages of lions hunted was agreed on in July 2013 in Harare, Zimbabwe, during a meeting hosted Non-Detrimental and Enhancement Finding: Conservation and Management of Lion by the Zimbabwe Parks and Wildlife Management Authority (ZPWMA) and an independent non-governmental conservation organization. The approach adopted by Zimbabwe re cognizes four as opposed to three key age categories as shown in the example below:

	≥6 years	No trophy	5 years' old	4 years' old	<4 years	Failure to submit hunt return/incomplete hunt returns
For quotas of 3/more	4	3	3	2	-3	0
For quotas of 2	4	3	3	2	0	0
For quotas of 1	6	3	3	2	0	0
Quota setting process	These points are added up and divided by 3 to yield the quota for next year					

9.7.3. Lions are aged by triangulating multiple different aging characteristics, including:

- The degree of facial scarring;
- The teeth colour and degree of wear;
- The mane development (particularly regarding the shape around the ear and the mohawk);
- Through post mortem analysis of the width of the pulp cavity of the second premolar (which becomes narrower with age).

10. HUNT RETURNS AND REGULATION

10.1. Each Outfitter is issued a QUOTA by ZPWMA at the beginning of each year which has been determined by ZPWMA Ecologists and then presented at a public Quota Setting meeting held before the commencement of each season.

10.2. The Central Bank and ZPWMA operate an online platform namely Tourism Receipts Accounting System ("TRAS") which links all outfitters and ZPWMA to a central accounting system in which each hunt is captured prior to the commencement. The information is captured on a form (Annexure XX) which is then processed by the ZPWMA authority Area Office who authorises each hunt by way of a stamp once it has confirmed that there is available quota, etc.

10.3. A ZPWMA Ranger accompanies each hunt.

10.4. Upon completion of each hunt the "Details of Species Hunted" portion of the TRAS form is completed by the Ranger and submitted back to the ZPWMA Area Office for deduction from the quota.

10.5. Every TRAS form is signed by the Operator, the PH conducting the hunt and the hunting client on the completion of each hunt.

10.6. There are heavy fines and penalties for any operator who exceeds his quota

11. OTHER INFORMATION

Hunting in Zimbabwe Matetsi Safari Area is strictly regulated and monitored in line with national hunting laws, regulations and ethics. All hunting activity are monitored to verify that quotas and sex/age restrictions of harvested animals are being met.

The legal and regulation framework applicable to the hunting, conservation and protection of all species includes:

Parks and Wildlife Act; Chapter 20:14 (1996) as amended in 2001.
Environmental Management Act; Chapter 20:27.
Statutory Instrument 362 of 1990: Parks and Wildlife (General) Regulations, 1990.
Statutory Instrument 76 of 1998: Import and Export of Wildlife Products.
Statutory Instrument 40 of 1994: Parks and Wildlife Act (General) Amendments.
Statutory Instrument 26 of 1998: Parks & Wildlife Act (General) Amendment.
Statutory Instrument 92 of 2009: Compensation Values for Wildlife.
Statutory Instrument 93 of 2009: Compensation Values for Trapping of Animals.
Trapping of Animals Control Act 20.16.
Forest Act; Chapter 19:05.

Further conservation strategies for individual and groups of similar species are available to guide conservation of species of conservation concern. These include the Lion Conservation strategy of 2006 and the National Elephant management Plan (2015-2020) which is reviewed every five years.

11.1. Maintenance of the concession

11.1.1. Law enforcement

Local, mobile (vehicle), extended and strategic patrols are conducted by ZPWMA rangers. The rangers use of Spatial Monitoring Reporting Tool (SMART) technology to collect and capture and produce reports on law enforcement activities which enhances effectiveness and coverage of all concession area. Ranger support in the form of vehicle for deployment enhances timeous response to incursions across the concession which significantly reduce illegal offtake by poachers.

11.1.2. The concession undertakes fire management activities to: manage fuel load, improve habitat heterogeneity, control parasites and stimulate forage production and suppress unplanned veld fires during the dry season. Fire breaks along concession boundaries are carried out by ZPWMA in conjunction with the concession. The concession has an annual target of 50km^2 of early block burning, minimum of 50km target of road grading and fire breaks.

11.1.3. Game water management is also a critical are of management given the high elephant numbers. Supplementary artificial game water is provided by means of solar and wind power during the dry season (applies to other units except unit 1). Matetsi is endowed with natural annual rivers and springs that provide water for wildlife. Care is taken to prevent the unplanned game water provisioning through guidance from Area Ecologist in order to maintain area integrity through limiting impact of high elephant densities during the drought months from surrounding protected area network (parks and forest estates). Veterinary matters such as

diseases outbreak are managed and monitored by the ZPWMA Area Veterinary Doctor in conjunction with private wildlife veterinary institutions.

11.2. Research

Research in fire and habitat management, animal's survey is done by Area Ecologist and external researchers. The ZPWMA office at Matetsi Safari Area is involved in measuring, monitoring and analyzing trophy quality and offtakes of all hunted animals. This is done to ensure that Safari hunting does not substantially alter natural selection or ecosystem processes. The limited quota, as further limited by age restrictions, ensures that hunting offtakes do not negatively affect natural processes. This age-based policy for lions (*Panthera leo*) and *Panthera pardus* (leopard) was adopted in part to mitigate any social or population impacts from limited safari hunting.

12. There is no "one size fits all" conservation model when determining an Operators commitment to conservation and communities. Some African Operators (especially within the South African high-fence models) are specifically involved with community upliftment as are our CAMPFIRE Operators. It is our position that our commitment is even greater in that we fund the Regulator who in turn administers Hunting and Conservation on the National level.

In our view the right scenario for Zimbabwe is where there is a mix of different models to attain true Sustainable Use Conservation which is the current National Conservation Policy and is being applied throughout the industry in Zimbabwe.

13. It is our humble submission that we more than fit the criteria in terms of ensuring that our hunting is ethical, properly regulated, sustainable and benefits the overall Citizens of Zimbabwe in the case of any foreign sport-hunters that require a permit to import their trophies.

I hereby declare the foregoing to be true and correct to the best of my knowledge and ability

Signed in Matetsi on the 26th day of August, 2020

RE: PRT # 22800D, Applicant Robert Facchina for a Lion from Zimbabwe
Supplement to the Import Permit Application

Ms. Nelson:

This is a supplement to the existing application, PRT # 22800D, for Robert Facchina for his lion trophy from Zimbabwe.

Answers to Missing section of Application:

6b. Date the Wildlife was taken October 29, 2018

9a. Do you have any information regarding the population status or trend data on the species hunted?

Please reference the Enhancement and Non-Detriment Findings for Panthera Leo in Zimbabwe (2016). In the Summary beginning on page 422, you will find Hunting in Zimbabwe has created financial incentives for the development and retention of wildlife across Safari Areas, Forestry Areas, Communal CAMPFIRE Areas, and private Conservancies. The lion population is well-managed due to strict quotas for offtake, with strict penalizations for non-compliance. Lion hunting is observed heavily by the ZPWMA with specific databases and return forms, like the TRAS2, where the hunting can be tracked and monitored throughout the country electronically. For Zimbabwe and the Matetsi Safari Areas the lion population is steady and growing.

9b. In-order-to hunt, you likely paid for licenses or trophy fees. What were those fees, and do you have any information on how those funds were used by either the landowner, local community, or government?

Trophy fees for a lion in this area are about $40,000 U.S. dollars. Mabalengwe Safaris has contributed a total of $654,892 U.S. Dollars to ZPWMA (Zimbabwe Parks and Wildlife Management Authority) over the last three years in Right to Hunt fees, Concession fees, and Trophy fees – all of that goes back into Conservation and anti-poaching done by ZPWMA. Non-hunting parks in Zimbabwe bring in very little money- it is Safari operators like Mabalengwe that bring in the capital for large scale conservation efforts.

9c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

Please reference the Operator Enhancement Report provided by Mabalengwe Africa Safaris. This report is extremely thorough and details the large amounts of money that the operator must pay to ZPWMA who employ all of the

anti-poaching staff as well as provide the ecology and biology services to each Matetsi Safari Area unit and the surrounding community areas. Per year -Mabalengwe spends $220,000 U.S. dollars on these efforts. In the report you will find that they have also stated that the total income of the company is decreasing due to the lack of lion and elephant hunt sales and the decreasing number of U.S. clients hunting lion and elephant. If import permits are not being issued for sport-hunted trophies than you can expect that a quarter million dollars will be lost every year on conservation in this area- and you can expect for the surrounding areas to follow.

Please refer to these documents and the hundreds of pages of information Conservation Force previously submitted to the U.S. Fish and Wildlife Service, as well as information submitted by the government authorities in R.S.A., outfitters, and others, in making a positive enhancement finding and issuing an import permit for this lion trophy.

If you have any questions about this import application, please do not hesitate to contact us.

Sincerely,

Aimee Korver

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
HOMYACK	STEVEN	(NMN)	JR

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. (b) (6)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
ROBESONIA	PA	19551	LEBANON	U.S.A.
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
(SAME)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the amount of **$100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee—attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

SAME AS PAGE1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

STEVEN HOMYACK JR

(b) (6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☒ ~~Yes~~ NO

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      PANTHERA LEO AFRICAN LION

   b. Sex (if known). MALE

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

      SOUTH AFRICA
      NA VORSTERSHOOP NORTH WEST PROVINCE
      DR. RUTH SEGOMOTSI MOMPATI DISTRICT
      VORSTERSHOOP PORTION 109

   b. Date wildlife is to be hunted:

      DELETE GIT NA 09/09/2017 BEGIN

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

      NA SOMERBY SAFARIS

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

      SOUTH AFRICA
      VORSTESHOOP NORTH WEST PROVINCE
      DR RUTH SEGOMOTSI MOMPATI DISTRICT
      VORSTERHOOP PORTION 109

   b. Date wildlife was hunted:

      11/09/2017 BEGIN

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

SOMERBY SAFARIS

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

UNIVERSAL TROPHY SERVICES
PLOT 114
BASHEWA, PRETORIA
0056
SOUTH AFRICA

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). COPIES ATTACHED

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: RUPERT PEDEKIND
Business Name: UNIVERSAL TROPHY SERVICES
Address: PLOT 114 BASHEWA
City: PRETORIA
State/Province:
Country, Postal Code: SOUTH AFRICA, 0056

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

ROBYN/SMALDEEL, THEUISSEN, VRYSTAAT, 9410

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

ANSWER ON ATTACHED PAGE.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

PLEASE FIND ATTACHED LETTER FROM THE HUNTING ORGANIZATION AS "SHPA LETTER".

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to re[redacted]g to import an elephant trophy, I understand that I may import no r[redacted] year.

    Applicant's si[redacted] Date: 12/19/2018

    Be aware that there r[redacted]nents by your local or state governments, as well as required by ot[redacted] conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Ordinary Permit No: O 12313

Please familiarise yourself with this terms and conditions.
The permit is not transferable.
This permit shall be subject to the provisions of any law in force during the period of validity of the permit.
The Hunter or Landowner who contravenes or fails to comply with any one of the conditions or requirements, to which this permit is subject, shall be guilty of an offence.
This permit only authorises **the hunting** of the animal during the day.
The Hunter will ensure that this permit is immediately available during the hunt.
The lion must be released in the hunting area a minimum of 96 hours prior to hunt and after receiving a permit to do so.
Information requested on this permit shall be done in ink and in print. False and unreadable information will cause this permit to be invalid.
No person shall hunt the wild animal or may be allowed by a landowner to hunt if the hunter did not beforehand acquire the necessary hunting skills and firearm training to: i) Ensure the safety of him or herself, other people and non targeted species. ii) Ensure a hunt which consists of generally accepted sound hunting ethics, a fair chase, the minimum cruelty and damage to the ecology of the hunting area.
No person may hunt when under the influence of alcohol or any substance that may deter his/her vision, judgement or in any way negatively affect his or her conduct.
A Hunter will immediately report the wounding of any wild animal to the landowner or his representative and will be responsible for the tracking down and killing thereof. If there is reasonable chance that the animal pose any threat to property or human life, the hunter and the land owner will immediately notify both the nearest Police station and the Local Nature Conservation district officer.
The landowner may at any time stop the hunt and withdraw the permit.
A Hunter should be accompanied by a designated official from this Directorate.
Animals may not be hunted under the influence of drugs.
Only animals that have been declared as wild by this directorate may be hunted. (No tame animals may be hunted)

QUESTION 7

No hunting with dogs is allowed.
Hunting must be done on foot and from at least 200m from the vehicle (Except in the case of disabled hunters)
No animal may be artificially lured by sound, scent, visual stimuli, feeding bait, other animals of its own, another species or any other method.
Hunting may not take place nearby any other lions kept in captivity.
The Hunting party may not be more than 5 people.
Hunting of a lion in a pride situation is prohibited.
No Lion may be captured, kept in captivity and then released for the purpose of hunting.
If the captive bred lion/s will be darted / immobilised for the purpose of capturing , release and/ or transport, the following must be noted:- - Darting / immobilisation may only be done by a registered Veterinarian. - The responsible Veterinarian must be TOPS registered and have a valid permit to conduct restricted activities i.t.o the TOPS regulations. This permit is subject to the responsible Veterinarian whom will perform the darting / immobilisation, to the Vryburg Conservation Office. **A Nature Conservation Official must be present during the release and hunting of the lion.** **Please notify the Vryburg Conservation Office at least 3 working days prior to activity of the exact date and time of the planned activity.** **Tell: 053 928 0656 or \071 889 7867\082 446 1816**
This is an integrated permit issued in terms of the provisions of the TRANSVAAL NATURE CONSERVATION ORDINANCE 12/83, CAPE NATURE CONSERVATION ORDINACE 19/74, BOPHUTHATSWANA NATURE CONSERVATION ACT 3/1973 AND 90(1)(a)(i)(ii)(b)(c) of the Biodiversity Act, Act 10 of 2004 and Regulations 10, 18 and 44 of the TOPS Regulations.

9.b.

The trophy fees for this is $12,500. A $1500 of that amount is for the permit and license fees.

Included in the $11,000 that is left, all expenses for instance, traveling to the Kalahari, paying the PH his daily fees, skinners, trackers, employees at the lodge, etc are all included in the $11,000. We pay a substantial membership fee annually to belong to the Professional hunters Association of South Africa (PHASA) and PHASA does a lot of community work.

We can't say from this specific lion-this is where we donated the money to. We use all the trophy fees for all animals hunted in general during the year to take care of families in need, help schools with learning materials, donating clothing to orphanages, etc.

The landowner must regularly, in his own capacity, get involved in community and socially uplifting work for instance donating to schools, etc. (please find attached a letter from a school where the outfitter donated.

Nature Conservation use the funds to pay the salaries of the workers that are working with the permit applications. Their job is to capture the applications and to issue the permits and to keep track of all the animals that have been hunted, the quotas still left, etc. The department of environmental affairs use some of the permit fees for conservation in national parks. –Somerby Safaris

Our group brought 6 large boxes of school supplies and donated them to a preschool. While in S.A. we also purchased 2 dozen pairs of shoes and a refrigerator that we also donated to the school.

-Steven Homyack Jr.

13 August 2018

Dear Chris Botha (Kalahari Pride Safari)

On behalf of Moreleta Park Preschool, We want to extend a heart-felt thank you for your support and sponsorship to making this golf day so successful. The vibe was incredible and we are so grateful for everyone's contribution, fun attitude and encouragement!

Your generous contribution helped make our vision a reality by making it such a huge success. We will now be able to fix the damaged caused by the rain storm.

This was our first golf day, but definitely not our last. We are already busy planning our next golf day for 2019 and would love you to be part of it again. We will let you know early in 2019 what date we chose. Hope you will be part of it again and even see you there.

Sincerely,

Natasha Botha and Marga van Wyk

To : To whom it may concern
Re : Motivation of support to apply for export of lion trophy Dr Steve Hornyack

The application to export the trophy is supported by SAPA. The hunt was conducted on a SAPA accredited farm Vostershoop. This implies that the supplier of the animal and the presentation of the hunt was done in terms of the SAPA norms and standards as approved by the SAPA executive. The farm is submitted to a disciplinary process and regular audit.

The landowner also contributed a significant amount to the SAPA conservation fund. This indicate that money generated by the hunts also contributed to the conservation of the lion as a specie. The lion biodiversity management plan document serve as basis of all decisions made on the breeding and hunting of lion. SAPA is the author of this document and present it as proof of the commitment to conservation of the African lion.

The African lion is an iconic predator species. However, lion populations in most of Central and Northern Africa have become extinct and populations in Eastern and Southern Africa are under pressure. Serious and urgent efforts are required to reduce the threat to African lion populations in the wild.

The South African Predator Association (SAPA), on behalf of the captive lion industry in South Africa, recognizes that it has a special responsibility towards contributing to the survival and wellbeing of "wild" lion populations. To achieve this, SAPA has established a Conservation and Development Fund. The main aim of the Fund is to facilitate the lion industry's contribution to the conservation of wild African Lions and other predator populations.
The establishment of the Fund was approved by all SAPA members during the Annual General Meeting of Nov 2015 and confirmed by the SAPA Council meeting of 12th of July 2016.

The objectives of the Fund are:

1.1 to support approved lion/predator conservation projects;
1.2 to support approved lion/predator research projects;
1.3 to support approved projects to establish lions/predators in the wild;
1.4 to support approved social upliftment, development and educational projects in communities associated with lion/predator populations; and
1.5 to finance operational and administrative activities required by the above mentioned activities

Together with other members of this fund Mr Chris Both was instrumental to raise 1.2 Million rand for the conservation fund. This money is now at the disposal of the technical committee to evaluate appropriate projects to fund. He also donated funds to a pre-primary school of his choice.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
WILLIS	RONALD	CRAIG	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			cindi.rulon@procargousa.com

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title		6. Primary contact name	
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
RAINBOW	TX	76077	SOMMERVELL	USA

2.a. Mailing address (include if different than physical address. Include name of contact person if applicable)
(b) (6)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
HICO	TX	76457	HAMILTON	US

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the **amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].
2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Pro Cargo-- attn: Cindi Rulon -- 15619 Morales Rd. Houston, Texas 77032-- FED EX envelope enclose

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   CINDI RULON CINDI.RULON@PROCARGOUSA.COM 281-220-3176

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

PANTHERA LEO ---- LION

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

b. Date wildlife is to be hunted:

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. IF THE TROPHY HAS ALREADY BEEN TAKEN, please enter the following:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

Muchinga province, game management area- Munyamadzi- Hunting block- Nyampala Ranch, Mfuwe Town

b. Date wildlife was hunted:

JULY 28, 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

BAOBAB SAFARIS

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

Bridge Shipping Zambia

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). -----attached-------

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:	
Business Name:	Baobab Safaris
Address:	Plot No 133
City:	Freedom Way
State/Province:	Town Centre
Country, Postal Code:	Lusaka, Zambia

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

In one day of my lion hunt - I saw 5 male lion, 12 females and 3 cubs. I heard many lions every morning as they call to control the territory. This area has a large and well-managed lion population.

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

I paid $10,000. for this lion hunt. These funds support the government efforts to manage the wild game with scouts, guides,anti-poaching efforts.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted

The human interaction with the animal population is a problem - the funds from the hunting business go towards the government efforts to control this issue. The locals say that this problem has improved. The hunting industry benefits the community by providing income for the wildlife dept. as well the community.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of a leopard trophy, I understand that my client may only import two leopard trophies in one calendar year.

Taxidermist/Broker's signature: [signature] Atty in fact Date: 02/19/2019

11. If you are the hunter applying to import your own trophy, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import a leopard trophy, I understand that I may only import two leopard trophies in one calendar year.

Applicant's signature: _____ Date: _____

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

may act through any of its offices or any employees with Power of Attorney on file with this licensed broker as required by the Regional Commission of Customs as a true and lawful agent and attorney of the grantor named above for and in the name, place, steed of said grantor from this date and in all Customs Districts, and in no other name, to make, endorse, sign, declare, ontwear to any entry, withdrawal, declaration, certificate, bill of lading, or other document required by law or regulation in connection with the importation, transportation, or exportation of any merchandise shipped or consigned by or to said grantor; to perform any act or condition which may be required by law or regulation in connection with such merchandise; to receive any merchandize deliverable to said grantor: To make endorsements on bills of lading conferring authority to transfer title, make entry or collect drawback, and to make, sign, declare, or swear to any statement, supplemental statement, schedule, supplemental schedule, certificate of delivery, certificate of manufacture, certificate, and delivery abstract of manufacturing records, declaration of proprietor on drawback entry, declaration of exporter on drawback entry, or any other affidavit or document which may be required by law or regulation for drawback purposes, regardless of whether such bill of lading, sworn statement, schedule, certificate, abstract, declaration, or other affidavit or document is intended for filing in any customs district. To sign, seal, and deliver for and as the act of said grantor any bond required by law or regulation in connection with the entry or withdrawal of imported merchandise or merchandise exported with or without benefit of drawback, or in connection with the entry, clearance, lading, unlading or navigation of any vessel or other means of conveyance owned or operated by said grantor, and any and all bonds which may be voluntarily given and accepted under applicable laws and regulations, consignee's and owners declarations provided for in section 485, Tariff Act of 1930, as amended, or affidavits in connection with the entry of merchandise: To sign and swear to any document, and to perform any act that may be necessary or required by law or regulation in connection with the entering, clearing, lading, unlading, or operation of any vessel or other means of conveyance owned or operated said grantor. To authorize other Customs Brokers to act as grantor's agent; to receive, endorse and collect checks issued for Customs duty refunds in grantors name drawn on the Treasurer of the United States; if the grantor is a nonresident of the United States, to accept service of process on behalf of the grantor. And generally to transact at the customhouses in said district any and all customs business, including making, signing, and filing of protests under section 514 of the Tariff Act of 1930. In which said grantor is or may or may be concerned or interested and which may properly be transacted or performed by an agent and attorney, giving to said agent attorney full power and authority to do anything whatever requisite and necessary to be done in the premises as fully as said grantor could do if present and acting, hereby ratifying and confirming all that the said agent and attorney shall lawfully do by virtue of these presents; the forgoing power of attorney to remain in full force and effect until notice of revocation in writing is duly given to and received by the District Director of customs of the district aforesaid. If the donor of this power of attorney is a partnership, the said the power shall in no case have any force or effect after the expiration of 2 years from the date of its execution. Or until revoked. Pursuant to 19 CFR 111.36(a), election is made waiving the right to receive invoices, supporting documents and correspondences from John Rulon CHB, who is directed to forward all documents and inquiries concerning our imports to their customs brokerage services, to our freight forwarder, who will pay John Rulon CHB, for duties, and services performed on our behalf. It is understood the right to revoke said waiver is continuing.

Customs Rules on Discharge of Importers Liability for Duties

The U.S. Customs Service has issued a final amendment of the regulations to provide an alternative procedure for an importer record to pay duties on imported merchandise through a licensed customhouse broker. Present rules provide for the payment of duties to Customs by a broker on behalf of the importer. Under the alternative procedure, the importer may elect to submit to the broker a separate check or bank draft for the duties payable to the "U.S. Customs Service". The broker would then deliver the importer's check or bank draft to Customs. The new rule also requires brokers to provide written notification to their clients, advising that if I the client is an importer of record, payment to the broker will not relieve the client of liability for Customs charges in the event that the charges are not paid by the broker. Brokers will be required to provide this notification to all active clients annually during the month of February. Additionally, brokers will be required to provide such information on a power of attorney executed on or after the effective date of the new rule. These amendments are effective as of September 27, 1982

IN WITNESS WHERE OF, the said (Print name) x Craig Willis

has caused these presents to be sealed and signed.

Application # 29967D / lion import

Cindi Rulon <Cindi.Rulon@procargousa.com> Wed, May 22, 2019 at 5:00 PM
To: "Vargas, Darcy" <darcy_vargas@fws.gov>

Dear Ms. Vargas,

Africa writes their dates differently than the U.S. They put the day in the month first, then the month , then the year.

Zambia issued Craig Willis a hunting license 0000948 on July 12, 2018.

Then Craig Willis was issued a hunt permit 0000682 to hunt in the Munyamadzi Area on July 18, 2018 through August 6, 2018.

The lion was harvested on July 28, 2018 within the authorized hunt period.

I hope this information brings more clarity.

Best Regards,
Cindi Rulon

Dear Ms. Rulon,

Ref: 29967D

Thank you for the clarification on the hunt dates.

We will await your submission of an unaltered copy of license number 0000946 (without information *whited-out*).

Also, please let us know if we should wait for a response to application questions questions 9.a. through 9.c. or if you are choosing to leave your response to the ESA enhancement questions as "unknown."

To: Cindi Rulon <Cindi.Rulon@procargousa.com>
Subject: Applica on # 29967D / lion import

Dear Ms. Rulon,

Ref: 29967D; Import of a lion trophy, from Munyanadzi province GMA, Lusaka Zambia, taken on July 28, 2018.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. Please provide a valid copy of the Zambia licenses/permits authorizing your lion hunt. Also, please be aware of the following:

- License # 0000682, issued to Mr. Willis, for hunting within Munyanadzi GMA, from June 8, 2018, through July 18, 2018, was enclosed in the application package. However, the approved hunt dates are prior to the date that the lion was hunted. Therefore the provided license does not indicate that the Munyanadzi GMA hunt was authorized by Zambia. Please provide a copy of a license authorizing Mr. Willis to hunt in Munyanadzi GMA on July 28, 2018.
- License # 0000946, that was issued on July 12, 2018, authoring Mr. Willis to hunt 1 lion in 2018, was also enclosed in the application package. However, this document was altered with *white-out* and the correlation between this license and the GMA hunting license is not completely clear. Please provide clarity on the 2 different licenses and different hunt authorization dates.

2. Please provide an unaltered copy of license number 0000946 (without information *whited-out*).

3. If available, please provide documentation to support the answers to application questions 9.a. through 9.c.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by June 6, 2019 (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. Please provide a valid copy of the Zambia licenses/permits authorizing your lion hunt. Also, please be aware of the following:

- License # 0000682, issued to Mr. Willis, for hunting within Munyanadzi GMA, from June 8, 2018, through July 18, 2018, was enclosed in the application package. However, the approved hunt dates are prior to the date that the lion was hunted. Therefore the provided license does not indicate that the Munyanadzi GMA hunt was authorized by Zambia. Please provide a copy of a license authorizing Mr. Willis to hunt in Munyanadzi GMA on July 28, 2018.
- License # 0000946, that was issued on July 12, 2018, authoring Mr. Willis to hunt 1 lion in 2018, was also enclosed in the application package. However, this document was altered with *white-out* and the correlation between this license and the GMA hunting license is not completely clear. Please provide clarity on the 2 different licenses and different hunt authorization dates.

2. Please provide an unaltered copy of license number 0000946 (without information *whited-out*).

3. If available, please provide documentation to support the answers to application questions 9.a. through 9.c.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by June 6, 2019 (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 5:31 PM
To: Cindi Rulon <Cindi.Rulon@procargousa.com>

Dear Ms. Rulon,

Ref: 29967D

Thank you for the clarification on the hunt dates.

We will await your submission of an unaltered copy of license number 0000946 (without information *whited-out*).

Also, please let us know if we should wait for a response to application questions questions 9.a. through 9.c. or if you are choosing to leave your response to the ESA enhancement questions as "unknown."

Thank you for submitting an application to the U.S. Fish and Wildlife Service. The application was received by the Division of Management Authority on 02/28/2019; check number 2927 accompanied the application for AFRICAN LION. Your application has been assigned the following PRT identification number: MA29967D-0While processing time may be less, you should anticipate a minimum of 30 days to process your request, with many requests averaging between 60 to 90 days due to some requests which need to be published in the Federal Register and/or be reviewed by other Service offices. While we are aware that you may want to inquire about the status of your application, we request that you allow our office at least three weeks after the receipt of this notification to make any inquiries. Should you have additional information that you need to provide to our office pertaining to the current request, we ask that you call our office first at 800-358-2104 or email managementauthority@fws.gov to obtain further instructions.

MA-299670 - RONALD CRAIG WI

Operator Enhancement Questionnaire

Operator Information

a. Name of area operator: **Baobab Safaris Limited**

b. Years in business: **35 Years**

c. Name of company conducting hunt: **Baobab Safaris Limited**

d. Country: **Zambia**

Concession

a. Name of concession: **Nyampala Hunting block (Munyamadzi G.M.A)**

b. Area in km^2: **2185**

c. Land tenure: **Government and community lease**

d. Length of concession agreement: **7 Years**

e. Can it be renewed? **Yes**

f. Length of renewal, if applicable: **Unclear at this time**

g. Estimated total amount received in trophy fees last year, if applicable: **$250,000.00**

h. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain:

Over and above the obligatory concession fees paid to the Government and Local Community, Baobab Safaris Limited spends an additional $60,000.00 Annually for the below mentioned activities:

- **Infrastructure Development pledge annually**
- **Resource Monitoring pledge annually**
- **Community development pledge annually**
- **Law enforcement pledge annually**
- **Fire management pledge annually**
- **Annual Evaluation of compliance by hunting outfitter**

These funds where used for the following activities:

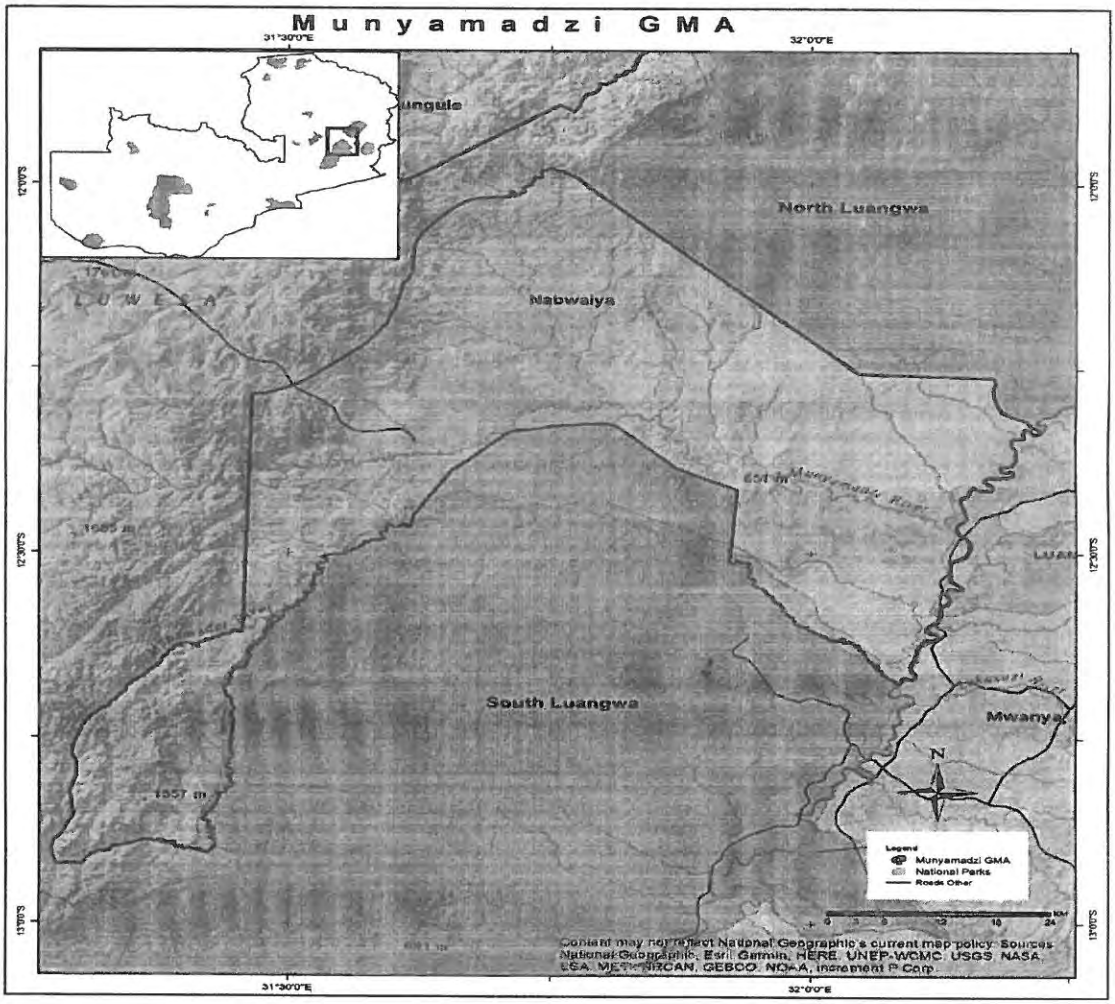
- **Purchase a new Land Cruiser pick up for community use as well as Anti Poaching use.**
- **Two students from the community are currently in college studying Tourism funded directly by the safaris outfitter.**
- **Community is directly paying bursaries for 19 students from these funds.**
- **The construction of 12 brand new Scout houses, 6 at Kalimba and 6 at Mayembe to assist with Law Enforcement in those areas.**

Operator Enhancement Questionnaire

- **Purchase of computer and printing equipment for Kanele wildlife headquarters in the area as while as Community resource board offices.**
- **Purchase of 4 shotguns for Anti poaching patrols.**
- **Funds were also used for delivery of 70% meat to all areas of the blocks.**
- **Repairing the NTUNTA-NABWALYA Road as access to the areas is completely restricted during the rainy season.**
- **Building and refurbishing of schools, clinics, teachers houses, mothers shelters, a guest house, repairing and drilling of new boreholes.**

i. Please provide the concession location and nearest City: **In Between Luambe, South Luangwa and North Luangwa National parks.**

J. Please attach a map or maps with the boundaries marked and showing the nearest city:



k. If the concession borders a national park, please provide the park name: **South Luangwa National Park, Luambe National Park and North Luangwa National Park.**

l. Description of general and distinctive habitat features and any water features:

The water features are: Luangwa River, Munyamadzi River, Mupamandzi River and Mutinondo River.

The Habitat features are: Mopani Woodland, Semi Savanna, Miombo Woodlands and Riverine Bush.

Communities in the Concession

a. Are there any communities living in the concession? **Yes**

b. If so, estimated number of people or villages in the concession? **14,220 under 105 Headmen and one chief.**

c. Are there communities bordering this concession? **Yes**

d. If so, estimated number of people or villages around the concession? **The bordering areas are also Game Management areas and they have their own conservation plans in place.**

Relevant game populations in the concession:

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How is it monitored?
Elephant	Dense	± 3,000	Up	-Regular aerial patrols by Frankfurt Zoological Society and daily sighting by operator. - Patrol records from scouts
Lion	Dense	± 85	Up	-Camera trap footage; -Shared information with Zambia Carnivore Project, conservation South Luangwa, Frankfurt Zoological Society. -Daily sightings -Data recorded on patrols.

Operator Enhancement Questionnaire

Prey species				
- Buffalo	Dense	± 2,500	Up	- Regular aerial patrols.
- Bushbuck	Dense	± 350	Up	- Data collected by scouts
- Bushpig	Average	± 200	Up	- Daily sightings by outfitter.
- Crocodile	Dense	± 1,000	Up	
- Duiker C	Average	± 100	Stable	
- Eland	Sparse	± 150	Stable	
- Grysbok	Average	± 80	Stable	
- Hartebeest	Sparse	± 80	Stable	
- Hippopotamus	Dense	± 5,000	Up	
- Hyena	Average	± 250	Up	
- Impala	Dense	± 8,000	Up	
- Klipspringer	Sparse	±50	Stable	
- Kudu	Average	± 250	Stable	
- Puku	Average	± 1,000	Up	
- Reedbuck	Sparse	± 50	Stable	
- Roan Antelope	Sparse	± 150	Stable	
- Warthog	Dense	± 1,000	Up	
- Waterbuck C	Average	± 250	Up	
- Wildebeest C	Dense	± 1,250	Up	
- Zebra	Dense	± 3,000	Up	

If there are any population studies or reports being done in or around the concession area, please provide a copy with your application.

Are there any actions being taken to conserve game community habitat? If so, please explain and attach any relevant project photos or reports.

Local Community Participation

a. Total employment number: **82**
b. Total employment in off-season: **37**
c. Please identify the number and type of all employees:

Employee Type	Number of Employees	Number of Employees from local communities	Number of Employees in the off Season
Professional Hunters	3	3 Zambian Citizens	
Trackers	6	6 locals	
Anti-poaching scouts/rangers	31	31 locals employed by Community Resource Board funded by hunting operations	
Other anti-poaching	6	Wildlife Offices under D.N.P.W	
Cooks/housekeepers	6	6 locals	
Community coordinators	3	3 community	
Managers	2	Not local	

Operator Enhancement Questionnaire

Biologists	2	Employed by the Department of National Parks and Wildlife	
Others: Road cleaning crews	15	15 locals	
Airstrip cleaning crews	15	15 locals	

Anti-poaching efforts

a. Number of anti-poaching staff: **63 community scouts Employed by Community Resource Board, supported by 2 hunting operators that operate the 2 hunting concessions within this Game management Area, also supported by Frankfurt Zoological Society and Department of National Parks and Wildlife.**

b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? **Both**

c. Months during which anti-poaching patrols are conducted: **All year round**

d. Number of anti-poaching patrols per month: **10 long patrols, 6 short patrols and 20 day patrols.**

e. Estimate the percentage of trophy fees that go toward anti-poaching efforts**: 50%**

f. Description of anti-poaching equipment, vehicles, etc.: **Spotter planes (FZS), Vehicles, Rifles, camping equipment, communication equipment, bicycles, uniforms, boots and rain coats.**

g. Do government-sponsored game scouts conduct patrols: **Yes**

Community investment

a. Does the company contribute money or goods/services to local communities? **Yes**

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)?

- **As required by law and contract, 20% of concession fees goes directly to the community and 80% goes to the Department of National Parks and Wildlife.**
- **Over and above this, the company pays $60,000.00 to the community/Department of National Parks and Wildlife for infrastructure development for law enforcement, resource protection, fire management and community development.**
- **Trophy fees are shared between the government and local community on a 50/50 share basis. 50% of the money goes direct to the community for community projects annually.**
- **Voluntary donations are also provided such as solar powered street lights to wildlife camps for security purposes.**

c. Does the company provide game meat to nearby communities? **Yes**

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: **Over 70% of meat was delivered free of any charges totalling approximately 33,990 kgs calculated at $5 per kg equates to the value of $169,950.00**

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. **This is mainly done in the off season when crops are in the fields by the Department of National Parks and Wildlife, community scouts using funds provide by the safaris outfitter.**

- **Chilli fences are erected**
- **Chilli bombs**
- **Chilli blocks are made**
- **Beehives are put around the crops.**
- **Fireworks are procured and distributed to all Village Area Groups (VAGs).**
- **PAC hunts are conducted if the outfitter is called upon to assist, but are usually done by D.N.P.W.**

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? **Maize is bought and given to the local residents so that they can survive through the difficult dry season.**

Species	Damage caused	Consolation paid 2016	Consolation paid 2017	Consolation paid 2018
Elephant	Maize	500 x 50kg bags of maize grain is provided for elephant damage as well as drought relief.	500 x 50kg bags of maize grain is provided for elephant damage as well as drought relief	500 x 50kg bags of maize grain is provided for elephant damage as well as drought relief

j. Include receipts and photographs of projects, if available

Company Clientele

a. How many U.S. clients did the company have in the past three years, what percentage of the company's clients were from the U.S., and what fees did they pay?

	Hunting elephant	Hunting lion	All species
Number of U.S. clients	**2016: 1** **2017: Nil** **2018: 4**	**2016: 1** **2017: 2** **2018: 2**	**2016: 5** **2017: 9** **2018: 11**
Percentage of U.S. clients	**2016: 100%** **2017: Nil** **2018: 100%**	**2016: 100%** **2017: 100%** **2018: 100%**	**2016: 45%** **2017: 85%** **2018: 95%**
Trophy fees paid by U.S. clients	**2016: $15,000.00** **2017: Nil** **2018: $60,000.00**	**2016: 15,000.00** **2017: $30,000.00** **2018: $30,000.00**	**2016: $67,500.00** **2017: $121,000.00** **2018: $142,000.00**

b. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients:

65% U.S Clients.

Hunting Policies

a. List the expertise required for the company's professional hunters (i.e. abilities and experience):

- **Professional hunters need to have people skills.**
- **Professional hunters need to have medical skills.**
- **Professional hunters need to have mechanical skills.**
- **Professional hunters need to have good knowledge of Fauna and Flora.**
- **Professional hunters must undergo a minimum of 3 years practical training in the hunting of dangerous game. They are encouraged to do their apprenticeships with as many fully licensed pro hunters as they can, they are also encouraged to do it in as**

many hunting blocks as they can, this is for them to get different ideas and broaden their knowledge in the selection and follow up dangerous game in different conditions.

b. Are there age/sex requirements for take of trophies? If so, please describe how this is enforced for each species (attach methodology if available): **Yes,**

- **The outfitter has also been following an age based off take approach since the re-introduction of Lion and Leopard trophy hunting in Zambia, the company has cited 7 years as the benchmark for the minimum age of cats to be harvested. The company also insists that the professional hunters be very conservative when estimating ages of cats to be hunted, as a result many cats are passed up before the correct speciment that meets the criteria is found.**
- **It is company policy to harvest mature males from different zones of the hunting block rather than from the same parts of the hunting areas.**
- **Lion ageing is based on a few factors:**
  - i. **Blackness of the nose needs to be 80% black or more to be of age.**
  - ii. **Facial scaring the more the lion is scared than its older.**
  - iii. **The slack jaw indicated an old lion.**
  - iv. **Professional hunters must look at the lion teeth if they are short and yellow that means the lion is old.**

c. Are there hunt return forms that must be reported to officials? If so, please include a copy of these forms or confirmation of their receipt for the past 3 years: **Yes, attached is the Lion and Leopard hunt return form and the Elephant ESI form.**

Other information

Please provide a narrative of other enhancement information about the operation, such as any additional hunting policies, maintenance of the concession, management activities, research, community involvement and outreach, etc.

- **Baobab Safaris Ltd has made it mandatory for all its professional hunters to take available online refresher training courses for aging predators to keep them abreast with international standards on aging Lions and Leopards.**
- **From 2015 to date, 10 boreholes have been serviced and drilled to provide clean drinking water.**
- **Construction is at the planning stages for another safari camp to be built in the area that is meant to be used for used for consumptive and non-consumptive tourism activities, as a means of Job Creation and Increased Revenue for all Stakeholders.**
- **Sensitising community members particularly at grass root level of the benefits of Safari hunting and conservation.**

Operator Enhancement Questionnaire

- Every year the community endeavours to select and train between 5 and 10 new wildlife scouts that are employed within the Munyamadzi Corridor and North Luangwa conservation project area that this G.M.A is part of.
- Land use plans and general management plans are currently being finalised for the G.M.A, this is to reduce habitant loss, to avoid silting of the rivers, to reduce human - animal conflicts.
- Zambia Carnivore programme and Frankfurt Zoological Society have got Lions, Wild dogs and Elephants collared that roam these areas and data sharing of sightings and pictures from camera traps as well as conventional cameras are shared by our professional hunters, this data sharing is proving to be useful to the success of these research projects.

I declare that the foregoing is true and correct.

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name		1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Bailey		Brian		
2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address	
(b) (6) [redacted]		---	cindi.rulon@procargousa.com	

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b) (6) [redacted]				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Roswell	New Mexico	88203	Chaves	USA
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
Same---				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Pro Cargo- attn: Cindi Rulon -- enclosed FED EX envelope
   15619 Morales Rd. Houston, Texas 77032

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Cindi Rulon- 281-220-3176 – cindi.rulon@procargousa.com

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

Lion-- Panthera Leo

b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

Upper Lupande, South Luangwa, near Mfuwe, Zambia- GPS S13 01 54.08 S and 31 53 04.97 E

b. Date wildlife is to be hunted:

July-August 2019

c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

Jason Stone of Stone Hunting Safaris

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

- NOT HUNTED YET -

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: Trophy Trackers Consult.
Address: P O Box 39131
City: Lusaka, 10101
State/Province: Zamiba
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Operator Enhancement Report attached.....

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

The 28 day Safari hunt will cost $265.000. This includes 19 trophies and $160,000. in Daily Fees and Government Fees -- see attached report to see that these funds are used for anti-poaching efforts,scouts, camp employees from the community.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

See Attached Enhancement Report-------

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or ~~taxidermist~~ applying on behalf of a U.S. hunter or ~~foreign nation~~al, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: 02/22/2019

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: _____ Date: _____

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force
Operator Enhancement Questionnaire

v.5/8/18

1. Name of area operator: **LUPANDE GMA**

   a. Years in business: **THREE YEARS**

   b. Name of company conducting hunt: **WESTGATE PROPERTIES LTD**

2. Name of concession: **UPPER LUPANDE GMA** Size in km²: **1,226 KM2 (LUPANDE)**

   a. Land tenure: __ Government lease **X** Community __ Private ranch __ Private conservancy

   b. Length of concession agreement: **SEVEN YEARS** Can it be renewed? **X** Yes __ No

   c. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain: **YES WE ARE SUPPOSED TO PROVIDE A REPORT ON THE PLEDGES WE HAVE DONE TO THE COMMUNITY AND FUNDS THAT HAVE BEEN SPENT ON LAW ENFORCEMENT TO CURB POACHING IN THE AREA.THIS REPORT IS TAKEN INTO ACCOUNT AT THE TIME OF RENEWING THE CONCESSION IF WE WERE CONSISTENT DURING THE SEVEN YEARS TENURE**

   d. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city: **NEAREST TOWN IS MFUWE**

   e. If the concession borders a national park, please provide the park name: **SOUTH LUANGWA NATIONAL PARK AND NSEFU NATIONAL PARK**

   f. Description of general and distinctive habitat features and any water features: **HABITAT INCLUDES SAVANNA GRASSLANDS, MOPANE WOODLANDS, LAGOONS AND THE LUANGWA RIVER FLOWS THROUGH THE GMA**

3. Are there any communities living in the concession? **X** Yes __ No

   a. If so, estimated number of people or villages in the concession? **ABOUT 250 PEOPLE ONLY IN ONE VILLAGE IN THE GMA**

4. Are there communities bordering this concession? **X** Yes __ No

   a. If so, estimated number of people or villages around the concession? **THE POPULATION IS SPARSE AROUND THE GMA**

5. Relevant game populations in the concession:[1]

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	**ABUNDANT**	**600 AND ABOVE**	**UPWARD**	**PATROL DATA AND OBSERVATIONS**
Lion	**FREQUENT**		**UPWARD**	**-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA**
Leopard	**FREQUENT**		**UPWARD**	**-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA**
Prey species	**ABUNDANT PREY BASE**	**ABUNDANT**	**UPWARD**	**-TRAIL CAMERAS -OBSERVATIONS- -PATROL DATA**

6. Total employment number: **25 PERMANENT EMPLOYEES AND 50 CASUALS BEGINNING OF THE SEASON FOR CAMP BUILDING AND OPENING UP THE ROADS.**

   a. Please identify the number and type of all employees:

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	FOUR	NONE
Trackers	FOUR	FOUR
Anti-poaching scouts/rangers	TWELVE	TWELVE
Other anti-poaching	THREE	THREE
Cooks/housekeepers	TEN	TEN
Community coordinators	ONE	ONE
Managers	ONE	NONE
Biologists	NONE	NONE
Others: _____SKINNERS_____	THREE	THREE

7. Number of staff employed in the off-season: **FIVE (5)**

a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	12	12	**THROUGHOUT THE YEAR**
Managers	1		
Maintenance	2		
Road opening/construction	30	25	**BEGINNING OF THE SEASON**
Community relations personnel	2	2	
Others: _____	NONE		

8. Anti-poaching efforts:[2]

a. Number of anti-poaching staff: **TWELVE**

b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? **BOTH**

KNOW ALL MEN BY THESE PRESENTS: That x BRIAN BAILEY (Full Name of Person), residing at x (b) (6) [redacted] ROSWELL NM 88203 hereby constitutes and appoints each of the following persons - John Rulon CHB may act through any of its offices or any employees with Power of Attorney on file with this licensed broker as required by the Regional Commission of Customs as a true and lawful agent and attorney of the grantor named above for and in the name, place, steed of said grantor from this date and in all Customs Districts, and in no other name, to make, endorse, sign, declare, or swear to any entry, withdrawal, declaration, certificate, bill of lading, or other document required by law or regulation in connection with the importation, transportation, or exportation of any merchandize shipped or cosigned by or to said grantor; to perform any act or condition which may be required by law or regulation in connection with such merchandize; to receive any merchandize deliverable to said grantor: To make endorsements on bills of lading conferring authority to transfer title, make entry or collect drawback, and to make, sign, declare, or swear to any statement, supplemental statement, schedule,, supplemental schedule, certificate of delivery, certificate of manufacture, certificate, and delivery abstract of manufacturing records, declaration of proprietor on drawback entry, declaration of exporter on drawback entry, or any other affidavit or document which may be required by law or regulation for drawback purposes, regardless of whether such bill of lading, sworn statement, schedule, certificate, abstract, declaration, or other affidavit or document is intended for filling in any customs district. To sign, seal, and deliver for and as the act of said grantor any bond required by law or regulation in connection with the entry or withdrawal of imported merchandise or merchandise exported with or without benefit of drawback, or in connection with the entry, clearance, lading, unlading or navigation of any vessel or other means of conveyance owned or operated by said grantor, and any and all bonds which may be voluntarily given and accepted under applicable laws and regulations, consignee's and owners declarations provided for in section 485, Tariff Act of 1930, as amended, or affidavits in connection with the entry of merchandise: To sign and swear to any document, and to perform any act that may be necessary or required by law or regulation in connection with the entering, clearing, lading, unlading, or operation of any vessel or other means of conveyance owned or operated said grantor. To authorize other Customs Brokers to act as grantor's agent; to receive, endorse and collect checks issued for Customs duty refunds in grantors name drawn on the Treasurer of the United States; if the grantor is a nonresident of the United States, to accept service of process on behalf of the grantor. And generally to transact at the customhouses in said district any and all customs business, including making, signing, and filling of protests under section 514 of the Tariff Act of 1930. In which said grantor is or may or may be concerned or interested and which may properly be transacted or performed by an agent and attorney, giving to said agent attorney full power and authority to do anything whatever requisite and necessary to be done in the premises as fully as said grantor could do if present and acting, hereby ratifying and confirming all that the said agent and attorney shall lawfully do by virtue of these presents; the forgoing power of attorney to remain in full force and effect until notice of revocation in writing is duly given to and received by the District Director of customs of the district aforesaid. If the donor of this power of attorney is a partnership, the said the power shall in no case have any force or effect after the expiration of 2 years from the date of its execution. Or until revoked. Pursuant to 19 CFR 111.36(a), election is made waiving the right to receive invoices, supporting documents and correspondences from John Rulon CHB , who is directed to forward all documents and inquiries concerning our Imports to their customs brokerage services, to our freight forwarder, who will pay John Rulon CHB, for duties, and services performed on our behalf. It is understood the right to revoke said waiver is continuing.

Customs Rules on Discharge of Importers Liability for Duties

The U.S. Customs Service has issued a final amendment of the regulations to provide an alternative procedure for an Importer record to pay duties on imported merchandise through a licensed customhouse broker. Present rules provide for the payment of duties to Customs by a broker on behalf of the importer. Under the alternative procedure, the Importer may elect to submit to the broker a separate check or bank draft for the duties payable to the "U.S. Customs Service". The broker would then deliver the Importer's check or bank draft to Customs. The new rule also requires brokers to provide written notification to their clients, advising that if I the client is an Importer of record, payment to the broker will not relieve the client of liability for Customs charges in the event that the charges are not paid by the broker. Brokers will be required to provide this notification to all active clients annually during the month of February. Additionally, brokers will be required to provide such Inform(b) (6) [redacted] effective date of the new rule. These amendments are effective as of September 27, 19

Application # 30488D / lion import / Brian Bailey

Cindi Rulon <Cindi.Rulon@procargousa.com> Wed, May 22, 2019 at 4:37 PM
To: "Vargas, Darcy" <darcy_vargas@fws.gov>

Dear Ms. Vargas,

I attached another page 4 of this application which I added more information. Mr. Bailey has not hunted yet so he has not been issued a hunt license yet. They will issue it to him when he arrives in Zambia.

Please add this information to the application.

Best Regards,
Cindi Rulon

Vargas, Darcy <darcy_vargas@fws.gov>

Application # 30488D / lion import / Brian Bailey

Cindi Rulon <Cindi.Rulon@procargousa.com> Wed, May 22, 2019 at 5:42 PM
To: "Vargas, Darcy" <darcy_vargas@fws.gov>

Hi Ms. Vargas,

Hunters have to prepay to book their hunts. They may pay from 6 months to 1 year prior to the hunt. Hunting licenses are not issued until the hunter arrives into the country for the hunt.

[Quoted text hidden]

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). NOT HUNTED YET - NO LICENSE ISSUED YET.

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name:
Business Name: Trophy Trackers Consult.
Address: P O Box 39131
City: Lusaka, 10101
State/Province: Zamiba
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

Operator Enhancement Report attached.....

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

The 28 day Safari hunt will cost $265.000. This includes 19 trophies and $160,000. in Daily Fees and Government Fees -- see attached report to see that these funds are used for anti-poaching efforts,scouts, camp employees from the community.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

See Attached Enhancement Report------

Vargas, Darcy <darcy_vargas@fws.gov>

Application # 30488D / lion import / Brian Bailey

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 4:13 PM
To: cindi.rulon@procargousa.com

Dear Ms. Rulon,

Ref: 30488D; Import of Mr. Brian Bailey's lion trophy, from Upper Lupande GMA, South Luangwa, Zambia, to be taken between July 2019 through August 2019.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. Please provide copies of the Zambia licenses/permits authorizing Mr. Bailey's lion hunt within Upper Lupande GMA.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office by June 6, 2019 (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

Application # 30488D / lion import / Brian Bailey

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 5:22 PM
To: Cindi Rulon <Cindi.Rulon@procargousa.com>

Dear Ms. Rulon,

Ref: 30488D

The application indicates that money was already paid for a hunt. Therefore, it seems as if a license should have already been issued. However, we are not completely clear on when Zambia issues licenses in relation to hunt dates. That said, regardless of when Zambia issues their licenses, according to our regulations, we can not have an incomplete application open longer than 45 calendar days and without a copy of Mr. Bailey's licenses, his application remains incomplete. Therefore, please ensure to provide a copy of his licenses prior to June 6, 2019. If they are not received by that date, we will have to administratively close Mr. Bailey's application. Once closed, we could not re-open it. A new application and new fees would have to be submitted for the request.

Dear Ms. Rulon,

Ref: 30488D

Your email, sent at 10:09 A.M. (Eastern Time) today, states that the email includes a copy of Brian Bailey's Zambian hunting license. However, the email does not contain such attachment. Instead, the document attached to your email is a copy our database's automatic message letting you know that the referenced application was received in this office on March 3, 2019.

Also, please be aware that you were notified on several occasions that a complete application was required to be sumitted prior to June 6, 2019. Therefore, I will forward your request to my supervisor to determine if a special exemption can be made. However, before I do so, please reply to let me know if you are able to provide a copy of Mr. Bailey's hunting license, inlcuding Zambia's authorization to take a lion (Zambia typically issues a licese to hunt within a particular area and a separate license that lists the species authorized to take).

Respectfully,

Darcy Vargas

Enhancement Finding

Applicant: Brian Bailey (PRT-30488D)

Summary

Brian Bailey submitted an application to import one male African lion (*Panthera leo melanochaita*), which he hunted July 13, 2019, from Zambia, for the purpose of enhancing the propagation and survival of the species in the wild. This subspecies of African lion is listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and is listed as threatened under the U.S. Endangered Species Act (Act or ESA). As such, export of a hunted African lion out of Zambia requires the prior issuance of a CITES export permit from the CITES Management Authority of Zambia; and import into the United States requires the prior issuance of an ESA import permit by the U.S. Fish and Wildlife Service (Service). The Service, therefore, may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the propagation or survival of the species in the wild.

After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and information received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken on July 13, 2019, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

U.S. Governance of the Lion:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion (79 Fed. Reg. 64472.). On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service

published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r) (80 Fed. Reg. 79999). The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application demonstrating that the activity meets the requirements for issuance under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in future findings for import of sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

Our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Bailey's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Upper Lupande Game Management Area (GMA), in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service in

making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.,* population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all

relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Bailey's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we review a number of factors. Some of the factors we considered in making this finding include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country.

Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives for local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. In this finding, we examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the proposed import of this trophy in accordance with the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how Mr. Bailey's participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range country and interested

parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for our finding:

In February 2020, the Service received an updated "Enhancement and Non-detriment Finding for African lion Sport Hunting in Zambia" from Zambia's Department of National Parks and Wildlife (DNPW). This updated finding notes, "since the re-introduction of trophy hunting for lion in 2016, the DNPW is implementing an adaptive management strategy that limits the off-take of lions. To support this approach, it has experimented in implementing a robust age-based monitoring programme that will become binding for the 2020 hunting season." Prior to this February 2020, update, in February 2016, the Service sent a letter to Zambia's Wildlife Authority with questions about the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether the management addresses the three main threats that were identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. In the letter, the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when considered in conjunction with the Service's permit issuance criteria, aids the Service in making the required enhancement findings for permitting importation of sport-hunted lion trophies. In response to this letter, Zambia's DNPW (DNPW 2016), provided documentation, dated May 5, 2017, describing Zambia's lion population and management plans.

Since 2016, the Service has met with officials from Zambia multiple times to receive updated information and clarify questions the Service has had on the status of and management of lions in Zambia with respect to imports of sport-hunted lion trophies. For example, more recently, Service representatives met with Zambian officials in February, 2020, at the annual Safari Club International Convention in Reno, Nevada; November, 2019, at the 17th African Wildlife Consultative Forum in Zimbabwe; and November 2018, at the 16th African Wildlife Consultative Forum in Uganda.

The documentation the Service received from DNPW in February, 2020, and May, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, information received from interested parties, and Mr. Bailey's application are the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS), which was responsible for the protected area network. In 1999, the Government of

Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capacity, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with its law enforcement capabilities due to inadequate resources.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Zambia's vision as stated in the Strategy is to have a secure, viable, and well-managed wild population of lions that will support conservation of biodiversity in harmony with human development. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies and projects that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW 2016). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work-time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. Under DNPW, *the Wildlife Law Enforcement Unit* currently has a staff compliment of 1,525 Wildlife Police Officers covering an estimated 236,376 km^2 of wildlife estates (equivalent to approximately 155 km^2/Wildlife Police Officer) (DNPW 2020, p. 18). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under Zambia's Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition, Zambia is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including making findings by the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. Zambia has provided to us a copy of its May 5, 2016, non-detriment finding for lions, which it updated in January, 2020. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." The Scientific Authority further explained that its positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa. As of 2020, additional genetic analyses are also being conducted by Zambia Lion Project, including assessments that will help inform DNPW in future efforts to translocate lions among different

regions in Zambia in order to re-establish lion populations in historic lion range e.g., West Lunga complex.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). In 2018 the Zambia Carnivore Programme (ZCP 2018) intensively monitored 15 prides and 15 coalitions totaling 173 lions across Northern and Central Kafue in 2018 extending the study area to the remote Kasonso-Busanga GMA. It is believed that the lion population in this ecosystem is stable or possibly increasing (DNPW 2020, p. 11). A report by the Democratic staff of the House Committee on Natural Resources concluded that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al*. 2016). As of 2016, Africa had the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by the year 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at

least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al*. 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts. Poverty and the necessity for rural people to obtain some income are the main drivers of bush meat poaching in Zambia. Since 2016, DNPW has continued to work with ZCP and Conservation South Luangwa (CSL) to mitigate snaring by-catch through intensive monitoring of collared wild dog and lion groups through ground, aerial and satellite/ GPS tracking, coupled with data-directed anti-snaring patrols, field-based veterinarians. In the Kafue ecosystem, DNPW worked with ZCP and Panthera through their newly-formed anti-poaching units, as well as, with hunting operators' anti-poaching units, which confirmed no reports of snared carnivores in 2018, with one lion treated for an old snare injury.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe had been imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions was a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016). In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding, breeding, and commercial use (i.e. walking and petting) of captive-bred lions is banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

NGOs are also a source of supplemental revenue sources. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Although the success of the moratorium cannot be fully assessed, there is some information available that indicates that lion populations are stable or increasing (DNPW 2020, pp. 10-11).

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2020, 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting

blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelope system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes are only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2020, 2016). As of 2018, the quota was reduced to 31. The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW has transformed the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The guidelines were revised in 2019 from those developed in 2016 for lion and in 2018 for lion and leopard and are meant as an instrument to provide technical guidance on the scientific methodologies to be used on lion aging and on some methodologies for lion and leopard hunting and status monitoring. These guidelines also incorporate details pertaining to the monitoring of leopard hunting and status. The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Since the adoption of this practice in 2016, DNPW has introduced a legally binding regulation that will enter into force for the 2020 season (DNPW 2020, p. 42). The Guidelines shall be regularly

updated to reflect advances in scientific knowledge in order to guide technically the implementation of the regulations. The new management approach to Lion hunting in Zambia is based on three pillars: i) a conservative, precautionary quota, well below one of the recommended thresholds for sustainability, ii) an age–based harvest limit and strong monitoring of lion offtakes, and iii) significant and direct community benefits. This will ensure that lion hunting in Zambia is sustainable and does not negatively affect the population. In addition, in the hunting concession agreements signed in 2015, no hunting outfitter has been guaranteed a lion on quota. It is made clear that the quota for any species shall be based on scientific methods including the latest available survey and aging techniques.

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. DNPW also receives funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.

- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and permit issuance criteria (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated its desire to maintain the long-term conservation of its lion population with its 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that it has established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy-hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has identified how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit</u>:

As described under <u>Current Lion Status in Zambia</u> above, Zambia has taken strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2020, 2016). Monitoring, local community benefits, human lion-

conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Bailey's hunting and subsequent import of this lion provides an indirect benefit to wild populations by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species is positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion trophy would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Bailey

will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Bailey, in managing the lion populations in GMAs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency, they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Bailey.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion trophy will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Brian Bailey.**

Intra-Service Section 7 Biological Evaluation Form

Originating Person: Amy Brisendine Date: April 7, 2020

Telephone Number: 703-358-2005

I. **Service Program and Geographic Area or Station Name**: Branch of Permits, Division of Management Authority, International Affairs

II. **Flexible Funding Program** (e.g. Joint Venture, etc.) if applicable: N/A

III. **Location**: 5275 Leesburg Pike, MS: IA, Falls Church, VA 22041-3803

IV. **Species/Critical Habitat**:

Southern and Eastern African lion (*Panthera leo melanochaita*)

Critical Habitat: N/A

V. **Project Description:** Describe proposed project or action or, if referencing other documents, prepare an executive summary (attach additional pages as needed):

As described in the permit application, 30488d, Brian Bailey, has requested a permit to import a trophy of one lion that he lawfully hunted in Zambia. The import is for personal purposes.

VI. **Determination of Effects:**

(A) Description of Effects: Describe the action(s) that may affect the species and critical habitats listed in item IV. Your rationale for the Section 7 determinations made below (B) should be fully described here.

Issuance of the requested import permit by the Branch of Permits will result in the importation of one personally sport-hunted lion that has been lawfully taken in Zambia on the date specified in the permit application.

The trophy will be accompanied by the required CITES export permit issued by the CITES Management Authority of Zambia.

The requestd U.S. Federal Fish and Wildlife import permit does not authorize the killing of an African lion; the authorization to hunt and lawfully take a lion is under the purview of the government of Zambia. Therefore, the proposed action of issuing a Federal Fish and Wildlife import permit for this lawfully hunted lion will not directly or indirectly affect individuals of listed or proposed species or designated/proposed critical habitat of such species.

(B) Determination: Determine the anticipated effects of the proposed project on species and critical habitats listed in item IV. Check all applicable boxes and list the species (or attach a list) associated with each determination**.**

Determination

No Effect: This determination is appropriate when the proposed project will not directly or indirectly affect (neither negatively nor beneficially) individuals of listed/proposed/candidate species or designated/proposed critical habitat of such species. **No concurrence from DSA/ESFO required.** **X**

May Affect but Not Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to cause insignificant, discountable, or wholly beneficial effects to individuals of listed species and/or designated critical habitat. **Concurrence from DSA/ESFO required.** _____

May Affect and Likely to Adversely Affect: This determination is appropriate when the proposed project is likely to adversely impact individuals of listed species and/or designated critical habitat. **Formal consultation with DSA/ESFO required.** _____

May affect but Not Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project may affect, but is not expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Concurrence from DSA/ESFO optional.** _____

Likely to Jeopardize candidate or proposed species/critical habitat: This determination is appropriate when the proposed project is reasonably expected to jeopardize the continued existence of a species proposed for listing or a candidate species, or adversely modify an area proposed for designation as critical habitat. **Conference with DSA/ESFO required.** _____

Permittee:
BRIAN BAILEY
(b)(6)
ROSWELL, NM 88203
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2019 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zambia for the 2019 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Shea	Christopher	Michael	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Shelby Township	MI	48315	Macomb	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Signature of applicant/Principal Officer for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy)

OMB Control No. 1018-0093
Expires 08/31/2020

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Lion

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

      Chewore Safari Area - North

   b. Date wildlife was hunted:

      04-Oct-2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Big Five Safaris (Pvt) LTD, HOP0143, Chewore North Safari Area, 54 Edinburg Rd., Vainona, Borrowdale - P O Box CY 1949, Harare

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Trophy Consultants International, 4 Josiah Chinamano Road
Belmont, Bulawayo, Zimbabwe

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name:
Business Name:
Address:
City:
State/Province:
Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

OMB Control No. 1018-0093
Expires 08/31/2020

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

    Applicant's signature (b) (6) _____ Date: 02/18/19

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name		1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Lott		James	Dan	.
2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address	
(b) (6)				

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b) (6)				
1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Roswell	GA	30075	Fulton	U.S.
2.a. Mailing address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U S. FISH AND WILDLIFE SERVICE in the **amount of $100.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee--attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Same

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

   Panthera leo - Lion

   b. Sex (if known).

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   South Africa - Limpopo - Cosmopolite (Conservancy)
   Nearest town - Lephalale
   LP0619

   b. Date wildlife is to be hunted: August 2, 2019 to August 9, 2019

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   Riaan Vosloo
   Shingani Safaris
   www.shingani.com

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

   Not yet taken

   b. Date wildlife was hunted:

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). Not yet hunted

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
Name:
Business Name: Troplex Taxiderny
Address: 4 Hendrik Pistorius Ave | admin@troplex.co.za
City: Lephalale
State/Province:
Country, Postal Code: South Africa 0556

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

a. Do you have any information regarding the population status or trend data on the species hunted?
No

b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?
Trophy fee to be paid - $ 15,000
According to the outfitter the lion concession supports 25 families - 14 people directly employed by him. There are more game per square mile than anywhere else.

c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?
See above
Most of the employees are involved in hunting and managing habitat for various game.

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

Applicant's signature: (b) (6) [redacted] Date: 3/1/2019

Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

LIMPOPO PROVINCE

1. This permit does not absolve the holder thereof in obtaining any other permit, licence, certificate or document as may be required by any other relevant legislation from any province or country.
2. This permit must be signed by the permit holder and must be in his/her possession for the duration of the hunt.
3. This permit does not allow the hunting with a bow and arrow or any other prohibited method unless specified on the permit.
4. This permit does not authorise the hunting during the night, unless specified on the permit
5. This permit does not allow the hunting of listed species which is under the influence of a tranquilising, narcotic, immobilising or similar agent,
6. If a wounded animal crosses into a neighbouring country, province or property the Department as well as the country where the animal entered into must be notified within 24 hours
7. No driving of listed species for the purpose of hunting is authorised.
8. The Department reserves the right to nominate an official to be present during any or all hunts conducted in accordance with this permit.
9. The outcome of the hunt in the case of TOPS threatened species must be reported within two working days after the listed species was hunted, the hunt terminated or in the case where the hunt was not successful. This office reserves the right to inspect the hunting sight or any relevant product of such hunt.
10. In the case where trophies will not be exported from RSA the permit holder must immediately apply for a TOPS Possession Permit in the case of TOPS species
11. Elephant tusks must be marked by an Environmental officer
12. A TOPS Ordinary permit is r equired to convey any part of any TOPS species hunted to any facility within the country, except a taxidermy
13. The Department may require scientific information or material from the animal hunted.
14. The non-compliance with the permit details as well as these special conditions will result in criminal charges and may influence the granting of similar permits to the permit holder.
15. Issued in terms of the Limpopo Environmental Management Act 2003, Act no. 7 of 2003.
16. An elephant/ crocodile may not be hunted next to the water's edge of an international border
17. In the case of dangerous game the minimum calibre requirement is a 375.
18. This permit does not absolve the applicant from conforming to the norms and standards for hunting
19. No put and take system of hunting is allowed
20. No animal may be hunted in a controlled environment
21. The use of dogs may only be used to flush birds or track wounded animals
22. All clients must be accompanied by a PH

Good afternoon Dan,

Thank you for your inquiry. Your application, #32568D, that was received on March 11, 2019, is currently under review. Please be aware that we have a significant number of applications pending, and we process applications in the order they are received in the office. The staff member working on your application has been notified of your inquiry. If there is a need for additional information or clarification on information provided in your application, the staff member will contact you directly.

Thank you,
U.S. Management Authority, Branch of Permits.
****

Please review the U.S. Fish and Wildlife Service's Office of Law Enforcement's webpage on importing and exporting commercial wildlife shipments. Contact the Office of Law Enforcement to see if your situation applies.

Wildlife (including parts and products) imported or exported from the U.S. must be declared to the U.S. Fish and Wildlife Service. Please contact the Wildlife Inspector at the appropriate designated port to learn the requirements for your shipment.

Contact USDA-APHIS to determine their quarantine and health certificate requirements for import and export. Visit their website or call the National Import Export Services (NIES) Call Center: 301-851-3300.

Please check with the CDC for their requirements.

Contact the State and foreign country to check on their requirements.

We encourage permit applicants to review our tips and reminders for completing applications.

We appreciate your time and consideration.

Subject: [EXTERNAL] Applica on #MA32568D-0

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Hello
It has been almost a year since my application was submitted. Authorities in South Africa have consistently indicated that lion is not on the cusp of being endangered.

So I respectfully request that my application can be approved so that shipment can be arranged. Thanks for your consideration.

Best regards,
Dan Lott

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Noland	Weldon	G	

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block; U.S. hunters must provide their U.S. address)

(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
Riverton	Utah	84065	Salt Lake county	United States

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE in the amount of $100, nonrefundable processing fee. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:
(1) Is raw, processed, or manufactured;
(2) Was legally obtained by the hunter through hunting for his or her personal use;
(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
(iii)The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

   Weldon Noland (b) (6) Riverton Ut. 84065

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Weldon Noland (b) (6)
   Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   Panthera Leo genus,Species (Lion)

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   Zimbabwe, Matendere Ranch, Save Valley Conservancy, Nyika Province, Masivngo (nearest city)
   19.992789 32.109837

   b. Date wildlife is to be hunted: August 21 2019 to Septmeber 09 2019

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:
   Save Safaris Mike Payne

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   N/A

   b. Date wildlife was hunted:

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so). I Have Not hunted yet

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

   Name: Mike Payne
   Business Name: Save Safaris
   Address: 54 Harare Dr.
   City: Chisipite
   State/Province: Harare
   Country, Postal Code: Zimbabwe

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted? No

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government? Trophy fee = $15000.00
      Hunting fee =$39600.00

      Total = $54600.00

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted? No

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy,** please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: (b) (6) [redacted] Date: 04-11-2019

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Conservation Force v.5/8/18
Operator Enhancement Questionnaire

1. Name of area operator: Save Safaris
   a. Years in business: 9 years
   b. Name of company conducting hunt: Save Safaris
   2. Name of concession: Matendere and mapari ranches Size in km²: +- 364
   a. Land tenure: __ Government lease __ Community __ Private ranch __ Private conservancy x
   b. Length of concession agreement: 10 years Can it be renewed? x Yes __ No
   c. Length of renewal, if applicable: 5 years
   d. Estimated total amount received in trophy fees last year, if applicable: $ 129200.00
   e. Are there any special obligations under the concession agreement such as annual reporting, poaching control, community investment, community employment, etc.? If so, please explain:
   annual aerial game count, own anti poaching units and conservancy anti poaching unit local employment where possible
   f. Please provide the concession location and nearest city. Please attach a map or maps with the boundaries marked and showing the nearest city:
   In the north of the Save Valley Conservancy. Masvingo
   g. If the concession borders a national park, please provide the park name: N/A
   h. Description of general and distinctive habitat features and any water features:
   Mapari has the Devuli and Save Rivers as a boundary, matendere has a large dam to provide water

3. Are there any communities living in the concession? __ Yes x No
   a. If so, estimated number of people or villages in the concession? Nil
4. Are there communities bordering this concession? x Yes __ No
   a. If so, estimated number of people or villages around the concession? +- 600 people
5. Relevant game populations in the concession:[1]

Species name	Relative Abundance (dense/avg./sparse)	Est. population	3-Year trend (up/ down/ stable)	How monitored?
Elephant	Dense	350	up	aerial surveys and scouts on the ground
Lion	Dense	80 - 90 (M + F)	up	
Leopard	Dense	60 - 70 (m + f)	up	Spoor surveys
Prey species	Dense	very large numbers	up	

6. Total employment number: 43
   a. Please identify the number and type of all employees:

2 management, 1 camp manager, 5 camp staff, 14 anti poaching, 2 tractor drivers, 6 trackers,13 general

[1] The new FWS import permit application form asks the applicant: "9. a. Do you have any information regarding the population status or trend on the species hunted?"

Type	Total number of this type	Number of this type who are local/from nearby communities
Professional Hunters	2	1
Trackers	6	6
Anti-poaching scouts/rangers	14	8
Other anti-poaching		
Cooks/housekeepers	5	5
Community coordinators	1	1
Managers	3	2
Biologists	0	
Others: _____	14	14

7. Number of staff employed in the off-season: 42

   a. Please identify the number and type of staff that are engaged when the season is not open:

Type	Total number of this type	Number of locals/from nearby communities	When employed?
Anti-poaching staff	20	14	all year
Managers	2	2	all year
Maintenance	6	6	all year
Road opening/construction	8	8	all year
Community relations personnel	1	1	all year
Others: Camp staff	5	5	all year

8. Anti-poaching efforts:[2]

   a. Number of anti-poaching staff: 14 - 20

   b. Are anti-poaching patrols conducted during the hunting season, off-season, or both? both

   c. Months during which anti-poaching patrols are conducted: all year

   d. Number of anti-poaching patrols per month: Always a team out daily

   e. Description of anti-poaching equipment, vehicles, etc.: toyota landcruiser mazda 4 x 4 pick up

   f. Who is responsible for organizing and coordinating anti-poaching from prevention through successful prosecution? The managers co ordinate with the local police and National Parks

   g. Do you offer rewards to poaching informants leading to arrest? x Yes __ No

   h. Do you offer rewards to poaching informants upon conviction? x Yes __ No

   i. Please describe the company's anti-poaching expenditures below. What currency are the expenditures given in? +- $48500.00 USD on average. This year we are replacing radios and equipment so it will be higher

[2] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers anti-poaching a "conservation benefit."

Type of expense	Spending 2015	Spending 2016	Spending 2017	Remarks
Salaries for anti-poaching scouts	29120.00	30000.00	40040.00	We also contribute to the Save Valley Conservancy anti poaching unit
Equipment				
Vehicles	2130.00	2300.00	14400.00	Another vehicle purchased 2017
Petrol Diesel	3000.00	3500.00	3500.00	
Rewards paid	1000.00	400.00	600.00	
Other: _____				
Other: _____				
TOTALS				

9. Anti-poaching results:

Category	2015	2016	2017	Remarks
Poaching incidents discovered	43	26	36	
Elephant carcasses observed				nil from poaching
Lion carcasses observed				nil from poaching
Leopard carcasses observed				nil from poaching
Ivory poachers arrested				nil from poaching
Meat poachers arrested	10	8	8	
Other poachers arrested				
Poachers convicted	10	8	8	
Snares/gin traps collected	460	330	250	no gin traps
Firearms confiscated	2	0	0	muzzle loaders
Vehicles confiscated	0	0	0	
Bicycles confiscated	1	0	0	
Boats/nets confiscated	1	0	0	net
Tusks recovered	0	0	0	
Other: _____				

10. Community investment:[3]

a. Does the company contribute money or goods/services to local communities? ✓ Yes __ No

b. If so, what percentage or amount is shared, how often, and why (e.g., required by law, required by contract, voluntary contribution)? Voluntary donations to local clinic/school

c. Does the company provide game meat to nearby communities? ✓ Yes __ No

d. If so, please estimate the amount and/or value of meat contributed in prior year and describe the meat contribution program: If elephant trophies are hunted up to 10 ton frsh meat delivered to surrounding community

e. If the company performs problem animal activities for surrounding communities (e.g., patrolling fields during the harvest, chasing away problem animals, conducting PAC hunts or PAC killings), please describe. PAC lion and elephant shot and chased back to the SVC. Occasionally lion darted and returned to SVC. PAC is a weekly occurance and lion pressure on the cattle around the svc is big

[3] The new FWS import permit application asks for activities that provide a "conservation benefit" to the species. The FWS considers community investment a "conservation benefit."

f. Please describe any consolation payments made to local residents damaged by game species. What currency are the expenditures reported in? Nil

Species	Damage caused	Consolation paid 2015	Consolation paid 2016	Consolation paid 2017
Elephant	SVC policy is not to pay compensation. Where possible to help with PAC or to chase the animals back into			
Lion	the conservancy			
Leopard				
Other				

g. Please describe any community projects paid for by the company. What currency are the expenditures reported in? USD

Type of project	Spending 2015	Spending 2016	Spending 2017	Remarks
Education (e.g., classrooms, offices)	Across the whole SVC around $50000.00 per year in donor and own funding			
Education (e.g., school fees, supplies)	as above			
Health (e.g., clinics, offices)	Donation of meat and medical supplies like bandages, maternity pads etc			
Health (e.g., medical salaries, equipment)				
Community scout salaries				
Other community anti-poaching	500	600	600	Payments to informers
Local government activities				
Water infrastructure improvements				
Sports teams funded	Soccer balls donated			
Construction materials donated	15000.00			Help with building a dam
Other: _____				
Other: _____				
TOTALS				

11. How many U.S. clients did the company have in the past three years, what percentage of the company's clients were from the U.S., and what fees did they pay? 90% from the US

	Hunting elephant	Hunting lion	Hunting leopard	Hunting all species
Number of U.S. clients	2015: 2 2016: 2 2017: 0	2015: 1 2016: 1 2017: 2	2015: 4 2016: 3 2017: 4	2015: 18 2016: 14 2017: 19

12. Approximate dollar amount and/or percentage of the company's revenue from U.S. clients:
90%

13. Other information: Please provide a narrative of other enhancement information about the operation, such as any special hunting policies (e.g., aging, size, resting areas), concession improvements (e.g., digging and maintaining boreholes, restocking), management activities, research, etc.

14. I declare that the foregoing is true and correct.

Signature: _____

Name: Melanie Payne Title: Public Officer

All trophies are aged by G Connear who is employed by the SVC. This has been ongoing for more than 10 years and quota is based on the number of animals hunted the previous year that are of the minimum recommended age or older. Penalty's on quota if underage animals are hunted. All properties on the SVC have water points fed either from boreholes or dams built by the concession holders. There is a number of research teams on the conservancy that study all the properties, there is the African wild dog foundation, large carnivore research done in conjunction with road counts for spoor and the Lowveld rhino trust that monitor the black and white rhino populations as well as provide assistance with anti poaching resources. There is also the Special Species Protection Unit which is paid for the by SVC and donors which does anti poaching with special emphasis on pangolins, rhino and elephant. This includes the use of a microlight, dog unit and several vehicles and motorbikes.

Subject: CITES Permit Application #37069D
Date: Thursday, August 13, 2020 6:19:42 PM

Hi Mr. Noland,

This email is in regard to your CITES permit application #37069D to import a lion trophy from Zimbabwe. On the application, it was indicated that the hunt was to take place between 8/21/2019 and 9/9/2019. Please provide the specific date that the lion was taken.

Please reply directly to this email with the requested information.

Thank you and let me know if you have any questions.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office ***within 45 calendar days of the date of this email****, your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.*

Thank you,

Jenna King

In Reply Refer to: FWS/AIA/DMA/PRT-02378D – Reconsideration

US Fish & Wildlife Service
5275 Leesburg Pike, MS:IA
Falls Church VA 22041-3803

Dear Mary Cogliano, Chief:

This letter is in response to your denial for my request of a permit number to import a sport-hunted trophy of one lion (Panthera leo melanochaita) I am requesting a reconsideration of my application on the below bases.

After reviewing your reply, it was brought to my attention that we had the incorrect permits and information on my application and after conferring with my guides I was able to obtain the correct permits that have been submitted and approved by the parks. I have also been advised that they reached out to USFW confirming that all the permits are now in the appropriate order. Please review the corrected information attached.

If you have any questions you can reach me at (b) (6) cell (b) (6) office or via email to (b) (6) additionally Christina Nicklas my office manger may also be able to help you with any questions, she can be reached at (b) (6) office or (b) (6)

Sincerely,

(b) (6)

Jason C. Webster

Type of Activity

IMPORT OF SPORT-HUNTED TROPHIES under Appendix I of the Convention on International Trade in Endangered Species (CITES) and/or U.S. Endangered Species Act (ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
Instructions on how to make your application complete and help avoid unnecessary delays are attached.

Section A: Complete if applying as an individual

1.a. Last Name	1.b. First Name	1.c. Middle Name/Initial	1.d. Suffix
Webster	Jason	C	

2. Date of Birth (mm/dd/yyyy)	3. Telephone Number	3.a. Alternate Telephone Number	4. E-mail address
(b) (6)			

Section B: Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution		1.b. Doing business as (DBA)	
2. Tax identification no.		3. Description of business, agency, Tribe, or institution	
4.a. Principal officer Last name	4.b. Principal officer First Name	4.c. Principal officer Middle name/initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

Section C: All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Houston	Texas	77036	Harris	USA

2.a. Mailing address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f.Country

Section D: All applicants MUST complete

1. Attach the **nonrefundable application processing fee** in the form of a check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee–attach documentation of fee exempt status as outlined in instructions [50 CFR 13.11(d)].

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50 Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and a (b) (6) y false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for a trophy that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:

- Is raw, processed, or manufactured;
- Was legally obtained by the hunter through hunting for his or her personal use;
- Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
- Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
  - i. Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
  - ii. The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
  - iii. The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 4-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. Name and address where you wish the permit to be mailed, if different from page 1. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via the U.S. Postal Service.

   Same as page 1

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Same as applicant or Christina Nicklas (b) (6) [redacted]

3. Disqualification factor. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☒ No ☐ Yes

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court; and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Lion - Leo Melanochaita

   b. Sex (if known). Male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife was removed from the wild:

Upper Lupande, GPS Coordinates 13.00598, 32.08455

   b. Date wildlife was hunted:

July 21, 2018 - Aug 10, 2018

c. Name of hunting outfitter, safari company, or professional hunter you hunted with:

Westgate Properties Ltd

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the foreign export/re-export document]:

Mike Borman, Bangweulu Taxidermy Limited, 4142/K Chidwema Rd New Kasama Lusaka Zambia

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from **Namibia**, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].
   Name: Mike Borman
   Business Name: Bangweulu Taxidermy Limited
   Address: 4142/K Chifwema Road
   City: New Kasama
   State/Province: Lusaka, Zambia
   Country, Postal Code:

9. For species listed under the U.S. Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service (Service) must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful for our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   Unknown

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, local community, or government?

   Unknown

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or landowner that provide a conservation benefit to the species being hunted/species hunted?

   Unknown

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national, provide documentation to show you have a Power of Attorney to act on your client's behalf and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying for the import of an elephant trophy, I understand that my client may import no more than two elephant trophies in one calendar year.

    Taxidermist/Broker's signature: _____ Date: _____

11. If you are the hunter applying to import your own trophy, please read and sign the following statement:

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit). If applying to import an elephant trophy, I understand that I may import no more than two elephant trophies in one calendar year.

    Applicant's signature: (b) (6) Date: 4-15-19

    Be aware that there may be additional permitting or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign governments to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

12. All international shipments must be through a designated port. A list of designated ports (where an inspector is posted) is available from **the list of designated ports**. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

Re: Applications for Import of Sport-Hunted Trophies

Dear Chief Van Norman:

Enclosed please find four applications to import sport-hunted trophies.

- The first applicant is hunting a lion in Namibia at Kalahari Game Lodge, a 400 km^2 property that borders the Kgalagadi Transfrontier Park. This property maintains an increasing population of wild lion. The property is fenced on one side, and species must be managed to conserve the biodiversity and maintain the lion population and habitat quality. The property has identified two lion this year suitable for hunting. The hunting will generate revenues to be reinvested in wildlife management, poaching control, and local employment. Please see the attached letter from the landowner, and please consider this information and the information submitted by Namibia's Ministry of Environment and Tourism in making a positive enhancement finding for this applicant.
- The second applicant is hunting an African lion in the Selous Game Reserve, Tanzania, with Rungwa Game Safaris. We previously provided an enhancement report from Rungwa Game Safaris and have enclosed it again for ease of reference. This company invests heavily in anti-poaching and community livelihoods. Its areas maintain healthy lion populations, and the company abides by a six-year age restriction on trophies. Please consider the enhancement report and the other information provided by Tanzanian authorities and Conservation Force in making a positive enhancement finding for this applicant.
- The third applicant is hunting elephant and lion with Mopane/Nyamvu Safaris in Zambia in 2018 and 2019, respectively. We previously submitted operator enhancement reports from these companies and have enclosed the reports again for ease of reference. These companies together invest over $61,000/year in anti-poaching, $45,000/year in community projects, and $30,000/year in game meat distributed to rural villages. In their concessions, the companies are securing elephant populations and lion prey species from poaching. The companies are recovering populations that had suffered from bushmeat poaching. The companies are enhancing the survival of elephant and lion by addressing the primary threats to each species. Please consider the enclosed enhancement reports and the information provided by Zambian authorities and Conservation Force in making a positive enhancement finding for each of these applications.

Please do not hesitate to contact us if you have questions about these applicants or need further information.

Sincerely,

Regina Lennox

Type of Activity:

IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Cunningham	Samuel	James	na

2. Date of birth (mm/dd/yyyy)	3. Telephone number	3.a. Alternate telephone number	4. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes) (If Broker or Taxidermist is applying on behalf of a foreign national, provide Broker or Taxidermist's name and address in this block, U.S. hunters must provide their U.S. address)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
Amarillo	Texas	79124	Potter	USA

2.a. Mailing Address (include if different than physical address, include name of contact person if applicable)
same

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country
same	same	same	same	same

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete ar[redacted]ge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES and/or ESA)*

Note 1: This form should be used to request authorization to import trophies of species listed on Appendix I of CITES and/or as threatened or endangered under the ESA (examples include elephants, lions, cheetahs, wood bison, and markhor).

PLEASE USE FORM 3-200-19 FOR SOUTHERN AFRICAN LEOPARD TROPHIES AND SOUTHERN WHITE RHINOCEROS TROPHIES TAKEN IN NAMIBIA.

Note 2: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but were unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52) and return your original permit with that form.

Note 3: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 4: *Sport-hunted trophy* is defined at 50 CFR 23.74 as follows: *Sport-hunted trophy* means a whole dead animal or a readily recognizable part or derivative of an animal specifically identified on the accompanying CITES document that meets the following criteria:
(1) Is raw, processed, or manufactured;
(2) Was legally obtained by the hunter through hunting for his or her personal use;
(3) Is being imported, exported, or re-exported by or on behalf of the hunter as part of the transfer from its country of origin ultimately to the hunter's country of usual residence; and
(4) Includes worked, manufactured, or handicraft items made from the sport-hunted animal only when:
(i) Such items are contained in the same shipment as raw or tanned parts of the sport-hunted animal and are for the personal use of the hunter;
(ii) The quantity of such items is no more than could reasonably be expected given the number of animals taken by the hunter as shown on the license or other documentation of the authorized hunt accompanying the shipment; and
(iii)The accompanying CITES documents (export document and, if appropriate, import permit) contain a complete itemization and description of all items included in the shipment.

Note 5: Certain hunting trophies, including elephants, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-6 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

---

1. Name and address where you wish the permit to be mailed, **if different from page 1**. If you would like expedited shipping, please enclose a self-addressed, pre-paid, computer-generated, courier service airway bill. If unspecified, all documents will be mailed via regular mail through the U.S. Postal Service.

   Same

2. Who should we contact if we have questions about the application (name, phone number, and e-mail)?

   Applicant or attorneys with Conservation Force, 504-837-1233, cf@conservationforce.org

3. Have you or your client (if a broker applying on behalf of your client), been assessed a civil penalty or convicted of any criminal provision of any statute or regulation relating to the activity for which the

application is filed; been convicted, or entered a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act; forfeited collateral; OR are currently under charges for any violation of the laws mentioned above?

No X Yes ____

If you answered "Yes" to Question 3, provide: a) the individual's name; b) date of charge; c) charge(s); d) location of incident; e) court, and f) action taken for each violation. Please be aware that a "Yes" response does not automatically disqualify you from getting a permit.

na

4. For each trophy to be imported, provide:

   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      Panthera leo (lion)

   b. Sex (if known). male

5. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following information:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where wildlife is to be taken from the wild:

   South Luangwa, Zambia in Nyamvu and West Petauke GMA, Nyimba is closest town

   b. Date wildlife is to be hunted: 09/23/2019-10/15/2019

   b. Name of hunting outfitter, safari company, or professional hunter you will be hunting with:

   WH van Noordwyk, Nyamvu Safaris and Mopane Safaris

6. **IF THE TROPHY HAS ALREADY BEEN TAKEN**, please enter the following:

   a. Country and place (area, region, GIS coordinates, ranch, conservancy, management area, or hunting block, AND nearest city) where trophy was removed from the wild:

   na

   b. Date wildlife was hunted: na

   b. Name of hunting outfitter, safari company, or professional hunter you hunted with:

   na

   c. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export document]:

   na

7. Please provide a copy of any applicable foreign government permits or licenses that were required to remove this animal from the wild (if you have not hunted yet and do not currently hold any such permits or licenses, please indicate so).

8. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you **must** provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will appear on the face of the export permit].

Name: Douglas Cockroft
Business Name: Splitting Image Taxidermy
Address: PO Box 27582, Greenacres
City: Port Elizabeth
State/Province: East Cape
Country, Postal Code: South Africa 6057
Telephone: +27 41 811 9729 email: info@splitimagetaxidermy.co.za

9. For species listed under the Endangered Species Act, please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. While we will communicate with the range country for the species you will hunt or hunted when making the required findings, if you have any information that could support this finding, it would be helpful to our review if you could provide it. Please submit such information on a separate page with your application.

   a. Do you have any information regarding the population status or trend data on the species hunted?

   b. In order to hunt, you likely paid for licenses or trophy fees. What were those fees and do you have any information on how those funds were used by either the landowner, community, or government?

   c. Do you have information on other funding activities that are being carried out, or were carried out, by the safari outfitter, professional hunter, concession holder, or land owner that provide a conservation benefit to the species being hunted/species hunted?

CERTIFICATION STATEMENT (original signature must be provided for either 10 or 11 below)

10. **If you are a broker or taxidermist applying on behalf of a U.S. hunter or foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies and two elephant trophies within the same calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

    Taxidermist/Broker's signature: _____ Date: _____

11. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

    I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies and two elephant trophies within the same calendar year. In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

    Applicant's signature: (b)(6) Date: 02/19/2018

    Be aware that there may be permit or approval requirements by your local or state governments, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist where possible, it is your responsibility to obtain such approval.

All international shipment(s) must be imported through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my applications for a permit to import a lawfully hunted lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my trophy at the following address:

NYAMVU SAFARIS, LTD.
Address, 6980 KATANGA ROAD LUSAKA
Operator email: ZAID137@HOTMAIL.COM

I. DESCRIPTION OF COMPANY AND CONCESSION

Nyamvu Safaris, Ltd. has been operating Nyamvu Game Reserve since April 2005. The Game Reserve provides habitat for a range of species including lion, kudu, leopard, buffalo, and elephant and is also a None Fenced Game Reserve but open and wild like all other hunting blocks in Zambia. The Game Reserve is in Nyimba District in Eastern Province of Zambia. The Area is along the Luangwa River. Nyamvu Safaris has entered into a Long term project with the Wildlife Authorities to try and develop a Game Reserve for Animals for a period of Ninety Nine years.

The Director of Nyamvu Safaris is Mr. Zaeed Patel. Nyamvu has permanent employees who work throughout the year and are on two year contracts that are renewable. The camp has a resident Professional Hunter and a camp Manager. Other employees include four game trackers, nine anti-poaching scouts, and six camp staff (cooks, cleaning, miscellaneous). We estimate a total of about 113 people to be direct beneficiaries from Nyamvu Safaris employees. These beneficiaries come from the local community.

When Nyamvu Game Reserve was acquired in 2005 the Area was completely depleted such that even seeing an Impala was almost impossible. It had to take frantic efforts by Mr. Zaeed Patel to begin the Anti-Poaching Patrols and then creating water points for animals to access water easily. Slowly the animals started coming back to Nyamvu Game Reserve and as we speak today after 10 years of progressive anti-poaching and creation of suitable conditions for Animals Nyamvu is now home to most of the wild species of Southern Africa including Elephant, Lion and Leopard. The director of Nyamvu has even carried out a restocking exercise of Sable Antelope which originally was not there. We can confirm that Nyamvu now has enough sable that can even be included on Safari Quota to be hunted. The restocking exercise is not only limited to sable only but other species as well.

Among the many efforts done to improve the number of animals in Nyamvu include provision of salt Leaks, provision of Maize Bran, creation of Dams for easy accessibility of water are among the many efforts done to create suitable conditions for Animals to stay in Nyamvu.

We further wish to put it on record that Nyamvu Game reserve is an Area where the director has invested heavily to make it what it is today. The Area was not hunted for about three years from 2005 when it was acquired to about 2008. In all these years the director was merely investing in Anti-poaching patrols, creation of water points among other things to attract game. This is the kind of effort that was invested in this None Fenced Game Reserve to ensure that we have enough stocks of animals.

Safari Hunting was therefore introduced to help with the conservation and income generation for the area and for the help of re-building. In order to make the community benefit from such animals it was agreed that some revenue can be derived from selling these animals on Safari and the revenue can be used to improve the welfare of the surrounding communities.

We can confirm that Schools, Clinics, Bridges, Grave Roads have been built in the surrounding communities of Nyamvu Game Reserve through the revenues raised from Safari Hunting. The chief has equally had a fair share of some benefits through the construction and periodical renovations of the chief's palace and grading of the road which leads to the palace. Nyamvu further purchased Banana Boats that are used by villagers in the community to cross the Luangwa River when trying to access the other side of the River. School Children, Community health workers are among the beneficiaries who use the Banana boat to cross the Luangwa River.

II. ANTI-POACHING COMPONENT

Nyamvu Safaris maintains three groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the Wildlife Scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

Nyamvu Safaris spends about $ 26000 on average per annum to carry out Anti-poaching patrols in the Game Reserve. A total of between 300 and 350 days is recorded per annum. 3000 liters of diesel are used on average per annum which is consumed by 2400 hours of patrol hours. The amount spent on payments for rewards after abducting poachers has been steadily decreasing from 2005 although an average of about 2800 dollars is spent per annum in rewards. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	5650	Directly paid and some subsidies to WA
Scout equipment	9450	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	3900	For scouts and WA
Rations for WA and community scouts	3800	
Rewards	2800	For information and arrests
TOTAL	$ 25600	

In the Picture Below two poachers that were apprehended by our Vigilant Scouts.

COMMUNITY PARTICIPATION

A. Community Assistance Component

The agreement that Nyamvu Game Reserve has with the community does not specify what amounts need to be contributed to the community. However on Average, Nyamvu contributes about $ 20000 per annum.

In addition to these direct contributions, we pledge to distribute at least 60% of game meat harvested to the villages.

A hammer mill donated to the community by Nyamvu Safaris

B. Conflict Control

Our problematic animals are mainly the Lions and Elephant. Attached are extracts from the media which confirm Lions attacking Human Beings in Nyimba District of Eastern province where Nyamvu Game Reserve is situated. Management of Nyamvu Safaris has set aside a fund which is used to compensate victims of such unfortunate circumstances. The fund is usually 5000 dollars but can be adjusted depending on the number of such occurrences in a particular year.

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans which costs approximately $5000 to maintain per annum. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the Game Reserve by finding water resource. This usually attracts Lion and Leopard to come and hunt in the game Reserve.

V. OTHER INFORMATION

A. Prey Base

Nyamvu Safaris has been monitoring the population growth of the Lion and Leopard which is a result from efforts done so far such as anti-poaching efforts, water provision, and fire management.Nyamvu Safaris will further engage the wildlife Authorities in Monitoring the resources on the ground by position cameras in strategic Areas so as to monitor the Activities of the Lion and Leopard.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lon in our Area. As at now we use Lion tracks and foot prints. Sightings by individuals and just the a few cameras which we use to monitor the size and age for Lion and Leopard when Hunting.

C. Elephant Hunting

Our area is endowed with some very good Elephant hunting and due to the long term conservation plan produces good quality tusks now of between 50 and 60 pounds. Our well-coordinated anti-poaching system has made poaching of Elephant in Nyamvu very difficult. The community has also assisted management at Nyamvu by bringing reports of members of the community that have links with suspected poachers and stringent measures have been taking which include imprisonment for those that were found guilty of poaching. Through our various anti–poaching awareness programs with the community we have managed to make the community assist to guard this natural resource jealously. Nyamvu Safaris maintains a policy of not taking any Elephant whose tusks are weighing 20 kilograms and below.

E. Lion Aging Approach

We use the Lion aging approach when conducting Safari Hunting for Lion. Earlier on we mentioned of Human Animal conflicts mainly with Lions. This can be managed by removing the older Lions in the system through Safari Hunting. It has always been a Policy for Nyamvu Safaris not to harvests any Lions or Leopard which are not old enough to have outlived their useful life. In view of this approach not more than five Lions have been taken in Nyamvu game Reserve from the time Safari Hunting was introduced.

F. U.S. Hunters

It is of no doubt that this is the most sought after market with regards to Safari Hunting in Zambia. Nyamvu Safaris has had a number of clients donating equipment and in some instances funds for Anti –poaching programs. This can confirm to you that these hunters are not only after fulfilling their interests but to also allow the community to benefit through a conservative based approach to Safari Hunting.

CONCLUSION

Nyamvu Safaris can proudly confirm that the project which it started in 2005 has been a success looking at the way the numbers of wildlife has increased in our game reserve. We recognize that the Cat and Elephant hunts bought and booked by our American Clients contribute a higher percentage of income in the Safari Hunting and it is our obligation to share these finances with the communities who have played an important role to conserve this resource. We also realize that these species are a renewable resource and as such we will endeavor to provide suitable conditions for the reproduction and sustainability of these species with the allowance of our American Clients to keep coming and hunting the different species in Africa.

Signed: _____

Operator Name: Zaeed Patel

Title: Director

MOPANE SAFARIS, LTD.
Address, 515 FRANCISTOWN ROAD LIVINGSTONE
Operator email: karimtd@yahoo.com

I. DESCRIPTION OF COMPANY AND CONCESSION

Mopane Safaris, Ltd. has been operating in Luembe-West Petauke Concession since April 2015. The concession provides habitat for a range of species including lion, kudu, leopard, buffalo, and elephant. The concession is in Eastern Province of Zambia. The Area is along the Luangwa River and is about 3227 square kilo meters in connection and conjunction with Nyamu Game Reserve our other area. The Area is classified as Secondary Hunting Area. Mopane Safaris has entered into a Ten Year Lease agreement with the wildlife Authority and is renewable subject to conducting successful conservation records of the Ecological system.

Our company is a Limited Company whose Directors are Mr. Saeed Omar Abdul Karim and Mr. Chishimba Mumba. This concession was acquired in April 2015. In view of this Mopane Safaris has one resident Professional Hunter who also provides the functions and duties of a Camp Manager. Other employees include, four game trackers, twelve anti-poaching scouts, and six camp staff (cooks, cleaning, miscellaneous). We estimate a total of about 215 people to be direct beneficiaries from Mopane Safaris employees. These beneficiaries come from the local community.

We very much welcome the donations that are made by some clients from the United States of America as these go a long way in improving the quality of life in these rural communities of Zambia. In most circumstances these communities do not have an economic activity which can assist them raise money for school fees and medication. The only activities which they engage themselves in is farming which is done at subsistence level to only provide for their families. This therefore follows that Safari Hunting provides some economic benefit to these communities as it enable the employees to raise some money to send their children to school, buy School necessities and meet some basic healthcare requirements.

Safari hunting therefore helps not only meet some financial needs of these communities but also prevents them from Illegal Hunting Activities which have adverse effects on the population of the animals. It therefore follows that most of the revenue for Safari Hunting is derived from Hunting of Cats and Elephant. With this in mind Mopane Safaris, the Community and the Wildlife Authorities have an enormous task to prevent the Cats from going into extinction by providing a more robust anti–poaching system to prevent the extinction of cats in these concessions.

II. ANTI-POACHING COMPONENT

Mopane Safaris maintains four groups of anti-poaching teams. Each team consists of three men per team and is equipped with a 4x4 Land cruiser, uniforms and boots, tents, rations, and a satellite phone. The patrols are done in conjunction with the Wildlife Scouts. We supply rations at least twice per month to both the government game scouts and our village scouts to ensure they are sufficiently equipped for the patrols.

Fig I. Director and Resident Professional Hunter of Mopane Safaris Mr.Karim (Center) planning the Anti-Poaching Patrols with a wildlife officer and a member from the community.

Fig ii. In the Picture below some Ivory Tusks recovered from Poachers and weapons used for poaching.

In 2015, Mopane Safaris spent almost $ 30900 in Luembe-West Petauke Consession on anti-poaching patrols, equipment, and assistance to the Wildlife Authority and community scouts, including by providing 1450 liters of diesel for patrol vehicles. We recorded 328 patrol days and well above 1968 patrol hours. We also made over $ 2005 in payments of rewards to leads helping in the abduction of poachers. A breakdown of spending on anti-poaching is below.

Item	Spend (USD)	Notes
Scout salaries	11900	Directly paid and some subsidies to WA
Scout equipment	12450	Clothing, vehicles, rations, phones, tents, etc.
Diesel / petrol	1885	For scouts and WA
Rations for WA and community scouts	7800	
Rewards	2005	For information and arrests
TOTAL	$ 36040	

The concession agreement has a clause which requires Mopane Safaris to submit Annual reports on the Anti-Poaching Activities and patrols done in each particular year to the Wildlife Authorities. This report will be taken into account in 2025 whether to renew the concession or not.

III. COMMUNITY PARTICIPATION

A. Community Assistance Component

We make contributions to the community Resource Boards of about $ 25900 annually as per agreement which was entered into 2015 by Mopane Safaris, the Community and the Wildlife Authorities.

In addition to these direct contributions, we pledge to distribute at least 60% of game meat harvested to the villages. In 2015 the value was $ 24371.

Fig iii. Resident Professional Hunter and Director attending a community Meeting.

B. Conflict Control

We usually have reports of problem Animals mainly Elephants destroying crops for villagers and Human Animal conflict from Lions. $ 12000 has been set aside for compensation purposes when we have such occurrences. In 2015 we paid $ 1000 in compensation to maize fields that were damaged by Elephants to grain fields for Villagers. We further compensated a family whose member was attacked and killed by an Elephant and was one of our Village Scouts who had gone out of camp and on returning to camp the incident occurred. The total cost for compensation and funeral arrangements was $ 2500

IV. HABITAT PROTECTION AND CONSERVATION DEVELOPMENT

We have developed the water infrastructure for the exclusive use of wildlife in our concession. The infrastructure developed so far is natural pans which costs approximately $5000 to maintain in 2015 and 2016 respectively. The increased water supply increases the carrying capacity of the concession and the lion's prey base due to more game residing in the concession by finding water resource. The concession is along the Luangwa River and this makes it have smaller streams flowing in the concession creating more water points for animals. As a result we have a lot of Game in our concession which attracts Lion, Elephant and Leopard.

V. OTHER INFORMATION

A. Prey Base

Mopane Safaris in Luembe-West Petauke is still monitoring the population growth of the Lion, Leopard, Elephant and other species which will result from efforts done so far such as anti-poaching efforts, water provision, and fire management. Mopane Safaris will further engage the wildlife Authorities in monitoring the resources on the ground by position cameras in strategic Areas so as to monitor the Activities of the Game and Cats. Luembe is a secondary Area and as such we have applied more concerted efforts aimed at mitigating the impact of poaching that had characterized the Area for the years when we were not operating in the Area.

We also engaged the wildlife authorities to regulate resident Hunting by proposing that resident Hunting be temporarily stopped for five years so as to give room for animals to breed so as to improve the numbers in the Eco system in Luembe Game Management Area.

B. Lion Population Tracking

Lion is not easy to track and as such we are still developing tools which we will use to study the population of Lon in our Area. As at now we use Lion tracks and foot prints. Sightings by individuals and just the a few cameras which we used this year to monitor the size and age for Lion and Leopard.

C. Lion Aging Approach

Like other Safari Companies we have been following an age-based policy for African lion trophies since 2015, after adopting a mutual aging agreement with our wildlife Authorities, and to be conservative in estimating age.

A number of potential Lion Trophy were not hunted this year because of our company policy and selectiveness.

Our approach as a company from 2015 until 2025 when our concession will be due for renewal is to hunt Lion which has reached an advanced and mature age only of 6 years and above.

D. Elephant

Elephant Hunting in Luembe is also one of the High Income earners. Mopane Safaris is alive to the fact that Ivory is of high value on the world market and is on high demand in particular the Far East. Mopane Safaris therefore has put up a robust Anti-Poaching program to protect this rare species. In view of this we have a policy as company not to harvest any Elephant with Tusks weighing below 20 kilograms. We recognize the fact that it may be difficult to judge but we expect the Professional Hunters to exercise caution and use their judgment before allowing a client to hunt one. Professional Hunters have been given an allowable allowance of 1 kg so as not to go below the recommended threshold by the wildlife authorities of 15 Kilograms as a minimum shoot able size Elephant.

E. U.S. Hunters

Most of our clients are from the United States. These hunters have a conservation ethic and usually contribute above their fees to anti-poaching of our community compensation fund or community assistance programs.

CONCLUSION

Mopane Safaris regulated, sustainable-use based hunting program enhances the survival of the Lion, Leopard and Elephant and we recognize that the Cat and Elephant hunts bought and booked by our American Clients contribute a higher percentage of income in the Safari Hunting and it is our obligation to share these finances with the communities who have played an important role to conserve this resource. We also realize that these species are a renewable resource and as such we will endeavor to provide suitable conditions for the reproduction and sustainability of these species with the allowance of our American Clients to keep coming and hunting the different species in Africa.

Operator Name: Saeed Karim

Title: Director

RE: Zambian Operators Enhancement Report Summary

INTRODUCTION

This is a summary report of the individual "Operator Enhancement Reports" provided by four Zambian hunting operators. The reports detail the individual operator's anti-poaching, community investment, habitat protection, animal conflict control, and other important information. This report compiles that data to ensure the confidential of the sources for commercial competition purposes.

The reports were provided by a sample of four Zambian safaris operators. They manage four hunting areas covering 10,028 km^2. The anti-poaching, community development, and other figures explained in this summary report far under represent the full benefits provided by hunting operators in Zambia.

ANTI-POACHING

All four operators deploy anti-poaching units in their concessions. Anti-poaching operations are conducted year-round and teams are deployed several times per month. The teams range from three to five members. Of the three operators reporting, at least 991 anti-poaching days were conducted in 2015 (2.71 years of anti-poaching patrols). The operators provide fuel and rations to government and community scouts and coordinate with these scouts to ensure complete coverage. Moreover, the operators keep their anti-poaching teams motivated by providing them with rewards for contraband seizures and poacher arrests.

Two of the four companies keep records of poacher arrests and seizures. In 2015, one operator recorded 94 snares collected, and 28 muzzleloaders and seven shotguns confiscated. In 2016, another operator recorded over 1,000 snares and 40 gin traps collected, 10 poachers arrested, and three bicycles, five muzzleloaders, and 14 miscellaneous weapons confiscated.

Operators fund their anti-poaching through their hunting revenues and secondarily from client contributions. Anti-poaching expenses reported by the operators include: vehicle fuel, rations, salaries, clothing, vehicle repair, phones, tents, support to Wildlife Authority, and rewards. In 2015 alone, the four operators spent $201,900 on anti-poaching. None of the operators reported any serious habitat related destruction.

COMMUNITY DEVELOPMENT & OTHER SOURCES OF COMMUNITY EMPOWERMENT AND ASSISTANCE

The four operators provide assistance in the form of direct and ancillary support to the communities. Doing so incentivizes the communities to protect wildlife and not retaliate in instances of human-wildlife conflict.

In 2015, the operators contributed $99,900 to the villages located in their hunting areas. These contributions took the form of school renovations, village government infrastructure support, funding youth sports league, paying teacher salaries, sponsoring school fees for

impoverished children, digging new boreholes and providing pump stations, funding transportation for children to attend school, and medical support to the communities, among other things.

Protein malnutrition is a serious threat faced by many rural Zambians. Furthermore, bushmeat poaching is indiscriminate and damaging especially on prey base species. To combat both protein malnutrition and indiscriminate bushmeat poaching, all four operators donate legally harvested meat to the communities. On average, the four operators report donating 55% of the annually harvested animals to the communities. Two of the four operators report the value of the game meat donated to the villages being $51,871 in 2015.

The operators also support the communities by providing full-time and part-time employment. The four operators report hiring full-time employment of 89 camp staff and 71 anti-poaching scouts. The full-time employees are sourced from the local communities, thus extending the benefits to dependents. The operators report 1,128 community members being dependent on the employment provided by the operators. Lastly, one operator reports hiring 130 additional community members for temporary employment each year.

ADDITIONAL INFORMATION

HABITAT PROTECTION

Three of the four operators report providing water infrastructure for the exclusive use of wildlife in their hunting areas. The habitat set aside for hunting is crucial for lion conservation as it would otherwise be at the disposal of communities for agricultural and livestock use.

WILDLIFE CONFLICT CONTROL

All four operators have a conflict control program in place with the communities. Communities are trained and provided with equipment to deal with crop raiding wildlife in a non-harmful manner. All of the operators also have funds to compensate villagers for lost crops, injured or killed family members as a result of wildlife, and lost livestock.

OTHER LION ENHANCEMENT INFORMATION

All four operators report monitoring lion. The most common form is compiling pictures from trail cameras of lion on bait and entering lion sightings and tracks onto GPS. Information is transmitted between the company and the Wildlife Authority. By using trail cameras, the operators can identify and more accurately age male lion to ensure they comply with new aging regulations.

CONCLUSION

The sampled Zambian hunting operators provide lion enhancement by addressing the three primary threats to lion survival: loss of prey base, loss of habitat, and human lion conflict.

In 2015 alone, the four operators invested $201,900 on anti-poaching. Anti-poaching directly combats loss of prey base by apprehending poachers, monitoring the concessions, and collecting indiscriminate snares and gin traps.

Community development plays an essential role in incentivizing the communities in protecting the wildlife and habitat. The operators compensate the communities in various ways. In 2015, the four operators contributed $90,900 directly to the communities. Furthermore, the operators provide an essential source of full time and temporary employment as well as game meat donations to dissuade poaching and provide essential protein.

In short, the attached reports demonstrate that licensed, regulated hunting in Zambia enhances the survival of lion in the wild.

Lion Trophy Import application # 84930C

Vargas, Darcy <darcy_vargas@fws.gov> Wed, May 22, 2019 at 1:39 PM
To: "John J. Jackson, III" <cf@conservationforce.org>

Dear Conservation Force,

Ref: Application # 84930C; Samuel James Cunningham's lion import application request.

The referenced application has been reviewed and found to be incomplete. Therefore, please reply to the following:

1. The referenced application is requesting the import of a lion, to be taken in Zambia between September to October of 2019. However, the location of address of whom would be shipping the lion to Mr. Cunningham is in East Cape South Africa. Therefore, in order for us to consider authorizing the import of a lion trophy from South Africa, we must be provided with a copy of the Zambian CITES permit that will authorize the export of the lion trophy from Zambia to South Africa.

2. Please clarify why the trophy is being exported from Zambia to South Africa, before being requested for import into the United States.

In accordance with 50 CFR 13.ll(e), if the requested information is not received by this office **by June 6, 2019**, (45 calendar days of the date of this email), your application will be abandoned and administratively closed. Once a file is closed, you will need to submit a new application, and all required fees, for the Service to consider your proposed activity.

Respectfully,

Darcy Vargas

Dear Mr. Cunningham,

I apologize for the delay in processing your application to import a trophy of a lion that was hunted in Zambia (application no. 84930C, received in our office on 3/27/2018). Can you please provide me with the specific date the lion was hunted/taken?

Thank you and please contact me if have any questions.

Best regards,

Good Day Tammy.

Thank you for copying me in the correspondence.

Sam did not come on the hunt and I doubt is planning this original planned safari in Zambia soon.

But please just make sure to get the final answer back from Sam before you all do anything.

Best Regards
Werner.

Subject: Applicaon # 84930C - S. Cunningham

Mr. Cunningham,
Mr. Jackson asked me to follow up with you after he saw your response to the FWS that you had cancelled your trip to Zambia for a lion hunt.
He wanted to inquire if you did not go on the hunt because you did not have an import permit? Are you planning to reschedule your trip, in which case we may be able to amend your application?
If you do not plan to reschedule a trip, do we have your permission to withdraw this import permit application?
Please, let us know if you have any questions or we can assist you with anything else.
Thank you

NOV 17 2017

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
AyL	DAVid	GEORGE	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; include name of contact person if applicable; include room or apartment #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
ARLINGTON Hts	IL	60004	USA COOK	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☒ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: 08US148918/9 No ☐

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6)

Signature of individual responsible for permit (No photocopied or stamped signatures) — Date of signature (mm/dd/yyyy): 10-23-17

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
   AFRICAN LION
   b. Sex (if known). MALE

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:
   b. Date wildlife is to be hunted:
   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

3. **IF THE ANIMAL IS DEAD,** please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):
   ZAMBIA - EASTERN PROVINCE MWANZA GMA NEAREST CITY IS MFUWE GIS COORDINATES 36L 0397901 UTM 8589200
   b. Date wildlife was hunted: 10-5-17

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).
SKIN SKULL LIFE SIZE MOUNT

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:
MVH SAFARIS
PLOT NUMBER 6980 KATANGA ROAD
HEAVY INDUSTRIAL AREA LUSAKA-ZAMBIA

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name: MVH SAFARIS
Business Name: MVH SAFARIS ZAMBIA LIMITED
Address: P.O. BOX 35225 LUSAKA
Address: 6980 KATANGA ROAD
City: LUSAKA
State/Province: LUSAKA
Country, Postal Code: 10101

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: (b)(6) Date: 10-23-17

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, **if** different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):

DAVID C. AUL [redacted]

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Ref: 62471C

Ms. Vargas,

My father, David G. Aul, has asked me to assist him with getting you the informaon y ou have requested. A. ached are the hunng permit and license documen ts you requested. The hunt was conducted in a GMA. My father's lion is listed on line #2 on the aging report (Client "DAG" should be DGA). The professional hunter ("PH") who guided on his trip, Jason Stone, said that this report also incorrectly lists a different PH (see attached text message).

Please let me know if you require any addional in formaon.

Sincerely,

David J. Aul

SUMMARY REPORT ON AGING OF THE 2017 HUNTED LIONS.
BY DNPW Research Unit.

1.0 BACKGROUND

The Department of National Parks and Wildlife in 2017 issued a lion sport hunting quota of 34 animals. Out of the 34, a total of 21 were successfully harvested from 15 Hunting blocks.

Measurements and photos from Professional Hunters were submitted to three different independent assessors while DNPW also did its own assessment. Thereafter a meeting was held by the Ad hoc Aging Committee that finalised the age category of each lion hunted. Below are observations and recommendations as discussed during the aging committee meeting held on 17th May 2018 at Chilanga and results of the aging process presented in the attached table.

2.0 OBSERVATIONS AND RECOMMENDATIONS

Further to the aging process, a few concerns and observations were made by the assessors and the aging committee.

1st Observation : Poor and fewer photos taken than required. Some professional hunters did not take all the required 10 (6 Field and 4 skull) photos and from the positions as indicated in the guidelines, while some were taken of dirty and bloody animals. This made aging difficult.

Recommended Actions:

(I) More photographs should be taken right after the hunt with the nose and muzzle and teeth in particular should be clean of dirt and blood. These would significantly help with aging as often the nose is dirty and muzzle and teeth often bloody or in bad light. Better pictures would be essential for some of these lions.

(II) PHs need to photograph the whisker-spot patterns (side of face on each side) better in order to better age them with known age-animals.

2nd Observation: Incomplete submission of return forms. Some parts of the return form where not completed while some PHs did not submit the trophies for measurement intime;

Recommended Actions:

(I) DNPW will not accept incomplete submissions therefore will not process export permits or PH licences until complete returns are submitted;

(II) All submissions of return forms and field photos should be made directly by PH or outfitter representative to DNPW and signed for but not through third parties like a taxidermy company.

3rd Observation: Late submission of return forms. The hunting guidelines require that trophies and completed return forms are submitted within two months of the hunt. This consequently, affected processing of aging and consequently processing of professional hunter's license and export permits.

Recommended Actions:

(1) DNPW to fine and caution PHs for late submission;

(II) No professional hunter's license will be renewed for repeat offenders;

(III) Export permits will only be processed upon payment of fine and submission of complete returns form and trophy.

4th Observation: Mixing up of Photos. Some PHs who hunted more than one lion sent photos of different lions in one folder. This made it difficult to tell one animal from the other thus affected aging.

Recommended Actions:

(I) All photos should be submitted as JPEG in one folder for each lion hunted and properly labelled using the naming format: GMA_Hunting Block_PH's last name. For example, if a PH by the name of Jeff Banda hunted two lions in Mwanya, the folder should be called "Lumimba_Mwanya_Banda1" and the second lion's folder "Lumimba_Mwanya_Banda2".

(II) Figure 1 photo of whole body from side should include PH in photo for identification.

(III) Capture trophy's label must be captured in the photo

5th Observation: Age of hunted lions: From the estimates of the 2017 trophies assessed, the youngest lion was Munyamadzi Game Ranch and Sandwe while the oldest was in Mukungule. There were no subadult lions/young adult or female lions taken, and no extremely old lions taken apart from Mukungule who was judged to be at least about 8yrs.

Recommended Actions:

No further action but to congratulate most PHs for sticking to the hunting guidelines on age and especially Boabab Safaris for harvesting the oldest lion in 2017. DNPW further encourages PHs to increase their hunting effort and use camera traps to improve on filed identification of lions

6th Observation: Average age of Hunted lions and Quota: The majority of lions taken in 2017 assessed here all within the 5-6 year old range. While this may be acceptable given a 5-year old minimum but it is not ideal not sustainable over time.

Recommended Actions: We would highly recommend that the allocated quotas not exceed 1 lion/hunting block/year, as was discussed when lion hunting was reopened in 2016. This will help to ensure trophy quality as well as maintain sustainability of lion hunting in years to come. People will never be able to find truly old lions if they are shooting them as 5-6 year olds every year.

Table showing results of aging for lions hunted in 2017 and one in 2016

S/N	Hunting Block	Client	Name of PH	ASSESOR				Final Age Category	Comments
				A	B	C	D

Enhancement Finding
Applicant: David George Aul (PRT-64271C)

David George Aul submitted an application on November 21, 2017, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken October 5, 2017, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the

applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita*, including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita*, the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Aul's application involving a *P. l. melanochaita* sport-hunted trophy taken in the Eastern province Mwanya, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Aul's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.*, by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Aul's, participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Aul's application were the basis of this finding.

***Governance of Lions in Zambia*:**

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation

guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016).

In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an

individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their

obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Aul's hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Aul will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Aul, in managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): <u>The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application</u>:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): <u>Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application</u>:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Aul.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to David** (b) (6) **Aul.**

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2017 hunting season.**

D. Trophy must be accompanied by valid hunting authorization ssued by the government of Zambia for the 2017 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
BURNS	THOMAS	PATRICK	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
AUSTIN	TX	78733	TRAVIS	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: 060509031779 No ☐

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of [redacted] that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6)

Signature (b)(6) of applicant/person responsible for permit (No photocopied or stamped signatures) — Date of signature (mm/dd/yyyy): 11/17/2017

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.
      P.L. Melanochaita (African Lion)

   b. Sex (if known).
      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):
      Zambia Southern Province, Mulobezi, GPS: 16°19'22.18"S; 25°25'28.90"E

   b. Date wildlife was hunted:
      July 7, 2016

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).
All parts including skin, skull and floating bones

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:
Bangweulu Taxidermy, 4142/K Chifwema Road, New Kasama, Lusaka ZAMBIA

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	Michael Borman
Business Name:	Bangweulu Taxidermy, LTD.
Address:	4142/K Chifwema Road
Address:	New Kasama
City:	Lusaka
State/Province:	ZAMBIA
Country, Postal Code:	

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: [redacted] Date: 11/17/2017

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
Greg Brownlee - (b) (6)
Regina Lennox - regina.lennox@conservationforce.org or 504-837-1233

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III, Regina Lennox, and other attorneys of the non-profit law firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a threatened-listed African lion trophy

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that Conservation Force be copied with all correspondence, acknowledgements, notices, and decisions concerning my application to import my trophy at the following address:

Conservation Force

Enhancement Finding
Applicant: Thomas Patrick Burns (PRT-64280C)

Thomas Patrick Burns submitted an application on November 21, 2017, for the importation of one male African lion (*Panthera leo melanochaita*) from Lusaka, Zambia, for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the government of Zambia, other information available to the Service, and comments received from interested parties, the U.S. Fish & Wildlife Service (Service) has determined that the importation of the sport-hunted trophy taken July 7, 2016, from this wild lion (*P. l. melanochaita*) population within Zambia **meets** the enhancement criteria under 50 CFR 17.32.

Governance of the Lion in the United States:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act or ESA) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. (79 Fed. Reg. 64472.) On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes Zambia, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the

prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from Zambia, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in Zambia.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita*, including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita*, the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.*, that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in Zambia contributes to the overall conservation of the species

by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Burns' application involving a *P. l. melanochaita* sport-hunted trophy taken in the Zambian Southern Province, Mulobezi, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Lusaka, Zambia. This document sets out guidance from experts in the field on the use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

> (a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities.

The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Burns' trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how Zambia's's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We considered whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examined if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examined if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also considered how the U.S. hunter's, in this case, Mr. Burns', participation in the hunting program contributes to the overall management of lions within the country.

The management program in Zambia for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On February 2, 2016, the Service sent a letter to Zambia's Wildlife Authority with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in Zambia and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when

considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our February 2, 2016, letter, Zambia's Department of National Parks and Wildlife (DNPA), herein referred to as DNPW (DNPW 2016), provided a binder of documentation describing Zambia's lion population and management plans. In addition, the Service met with representatives of Zambia's DNPW during the 17th Meeting of the Conference of the Parties to the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in Johannesburg in late September 2016. The DNPW binder documents, dated May 5, 2017, along with the Service's final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DNPW, comments received from interested parties, and Mr. Burns' application were the basis of this finding.

Governance of Lions in Zambia:

The responsibility for implementing wildlife conservation laws in Zambia dates back to the 1930s or 1940s with the establishment of the Department of Tsetse, Fisheries, and Wildlife. In the late 1950s, this agency became the Department of Game and Fisheries and operated under this designation until the mid-1970s, when it became the Department of National Parks Wildlife Service (DNPWS) who was responsible for the protected area network. In 1999, the Government of Zambia transformed this agency into Zambia's Wildlife Authority (ZAWA), creating a semi-autonomous agency responsible for the management and protection of this network, with statutory powers derived through the Zambia Wildlife Act No. 12 of 1998. However, this agency, due partly to its semi-autonomy, had a low funding capability, relying primarily on revenue from tourism, which also included sport hunting. Between 1999 and 2005, ZAWA struggled with their law enforcement capabilities due to inadequate resources. The costs associated with transforming DNPWS to ZAWA continued to affect the financial and staff allocations for law enforcement activities. Large sums of money that could have been utilized by law enforcement were apparently channeled into tasks involved in the transformation process.

Since 2005, in partnership with the Zambia Lion Project (ZLP), ZAWA (now DNPW) established a voluntary program to assess and age lions taken as trophies (DNPW 2016). From 2006 through 2012, DNA samples were taken from teeth of both live and trophy lions in order to estimate the age of lions taken as trophies (DNPW 2016). The results from these past sampling efforts helped demonstrate the performance of the hunting sector during this time. It has also provided a baseline for comparing future performance.

By 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the approval of this strategy, research has begun and management actions have been taken to address local community benefits, human-lion conflict, land use planning and zoning, trade, and monitoring (DNPW 2016). Some of the lion-related studies that were initiated are the Zambia Carnivore Programme (ZCP), Kafue Lion Project, and Zambia Lion Project (ZLP) (DNPW, 2106). The development of this strategy also led to the employment of 12 ecologists, with three committed to spending 70% of their work time on lion-related issues (DNPW 2016).

In 2015, ZAWA was disbanded and reincorporated as a government department, the Department of National Parks and Wildlife (DNPW). In addition, the Zambia Wildlife Act No. 12 of 1998 was

repealed. However, the Wildlife Act No. 14 of 2015 (Wildlife Act) is still the principle legislation guiding the management of wildlife in Zambia through a system implemented and enforced by DNPW with assistance from stakeholders (DNPW 2016).

The Wildlife Act is administered by DNPW under the Ministry of Tourism. DNPW is headed by a Director, with assistant directors who command 4 elements of the department: Principal Warden-Operations Wildlife Law Enforcement Unit, Principal Warden-Conservation Unit, Principal Engineer Infrastructure Development Unit, and Principal Natural Resource Management Officer Community-based Natural Resource Management Unit. *The Wildlife Law Enforcement Unit* is comprised of 1,250 Wildlife Police Officers who are responsible for investigating and enforcing wildlife crimes within 236,376 km^2 of wildlife area (average 189 km^2 per officer). The Zambian government has also committed to adding an additional 850 officers by 2018 (600 new officers were reportedly added in 2016). *The Wildlife Conservation Unit* is responsible for mitigating human-wildlife conflict, facilitating wildlife officer trainings, regulating private wildlife estate operations, managing ecosystems, managing landscape conservation of certain species, and both developing and implementing park regulations. *The Infrastructure Development Unit* is responsible for construction and maintenance of infrastructures and machinery within protected areas. *The Community-based Natural Resource Management Unit* is responsible for co-managing Game Management Areas (GMAs) with local communities. Duties include providing technical support to Community Resource Boards regarding the management of human-natural resources in GMAs and open areas. This unit facilitates the election of the Community Resources Board members and the election of Village Action Groups. Responsibilities also include monitoring the use of funds disbursed to Community Resources Boards and training village scouts and Community Resources Board members.

The lion is a protected species under the Wildlife Act. It is a criminal offense to hunt, kill, capture, or possess a lion without a license. The lion is also protected under private wildlife estate legislation and statutory instruments implemented with the (now repealed) Wildlife Act of 1998 and carried over to the Wildlife Act. Additionally, in 2016, four new statutory regulations were reportedly enacted to address various aspects of lion management to complement the operation of the new Wildlife Act. They included the Zambia wildlife regulations for granting of hunting concessions, lion sport hunting, keeping of big cats in captivity, and conducting ecological or research wildlife assessments (DNPW 2016).

In addition to Zambia's domestic laws, it is also a Party CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including findings from the exporting country's CITES Management Authority that the specimen was legally acquired and the country's Scientific Authority that the export will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, Zambia provided a copy of their May 5, 2016, non-detriment finding for lions. This finding states that "(t)he CITES Scientific authority of Zambia has considered the population of lion in Zambia; the quota-setting system and current precautionary quota of only 24 lions; the newly implemented age-based harvest policy; the limited offtake; the adaptive management of lion; and the substantial revenues generated for DNPW operations, anti-poaching, and community development." They further explain that their positive finding was based on three pillars that include a "precautionary" quota, age-based harvesting, and community benefits.

Current Lion Status in Zambia

Lion Range:

According to DNPW, the lion range in Zambia covers about 63% of Zambia's protected areas, which is about 145,000 km^2 (DNPW 2016). Historically, lions occurred in the West Lunga complex, although, recently, populations have not been found in this complex (DNPW 2016). The majority of lions are found in three main clusters throughout Kafue, Luangwa, and the Lower Zambezi region. Luangwa and Lower Zambezi are connected through GMAs. Smaller populations of lions are also present in Liuwa Plains, Sioma Ngwezi, Nsumbus, and the Lavushi Manda National Parks. In addition, Kazungula and Siavonga open areas have lion populations that roam between Zambia and other countries (DNPW 2016).

The 2016 IUCN Red List Assessment stated that lions are now extinct in 15 countries in Africa (including Western Sahara, which is technically a disputed territory), are possibly extinct in another seven countries, and now occur in only 24 countries (Macdonald 2016). The latest IUCN estimates suggest a population of 23,000 - 39,000 lions throughout their current range on the African continent (IUCN 2016), representing a decline of at least 43% between 1993 and 2014. Lions are now considered to have been extirpated from at least 92% of their historic range (Macdonald 2016). Therefore, in assessing the population of lions in Zambia, we must also consider the significance of the diminishing total population of lions remaining in the wild. This is in part because the southern and eastern African lion populations include Zambia (DNPW 2016). DNPW presented a study conducted by the Zambia Lion project (ZLP) in which DNA analysis of Zambian lions was undertaken during 2004 - 2012. The study concluded that southern African and eastern African lions were integrated among the Zambian lions. The study also determined that the genetic diversity of Zambian lions is much greater than comparable areas in southern and eastern Africa.

Population Status:

Data provided by Macdonald (2016) indicate that Zambia contains approximately 1,200 free-ranging lions in an estimated range of 135,000 km^2 (approximately 10,000 km^2 less range than identified by the Zambian government). DNPW explains that previous lion estimates were determined, in large part, through expert opinion (DNPW 2016). They also confirm that no intensive research has been conducted in the corridor area, consisting of West Petauke, Chisomo and Luano GMAs, and surrounding Open Areas (DNPW 2016).

In addition to the population status determined by Macdonald (2016), the Zambian Carnivore Programme (ZCP) studied the population of lions in Zambia. In 2013, the ZCP monitored 13 prides and 13 coalitions, comprised of 141 lions with 3 adjacent sites of 20 lions each, totaling over 200 lions. In 2014, the ZCP monitored 15 prides and 13 coalitions, with a total of 166 individual lions. In 2015, the ZCP's partial data indicated that 15 prides and 15 coalitions of lions exist throughout Zambia.

In acknowledging their need for more complete and current lion population data, DNPW has begun working with partners on monitoring studies in the Luangwa and Kafue ecosystems. Surveys were conducted in the later part of 2016 (DNPW 2016). The Service has not seen the results, but will request them for consideration in future enhancement determinations. In addition, dependent on funding availability, DNPW has identified that a survey would be conducted of the corridor

between South Luangwa National Park and Lower Zambezi National Park and the GMAs surrounding the eastern part of North Luangwa National Park.

A report by the Democratic staff of the House Committee on Natural Resources concludes that Zambia lion populations may show signs of stabilizing or even recovery, but strict controls on additional mortality are necessary to prevent further decline (Grijalva 2016).

Threats:

Habitat Loss, Population Growth, and Human-Lion Conflicts:

Lion populations throughout Africa have decreased in correlation with their habitat. Currently only 10 stable populations with more than 500 lions still exist throughout the continent of Africa (Creel *et al.* 2016). Africa has the fastest human population growth rate in the world, with projections estimating a population tripling across 27 African states by 2100, leading to a continental estimate of 4 billion. Eight lion range states are estimated to have a five-fold increase in human population by 2100 (Macdonald 2016), and Zambia has not steered clear of Africa's population and development growth (DNPW 2016). Human population growth has increased in Mfuwe, the gateway town to South Luangwa National Park, largely due to increased infrastructure development and an increasing number of economic opportunities created through tourist lodges (DNPW 2016). Habitat loss, population growth, human-lion conflicts, poverty, poaching, diseases, uncontrolled hunting, and the importation of captive-bred lions into Zambia are all threats to the long-term survival of lion populations in Zambia.

DNPW stated that human-lion conflicts are not uncommon in Zambia. From the years 2008 through 2015, a total of 327 livestock animals were recorded as being killed by lions; since 2002, at least 70 lions were reported killed as a result of human lion conflicts (DNPW 2016). The number of Zambian lions killed as a result of human-lion conflict is shown in the table below.

Year	Lions Killed
2002	2
2003	4
2004	1
2005	0
2006	5
2007	8
2008	2
2009	5
2010	3
2011	8
2012	5
2013	10
2014	14
2015	1
2016	2

Poverty, Poaching, and Disease:

Prey base depletion is partly linked to habitat loss, but more importantly to poaching and bush meat trade (Becker *et al.* 2013). Poaching of lions for the trade in bones and other body parts for traditional medicine is an emerging threat within Africa (Macdonald 2016). Within Zambia, another more widely occurring threat believed to be facilitated by high levels of poverty is poaching of lions for bush meat (DNPW 2016). DNPW acknowledges that bush meat poaching occurs widely in Zambia (DNPW 2016). They also acknowledge that the amount of illegal use of lion parts in Zambia is currently unknown (DNPW 2016). However, DNPW has indicated it will establish an investigation into the illegal trade and use of lion parts.

Zambia has addressed the need to monitor the health of their lions by creating the Infrastructure Development Unit (IDU). The IDU subsequently established a veterinary unit of DNPW whose responsibility is to regularly sample lion specimens for diseases. This unit also assists law enforcement officers in the treatment of injured lions due to illegal activities such as snaring (DNPW 2016).

Trophy Hunting:

Di Minn *et al.* (2016) estimated that 37.8% of Zambia is covered by terrestrial protected areas, with 21.3% in Open Game Ranches. According to a 2012 article, lion hunting in Africa generates 5–17% of gross trophy hunting income on national levels, with the proportional significance highest in Mozambique, Tanzania, and Zambia (Lindsey *et al.* 2012). A more recent paper published by Macdonald, however, asserted that Zambia generated very little revenue from trophy hunting (Macdonald 2016). It should be noted, however, that Macdonald based the paper on data obtained in the years before 2016 (the moratorium was between 2013 and 2015), and the formation of DNPW and newer regulations were not implemented until after Zambia imposed a moratorium on lion hunting for the years 2013 through 2015. According to DNPW, Zambia's total hunting revenue (all hunting, not just lions) accounted for 32% of the revenue that ZAWA (now DNPW) received during the years 2010 through 2012 (DNPW 2016). They also affirm that the average revenue generated for hunting in Zambia was reduced to 4% during the lion hunting moratorium in 2013 and 2014 (DNPW 2016).

IUCN has only examined the lion population in Luangwa, Zambia. Their findings indicate that trophy hunting in Luangwa contributed to a decline in the lion population by 28% between 1993 and 2014 (Macdonald 2016). However, this assessment was done prior to Zambia's 2013-2015 hunting ban and therefore, it will need to be re-assessed now that Zambia's lion hunting ban has been lifted and new regulations have been implemented.

Importation of Captive-bred lions:

Captive-bred lions from South Africa and Zimbabwe are being imported into Zambia for lion walks (DNPW 2016). DNPW believes that the importation of captive-bred lions is a result of a growing photo-tourism market in the Livingstone area of southern Zambia (DNPW 2016). Since 2008, a total of 54 captive-bred lions have been imported into Zambia, but the Zambian government has imposed a condition that the captive-bred lions will not be introduced into the wild (DNPW 2016).

In order to ensure that Zambia's captive-bred lions do not negatively impact their wild lion populations, Zambia is currently working on the preparation of a statutory instrument that will regulate the importation and captive uses of lions. Other than for temporary veterinary purposes, the holding of, breeding, and commercial use (i.e. walking and petting) of captive-bred lions will be banned (DNPW 2016). Lions that are currently held in captivity will be required to be castrated or spayed, and eventually all commercial uses of captive-held lions will be phased out (DNPW 2016). DNPW states that "particular care will be taken to avoid the dumping of captive-held cats into wild areas for any reason, especially for hunting or 'release' as means for the owners to avoid the penalties or costs associated with the authorized disposition of their animals (DNPW 2016)."

Partners/Non-governmental Organizations (NGOs):

DNPW has partnered with several NGOs in an effort to obtain lion population survey data and to conduct other lion-related research studies. The Zambia Lion Project (ZLP) has conducted research on the presence/absence of lion surveys throughout Zambia (DNPW 2016). They have also assisted with DNA collection studies. The Zambia Carnivore programme (ZCP) has been documenting population trends and demographic vital rates of lions in the key areas of South Luangwa National Park, Kafue National Park, and Liuwa Plain National Park. Through their research efforts, the ZCP has also contributed to aerial support that has assisted DNPW with enforcement actions.

Although their research focus has been on elephants, the Frankfurt Zoological Society has been active in North Luangwa ecosystem for over 20 years. Conservation South Luangwa (CLS) has been active in South Luangwa National Park and surrounding GMAs. Game Rangers International has been active in the Kafue ecosystem since 2010. Conservation Lower Zambezi (CLZ) is also active in the Lower Zambezi national park and surrounding GMAs.

Supplemental revenue sources are also gained with the support of several NGOs. NGOs can provide functions that include anti-poaching units and/or aerial support. One such example is the Frankfurt Zoological Society (FZS), which has been active in North Luangwa National Park for over 20 years. FZS established a partnership with DNPW in order to help preserve black rhino and elephant populations through the establishment of The North Luangwa Conservation Programme (NLCP).

Lion Management in Zambia

History of Lion trophy exports:

During 2008 - 2012, DNPW authorized the export of 289 lion trophies (50, 40, 89, 37, and 73 respectfully). During 2013 - 2015, the Zambian government established a lion hunting moratorium (some trophies apparently taken before the moratorium were exported during this time, however). The moratorium was established to allow time to restructure Zambia's governance of lions and to allow a period of time for lion recovery (DNPW 2016). Data comparing the lion population status before and after the moratorium are currently unavailable; hence, the success of the moratorium cannot be fully assessed.

Lion Hunting and Concessions:

Zambia lion hunting occurs in *Game Management Areas (GMAs)* and *Open Game Ranches (OGRs)*. OGRs are unfenced private lands reserved for the wildlife conservation management of an

individual or local community. They are buffered by GMAs. DNPW issues annual non-resident hunting quotas to the OGRs in exchange for managing the wildlife; although all animals remain the property of the State (DNPW 2016).

All 20 of Zambia's national parks are surrounded by GMAs, but currently, lion hunting only occurs within hunting blocks located in the GMAs that surround the National parks in the Luangwa, Kafue, and Lower Zambezi ecosystems. GMAs are primarily designated for safari (tourist) and resident hunting, but some GMAs also include photographic tourism. All GMAs allow settlement. There are 36 GMAs in Zambia covering 177,404 km^2 (DNPW 2016). Most, but not all, GMAs have General Management Plans outlining basic management practices. Community-Based Natural Resource Management (CBNRM) is implemented within GMAs through Community Resource Boards (CRBs) (DNPW 2016). The CRBs focus on the economic and social well-being of local communities. There are currently 75 registered CRBs within Zambia that employ approximately 750 community scouts and 79 support staff.

DNPW, in consultation with the local community, is mandated to grant hunting concessions within specific hunting blocks within GMAs. Hunting concessions must be registered in Zambia, have a tourism enterprise license, have a valid tax clearance certificate, provide proof that the company is not bankrupt, and they must meet any additional conditions set by an evaluation committee (DNPW 2016). Leases are stated to range from 7 - 15 years, with the length of lease time dependent on the abundance of species classified within the individual hunting block (DNPW 2016). Prime hunting blocks have greater species abundance and are generally awarded shorter lease agreements in comparison to secondary hunting blocks. Secondary hunting blocks are generally given longer lease periods in an effort to provide incentives for the concessionaire to invest greater resources, allowing wildlife populations to increase before offering hunting (DNPW 2016).

Hunting block concessions are awarded through a bid process in accordance with the Zambia Public Procurement Act No 12 of 2008. Bids are taken from companies through a "two envelop system." The bids consist of a technical proposal and a financial proposal being placed in separate clearly marked envelopes. The technical bid is required to be evaluated by criteria outlined in Zambia's Wildlife Act before the envelope containing the financial bid is opened. Financial envelopes will only be opened for bidders that meet a specific technical expertise (e.g., a score of over 80 on the established criteria). The lease is awarded to the bidder that qualified with a minimum technical rating of 80 and whom submitted the highest financial bid (DNPW 2016).

Successful bidders must address statutory obligations to communities and provide enforcement contributions when developing Concessionary Agreements. Concessionary Agreements are developed through a partnership between the communities, safari operators, professional hunters, and DNPW. As such, a hunting concession agreement is not valid without the signature of the Chief(s) or CRB associated with the hunting block (DNPW 2016). Concessionaires are required to use collected fees to support resource protection by providing community scouts, vehicles, fuel, patrols, and equipment. They must provide infrastructure development to local communities and also offer resource monitoring and fire management. Some concessionaires further benefit community development by supporting the employment of teachers and nurses, purchasing ambulances, building classrooms and clinics, and providing houses for teachers and health personnel. Moreover, they are mandated to provide 50% of the meat from hunted animals to the local community. Concessionaires are evaluated annually and those that do not comply with their

obligations can have their concession terminated before the end of the agreement's term (DNPW 2016).

Hunting Quotas:

From 2005 - 2012, Zambia had quotas that totaled 683 lion in 21 GMAs and 5 OGRs, with the highest annual quota set at 117 lions and the lowest at 55 lions (DNPW 2016). The quotas were generally based on the previous year's lion quotas and, in some cases, the quotas were a fixed part of a concession agreement (DNPW 2016). However, DNPW did not completely identify the basis for these quotas or how they were distributed. Currently, quotas are based primarily on lion populations determined through aerial surveys (DNPW 2016). However, information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring is also used. CRBs use the information they have collected to determine what the GMA quota should be. Their proposal is submitted to DNPW for approval. Once a proposal is received, DNPW accepts feedback from field staff and safari hunting outfitters, as well as the hunting guidelines (below), before the quotas are approved by the Wildlife Conservation and Management Unit and distributed by their Licensing Unit. The quotas are then distributed to the CRBs and hunting companies. DNPW is required to share the approved quotas with other government agencies, including the Auditors General Office and Anti-Corruption Commission. For 2016, Zambia established a quota of one lion per hunting concession, for a total quota of 24 lions (2 hunted on OGRs and 22 hunted in GMAs). Quotas are set for individual hunting blocks within the GMAs.

Hunting Guidelines:

The Zambia's Conservation Strategy and Action Plan for the African lion was developed in 2010 and designed with a 10-year plan (DNPW 2016). The purpose of the plan is to gain stakeholder participation while using adaptive management practices when addressing concerns regarding scientific management, habitat protection, and human-lion conflicts. Based on the principles of the Action Plan, following the three-year moratorium, in 2016, DNPW consulted independent lion experts and held a workshop that resulted in the creation of hunting guidelines (DNPW 2016). The guidelines are considered part of an adaptive process to manage lion hunting in Zambia. DNPW is in the process of transforming the guidelines into a statutory law that will include provisions for monitoring lion hunting through an age-based system (DNPW 2016). The lion hunting guidelines include, but are not limited to, the following recommendations:

1. No hunting of female lions.
2. No hunting of any lion born or held in captivity.
3. No use of pre-recorded sounds in lion hunting.
4. No lion hunting on fenced game ranches.
5. Lions should only be hunted in Prime and Secondary areas and Open Game Ranches known to be rich in lion and prey.
6. Establishment of a place for trophy measurements of hunted lions for exports should be established.
7. DNPW shall establish a lion aging evaluation committee that will include representatives from the Professional Hunters Association, the Safari Operator Association, the Wildlife Producers Association, and officers from DNPW that are nominated by the director. Prior to issuing CITES permits, the committee shall meet once a year to establish the age of hunted lions.

DNPW has established age-based categories that divide lion hunting into four age-based categories: Category 1 consists or male lions between five and six years old and above; Category 2 consists of male lions older than four years old, but younger than five years old; Category 3 consists of male lions that are younger than four years old; and Category 4 consists of male lions seven years old or older. DNPW has determined that only male lions that are five years and older should be hunted. However, DNPW may authorize the export of Category 2 male lions so as not to penalize the hunter. Lions that are less than four years old will be confiscated and may not be exported. In cases where lions under five years old are taken, however, the professional hunter and the safari outfitter may be penalized (Becker 2017 per. comm.).

Wildlife officers must also accompany hunters on all hunts (DNPW 2016). The officer is responsible for recording hunt activities on specified forms such as the Safari Hunting Monitoring form and Trophy Measurement form. The officer endorses licenses to ensure that they are not used more than once and the officer also ensures that all harvested trophies are registered (DNPW 2016).

Hunting-generated Revenue:

DNPW receives revenue by charging GMA fees per lion hunt. They also receive funds from annual professional hunter fees, certificate of valuation of trophies fees, certificate of ownership of trophies fees, permit fees, handling fees, and CITES security stamp fees. Hunting license fees in Zambia are statutory. The foreign hunter looking to take a lion must pay the fee directly to the outfitter, with the minimum amount currently set at $4,200. DNPW collects these fees from the outfitter/ concession and does not deal with the foreign hunter directly. Therefore, the outfitter may choose to charge the foreign hunter any amount greater than $4,200. The revenue generated from license fees (also referred to as Animal fees by DNPW) is mandated to be shared with CRBs under the Zambia Wildlife Act No. 14 of 2015. The fees are shared with CRBs and DNPW as follows:

License fees (animal fees):

- 5% of funds go to the CRB chief/leader.
- 45% of funds go to CRB community funds.
    - According to Zambia's "Guideline on the use of Community funds accrued from wildlife management", 45% of these community funds should go to wildlife protections and patrols, 35% should go to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds should go towards CRB administration costs.
- 50% of funds go to DNPW (mandated under the Zambia Wildlife Act No. 12 of 1998 and continued in the Wildlife Act) in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

According to Zambia's hunting guidelines, hunts involving lions are required to be a minimum of 16 days (DNPW 2016). A daily conservation fee of $150 per hunter and $100 per observer is collected for monitoring purposes (DNPW 2016). These daily hunt fees typically cover combined hunt packages that include hunting lion, along with other species such as hippos and impalas. The fees are allocated by percentages to CRBs and DNPW as follows:

Daily fees (Concession fees):

- 5% of funds go to the CRB chief/leader.
- 15% of funds go to CRB community funds.
    - Based on recommended guidelines, 45% of these community funds go to wildlife protections and patrols, 35% goes to community projects such as constructing clinics, roads, schools, and wells, and 20% of the funds go to CRB administration costs.
- 80% of funds go to DNPW in the form of conservation funds, including, but are not limited to: scout/wildlife officer salaries, resource protection, consultancy and legal fees, animal surveys, staff training, administrative and operational expenses, repair and maintenances, and other conservation expenses.

Hunting fees for all species accounted for 32% of revenues that DNPW received during 2010 - 2012. However, that amount was reduced to about 4% during the 2013 and 2014 moratorium (DNPW 2016). Safari hunting also creates other revenue for Zambia, through activities such as tipping, eating in restaurants, staying at lodges, purchasing souvenirs, and paying for taxidermy.

Evaluation:

As stated earlier, the Service will evaluate any application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for endangered species permits (50 CFR 17.32(a)(2)). In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is **adequate to justify removing from the wild** or otherwise changing the status of the wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions has demonstrated the ability to contribute toward positive conservation outcomes that mitigate or improve the status of lions throughout their range within Zambia, while addressing the main threats of habitat loss, human-lion-livestock conflict, and prey depletion.

The IUCN's 2012 Guiding principles on trophy hunting support the concept that hunting can provide a conservation benefit if it is part of a governance system that provides both implementation and enforcement at a level that adequately supports conservation. The Service also believes that conservation hunting can assist the wild lion populations if managed well. Lion hunting, if managed properly, could meet the Service's enhancement criteria under the Act. There must be adequate information and data clearly showing that removing lions from the wild for trophy hunting will be done at a level and with sufficient oversight such that it improves the current status of lions in the wild (50 CFR 17.32).

Zambia has demonstrated their desire to maintain the long-term conservation of their lion population with their 2013-2015 moratorium on lion hunting. When the Zambian government realized that population numbers were declining to an unstainable level, they applied the

moratorium for 3 years, until they determined that their lion population increased enough to tolerate limited offtakes (DNPW 2016).

As mentioned in the sections above, the Zambian government has clarified that they have established block quotas by surveying lion populations through a combination of aerial surveys and information obtained from ground counts, patrol sightings, local and expert opinion, and hunting monitoring. Because surveys are continually being carried out on the current population of lions in Zambia, future findings will consider updated population data. Therefore, the Service will need to continue to monitor the effectiveness of new lion surveys that contribute to determining the population status of lions in correlation with hunting block quotas.

The difference in male turnover between hunting/non-hunting periods is apparent from cub survival rates. Macdonald (2016) reports that in the absence of hunting, 80% of cubs survived to one year of age, during the trophy hunting period, 66% of cubs survived to one year of age. The principle behind restricting trophies to older males is that their tenure in the pride should have been long enough to raise at least one generation of cubs to adulthood. However, lion experts have come to varying conclusions regarding the minimum age recommended for sustainable lion hunting. Creel *et al.* (2016), not only state that the minimum hunting age should be 7-8 years old, but they also conclude that age-restricted harvesting is not sufficient to yield sustainability by itself. However, other experts believe that the sustainable age of lions is five years and older, provided that proper identification/aging can occur before the animal is harvested. Nonetheless, lion experts are in consensus that hunting lions younger than five years old may not be sustainable. Zambia's recommended hunting guidelines are in line with the minimum age of five-year-old lions, but the Service is concerned that allowing for the export of lions under this age (Zambia allows export of four-year-old lions, but not less than four years old) may not be sustainable. Zambia will need to closely monitor the number of exports of "under age" trophies to determine if there are sufficient disincentives to discourage taking such animals.

The Zambian government has done a good job of identifying how resources from hunting-generated revenue would be shared with communities. The local communities receive funds from concessions and license (animal) hunting fees. As outlined in the license fee distribution above, 35% of the funds allocated to CRBs help support community projects such as constructing clinics, roads, schools, and wells, thereby providing incentives for the local community to ensure the long-term conservation of the lions. In addition, 45% of the CRB license fees go to wildlife management, including resource protection and patrols.

Zambia's human population growth has contributed to conflicts within the GMAs. As clarified above, DNPW contributes 50% of the license fees (animal fees) and 20% of the Concession fees to local communities. These financial benefits received from living in a GMA have provided incentives for newcomers to illegally squat in the GMAs looking to capitalize on the financial benefits. Consequently, the illegal squatting has caused enough conflict with local people to trigger action to be taken by the Zambian government. In August of 2015, over 2,000 squatter households within the Mumbwa GMA were evicted so that the registered local communities could receive the full benefits of living within a conservation area (DNPW 2016). The long-term impacts of the eviction will need to be considered in future findings, as the information becomes available.

Therefore, based on the information available to the Service and considering that the lion to be imported was harvested in compliance with Zambian laws and regulations, we conclude that the

purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:

As described under Current Lion Status in Zambia above, Zambia has taken great strides to address the major threats facing lions through their hunting program and updated regulations. In 2010, Zambia developed a ten-year Conservation Strategy and Action Plan for the African lion. Since the establishment of the Action Plan, the Zambian government has cooperated with partners to implement the strategy (DNPW 2016). Monitoring, local community benefits, human lion-conflict, and land use planning are only some of the benefits of the Action Plan (DNPW 2016). The development of the Community-Based Natural Resource Management Unit has helped facilitate Zambia's economic and social well-being by providing technical support to CRBs, training of village scouts and CRB members, and monitoring the use of funds disbursed to the CRBs. An investigative unit also carries out investigations related to wildlife crimes. Furthermore, the President of the Republic of Zambia has also directed the Defense san security wings in the country to join in the fight against poaching.

Taking into account that the off-take of wild lions is currently being monitored by the Zambian government, that the government of Zambia is implementing an age-based harvest strategy and a precautionary quota, and that the government of Zambia's management of lions provides community benefits, Mr. Burns' hunting and subsequent import of this lion provides an indirect benefit to wild populaitons by helping to support the reserves where lions are found. Therefore, based on the information available to the Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

We are not aware of any programs intending to enhance the survival of lions in Zambia that would conflict with Zambia's management plan. However, we are aware of the Zambian Carnivore Programme (ZCP), which is a non-profit Zambian registered trust that is dedicated to conserving large carnivore species and the ecosystems they reside in. The program works to build capacity within local Zambian organizations and government bodies for the sustainable conservation of large carnivores and herbivores, their ecological functions, and their habitats. Therefore, based on the information available to the Service, the issuance of an import permit for this legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

In evaluating this criterion, the Service assesses whether the hunting program established for lions is subject to a governance structure that clearly allocates management responsibilities and supports regulatory pathways in support of positive conservation outcomes. Zambia's lion management

program is based on a precautionary quota, an age-based harvest with monitoring of off-takes, and direct community benefits (DNPW 2016).

Currently, per Zambia's approved budget, DNPW retains all revenue from sport hunting. 50% of animal fees and 80% of concession fees are allotted to DNPW as conservation funds. This funding source is vital to lion conservation because it supports on-the-ground conservation, protected area management, and enforcement efforts. Additionally, 45% of animal fees and 15% of concession fees go to communities where the hunts take place. As long as communities continue to benefit from the sport hunting of lions through job opportunities, funded community projects, and sharing of meat derived from hunting, they may have the incentive to protect it.

Given that lion management in Zambia allows limited, controlled off-take of lions in a manner that mimics natural processes and provides community benefits, the legal hunt undertook by Mr. Burns' will contribute to reducing the threat of extinction of lions in Zambia. The utilization of hunters, such as Mr. Burns' managing the lion populations in GMAs and OGRs is an important element of the success of lion management in Zambia.

Therefore, based on the information available to the Service, the purposes for which this import permit would be issued would likely reduce the threat of extinction facing lions in Zambia.

17.32(a)(2)(v): <u>The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application</u>:

As with any discussion of hunting, there are numerous opinions on the impact that hunting has on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and literature, there is general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for as long as possible by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see that benefits can be obtained through a science-based hunting program for lions. There have been a large number of comments from some NGOs and the public opposing hunting any lions, but particularly captive-bred lions. This opposition, however, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process.

Therefore, based on the information available to the Service, there is general support from scientists and other persons or organizations having expertise concerning lions that the legal well managed, science-based harvest of lions, and the subsequent import of these trophies, would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): <u>Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application</u>:

Examining whether adequate resources exist, the Service relied primarily on information provided by Zambia (DNPW 2016). The long-term survival of lions in Zambia, is directly tied to the economic and ecological success of the country. When ZAWA became a semi-autonomous agency,

they struggled with funding to provide for adequate staffing and fulfillment of lion conservation objectives. However, after transforming back to a government agency, DNPW (formerly ZAWA) has been able to ensure that staff are adequately resourced and paid by Zambia's government, while retaining funding generated from sport hunting, as per the approved budget for the country. This ability to deliver on conservation objectives is improved with funding provided by U.S. sport hunters such as Mr. Burns.

Therefore, based on the information available to the Service, the applicant undertook a legal, authorized hunt, abiding by management practices in accordance with the government of Zambia's laws and regulations, having the expertise, facilities, and other resources available to him to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of lions within Zambia and the level of management and oversight provided to lions, it appears that the harvest and import of this lion as a sport-hunted trophy meet the purposes of the Act. Zambia's ongoing adaptive management and limited off-take of lions is important to the survival of lions in Zambia.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in Zambia, to Thomas** (b) (6) **Burns.**

(b) (6) [redacted]
AUSTIN, TX 78733
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zambia for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2016 hunting season.**

D. Trophy must be accompanied by valid hunting authorization issued by the government of Zambia for the 2016 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
CHAO	RANDAL		

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b)(6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b)(6)			(b)(6)

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address, Apartment #, Suite #, or Room #; no P.O. Boxes)
(b)(6)

1.b. City	1.c. State	1.d. Zip code/Postal code	1.e. County/Province	1.f. Country
WILMETTE	IL	60091	COOK	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)

2.b. City	2.c. State	2.d. Zip code/Postal code	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☐ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: _____ No ☑

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable*** ***le 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my ... ...y false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6)

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      PANTHERA LEO, two captive breed african lions (one male and one female) from south africa

   b. Sex (if known).

      ONE MALE AND ONE FEMALE

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

   b. Date wildlife is to be hunted:

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      SOUTH AFRICA, FREE STATE PROVINCE

   b. Date wildlife was hunted:

      1/19/2016-1/20/2016

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

ONE FULL MOUNT, SKULL, FLOATING BONE
ONE RUG, SKULL, FLOATING BONE

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

SANDRA LINDE TAXIDERMY, P.O. BOX 764, FRANKFORT, 9830, SOUTH AFRICA
+2782 378 3307 INFO@SANDRALINDETAXIDERMY.CO.ZA

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	MADELEINE VENTER
Business Name:	SANDRA LINDE TAXIDERMY
Address:	P.O. BOX 764
Address:	
City:	FRANKFORT, 9830
State/Province:	SOUTH AFRICA
Country, Postal Code:	

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applic[redacted]y, once imported into the United States, cannot be re-exported.

Applicant's signature: _____ Date: 10/5/2017

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
RANDAL CHAO, (b)(6) [redacted]

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Mr. Randal Chao
(b)(6) [redacted]
Wilmette, Illinois 60091

Dear Mr. Chao:

This letter responds to your October 5, 2017, application requesting a permit under the U.S. Endangered Species Act (Act) to import a sport-hunted lion (*Panthera leo melanochaita*) hunted in the Free State Province, South Africa. After careful review and consideration of your application, your request is being denied for the reasons described below.

The subspecies of lion found in Southern Africa (*P. leo melanochaita*) is listed as threatened under the Act with a rule under section 4(d) of the Act, which is set forth at 50 CFR 17.40(r)[1]. Section 9 of the Act[2] and our implementing regulations at 50 CFR 17.31 set forth a series of general prohibitions that apply to all threatened wildlife, respectively, except where there is a 4(d) rule, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Otherwise prohibited activities, such as imports, may be permitted, but only if the U.S. Fish and Wildlife Service (Service) finds that the activity is consistent with the 4(d) rule and the purpose of the Act [Section 10(d)[2]]. The primary purpose of the Act is the conservation and continued existence of wild populations of endangered and threatened species and the ecosystem on which they depend (Section 2[2]). It is the requirement of the Act and its implementing regulations (50 CFR 17.31(a)(2)[1]) that the proposed

[1] The text of this regulation is available at: http://go.usa.gov/xr6m3
[2] The text of the Act is available at: http://go.usa.gov/xr6dd

activities of the applicant would enhance the propagation or survival of the subspecies by reducing the threat of extinction in the wild or otherwise benefits the species in the wild.

While the threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits, it does not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of captive-bred lion hunting trophies. Therefore, when making a determination of whether the importation of such a trophy would enhance the propagation or survival of *P. l. melanochaita,* the Service examined the overall management of the captive subspecies in South Africa and whether that management addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In that review, we evaluate whether the import contributes to the overall conservation of the subspecies in wild by addressing loss of habitat, loss of prey base and human-lion conflicts, the basis for listing the subspecies as threatened under the Act.

Since the subspecies was listed under the Act, the Service has had discussions with South African Department of Environmental Affairs and the South Africa Predator Association (SAPA). However, the Service has not receive any specific information about how the management and subsequent hunting of captive lions contributes to the species in the wild. While the 2015 Biodiversity Management Plan for the Lion (Panthera leo) in South Africa (BMP), the lion management plan for the country, has some discussion on captive lions within South Africa, it does not include any discussion of how captive lions are contributing to the long-term conservation of lions in the wild. The brief overview of activities being conducted or proposed to be conducted by SAPA, received on August 26, 2016, and further discussion on September 28, 2016, provided some additional discussion of how captive lions could potentially contribute to wild lion conservation, it primarily addressed activities and support that could be started in the future or activities that, while generally contributing to South Africa's overall economy, do not contribute directly or indirectly to conservation efforts for *P. l. melanochaita.* Further, of over 200 farms/ranches that maintain captive-bred lions, SAPA only identified 9 that were accredited under their standards for hunting, which would be the only facilities that might contribute to SAPA activities.

According to the BMP, captive lions in South Africa are primarily held and bred in private facilities under the governance of individual South African provinces. The BMP points to a prevailing view amongst carnivore specialists that captive-bred lions do not contribute to the conservation of the species, particularly given that inbreeding is known to occur with captive lions. This could compromise genetic integrity and provenance and therefore not make these lions suitable for reintroduction purposes. Further, based on the limited information currently available, there is no evidence to suggest that captive breeding operations are supporting or contributing to any in-situ conservation efforts for wild lions. Given the level of management and oversight that is afforded wild and wild-managed lions, the claim that has been voiced by some that utilizing captive lions as trophy animals reduces the demand on wild lions is not demonstrated to be accurate based on available information.

The decision to issue or deny an application to import a captive-bred lion trophy is made on a case-by-case evaluation of the submitted application. As such, we would need to evaluate each

application individually to determine if the information provided by the applicant would enable the Service to find that a permit for the importation of sport-hunted trophies of captive-bred lions (*P. l. melanochaita*) taken in South Africa during the 2016 calendar year meets the enhancement criteria under 50 CFR 17.32. However, based on the currently available information, and the information you provided in your application, your proposed import does not appear to meet the purposes of the Act or the issuance criteria in 50 CFR 17.32(a)(2).

Therefore, there is no indication that permitting the import of trophies of captive-bred lions sport-hunted in South Africa in 2016 would enhance the propagation or survival of the species in the wild. Without additional information that would enable the Service to make such a finding in accordance with the general considerations laid out above, the Service is unable to make a determination that the import of captive-bred lions would meet the issuance criteria under 50 CFR 17.32. Therefore, until such time as additional information becomes available that would affect this finding, the Service **is unable to authorize the import of captive-bred lion trophies from South Africa**. Please see attached October 19, 2016, enhancement finding for additional information.

As provided in 50 CFR 13.29 (a)[3], you may request reconsideration of our decision to deny your application. Such a request must be submitted in writing with the original signature of the person requesting reconsideration or by that person's legal representative, must contain a certification statement as provided at 50 CFR 13.12(a)(5)[1] should refer to your file number, PRT-58309C, and must be received in this office within 45 calendar days of the date of this letter. The reconsideration of the decision to deny your request will be based on the information you provided in your original application. As such, your letter requesting reconsideration must address how our decision to deny your application was based on a misinterpretation of the information provided in your applications, or it must present clarification of this information. **Should you supply new information that changes the content of your original application, a new application will need to be submitted to this office before such information can be considered.**

If you have any questions, please contact Biologist Caroline Harlow of this office: Division of Management Authority, Branch of Permits, MS: IA, 5275 Leesburg Pike, Falls Church, Virginia 22041-3803 (1-800-358-2104, ext. 2296 or 703-358-2296).

Sincerely,

Timothy J. Van Norman, Chief
Branch of Permits
Division of Management Authority

Dear Sir,

This letter responds to your decision of denial for my permit application to import sport-hunted lions (Panthera leo melanochaita) hunted in the Free State Province South Africa on Jan 19-20, 2016.

The primary reason for your decision of denial was because lions found in Southern Africa is listed as threatened under 50 CFR 17.40(r) section 4(d), and your implementing regulations at 50 CFR 17.31. However I respectfully request you to reconsider the decision or issue a statement that such permit is not required. The reasons are laid out as follows:

1. According to your web page https://www.fws.gov/endangered/what-we-do/lion.html, the final lion rule regarding Panthera leo melanochaita was published in the Federal Register on December 23, 2015, and went go into effect 30 days after publication on **January 22, 2016.** My lion hunting took place on Jan 19-20, 2016, this is **before** the Act effective date. E*x post facto* laws are generally prohibited by clause 3 of Article I, Section 9 of the United States Constitution.

2. In your web FAQ page regarding lions, https://www.fws.gov/endangered/what-we-do/pdf/Lion_FL_FAQs_Final.pdf, page 3 specifically states:

   If I hunt a lion in Africa between December 23, 2015, the date the lion listing was published in the Federal Register, and January 22, 2016, when the listing goes into effect, do I need to obtain an import permit when I bring the trophy into the United States?

   No. Lions hunted in Africa before the effective date of January 22, 2016, would be considered to be "pre-Act" and exempt from the permitting requirements, regardless when it was imported into the United States. It is important, however, that you provide appropriate documentation establishing when the lion was hunted to the U.S. Fish and Wildlife Service Wildlife Inspector at the time of import.

I have included a hard copy of above reference web pages as evidence for your review. As you can see, it is unambiguous that my sport trophy lion import is legal and should be exempt from permitting requirement. As a caution for potential misunderstanding during import inspection process, I would respectfully request from you a statement to positively indicate my lion trophy import is exempt.

Should you have any questions, please do not hesitate to contact me at (b) (6) I would be happy to supply any further evidence that you may request.

Sincerely,

(b) (6)

Lions Are Now Protected Under the Endangered Species Act

Lion in Botswana.

Photo credit: C.M. Perry & R. Sayers, Jr., used with permission

The U.S. Fish and Wildlife Service added two subspecies of lion under the Endangered Species Act due to these primary factors:

- Habitat Loss
- Loss of Prey
- Retaliatory Killing Due to Increased Human-Lion Conflicts
- Inadequate Regulatory Mechanisms
- Weak Management of Protected Areas.

Based on newly available scientific information on the genetics and taxonomy of lions, the Service assessed the status of the entire lion species. The new science resolved that the western and central populations of African lion are more genetically related to the Asiatic lion. These lions are now considered the same subspecies, *P. l. leo*. There are only about 1,400 of these lions remaining; 900 in 14 African populations and 523 in India. Considering the size and distribution of the populations, population trends and the severity of the threats, the Service has found that this subspecies meets the definition of endangered under the ESA.

The subspecies of *P. l. melanochaita* likely numbers between 17,000-19,000 and is found across southern and eastern Africa. The Service determined that this subspecies is less vulnerable and is not currently in danger of extinction. However, although lion numbers in southern Africa are increasing overall, there are populations that are declining due to ongoing threats. As a result, the Service finds the subspecies meets the definition of a threatened species under the ESA.

The final lion rule will publish in the *Federal Register* on December 23, 2015, and will go into effect 30 days after publication on January 22, 2016.

Concurrent with this final listing rule, to protect lions and other foreign and domestic wildlife from criminal activity, U.S. Fish and Wildlife Service Director Dan Ashe also issued a Director's Order to strengthen enforcement of wildlife permitting requirements. Through the Director's Order, the Service is redoubling its efforts to ensure that the world's rarest species are protected from those who violate wildlife laws. The Service has the authority to deny future permit applications for activities such as sport hunted trophy imports to anyone that has previously been convicted of or pled guilty to violations of wildlife laws. The order will ensure that this authority will be exercised to the fullest extent.

Read the Director's Order

The Service found that sport-hunting, if well managed, may provide a benefit to the subspecies. Well-managed conservation programs use trophy hunting revenues to sustain lion conservation, research and anti-poaching activities. However, the Service found that not all trophy hunting programs are scientifically based or managed in a sustainable way. So in addition to protecting both lion subspecies under the ESA, we created a permitting mechanism to support and strengthen the accountability of conservation programs in other nations. This rule will allow for the importation of the threatened *Panthera leo melanochaita*, including sport-hunted trophies, from countries with established conservation programs and well-managed lion populations.

"The lion is one of the planet's most beloved species and an irreplaceable part of our shared global heritage. If we want to ensure that healthy

lion populations continue to roam the African savannas and forests of India, it's up to all of us – not just the people of Africa and India – to take action,"
- Service Director Dan Ashe

Frequently Asked Questions
Final Rule Listing Two Subspecies of Lion under the Endangered Species Act

About the Decision

What action is the U.S. Fish and Wildlife Service taking?
Following review of the best available scientific and commercial information, the U.S. Fish and Wildlife (Service) is listing the two subspecies of lion under the Endangered Species Act (ESA), *Panthera leo leo*, located in India and western and central Africa, as an endangered species and *Panthera leo melanochaita*, located in eastern and southern Africa, as a threatened species.

The Service is also finalizing a rule under section 4(d) of the ESA for *P. l. melanochaita*. The 4(d) rule will provide conservation measures for this subspecies by establishing a permitting mechanism for the importation of sport-hunted *P. l. melanochaita* trophies that will ensure hunting contributes to the survival of the species in the wild. The Service found that sport-hunting may provide a benefit to the subspecies if well managed, however, recent information received during the public comment period indicates that not all trophy hunting programs are providing benefits to the subspecies. The Service wants to ensure that U.S. trophy imports originate from countries with a scientifically sound management program and provide funds that further lion conservation.

With an endangered listing, all imports of *P. l. leo* will be generally prohibited, except when it can be found that the import will have a benefit to the species.

Caroline George

The final lion rule will publish in the *Federal Register* on December 23, 2015, and will go into effect 30 days after publication on January 22, 2016. For more information on the two subspecies of lion, including a copy of the final rule, please visit: http://www.fws.gov/endangered/what-we-do/lion.html.

What is different between the proposed and final rule to list lions?
The Service received new information from the International Union for Conservation of Nature (IUCN) that the western and central populations of lions are genetically closely related to the currently endangered Asiatic lion (formerly the endangered *Panthera leo persica*), and the IUCN has named this subspecies *Panthera leo leo*. The IUCN also found that the southern and eastern populations of lions are now their own subspecies, *Panthera leo melanochaita*. The Service has determined the two subspecies of lion qualify for different statuses under the ESA.

About Lions: Range and Population

2016

Why is the Service proposing to list one subspecies, *P. l. leo*, as endangered and the other subspecies, *P. l. melanochaita*, as threatened?
The Service received new information on population numbers for both subspecies. There are only a total of about 1,423 *P. l. leo* left: 900 in 14 populations in western and central Africa, and only 523 in India. Conversely, there are approximately 17,000-19,000 *P. l. melanochaita* found in southern and eastern Africa.

After reviewing the best scientific and commercial data available, the Service found the lion is impacted by a number of factors actively contributing to its population decline throughout Africa and Asia. The three main threats are habitat loss (fragmentation and degradation), loss of prey base and

human-lion conflict. The Service found that the only population of this subspecies found in India, though currently stable, is still facing threats and is highly vulnerable to stochastic (random) events, such as weather, fire, disease and other potentially devastating forces. If regional trends continue at its current rate, western and central Africa will likely lose a third of its population in five years and half the population in 10 years. Given the threats are acting on such a small number of *P. l. leo* the Service has determined that this subspecies meets the definition of an endangered species under the ESA.

Between 1993 and 2014, the population of *P. l. melanochaita* in eastern Africa declined by 59 percent. In southern Africa the lion population increased by 8 percent during the same time period; however, one of the largest populations, Okavango, and 6 unfenced reserves in Botswana, Namibia and Zimbabwe declined. However, eastern Africa is likely to lose a third of its population in 20 years and half the population in 30 years. Many of the increasing southern African populations are in small, fenced and intensely managed areas that have already reached carrying capacity.

Additionally, the human population, and thus negative impacts to lion associated with it, is expected to increase substantially by 2050; impacts of climate change are projected to manifest as early as 2040. Due to a larger population and greater number of populations, the Service believes this subspecies is less vulnerable to threats and is not currently in danger of extinction. However, the Service found that this subspecies is likely to become endangered within the foreseeable future. Therefore, the agency is listing *P. l. melanochaita* as threatened.

About the 4(d) Rule

Why does *P. l. melanochaita* need a 4(d) rule?
The Service is adding a 4(d) rule for *P. l. melanochaita* in order to create a permitting mechanism. During the public comment period the Service found that not all trophy hunting programs are scientifically based or managed in a sustainable way. This 4(d) rule creates a permitting mechanism to regulate the import of all *P. l. melanochaita* parts and products, including live animals and sport-hunted trophies, into the United States to ensure that imported specimens are legally obtained in a manner that is consistent with the purposes of the ESA and the conservation of the subspecies in the wild. It will allow for the importation of *P. l. melanochaita* provided they are permitted by the Service as originating from countries with effective lion conservation programs.

This 4(d) rule is intended to promote additional conservation efforts by authorizing only activities that would provide a direct or indirect benefit to lions in the wild. By providing incentives through the permitting process to countries and individuals who are actively contributing to lion conservation, the agency will be able to leverage a greater level of conservation than might otherwise be available.

The 4(d) rule will supersede the import exemption found in 50 CFR 17.8 for threatened wildlife listed in Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES), such that a threatened species import permit under 50 CFR 17.32 is now required for the importation of all *P. l. melanochaita* specimens.

Therefore, section 9(c)(2) of the ESA for the otherwise lawful importation of wildlife listed in Appendix II of CITES that is not an endangered species does not apply to this subspecies. Under this 4(d) rule, all otherwise prohibited activities, including all imports of *P. l. melanochaita* specimens, require prior authorization or permits under the ESA.

Will a permit be required to import a sport-hunted *P. l. melanochaita* trophy?
Yes. While there is evidence that many of the range countries have implemented or will implement best management practices, the Service wants to promote those practices to the extent it can. By requiring import permits, the agency can ensure these imports enhance the conservation of this lion subspecies in the range countries by supporting well-managed, scientifically based conservation programs that include trophy hunting of lions. For additional information on importing sport-hunted trophies, please visit http://www.fws.gov/international/permits/by-activity/sport-hunted-trophies.html.

African lions (includes all lions in Africa under the taxonomic classification currently used by CITES) are also listed in Appendix II of CITES. As such, a CITES export permit is required from the country where the trophy was taken. Contact the CITES authorities in that country for additional information and instruction. Click here for a list of national CITES contacts.

If I hunt a lion in Africa between December 23, 2015, the date the lion listing was published in the *Federal Register*, and January 22, 2016, when the listing goes into effect, do I need to obtain an import permit when I bring the trophy into the United States?

No. Lions hunted in Africa before the effective date of January 22, 2016, would be considered to be "pre-Act" and exempt from the permitting requirements, regardless when it was imported into the United States. It is important, however, that you provide appropriate documentation establishing when the lion was hunted to the U.S. Fish and Wildlife Service Wildlife Inspector at the time of import.

What criteria must be met for the Service to consider issuing a permit for the import of a sport-hunted *P. l. melanochaita* trophy?
The permitting program would allow importation of sport-hunted *P. l. melanochaita* trophies only from range countries that have management programs that are based on scientifically sound data and are being implemented to address the threats that are facing lions within that country.

Such management programs would be expected to address, but are not limited to: evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for conservation. In evaluating these factors, the Service will work closely with the range countries and interested parties to obtain the best available scientific and commercial data. By allowing entry into the United States of *P. l. melanochaita* sport-hunted trophies from range countries that have scientifically based management programs, the range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities.

Is the Service allowing hunting of threatened *P. l. melanochaita*?
The 4(d) rule does not regulate hunting of *P. l. melanochaita*, but rather prohibits imports of sport-hunted *P. l. melanochaita*. Hunting, or take, of a wholly foreign species in its native country is not regulated by the ESA because the action is not subject to the jurisdiction of the United States. Regardless of U.S. import regulations, sport hunters are able to participate in *P. l. melanochaita* hunts in countries that allow it. However, many lions are taken by U.S. hunters, and conditioning the continued importation of sport-hunted trophies upon a demonstration that they originate from a country with a scientifically sound management program will encourage effective management for the species in the wild. In addition, a scientifically based management program that includes sport hunting can provide economic incentives for the range country and local communities to protect and expand lion populations and habitat.

What measures are in place to ensure that *P. l. melanochaita* sport-hunted trophies would not enter into illegal trade?

In the United States, CITES-implementing regulations clearly state that an Appendix-II, threatened species sport-hunted trophy may only be used for non-commercial purposes. Selling such a trophy after import constitutes a violation of the ESA. Import, export, re-export and foreign and interstate commerce of lions is prohibited without a permit to ensure that any lions or their parts or products, including hunting trophies, do not illegally enter into commerce. ESA violations carry a maximum penalty of one year in prison and a $100,000 fine; conviction under the Lacey Act is punishable by a prison term of up to five years and a $250,000 fine.

What does the Service consider in making enhancement findings for the import of sport-hunted trophies?

To determine whether to allow such imports, the Service considers factors such as the biological needs of the species; possible threats to the populations; current population estimates; management programs; legal protection (for sport-hunted trophies this includes hunting regulations and any applicable quotas); local community involvement; and, if any funds are generated by the import, how those funds are used for conservation. This rigorous evaluation process ensures that sport hunting is part of an overall conservation program supported by strong governance and management practices. By allowing imports from countries that are making strong efforts to conserve their lions, the Service will promote these countries' programs over those less willing to address long-term lion conservation.

How long will it take to process an application for the import of a sport-hunted *P. l. melanochaita* trophy?

Although the issuance of permits may initially be delayed because the Service lacks the necessary information on which to judge whether a country's management program for lions provides sufficient enhancement, we are already seeking information on *P. l. melanochaita* management programs of the range countries and will strive to make the required determinations as quickly as possible. If the agency has the necessary information from the range country where the hunting will occur, we are generally able to process permits within 45 to 60 days from the time of application.

About the Director's Order

Concurrent with this listing rule, to protect lions and other foreign and domestic wildlife from criminal activity, Service Director Dan Ashe is issuing a Director's Order to strengthen enforcement of wildlife permitting requirements. The order will ensure that violators of wildlife laws are not subsequently granted permits for future wildlife-related activities, including the import of sport-hunted trophies.

On February 11, 2014, President Obama issued the first National Strategy for Combating Wildlife Trafficking. One of the three strategic priorities of the strategy is to strengthen domestic and global enforcement, including assessing related laws, regulations, and enforcement tools.

This order, consistent with the strategy, establishes policy and procedure for Service employees to assert full legal and regulatory authority to deny wildlife violators the ability to obtain wildlife permits, certificates and licenses issued under 50 CFR part 13.

The Service will consider all relevant facts or information available, including relevant violations of a federal, state, foreign or tribal law or regulation related to or governing the activity for which they are applying, and may make independent inquiry or investigation to verify information or substantiate qualifications asserted by the applicant.

December 5, 2017

Mr. Randal Chao
(b)(6)
Wilmette, Illinois 60091

Dear Mr. Chao:

This letter responds to your November 28, 2017, request for reconsideration of our November 13, 2017, denial of your application for a permit under the U.S. Endangered Species Act (Act) to import a sport-hunted lion (*Panthera leo melanochaita*) hunted in the Free State Province, South Africa.

Based on information in your request and our further review of your application, it appears that your trophy falls within the window just prior to the formal listing of the lion as threatened under the U.S. Endangered Species Act. Therefore, because your lion was hunted just prior to its listing date, you are not required to obtain a permit from this office in order to import your trophy. Your application fees will be refunded to you in six to eight weeks.

You may wish to contact the port where your trophy will enter to discuss what documentation you will need to show to inspectors regarding "pre-Act" status at the time of inspection and clearance.

If you have any questions, please contact Biologist Caroline Harlow of this office: Division of Management Authority, Branch of Permits, MS: IA, 5275 Leesburg Pike, Falls Church, Virginia 22041-3803 (1-800-358-2104, ext. 2296 or 703-358-2296).

Sincerely,

Jorge D. Villavicencio

Type of Activity:
IMPORT OF SPORT-HUNTED TROPHIES
(Appendix I of CITES and/or ESA)

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
STEINER	RICHARD	FREDERICK	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b)(6)			

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b)(6)			

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)

2. Tax identification no.	3. Description of business, agency, Tribe, or institution

4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix

5. Principal officer title	6. Primary contact name

7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)				
(b)(6)				
1.b. City	**1.c. State**	**1.d. Zip code/Postal code:**	**1.e. County/Province**	**1.f. Country**
WESTMINSTER	COLORADO	80234	ADAMS	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)				
2.b. City	**2.c. State**	**2.d. Zip code/Postal code:**	**2.e. County/Province**	**2.f. Country**

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: MA33614C-1 No ☐

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other [redacted] and I certify that the information submitted in this application for a permit is complete and accurate to the [redacted] statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6) 11/17/2017

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit.** If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      PANTHERA LEO. AFRICAN LION.

   b. Sex (if known).

      MALE

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

      CENTRAL AFRICAN REPUBLIC. HAUT MBOMOU PROVINCE. NEAREST CITY IS DJEMA.

   b. Date wildlife is to be hunted:

      27 FEBRUARY 2018 THROUGH 20 MARCH 2018.

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      SKIN, SKULL, CLAWS.

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

   b. Date wildlife was hunted:

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	MR. ALAIN LEFOL
Business Name:	NATIONAL SAFARIS
Address:	BP 483
Address:	
City:	BANGUI
State/Province:	
Country, Postal Code:	CENTRAL AFRICAN REPUBLIC

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported.

Applicant's signature: [redacted] Date: 11/17/2017

Be aware that there may be additional permitting or approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, if different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
RICHARD F. STEINER, (b)(6)

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

Re: Applications for Import of Sport-Hunted Lion Trophies

Dear Chief Van Norman:

Enclosed please find three applications to import sport-hunted lion trophies. The first applicant is hunting in South Africa, at Khamab Kalahari Game Reserve, an area that has been designated to have "wild" lion by South Africa's Department of Environmental Affairs. Please refer to the attached list and information in the DMA's files, which includes the management plan for this reserve. The applicant is lawfully hunting a lioness as a population control measure, as explained in the attached justification. Please consider that information and the information previously submitted by South Africa's DEA and Conservation Force in making a positive enhancement finding for this applicant.

The second applicant is hunting in Tanzania with Rungwa Safaris/Bundu Safaris. This operator has submitted an enhancement report, which was sent to the DMA in October 2016 and is attached for ease of reference. Please consider that information and the information previously submitted by Tanzania's Ministry of Natural Resources and Tourism/Wildlife Division/Tanzania Wildlife Management Authority and Conservation Force in making a positive enhancement finding for this applicant.

The third applicant is hunting in Zimbabwe in the Dande South concession. This concession incorporates extensive anti-poaching and community investment. We will shortly submit an enhancement report from this operator. Please consider that information and the information previously submitted by Zimbabwe's Parks and Wildlife Management Authority, Conservation Force, and others in making a positive enhancement finding for this applicant.

Please do not hesitate to contact us if you have questions.

Sincerely,

Regina Lennox

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a threatened-listed, wild-managed African lion trophy from South Africa.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my lion trophy at the following address:

Hi John, here is the motivation to hunt 1 possibly 2 lionesses at Khamab this year. Let me know if this will cover what is required by USFW? John, have you heard from Matt Mouron?

Note below from Hanno, the reserve ecologist.

Hi Scruff and Johan

Attached the motivation for the hunting of the lioness. I think this should be sufficient as it describes in detail how it fits in with the National lion BMP as well as the KKR lion management plan.

Scruff, let me know if anything else is needed from our side for now?

I have spoken to the Northwest Conservation officials and the permit should not be any problem as we are one of the 4 approved reserves.

Best regards

Hanno

MOTIVATION FOR THE HUNTING OF AN ADULT LIONESS ON KHAMAB KALAHARI RESERVE

Prepared by Hanno Kilian, Reserve Ecologist, Khamab Kalahari Reserve.

E-mail: ecologist@khamab.co.za

A Biodiversity Management Plan (BMP) for the African lion (*Panthera leo*) in South Africa was published for implementation in December 2015 in accordance with the National Environmental Management: Biodiversity Act (10/2004) (Gazette no. 39468). The wild managed lion metapopulation is one of three recognised lion populations in South Africa, the other two being the wild lion population and the captured lion population (BMP). The wild managed lion population typically occurs in fenced game reserves that are typically <1000km^2 in size. Fencing of reserves is seen mostly in South Africa, and few fenced reserves are seen in the rest of southern Africa. There are various pro's (Packer et al 2013) and con's (Creel et al 2013) of using fencing as hard boundaries of game reserves, but the reality is that fencing is unfortunately an essential component of lion conservation in the future as habitats get more fragmented (Riggio et al 2013) and human populations pushing towards boundaries of conservation areas. The managed lion population could therefore be an important example of conservation of lions in a changing African context.

However, because of the fragmented nature of the fenced reserve, the conservation value of these populations has been questioned (Slotow & Hunter 2009). Furthermore, management of these fragmented and isolated populations create problems as many of the natural processes that occur in large naturally functioning lion population were disrupted in the small fenced reserve. As it is almost impossible to restore these processes on these fenced reserves, another approach is needed. The approach that has been adopted to overcome these problems is to mimic the outcome of these natural processes through management interventions (Miller et al 2013) in a metapopulation approach (Selier & Ferreira 2017).

Disruption in social dynamics were identified as one of the key drivers of challenges in managed wild lion populations, of which rapid population growth and degraded predator-prey relationship are the most important (BMP). It is some of the basic biological characteristics of lions where the opportunity lies to mimic behaviour and dynamics of lion prides. These characteristics include ages of first breeding, litter intervals, cub survival, litter sizes, female dispersal and age of last breeding (Miller et al 2013). Several suggestions have been identified on how to mimic the outcomes for natural processes, which includes contraception, unilateral tube tying, translocations and removal of females, which are all recognised by the by the Lion Biodiversity Management Plan for South Africa (BMP).

To mimic the social and population dynamics of females and maintain an average pride size of four females, one or more of the following five management options are recommended:

1. Increase the age at first reproduction using contraception of sub-adult females;
2. Establish longer intervals between births using contraception of adult females;
3. Reduce age specific fecundity through reduced litter sizes using unilateral tube-tying of fallopian tubes;
4. Mimic female dispersal by removing as well as introducing sub-adult females at infrequent irregular intervals (on average once every 5 to 10 years);
5. Mimic higher death rates of old females by removing (through hunting/translocation) the oldest females (typically >10 years of age) in the pride.

The lion management plan of Khamab Kalahari Reserve (KKR) (Kilian 2016) has identified the same possibilities to mimic behaviour and population dynamics as those specified in the National BMP. However, in the lion management plan of KKR, the restoration of some of the biological process involved in lion dynamics are given priority above mimicking of the natural control mechanisms, which are far more invasive and management intense. Here mimicking especially refers to the use of contraceptives and other birth control options like unilateral tube tying or removal of ovaries. The restoration of biological process in lion populations would involve managing the population in such a way to promote natural pride structures, as well promoting male lion turnover, and facilitating the presence of roaming bachelor male coalitions on the reserve.

One of the problems identified with managed wild lions is the inclination of adult females to become loners (Miller et al 2013) and not associate in pride structures. This especially disrupts predator-prey dynamics, which results in an increase in overall predation, which can be a problem on fenced reserves. This has been flagged as a potential problem in the lion management plan of KKR, and which is something that was specifically highlighted as something that must be avoided (Kilian 2016). The female offspring of lone lionesses also tend to develop into lone females when they grow up (pers obs), which exacerbate the problem even further.

The KKR management plan suggests that females that spend more time on their own (or with their own offspring only) than with other lion groups, should be removed from the population to promote the development of stronger pride structures, as is the case in wild lion populations. These females can then either be removed through translocation if there are translocation options available, removed through hunting if they don't have dependant cubs, or euthanised as last resort.

Where translocation is not an option, trophy hunting can be a valuable meta-population management tool for South Africa's managed wild lions in the following instances (Selier & Ferreira 2017):

a. Removal of the oldest females (typically >10 years of age) in the pride to mimic higher death rates of old females.
b. Removal of sub-adult males (typically 2-4 years old) to mimic male dispersal.
c. Removal of the dominant male/s every 3 years to mimic pride take-overs.
d. Removal of oldest males (typically >8 years old) to mimic higher death rates of old males.

KKR has identified three lionesses that the fits the criteria of spending more time on their own than with other lions in a pride, and therefore do not form part of any pride. As per the KKR lion management plan (Kilian 2016), these lionesses should be removed from the population by one of the means identified above. Furthermore, it also coincides with the option above of mimicking higher death rates of older females as a management tool in the lion meta-population as identified by the BMP.

Options for the removal through translocation of older (10yr) adult females are extremely rare, and any possible translocation option will be pursued if they become available. KKR has decided to make at least one of these females available for hunting in 2018. This, however, will be dependent on her not having cubs at the time of the hunt, or not associated with a pride at that stage.

KKR is one of four reserves that were identified by the Scientific Authority and recognised by the Department of Environmental Affairs (DEA) as reserves where hunting of managed wild lions can take place. Hunting of lion forms an integral part of the management toolbox of the lion management plan on KKR, together with live removals and translocations, as well as the restoration of natural processes and conserving genetic diversity.

The removal of these old lionesses will benefit the lion population as a whole as it forms part of the process that KKR embarked on to restore natural lion social dynamics, and at the same time reducing the predation impact of the lion population on the game population of KKR. Hunting of one of these lionesses will therefor only have positive impact on the lion population, while also providing additional income to the reserve to assist in managing the reserve and its animal populations in a responsible and sustainable manner.

Dear Tim

Please note the attached lion properties that are approved by our Scientific Authority as contributing to Conservation.

Please note we have removed the reserves that do not hunt lions and added one new one. If you receive an application with none of these properties please contact us for verification.

Regards

Mpho Tjiane

Enhancement Finding
Applicant: Matthew John Moroun (PRT-82926C)

Matthew John Moroun submitted an application on March 15, 2019, for the importation of one male African lion (*Panthera leo melanochaita*) from Khamab Kalahari Reserve, North West Province, South Africa for the purpose of enhancing the propagation and survival of the species in the wild. After evaluating the available information submitted with the application, information provided by the Government of South Africa, other information available to the U.S. Fish & Wildlife Service (Service), and comments received from interested parties, the Service has determined that the importation of the sport-hunted trophy taken in July, 2018, from this wild lion (*P. l. melanochaita*) population within South Africa **meets** the enhancement criteria under 50 CFR 17.32.

U.S. Governance of the Lion:

On October 29, 2014, the Service published in the Federal Register a finding that listing the African lion subspecies (*Panthera leo leo*) as a threatened species under the Endangered Species Act (Act) was warranted and proposed a rule under Section 4(d) of the Act to provide conservation measures for the African lion. 79 Fed. Reg. 64472. On December 23, 2015, after fully considering the comments from the public and the peer reviewers on the proposed rule, the Service published in the Federal Register the final rule in which the taxonomic classification of the Asiatic lion (previously classified as *P. l. persica* and listed as an endangered species under the Act) was changed to *P. l. leo* (Asia and western, central and northern Africa) and listed as an endangered species, and the *P. l. melanochaita* (southern and eastern Africa) subspecies was listed as a threatened species with a rule under Section 4(d) of the Act, which is set forth at 50 CFR 17.40(r). 80 Fed. Reg. 79999. The effective date of this listing was January 22, 2016. Therefore, as of January 22, 2016, the lion subspecies *Panthera leo melanochaita*, whose range includes South Africa, is listed as threatened under the Act and is regulated under an ESA Section 4(d) special rule [50 CFR 17.40(r)].

Section 9 of the Act and our implementing regulations at 50 CFR 17.21 and 50 CFR 17.31 set forth a series of general prohibitions that apply to all endangered and threatened wildlife, respectively, except where a 4(d) rule applies to threatened wildlife, in which case the 4(d) rule contains all the applicable prohibitions and exceptions. Under the 4(d) rule for *P. l. melanochaita*, all of the

prohibitions under 50 CFR 17.31 apply to *P. l. melanochaita* specimens. These prohibitions, at 50 CFR 17.21 and 17.31, in part, make it illegal for any person subject to the jurisdiction of the United States to "take" (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or to attempt any of these) within the United States or upon the high seas; import or export; deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever, in the course of commercial activity; or sell or offer for sale in interstate or foreign commerce any lion specimens. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken in violation of the Act. Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits for endangered species, such as *P. l. leo*, are codified at 50 CFR 17.22. Regulations governing permits for threatened species, such as *P. l. melanochaita*, are codified at 50 CFR 17.32.

In sum, under paragraph 17.40(r)(1), all the prohibitions and exceptions under 50 CFR 17.31 and 50 CFR 17.32 apply to *P. l. melanochaita*. Accordingly, the Service may authorize the import of a sport-hunted lion trophy from South Africa, but only if it first makes a finding that permitting import of a trophy would enhance the survival of the species in the wild.

As we explained when finalizing the 4(d) rule for *P. l. melanochaita*, any person wishing to conduct an otherwise prohibited activity, including all imports of *P. l. melanochaita* specimens, must first obtain a permit under 50 CFR 17.32. As with all permit applications submitted under 50 CFR 17.32, the individual requesting authorization to import a sport-hunted trophy of *P. l. melanochaita* bears the burden of providing information in their application showing that the activity meets the requirements for issuance criteria under 50 CFR 17.32. In some cases, such as for import of sport-hunted trophies, it is not always possible for the applicant to provide all of the necessary information needed by the Service to make a positive determination under the Act to authorize the activity. In such cases, the Service may consult with the range country and other interested parties to the extent practicable to obtain necessary information. The Service will make the required findings on sport-hunted trophy imports of *P. l. melanochaita* on an individual application basis, however information obtained for the country as a whole will continue to be considered as it contains information pertinent to the Service's evaluation. Any new information obtained or submitted to the Service will be evaluated and considered in all future findings for sport-hunted trophies of *P. l. melanochaita* taken in South Africa.

In evaluating the available data on lion hunting in South Africa, the Service understands that South Africa has three classifications for lions: wild, wild-managed, and captive-bred and classifies wild and wild-managed lions separately from captive-bred lions raised for hunting purposes since the management and oversight of these specimens is different within South Africa. Therefore, information relevant to the Service's consideration on whether to permit the import of a sport-hunted trophy from Khamab Kalahari Reserve, a reserve which maintains a population of wild lions, must be evaluated based on information pertaining to the management of wild and wild-managed lions in South Africa.

General considerations:

As we also explained when finalizing the 4(d) rule, our threatened species permitting regulations at 50 CFR 17.32 provide issuance criteria for threatened species permits [50 CFR 17.32(a)(2)], but do not specify what would constitute the enhancement of propagation or survival with regard to authorizing the import of parts or products of *P. l. melanochaita,* including sport-hunted trophies. Therefore, when making a determination of whether an otherwise prohibited activity enhances the propagation or survival of *P. l. melanochaita,* the Service examines the overall conservation and management of the subspecies in the country where the specimen originated and whether that management of the subspecies addresses the threats to the subspecies (*i.e.,* that it is based on sound scientific principles and that the management program is actively addressing the current and longer term threats to the subspecies). In this review, we evaluate whether the import of a sport-hunted lion trophy taken in South Africa contributes to the overall conservation of the species by considering whether the biological, social, and economic aspects of a program from which the specimen was obtained provide a net benefit to the subspecies and its ecosystem.

The Service has evaluated Mr. Moroun's application involving a *P. l. melanochaita* sport-hunted trophy taken in Khamab Kalahari Reserve, in the context of enhancement of propagation or survival in accordance with our threatened species permitting regulations at 50 CFR 17.32 and issuance criteria for threatened species permits [50 CFR 17.32(a)(2)]. These include, in addition to the general permitting criteria in 50 CFR 13.21(b):

> (i) Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit;
>
> (ii) The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit;
>
> (iii) Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed;
>
> (iv) Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit;
>
> (v) The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application; and
>
> (vi) Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

In addition to these factors, particularly in relation to sport hunting, we find the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0* (IUCN SSC 2012), to provide useful principles, which, considered in conjunction with our threatened species issuance criteria, will aid the Service when making this enhancement finding for the importation of a sport-hunted trophy of *P. l. melanochaita* from Khamab Kalahari Reserve. This document sets out guidance from experts in the field on the

use of trophy hunting as a tool for "creating incentives for the conservation of species and their habitats and for the equitable sharing of the benefits of use of natural resources" (IUCN SSC 2012, p. 2) and recognizes that recreational hunting, particularly trophy hunting, can contribute to biodiversity conservation and more specifically, the conservation of the hunted species.

The SSC document lays out five guiding principles that, considered in conjunction with our threatened species issuance criteria, will aid the Service in making this enhancement finding for importation of a sport-hunted trophy of *P. l. melanochaita:*

(a) *Biological sustainability:* The hunting program cannot contribute to the long-term decline of the hunted species. It should not alter natural selection and ecological function of the hunted species or any other species that share the habitat. The program should not inadvertently facilitate poaching or illegal trade in wildlife by acting as a cover for such illegal activities. The hunting program should also not manipulate the ecosystem or its component elements in a way that alters the native biodiversity.

(b) *Net Conservation Benefit:* The biologically sustainable hunting program should be based on laws, regulations, and scientifically based quotas, established with local input, that are transparent and periodically reviewed. The program should produce income, employment, and other benefits to create incentives for reducing the pressure on the target species. The program should create benefits for local residents to co-exist with the target species and other species. It is also imperative that the program is part of a legally recognized governance system that supports conservation.

(c) *Socio-Economic-Cultural Benefit:* A well-managed hunting program can serve as a conservation tool when it respects the local cultural values and practices. It should be accepted by most members of the community, involving and benefiting local residents in an equitable manner. The program should also adopt business practices that promote long-term economic sustainability.

(d) *Adaptive Management: Planning, Monitoring, and Reporting:* Hunting can enhance the species when it is based on appropriate resource assessments and monitoring (*e.g.*, population counts, trend data), upon which specific science-based quotas and hunting programs can be established. Resource assessments should be objective, well documented, and use the best science available. Adaptive management of quotas and programs based on the results of resource assessments and monitoring is essential. The program should monitor hunting activities to ensure that quotas and sex/age restrictions of harvested animals are met. The program should also generate reliable documentation of its biological sustainability and conservation benefits.

(e) *Accountable and Effective Governance:* A biologically sustainable trophy-hunting program should be subject to a governance structure that clearly allocates management responsibilities. The program should account for revenues in a transparent manner and distribute net revenues to conservation and community beneficiaries according to properly agreed decisions. All necessary steps to eliminate corruption should be taken and to ensure compliance with all

relevant national and international requirements and regulations by relevant bodies such as administrators, regulators and hunters.

This approach to enhancement findings for the importation of a sport-hunted trophy of *P. l. melanochaita* is consistent with the purpose and intent of the Act. As such, before the Service will authorize the importation of a sport-hunted trophy, we must determine that the trophy-hunting program is managed to ensure the long-term survival of the species. As part of this evaluation, we recognize that in many parts of the world, wildlife exists outside of protected areas and must share the same habitat and compete with humans living in these areas for space and resources. As identified in the *IUCN SSC Guiding Principle on Trophy Hunting as a Tool for Creating Conservation Incentive*, if communities that share these resources with wildlife do not perceive any benefits from the presence of wildlife, they may be less willing to tolerate the wildlife. However, under certain circumstances, trophy hunting can address this problem by making wildlife more valuable to the local communities, thus encouraging community support for managing and conserving the hunted species, as well as other species.

In evaluating whether the importation of Mr. Moroun's trophy of *P. l. melanochaita* would be authorized pursuant to 50 CFR 17.32, in accordance with our threatened species issuance criteria, we examined how South Africa's management program for lions addresses the three main threats that have led to the decline of the subspecies: habitat loss, loss of prey base, and human-lion conflict. When examining a management program and whether this trophy taken as part of that program meets the issuance criteria, we study a number of factors. Some of the factors we considered include whether the program is based on sound scientific information and identifies mechanisms that would arrest the loss of habitat or increase available habitat (*i.e.,* by establishing protected areas and ensuring adequate protection from human encroachment). We consider whether the management program actively addresses the loss of the lion's prey base by addressing poaching or unsustainable offtake within the country. Several components of a management plan from which trophy imports could meet the issuance criteria would be whether there are government incentives in place that encourage habitat protection by private landowners and communities, and incentives provided to local communities to reduce the incursion of livestock into protected areas or to actively manage livestock to reduce conflicts with lions. We examine if the hunting component of the management program supports all of these efforts by looking at whether hunting concessions/tracts are managed to ensure the long-term survival of the lion, its prey base, and habitat. Hunting, if properly conducted and well managed, can generate significant economic benefits that may contribute to the conservation of lions. In looking at whether we are able to authorize the import of a trophy under the issuance criteria at 50 CFR 17.32(a)(2), we examine if the trophy hunting provides financial assistance to the wildlife department to carry out elements of the management program, and if there is a compensation scheme or other incentives to benefit local communities that may be impacted by lion predation. We also consider how a U.S. hunter's, in this case, Mr. Moroun's, participation in the hunting program contributes to the overall management of lions within a country.

The management program in South Africa for *P. l. melanochaita* is expected to address, but is not limited to, evaluating population levels and trends; the biological needs of the species; quotas; management practices; legal protection; local community involvement; and use of hunting fees for

conservation. In evaluating these factors, we work closely with the range countries and interested parties to obtain the information. By allowing entry into the United States of *P. l. melanochaita* trophies from range countries that have science-based management programs, we anticipate that other range countries would be encouraged to adopt and financially support the sustainable management of lions that benefits both the species and local communities. In addition to addressing the biological needs of the subspecies, a scientifically based management program will provide economic incentives for local communities to protect and expand *P. l. melanochaita* habitat.

Basis for Finding:

On January 12, 2016, the Service sent a letter to South Africa's Department of Environmental Affairs (DEA) with a list of questions that would aid the Service in evaluating the overall conservation and management of the subspecies, *P. l. melanochaita*, in South Africa, and whether that management addressed the three main threats that have been identified as the reason for the decline of the species: habitat loss, loss of prey base, and human-lion conflict. Additionally, in the letter the Service referenced the *IUCN Species Survival Commission (SSC) Guiding Principles on Trophy Hunting as a Tool for Creating Conservation Incentives, Ver. 1.0 (*IUCN SSC 2012*)*, as it provides useful principles, which when considered in conjunction with the Service's permit issuance criteria, would aid when making the required enhancement findings for permitting importation of sport-hunted lion trophies.

In response to our January 12, 2016, letter, the DEA provided four documents. In addition, the Service met with representatives of DEA during the 17th Meeting of the Parties to the Convention in Johannesburg in late September 2016. Further, since those meetings, there have been several written exchanges with DEA discussing the DEA's evaluation of reserves with lions and how these animals conform to DEA's lion management plan. The four documents provided to the Service in January 2016, along with the Service's own final rule on the lion listing under the Act, relevant information obtained separately through open sources such as IUCN documents, relevant information from DEA, comments received from interested parties, and Mr. Moroun's application were the basis of this finding.

South Africa has defined three populations of lions that exist within the country through their Biodiversity Management Plan for the Lion (*Panthera leo*) in South Africa for 2015 to 2019 (BMP; December 2015): *Wild lions,* who completely fulfill their role in biodiversity processes and are largely unmanaged, and exist only in formally proclaimed national parks and game reserves. This population's vital rates and demographics are not actively manipulated; *Wild-managed lions,* which include all lions that have been re-introduced into smaller fenced reserves (<1000km^2), and are managed to limit population growth and maintain genetic diversity. Some of the vital rates and demographics of these lions are actively manipulated; and *Captive lions*, bred for financial gain, where all vital rates and demographics of these populations are actively manipulated.

***Governance of Lions in South Africa*:** The lion is listed as vulnerable in the South African list of Threatened and Protected Species (ToPS) under Section 56(1) of the National Environmental Management Biodiversity Act, 2004 (Act no 10 of 2004; NEMBA; BMP pg. 1). NEMBA further

regulates a permit system regarding restricted activities involving specimens of listed threatened or protected species (Act no 10 of 2004; Chapter 7). Regulated activities in need of registration include, among others, captive breeding facilities, sanctuaries, scientific institutions, game farms, wildlife traders, wildlife product traders, taxidermists, wildlife translocators, and freight agents (NEMBA pg. 25).

NEMBA gives effect to the Convention on Biological Diversity (CBD), of which South Africa is a party, and Section 24 in the Bill of Rights of the Constitution of the Republic of South Africa (1996). Under Section 24(b): "everyone has the right to have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures that: (i) prevent pollution and ecological degradation; (ii) promote conservation; and (iii) secure ecologically sustainable development and use of natural resources while promoting justifiable economic and social development" (BMP pg. 15).

In addition to South Africa's domestic laws, it is also a Party to CITES. The lion is listed in Appendix II of the Convention. As an Appendix-II species, certain criteria must be met before such species can be exported, including a finding from the exporting country's CITES Scientific Authority that the proposed activity will not be detrimental to the survival of the species in the wild. In their reply to our inquiry, South Africa provided a copy of their 2015 CITES non-detriment finding (NDF) for lions. Their finding, while focusing only on wild and wild-managed lions, applies to all lion exports from South Africa, including the captive lion population. This was clarified through personal communication with the South African Management Authority, where the Service was informed that the finding may be amended to better clarify that the finding applies to all lions within South Africa. A copy of the DEA's most recent lion NDF, dated January 23, 2018, which was included in a previous permit application, provides information on wild, wild-managed, and captive-bred lions and continues to find that the export of the species will not be detrimental to the survival of the species in the wild.

South Africa is also a member of the Southern African Development Community (SADC). Under the SADC Treaty, Article 5(g) establishes objectives to, among other aspects, promote the sustainable use of wildlife, harmonization of legal instruments governing wildlife use and conservation, promote the conservation of shared wildlife resources through the establishment of transfrontier conservation areas, and facilitate community-based natural resources management practices. To implement the SADC Treaty, member states are required to establish management programs for the conservation and sustainable use of wildlife.

In 1991, South Africa legalized private ownership of wildlife, leading to a significant rise in game ranches and farms. In 2010, private lands with wildlife covered approximately 16.8% of South Africa, compared to national and provincial protected areas accounting for only 6% (Cousins *et al.* 2010). It has been stated that this expansion of private lands and the wildlife industry resulting from the private ownership of wildlife is responsible for significantly increasing South Africa's large mammal populations (Crowley and Mokhema 2014). According to Crowley and Mokhema (2014), South Africa's game ranching industry is worth $1.1 billion a year and is growing at 10 percent annually. The lion is listed as vulnerable in the South African list of Threatened and Protected Species (ToPS) under Section 56(1) of the National Environmental Management

Biodiversity Act, 2004 (Act no 10 of 2004; NEMBA; BMP pg. 1). NEMBA further regulates a permit system of restricted activities involving specimens of listed threatened or protected species (Act no 10 of 2004; Chapter 7). Regulated activities in need of registration include, among others, captive breeding facilities, sanctuaries, scientific institutions, game farms, wildlife traders, wildlife product traders, taxidermists, wildlife translocators, and freight agents (NEMBA pg. 25). Depending on the requesting entity, the issuing authority is either the Minister (DEA) or the appropriate Provincial government (MEC). Under ToPS, wild lions should not be introduced into captivity. This permitting regime generates funds for national conservation efforts, while allowing landowners to profit from maintaining wildlife on their property. The landowners can then reinvest in the property by funding conservation efforts, managing wildlife, and carrying out anti-poaching efforts (Cousins *et al.* 2010).

Current Lion Status in South Africa: The lion was almost extirpated in South Africa by the early 1900s, remaining only in small numbers in what is now Kruger National Park (NP) and the Kgalagadi Transfrontier Park (TP). With the formation of Kruger NP in the 1920s, wild lion numbers slowly recovered, growing to the current population of approximately 1,700 lions (BMP, pg. 40). Kgalagadi TP has a stable, albeit smaller, population of approximately 400 lions, but is considered a lion stronghold in southern Africa. Lions recolonized Hluhluwe-iMfolozi Park (HiP) in the 1950/1960s and that population is currently stable at approximately 120 lions. Along with small groups of lions in Addo Elephant National Park, Karoo National Park, Marakele National Park, there are approximately 2,200 wild lions in South Africa. In addition, there are approximately 800 wild-managed lions separated among 45 fenced reserves of less than 1,000 square kilometers each (BMP pg. 40). It should be noted, however, that DEA is evaluating each of these fenced reserves to confirm that the lions maintained on the reserve can be classified as wild-managed. As such, the Service evaluated this application, in part, based on DEA's evaluation of the reserve where the lion was taken.

When the Service listed the lion in southern and eastern Africa as threatened under the Act, three primary threats to the species throughout its range were identified: loss of habitat, loss of prey base, and human-lion conflict. These three threats led to the shrinking of lion populations and their range from pre-Colonial South Africa, to the current situation of lions being found predominantly on a limited number of national parks and fenced reserves. However, given the current focus of wildlife management practices in South Africa on fencing protected areas, additional habitat loss has been minimized. Further, due to more intensive management of the fenced reserves to maintain biodiversity, more stable prey bases and limited human-lion conflict are being observed.

According to South Africa's Scientific Authority's 2017 NDF published in January 2018, there are no specific official figures on the illegal trade in lions and lion products in South Africa, which is consistent with their 2015 NDF. There are currently no statistics relating to cases involving lions in the National Environmental Compliance and Enforcement Report, although there are cases currently under investigation. No recorded or known illegal trade in wild lion has occurred in Gauteng, KwaZulu-Natal or the Eastern Cape, and the illegal utilization of lions within South Africa's national parks is negligible. However, according to the NDF, lions along the Kgalagadi Transfrontier Park boundaries have been persecuted for decades. Illegal trade in captive-bred lions within the North West Province is suspected to take place, as this industry is large and a challenge

to regulate. The 2017 NDF does not discuss in further detail the reports referenced in the 2015 finding, regarding the illegal translocations of animals or trade in lions and their body parts for which offenders were not in possession of a permit to breed, keep, hunt, catch, sell, convey or export live animals or parts thereof. According to the 2015 and 2017 NDF, and supported by information in the Service's final listing rule, the illegal local and international trade in lions poses a moderate, but non-detrimental risk to the species in South Africa (BMP pg. 14; USFWS 2015, 80 Fed Reg. 79999).

To manage any population to maintain an appropriate population level and determine whether sport-hunting is having a positive effect, it is vital to have sufficient data on population estimates and population trends on which to base management decisions. According to Riggio et al. 2013 (pg.32), and Bjorklund in Riggio et al 2013 (p.32), the minimum number of lions estimated to constitute a viable population is 500 individuals. Kruger National Park, with approximately 1,200 lions, has a stable population of wild lion and is considered a stronghold for lions in South Africa. Kgalagadi Transfrontier Park, with a stable population of approximately 400 lions, is considered a potential stronghold and conserves the genetic diversity within the Kalahari ecosystem (Bauer et al. 2008, in Riggio et al. 2013 (pg. 32); Bjorkland 2003 (pg. 515, 518). Wild lions in HiP, Addo Elephant National Park, Karoo National Park, and Marakele National Park, albeit smaller in size, appear to be stable, but would need to grow to be considered potential strongholds for maintaining genetic diversity. All of these populations receive very little direct management and hunting is not allowed within the National Parks (BMP).

Lion Management in South Africa: In 2015, in response to the requirements under NEMBA and the SADC Treaty, and after stakeholder workshops in 2013 and 2014, South Africa published the Biodiversity Management Plan for the Lion (*Panthera leo*) in South Africa for 2015 to 2019 (BMP) and stated that the "BMP for African lion will be regarded as the national strategy for African lions in South Africa" (pg. 2). The BMP was created in response to the Regional Strategy for Lions in East and Southern Africa in 2005 (IUCN SSC Cat Specialist Group 2006), which encouraged the development of national strategies aligned with national strategies of neighboring countries. The BMP was developed jointly by South Africa's Department of Environmental Affairs, Council for Scientific and Industrial Research (CSIR), and Dr. Paul Funston (Panthera). The current BMP is the first in a series of five-year iterations, as required under NEMBA, where the success of the preceding five years will be measured, and adaptations made to ensure that the plan for the following five–year period is appropriate for the circumstances at the time.

The BMP has identified the vision that "...lions will provide Moroun opportunities for biodiversity conservation, economic development, social benefits, and improved management capacity." The BMP lays out five specific objectives for the conservation of wild and wild-managed lions within South Africa:

- Improve the conservation status of lions within the broader conservation context.
- Develop and implement effective communication tools that are informed by scientific research (communication, education, and public awareness).
- Ensure that existing legal instruments are compatible and complementary at national and provincial levels, and improve the capacity to implement these laws.

- Establish a lion forum or working group.
- Collaborate the alignment of this BMP with lion conservation plans in neighboring countries and link with international working groups.

All five of these objectives are stepped down to specific action items with intended 5-year outcomes, indicators on how the action plan is succeeding, and the party responsible for implementation. The BMP will be re-evaluated in 2019 to assess the success of the plan and to modify the BMP for 2020 to 2025 accordingly.

While these five objectives appear to serve a valuable role in lion management in South Africa, two are most relevant in determining if the implementation of the BMP enhances the propagation or survival of the species, as required by the Act for the issuance of this import permit. The first objective, "Improve the conservation status of lions", has been broken down into three sub-objectives for wild and wild-managed lions: maintain current protection status of lions; reassess the conservation status of lions; and enhance the conservation status of wild lions. The intended 5-year outcomes of these sub-objectives are to have stable wild lion populations in all protected areas with no illegal trade in wild lions, have more than 80% of all reserves with wild-managed lions integrated into a managed meta-population approach for genetic management, publish norms and standards for the management of wild-managed lions, and a stronger understanding of wild-managed lion population size and trends. To achieve these sub-objectives, South Africa has already conducted population surveys of wild lions in 2015 and will census every 3 years. They have also started implementing the managed meta-population plan with the goal of over 80% of reserves included by 2019. The norms and standards for the management of wild-managed lions was to be completed by the end of 2016 and the first audits to obtain a stronger understanding of wild-managed lion population trends was completed in 2015 and is supposed to continue annually thereafter. One of the first outcomes of these evaluations has been the apparent tightening of how DEA assesses whether a reserve holds "wild-managed" lions or if the lions on a reserve are considered "captive-bred". As such, the Service consulted with the DEA on whether the reserve identified in this application where the trophy animal will be taken maintains wild-managed lions.

The second objective, "Ensure that existing legal instruments are compatible and complementary at national and provincial levels, and improve the capacity to implement these laws", identifies two actions: ensure alignment on permitting decisions between national and provincial legislation; and address and implement training needs for all aspects of legislation regarding lions. The intended 5-year outcome of these two actions is to have well-trained managers that make better management decisions, and effective legislation to support lion conservation and sustainable utilization of lions.

The BMP has two additional objectives focusing specifically on wild-managed lions. As with the objectives discussed above, these objectives are stepped down to specific action items with intended 5-year outcomes, indicators on how the action plan is succeeding, and the parties responsible for implementation. The first is to maintain the wild-managed lions as a key population that contributes to socio-economic-ecological opportunities through mimicking "natural" ecological functions (e.g., wild lion survival rates, fecundity, litter sizes, and mortality rates). This objective is broken down to a number of action items ranging from mimicking survival changes through lethal and non-lethal removals, mimicking required immigration/emigration into an area, and measuring

demographic responses by determining age- and sex-structure through ranger observations, and informing stakeholders on progress of management efforts. These action items predominately have target dates that are on-going, annual, or bi-annual, with outcomes that can be used- in adaptive management efforts.

The second wild-managed lion objective is "To maintain lion genetic integrity by inducing social limitations through management-assisted dispersal and changes in dominance hierarchies", which focuses primarily on ensuring that lions within smaller fenced areas (<1,000 sq. km.) mimic natural biological processes such as natural dominance hierarchies and female dispersal to ensure genetic diversity. The action items for this objective include modeling genetic diversity within reserves, mimicking male dispersal from and into a social unit through removal (e.g., culling/hunting or translocation) and introduction (translocation) of males at appropriate ages, and mimicking occasional female dispersal into social units through removal and introduction.

The BMP has information on the lion's biology, habitat requirements, threats, and relevant legislation, as well as an extensive chapter on wild-managed lions. This chapter explores the history of wild-managed lions, particularly how lions had been managed in the past and what actions are needed to move forward in establishing a meta-population through connecting the reserves and allowing for genetically viable populations that can contribute to the overall wild lion population. According to the BMP, the wild lion populations are complemented by a fragmented population of wild-managed lions in South Africa found on fenced areas or reserves typically less than 1,000 square kilometers in size. This largely results from private property as well as wildlife ownership rights enforced by fencing as required by South African law. According to the BMP, even though opinions vary on the pros (Packer et al. 2013) and cons (Creel et al. 2013) of fencing as an essential component of range-wide lion conservation in the future, the use of fences is likely to increase as human land use continues to expand into lion ranges. The expanded use of fencing, particularly in areas where fencing is currently not widely utilized, could lead to continued fragmentation of lion habitats (Riggio et al. 2012, Dolrenry et al. 2014). Therefore, wild-managed lions in South Africa provides a key example on how to achieve integrated lion conservation goals in a changing African context that would enhance the survival of the species.

In the 1990s, the number of public and private game reserves started to increase in South Africa and many of them reintroduced lions, mostly as a tourist draw. Lions from these populations were then used for yet more reintroductions leading to a current number of about 800 lions on over 45 fenced reserves (Miller et al 2013). Many of these reserves have only one or two prides of lions, with the largest (Pilanesberg National Park and Madikwe Game Reserve) having four or five prides. Historically, most managers of these reserves had the tendency to manage their lion populations in isolation, although there was some movement of 'excess' lions.

Because of fragmented, isolated management of these populations, the conservation value of these lions has been questioned in the past (Hunter et al 2007, Slotow & Hunter 2009). Because of this, the BMP sets out management criteria within the reserves that maintains ecological processes and creates a meta-population (BMP pg. 41 and 42). Researchers noted indicators of inbreeding in two reserves (Trinkel et al. 2008, 2010), while several reserves experienced increased lion population growth rates with subsequent high lion densities (Miller & Funston 2014). The combination of high

lion densities and restricted size of the reserves disrupts predator-prey relationships – often with prey dramatically declining (Tambling & du Toit 2005, Slotow & Hunter 2009). In addition, managers increasingly find it hard to locate new areas for 'excess' lions (Kettles & Slotow 2009). The Lion Management Forum (LiMF), founded in 2010, provides a platform for concerned managers to discuss the unique issues surrounding small, fenced lion populations. LiMF members recognize that many of the natural processes characteristic of large naturally functioning lion populations have been disrupted on these small reserves. Given the small sizes of these reserves, limited opportunities exist for restoration of these natural processes Therefore, LiMF, and the BMP, have put forward management interventions that would mimic the outcomes of natural processes that are showing great success (Miller et al. 2013; Ferreira & Hofmeyr 2014).

The BMP recognizes that the managed lion meta-population is slightly contradictory to the theory of meta-population dynamics, as meta-populations are those with spatio-temporally variable subpopulation dynamics, variable dispersal, and availability of empty habitats that are largely connected (Oliveier et al. 2009). That is not the case with most wild-managed lion populations on small reserves in South Africa. Thus, in essence, the managed meta-population is a unique product of the South African response to managing and conserving large carnivores on isolated small reserves. The approach essentially recognizes a single population with social groups spatially isolated over vast areas. Some of these challenges can be reconciled through identifying regional nodes.

The lions for reintroductions into South Africa's small reserves were initially sourced from Etosha National Park, as well as Sabi Sand Game Reserve, adjacent to the Kruger National Park. Recently, SANParks relocated some animals from the South African park of Kgalagadi Transfrontier Park (Slotow & Hunter 2009). Managers applied minimal genetic management throughout the history of lion reintroductions (Slotow & Hunter 2009, Trinkle et al. 2010). As a result, geographic genetic structure in the wild-managed lion meta-population reflects mixed origins with few reserves having lions of only one origin (Miller et al. in review). The South African wild-managed lions thus represent a novel lion genetic diversity not associated with a single origin. Maintaining the origin of the base genetic stock is thus, according to the BMP, a low priority (BMP pg. 45).

Hunting and Utilization:

Hunting: According to the 2017 NDF (the last assessment available to the Service), hunting of wild lions is not allowed within national parks and only limited hunting is allowed in some provincial reserves, effectively ensuring protection for the majority of wild lions. There is some harvest of wild lions for the control of problem animals (e.g., stock-raiding) and, in very limited cases, population management within the national parks. In addition, a small number of wild lions from Kruger NP have dispersed out of the park into some of the reserves surrounding the park and may be harvested. According to the BMP, fewer than 2 wild lions and only approximately 10 wild-managed lions are taken off of private reserves annually.

South Africa has not set a specific annual quota for wild-managed lions. Instead, according to information provided to the Service, authorizations for hunting wild-managed lions are addressed on a case-by-case basis. Reserves maintaining wild-managed lions must submit an application to

the provincial authorities requesting a permit. Professional Hunters are obliged to record all completed hunts in a professional hunting register and this register is used to compile provincial reports on the number of lions taken annually. The level of off-take is also evaluated in the management of the meta-population to ensure that only those animals that no longer meet management goals are removed from the population. These animals are typically older lions that have successfully bred and raised several litters of kittens. Most experts consider the recommendation by Packer *et al.* (2011, p. 151) to limit offtake to no more than 1 lion per 2,000 km^2 to be a sustainable offtake of lions. The BMP (pg. 29) has established more restrictive limits for areas of less than 1000 km^2 to not exceed 0.5 lions/1000 km^2.

Utilization: An active lion bone trade from South Africa to several Asian countries for traditional medicinals is primarily supplied from captive-bred lions taken as hunting trophies, as well as captive-bred lionesses and juvenile lions (BMP pg. 30; 2017 NDF pg. 13). Lion bones are being used as a substitute for tiger bones, which is highly valued in Asia, primarily in China and Vietnam (Williams et al. 2015, pg. 1; Gratwicke et al. 2008, pg. 2–5; Graham-Rowe 2011, pg. s101–s102). In 2008, South Africa began issuing CITES permits for the export of skeletons of captive-bred lions to Asia. The number of lion skeletons for which South Africa issued permits for export to Asia (China, Viet Nam, Thailand and Lao PDR) increased tenfold from 2008 to 2011, from about 50 to about 573 skeletons, respectively, representing a total of 1,160 skeletons or about 10.8 metric tons (11.9 US tons) of lion bone in 4 years (Williams 2015, pp. ix–x, 46). With respect to meeting demand for lion bone, Lindsey et al. (2012, p. 20) states that there are likely to be large numbers of lion bones available for export from game farms, from lionesses and non-trophy males, and as byproducts from animals shot as trophies. In addition, Williams et al. (2015, p. 41) reports that there may be between 1,400 and 6,200 lion skeletons from past trophy hunts on South African game farms that could potentially be used to supply demand for lion bone. Further, at the 17th Meeting of the Conference of the Parties, the Appendix II listing for *P. leo* was amended to include an annotation establishing an export quota for lion bones. The annotation states that "[A] zero annual export quota is established for specimens of bones, bone pieces, bone products, claws, skeletons, skulls, and teeth removed from the wild and traded for commercial purposes. Annual export quotas for trade in bones, bone pieces, bone products, claws, skeletons, skulls and teeth for commercial purposes, derived from captive breeding operations in South Africa will be established and communicated annually to the CITES Secretariat." The Service is aware of a press release from the Endangered Wildlife Trust in which they state the DEA has established a quota of 800 skeletons (with or without skulls) of captive-bred lions for international trade, and as of this finding, the CITES website shows that South Africa has communicated a 800 skeleton export quota for 2017 and 2018 to the CITES Secretariat.

While the BMP suggests that the value of bones, whether wild or captive, is not high enough to stimulate the illegal harvest of lions solely to sell the bones into the bone trade, there is the potential that if the value of bones increases due to increasing demand from Asian markets, that captive lions could be a legal source of bones that masks the illegal harvest of wild lions. Additionally, evidence suggests that there may be incentive to poach wild lions for the bone trade. According to Williams et al. (2015, p. x), the 2013 price paid to South African game farmers and landowners for lion bones was $1,260–2,100 USD per skeleton. In many lion range states, this exceeds per capita GDP (gross

domestic product) (World Bank 2015, unpaginated). Thus, the current price paid for lion bone may provide incentive in some countries to poach wild lions. While the lion bone trade appears to currently be based primarily in South Africa's captive lion hunting industry, the trade appears to be having little or no impact on wild lion populations in South Africa at this time—lion populations in South Africa are stable or increasing and there is little poaching of wild lions in the country (Funston and Levendal 2015, pp. 1, 26; Williams et al. 2015, pp. 79–80). However, the impact of the lion bone trade on lion populations outside South Africa is unknown. Based on the effect of the tiger bone trade on tiger populations, if current conditions—for example, rapidly increasing demand and involvement of an international crime syndicate in the lion bone trade (Final listing rule, pg. 80026) —continue unchanged, then there is considerable potential for extensive poaching of wild lions to occur in order to meet demand.

Evaluation:

As stated earlier, the Service has evaluated this application in accordance with our threatened species permitting regulations at 50 CFR 17.32 and the issuance criteria for threatened species permits [(50 CFR 17.32(a)(2)]. In evaluating each of these criteria on the basis of information available to the Service, we have been able to determine that this import of the wild lion trophy animal would qualify for the issuance of the required import permit.

17.32(a)(2)(i): Whether the purpose for which the permit is required is adequate to justify removing from the wild or otherwise changing the status of the wildlife sought to be covered by the permit:

While there is habitat available to lions on the national parks and within the smaller, fenced reserves, much of South Africa has been converted into agricultural uses, managed plantation forests, human developments, or extractive industries. With the legalization of private ownership of wildlife in the early 1990s, there has been a significant increase in private land set aside for wildlife. This has led to a boost in South Africa's wildlife, particularly large mammals. South Africa laws, such as ToPS, were put into place to ensure that utilization of this wildlife is sustainable and provides for long-term incentives to maintain these areas for wildlife protection. The national parks and fenced reserves are natural areas surrounded by development. It is only through the on-going management of these remaining natural areas that lions survive in South Africa. South Africa's management of wild and wild-managed lion population as a meta-population, using human intervention (e.g., translocation) as a substitute for natural occurrences (e.g., dispersal), is ensuring that lion populations are genetically healthy and viable.

While it has been stated that South Africa's hunting industry generates $1.1 billion annually, not all of this is connected to lion hunting or to United States hunters. However, lions are a key component of the hunting industry since they are part of the "Big 5" trophies and a draw for United States hunters, such as Mr. Moroun, to South Africa. Based on the information available to the Service, the presence of private reserves has increased the number and diversity of wildlife in

South Africa, thus fueling the hunting industry, which funds the on-going success of private reserves. It appears that without the hunting industry, these reserves, which have become islands of wilderness surrounded by civilization in much of South Africa, would not be economically viable, and therefore would not exist. Both ToPS and the BMP have put into place mechanisms to adequately oversee the harvest of wild and wild-managed lions in South Africa. With an annual harvest of approximately 10 wild-managed lions, South Africa is not exceeding the limits identified in the BMP of 0.5 lions/1,000 sq. km. The objectives of the BMP and the actions and monitoring activities that have been put into place to achieve these objectives should support the adaptive management approach that South Africa has established for managing lions.

Therefore, based on the information available to the Service and seeing that Khamab Kalahari Reserve has been determined by the DEA to maintain a wild lion population, the purpose for which a permit is being requested is adequate to justify removing the sport-hunted trophy lion from the wild or otherwise changing its status.

17.32(a)(2)(ii): <u>The probable direct and indirect effect that issuing the permit would have on the wild populations of the wildlife sought to be covered by the permit:</u>

The national management plan, the BMP for lions is extensive and addresses many aspects of lion conservation and management. As reviewed above, the BMP provides a history of the relevant legislation with regards to lion conservation and puts the current efforts into context. The BMP also reviews the species' biology, population status, habitat requirements, and threats to lion populations. Objectives for conservation of the species, as well as a plan to develop a meta-population for wild-managed lions, are also included. Additionally, the monitoring plans have scientifically sound methodologies. Lastly, but equally importantly, are the monitoring and evaluation efforts laid out in the BMP.

In evaluating the information provided by the South African government and other sources, it appears that the hunting program in South Africa is addressing the three main threats identified by the Service when making the determination that the species is threatened with the possibility of extinction. The fenced reserves, including Khamab Kalahari Reserve and national parks are maintaining habitat for lions and ensuring that there is no further habitat loss, provided that the reserves can remain economically viable. In order to maintain a viable population of wild and wild-managed lions, the parks and reserves must maintain biodiversity and a sustainable prey base. Finally, while there is still controversy over the extensive utilization of fencing in South Africa, it does reduce human-lion conflicts and the number of lions killed in retaliation for killing livestock. Therefore, the management of lions on these reserves and, the limited hunting of lions under this management program contributes to the on-going survival of the species in South Africa.

The off-take of this wild lion provides a direct benefit to the wild populations by helping to support the reserve and manage the local population. Therefore, based on the information available to the

Service, the probable direct and indirect effect that issuing an import permit for this legally hunted lion would have on the species would be positive.

17.32(a)(2)(iii): Whether the permit, if issued, would in any way, directly or indirectly, conflict with any known program intended to enhance the survival probabilities of the population from which the wildlife sought to be covered by the permit was or would be removed:

As stated above, South Africa is closely monitoring and controlling the harvest of wild and wild-managed lions through permitting under ToPS and through the BMP. The issuance of an import permit for a wild lion legally hunted in Khamab Kalahari Reserve under these authorities would not conflict with any programs intended to enhance the survival probably of the species in South Africa.

Therefore, based on the information available to the Service, the issuance of an import permit for a legally hunted wild lion would not conflict with any known conservation program for the species.

17.32(a)(2)(iv): Whether the purpose for which the permit is required would be likely to reduce the threat of extinction facing the species of wildlife sought to be covered by the permit:

As previously stated, wild lions only occur in a limited number of national parks and reserves in South Africa and wild-managed lions are currently found on 45 reserves of less than 1,000 sq. km. While the wild lions on the national parks receive only limited direct management activities, the reserves require management that is more intensive in order to mimic natural biological and ecological roles of lions. All indications show, that given the threats identified by the Service when listing the species as threatened under the ESA, the presence of these national parks and reserves, including Khamab Kalahari Reserve, is actively addressing the three causes of lion decline: loss of habitat, loss of prey base, and human-lion conflict. While the concept of lions behind fences has both benefits and drawbacks, it appears to be a major contributor to the on-going survival of lions in the wild in South Africa. While open and unmanaged habitat not impacted by human intervention would be the ideal conditions for lion populations in South Africa, as well as throughout its natural range, this is not currently a viable option within South Africa.

With limited, controlled off-take of lions as part of the limited management of wild lions, the hunt that Mr. Moroun undertook will contribute to reducing the threat of extinction of lions in South Africa. It appears that the permitting activities under ToPS and the implementation of the BMP will ensure the long-term survival of lions. The utilization of hunters such as Mr. Moroun in managing the populations on these reserves is an important element of the success of lion management in South Africa.

Therefore, based on the information available to the Service, the purpose for which this import permit would be issued will likely reduced the threat of extinction facing lions in South Africa.

17.32(a)(2)(v): The opinions or views of scientists or other persons or organizations having expertise concerning the wildlife or other matters germane to the application:

As with any discussion of hunting as a management tool, there are numerous opinions on the impact it would have on a species. From reviewing comments made during the listing process for lions, as well as information obtained through personal conversations and available literature, there is a general agreement that hunting, done properly and well managed, would not have an adverse effect on lion populations. Mimicking natural processes within the management program, such as maintaining pride hierarchy for long periods by leaving the alpha male in place, will better ensure the long-term survival of the species. Numerous researchers have stated that, while they may not support hunting in general, they see benefits that can be realized through a scientifically based hunting program for lions. There have been a large number of comments from some Non-Governmental Organizations (NGOs) and the public that oppose hunting any lions, but particularly captive-bred lions. However, this opposition, is primarily based on the perceived ethics of hunting. While these comments are an indication of concerns from some members of the public over hunting, they are not germane to our review process for this application.

Therefore, based on the information available to the Service, there is general support by scientists, individuals, and other organizations having expertise concerning lions, that the legal harvest and subsequent import of these lion trophies would not have an adverse effect on the species, but would further efforts to conserve the species in the wild into the future.

17.32(a)(2)(vi): Whether the expertise, facilities, or other resources available to the applicant appear adequate to successfully accomplish the objectives stated in the application.

The oversight by DEA and the implementation of the BMP establishes a framework in which reserves manage their wildlife. The long-term survival of lions, at least in South Africa, is tied directly to the success, both ecologically and economically, of the reserves. The reserves that maintain wild lions and, as part of the management program, carry out very limited hunting, and have the expertise and facilities to maintain lions successfully. This includes Khamab Kalahari Reserve, a population of wild lions.

Therefore, based on the information available to the Service, the applicant hunted on a properly permitted reserve that carries out their management practices in accordance with national and

provincial regulations, having the expertise, facilities, or other resources available to them to successfully accomplish the objective stated in the application.

Conclusion

Given the current status of wild and wild-managed lions within South Africa and the level of management and oversight provided to them, it appears that the harvest and import of this lion as a sport-hunted trophy meets the purposes of the Act. The applicant hunted on a properly licensed reserve that is actively managing lions in a manner that will maintain the species on the reserve.

Therefore, with the information currently available to the Service and in accordance with the issuance criteria laid out above, the Service is able to make a determination that the import of this wild lion will enhance the propagation or survival of the species. Therefore, the Service **is able to authorize the import of one male wild lion trophy taken in South Africa, to Matthew John Moroun, Grossepoint Farms, MI**.

Under provisions of section 7(a)(2) of the Endangered Species Act, a Federal agency that permits, licenses, funds, or otherwise authorizes activities must consult with the Fish and Wildlife Service as appropriate, **to ensure that its actions will not jeopardize the continued existence of any listed species.**

The Act states that each federal agency shall insure that any action authorized ... **"is not likely to jeopardize the continued existence of any endangered species or threatened species** *OR* result in the destruction or adverse modification of habitat of such species which is determined ...to be critical...."

Intra-Service Section 7 Biological Evaluation under ESA
Division of Management Authority

Originator: Emma Nelson
Date: August 13, 2019
Application Number: 82926C

I. Listed species and critical habitat (if any) potentially affected:

The applicant requests a permit to import one female sport hunted lion trophy (*Panthera leo melanochaita)* taken within Khamab Kalahari Reserve, North West, South Africa during the 2018 hunting season for the purpose of enhancement of the species.

Scientific name:
Panthera leo melanochaita

Common name:
African lion

Date listed:
12/23/2015- T

Description of species, threats, and critical habitat:
The lion has a broad habitat tolerance, absent only from tropical rainforest and the interior of the Sahara desert. There are records of lions to elevations of more than 4,000 m in the Bale Mountains and on Kilimanjaro. Although lions drink regularly when water is available, they are capable of obtaining their moisture requirements from prey and even plants (such as the tsama melon in the Kalahari desert), and thus can survive in very arid environments. Medium- to large-sized ungulates (including antelopes, zebra and wildebeest) are the bulk of their prey, but lions will take almost any animal, from rodents to a rhino. They also scavenge, displacing other predators (such as the spotted hyaena) from their kills.

Lions are the most social of the cats, with related females remaining together in prides, and related and unrelated males forming coalitions competing for tenure over prides. Average pride size (including males and females) is four to six adults; prides generally break into smaller groups when hunting. Lions tend to live at higher densities than most other felids, but with a wide variation from 1.5 adults per 100 km² in southern African semi-desert to 55/100 km² in parts of the Serengeti. Pride ranges can vary widely even in the same region: e.g., from 266-4,532 km² in the Kgalagadi Transfrontier Park of South Africa.

The main threats to lions are indiscriminate killing (primarily as a result of retaliatory or pre-emptive killing to protect human life and livestock), prey base depletion, habitat loss, illegal trade in lion parts, trophy hunting (depending on management), and disease. Habitat loss and

conversion has led to a number of subpopulations becoming small and isolated. Furthermore, trophy hunting has a net positive impact in a some areas, but may have at times contributed to population declines in Botswana, Namibia, Tanzania, Zimbabwe, Cameroon and Zambia.

The economic impact of stock raiding can be significant and therefore lions are persecuted intensely in livestock areas across Africa; their scavenging behavior makes them particularly vulnerable to poisoned carcasses put out to eliminate predators. Little actual information exists on the number of lions killed as problem animals by local people, even though this is considered the primary threat to their survival outside protected areas.

Lion population density across the species' range is known to track the biomass of large wild herbivores, the lion's principle prey species. These species are increasingly under threat from an unsustainable and increasingly commercialized bushmeat trade, leading to collapses in prey populations across large parts of savanna Africa.

Illegal trade in lion body parts for medicinal purposes is considered a threat to African lion subpopulations (according to the regional lion conservation strategies, which call on countries to prohibit and control trade in lion bone and other parts and products) as well as to the small subpopulation in India's Gir Forest. In West and Central Africa, there are many reported uses for lion skins and bone in Benin (with fat and bones being most commonly utilized), and a survey carried out around Nigeria's Yankari National Park found more than 22 lion parts considered to be of medicinal value, with most of the over 200 interviewees saying they had used lion parts in the past, and half within the past three years. The widespread prevalence of fakes in the traditional medicinal market is indicative of a continued demand. While fakes may replace items in the market that otherwise would be illegally sourced from the wild, they could perpetuate demand and poaching when consumers aspire to the genuine wild item rather than making a conscious choice of an (often cheaper) alternative.

There appears to be increasing interest in the use of African lion bone in Asia. There is no history of lion bone being used in traditional medicine there, but China has permitted the use of bones from captive lions to make medicinal wines traditionally containing tiger bone. South Africa has reported the export of large quantities of lion bone sourced from captive animals to China, the Lao People's Democratic Republic and Viet Nam. Legal international trade in bone reported as from captive-bred lions could serve as a cover for illegally wild-sourced lion (and other big cat) parts. There is also concern that wild lion parts from eastern and Southern Africa could be drawn into the large illegal wildlife trade to Asia centered around elephant ivory.

Trophy hunting is carried out in a number of sub-Saharan African countries and is considered an important management tool for conserving wild land providing financial resource for lion conservation for both governments and local communities. However, there is concern that management regimes have not always been sufficient to deter unsustainable offtakes. A sustainable offtake level of one male lion per 2,000 km^2 has been recommended, but offtake has been higher in many areas, which suggests that it is potentially a threat. Trophy hunting can thus be a tool for conservation but also a threat, depending on how it is regulated and managed. Hunter et al. (2013) cautioned that regulatory measures which reduce the profitability of lion trophy hunting could have widespread negative impacts for wildlife-based land use, anti-poaching and tolerance of lion outside protected areas.

No critical habitat has been designated.

II. Geographic area where action will occur:

Khamab Kalahari Reserve, North West, South Africa

III. Description of the proposed action:

The applicant requests a permit to import one female sport hunted lion trophy (*Panthera leo melanochaita)* taken within Khamab Kalahari Reserve, North West, South Africa during the 2018 hunting season for the purpose of enhancement of the species.

IV. Determination of effects:

A. Explanation of effects of the action on species and critical habitat in item I:

The import of the sport-hunted trophy will have no effect.

B. Explanation of actions to be implemented to reduce adverse effects:

The action will have no effect.

V. Effect of determination and response requested:

A. Determination

No effect.
Species: African lion (*Panthera leo melanochaita*)

Mary Ellen Williams

CHIEF, BRANCH OF PERMITS, DMA

Permittee:

MATTHEW JOHN MOROUN
(b)(6) [redacted]
GROSSE POINT FARMS, MI 48236
U.S.A.

Authority: Statutes and Regulations: 16 USC 1539(a); 50 CFR 17.40(r).

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one female African lion (*Panthera leo melanochaita*), taken in South Africa for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2018 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of South Africa for the 2018 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law.

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

Mr. Timothy Van Norman
Chief, Branch of Permits
U.S. Fish and Wildlife Service
5275 Leesburg Pike
Falls Church, Virginia 22041-3803

Dear Chief Van Norman:

RCVD JAN 28 2016

Enclosed please find four applications for permits authorizing the import of sport-hunted trophies of *P. l. melanochaita* from Zimbabwe. In evaluating these applications, please consider the information on lion conservation and management in Bubye Valley Conservancy, Save Valley Conservancy, and Zimbabwe on the whole already submitted by Conservation Force and others. An index of this information is attached to this letter.

The information submitted by Conservation Force demonstrates that the lion conservation and management program in Zimbabwe, and specifically in Bubye Valley and Save Valley Conservancies, enhances the survival of the species because it addresses the three main threats to lion: (1) loss of habitat, (2) loss of prey base, and (3) human-lion conflict, and more.

First, the information demonstrates that habitat would not otherwise exist for lion in Bubye Valley and Save Valley Conservancies but for the income generated by tourist safari hunting. Both conservancies rely on the income from tourist safari hunting to fund their operations. If hunting stopped, the 1.7 million acres of habitat protected in these conservancies are likely to be lost to the lion, rhino, and prey species.

Second, Bubye Valley and Save Valley Conservancies each engage in extensive anti-poaching operations that protect the lion's prey base. For example, in 2015, Bubye Valley Conservancy spent $590,000 on game scouts and anti-poaching. All of these funds were generated by tourist safari hunting.

Finally, the information shows the significant community assistance programs in place in each of these conservancies. Bubye Valley Conservancy and Save Valley Conservancy each contribute $100,000 annually to local communities in cash, services, game meat, and supplies. This support is used to build schools and clinics, maintain water infrastructure, assist with repairs and maintenance of equipment, fund school books and field trips, increase consumption of protein, and otherwise improve the quality of life for local residents. Because of these benefits, local people are more willing to tolerate lion, and human-lion conflicts are reduced.

We believe the information already in the Fish and Wildlife Service's possession satisfies the requirements of 50 C.F.R. § 17.40(r) for Zimbabwe. However, we will continue to submit information about the benefits generated by safari hunting as it becomes available.

Sincerely,

John J. Jackson, III on behalf of
Conservation Force

Type of Activity:
IMPORT OF SPORT-HUNTED TROPHIES (Appendix I of CITES and/or ESA) Threatened-listed lion

Complete Sections A or B, and C, D, and E of this application. U.S. address may be required in Section C, see instructions for details.
See attached instruction pages for information on how to make your application complete and help avoid unnecessary delays.

A. Complete if applying as an individual

1.a. Last name	1.b. First name	1.c. Middle name or initial	1.d. Suffix
Smithers	Jeffrey	Davis	

2. Date of birth (mm/dd/yyyy)	3. Social Security No.	4. Occupation	5. Affiliation/ Doing business as (see instructions)
(b) (6)	(b) (6)	(b) (6)	

6.a. Telephone number	6.b. Alternate telephone number	6.c. Fax number	6.d. E-mail address
(b) (6)	(b) (6)	(b) (6)	(b) (6)

B. Complete if applying on behalf of a business, corporation, public agency, Tribe, or institution

1.a. Name of business, agency, Tribe, or institution	1.b. Doing business as (dba)		
2. Tax identification no.	3. Description of business, agency, Tribe, or institution		
4.a. Principal officer Last name	4.b. Principal officer First name	4.c. Principal officer Middle name/ initial	4.d. Suffix
5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C. All applicants complete address information

1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes)
(b) (6)

1.b. City	1.c. State	1.d. Zip code/Postal code:	1.e. County/Province	1.f. Country
San Antonio	Texas	78258	Bexar	USA

2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)
Same

2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount of $100, nonrefundable processing fee**. Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes ☑ If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: 12US75980A/9 No ☐

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other applicable parts in subchapter B of Chapter I of Title 50, and I certify that the information submitted in this application for a permit is complete and accurate to the best of my knowledge and belief. I understand that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6)

Signature of individual responsible for permit (No photocopied or stamped signatures) — Date of signature (mm/dd/yyyy): 01/20/2016

Please continue to next page

E. IMPORT OF SPORT-HUNTED TROPHIES *(Appendix I of CITES* and/or *ESA)*

Note 1: If you hold an import permit for trophy/trophies that you did not use, please **return the unused original permit**. If you are requesting reissuance of a permit because you have taken a trophy, but are unable to import it prior to the expiration of the permit, please use the renewal form (3-200-52; http://www.fws.gov/international/permits/by-form-number/index.html) and return your original permit with that form.

Note 2: Applications for species listed as endangered under the U.S. Endangered Species Act are published in the Federal Register for a 30-day public comment period. Please allow at least **90 days** for the application to be processed.

Note 3: USFWS has determined that a trophy consists of raw or tanned parts of a specimen taken by a hunter during sport hunt for personal use. It may include the bones, claws, hair, head, hide, hooves, horns, meat, skull, teeth, tusks, or any taxidermied part, including, but not limited to, a rug or taxidermied head, shoulder, or full mount. It does not include articles made from a trophy, such as worked, manufactured, or handicraft items for use as clothing, curios, ornamentation, jewelry, or other utilitarian items. If you wish to import such products, please contact the Division of Management Authority for the proper application form.

Note 4: Certain hunting trophies, including leopard, elephant, and rhinoceros hunting trophies, are subject to restrictions on their use after import into the United States. Please see 50 CFR 23.55 for more information or contact the Division of Management Authority.

Please provide the following information. Complete all questions on the application. Mark questions that are not applicable with "N/A". If needed, use a separate sheet of paper. On all attachments or separate sheets you are submitting; please indicate the application question number you are addressing. If applying for more than one trophy, be sure to answer questions 1-5 for each trophy addressed in this application. If importing trophies from more than one country, you must submit a separate application for each shipment in order to obtain separate import permits.

1. For each trophy to be imported, provide:
   a. Scientific name (genus, species, and, if applicable, subspecies) and common name.

      P. l. melanochaita (African lion)

   b. Sex (if known).

      Male

2. **IF ANIMAL IS CURRENTLY LIVING IN THE WILD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife is to be taken from the wild:

      Zimbabwe: Bubye Valley Conservancy, Beit Bridge District, Matabeleland South. Nearest town is Beit Bridge and nearest city is Bulawayo. GPS coordinates for Towla are S 2126478 , E 02953162. Hunting area is a wildlife conservancy of 850,000 acres.

   b. Date wildlife is to be hunted:

      May 2016

   c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

      All parts including skin, skull, teeth, and claws

3. **IF THE ANIMAL IS DEAD**, please enter the following:
   a. Country and PLACE (area, region, GIS coordinates, ranch AND nearest city) where wildlife was removed from the wild (provide a map if possible):

      N/A

   b. Date wildlife was hunted:

c. Description of the trophy and parts you intend to import (e.g., skin, skull, shoulder mount, life size mount, claws, horn, tusks).

d. The current location of the trophy (address and country) [the U.S. import permit will identify this country as the country of export/re-export and must match with the export/re-export documents]:

4. Complete name and address of overseas person or business shipping the trophy to you. If you are applying to import a trophy directly from Namibia, you must provide the name and address of the professional hunter listed on your Namibian hunting permit [this name will also appear on your Namibian export permit and must match the U.S. import permit].

Name:	Steve Colletts
Business Name:	
Address:	15 Josiah Chinamano Road
Address:	
City:	Bulawayo
State/Province:	
Country, Postal Code:	Zimbabwe

5. Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application.

Please see information already provided by Conservation Force, Pete Fick/Bubye Valley Conservancy, and Zimbabwe authorities.

CERTIFICATION STATEMENT (original signature must be provided for either 6 or 7 below)

6. **If you are a broker or taxidermist applying on behalf of a foreign national,** provide documentation to show you have a **Power of Attorney** to act on your client's behalf and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by my client and is being imported only for my client's personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that my client may only import two leopard trophies in one calendar year (if applicable). In addition, I have advised my client that raw ivory, once imported into the United States, cannot be re-exported.

Taxidermist/Broker's signature: _____ Date: _____

7. **If you are the hunter applying to import your own trophy**, please read and sign the following statement.

I acknowledge that the sport-hunted trophy/trophies to be imported has been/will be personally hunted by me and is being imported only for my personal use (i.e., **not for sale, transfer, donation, or exchange that is reasonably likely to result in economic use, gain, or benefit**). I understand that I may only import two leopard trophies in one calendar year (if applicable). In addition, I understand that raw ivory, once imported into the United States, cannot be re-exported

(b) (6)

Applicant's signature _____ Date: 01/20/2016

Be aware that there may be approval requirements by your local or state government, as well as required by other Federal agencies or foreign government to conduct your propose activity. While the Service will attempt to assist you, it is your responsibility to obtain such approval.

8. All international shipment(s) must be through a designated port. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2).

9. Name and address where you wish permit mailed, **if** different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

10. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 9. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email):
    John J. Jackson, III or Regina Lennox of Conservation Force
    504-837-1233, jjw-no2@att.net or regina.lennox@conservationforce.org

12. **Disqualification Factor**. A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. (50 CFR 13.21(c)) Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☑ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.

NOTICE OF REPRESENTATION

This is a notice to the U.S. Fish and Wildlife Service that I have appointed John J. Jackson, III and Regina Lennox of the non-profit firm Conservation Force as my attorneys and legal representatives for all matters concerning my application for a permit to import a threatened-listed African lion trophy.

This authority is inclusive and extends to all applications and filings, whether administrative or judicial, including but not limited to any request for reconsideration, appeal, and litigation.

I also request that these attorneys, through the address for Conservation Force below, be copied with all correspondence, acknowledgements, notices and decisions concerning my application to import my lion trophy at the following address:

John J. Jackson, III
Regina Lennox
Conservation Force
3240 S. I-10 Service Road W., Suite 200
Metairie, Louisiana 70001 USA
T: (504) 837-1233
F: (504) 837-1145
E: jjw-no2@att.net

Summary of Steps Taken by Zimbabwe to Improve the Management of Lion Sport-Hunting

i – Banning of all lioness hunting in Zimbabwe
ii – Hunting moratoria around the Gonarezhou and Hwange National Parks
iii – Removal of fixed hunting quotas
iv – Age restrictions on sport-hunted lions
v – Scientifically-based adaptive quota management system

Summary of Lion Sport-Hunting's Contribution to Conservation

i – Lion sport-hunting contributes 33.9% to 42.4% of total revenue on private land
ii – Lion sport-hunting generates up to US$ 557 km^{-2}
iii – Anti-poaching (in particular that of rhinoceroses) costs ∼US$ 216 km^{-2}

Introduction

The United States Fish and Wildlife Service (USFWS) have recently evaluated the conservation status of the lion *Panthera leo* with particular regard to sport-hunting (http://www.fws.gov/endangered/what-we-do/lion.html [accessed 2015-01-19]). The results of this evaluation have led to the formal protection of two subspecies under the Endangered Species Act, classifying *P. l. leo* as endangered and *P. l. melanochaita* as threatened. Together these subspecies apparently represent all of the lions in Africa (Barnett et al. 2014).

Sport-hunting is a legal activity in which the international import/export of trophies is both sanctioned and carefully controlled by the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES). The USFWS found that the sport-hunting of *P. l. melanochaita* "*if well managed, may provide a benefit to the subspecies*" (http://www.fws.gov/endangered/what-we-do/lion.html [accessed 2015-01-19]). Here we explore this statement further, and present data from three long-term *in situ* lion research projects; the Bubye Valley Conservation Research Initiative, Savé Val-

ley Conservancy Research, and the Hwange Lion Research Project.

The data presented in this report clearly illustrates the positive conservation benefit that well-managed trophy hunting of lions can have for the species, as well as the importance of hunting in maintaining the wildlife in an area; addressing Point 5 on page 3 of the Federal Fish and Wildlife Permit Application Form (Form 3-200-20) [i.e. "*Please be aware that the U.S. Fish and Wildlife Service must make a finding that your activities will enhance or benefit wild populations of the species involved. If you have any information that could support this finding (e.g., population status or trend data; how the funds from license/trophy fees will be spent; what portion of the hunting fee will support conservation), please submit such information on a separate page with your application*"].

Figure 1: The lions pictured here, known as Winston (*standing*) and Geronimo (*lying*), were both collared in March 2012 when they were the dominant males in the Matombosa area and have been continuously monitored ever since as part of the on-going long-term WildCRU Bubye Valley Conservation Research Initiative. In November 2015 Geronimo, who was approximately 9 years old, died after succumbing to injuries sustained from fighting with another male. Winston, also 9 years old, has since lost his dominant status, lost his territory to two 4.5 year old males, become nomadic and avoids contact with other males. As of this report being written, the recent litter of cubs that both Winston and Geronimo sired are still alive.

Most importantly, since July 2013 there has been a continuous self-imposed internal reform of the lion hunting industry in Zimbabwe that is actively participated in and supported by all of the relevant stakeholders, including; the Zimbabwe Parks and Wildlife Management Authority (ZPWMA), non-governmental organisations, professional hunters, safari operators, scientists and researchers.

Here we discuss the results of this process in terms of robust evidence regarding the sustainability and self-regulation of lion hunting in Zimbabwe.

Figure 2: Winston and Geronimo's cubs.

Lions – *Panthera leo*

The IUCN Red List have recently reclassified lions as Vulnerable (remaining as such since 1996; IUCN 2015), estimating that there are between 20,000 and 30,000 free-ranging lions left (Bauer et al. 2015a) in less than 25% of their historic range (IUCN 2006). However, this generalised classification does not take into account an apparent conservation dichotomy: sample subpopulations of lions in Botswana, Namibia, South Africa and Zimbabwe have in fact increased overall (Bauer et al. 2015a). Lions were historically present throughout Africa, some of Europe, the Middle East and Asia (Bauer and Van Der Merwe 2004), but current conservation strongholds remain only in parts of eastern

and southern Africa (Brassine and Parker 2012; Nowell and Jackson 1996). The current lion population estimate for Zimbabwe's major lion areas is approximately 2,600 individuals [Hwange-Matetsi Complex: 750, South Eastern Lowveld: 350, Gonarezhou National Park: 60, Malilangwe: 37, Savé Valley Conservancy: 284, Bubye Valley Conservancy: 500, Mid-Zambezi Valley Complex: 600], though the actual number would be larger if there were data available for the countries minor lion areas that are yet to be surveyed] (ZPWMA 2015).

The lion is a uniquely social felid, forming coalitions of up to nine males associated with one or more female prides that may consist of more than 20 individuals (Macdonald et al. 2010; Schaller 1972). Lions are infamously infanticidal (Schaller 1972), where males will kill unrelated cubs so as to bring the female into oestrus and present an opportunity to sire their own litter, which is often used as an argument against sport-hunting of the species (e.g. Packer et al. 2010), where it is feared that the removal of dominant males causes cub mortality that eventually results in lowered population recruitment and survival (Packer et al. 2009). Infanticide, however, does not result from sport-hunting when age-appropriate males, past their prime and no longer territorial or with dependent cubs, are harvested (Whitman et al. 2004). Moreover, the fission-fusion nature of lion society (Mosser and Packer 2009; Pusey and Packer 1987) means that infanticide may still occur when the dominant males are simply not present there and then to defend their cubs (B. du Preez, pers. obs.).

In the 1990's, lions were successfully reintroduced into private areas in parts of their former range, where they achieved high reproductive and survival rates (Miller and Funston 2014). However, the resultant population growth inevitably led to the potential problem of overabundance (Funston 2008) and low genetic diversity (Trinkel et al. 2010), with both of these issues requiring active and intensive management (Hunter et al. 2007) and ultimately reducing the conservation value of these lion populations (Miller and Funston 2014). The ability to translocate lions originally facilitated the relief of overpopulation, but as the available areas for relocations were used up, sport-hunting and euthanasia have subsequently become the main methods of lion population control (Miller and Funston 2014).

The lion is the apex predator wherever it occurs (Macdonald et al. 2010), and is an ideal conservation umbrella; being large, charismatic and easily observable (e.g. Williams et al. 2000). Lions are important to commercial wildlife ventures, which risk losing significant market share where they cannot offer them to clients (Lindsey et al. 2007), and are thus prioritised in conservation; exploiting their charisma to attract tourists and raise the funds required in ensuring that wildlife areas remain viable. The lion is also a particularly valuable species in the sport-hunting industry, rivalled only in demand by buffalo *Syncerus caffer* and leopard *Panthera pardus* (Creel and Creel 1997), and are therefore prevalent in private wildlife areas (Packer et al. 2013) where their populations can achieve exponential growth rates given the protection and resources afforded by well-managed operations (Smuts et al. 1978; Loveridge et al. 2007b; Kettles and Slotow 2009; Miller and Funston 2014).

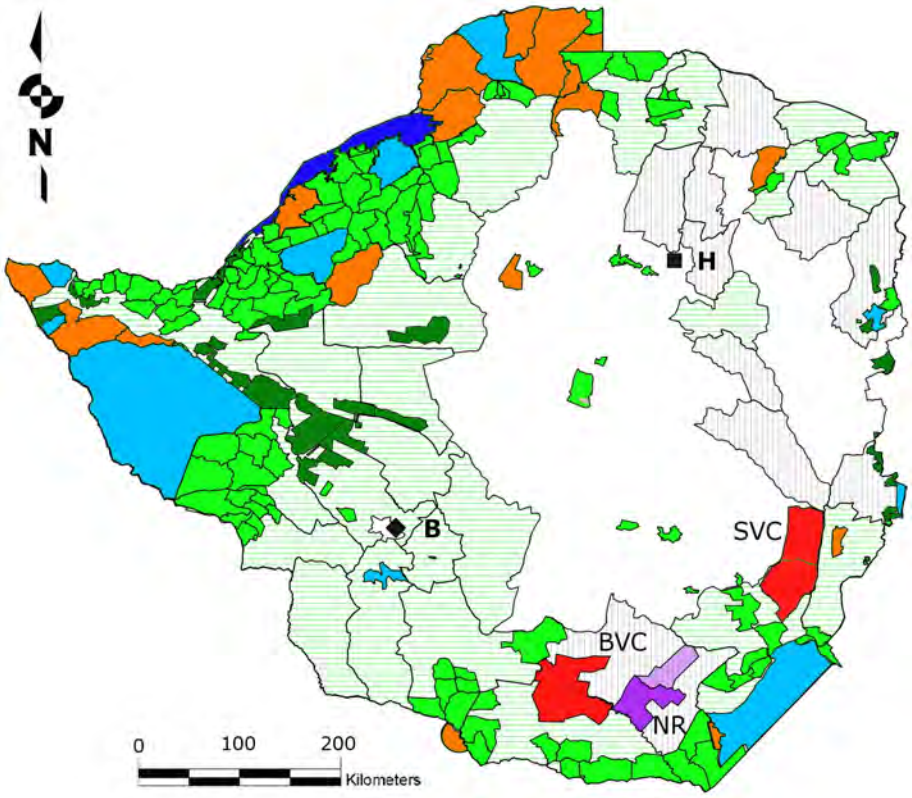

Figure 3: Map of Zimbabwe's main wildlife areas: [*i*] National Parks are represented in light blue; [*ii*] Safari areas are represented in orange; [*iii*] Forestry areas are represented in dark green; [*iv*] Community and Private wildlife areas are represented in light green; [*v*] Communal Land (CAMPFIRE Areas) in which sport-hunting may occur is represented by light green horizontal stripes; [*vi*] Communal Land in which sport-hunting does not occur is represented by grey vertical stripes. [*vii*] The Bubye Valley [BVC] and Savé Valley [SVC] Conservancies are represented in red. [*viii*]The Nuanetsi Ranch [NR] on which sport-hunting takes place is represented in dark purple (light purple represents the Nuanetsi Ranch cattle area); [*ix*] Lake Kariba is represented in dark blue. Harare (the capital city) is represented by a black square and letter '**H**'. Bulawayo is represented by a black diamond and letter '**B**'. Sport-hunting may occur in areas: *ii*, *iii*, *iv*, *v*, *vii* & *viii*

The ability of lions to rapidly increase in abundance is an aspect of their ecology that is often overlooked. Lion populations can achieve exponential growth rates (Miller and Funston 2015; Groom and Watermeyer 2015; du Preez et al. in prep.), and the problems associated with high lion densities fast present themselves and require significant investment in their solution (Hunter et al. 2007; Kettles and Slotow 2009; Loveridge et al. 2007; Packer et al. 2013; Smuts 1978). Whilst unregulated sport-hunting of lions (in particular that of dominant males and pride females) may result in population declines (e.g. Packer et al. 2010; Packer et al. 2009), restricting offtake to only males over

a certain age (i.e. have already bred and/or are no longer dominant) has no impact on lion population persistence, irrespective of quota size (Whitman et al. 2004). Such is the situation currently facing both the Bubye Valley and Savé Valley Conservancies, where the lion populations continue to grow despite sport-hunting and increasing quotas. Whilst sport-hunting may not alleviate over-population in these areas, it does somewhat offset the cost of keeping lions. Culling of lions may be the only realistic option for controlling numbers in larger areas, as the use of contraceptives is likely to be inefficient and expensive. Because of fears about public sentiment associated with sport-hunting, it has now become common practice for managers to cull excess lions in more than 45 wildlife areas in South Africa to which lions have been introduced, and which resulted in the wasteful destruction of about 200 lions in 2012 (Miller and Funston 2014).

Conservation and Sport-Hunting

There is more land area in Africa conserved for hunting than there is in all of Africa's formally protected areas combined: approximately 1.4 million km^2, which exceeds the total area covered by national parks by 22% (Lindsey et al. 2007). For wildlife conservation to be successful outside of national parks, these areas must be self-sufficient and able to generate sufficient revenue to cover the considerable costs of protecting the habitat and wildlife therein (Lindsey et al. 2006). Indeed, conservation would benefit from an incentive to utilise land for wildlife rather than the alternatives of livestock grazing, agriculture, and deforestation.

The international trade of lions, including trophies, is controlled by a strict CITES licensing system on the basis that this trade does not endanger the ultimate survival of the population (https://www.cites.org/eng/disc/how.php [accessed 2015-01-19]). The positive aspects of sport-hunting as a conservation tool include a focus on males and a low percentage off-take; neither of which generally jeopardise populations, and also suggest that hunting could play a role in population recovery (Leader-Williams et al. 2005).

The recommendation of setting uniform harvest limits, e.g. 1 lion 2,000 km^{-2} (Lindsey et al. 2012; Packer et al. 2010), may be overly simplistic, affect the economics of wildlife based landscape use, and disincentivise investment in conservation (Lindsey et al. 2007). A more practical approach to sustainably setting realistic lion sport-hunting quotas could involve using a positive/negative feedback method that calculates a fluid quota per area based on the previous season's performance. Such an adaptive quota management system has already been implemented in Zimbabwe.

Zimbabwe's Adaptive Lion Quota Management System

An adaptive quota management system for lion hunting based on the ages of lions hunted was agreed on in July 2013 in Harare, Zimbabwe, during a meeting hosted by the Zimbabwe Parks and Wildlife Management Authority (ZPWMA) and an independent non-governmental conservation organisation. The points system is summarised in Table 1.

Table 1: *Points allocated to hunting blocks arising from the harvest of lions of different ages*

	≥ 6 years	No trophy	5 years old	4 years old	< 4 years	Failure to submit return, or incomplete return
For quotas of ≥3	4	3	3	2	-3	0
For quotas of 2	4	3	3	2	0	0
For quotas of 1	6	3	3	2	0	0
Resultant quota	*These points are added up and divided by 3 to yield the quota for next year*					

During 2013, operators were requested to submit hunt returns and photos as a trial run to get the system up and running. In 2014 operators were requested to do the same but were informed that the age of the lions hunted in 2014 would determine their lion quotas in 2015. The 2015 lion hunt results would thus also determine the 2016 quota.

Results of the Adaptive Lion Quota Management System

In 2015 there was a marked increase in the age of lions hunted in Zimbabwe as a whole. Notably, only one lion of <4 years of age was hunted and the large majority of lions were 5 years or older (Figure 4). In 2013, only 28% of the lions hunted were 5 years or older, in 2014 that figure had risen to 49% and in 2015 to 77.3% (Figure 5). The proportion of lions hunted that were less that 5 years of age dropped overall between 2013 and 2015 (Figure 6). For this achievement, credit is due to the hunting community for showing greater selectivity of harvest. A word of caution however, is that the majority of lions hunted were on the cusp of 5 - 6 years of age and were not older than six years. Restricting hunting to individuals that are at least six (and preferably older) is desirable from a biological perspective due to the reduced risk of the loss of pride males and infanticide of cubs associated with the harvest of such individuals (Whitman et al. 2004).

In 2015 the Zimbabwe national lion hunting quota was set at 85 lions. Of this 85, only 39 were hunted in 2015, and based on the resultant score from aging the trophies, and the fact that operators chose not to hunt lions of inadequate age (see Figures 4, 5 & 6), the recommended quota for 2016 was set at 75 [Harare 2015-11-11]. (The Rural District Council areas in which lions occur are currently exempted from the age restrictions, as was agreed upon at the 2013 lion management meeting in Harare, as a means of ensuring that impoverished communities obtain the opportunity to benefit from the presence of lions, recognising the potential negative impacts the species has on the livelihoods of livestock farmers).

Using these figures and estimating the average value of a lion safari at approximately US$ 80,000 then a 50% offtake (35 lions) would generate US$ 2,800,000 annually. If management costs are approximately \$150 km^{-2} (V. Booth, pers. comm.), then the lion safaris alone can support 18,600 km^{-2} of wildlife habitat in Zimbabwe.

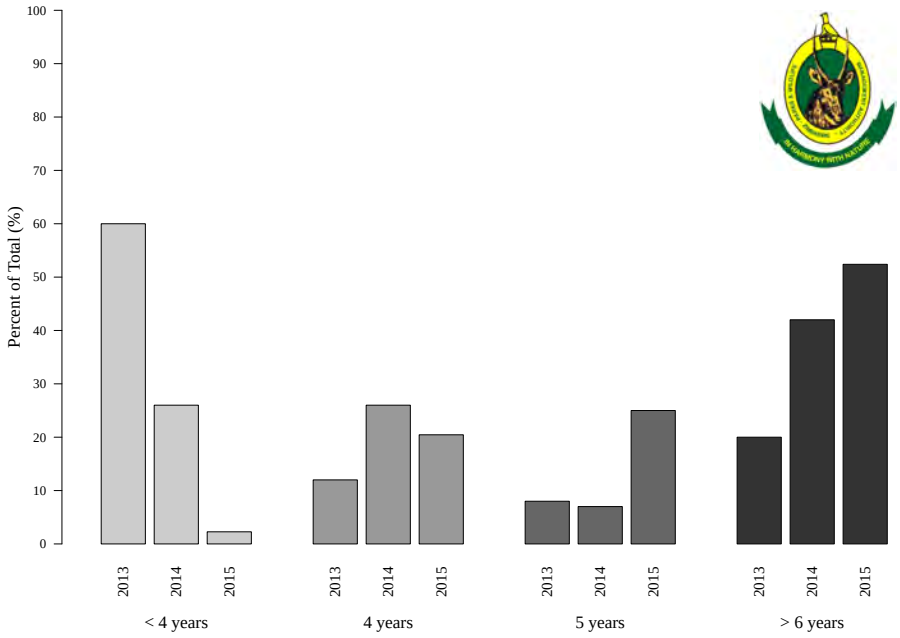

Figure 4: The percentage of lions hunted in each age class in 2013, 2014 and 2015 in Zimbabwe.

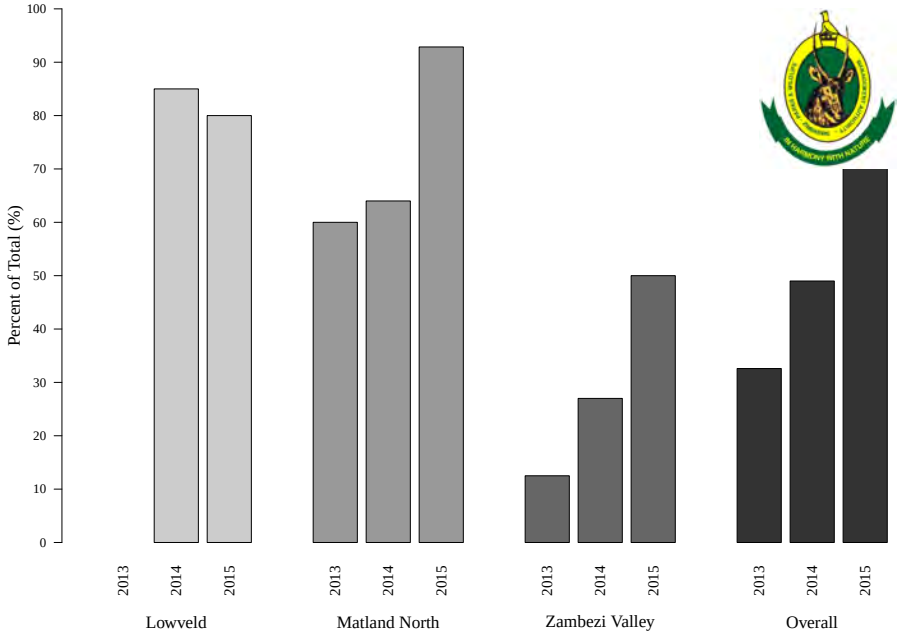

Figure 5: The proportion of lions hunted that were 5 years or older in the three main lion-hunting areas of Zimbabwe.

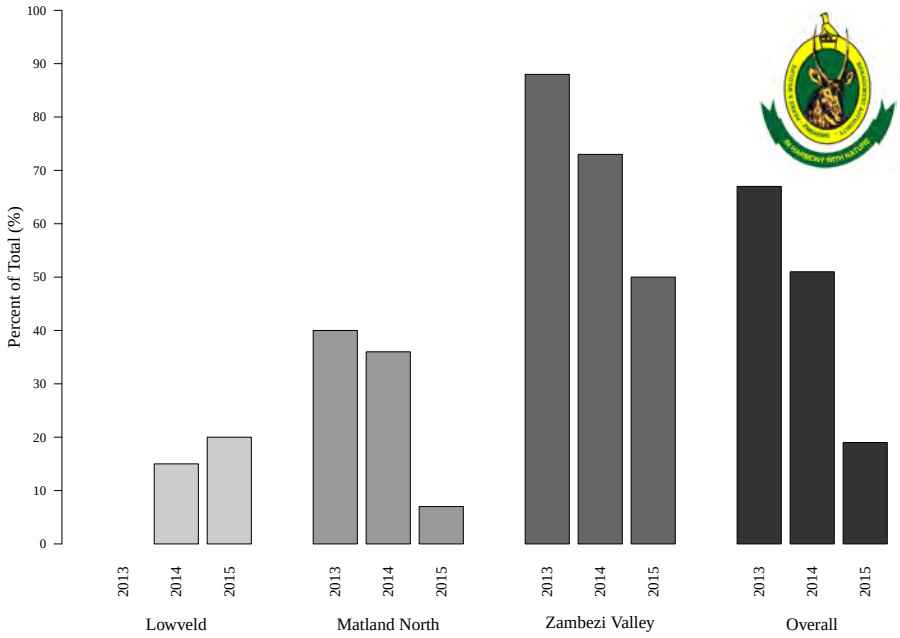

Figure 6: The proportion of lions hunted that were less than 5 years of age in the three main lion-hunting areas of Zimbabwe.

Table 2: *Human and Lion Conflict (2009 - 2011) in Zimbabwe, including human mortality caused by lion (CAMPFIRE Association, 2012)*

District	Total incidents	Livestock killed	*People Injured*	*People Killed*
Hurungwe	5	1	*2*	*2*
Chiredzi	25	136	*0*	*0*
Mbire	5	7	*0*	*5*
Binga	9	39	*0*	*0*
Total	**44**	**183**	***2***	***7***

Human-Lion Conflict

The lion is a flagship species and powerful symbol of Africa; yet living with lions poses hardships for many communities (e.g. Table 2). In some areas, the lion is a major predator on domestic livestock, inevitably leading to conflicts with local herders. Both sides suffer in this situation.

Outside of protected areas, the lion's prey base is much reduced, which results in relatively greater chance of encountering livestock. Co-existence of lions with people may be enhanced by giving value to lions through tourism and hunting promoted in communal lands under the Communal Area Management Programme for Indigenous Resources (CAMPFIRE). This hunting contributes to the conservation of lions via the financial revenue generated, which is ploughed back into conservation of the resource and empowers local communities to invest in their own rural development programs.

The Bubye Valley Conservancy

History of the Bubye Valley Conservancy

Towards the end of the nineteenth century, the Liebig's Extract of Meat Company (LEMCO) founded an extensive cattle ranch in the Zimbabwean lowveld, to the detriment of the indigenous wildlife that was initially eliminated because of competition for grazing with the livestock, as well as a risk of disease transmission from buffalo and wildebeest *Connochaetes taurinus*. As their natural prey base became depleted, the predators were subsequently persecuted when they began to prey on the livestock. Some wildlife persisted in small pockets of remote habitat, however lion, elephant *Loxodonta africana*, buffalo and rhinoceros *Diceros bicornis* [black] & *Ceratotherium simum* [white] were all completely eradicated. A monoculture of cattle dominated the landscape and impacted on the environment for the better part of a century.

Then, in 1992, Zimbabwe suffered one of the worst droughts on record, a relatively short time after the devastating one of 1983 that LEMCO was still trying to recover from. The frequency and severity of the droughts effectively reduced confidence in the economic viability of cattle ranching in the area, and the Bubye Valley Conservancy was subsequently founded in 1994 with the realisation that endemic wildlife, which are better adapted than livestock to cope with the local climate, could be successfully commercialised (Child 1988; Bond 1993).

The conversion from cattle ranching back to a wildlife area was neither straightforward nor cheap, requiring a significant initial investment and annual running costs. In just 20 years of operation the Bubye Valley Conservancy now protects the world's third largest black rhinoceros population, one of Zimbabwe's largest lion populations, a large and increasing elephant population, and abundant game.

Sport-hunting is an essential step in converting areas that were previously dedicated to livestock farming into non-consumptive tourism areas (Child 1993), and was fundamental to the formation of Bubye Valley Conservancy and allowing the wildlife populations to recover. The Samanyanga area of the Bubye Valley Conservancy, probably the most scenic section, was originally set aside for non-consumptive photographic tourism, but made an annual loss for several years, before, largely due to Zimbabwe's land reform program and resultant instability in the country, it was reverted back to sport-hunting as the only practical and economically viable option (K. Leathem, pers. comm.). Sustainable sport-hunting provides the sole economic incentive to continue operating the Bubye Valley Conservancy as a wildlife conservation area.

Bubye Valley Conservancy Community Support

The Bubye Valley Conservancy donates over 45 tonnes of meat from sport-hunting to the local communities each year. This meat donation is worth over US$ 100,000 per year, and the communities are free to decide how they use it. In addition to this, the Conservancy also supports several schools, clinics, and community projects in the three surrounding districts of Mwenezi, Maranda and Jopempe. The local community thus

sees a direct benefit from the wildlife on the Bubye Valley Conservancy, but is also empowered by job opportunities created both with these special projects, as well as on the Conservancy. A summary of the Bubye Valley Conservancy community support effort between 2011 and 2015 is provided in Table 4.

Bubye Valley Conservancy Lion Monitoring and Management

After originally being eradicated by cattle ranchers in the area, 13 lions were reintroduced to the Bubye Valley Conservancy in 1999, and four young males broke into the Conservancy that same year. From the original 17 animals present in 1999, the Bubye Valley Conservancy lion population was estimated at approximately 280 individuals in 2009 when robust population surveys were initiated by a research team from the University of Oxford Wildlife Conservation Research Unit (WildCRU), and this population has continued to grow. Today it is estimated that there are over 500 lions on the Bubye Valley Conservancy (du Preez et al. 2015). The exponentially increasing Bubye Valley Conservancy lion population currently exists at one of the highest densities in Africa (∼0.187 lions km^{-2}: du Preez et al. 2015; Figure 7), greater than that of the Serengeti, Tanzania (0.100 lions km^{-2}: Pusey and Packer 1987; Spong 2002), Selous, Tanzania (0.080 - 0.130 lions km^{-2}: Creel and Creel 1996, 1997), Kruger National Park, South Africa (0.096 - 0.112 lions km^{-2}: Mills 1995), and Hwange National Park, Zimbabwe (0.027 lions km^{-2}: Loveridge et al. 2007). This equates to one of the largest contiguous lion populations in Zimbabwe.

Bubye Valley Conservancy Lion Hunting

The Bubye Valley Conservancy offsets the cost of lion predation on its wildlife via sport-hunting of the species, and which began in 2002. In 2014, the lion hunting quota allocated to the Bubye Valley Conservancy by ZPWMA was 10 individuals. Based on the fact that the entire quota was harvested and that maximum points were scored for each individual trophy (more than six years in age), the allocated quota was raised to 13 lions for 2015. Only 12 out of 13 lions were hunted in 2015 due to a late cancellation; nevertheless eight lions over six years old and four lions of five years old were harvested and the resultant points justifying a quota of 15 lions for 2016.

Table 3: *The Bubye Valley Conservancy annual lion hunting quota and offtake from 2002 to 2015.*

	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Approved quota	1	2	3	2	2	2	3	3	5	8	12	10	10	13
Quota taken	1	2	3	2	2	2	2	3	5	8	12	10	10	12
Percentage success	100	100	100	100	100	100	67	100	100	100	100	100	100	92

Note that while the lion hunting quota for Zimbabwe has been voluntarily reduced by the national steering committee, the Bubye Valley Conservancy lion hunting quota has been successively raised twice based on both hunt success and age of lions hunted and the resultant points scored under the national adaptive quota management system (Table 3).

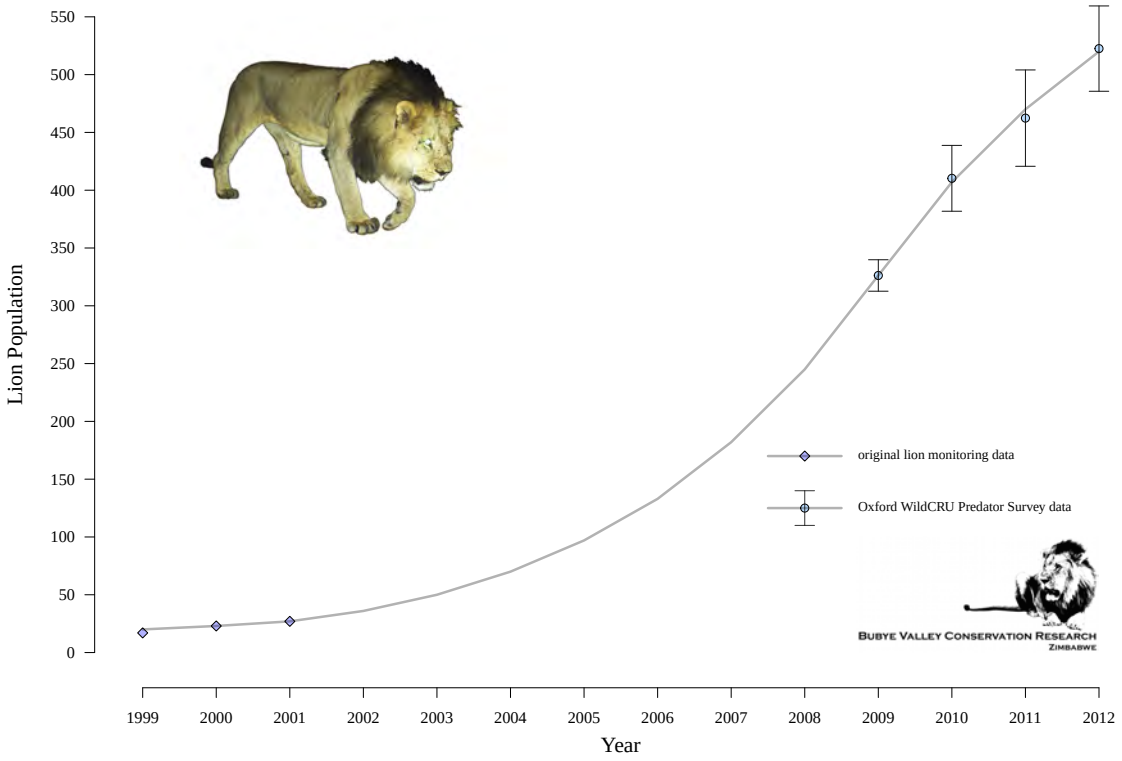

Figure 7: The Bubye Valley Conservancy lion population has grown exponentially since the reintroduction of lions in 1999. Diamonds represent the known lion abundance from monitoring of the original individuals introduced; Points indicate lion abundance calculated from spoor transect analyses; error bars represent the standard error of the mean.

Table 4: *Summary of the Bubye Valley Conservancy support to the surrounding local communities (2011 - 2015)*

Boreholes:	- 1 x Jompembi Village 2 - 1 x Penemene - 1 x Jompembi Village 4 - 1 x Nyimani village (Mwenezi) - 1 x Driehoek School - 1 x Mgaladhivha School - 2 x Mtetengwe to supply water to the clinic site - 2 new bush pumps (complete) purchased and installed at Village 2 & Village 3 and troughs built at both sites *Drinking trough for cattle built at Village 2 borehole* *All boreholes equiped with new bushpumps, piping and cylinders* *Boreholes at Village 3, Mtetengwe, Mdzwiti, Vumani and Penemene and Makado Police post repaired and maintained* *All new piping and pumps etc. are supplied by BVC*
Buildings:	- Mtetengwe Clinic's main building built - 3 x F13 staff houses built *Clinic and House fenced - everything funded and built by BVC* *The clinic is a standard large Government clinic - male & female wards + maternity ward and outpatients* *Storerooms, offices etc. also built* *All houses and buildings are electrified, painted and supplied with running water* - Mtetengwe School school office block and staff room built and painted *All classroom windows repaired and the schools second borehole repaired.* - Secure engine house was built at the second borehole site - Borehole equipped with BH15S mono pump unit driven by a rebuilt Lister LT 1 engine - 5000 litre header tank and stand errected - new 5000 litre header tank purchased and fitted - pipeline laid to connect the borehole to the clinic - another pipeline connected to the same borehole to supply the Mtetengwe school with fresh water - New coldroom and refrigeration unit purchased and fitted at the Lutumba butchery *Part of aid program to get the Beit Bridge RDC self funding projects up and running* - New coldroom and refrigeration unit was purchased and fitted at the Rutenga butchery *Part of aid program to get the Mwenezi RDC self funding projects up and running*
Meat Donations:	- BVC donates meat on a regularly basis to the Mwenezi Orphange - Numerous donations of meat were made to support school sports days & speech nights/prize giving events *Both Beit Bridge & Mwenezi districts* - 1600 kgs of meat has been donated each month since July 2011 to a Maranda trust *Administered by Chiefs andlocal headmen* *Excess meat sold and funds used for community projects* *Classroom roof replaced at Vhongwe school* *4 new classroom blocks constructed at other schools using funds from these monthly allocations* - 1000 kgs of meat per month is been donated to Beit Bridge communities since April 2014 - 1000 kgs of meat per month is been donated to Mwenezi communities since August 2013
Miscellaneous:	- Sports uniforms for the Penemene school team purchased ($2600) *Sports uniforms required for inter-schools sports* - Transport the soccor teams representing Mgaladivha, Jompembi and Tongwe *To Lutumba for the inter-school competitions* - 2 sets of soccer goal posts & 2 sets of Netball poles were made for Mgaladivha School *New soccer field graded by BVC* - 2m security fencing supplied to Penemene School - Second hand door and window frames donated to Mapiri school (ex Mazunga School) - 1 new 3 1/2 " rod pump cylinder was purchased and fitted to the Vumhani borehole *All repairs to b/holes in the Vumhani area are done by BVC* - 26 bags of cement were donated to Mgaladivha School - Fencing donated to the Mgaladivha School - Supplied 10 x 5/8" mono shafts for the Botalele Clinic (Maranda) borehole - Water supply to Mlelezi Clinic - 400 m pipeline laid to supply the Nyimani Villarge's cattle with water *3.5 m drinking trough build for this same project* - 60 bags cement donated to the Welkom for repairs to a dam wall - 6 loads of riversand and 20 cement donated to Vumani Preschool - Various school renovations in both the Beit Bridge and Maranda areas
Current Projects:	- Construction of a School admin block at Mgaladhivha School - Supply of 24 loads of riversand to Mdzwiti School (value $1200) - All roofing materials supplied to Mdzwiti School - Supply roofing materials, cement, all window and door frames for Vumani Preschool

The Savé Valley Conservancy

History of the Savé Valley Conservancy

The Savé Valley was a wildlife-rich wilderness until the early 1900's, when the first cattle ranching initiatives started in the area. The establishment of Devuli Ranch and Angus Ranch in 1920 paved the way for seven decades of commercial cattle ranching in the area we know today as the Savé Valley Conservancy. Roads were cut, fences erected and an everlasting 'battle' ensued against the wildlife, especially against all predators.

The large predators, especially lions, were virtually eradicated (Pole 1999). However, by the late 1980's, declining range productivity, depressions and droughts forced the landowners to consider alternative options. Around that time, empirical evidence of the competitive advantage of wildlife over livestock began to emerge (Child 1988; Bond 1993), especially in arid areas (Jansen et al 1992; Cumming 1993), and wildlife was finally given serious consideration as a viable land use option.

In 1989, a proposal was drawn up (du Toit 1989) to turn what was then the Sabi Valley Intensive Conservation Area into a wildlife conservancy. The plan was to create a single large wildlife area, especially for the re-establishment of endangered species and overexploited species, with cattle remaining the primary income generator. The Savé Valley Conservancy was constitutionally inaugurated in June 1991, and following the severe 1991/1992 drought, wildlife ranching became the primary land-use. At the time this was the largest private wildlife conservancy in the world (3,410 km^2).

The conservancy members then restocked the wildlife, removed all internal fencing, erected a common perimeter fence and developed effective security systems. A double, electrified, veterinary-approved fence was completed in 1995, and the following decade saw a massive investment in wildlife re-stocking and security systems.

Sport-hunting was essential for the successful transition of the conservancy from cattle to wildlife. During the early years, wildlife densities were low, resulting in poor potential for ecotourism, and hunting generated the income needed to erect the fence, re-stock game, and improve security, especially because of the significant numbers of black rhinoceros now found there. Gradually, some of the ranchers shifted more into ecotourism. One property, Senuko Ranch, completed a 16 bed up-market lodge with a view of marketing non-consumptive safaris, offering game drives and bush walks and specializing in rhino walks and African wild dog *Lycaon pictus* den visits. Lodge occupancy rose from 0% in 1996 to 62% by the end of 1999.

However, the Zimbabwean land reform program, which was initiated in February 2000, soon made a strong negative impression in the international community, and resulted in travel bans and warning from most of Zimbabwe's source markets. This, together with the political instability meant that the wildlife industry and ecotourism industry collapsed over-night: sport-hunting became the only economically viable land use option, and has remained the only tangible source of income to the landowners of the Savé Valley Conservancy. In the case of the Senuko Lodge, for example, the land reform program resulted in a 98% cancellation of

the confirmed bookings. After four years of seeking alternative markets, the lodge could achieve no higher than 17% occupancy, and in 2005 moved back into a hunting-based operation.

A more direct impact of the land reform program for the Savé Valley Conservancy was the loss of 33% of the area of the conservancy to invading subsistence farmers (Lindsey et al 2008). The loss of land was catastrophic and the related pressure from wire snare poaching was extreme. In the following eight years (2001 to 2009), 10,520 illegal hunting incidences were recorded, 84,396 wire snares were removed and at least 6,454 wild animals killed (Lindsey et al. 2011).

Savé Valley Conservancy Community Support and Anti-Poaching

In 2012, conservancy members provided over US$ 100,000 worth of support to adjacent villages or farmers in the resettled areas. Assistance included drilling boreholes, maintaining boreholes, dredging of dams, assisting with building projects in clinics and schools, assisting with repairs, maintenance and materials at schools, education initiatives, school field trips, provision of computer equipment in schools, craft programs and regular donations of meat.

Moreover, the conservancy recently entered into a mutually dependent agreement with the Chiefs representing the communities surrounding the Savé Valley Conservancy. The agreement links the communities to the Natural Resource Utilisation that occurs through the business operation of the conservancy and opens up opportunities for the local indigenous populations to share in any wealth creation. This agreement strengthens relations between the conservancy and the surrounding local communities and creates an environment that helps to protect, conserve and sustain the natural assets of the area. The hunting tourism of the conservancy is currently the only form of income by which the surrounding communities can benefit. Revenues from trophy lion hunting constitute a significant portion of inflow and thus an important part of the community benefits. Any reduction would seriously jeopardise the growth of this infant positive relationship and community empowerment initiative.

The Savé Valley Conservancy is thus pioneering private-community partnerships in Zimbabwe, and trade restrictions on lion trophies will indirectly adversely affect these already seriously impoverished communities through a reduction in available income to share with communities. This is very likely to have a knock on impact on the lions themselves with a significantly reduced tolerance and an increase in retaliatory poisoning of lions for livestock predation. Without a demonstration of income from lions, the political pressure from the surrounding communities to remove them from the conservancy altogether will be a challenge to resist.

Savé Valley Conservancy Lion Monitoring and Management

After the Conservancy was formed, and persecution stopped, lions, mainly males, recolonized the area and their numbers started to increase in the late 1990's / early 2000's. Few lionesses were observed until 2003, when small family groups and male-female pairs were seen, and by 2004 - 2005 there were some reports of cubs. During this period 13

lions were also reintroduced into the Savé Valley Conservancy. After an initial lag phase the lion population on the Savé Valley Conservancy has increased dramatically and at present is growing exponentially (Figure 8; Groom and Watermeyer 2015).

Monitoring of the lion population began in 1999 (Pole 1999) with track index or call-up surveys being conducted sporadically until 2006. From 2007 to present, annual conservancy-wide track index surveys have been conducted using a standardized methodology (Groom and Watermeyer 2015). The resulting population estimates were verified in 2011 by a baited lion call-up survey and a collation of managers' estimates, all of which provided similar results.

Prey availability models (Hayward et al. 2007) suggest that the carrying capacity for the lion population in the Savé Valley Conservancy is approximately 271 lions. The population estimate for 2015 was 284 lions, suggesting lions have reached their ecological carrying capacity, even whilst being responsibly hunted.

A professional lion management plan was commissioned by the conservancy in 2011 (Funston 2011), to provide the Savé Valley Conservancy members with a science-based plan to help them ethically and sustainably manage their lion population. This plan specifically advocates the use of hunting as a conservation management tool. It also demonstrates willingness by the conservancy to guide their lion management based on science and advice from professionals.

Savé Valley Conservancy Lion Hunting

Lions have been hunted in the Savé Valley Conservancy since 2002, although that was largely for removal of problem animals. Hunting began properly in 2005 with quotas increasing annually to a maximum of seven per year from 2009 onwards (Table 5), with the quota being raised to ten for 2016 based on trophy ages.

Despite offtakes of lions through sport-hunting, the lion population has continued to increase in the Conservancy. The revenue generated from hunting lions has enabled landowners to invest in proper land management, anti-poaching, water provision and fence maintenance, all of which benefit the lion population (especially as lions seem to be vulnerable to being caught in wire snares; Becker et al 2013; R. Groom, pers. obs.).

Table 5: *The Savé Valley Conservancy annual lion hunting quota and offtake from 2002 to 2015.*

	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Approved quota	5	5	1	3	3	4	6	7	7	7	4	2	3	5
Quota taken	1	0	1	3	3	3	3	6	5	3	4	1	3	5
Percentage success	20	0	100	100	100	75	50	86	71	43	100	50	100	100

Sport-hunting of lions brings considerable revenue to the Conservancy, revenue that is vital for the continued functioning of the area for wildlife conservation. Without the costs of lions being offset by the income from sport-hunting, landowners cannot reasonably be expected to tolerate such high lion densities, and their numbers would have to be reduced significantly.

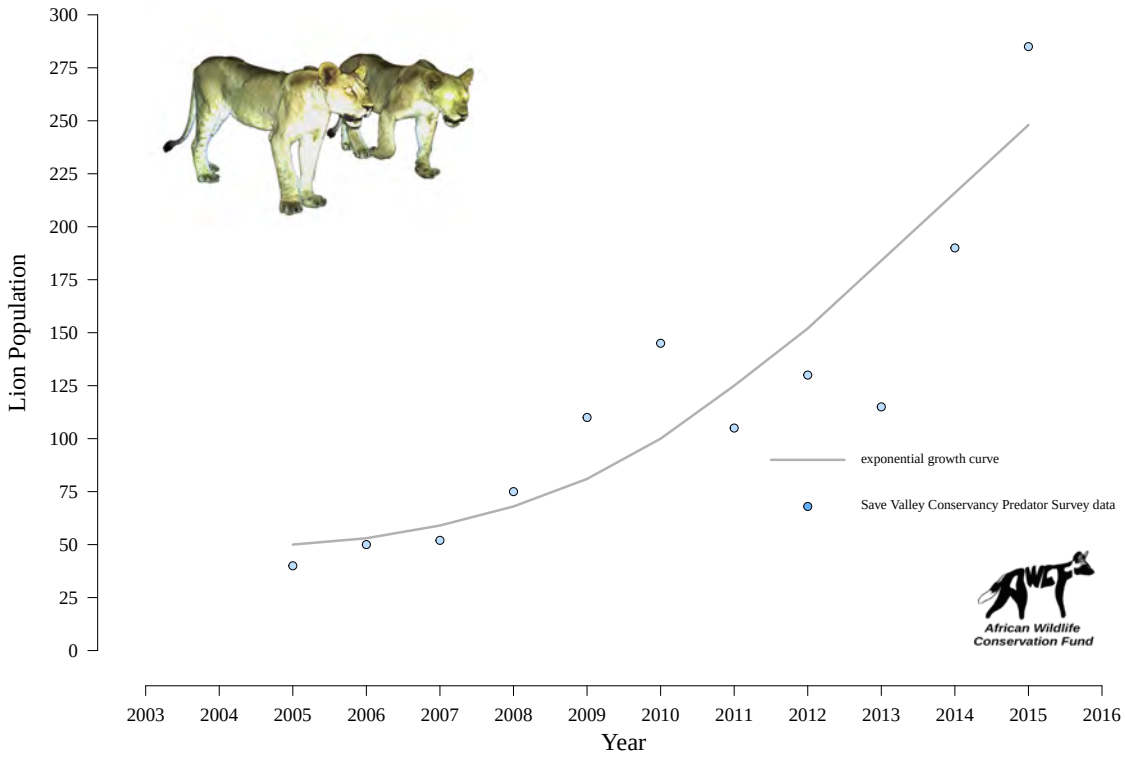

Figure 8: The Savé Valley Conservancy lion population, like that of the Bubye Valley Conservancy, has grown exponentially. Points indicate estimated lion abundance calculated from field surveys; the line represents the exponential growth curve.

The Pros and Cons of Conserving Lions

The saturation of lions in wildlife areas on both state and private land is positive for their future conservation security; but it is also critical to that of incidentally conserved endangered species, such as both species of rhinoceros on private wildlife conservancies in Zimbabwe (Lindsey et al. 2009; Suzuki 2001), which benefit from the same resources and protection that are incentivised and provided by the revenue generated from sport-hunting. The Bubye Valley Conservancy now boasts the world's third largest black rhinoceros population (N. Anderson [Lowveld Rhino Trust], pers. comm.), which is classified as Key 1 by the African Rhino Specialist Group and means that this population is considered key to the overall survival of the species. The Savé Valley Conservancy has the second largest black rhinoceros population in Zimbabwe after Bubye. These are not coincidences. These rhinoceros (and other endangered species, such as wild dog) strongholds are the result of the incidental conservation benefits derived entirely from sport-hunting activities - there are no photographic tourists visiting either the Bubye Valley or Savé Valley Conservancies, and the rhinoceros are not hunted. Having rhinoceros on the land therefore generates no revenue - and in fact there is a significant cost associated with protecting these animals; US$ 590,000 (not including incentive and reward bonuses donated for these purposes) was spent on anti-poaching by the Bubye Valley Conservancy during 2015 (K. Leathem, pers. comm.), and US$ 546,000 is spent annually on anti-poaching by the Savé Valley Conservancy (Lindsey et al. 2012). This expense is covered mainly by the revenue generated by sport-hunting with additional donations from the clients; and most importantly, the habitat for the rhinoceros is preserved by maintaining the land as a conservation area, as opposed to converting it into agricultural or grazing land for example.

However, the high densities of lion populations achieved within commercial wildlife areas have the potential for intense intraguild persecution. Lions are aggressively competitive, and research on the relationship between lions and leopards has shown that high densities of lions can negatively affect leopard population density, demographic structure, cub survival, and spatial ecology down to even the step-wise decisions that leopards make regarding habitat use and behaviour based on both the actual and potential risk of encountering lions (du Preez 2014; du Preez 2015). Leopards are a generalist species that are able to cope with persecution by adapting their behaviour and ecological niche, and even they suffer under a burgeoning lion population; ecological specialists and endangered species, such as cheetah *Acinonyx jubatus* and wild dog, do not fare nearly as well under such intense competitive pressure. In fact, competition with lions has been directly linked to reductions in cheetah (e.g. Durant 1998, 2000; Laurenson 1995) and wild dog (e.g. Creel 2001; Creel and Creel 1996; Vucetich and Creel 1999) densities, both of which face local extinction where lion abundance, and the respective level of persecution, is high. Excessive lion densities may also result in population declines of ungulate prey (e.g. Wegge et al. 2009). It is vital to holistic conservation that wildlife managers can understand and deal with the level of impact that lions exert on other species; particularly those that

are elusive difficult to observe, and which face decline if not carefully monitored. To this end, a conservation research initiative in partnership with WildCRU was established on the Bubye Valley Conservancy in 2009, and research conducted on the Savé Valley Conservancy since 2007.

Based on the number of kills made (du Preez et al. in prep.) and the current value of the meat (K. Leathem, pers. comm.), the Bubye Valley Conservancy lion population consumes hundreds of thousands of dollars worth of prey each year. These lions are mainly tolerated because of their ability to generate the revenue that helps to offset this expense - although it is estimated that economically it is still not worth keeping the lions whose cost outweighs their value (Funston et al. 2013).

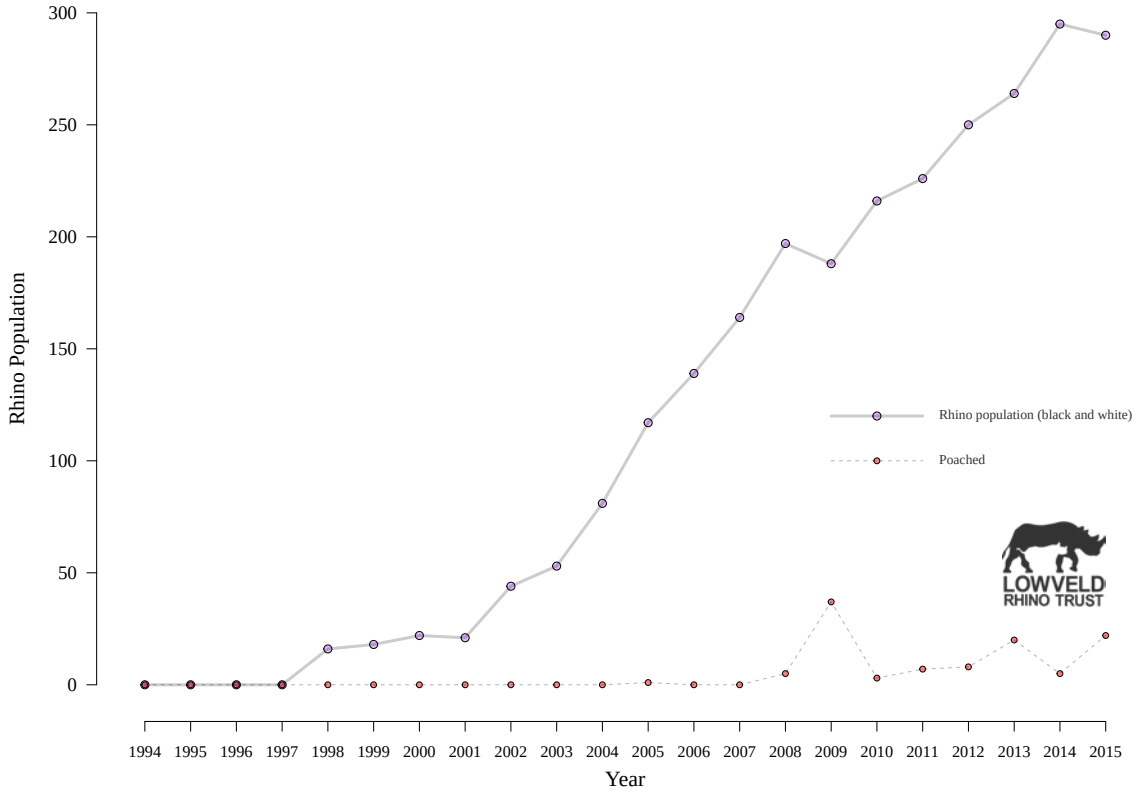

Figure 9: The Bubye Valley Conservancy black rhino population is rated as Key 1 by the African Rhino Specialist Group which means that the population is considered key to the overall survival of the species.

Where the Money Goes: The Finances of Lion Sport-Hunting and Reinvestment in their Conservation

Break-down of the finances involved in a typical lion hunt on the Bubye Valley Conservancy:

Lion Trophy fee: US$ 42,000
Lion Hunt Daily rate: US$ 2,950 day^{-1}
(Minimum lion hunt duration: 18 days [*total daily rate of US$ 53,100 lion hunt^{-1}*])

Additional costs include:
ZPWMA scout
Observers
Bait used
Other trophy species taken during the lion hunt, etc.
[*These additional costs average approximately US$ 6,500 lion hunt^{-1}*]

Bubye Valley Conservancy - Lion Sport-Hunting Revenue Generated (2015):

((18 days × 2,950 day^{-1}) + 42,000 trophy fee + 6,500 additional costs) × 12 lions
= **US$ 1,219,200**

Lion sport-hunting therefore represents approximately 33.9% of the Bubye Valley Conservancy's total annual revenue generation (which includes post-hunt meat and hide sales).

All of the revenue generated from lion sport-hunting on the Bubye Valley Conservancy has gone back into the running costs of the Conservancy, which is all part of conservation, and which includes: anti-poaching and fence monitoring and maintenance (approximately US$ 506,000 year^{-1}), research (approximately US$ 34,700 year^{-1} not including client and sponsor donations), and community support assistance (approximately US$ 210,000 year^{-1}).

[*No profit after costs has been declared, nor dividends taken by shareholders, since the Bubye Valley Conservancy was formed in 1994. All revenue generated to date has been spent on running costs, improvements and restocking.*]

Discussion

Here we have shown that since their reintroduction after historical eradication, both the Bubye Valley and Savé Valley Conservancies' lion populations have increased exponentially - not despite sport-hunting, but because of sport-hunting and the incentive it provides for protection.

The success of the Bubye Valley and Savé Valley Conservancies, in terms of both of their hunted lion and non-hunted rhinoceros populations, may also provide the motivation for other areas in the country to sustainably manage their wildlife resource. A case in point is the Nuanetsi Ranch, a wildlife area that is also a legacy of failed cattle ranching, located almost directly between the Bubye Valley and Savé Valley Conservancies in Zimbabwe (Figure 3). At present there is a single lion on the Nuanetsi Ranch but management is not able to justify introducing more due to the current uncertainty over the future of lion hunting (B. Lees-May [Nuanetsi Ranch Conservator], pers. comm.). The Nuanetsi Ranch is a wildlife area of 1,489 km^2, and could conceivably sustainably hold between 201 and 278 lions (based on the most recently estimated lion densities of the Savé Valley [0.135 lions km^{-2}; Groom and Watermeyer 2015]; and Bubye Valley [0.187 lions km^{-2}; du Preez et al. 2015] Conservancies respectively). However, the Nuanetsi Ranch has invested in building up an abundant wildlife population, which is sport-hunted, and the management will not risk losing a significant amount of valuable game, that could otherwise be sold as trophies or meat, to a species from which it can not recuperate lost revenue, and instead that requires further investment in control measures (B. Lees-May [Nuanetsi Ranch Conservator], pers. comm.).

Between 2005 and 2015 the United States market has represented 70.4% of the total Zimbabwean lion sport-hunting industry (http://trade.cites.org/en/cites_trade/ [accessed 2015-01-19]), though in reality it constituted over 90% for both the Bubye Valley and Savé Valley Conservancies. If this market was effectively lost due an inability of prospective clients to import their trophies, based on the economics involved it would become unviable to continue managing the Bubye Valley Conservancy as a wildlife area in its current form, and lions would either have to be re-exterminated, or at least severely reduced via culling; or else what is the largest privately owned wildlife area in the world would be converted back into a cattle ranching area (K. Leathem, pers. comm.). This is the reality of any business, in that it needs to cover costs and pay staff and cannot run at a loss for luxury of conservation. Child (1993) states "*A refusal to treat wildlife in the same way as other resources and maintenance of centralised protectionist management prejudices its survival. Only by raising its commercial value will wildlife be able to compete for space on the scarce African landscape. Trade bans which detract from wildlife's commercial value prejudice its chances of survival in the long term*".

Although the USFWS understandably categorises lion conservation by country for simplicity, rather than individual properties, the Bubye Valley and Savé Valley Conservancies currently and deservedly hunt more than a third of the total Zimbabwean lion quota between them. Here we have shown that this sport-hunting does not negatively affect the lion population, which remains in positive growth despite off-take. In addition

to this, other areas, such as the Nuanetsi Ranch, could be incentivised to invest in lion conservation if the ability to sustainably utilise the lions as a resource was guaranteed.

The USFWS identified five primary factors that threaten lion survival in the wild, namely: habitat loss; loss of prey; retaliatory killing due to increased human-lion conflicts; inadequate regulatory mechanisms; and weak management of protected areas (http://www.fws.gov/endangered/what-we-do/lion.html [accessed 2015-01-19]). Each and every point on this list, which notably does not include sport-hunting, supports the fact that incentivising tolerance for lions through sustainable use would enhance the species' overall survival.

As responsible conservationists, we are not arguing against tight regulation of sport-hunting, especially with regard to sensitive species such as lions, and we support the need for transparency and accountability within the industry. However, this reform is a process being driven from within, as any indiscretion is an affront on all stakeholders. For example, long-term lion monitoring by WildCRU in Hwange National Park (HNP), Matabeleland North, Zimbabwe, documented a 'vacuum effect' and reduction in male lion density in the Park as a result of sport-hunting in the surrounding areas (Loveridge et al. 2007). A result of this research was the recommendation that ZPWMA implement a hunting moratorium in western Zimbabwe, which was accepted and enforced from 2005 to 2008 (Davidson 2009). Subsequent monitoring of the HNP lion population showed that the perturbation effects caused by sport-hunting were reversed during the moratorium, and sport-hunting was reinstated at a reduced, more sustainable quota (Davidson 2009). This example demonstrates both the relationship between independent researchers and ZP-WMA, and that the research assists ZP-WMA in robust decision making. This study has also shown that the lion population was able to recover quickly, and that a blanket-ban would have been as unnecessary as it would have been detrimental to overall lion conservation in the country.

In addition to the self-imposed hunting moratorium in the Matabeleland North district, Zimbabwe has voluntarily stopped sport-hunting of any lioness. The fixed-quota concept, in which hunting quotas had to be paid for upfront before the hunting season even began, and which was resultantly attributed to poor quality trophies and young animals being hunted, has also been abandoned. The adaptive quota management system for lion hunting based on the ages of lions hunted has been accepted and embraced by all stakeholders. This adaptive quota management system has not only led to a reduced national lion hunting quota, but has also resulted in a significant increase in the age of harvested lions to a level that is considered to have minimal ecological impact, being old individuals that are no longer contributing to the gene pool nor protecting cubs.

The IUCN Red List lion conservation status has remained unchanged for 20 years even in the face of Africa's ever-changing landscape. Despite fears that lion abundance is decreasing overall, in southern Africa it is in fact increasing (Bauer et al. 2015b).

Conclusion

Given the evidence presented, the arguments against sport-hunting would appear to be based more in emotion than logic and reality (e.g. Lindsey et al. 2015). Conservation, however, is not about individuals within populations, but the overall populations themselves. Sustainable sport-hunting of lions is just that: *sustainable* - and ironically, without it, the lions themselves become unsustainable. Conservation objectives need to be balanced with both social and economic factors if they are to be achieved.

The USFWS states "Well-managed conservation programs use trophy hunting revenues to sustain lion conservation, research and anti-poaching activitie" (http://www.fws.gov/endangered/what-we-do/lion.html [accessed 2015-01-19]). The Bubye Valley and Savé Valley Conservancies both fully meet each one of these conditions: clearly contributing to lion conservation in Zimbabwe; having long-term conservation research programs; and self-funded anti-poaching units.

The histories regarding the formation of both the Bubye Valley and Savé Valley Conservancies were both presented in this report, despite being remarkably similar; the point being that lion conservation in both areas, and many others, has the same fate either way. The Bubye Valley and Savé Valley Conservancies are both excellent examples of focussed and determined efforts to make wildlife based land use viable in an otherwise cattle dominated landscape. However, the fact remains that the cost of having lions, both ecologically and financially, is high. Simply increasing the abundance of one species at the expense of another cannot be considered a conservation success.

LION ZIMBABWE ESA TROPHY

Permit Number: MA86472B-0

Effective: 10/19/2017 Expires: 10/18/2018

Issuing Office:

Department of the Interior
U.S. FISH AND WILDLIFE SERVICE
DIVISION OF MANAGEMENT AUTHORITY
BRANCH OF PERMITS, MS: IA
5275 LEESBURG PIKE
FALLS CHURCH VA 22041-3803

CHIEF, BRANCH OF PERMITS, DMA

Permittee:

JEFFREY DAVIS SMITHERS
(b) (6)
SAN ANTONIO, TX 78258
U.S.A.

Authority: Statutes and Regulations: 50 CFR 17.40(r)

Location where authorized activity may be conducted:
IMPORT THROUGH ANY PORT LISTED IN 50 CFR 14.12

Reporting requirements: Not applicable

Authorizations and Conditions:

A. Authorized to import the sport-hunted trophy of one male African lion (*Panthera leo melanochaita*), taken in Zimbabwe for the purpose of enhancement of the survival of the species.

B. Specimen may not be sold or transferred for any financial remuneration.

C. **Trophy must have been taken during the 2016 hunting season.**

D. Trophy must be accompanied by a valid trophy permit or hunting license issued by the government of Zimbabwe for the 2016 season.

E. Trophy must be accompanied by a valid Convention on International Trade in Endangered Species (CITES) Appendix II export permit/re-export certificate, source code "W", issued by the Management Authority of the exporting/re-exporting country.

F. General conditions set out in Subpart D of 50 CFR 13, and specific conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable conditions, including the filing of all required information and reports.

G. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other federal law. **This permit can be photocopied.**

H. Valid for use by permittee named above.

I. Acceptance of this permit serves as evidence that the permittee understands and agrees to abide by the "General Permit Conditions" (copy attached).

RCVD NOV 8 2018

To whom it may concern:

We are writing to explain the tardiness of Jeff Smithers' permit application and payment that was due on October 17, 2018. Please review the information provided and process the permit application without penalties or extra charges.

We were originally instructed to mail the application and payment to the Office of Law Enforcement in the Texas region, which as per Form 3-200-52 is Region 2 with a mailing address of 2545 W Frye Rd, Suite 8, Chandler, AZ 85224-6273. The application and payment were set via FedEx priority overnight on Tuesday October 16, 2018. FedEx tried to deliver the package on Wednesday October 17, 2018 at 9:52am, but were unable to deliver with the exception "customer not available or business closed". On Thursday October 18, 2018 we called the Office of Law Enforcement locate in Chandler AZ which went to a voicemail stating that this location no longer handles permit/license questions and that we would need to contact the Sacramento location. At that time we recalled the package with FedEx and would not get it back until Friday October 19, 2018.

Once we received the package containing the permit application and payment we reached out to the Sacramento, CA office to ensure the package was to be sent there as this was an application for the state of Texas. We left multiple messages starting Friday October 19, 2018 thru Tuesday October 23, 2018 requesting a call back to verify the correct mailing address. We received a call back on Tuesday October 23, 2018 in which we were instructed to send the permit application and payment to another address altogether with the Division of Management Authority.

We are now sending the permit application and payment to the Division of Management Authority (Branch of Permits, MS: IA) with the address of 5275 Leesburg Pike, Falls Church, VA 22041-3803 as instructed by phone, and would appreciate the application be processed without penalties or extra charges. We have provided the FedEx documentation that the original package would have arrived in Chandler AZ on the morning of October 17, 2018.

If you have any questions please feel free to call Cassie Drzymalla a(b)(6)

Thank You

5. Principal officer title	6. Primary contact name		
7.a. Business telephone number	7.b. Alternate telephone number	7.c. Business fax number	7.d. Business e-mail address

C.	**All applicants complete address information**			
1.a. Physical address (Street address; Apartment #, Suite #, or Room #; no P.O. Boxes) (b)(6)				
1.b. City: San Antonio	1.c. State: Texas	1.d. Zip code/Postal code: 78258	1.e. County/Province: Bexar	1.f. Country: USA
2.a. Mailing Address (include if different than physical address; include name of contact person if applicable)				
2.b. City	2.c. State	2.d. Zip code/Postal code:	2.e. County/Province	2.f. Country

D. All applicants MUST complete

1. Attach check or money order payable to the U.S. FISH AND WILDLIFE SERVICE **in the amount indicated on pages 6 and 7.** Federal, Tribal, State, and local government agencies, and those acting on behalf of such agencies, are exempt from the processing fee – ***attach documentation of fee exempt status as outlined in instructions.*** (50 CFR 13.11(d))

2. Do you currently have or have you ever had any Federal Fish and Wildlife permits?
Yes [X] If yes, list the number of the most current permit you have held or that you are applying to renew/re-issue: MA86472B-0 No [ ]

3. Certification: I hereby certify that I have read and am familiar with the regulations contained in ***Title 50, Part 13 of the Code of Federal Regulations*** and the other ***applicable parts in subchapter B of Chapter I of Title 50***, and I certify that the information submitted in this application for a permit is complete and accurate to the bes d that any false statement herein may subject me to the criminal penalties of 18 U.S.C. 1001.

(b)(6)

Sig sponsible for permit (No photocopied or stamped signatures) Date of signature (mm/dd/yyyy): 10/15/18

E. REISSUANCE, RENEWAL, OR AMENDMENT OF A PERMIT (For this application, all permits, registrations, and certificates are referred to as a permit.)

NOTE 1: If you are renewing your Designated Port Exemption permit, use form 3-200-2 (http://www.fws.gov/forms/3-200-2.pdf) and submit to appropriate Office of Law Enforcement address. If you are renewing your Import/Export license (required for commercial activities), use form 3-200-3 (http://www.fws.gov/forms/3-200-3.pdf) and submit to appropriate Office of Law Enforcement address.

NOTE 2: This form **cannot** be used for lost or damaged permit. If you need to replace a lost or damaged permit, please use form 3-200-66, http://www.fws.gov/international/pdf/permit-application-form-3-200-66-replacement-document.pdf. The application **must** be submitted to the office that issued the initial permit. Lost or damaged permit

NOTE 3: Some activities, such as all master files for multiple shipments, Certificate of Scientific Exchange (COSE), circus/traveling exhibits, and artificially propagated plants, can only be re-issued, renewed, or amended by submitting a new application for permits for those activities. Please refer to http://www.fws.gov/international/permits/by-form-number/index.html to determine if another application form would be more appropriate or contact the Division of Management Authority for more information.

1. **Permit number.** Enter the permit number to be reissued/renewed/amend MA86472B-0.

2. Submit the original permit with this application.

3. **Past activities.**
   a. Provide copies of all cleared documents and form 3-177 (FWS declaration of wildlife) associated with this permit.
   b. Provide a summary detailing activities conducted under this permit, as well as a brief statement of why you are seeking reissuance/renewal.

4. **Annual Report.** If required by your permit, provide an annual report as conditioned (Please disregard if you have already submitted your annual report.)

5. **Sport-hunted trophies:** If you did not hunt during the hunting season stated in your original application, you are not eligible for a renewal. Please submit a new application form.

6. **Certification** - Complete one of the statements below and supply any additional documentation requested: (original signature is required)

   a. For **NO CHANGES** to original application:

   I certify that the information submitted in support of my original application for the permit indicated above has not changed and is still currently correct. I hereby request reissuance or renewal of this permit.

   Permittee's signat[redacted] Date: 10/15/18

   b. For **CHANGES** t[redacted]

   On an attached page(s), provide a complete description of any changes (e.g., change in principal officer, personnel, address, location of activities, types of activities). Please sign each attached page. Also note that we need to request additional information regarding the changes after reviewing your initial request.

   I certify that the information submitted in support of my original application for the permit indicated above is still currently correct EXCEPT for the changes noted on the attached, signed page(s). I hereby request re-issuance or renewal of this permit with the indicated changes.

   Permittee's signature: _____ Date: _____

7. All international shipment(s) must be through a designated port, unless otherwise authorized. A list of designated ports (where an inspector is posted) is available from http://www.fws.gov/le/designated-ports.html. If you wish to use a port not listed, please contact either the Office of Law Enforcement for a Designated Port Exemption Permit (form 3-200-2) or the Division of Management Authority.

8. Name and address where you wish the permit to be mailed, **if** different from page 1 (All permits will be mailed via the U.S. Postal Service, unless you identify an alternative means below):

9. If you wish the permit to be delivered by means other than USPS regular mail, provide an air bill, pre-paid envelope, or billing information. If you do not have a pre-paid envelope or air bill and wish to pay for a courier service with your credit card, please check the box below. Please DO NOT include credit card number or other information; you will be contacted for this information.

   ☐ If a permit is issued, please send it via a courier service to the address on page 1 or question 8. I understand that you will contact me for my credit card information once the application has been processed.

11. Who should we contact if we have questions about the application? (Include name, phone number, and email): Cassie DeZyMALLA

(b)(6)

12. **Disqualification Factor.** A conviction, or entry of a plea of guilty or nolo contendere, for a felony violation of the Lacey Act, the Migratory Bird Treaty Act, or the Bald and Golden Eagle Protection Act disqualifies any such person from receiving or exercising the privileges of a permit, unless such disqualification has been expressly waived by the Service Director in response to a written petition. [50 CFR 13.21(c)]. Have you or any of the owners of the business, if applying as a business, been convicted, or entered a plea of guilty or nolo contendere, forfeited collateral, or are currently under charges for any violations of the laws mentioned above?

☐ Yes ☒ No If you answered "Yes" provide: a) the individual's name, b) date of charge, c) charge(s), d) location of incident, e) court, and f) action taken for each violation.
