US Fish and Wildlife Service
The Friends of Heinz Refuge

Keynote Speaker - Dr. Dan Duran

Bugs, Beetles, and Other Insect Pollinators

Insects are the largest group of wildlife on Planet Earth, yet remain less known to most refuge visitors. From pollinators, to decomposers, to lunch for birds, fish, reptiles, and amphibians, insects play a critical role in most food chains that support all life. Come *bug* Dr. Dan Duran, entomology professor at Drexel University, also formally Vanderbilt University, and author of *Tiger Beetles of North America* from 2PM-3PM in the Visitor Center Auditorium to learn about native refuge insects.
