This variance adds MVP-ATWS-SM-047 for slip remediation along pipeline ROW. No cultural resources, wetland or waterbodies were found during surveys. This variance has a net increase of 0.36 acres of LOD from the original permit. There is a net increase in tree clearing of 0.02 acres of MYSO - Unknown Use Summer Habitat (UUSH). On January 29, 2018 the USFWS concurred with MVP's proposed process for reviewing variances that require tree clearing. Attachment 2 includes a table that shows MVP's acreage "banks" will remain net positive following approval of this variance request.

Variance A-40
December 10, 2018**

State and federal agencies identified areas where plant surveys were required. This variance does not occur in any of those areas.

There are no impacts to aquatic resources associated with this variance; which infers there are no impacts to listed aquatic species.

The only avian species-specific presence-absence surveys required for the project are scrub-shrub habitat-specific in the state of Virginia, thus do not apply to this variance area.

The modification of the tree clearing results in a net increase of 0.02 acres MYSO - Unknown Use Summer Habitat (UUSH). Tree clearing will not occur between June 1st - July 31st and October 1st - November 14th as per the BO. On January 29, 2018 the USFWS concurred with MVP's proposed process for reviewing variances that require tree clearing. Attachment 2 includes a table that shows MVP's acreage "banks" will remain net positive following approval of this variance request.

On 04/07/2016, and 08/24/2016, Environmental Solutions and Innovations, Inc. (ESI) conducted field surveys to search for portal openings (winter bat habitat). Surveys were conducted in accordance with agency approved protocols for the project. No portal openings were observed in the variance area.

Variance A-40

December 11, 2018

On December 3, 2018 Tetra Tech, Inc. (Tetra Tech) surveyed the proposed variance in Doddridge Co., WV for wetlands and streams. Wetland delineations were conducted utilizing the Routine On-Site Determination Methodology presented in the US Army Corps of Engineers (USACE) Wetland Delineation Manual (Technical Report Y-87-1) and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Eastern Mountains and Piedmont Region (Version 2.0).

During field surveys, Tetra Tech did not identify any wetlands or streams in the variance area as shown on the attached figure.
