

Use of IPaC and other cyber tools for an effective consultation

Ángel G. Colón Santiago

Pathway Student, Caribbean Ecological Services Field
Office

June 19 & July 20, 2018

Outline:

- Environmental Conservation Online System (ECOS)
- ECOS interface with the Threatened and Endangered System (TESS)
- Designated Critical Habitat for Threatened & Endangered Species
- IPaC as a tool for ESA consultations
- IPaC interface with the Tracking and Integrated Logging System (TAILS)
- Species list request
- National Wetlands Inventory

- What is ECOS?
 - Environmental Conservation Online System
 - Gateway web site.
 - Provide access to data systems in USFWS and other federal government data sources.
 - Assists USFWS personnel in managing data and information.
 - Provide public access to information from numerous Service databases.
 - Managed from HQ with super users at the Field Offices.

Where Listed: **WHEREVER FOUND**

General Information

The Puerto Rican parrot is bright green, about a foot in length, with red forehead, blue primary wing feathers, and flesh-colored bill and feet. This bird feeds chiefly on wild fruits, particularly the sierra palm (*Prestoria montana*), but may also consume flowers and tender shoots. During October, when other fruits are scarce, the tabonuco fruit (*Dacryodes excelsa*) becomes an important food item. Rodriguez-Vidal (1959) lists over 50 different plants whose fruits are eaten by the parrots

The species historical range included Puerto Rico. See below for information about where the species is known or believed to occur.

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

▾ Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

[DEFINE PROJECT](#)

Puerto Rican Boa

Epicrates inornatus

STATUS

Endangered; A species in danger of extinction throughout all or a significant portion of its range.

DESCRIPTION

The color is somewhat variable but usually ranges from pale to dark brown, sometimes grayish, with 70 to 80 darker colored blotches along the back from neck to vent. These dorsal blotches are generally dark-bordered with the centers of a lighter hue. Maximum size is approximately 6 and a half feet. Observations of captive specimens suggest that under natural conditions the diet of sub-adults and adults consists of birds, small mammals, and lizards. Rodr iguez and Reagan (1984) report bat predation by the Puerto Rican boa. The boa feeds by seizing the prey in its jaws, wrapping several coils around the victim, and then constricting until the prey has suffocated. The prey is then swallowed head first. The feeding habits of the very young are unknown.

CRITICAL HABITAT

No critical habitat has been designated for this species.

**Conservation Measures
for the species in the
defined Project Area**

General Project Design Guidelines (1 Species)

Generated June 17, 2018 07:55 PM MDT, IPaC vunspecified

IPaC - Information for Planning and Consultation (<https://ecos.fws.gov/ipac/>): A project planning tool to help streamline the U.S. Fish and Wildlife Service environmental review process.

CONSERVATION MEASURES FOR THE PUERTO RICAN BOA - USFWS

General Information:

The Endangered Puerto Rican boa (*Epicrates inornatus*) is an endemic species and it is the largest snake that inhabits the Puerto Rico Island Shelf. The color and pattern of the Puerto Rican boa is highly variable. The species color can range from tan to dark brown with irregular diffuse marking on the dorsum but some individuals lack marking and are uniformly dark. Juveniles have reddish brown ground color with numerous pronounced markings. The Puerto Rican boa can be found in the habitat range from the sea level to about 400 m of elevation. The boa tolerates a wide variety of habitat types ranging from wet montane to subtropical dry forest and can be found from virgin forest to areas that exhibit various degrees of human disturbance like roadside or out buildings. Boas are more active at night, remaining less active concealed or basking in the sun during the day. The U.S. Fish and Wildlife Service (Federal Register October 13, 1970) listed the Puerto Rican boa (*Epicrates inornatus*) as endangered in 1970 and it is protected by the Endangered Species Act of 1973, as amended. Any person that injures, captures, or kills a Puerto Rican boa is subject to penalties under federal law of up to \$100,000, one year in prison or a combination of both.

Recommendations:

The U.S. Fish and Wildlife Service (hereafter the Service) has developed recommendations to avoid or minimize impacts on the boa during a project development in an area where the boa may occur. The recommendations are the following:

- A. Prior to any earth movements or vegetation clearing, the boundaries of the project area, the buffer areas and areas to be protected should be clearly marked in the project plan and in the field.
- B. A pre-construction meeting should be conducted to inform supervisors and employees about the conservation of protected species, as well as penalties for harassing or harming such species.
- C. Prior to any use of machinery on areas where the boa may occur, the vegetation should be cleared by hand to provide time to the boa, if present, to be detected or move away from the area. All personnel involved in site clearing must be informed of the potential presence of the snake, and the importance of protecting the snakes.
- D. Before activities commence each workday during the vegetation clearing phase, the experienced personal in identifying and searching for boas should survey the areas to be cleared that day, to ensure that no boas are present or affected within the work area. If boas are found within the working area, activities should stop at the area where the boas are found until the boas move out of the area on their own. Activities at other work

If Project Design Guidelines are not available for the species, you should contact the CESFO

IPaC Information for Planning and Consultation

Powered by ECOS - the Environmental Conservation Online System

IPaC interface with the Tracking and Integrated Logging System (TAILS)

- What is TAILS?
 - Tracking and Integrated Logging System
 - An interface of IPaC and ECOS
 - Managed by Super Users in the Region.
 - Internet-based Field Office activity tracking system.
 - It is designed to promote and provide consistent recording and reporting of "Activities".

Endangered species review

[← BACK](#)[EXIT REVIEW](#)

1 Request an official species list ————— 2 Evaluate determination keys ————— 3 Make effect determinations

Step 1: Request an official species list

An official species list is a letter from the local U.S. Fish and Wildlife Service office with information that assists in the evaluation of potential impacts of this project. It includes a list of species that should be considered under [Section 7](#) of the Endangered Species Act, a project tracking number, and other pertinent information from the local office.

Does this project require an official species list?

Federal agencies are required to "request of the Secretary of Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action" ([Section 7](#) of the Endangered Species Act).

This requirement applies to projects that are **conducted, permitted, funded, or licensed** by any Federal agency.

[YES, REQUEST A SPECIES LIST](#)[SKIP / DOES NOT APPLY](#)

EXIT REVIEW

1 Request an official species list ————— 2 Evaluate determination keys ————— 3 Make effect determinations

Step 1: Request an official species list

Wait for the documents!

An official species list is a letter from the local U.S. Fish and Wildlife Service office with information that assists in the evaluation of potential impacts of this project. It includes a list of species that should be considered under [Section 7](#) of the Endangered Species Act, a project tracking number, and other pertinent information from the local office.

1 Processing species list request

The request was submitted on June 17, 2018 at 8:31 PM MDT.

Your species list request was submitted and is currently being processed. An official species list will be available momentarily. **Note that official species lists are no longer emailed.**

You may continue your review, or wait for the processing to complete. This page will refresh when the official species list is available. After processing, the official species list can also be found on the [Documents](#) page.

Consultation Code: 04EC1000-2018-SLI-0522

Event Code: 04EC1000-2018-E-00638

Project Name: Housing Rehabilitation for CESFO ROAD Show

June 17, 2018

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

THE FOLLOWING SPECIES LIST IS NOT A SECTION 7 CONSULTATION. PLEASE CONTACT OUR OFFICE TO COMPLETE THE CONSULTATION PROCESS

The purpose of the Endangered Species Act (Act) is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 et seq.), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect those species and/or their designated critical habitat.

Federal agencies are required to "request of the Secretary of Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action". The enclosed species list provides information to assist with the consultation process with the U.S. Fish and Wildlife Service (Service) under section 7 of the Act. However, the enclosed species list **does not complete the required consultation process**. The species list identifies threatened, endangered, proposed and candidate species, as well as proposed and designated critical habitats, that may occur within the boundary of your proposed project and/or may be affected by your proposed project.

A discussion between the Federal agency and the Service should include what types of listed species may occur in the proposed action area, and what effect the proposed action may have on those species. This process initiates informal consultation.

REGULATORY REVIEW

LOCAL OFFICE **CARIBBEAN ESFO** ▾

Regulatory review

The IPaC regulatory review process helps evaluate the potential impacts of your project on resources managed by the U.S. Fish and Wildlife Service. It walks through regulations covering each protected resource, and offers suggestions and assistance in designing your project.

Endangered species

Endangered species are protected under the Endangered Species Act ¹.

2 endangered species are known to occur or may be affected by activities in this location.

 Request an official species list
An [official species list](#) was generated 10 minutes ago.

 Evaluate determination keys
There are no determination keys available in this project area.

Will be available soon!

 Make effect determinations
For each listed species in the project area, a determination must be made regarding the potential effects of this project.

REVIEW SPECIES

Now what?

- Use the Project Guidelines to plan your project.
- Add them to you planning, recognize the species presence.
- Make your determination in base of the information obtained.
- Contact our biologists if you need assistance.
- Send the project package with the consultation code to the office for concurrence.

National Wetlands Inventory

- What is the National Wetland Inventory (NWI)?
 - is a publicly available resource that provides detailed information on the abundance, characteristics, and distribution of US wetlands.
 - NWI data are used by natural resource managers, within the US FWS and throughout the Nation, to promote the understanding, conservation and restoration of wetlands.
 - You can access to <https://www.fws.gov/wetlands/>

Wetlands

Wetlands provide a multitude of ecological, economic and social benefits. They provide habitat for fish, wildlife and plants - many of which have a commercial or recreational value - recharge groundwater, reduce flooding, provide clean drinking water, offer food and fiber, and support cultural and recreational activities. Unfortunately, over half of America's wetlands have been lost since 1780, and wetland losses continue today. This highlights the urgent need for geospatial information on wetland extent, type, and change.

Horicon National Wildlife Refuge. Credit: USFWS.

The National Wetlands Inventory

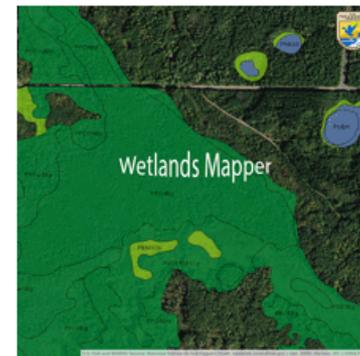

The US Fish and Wildlife Service (FWS) is the principal US Federal agency tasked with providing information to the public on the status and trends of our Nation's wetlands. The US FWS National Wetlands Inventory (NWI) is a publicly available resource that provides detailed information on the abundance, characteristics, and distribution of US wetlands. NWI data are used by natural resource managers, within the US FWS and throughout the Nation, to promote the understanding, conservation and restoration of wetlands.

Wetlands Mapper

The Wetlands mapper is designed to deliver easy-to-use, map like views of America's Wetland resources. It integrates digital map data along with other resource information to produce current information on the status, extent, characteristics and functions of wetlands, riparian, and deepwater habitats. The Wetland Mapper fulfills the U.S. Fish and Wildlife Service's strategic plan for the development, revision and dissemination of wetlands data and information to resource managers and the public. This information is intended to promote the understanding and conservation of wetland resources through discovery and education as well as to aid in resource management, research and decision making.

The wetlands displayed on the Wetlands Mapper show wetland type and extent using a biological definition of wetlands. There is no attempt to define the limits of proprietary jurisdiction of any Federal, State, or local government, or to establish the geographical scope of the regulatory programs of government agencies.

17.994 | -66.628

Enter Classification code: (Example: **L1UB1Hx**)

Optional: For geographically specific information*, please enter a State code: (Example: **TX** for Texas)

[CLICK HERE TO DECODE](#)

Description for code E2US2/3P:

- E** System **ESTUARINE**: The Estuarine System consists of deepwater tidal habitats and adjacent tidal wetlands that are usually semienclosed by land but have open, partly obstructed, or sporadic access to the open ocean, and in which ocean water is at least occasionally diluted by freshwater runoff from the land. The salinity may be periodically increased above that of the open ocean by evaporation. Along some low-energy coastlines there is appreciable dilution of sea water. Offshore areas with typical estuarine plants and animals, such as red mangroves (*Rhizophora mangle*) and eastern oysters (*Crassostrea virginica*), are also included in the Estuarine System.
- 2** Subsystem **INTERTIDAL**: The substrate in these habitats is flooded and exposed by tides; includes the associated splash zone.
- US** Class **UNCONSOLIDATED SHORE**: Includes all wetland habitats having two characteristics: (1) unconsolidated substrates with less than 75 percent areal cover of stones, boulders or bedrock and; (2) less than 30 percent areal cover of vegetation. Landforms such as beaches, bars, and flats are included in the Unconsolidated Shore class.
- 2** Subclass **Sand**: The unconsolidated particles smaller than stones are predominantly sand, although finer or coarser sediments may be intermixed.
- 3** Subclass **Mud**: The unconsolidated particles smaller than stones are predominantly silt and clay, although coarser sediments or organic material may be intermixed.
- P** Water Regime **Irregularly Flooded**: Tides flood the substrate less often than daily.

Now what?

- A wetland delineation will be needed.
- You should contact the Army Corps of Engineers (COE).
- The COE will lead you through the process.
