Hi, After talking w Steve and Betty again today, I reworked the questions. I think this should be final. Please let me know and I'll send to Steve and Mike. thanks John

Hi Steve,

We talked about what is needed cost estimate wise after you jumped off.

We need to know the following from Schwartz:

1. Does Schwartz know how many wolverine samples there are in the 300 total hair samples he has in hand? Is it 100, 150?
2. What is the total cost to run microsatellites only on the wolverine samples? When will he have the results?
3. Need to make sure his cost estimate includes appropriate statistical analyses and interpretation of those results.
