Date: Friday, March 31, 2017 11:34:43 AM

We should probably discuss this with the larger Core Team at the next team meeting (next Tuesday).

Thanks Ed. Betty, once Ed gets this info we should maybe have a call to discuss whether or not to add Utah.

Best, John

Hi John,

Just got off the phone with Sarah Lindsey of the UT Natural Heritage Program. She has processed the data sharing agreement.

She will get with her today if she's around and give her the go-ahead to get the data to us. Could be next week if not today.

Once I have it I'll blend it into the overall merge data and get you a copy.

I'll also send you a copy of just Kim's data so you can use that with your data selection in the Current Range.

Thanks, Ed

Thanks Ed, I'll have a look this am. We may end up changing the range to include portions of Utah, which is why I was asking you about those Utah records from Kim. Did they give you any idea of when they would be able to provide those records? I know you put in the formal request.

Best, John

Hello John, Here is the data you created for the current range, projected to North American Lambert Conformal Conic positioning, and I have started on creating the metadata.

No rush, but I'm thinking we will have something like this for the true final representation of the Range.

That all depends though, because you are the one who created it and your office may require things I did not include. Lara may have some input and have different ideas of what your office desires as legal constraints. Being that she had to make sure the GRSG data was covered.

I did call to attention that any source data is proprietary and a requester would have to go to the original source , not us.

This was just a copy of the dens compilation data metadata, edited to reflect the work that you completed.

Again it's just a start, but figured I should get something down while I had a bit of time to look at it.

Hope this helps and we can change it as needed for the final.

Something to talk about down the road.

Thanks, Ed
