

Bayou Sauvage National Wildlife Refuge

Bird list

This blue goose, designed by J.N. "Ding" Darling, has become a symbol of the National Wildlife Refuge System.

Bayou Sauvage National Wildlife Refuge consists of approximately 25,000 acres and is located entirely within the city limits of New Orleans, making it the nation's largest urban refuge. The refuge contains a variety of wildlife habitat, including bottomland hardwoods, freshwater and brackish marshes, lagoons, canals, borrow pits, and natural bayous, meeting the needs of 340 bird species during various seasons of the year.

For many birds, Bayou Sauvage is the last stop over on their journey along the Mississippi Flyway before continuing on over the Gulf of Mexico. During fall, winter, and summer months, migratory waterfowl populations can exceed 75,000. Hurricane Katrina severely impacted habitat for neotropical migrants, however, with the restoration of the forested ridge, ideally, these birds will once again make Bayou Sauvage part of their annual journey.

Wading birds are present year round and mottled ducks and wood ducks are common summer nesters. The American bald eagle and peregrine falcon can also be found here.

The following list contains 255 species, representing observations on and adjacent to Bayou Sauvage National Wildlife Refuge. Sightings of unlisted species should be reported to: Refuge Manager, BS NWR, 61389 Highway 434, Lacombe, Louisiana 70445.

This list conforms to the nomenclature and arrangement established by the American Ornithologists' Union (1998).

Symbols used in this brochure represent the following:

- Sp Spring (March-May)
- F Fall (September-November)
- S Summer (June-August)
- W Winter (December-February)

- c Common (certain to be seen in suitable habitat)
- u Uncommon (present but not certain to be seen)
- o Occasional (seen only a few times during a season)
- r Rare (seen at intervals of 2 to 5 years)

Five primary habitats common to the refuge are identified as follows:

- F Field
- f Forest
- A Aerial Flyover
- O Open Water
- M Marsh

- New Species ^
- Species of Special Concern *

Reporting Your Sightings On eBird

This online checklist program provides birders and U.S. Fish and Wildlife staff with updated birding reports. The database maximizes the utility and accessibility of bird observations made each year by both recreational and professional bird watchers. The program is one of the largest and fastest growing biodiversity data resources in existence. The reports on eBird serve as a vital foundation for better understanding bird distribution. The program resources are free to access and are used by a global community of educators, land managers, ornithologists, and conservation biologists.

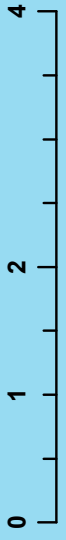

Responsible birders should abide by the American Birding Association's Code of Birding Ethics. More information can be found at <http://www.aba.org>

1. Promote the welfare of birds and their environment.
2. Respect the law, and the rights of others.
3. Ensure that feeders, nest structures, and other artificial bird environments are safe.
4. Group birding, whether organized or impromptu, requires special care.
