They should be the same, but I don't like the red color for the observations on the brighter map. I will call Ed either later today (I am teleworking) or sit down with him tomorrow (when I will be in the office).

Do you have a deadline as to when you would like to have these so you can send them out to Team?

I think the bright green and yellow one is visually easier to look at.

It seems that map has more primary habitat than the pink map? If so, what different parameters were used to create it?

I'd go with whichever you, Ed, and John think is most accurate.

Hi Justin - Can you take a quick look at these two maps? These represent the historic range of wolverine in western U.S. I'm not sure if either of them are ready to send to the Core Team; would like your input as to which makes more sense to you. I would like to send only one. John is creating the current range map and I asked him to try and complete that before the call tomorrow.

Thanks,

Betty
