

Rock Concert (by Drew Dumsch)

Igneous

I come from the ground, deep down where it's hot
I'm the toughest stone around, I'm igneous rock
I'm the granite god of the ground, I'm igneous rock

Sedimentary

I'm sedimentary, and that's alright by me
Made from mud of river and ocean beds, my colors are grey and brown and red
Down the hill I often tumble, hold me in your hands and I crumble
Cuz I'm sedimenta, sedimenta-reee.19

Metamorphic

Meta-meta-meta-meta-morphic, sedimentary and igneous (2x)
Give these rocks heat and pressure, and the change'll be marvelous!

Scat Rap (by Rodd Pemble, Mary Keebler, and Andy Bennett)

If you want to find out what animals eat
Take a good long look at what they excrete
Stuck in the scat are all kinds of clues
Parts of the food that their bodies can't use.

Chorus:

It starts with an "S" and ends with a "T"
It comes out of you and it comes out of me
I know what you're thinking, but don't call it that
Be scientific and call it "SCAT"!

Down by the creek on a hollow log
Scat full of berries and bones of frogs
Fresh last night, out with the moon
Hunting crawdads was a big raccoon.

Chorus

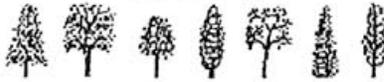

You park your car by a woods or field
You might end up with scat on your windshield
Full of seeds, purple and white
You just got bombed by a bird in flight.

Chorus

If you wanna know what's in the woods or around
Take a good long look at the scat on the ground
It tells us what they eat and tells us who they are
And that's what we know about scat so far.

Chorus

TREE RAP

There's more to a tree than meets the eye-
Now we're going to tell you what's inside.

First we'll start down underground-
That's where all the roots are found.

The tap root holds the tree up tall-
So when the wind blows hard the tree won't fall.

The lateral roots go out to the side-
And the root hairs go where the water can't hide.

Inside the trunk things are moving around-
The water goes up and the food comes down.

In the trunk you'll find five parts-
We start with the heart and go out to the bark.

READY....

*Heartwood

*Sapwood

*Cambium

*phloem

*Bark

On the top of the tree you'll find the leaves
They give off the oxygen that we breathe.

Evergreen leaves stay green year round-
Deciduous leaves fall to the ground.

Now you know the parts of a tree-
See what a good buddy you can be.
