SPECIAL NOTE

This map was prepared primarily by stereoscopic analysis of high-altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible hydrology, and geography in accordance with **Classification of Wetlands and Deep Water Habitats of the United States** (An Operational Draft) Cowardin, et al, 1977. The aerial photographs typically reflect conditions during the specific year and season when they were exposed. Wetlands may appear in forms that are different from the way they look on the photographs. Thus, a detailed on the ground and historical analysis of a single site may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be included on this document.

The delineation of wetlands for regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is not attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should contact the office of appropriate federal, State or local agencies concerning specific agency regulatory programs and proprietary jurisdictions that may affect such activities.

NOTES TO THE USER

- Wetlands which have been field examined are indicated on the map by an asterisk (*).
- Additions or corrections to the wetlands information displayed on this map are solicited. Please forward such information to the address indicated.
- Subsystems, Classes, Subclasses, and Water Regimes in *Italics* were developed specifically for NATIONAL WETLANDS INVENTORY mapping.
- Some areas designated as R4SB, R4SBW, OR R4SBJ (INTERMITTENT STREAMS) may not meet the definition of wetland.
- This map uses the class Unconsolidated Shore (US). On earlier NWI maps that class was designated Beach/Bar (BB), or Flat (FL). Subclasses remain the same in both versions.

Other information including a narrative report concerning the wetland resources depicted on this document may be available. For information, contact:

MODIFIERS

In order to more adequately describe wetland and deepwater habitats one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The farmed modifier may also be applied to the ecological system.

WATER REGIME		WATER CHEMISTRY		SOIL	SPECIAL MODIFIERS
Non-Tidal		Coastal Halinity	Inland Salinity	pH Modifiers for all Fresh Water			
A. Temporarily Flooded	H. Permanently Flooded	1. Hyperhaline	1. Hyperhaline	a. Acid	b. Organic	h. Diked/Impounded
B. Saturated	J. Intermittently Exposed	2. Euhaline	2. Euhaline	b. Circumneutral	s. Mineral	r. Artificial (Spoil)
C. Seasonally Flooded	K. Artificially Flooded	3. Mixohaline (Brackish)	3. Mixosaline	c. Alkaline	f. Farmed	x. Excavated
D. Seasonally Flooded/ Well Drained	L. Intermittently Flooded/Temporary	4. Mesohaline	4. Mesosaline	d. Circumneutral/ Alkaline		
E. Seasonally Flooded/ Saturated	M. Intermittently Flooded/Saturated	5. Polyhaline	5. Fresh			
F. Semipermanently Flooded	Z. Intermittently Exposed/ Permanent					
G. Intermittently Exposed						

*Three water regimes are only used in nearly intermittent freshwater systems
