From my 'extensive' research (Wikipedia!), Moose were a 'big thing' at the Pechora-Ilych reserve, but elk are also present

You're very welcome, Wayne. Do you have the English translation in your hands yet or are you expecting it soon? Sue and I do not understand the reluctance of the Canadian library to send the translation to you on inter-library loan.

So which is it, elk or moose? From what Webster's tells me (no natural scientist I), elk is more likely to be European and Asian, whereas moose is decidedly North American.

John

John!

Yes and many thanks to Mr. John Dick who picked up my FEDLINK request on March 16 and got the ball rolling and did so much research on this!

John, it was in your second response that really got my search for Knorre 1959 going when you asked me, "How much information do you need?" At that point I just laid everything out on the table and you took it from there and then got Sue to come in on it. Thank you so much for taking the time to help me and our agency on this.

Also our biologist who is working on this project, Betty Grizzle sends her best regards and many thanks to both of you!

Sincerely,

Wayne

That's great news! Not sure that I helped much other than a little unproductive digging, but glad they were able to grant you permission to obtain a copy!!

I'm still super curious if it is 'Elk' or 'Moose'

Dear Julie Anne,

Bonjour!

Thank you so very much for working with us to get this document. Sue Zwicker at the Smithsonian Libraries provided tremendous assistance to me in researching and coordinating this little project. I received your e-mail early this morning with the letter of permission from © Her Majesty the Queen in Right of Canada.

I have forward your e-mail with the permission letter and instructions to Brian at the University of Manitoba in the Repository of the Archives & Special Collections.

I promise to uphold and obey with due diligence the instructions in this letter regarding any further copyright clearance issues and include a statement that the Crown is the owner of the copyright on this document when cited.

Actually, I am at a loss for suitable words to describe what the possible end result might be, except to say that this is a big deal for the wolverine that has been found in the Lake Tahoe area. Thank you very much once again.
