I talked with Valerie and they have not found the roost tree, but have narrowed the location to a couple properties. They are making contact with landowners to see if they can get access to the properties. The capture site and general roost location is in a gated community. This will complicate things a bit, but may be worth the headache if the landowners will cooperate? I'll keep you posted.

Hey Rick,
I think Mark meant to reply to all. Please let us know what you hear from Virgil or I can contact him if you'd like.

Thanks! I'm curious to know if they were able to track her to a roost tree.

Rick

FYI – a female lactating NLEB was captured in Montgomery Co. last night.

Mark – this info might be useful to you as well.

Good Afternoon –

As required, please find attached a spreadsheet outlining capture information for three (3) northern long-eared bats from survey efforts last night. Two pregnant NLEB were captured in Harrison County, West Virginia and one lactating NLEB was captured in Montgomery County, Virginia. A radio-transmitter was only attached to the lactating NLEB.

Please contact us if you have any questions or require additional information.

Thank you,

Daniel J. Judy
