## **Note to Users:**

During 1961-2001, estimates of waterfowl harvest, hunting activity, and success in the United States were derived from the U.S. Fish and Wildlife Service's Waterfowl Harvest Survey, also known as the Mail-Questionnaire Survey. This was a two-part survey including: 1) a mail-questionnaire survey of individuals who purchased duck stamps with the intention of hunting waterfowl, and 2) a waterfowl parts-collection survey.

Beginning in 1999, a new survey, the Harvest Information Program, became fully operational nationwide. In this Program, the source of participants in the survey is lists of migratory bird hunters furnished by State Fish and Wildlife Agencies, the mail-questionnaire portion of the survey was re-designed, and both the mail-questionnaire and parts-collection portions of the survey were expanded to include some other species/groups of migratory game birds as well as waterfowl. The mail-questionnaire portion of the Waterfowl Harvest Survey, which was based on duck-stamp sales, was discontinued after the 2001 hunting season.

Since the source of participants and the design of the mail questionnaire in the Harvest Information Program are different from those in the previous Waterfowl Harvest Survey, the estimates of waterfowl harvest, hunting activity, and success derived from the two surveys are not comparable. Because of this, in 2003 the estimates for 1961-2001 derived from the previous survey were removed from the annually-updated compilation of data entitled "Waterfowl Harvest and Population Survey Data" and placed in a separate compilation entitled "Estimates of Waterfowl Harvest, Hunting Activity, and Success in the United States, 1961-2001, With Emphasis on the Mississippi Flyway".

Flyway Data Books contain annual estimates of migratory bird abundance, harvest, and hunter participation and activity. Due to the large volume of data and the number of years, species, and geographic areas involved, data tables may be large and complex. Readers that may need help reading and interpreting the data, or that may need data presented in an alternative format to facilitate reading and interpretation, should contact the U.S. Fish and Wildlife Service's Mississippi Flyway Representatives office ([david\\_scott@fws.gov](mailto:david_scott@fws.gov)) with specific request.

\* 1969 thru 1987 States have an option to either select a Special Scaup Season consisting of a season not to exceed 16 consecutive days, with a bag limit of 5 scaup.

The special season must fall between Oct 1 - Jan 31 and the special season must fall outside of regular duck season;

or states may choose a bonus scaup season which allows 2 additional scaup during the regular season's bag limit.

<sup>1</sup> State harvest-survey estimates

<sup>2</sup> Estimated harvest is for unplugged gun overall.

<sup>3</sup> Dates vary by zone - dates shown are inclusive for all zones

<sup>4</sup> In 2009 NM changed their survey methods from previous years

<sup>5</sup> Starting in 2014 ND is only reporting "uncorrected" harvest estimates due to concern that correcting for bias might be too conservative when bags are much larger with todays methods.

<sup>6</sup> Estimated harvest for special harvest tools are not mutually exclusive from each other.
