Great Dismal Swamp

*National Wildlife
Refuge*

Birds

Swainson's warbler
???

Introduction

This blue goose, designed by J.N. "Ding" Darling, has become the symbol of the National Wildlife Refuge System.

Great Dismal Swamp National Wildlife Refuge is one of more than 550 refuges in the National Wildlife Refuge System administered by the U.S. Fish & Wildlife Service. The refuge, established by Congress in 1974, consists of over 112,000 acres of forested wetlands. Lake Drummond, at 3,100 acres is the larger of two natural lakes found in Virginia, lies at the refuge's center. The refuge was established to protect and restore the biologically important Great Dismal Swamp ecosystem. Within that mission a primary concern is to provide protected habitat for migratory birds.

Birding is popular in the refuge April through June, but is best from early-April to late-May, the peak of the spring neo-tropical bird migration. As many as thirty five species of warblers have been observed and provide the principal attraction.

Downy Woodpecker

David Schneider

This brochure lists more than 210 birds that have been identified on the refuge, and is in accordance with the Seventh American Ornithologists Union Checklist.

Most birds are migratory and their seasonal occurrence and relative abundance are coded as follows:

Season

Sp	spring	March – May
S	summer	June – August
F	fall	September – November
W	winter	December – February

Relative Abundance

Relative abundance indicates how frequently you might see a bird in its favored habitat.

a	abundant	a species which is very numerous
c	common	likely to be seen or heard in suitable habitat
u	uncommon	present, but not certain to be seen
o	occasional	seen only a few times during a season
r	rare	may be present but not every year
acc	accidental	seen only once

- Birds known to nest on or near the refuge
