Hi Jody and Ryan

Dustin and I checked the 9 Grover cameras nearest to the park today (we didn't check 8, 9, 10, or 11).

There were fisher photos on Grover 13 and Grover 1! All detections were between Dec10 and Dec29, but we added hair snares to those two setups. From the photos, it looked like the fisher took down one of the chicken legs. We tried to find hair on the mesh, but didn't see anything. Hopefully it returns and loses some hair on the new gunbrushes!

We had to clear at least 20 downed trees today, and still ended up hiking to get two of the cameras (Grover 3 and 4). If either of you head out to check Grover 8-11, you'll probably want a saw and a partner. We'd hoped to get all 13 cameras checked today, but there were just too many trees across roads.

Best,  
Mike
