Betty,

So sorry for the delay getting back. My wife just had a baby and its been a couple weeks run off our feet.

Rich and I do in fact have that analysis coming. We hope to publish it. However, it is in its infancy as we are still trying to compile the appropriate data. Sorry I couldn't help more, but I will be able to discuss it more in a few months.

Bill

Hi Bill - If I recall from our conference call in March, you or Rich said that you were conducting genetic analyses for wolverines in BC to evaluate the population structure in that region. I also understood (from my notes) that your analyses was evaluating both 16-17 microsatellites and mtDNA haplotypes for your samples.

If I have this correct, have you completed your analyses? Is this something you and Rich are planning to publish, in an informal or formal report?

Feel free to call me at my office number below if you have questions.
