

Clarks River

National Wildlife Refuge Bird List

*Refuge Mission
Statement:*

*“The mission of the
National Wildlife
Refuge System is
to administer a
national network
of lands and waters
for the conservation,
management, and
where appropriate,
restoration of the fish,
wildlife and plant
resources and their
habitats within the
United States for the
benefit of present and
future generations of
Americans.”*

*National Wildlife
Refuge System
Improvement Act of
1997*

Clarks River National Wildlife Refuge

This blue goose, designed by J. N. "Ding" Darling, has become a symbol of the National Wildlife Refuge System.

Ray Stainfield

Established in 1997, Clarks River National Wildlife Refuge (NWR) was named for its location along the east fork of the Clarks River. The Clarks River is unique because it is one of the few rivers in the western Kentucky area that has not been channelized or dammed. Currently, the Refuge consists of approximately 8,500 acres, and is the only Refuge located solely within the bounds of the state of Kentucky. The Refuge was established to protect beautiful bottomland hardwood forest habitats.

The bottomland hardwood forests of this refuge are utilized by many species of neotropical songbirds. These birds spend approximately eight months of the year wintering in Central and South America, and the remaining months on their breeding grounds in North America's temperate latitudes. Over 200 species of neotropical songbirds can be found using the habitats of the refuge as a stopover (for resting and feeding) during migration or for nesting. The imperiled cerulean warbler, Swainson's warbler, and prothonotary warbler are three of the five birds on the U.S. Fish and Wildlife Service's list of high priority species of management concern. All three of these species are dependent on bottomland hardwood forests and can be found in small numbers on the refuge during the nesting season. Other neotropical songbird species to watch for are summer and scarlet tanagers, Kentucky warblers, indigo buntings, and Acadian flycatchers, all of which readily use the refuge.

For those interested in seeking out these and other birds, the following checklist is provided as an aid. The checklist is based on observations by staff, visiting ornithologists, and birdwatchers who have visited the refuge. By design, it is not all encompassing and, because of this, some of the generalized information that it contains may not necessarily seem appropriate for given species. Also, if you observe a species that is not

Andy Eller

listed here, please report it to us. Your information will be useful as we prepare future editions of this checklist. We do appreciate your help in updating our records.

The taxonomy and nomenclature used by this checklist follow the **Checklist of North America Birds**, American Ornithologists' Union, Seventh Edition, July 2000, as amended through the forty-ninth supplement, August 2008.

How to use your checklist

Symbols that appear in this checklist represent the following:

Seasons

Sp Spring.....March-May
(migration)

S Summer.....June-July
(breeding)

F Fall.....August-November
(migration)

W Winter.....December-
February

Seasonal Code Definitions:

c- common (certain to be seen or heard in suitable habitat)

f- fairly common (less certain to be seen or heard but usually present in smaller numbers)

u- uncommon (present but not easily seen or heard and may be overlooked)

r- (rare) – usually present every year, but typically only in small numbers and perhaps for only a brief period; observed infrequently and may be quite difficult to find even in appropriate habitat.

*- **Nesting species:** An asterisk denotes those species that have been confirmed nesting in the CRNWR Area.
