Long Island

National Wildlife Refuge Complex

Birds

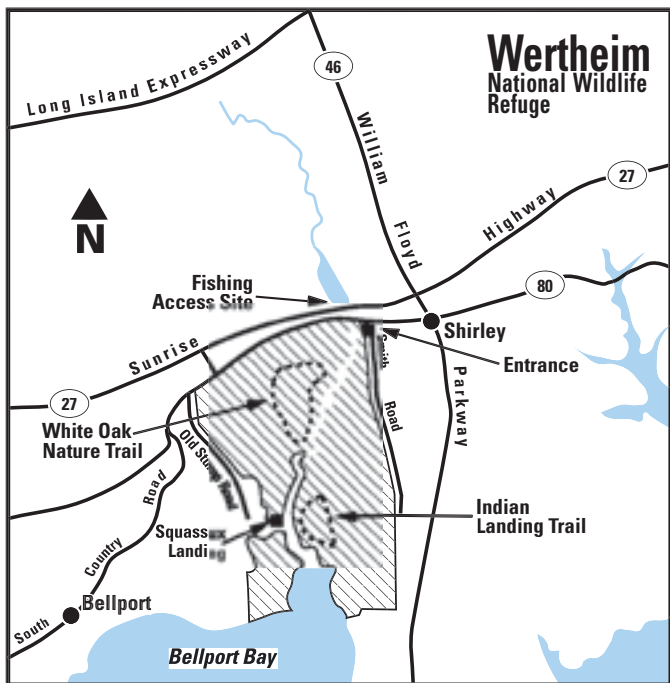

Rufous-sided Towhee
Sheldon M. Pollack

This goose, designed by J.N. "Ding" Darling, has become the symbol of the National Refuge System.

Welcome to the Long Island National Wildlife Refuge Complex! One of the primary purposes of the Complex is to manage for migratory birds. In turn, excellent opportunities for birdwatching abound. Refuge access is listed below.

Wertheim Refuge

Wertheim protects 2,550 acres on the south shore of Long Island, including the Carmans River—one of the last and largest undeveloped estuaries on Long Island. The refuge has a wide variety of habitats including oak-pine woodland, fields, ponds, river, streams, bay and fresh, brackish and saltwater marshes. These habitats attract and support a remarkable diversity and abundance of wildlife, including birds. The primary importance of the refuge is protection of the Carmans River estuary for use by migratory waterfowl—particularly black ducks, scaup, wood ducks and gadwall. Access is available by foot at the fishing access site and on the White Oak Nature Trail, or by boat to the Indian Landing Trail. Carry-

in boat launching is available at the fishing access site or at Squassamuck Landing. Access is available daily from 8 a.m. to 4:30 p.m.

Directions

From Route 27A/80 (Montauk Highway), turn south onto Smith Road, just east of the Carmans River. Go ¼ mile and the entrance to the office is on the right. Office hours are Monday-Friday, 8 a.m. to 4:30 p.m. (See map opposite.)

Target Rock Refuge

Target Rock is 80 acres on a peninsula on the north shore of Long Island. The refuge is comprised of mostly upland forest and a half mile of bay beach. You are likely to find a variety of songbirds, waterfowl, bank swallows, shorebirds and an occasional raptor. The diversity of warblers is best viewed during migration in May and September. Both beach (partial beach closure from April through August) and upland trails are open to the public. Access is available daily from ½ hour before sunrise to ½ hour after sunset. An entrance fee is charged.

Directions

From Route 110 in Huntington, Route 25A west ¼ mile. North on West Neck Road. Follow onto Lloyd Harbor Road. Entrance is at the end of the road on the right. (See map next page.)

Common Tern

Elizabeth A. Morton Refuge

Morton consists of 187 acres including Jessups Neck, and contains exceptionally diverse habitats. Sandy, gravel and rocky beaches fringe the peninsula, while the wooded bluffs of Jessups Neck overlook Peconic and Noyack Bays. The remainder is upland forest, brackish and fresh water ponds, a lagoon and open fields. The refuge was set aside to protect a unique natural area for migratory birds. Endangered and threatened species such as piping plovers (Federally and NY State listed), least terns (NY State listed) and osprey (NY State listed) use the beach area for nesting. A loss of habitat and human disturbance have caused populations to decline throughout their range, they are now protected by law. During the nesting season (April to August), public access to the peninsula is prohibited to protect nesting habitat. Both beach (partial beach closure from April through August) and upland trails are open to the public. Access

is available daily from ½ hour before sunrise to ½ hour after sunset. An entrance fee is charged.

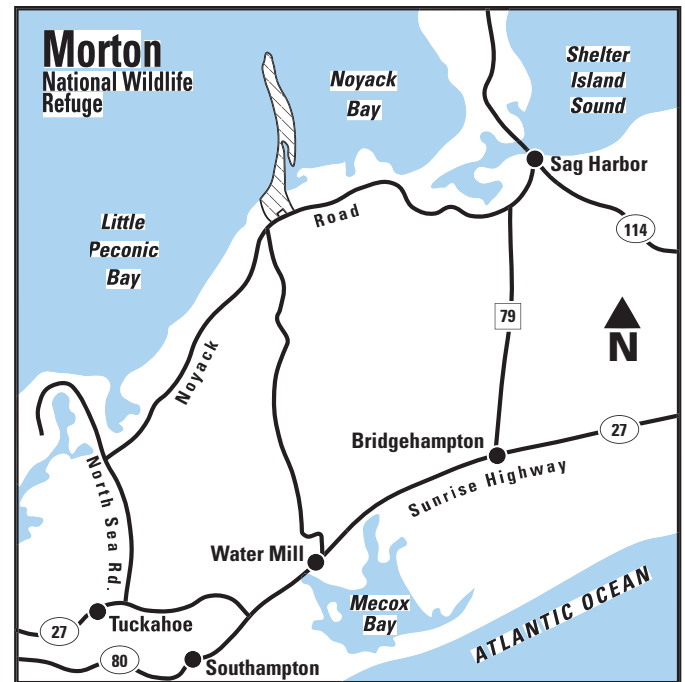

Directions

From Route 27 at Exit 8, north on North Sea Road (Route 38) for North Sea. Straight at traffic light, bear right onto Noyack Road, Refuge is 5 miles on the left. (See map below.)

Enjoy Your Visit!

Visitors can expect to see wildlife at any time, but viewing is best during early morning and evening hours while taking a quiet, observant walk or boat trip. Remember, these animals are wild and shy. For the best chance to see them, bring binoculars and have patience.

As part of the National Wildlife Refuge System, the Long Island National Wildlife Refuge Complex is committed to the primary goal of protecting our nation's wildlife. We need your support in accomplishing our goal.

R. W. Parris/USFWS

Short-billed Dowitchers

Season

Sp	Spring	March – May
S	Summer	June – August
F	Fall	September – November
W	Winter	December – February

Relative Abundance

Relative abundance indicates how frequently you might see a bird in its favored habitat.

- a** abundant very numerous
- c** common certain to be seen or heard in suitable habitat
- u** uncommon present, but not certain to be seen
- o** occasional seen only a few times during the season
- r** rare seen at intervals of 2 to 5 years

* Birds documented breeding on the Refuge.
Italics indicate threatened/endangered species.
