Jen and Tiernan,

The updated plant survey letter report for MVP is attached for your review. This will be filed with FERC this week. As discussed with Tiernan, I removed specific AMM for SWP from this report, but can send a draft of MVP's proposed AMM separately for your review and comment.

Please let me know if you have questions or need anything else.

Thanks,
Megan

Subject: MVP Remaining Plant Surveys

Tiernan,

As we discussed during our meeting last week, I am providing shape files (attached) for the parcels associated with remaining plant surveys for MVP.

We are working on the updated plant survey report to provide the status of surveys since the BA was submitted. Please let me know if your review of the remaining survey parcel data versus your modeled habitat data indicates that SWP can be ruled out. Otherwise we will plan to include conservation measures that were discussed during the meeting for SWP. On that note, please provide the list of conservation measures you presented if possible.

Also, Jen mentioned that if SWP is found and cannot be translocated that we may be able to donate it for research. Let me know if you find anything out about whether that is an option.

Thank you,

Megan
