# Birds of

## *Cibola National Wildlife Refuge*

Cibola National Wildlife Refuge is located along the lower Colorado River 20 miles south of Blythe, California. Approximately two-thirds of the refuge is in Arizona and one-third is in California and encompasses 18,555 acres. The refuge was established in 1964 to mitigate the loss of fish and wildlife habitat involved in the channelization projects along the Colorado River.

The main portion of the refuge is alluvial river bottom with dense growths of salt cedar, mesquite, and arrowweed along with several hundred acres of revegetated cottonwood and willow habitat. Through this flows the Colorado River, in both a dredged channel and a portion of its original channel. The refuge also contains ~1,000 acres of farmland and 785 acres of desert foothills and ridges.

The endangered Ridgway's rail, the only freshwater form of clapper rail, is found in suitable marshes throughout the refuge. Cibola NWR is important as a wintering ground for the western (or Great Basin) subspecies of Canada goose and for Sandhill Cranes.

This list of 287 species is in accordance with the seventh addition of the American Ornithologists' Union Checklist of North American Birds, 7th edition (1998) and its supplements through July 2016. Those species marked with an asterisk (\*) have nested on the refuge. Species that occur as accidental (marked with an "X") may occur more regularly in areas surrounding the refuge, but most are true geographic rarities. Note that seasons vary from species to species; fall migration for some, such as shorebirds and flycatchers, is much earlier (mid-July to mid-September) compared to fall migration for other species, such as most waterfowl and sparrows (September to November).

W Winter December—February  
 Sp Spring March—May  
 S Summer June—August  
 F Fall September—November  
 \* Confirmed or probable breeder (39 sps).  
 Federally Endangered or Threatened Species are listed in *italics*.

A Abundant—A very numerous species.  
 C Common—Likely to be seen or heard in suitable habitats.  
 U Uncommon—Present, not certain to be seen.  
 O Occasional—Seen only a few times during the season  
 R Rare—Unexpected, seen at intervals of 2 to 5 years.  
 X Accidental—Fewer than 3 records; vagrants outside their usual range.  
 Breeding records from *Arizona Breeding Bird Atlas* and refuge records.
