That's right, most of the snow is later or first parts of winter.

Also I'm looking closely at the records along the ID border at Continental divide and I think they are duplicate entries in the ID DFG data and then also represented again in the USFS data. We can look and maybe remove about 4 more records.

Thanks Ed. I took a quick look at some of the southern den sites/areas and the Cascades. Unfortunately, there is not too much imagery relevant to spring months.

Betty, You can copy this to a folder and then just double click on it and you can view it in Google. Tony said as long as we are just viewing it we are fine.
