

Quadrat Sampling

1. Mark your plot using a quadrat made of yarn. Once your quadrat is placed, **do not** move it. (Staple each corner of the plot).

2. Collect **all** of your data in the same place. Only record the things that you find inside **your** quadrat.

3. Next you are going to look for evidence of animals in your plot. Record any evidence of animals on your data collection sheet. (Look for tracks/trails, scat, and homes/burrows)
