---

Hi Betty, We have a total of 4,218 locations at present in our system and when combined or visually selected locations that fall within Current Range we get 3,961 records.

The issue I had with the 8 overlapping points that dropped in the overlay selection process were outside of Current Range.

We should have 257 records outside of Current Range and that is what I get in a visual selection process, but when running the overlay with the GIS I drop 8 records outside of the Current Range and retain only 249.

Regardless we do get the correct record count in the Current Range and that checks.

Hope this helps. This table shows the count of source type that falls within Current Range.

Ed
