There hasn't been an open trapping season in Region 2 (South Coast) since at least 1985, and since 1993 in Region 8 (Okanagan). If you want to check the hunting regs, they are all available at <http://a100.gov.bc.ca/pub/acat/public/viewReport.do?reportId=22560>.

Hi Rich - Just a quick follow-up question: Can you tell me how long the closures have been in effect, and whether this will change in the near future?

Thanks,
Betty

This one is easy... That is because there is no open trapping season or hunting season on wolverines in those management units in the Okanagan (Region 8) or South Coast (Region 2). There is only a trapping season for wolverines in the Kootenay (Region 4, the eastern half of the southern part of the province), which is the reason why there is reported harvest there.

Sorry, Rich, John sent me a correction regarding the map I just sent to you. See attached for the current version and his question (highlighted below).

Hi Betty, The map you just sent Rich is not the most up to date one we have. The one attached is with all of the 0's. Those are management units with 0 take according to Rich. To me **the question is why are there so many 0s within 100km of the border in BC. Particularly on the western side (N Cascades).**
