

Eagle Technical Assistance

Large Construction/Expansion Activities

You have determined that your activity is one of the following:

- Building construction, 3 or more stories;
- building construction, 1 or 2 story, with a project footprint of more than ½ acre;
- mining;
- oil and natural gas drilling and refining;
- installation or expansion of marinas with a capacity of 6 or more boats.

You have determined that the bald eagle nest (active or alternate nest) can be seen from the project site and that there is no similar activity within 660 feet of the nest. To avoid disturbing nesting eagles and their young, we recommend that you:

1. Maintain a buffer of at least 660 feet (200 meters) between all your activities and the nest (including active and alternate nests definitions);
2. maintain established landscape buffers that screen the activity from the nest.

Determination

If you can meet these guidelines and do not wish to apply for a permit at this time, keep these guidelines as your final determination

If you cannot meet these guidelines visit the [eagle permit application page](#).
