Doherty is on it and probably will connect with the fella at the U. of Calgary this week, hopefully will set up a meeting for early next week.

On another topic, we need to pull together our overview of the NOAA meeting from last week. Noreen et. al., want a presentation next week. I am waiting for Stephanie to give me a date, but we should talk about it this week and start to design the presentation. Including the slides you put together for our post presentation discussions last week.

Subject: Canada contacts for wolverine data

Hi Steve,

Hope you have a nice long weekend. Do you have any contacts in Canada who might be able to help me with these data requests? Byron said he might have a name in BC, but not anything outside of there. thanks John

1. Historical wolverine trapping data for British Columbia and Alberta. 1990-Present if available. Prefer to have GIS spatial locations or coordinates of harvest locations.
2. Historical wolverine occurrence locations (documented observations) of wolverines in Canada (all provinces). Prefer to have GIS spatial locations and/or coordinates of wolverine observations.
4. Any gis files for wolverine habitat (similar to Inman)?
