District*

Wildlife List

Welcome to Huron Wetland Management District

*This goose,
designed by J.N.
“Ding” Darling,
has become the
symbol of the
National Wildlife
Refuge System.*

The public lands of Huron Wetland Management District (WMD), called waterfowl production areas (WPA), are a part of the National Wildlife Refuge System. These WPAs are managed to preserve wetlands; benefit endangered species, migratory birds, and other wildlife; and provide places for people to learn about and enjoy wildlife.

Huron WMD lies within the prairie pothole region in east-central South Dakota. Headquartered in Huron, South Dakota, the District consists of more than 60 WPAs, totaling approximately 17,500 acres, in Beadle, Sanborn, Jerauld, Hand, Hyde, Hughes, Sully, and Buffalo counties.

The WPAs are open year-round to foot travel only. Visitors will find a rich variety of plant and animal life. Native prairie grasses, wildflowers, and wetland flora can be observed and studied in natural prairie settings. If you have time, a short walk often reveals a fascinating world of wildlife.

When to Visit

Birds and large mammals native to the prairie can easily be seen and heard year-round. While not always visible, many species of small mammals, reptiles, amphibians, and fish are also present.

During migration, large numbers and diverse species of bird life make WPAs a paradise for photographers and bird watchers. Sharp-tailed grouse and greater prairie-chicken leks are active in March and April. Snow geese usually pass through the District during March, while other ducks and geese are most abundant in April and May. Spring shorebird migration peaks during the first 2 weeks of May. Migrating songbirds begin to arrive in late April and continue through May.

Breeding songbirds continue to be active and vocal through June. Many waterfowl species use the WPAs to breed and rear young, with broods appearing in May. Many more young birds can be seen in June, July, and August. Young mammals are also easily seen in late summer. Shorebirds begin to return from the north in late June. They are most abundant in July and early August. During fall migration, waterfowl numbers peak in September. Snow geese, however, often do not arrive until October or November.

Places to Explore

Maga Ta-Hohpi is the largest WPA in the District, with a native prairie demonstration area, observation platform, GPS and compass courses, and over 3 miles of mowed trails to explore. LeClaire WPA remains wet even in the driest years and is a great place to view waterfowl. Cain Creek WPA provides an opportunity to see a diversity of wildlife, with beavers using the flowing creek and woodland birds using the shelterbelts. The rolling terrain and expansive mixed-grass prairie of Harter WPA provides habitat for pronghorn, sharp-tailed grouse, upland sandpipers, and chestnut-collared longspurs. The mudflats of Bauer WPA are an excellent place to look for shorebirds in late summer.

For a full listing of all waterfowl production areas within the District, contact the staff at the Huron WMD Headquarters in Huron, South Dakota, or consult the South Dakota Sportsman's Atlas published by the South Dakota Department of Game, Fish and Parks.

About the Wildlife List

Information provided in this brochure regarding species presence, seasonal occurrence, abundance, and distribution is based upon the eight-county area within the WMD. This wildlife list also includes species that frequent the Missouri River as it flows along the western boundaries of Sully, Hughes, and Buffalo counties. Most species may be more or less abundant at any given location, depending on the distribution of the individual species and the habitat available at that location.

Birds

The 304 species of birds found on this check list have been observed within Huron WMD; 131 of those species nest, have nested, or are highly likely to nest within Huron WMD. An additional 35 species are listed as accidental. As of April 2006, four species are listed on the Federal threatened and endangered species list — the whooping crane and least tern are endangered; the bald eagle and piping plover are threatened. The yellow-billed cuckoo is a candidate species for Federal listing.

on big bluestem*
USFWS

Bird Seasonal Occurrence

Sp	Spring (March - May)
S	Summer (June - August)
F	Fall (September - November)
W	Winter (December - February)

Bird Abundance

a	abundant - occurring in large numbers
c	common - certain to be seen in suitable habitat
u	uncommon - present, but not certain to be seen
o	occasional - seen only a few times during the season
r	rare - seen at intervals of 2 to 10 years
x	accidental - there is a recorded occurrence during the season

Note: These indicators of abundance are an average for the entire WMD.

Nesting Within the District Boundary

- One or more confirmed nesting records
- Species suspected to nest at least occasionally, but further confirmation is needed

Native versus Non-native

n Indicates a non-native species

Accessibility Information

Equal opportunity to participate in and benefit from programs and activities of the U.S. Fish and Wildlife Service is available to all individuals regardless of physical or mental ability. Dial 7-1-1 for a free connection to the State transfer relay service for TTY and voice calls to and from the speech and hearing impaired. For more information or to address accessibility needs, please contact the Refuge staff at 605 / 352 5894 or the U.S. Department of Interior, Office of Equal Opportunity, 1849 C Street, NW, Washington, D.C. 20240.
