MOCC - Motorboat Operator Refresher
SAF4R02

Target Audience
Any person operating Service watercraft and who is approaching the five year point requiring refresher training.

Summary and Objectives
The refresher training provides motorboat operators with updated information on new equipment, trends, and techniques in watercraft operation. It also provides a check of the operator's skills to ensure that individuals are able to safely operate motorboats in their expected work environment.

The refresher training includes two modules:

1. Online instruction that assesses the operator's knowledge of safe boating, and
2. Self-certification of the operator's practical skills and abilities to operate a motorboat.
   - Significant proven and safe operation of motorboats since completing the MOCC. This may be selected if the individual operates boats regularly as a normal part of their job.
   - Hands-on demonstration of boating exercises in the presence of a DOI certified instructor. This should be selected if the individual operates boats occasionally as a normal part of their job.

Curriculum Category
Safety and Emergency Response

Course Type
Online Self Study
