Hi John, I've attached the actual data table from Copeland's data. You can see that he just listed months and year. Because I had to try and compile all the different data together, I tried to just represent the latest date.

Not the best way as, his date range covers the den snow pack, but some data didn't have that detail so, I went with latest date.

See table as; Mar/May2007 would turn into "20070500" or year of 2007, month of May with no know "day".

I hope that explains stuff.

Sounds like I should send you all the raw den data too if you need.

I had to go in all data provided and run finds after I converted all attribute fields to Upper Case, on any attribute field that seemed like it would have info on "Dens". Then I coded each record as "Den" = 1 (yes) or 0 (no). I then extracted the den = 1 and pushed those over to my den data files.

I can zip all and send as I have then in a geodatabase, feature data set, if that helps on your end.

Hope this helps a bit and please let me know if I should send all the den data.

Thanks, Ed

Will do Betty. I haven't heard back from NOAA yet, but I pulled in the den site data for Glacier (where I have historical modis snow data) and I'm looking at it now. There are 13 dens in Glacier from Copeland. However, the date field in the den site shapefile only gives me year and month, not day. I assume this is the case Ed? Please correct me if I'm wrong the date field reads "2003040". This is April 2003? or is it the 40th day of 2003, which would be Feb 9th, 2003? I'm guessing it is April 2003, but want to make sure.

Thanks John

Thanks John. Audrey Magoun asked me to let her know *"if the Forest Service can provide the den data on the correct snow layer for the date of the den and the MODIS snow that was detected that year in that pixel. I'm just curious if this is possible from the database the USFS already has or whether it would have to be a separate analysis."* I told her that I would find out what you have (or we can try to request this directly if you don't have this already) so please let me know what you are able to obtain.

Betty

Many thanks Ed. I'm hoping to talk to NOAA today about time involved in bringing in Modis snow cover data for end of May for all of the den sites. I'll keep you and Betty in the loop on this.

Best, John

Hello John, Hope all's well. Here are the dens you and Betty discussed. We hope to get more, but this is what we have now.

I created these data from many sets, so the attributes were pulled and combined into fields that I thought would help Betty.

Note that the metadata is from one of the sets I used and I have yet to update it.

Hope this helps and please let me know if you have any questions.

Thanks, Ed
