Welcome

This goose, designed by J.N. “Ding” Darling, is the symbol of the National Wildlife Refuge System.

Welcome

Seedskadee National Wildlife Refuge (NWR) was established in 1965 to make up for the loss of habitat resulting from the construction of the Flaming Gorge and Fontenelle dams. The name Seedskadee originated from the Shoshone Indian word “Sisk-a-dee-agle” meaning “river of the prairie hen.” This 27,230-acre Refuge protects a mosaic of riparian, wetland, and upland shrub habitats along 36 miles of the Green River in the vast high desert sagebrush plains of southwestern Wyoming. The variety of habitats, from wet to dry, supports an interesting diversity of wildlife.

Over 300 species of wildlife have been documented on Seedskadee NWR. The Green River and adjoining riparian habitat provides an important migration route and nesting area for a wide variety of migratory waterfowl, such as the green-winged teal, and passerine bird species, like Wilson’s warbler and the northern oriole. Bald eagles, great blue herons, moose, mule deer, beaver, and porcupine raise their young in the riparian area. The river itself is home to several species of trout, as well as the Utah chub and other fish. Wetlands along the river attract species such as the trumpeter swan, ruddy duck, American avocet, and muskrat. Wildlife species that depend on the upland shrub habitats include sage grouse, Brewer’s sparrow, ferruginous hawk, pygmy rabbit, Great Basin gopher snake, and pronghorn.

Wildlife observation can be interesting any time of year at Seedskadee NWR, but to see the greatest diversity of birds, the best times of year to visit are spring and fall when bird migration is in full swing. Wildlife is most active during the morning and evening hours, so if possible, plan to be on the Refuge during these times.

About this Checklist

This checklist includes 222 bird species, 53 species of mammals, 6 species of reptiles, 4 amphibian species, and 22 species of fish. The checklist will be updated periodically as new species are documented. Species abundance varies annually due to changes in wetland water levels, fluctuations in available food, and natural cycles.

Seasons of Occurrence:

Since many birds are migratory, their seasonal occurrence and relative abundance are noted as follows:

<table>
<thead>
<tr>
<th>Season</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sp</td>
<td>Spring (March – May)</td>
</tr>
<tr>
<td>S</td>
<td>Summer (June – August)</td>
</tr>
<tr>
<td>F</td>
<td>Fall (September – November)</td>
</tr>
<tr>
<td>W</td>
<td>Winter (December – February)</td>
</tr>
</tbody>
</table>

Seasonal Abundance:

c  common – certain to be seen in suitable habitat

O  occasional – seen only a few times during the season

r  rare – seen at intervals of 2 - 5 years

x  hypothetical – within normal range, but never documented

Other Codes

•  denotes a breeding species

Accessibility Information

Equal opportunity to participate in and benefit from programs and activities of the U.S. Fish and Wildlife Service is available to all individuals regardless of physical or mental ability. Dial 711 for a free connection to the State relay service for TTY and voice calls to and from the speech and hearing impaired. For more information or to address accessibility needs, please contact the Refuge staff at 307 / 875 2187, or the U.S. Department of the Interior, Office of Equal Opportunity, 1849 C Street, NW, Washington, D.C. 20240.
