I agree. A couple below that I think will come up from ES people.

1. How accurately does your snow model predict past years and what level of confidence do you have in future snow projections based on model accuracy in the past / uncertainty around the global climate models?

2. Can we make any inferences about future snow pack in areas outside of the study areas, specifically across the known range of the wolverine?

I think all of us will be quizzed on the big outstanding questions regarding importance of snow to the wolverine, genetics, lower 48 population #s / viability, DPS/sub species, etc.

OK, thanks. Maybe we should supply some questions/parameters with considering to give them something to build from.

Subject: marj

Hi Steve,

Marj can't go on Thursday. I asked her if she has seen any docs on draft structure for the SSA and she said no.

Best, John
