Brian,

Apologies for the delayed response, I needed to discuss the scope of use for the proposed right-of-way application with Kaktovik Iñupiat Corporation (KIC) and they have agreed to the language below. The items below are those that have been identified for transport by either KIC and/or the North Slope Borough over the initial term of the proposed right-of-way application – Arctic ROW Permit R-353-AR.

Initial items identified for transport over the right-of-way during the term of this access permit will include but is not limited to the following:

- Movement of permanent school modules for Kaktovik.
- Other building modules.
- Bi-directional movement of community vehicles.
- Transport of diesel fuel using double-walled fuel tanks for the community powerplant.
- Other consumables as identified by the community

The number of round trips will vary year-to-year depending on community needs. All product(s) will be transported across the winter overland trail on low-ground pressure, rolligon vehicles.

Please let me know if you have any questions.

Best regards,  
Teresa Imm
