

Eagle Technical Assistance

Large Construction/Expansion Activities

You have determined that your activity is one of the following:

- Building construction, 3 or more stories;
- building construction, 1 or 2 story, with a project footprint of more than ½ acre;
- mining;
- oil and natural gas drilling and refining;
- installation or expansion of marinas with a capacity of 6 or more boats.

You have determined that the bald eagle nest (active or alternate) cannot be seen from the project site and that there is similar activity within 660 feet of the nest. To avoid disturbing nesting eagles and their young, we recommend that you:

1. Maintain a buffer of at least 330 feet (100 meters) between your activities and the nest (including including active and alternate nests definitions), or if a similar activity is closer than 330 feet, then maintain a buffer at least as far from the nest as the existing tolerated activity;
2. within 660 (200 meters) feet of the nest (including active and alternate nests), restrict any clearing, external construction or landscaping activities to outside the nesting season (outside the nesting season is from mid to late May through early to late September. Nesting season in the Southeast is generally Oct 1- May 15);
3. maintain established landscape buffers that screen the activity from the nest.

Determination

If you can meet these guidelines and do not wish to apply for a permit at this time, keep these guidelines as your final determination

If you cannot meet these guidelines visit the [eagle permit application page](#).
