

Summer 2021 Habitat Projects

Pardon our dust and the occasional trail closure as we undertake big habitat restoration projects at Baskett Slough National Wildlife Refuge this summer!

Oak Restoration:

Starting Monday, June 28th the Rich Guadagno Loop Trail around the top of Baskett Butte will close for at least a week. We will be conducting active oak restoration work using heavy equipment and want to keep everyone safe. This work will greatly benefit Oregon white oak and the species they support.

Dusky Marsh Restoration:

In August and September, areas around Dusky Marsh will need to be closed: Cackler, Vancouver and Dusky berms. This entire wetland network will be reworked to discourage non-native plants, remove any and all potential for fish entrapment, and to improve the overall quality and function of the wetland. We have staff and equipment that will be mobilized from other states to help us with this big undertaking. We'll share a lot more about this exciting project in the months ahead.
