Cooperative Endangered Species Conservation Fund Grants

(Section 6 of the Endangered Species Act)

As many species currently listed as federally endangered or threatened spend at least part of their life cycle on non-Federal lands, the U.S. Fish and Wildlife Service (Service) recognizes that recovery success will ultimately depend on working cooperatively with States to foster voluntary stewardship efforts on privately owned lands.

A variety of tools are available under the Endangered Species Act (ESA) to help States and landowners plan and implement projects to conserve species. One of the tools, the Cooperative Endangered Species Conservation Fund (section 6 of the ESA), provides grants to States and Territories to participate in a wide array of voluntary conservation projects for listed, candidate, and at-risk species.

The program provides funding to States and Territories for species and habitat conservation actions on non-Federal lands. States and Territories must contribute a minimum non-Federal match of 25 percent of the estimated program costs of approved projects, or 10 percent when two or more States or Territories implement a joint project. A State or Territory must currently have, or enter into, a cooperative agreement with the Secretary of the Interior to receive grants. Most States and Territories have entered into these agreements for both plant and animal species.

The Service awarded approximately \$80 million in Federal funding in fiscal year 2022 under four grant programs that are available through the Cooperative Endangered Species Conservation Fund.

Traditional Conservation Grants (\$13 M) provide financial assistance to States and Territories to implement

An FY 2022 grant to the State of California will enable the acquisition of up to 737 acres of habitat in Riverside County for the benefit of federally listed and at-risk species including the coastal California gnatcatcher. Photo credit: USFWS

conservation projects for listed, candidate, and at-risk species. Funded activities include habitat restoration, species status surveys, public education and outreach, captive propagation and reintroduction, nesting surveys, genetic studies, and development of management plans.

Conservation Planning Assistance Grants (\$9.1 M) provide funds to States and Territories to support the development, renewal or amendment of habitat conservation plans, safe harbor agreements, and candidate conservation agreements with assurances. Eligible activities include document preparation, public outreach, baseline surveys, habitat assessments and environmental compliance.

Habitat Conservation Plan (HCP) Land Acquisition Grants (\$38.4 M) provide funding to States and Territories to acquire land associated with approved HCPs. Grants do not fund the mitigation required of an HCP permittee; instead, they support land acquisition by the State or local governments that complement mitigation.

Recovery Land Acquisition Grants (\$19.3 M) provide funds to States and Territories for the acquisition of habitat for endangered and threatened species in support of draft and approved recovery plans. Acquisition of habitat to secure long-term protection is often an essential element of a comprehensive recovery effort for a listed species.

An FY 2022 grant to the State of Alabama will enable the permanent protection of 1,728 acres in Monroe County to support the recovery of the Red Hills salamander.
