Subject: British Columbia study
Date: Friday, February 17, 2017 10:00:35 AM

John - See attached report regarding wolverine detections in British Columbia (I also sent this to Bryon regarding his review of potential stressors to wolverines in Canada).

I have previously tried to contact one of Tony Clevenger's students regarding their genetic studies, but no response yet. I will try to contact Tony directly and will ask if we can get the coordinates for these study results.

FYI - apparently files over 25 MB sent via email require a Google Drive link, so you will see that below.
