ALERT – Road Reports and Fire Restrictions

**Also please note this information from the
U.S. Army Corps of Engineers at Fort Peck:**

PUBLIC ACCESS TO FORT PECK PROJECT SPILLWAY AREA AND ROAD CLOSURES:

This project began May 17, 2013 and continues.

The US Army Corps of Engineers will be closing all public access to areas adjacent to the Fort Peck Spillway. Only the highway bridge deck sidewalks adjacent to Highway 24 and the Overlook will remain accessible. These closures are necessary to facilitate construction work at the Spillway and ensure contractor, employee, and public safety. These areas will remain closed to public vehicular and pedestrian access until construction work is completed.

The following numbered roads within the Charles M. Russell National Wildlife Refuge road system will be posted as “ROAD CLOSED” or “ROAD CLOSED: Authorized Vehicles Only” for the duration of this construction work.

- **Road 340 is closed at its intersection with Road 341 near the bottom of the spillway.**
- **Road 341 is completely closed.**
- **Road 361 will be closed at the gate west of the spillway channel. This change opens Road 361 from the intersection of Road 528 to the west spillway gate.**

The Corps of Engineers requests that the public honor and respect these closures for everyone’s safety. We apologize for any inconvenience these closures may have on the public and will open them again when it is possible to do so.
