Arctic National Wildlife Refuge Winter Snow Conditions Report

The Arctic National Wildlife Refuge and the USGS maintain a network of monitoring stations across the coastal plain of the Arctic Refuge. These stations report real-time data* on snow and soil conditions that may be used to help support future planning of tundra travel on the coastal plain. For reference, the state of Alaska considers tundra open for off-road travel (in the foothills zone) when snow depths average a minimum of 9 inches (22.9 cm) and the ground is frozen to a minimum of -5° C at 12 inches (30 cm). However, the Refuge has not established a minimum standard and does not permit tundra travel at this time.

¹Upper Canning River:

Snow Depth: 0.2 cm

Soil Temp @ 20 cm: No report

²Tamayariak:

Snow Depth: *No report*

Soil Temp: *No report*

⁶Okpilak:

Snow Depth: 19 cm (-4.0)

Soil Temp: -1.3° C

⁷Iago:

Snow Depth: 28 cm (+4.0)

Soil Temp: - 0.4° C

⁵Marsh Creek:

Snow Depth: 11.6 cm (-9.3)

Soil Temp: 0.4° C

⁸Niguanak:

Snow Depth: 9.5 cm (+2.1)

Soil Temp: -2.3 ° C

⁴Camden Bay:

Snow Depth: *No report*

Soil Temp *No report*

³Katakturak East:

Snow Depth: 15.2

Soil Temp: *No report*

Averages:

Snow Depth: 13.9 cm (Under Minimum Standard)

Soil Temp at 30 cm: -1.0° C (Under Minimum Standard)
