This is the necropsy report from f09, one of the females I have been following for a few years now. She was reported to and found by ODFW in January, died overnight at Wildlife Images. She tested positive for rodenticide. Unclear if this was the cause of death but may have contributed to it. We still have a 100 percent detection rate for rodenticides in fisher tested in Oregon, N=-2. Very depressing. D

Dave,

Looks like this critter had a lot of minor issues, including some detection of anticoagulants.

Mark.

Mark and Steve,

Attached is the final report on the fisher.

Cheers,  
RG
