Warm Springs National Fish Hatchery

Welcome and Enjoy Your Visit!

Over a century ago, it was recognized that conservation measures were necessary to maintain good fishing in our public waters. Fishing has probably always been American's leading form of outdoor recreation. The Warm Springs Regional Fisheries Center is endeavoring to preserve this tradition for present as well as future generations of Americans.

What we do

The Warm Springs Regional Fisheries Center was established in 1990. The Center was established as the final step in developing a field station in the Southeast Region's fishery program that would incorporate a centralized Fish Health Laboratory, a National Fish Hatchery, and a Fish Technology Center and an

Sturgeon

Environmental Education Unit into a single complex.

National Fish Hatchery

The facility is a warmwater hatchery that was authorized by Congress in 1898 and established in 1899. The species of fish propagated here do best in summer water temperatures that reach 75 degrees to 85 degrees Fahrenheit. Species such as striped bass, sturgeon, and paddlefish which are vital to the fishery resources of the Southeastern United States and the Atlantic Coast are raised here and stocked in cooperation with the various State game and fish agencies.

Fish Health Laboratory

The Fish Health Laboratory was established in 1989, and it has the capability to provide state-of-the-art fish disease diagnostic and fish health certification services to a variety of national fish hatcheries, state fish hatcheries, and private fish farms. Triploid grass carp certification inspections are also provided to private

fish farmers in the ten southeastern states.

Fish Technology Development

The Fish Technology Center was established to improve and enhance management effectiveness by providing consolidated technical operational support to Regional fisheries operations, fish culture technical development, and the Service's technical assistance to the emerging private aquaculture industry.

Warm Springs National Fish Hatchery is one of many hatcheries located in the Southeastern Region. These hatcheries serve a vital role in the management of our fishery resources.

Aquarium Hours

8 am to 4 pm daily. The Aquarium is closed on federal holidays.

Take pride in Your Fishery Resources!
