Thanks Ann – I'll schedule our Wed teleconference before I leave today, let's make a final decision on the chip then.

A microchip is very easy to place. We have them on hand, and can place one without anesthesia. If she is ever seen again, you'd have to take her to a vet to have the chip read. We will give you the number for your records so that she can be identified in the future.

Subject: update

Hi everyone,

I wanted to share with all of you that I updated Wildlife Division leadership on this morning's teleconference and they requested we do not put a radio-collar on the lynx. Their reasons were very similar to what Terry and I shared during our teleconference. So let's move forward without putting a radio-collar on the lynx. With that said, I think we should consider putting in a "chip." Is that still possible? What's involved or how does it happen?

Thanks,

Dan
