

REGION NUMBER

STANDARD

Data following this standard should conform to the following:

DATA TYPE	Integer
SYNTAX	N, where each N represents a number from 0 through 9
RANGE	1 - 9
RECOMMENDED FIELD NAME	REGION

INSTRUCTIONS

As of the approval date, this data element will be used in any new automated system, data set, database, or information application, including new Geographic Information System (GIS) data and applications. This data element will also be used in any major modifications to existing systems or versions of these data-related items that use regional office numbers to identify Service organizations, and/or to track information and account codes by Service organization, within a geographically defined area.

Service staff are strongly encouraged to utilize this data element in existing systems, data sets, databases, and information applications. Where existing systems and data related items are not in compliance, they should be modified to achieve compatibility and implement this data standard.

SAMPLE DATA FOLLOWING THIS STANDARD

Examples of data and/or lookups for data following this standard:

The official name of each regional office is the word Region, followed by the appropriate Arabic numeral (e.g. Region 1); the standard abbreviation is R1.
