Hey Sumalee

This is (b) (6) from Giles County, Va with Canoe Cave on my land. I was looking at the DEIS report from MVP and discovered there is no mention of the Northern Long Ear Bat in their report.

Here is what it says.

The MVP pipeline route would cross the Canoe Cave Conservation Site in the vicinity of MP 213.7 in Giles County, Virginia. The site is ranked by VDCR as B2, having second order significance for natural resources. However, there are no records of federal or state-listed species associated with the site. Canoe Cave also has a high potential for use as a bat hibernacula. VDCR staff inventoried Canoe Cave in November 2015 and observed two tri-colored bats. VDCR staff also documented two genera of millipedes (*Pseudotermia*, and *Zygonopus*), two genera of amphipods (*Stygobromus*, and *Gammarus*), and one genus of aquatic isopod (*Caecidotea* sp.). DEISpage 4-158.

I wanted to make sure you were aware of this. Just another example of their incomplete studies and records.

Thanks for your time
